THE ENCYCLOPAEDIA OF ISLAM

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF
LEADING ORIENTALISTS

EDITED BY

C.E. BOSWORTH, E. VAN DONZEL, W.P. HEINRICHS AND G. LECOMTE
ASSISTED BY P.J. BEARMAN AND MME S. NURIT

UNDER THE PATRONAGE OF
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME VIII

NED — SAM

LEIDEN
E.J. BRILL
1995

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:

1993: Fascs. 131-136, pp. 1-384

1994: Fascs. 137-142, pp. 385-768

1995: Fascs. 143-146, pp. 769-1056

ISBN 90 04 09834 8

PRINTED IN THE NETHERLANDS

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to list after each contributor's name the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears within square brackets after the name of the original author.

Feroz Ahmad, University of Massachusetts. 511
Hamid Algar, University of California, Berkeley. 48, 117, 136, 704
[J. Allan, London]. 239, 267, 288, 289, 726
R. Amitai-Preiss, Hebrew University, Jerusalem. 759
Barbara Watson Andaya, University of Hawaii at Manoa. 295
P.A. Andrews, University of Cologne. 270
Ghaus Ansari, University of Vienna. 32
Sarah Ansari, University of London. 244
A. Arazi, Hebrew University, Jerusalem. 539, 885
[A.J. Arberry, Cambridge]. 14
A. Arioli, University of Rome. 389
R. Arnaldez, University of Paris. 25, 588, 667
M. Athar Ali, Aligarh Muslim University. 371, 573, 751
[A.S. Atiya, Salt Lake City]. 36, 325, 351
A. Ayalon, Tel Aviv University. 813
Ramzi Baalbaki, American University of Beirut. 821
[F. Babinger, Munich]. 1, 3, 8, 9, 36, 43, 62, 65, 110, 172, 190, 296, 308, 317, 391, 393, 419, 422
T. Bachrouch, University of Tunis. 764
Roswitha Badry, University of Freiburg. 333
[T.G. Bailey]. 23
[F. Bajraktarević]. 85, 279, 285, 322
Mohammad al-Bakhit, Al al-Bayt University, Amman. 385, 883, 1000
Çiğdem Balim, University of Manchester. 168, 170, 175, 177, 179, 484, 670, 818, 838, 1044
R.B. Barnett, University of Virginia, Charlottesville. 793
[Th. Bauer]. 1042
A.F.L. Beeston, University of Oxford. 665
M.A.J. Beg, University of Brunei. 672, 871, 892
Doris Behrens-Abouseif, University of Freiburg/Breisgau. 344, 683
[A. Bel]. 654
Afif Ben Abdesselem, University of Tunis. 738
Omar Bencheikh, Centre National de la Recherche Scientifique, Paris. 15
M. Bencheneb, Algiers. 693
R. Bencheneb, Paris. 127
H. Ben-Shammay, Hebrew University, Jerusalem. 539
[E. Berthels]. 44, 48, 68, 81, 478
Th. Bianquis, University of Lyons. 396, 654
J. Bisson, University of Tours. 850
W. Björkman, Uppsala. 481
J.R. Blackburn, University of Toronto. 185, 236, 521
Sheila S. Blair, Richmond, New Hampshire. 383
F.C. de Blois, Royal Asiatic Society, London. 445, 586, 675, 683, 972
[Tj. de Boer, Amsterdam]. 123
H. Boeschoten, University of Tilburg. 893
P.N. Boratav, Centre National de la Recherche Scientifique, Paris. 179, 232, 271
C.E. Bosworth, University of Manchester. 12, 24, 64, 67, 73, 76, 82, 110, 127, 149, 154, 155, 161, 163, 174, 175, 178, 191, 231, 235, 236, 237, 239, 245, 259, 278, 288, 300, 303, 306, 309, 312, 313, 373, 381, 385, 386, 393, 403, 404, 417, 450, 453, 460, 463, 469, 470, 473, 519, 526, 568, 586, 587, 591, 595, 598, 606, 607, 618, 630, 636, 652, 661, 670, 679, 694, 695, 701, 746, 749, 794, 798, 807, 808, 809, 811, 830, 842, 853, 860, 869, 879, 895, 918, 924, 959, 973, 979, 997, 999, 1029, 1034, 1041, 1043, 1050
G. Böwering, Yale University, New Haven, Conn. 841
Mary Boyce, University of London. 343
Jean Boyd, Penrith, Cumbria. 35
F. Braemer, Centre National de la Recherche Scientifique, Paris. 757
Barbara Brend, London. 453
J.T.P. de Bruijn, University of Leiden. 84, 134, 272, 423, 532, 637, 685, 777, 1012
Kathleen Burrill, Columbia University, NJ. 490
J. Burton, University of St. Andrews. 362
J. Burton-Page, Church Knowle, Dorset. 48, 64, 121, 252
Y. Callot, University of Tours. 481, 838, 847
J. Calmard, Centre National de la Recherche Scientifique, Paris. 748, 750, 756
Sheila R. Canby, British Museum, London. 510, 514
J. Carswell, Sotheby's, London. 226
M.G. Carter, New York University. 668, 836
J. Chabbi, University of Paris. 506
C. Chaline, University of Paris. 548
H. Chaouch, University of Tunis. 858
Mounira Chapoutot-Remadi, Institut français d'Etudes arabes, Damas. 160, 1001
E. Chaumont, University of Aix-Marseille. 900
the late J. Chelhod, Paris. 362, 654
P. Chelkowski, New York University. 81, 465
M. Chenoufi, University of Tunis. 402
W.C. Chittick, State University of New York, Stony Brook. 755, 861, 1024
M. Chodkiewicz, Ecole des Hautes Etudes en Sciences Sociales, Paris. 594
Y.M. Choueiri, University of Exeter. 49
V. Christides, University of Ioannina, Athens. 90
J. Couland, University of Paris. 26
Stephanie Cronin, London. 1051
Yolande Crowe, London. 1031, 1038
F. Dachraoui, University of Tunis. 118
F. Daftary, Institute of Ismaili Studies, London. 134, 443, 599, 923
H. Daiber, Free University, Amsterdam. 649, 660
M. van Damme, University of Utrecht. 350
J. Danecki, University of Warsaw. 573
R.E. Darley-Doran, Winchester. 231, 793, 974, 978
G. Dávid, Budapest. 292, 302
[C.C. Davies, Oxford]. 125, 245, 254, 258, 271, 368, 383, 426
R. Davis, Ohio State University, Columbus. 723

R. Deladrière, University of Lyons. 547
F.M. Denny, University of Colorado, Boulder. 299
W.B. Denny, University of Massachusetts, Amherst. 224
Sylvie Denoix, University of Aix-en-Provence. 861
[J. Deny, Paris]. 281, 282, 371, 483, 529, 531, 566
A. Dietrich, University of Göttingen. 37, 112, 687, 693, 707, 732, 1043
S. Digby, Rozel, Jersey. 1050
Christine Dobbin, Australian National University, Canberra. 238
G. Doerfer, University of Göttingen. 583
E. van Donzel, Leiden. 830, 850
H.J. Drossaart Lulofs, University of Amsterdam. 37
J. During, University of Strasbourg. 1019
H. Eisenstein, University of Vienna. 4, 1024
D.S. El Alami, Leicester. 708
Nadia El Cheikh, American University of Beirut. 602
N. Elisséeff, University of Lyons. 133, 817
W. Ende, University of Freiburg im Breisgau. 448, 909
G. Endress, University of Bochum. 859
C. Ernst, University of North Carolina, Chapel Hill. 652
T. Fahd, University of Strasbourg. 52, 65, 97, 108, 155, 350, 381, 562, 601, 647, 678, 705, 706, 728, 734, 830, 889
[H.G. Farmer, Glasgow]. 348
Suraiya Faroqhi, University of Munich. 12, 210, 406, 489, 567, 593, 1054
P.-B. Fenton, University of Strasbourg. 662
Halima Ferhat, University of Rabat. 691, 899
Maribel Fierro, C.S.I.C., Madrid. 480, 574, 636, 708, 819

N

CONTINUATION

NEDĪM, Aḥmed, an Ottoman poet, born in Istanbul, the son of a judge named Meḥmed Bey who had come from Merzifun. His grandfather (according to Gibb, *HOP*, iv, 30) was a military judge named Muṣṭafā. Aḥmed Refīḳ mentions as his great-grandfather Ḳara-Čelebi-zāde [*q.v.*] Maḥmūd Efendi, who also was a military judge. The genealogy given by Aḥmed Refīḳ is, however, wrong because he confuses Ḳaramānī Meḥmed Pas̲h̲a [*q.v.*] with Rūm Meḥmed Pas̲h̲a. The statement that Aḥmed Nedīm is descended from D̲j̲elāl al-Dīn is therefore simply the result of confusion. Little is known of his life. He was a *müderris*, later on intimate terms with Aḥmed III and his grand vizier Dāmād Ibrāhīm Pas̲h̲a [see AL-DĀMĀD]. He probably got his *laḳab* Nedīm from this friendship. Latterly he held the office of librarian in the library founded by his patron Dāmād Ibrāhīm Pas̲h̲a. On hearing of the end of Ibrāhīm Pas̲h̲a and the deposition of the sultan, Nadīm lost his life at the beginning of Rabīʿ I 1143/October 1730 in a horrible way; while escaping from the mob leaving the grand-vizier's palace he fell from the roof and was killed. He was buried in Ayās Pas̲h̲a in Pera beside the historian Fîndîḳlîlî Silāḥdār Meḥmed Ag̲h̲a [*q.v.*].

Aḥmed Nedīm is regarded as one of the greatest of Ottoman poets, one who is still appreciated for his pure language, free from foreign additions. Many literary historians have discussed his merits as a poet (cf. the specimens collected by Gibb, *HOP*, iv, 30 ff.). His collected poems (*Dīwān*; printed Būlāḳ, n.d.; a critical edition with introductions by Aḥmed Refīḳ Bey and Meḥmed Fuʾād Bey appeared in 1338-40 in Istanbul; the most recent critical edition is that of Abdülbâki Gölpınarlı, *Nedim divanı*, Istanbul 1951, 2nd ed. Istanbul 1972; there are manuscripts of the *Dīwān* in Europe in Munich, London and Vienna) enjoys great popularity. Nedīm translated into Turkish the history of Müned̲j̲d̲j̲im-bas̲h̲î [*q.v.*] Aḥmed Efendi (cf. F. Babinger, *GOW*, 234-5; cf. thereon *JA* ser. 7, xiii, 272); he was also one of the Turkish translators of ʿAynī's history (cf. Babinger, *GOW*, 259 ff.; the edict relating to this in Aḥmed Refīḳ, *Hicri on ikinci asırda İstanbul hayatı, 1100-1200*, Istanbul 1930, 85-5) but the manuscript seems to be lost.

Bibliography: Aḥmed Refīḳ's preface to his edition of the *Dīwān*; *Sid̲j̲ill-i ʿot̲h̲mānī*, iv, 549 (very superficial; here his grandfather is said to have been a certain *Ṣadr* Muṣliḥ al-Dīn and his father the judge Meḥmed); Bursalî Meḥmed Ṭāhir, *ʿOt̲h̲mānlî müʾellifleri*, ii, 453-4; J. von Hammer-Purgstall, *GOD*, iv, 310 ff. (who does not appreciate him highly); Gibb, *HOP*, iv, 30; A. Bombaci, *Storia della letteratura turca*, Milan 1956, 385-8; *PTF*, ii, Wiesbaden 1964, 448; Fahir İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 92-107, 400-5, 442, 467-8, 521, ii, 530; W.G. Andrews, *Introduction to Ottoman poetry*, Minneapolis 1976, index; idem, *Poetry's voice, society's song, Ottoman lyric poetry*, Seattle 1985, index; L. Miller, *Ottoman Turkish writers, a bibliographical dictionary of significant figures in pre-Republican Turkish literature*, New York etc. 1988, 105-7 (lists many relevant works in Turkish); Ahmet Evin, *Nedim, poet of the Tulip Age*, University Microfilms, Ann Arbor, Mich. 1988; *İA* art. *Nedîm, Aḥmed* (Fevziye Abdullah Tansel).

(F. Babinger*)

NED̲J̲ĀTĪ BEY, properly ʿĪsā (Nūḥ, also given, is not certain), the first great Turkish lyric poet of the pre-classical period, one of the founders of the classical Ottoman poetry. Born in Edirne (Amasia and Ḳasṭamūnī are also given), the son of a slave, obviously a Christian prisoner of war for which reason he is called ʿAbd Allāh, the name given to converts, he was adopted by a well-to-do lady of Edirne, received a good education and was trained by the poet Sāʾilī. In spite of the fact that his non-Turkish origin was generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic ideas. He came to Ḳasṭamūnī early and there began his poetic career, soon gaining a great reputation. His poems are said here and there to bear traces of the Ḳasṭamūnī dialect. Coming to Istanbul, he at once gained the favour of Sultan Meḥemmed II by a *ḳaṣīda* on winter; in 886/1481 he celebrated the accession of Bāyezīd II in a *ḳaṣīda* and was rewarded by an appointment as secretary in the *Dīwān*. He gained such favour with the Sultan that he was appointed secretary to his eldest son ʿAbd Allāh and was given the title of *bey* when the prince went to Ḳaramān as governor (*müteṣarrif*). After the prince's early death (888/1483), Ned̲j̲ātī returned to the capital with an elegy on the death of the prince which showed deep emotion. After a long interval in which he wrote a great deal but was in continual need, through the influence of Muʾayyad-zāde [*q.v.*] he became *nis̲h̲ānd̲j̲î* [*q.v.*] to Bāyezīd's younger son Maḥmūd when the latter went to Ṣārūk̲h̲ān in 910/1504. Ned̲j̲ātī wrote his finest verse while on the staff of this prince; this was the happiest period of his life. Maḥmūd also died prematurely in 913/1507 in Manisa, the capital of Ṣārūk̲h̲ān, and Ned̲j̲ātī again lost his patron. He returned with a beautiful elegy to Istanbul and finally retired from the service of the court on a modest pension. He took a house on the Wefā Meydānî, where many friends gathered round him, especially his pupils, the poet and *ted̲h̲kered̲j̲i* Edirneli Sehī and the poet Ṣunʿī. Ned̲j̲ātī died on 25 D̲h̲u 'l-Ḳaʿda 914/17

March 1509. He was buried near his own house, at the monastery of Sheykh Wefā and a tombstone was put up by Sehī for him.

He left a *Dīwān* which he had collected on the advice of Muʾayyad-zāde and dedicated to prince Maḥmūd. There is also attributed to him a *methnewī*, which is not otherwise known, entitled *Münāẓara-yi Gül u Khosrew*, also quoted as *Layla u Medjnūn* and *Mihr u Māh*. Even more uncertain seems to be the existence of the *methnewī* mentioned by Sehī, *Gül u Ṣabā*. Nedjātī is also mentioned as a translator of Persian works, but his pupil Sehī says nothing of this. He is said to have translated for prince Maḥmūd the *Kīmiyā-yi seʿādet* of al-Ghazālī (the Persian version of the Arabic *Iḥyāʾ*) and the *Djāmiʿ al-ḥikāyāt* (properly *Djawāmiʿ al-ḥikāyāt wa-lawāmiʿ al-riwāyāt*) from the Persian of Djamāl al-Dīn al-ʿAwfī.

His *Dīwān*, of which there are 21 mss. in Istanbul libraries has been edited by Ali Nihad Tarlan, *Necati Bey divanı*, Istanbul 1963, and gives Nedjātī a very prominent place in Ottoman literature; the *Dīwān* was regarded as a model for all Ottoman poets. Nedjātī, whom Idrīs Bidlīsī in his *Hasht bihisht* calls *Khosrew-i Shuʿarāʾ-i Rūm* and others *Malik al-Shuʿarāʾ* and *Ṭūsī-yi Rūm* (i.e. the Firdawsī of Anatolia), was regarded as the best poet of Rūm. He does not, it is true, reach the heights of Nesīmī, but he surpasses all his predecessors, of whom Aḥmed Pasha and Dhātī were the greatest, in originality and creative power. Only Bāḳī and Fuḍūlī have surpassed him. The problem to be solved by Aḥmed Pasha, Nedjātī and Dhātī was to incorporate completely into Turkish the matter borrowed and translated from Persian literature, which was still felt to be foreign, to adapt Turkish to Perso-Arabic metres and to domesticate fully the Arabic and Persian vocabulary. This was a great achievement for the time. Nedjātī brought about a great change in the literature as regards outlook, feeling and language. In him the age of Sultan Bāyezīd is most clearly reflected. Although he is not to be claimed as a very great poet, he was the king of the gild of poets of his time, who started a great literary movement. Nedjātī combined a thorough knowledge of Persian with a masterly command of Turkish. In the number of his *ghazels* he far surpasses Bāḳī. His work as a poet of *ḳaṣīdas* was original and stimulating. He was specially celebrated for his skill in the use of the proverb.

NEFES (T., from Ar. *nafas* "breath"), the name given to the Turkish folk religious poetry of the Bektāshī Ṣūfī order and other ʿAlawī, Shīʿī or Shīʿī-tinged groups, often performed with a certain *maḳām* [*q.v.*] or melodic musical line.

Legends on the origin of the *nefes* connect Ḥādjdjī Bektāsh [see BEKTĀSHIYYA] with the early 8th/14th century popular mystical poet Yūnus Emre [*q.v.*], recounting that the reluctant Yūnus eventually received the *nefes* or inspiration of the saint, and poured forth hymns on the theme of divine love which themselves became known as *nefesler* "breaths". The *nefes* also expresses strongly love for the Prophet Muḥammad, for ʿAlī and for the Ahl al-Bayt [*q.v.*] in general, and it came to be particularly, though not exclusively, identified with the Bektāshī order. It (and the similar *ilāhī* "divine [hymn]", which had slightly less of a folk character) was often performed to the accompaniment of the *sāz*, a stringed instrument, by the so-called *sāz shāʿirleri* or *ʿāshıḳlar* [see ʿĀSHIḲ].

Only a few *nefesler* were composed in the classical *ʿarūḍ* [*q.v.*] metre, and the vast majority are in *hedje* or syllabic metre, usually of 11 syllables divided 6-5 with one caesura or of 7 or 5 syllables with no caesura. They thus form part of the general body of Turkish folk poetry called *ḳoshma* [*q.v.*] or *türkü*, often sung to a free musical accompaniment.

Most of the writers of the considerable corpus of *nefesler* which has come down to us are anonymous, probably reflecting the secrecy with which the Bektāshīs veiled their rituals; the words of a *nefes* might be written down but not generally made public, and almost none of the musical accompaniments was ever recorded in any kind of notation. We do, however, have some poems after Yūnus Emre's time associated with such famous figures as Ḳayghusuz Abdāl (d. 818/1415 [*q.v.*]), and the *nefesler* of Khaṭāʾī (i.e. the Ṣafawid Shāh Ismāʿīl [*q.v.*]) are still sung by the Bektāshīs today; and by the 19th century, the names of several Bektāshī *sāz shāʿirleri* are known, such as Seyrānī (d. 1866), Turābī (d. 1868), Dertli (d. 1874), Mirʾātī (*flor.* in the 19th century) and Ḥilmī Dede Baba (d. 1907). The famous poet and philosopher Riḍā Tewfīḳ (d. 1949) [see BÖLÜKBASHÎ RIḌĀ TEWFĪḲ, in Suppl.] also wrote several highly valued poems in the genre.

(Tevfik Rüştü Topuzoğlu)

NEFʿĪ (980-1044/1572-1635), the greatest satirist of the Ottomans. ʿÖmer Efendi, whose nom-de-plume (*makhlaṣ*) was Nefʿī, came from the village of Ḥasan Ḳalʿa near Erzerūm (eastern Anatolia). Not much is known of his early life. He spent his early years in Erzerūm where the historian ʿĀlī [*q.v.*], who was a *defterdār* there, became acquainted with him. During the reign of Aḥmed I, fate brought him to the capital Istanbul where he worked for a time as a book-keeper. He failed in an attempt to gain the sultan's favour or that of his son, the unfortunate ʿOthmān II, with some brilliant *ḳaṣīdas*. It was not till the reign of Murād IV that he gained the imperial favour, but his malicious, sarcastic and indecent poems soon brought him into disgrace. He was appointed to the office concerned with the levying and collection of the *djizya* [*q.v.*], and later again became a member of the sultan's circle. His irresistible impulse to make all the notables of the empire the butt of his mockery made him a host of enemies. A satire on Bayrām Pasha, the sultan's brother-in-law and vizier, who had succeeded in being recalled from banishment and again attaining influence, cost him his life. The *muftī* gave his sanction to the execution of the great poet. With the sultan's consent he was shut up in the wood-cellar of the Imperial Palace, then strangled and his body thrown into the sea. The year of his death was Shaʿbān 1044/February 1635, not 1045 as Ḥādjdjī Khalīfa, *Fedhleke*, ii, 183, wrongly says (cf. on the other hand his *Kashf al-ẓunūn*, iii, 318, 631, where the correct date is given).

Nefʿī wrote Turkish and Persian with equal ease. His mastery of technique and natural poetical talent make him one of the greatest Ottoman poets; he is also undoubtedly one of the greatest, although hitherto little-known satirists. The reason why he is so little known is that a scholarly edition with full annotations of his Turkish *Dīwān* entitled "Arrows of Fate", *Sihām-i ḳaḍāʾ*, has so far never been undertaken, so that at the present day hardly any one is able to understand the countless allusions to particular circumstances and the veiled attacks on the individuals dealt with. The publication of his poems demands a knowledge of the conditions of his period, and particularly of life at court, which it is hardly possible to attain and which it would be very difficult to gather from the existing sources. Many of his flashes of wit and allusions are very difficult to understand. Many of his poems are distinguished by an obscenity which can hardly be surpassed and, however great may be their importance for the social history of his time, they are of little value as evidence of his poetic gifts. The "Arrows of Fate" are directed against almost every one prominent in politics and society in his time. In *GOD*, iii, 241, J. von Hammer has compiled a list of them. Some of his poems which pillory existing institutions, like the popular saints, the Ḳalender dervishes [see ḳalandariyya] etc., are of value for social history. Hardly one important contemporary was able to escape his scorn and ridicule. They were all made targets for his "Arrows of Fate" without mercy. He attacked the theologians (*ʿulamāʾ*) particularly unsparingly. Nefʿī's Turkish *Dīwān* has been several times printed: two parts at Būlāḳ in 1253, and in 1269 at Istanbul. Selections (with ample evidence of ʿAbd al-Ḥamīd's censorship!) were published by Abu 'l-Ḍiyāʾ Tewfīḳ in 1311 at Istanbul. There are mss. in European collections in London, Leiden and Vienna. A short *Sāḳī-nāme* by Nefʿī is mentioned in the catalogue of mss. of the Leipzig council library by H.L. Fleischer (p. 547^b). His Persian *dīwān*, not yet printed in its entirety, exists in several mss.; a Turkish translation, based on four mss. has been made by Ali Nihad Tarlan, *Nef'î'nin farsça divânı tercümesi*, Istanbul 1944. A collection of *münsheʾāt* is attributed to him, though it is dubious whether this was ever an independent collection.

On the circumstances of his death, see al-Muḥibbī, *Khulāṣat al-athar*, Cairo 1284/1867-8, iii, 228-9; Farāʾiḍī-zāda, *Taʾrīkh-i gülshen-i maʿārif*, i, Istanbul 1252, 668; and Naʿīmā, *Taʾrīkh*, ii, 489.

Bibliography: In addition to the sources mentioned, see also Gibb, *Ottoman poems*, 208, and *HOP*, iii, 252 ff.; the history of Naʿīmā, i, 586, and Bursalī Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, ii, 441 (according to which parts of his Persian *Dīwān* were published in the *Khazīne-yi Fünūn*); A. Karahan, *Nefʾi*, Istanbul 1954; A. Bombaci, *La letteratura turca*, Florence 1969, 370-3; Karahan, *Nefʾi divanında seçmeler*, Ankara 1985, ²Istanbul 1986; M. Çavuşoğlu, *Ölümünün üçyüzellinci yılında Nefʾi*, Ankara 1987; *İA*, art. s.v. (Abdülkadir Karahan). Examples of Nefʿī's poems are given in Fahir İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 17-19, 70-86, 120-4, 519, 528-9. (F. Babinger)

NEFĪR (a.), a term alluding in Ottoman usage to a musical instrument similar to a horn that comprised a part of the Ottoman band [see mehter]. The person playing the instrument was referred to as *nefīrī*, and, according to the 1755 and 1776 Ottoman salary registers, there were twelve such players in the sultan's band of approximately sixty members. This band, and similar ones like it belonging to high-level Ottoman officials, travelled with their owners wherever they went, and normally played during the day before three prayers, sc. the afternoon one, the one two hours after sunset, and then the one in the morning. They also performed during ceremonial events such as upon a sultan's accession, or during celebrations such as upon the arrival of the news of an Ottoman campaign victory.

The term, in its military usage, alludes to a body of men assembled for a common purpose. The Ottoman practice of the recruitment of volunteers by a general call to arms, referred to as *nefīr-i ʿāmm*, was resorted to on the declaration of war against Russia in 1769 by Muṣṭafā III. He took such a measure because of his reluctance to rely on the ill-trained and financially demanding Janissaries. *Nefīr-i khāṣṣ*, on the other hand, referred to the mobilisation of only a certain well-defined group of people.

Bibliography: For the musical usage, see Rāshid Meḥmed Pasha, *Tārīkh-i Rāshid*, Istanbul 1865, iii, 70, 82; M. D'Ohsson *Tableau général de l'Empire ottoman*, Paris 1791, vii, part 6; I.H. Zeki Pakalın, *Osmanlı tarih deyimleri ve terimleri sözlüğü*, Istanbul 1953, 672.

(F. Müge Göçek)

NEGEV [see AL-NAḲB].

NEMČE (NEMSE; A. *al-Nimsā*), a term (meaning "mute") borrowed from the Slavonic used by the Ottomans to indicate the Germans. In a broader sense, they also used it for the territory of the Holy Roman Empire, which lasted until 1806, and in a restricted sense for the territories under Habsburg rule within the boundaries of modern Austria.

In more recent Arabic sources, Germany is indicated by two terms which occur simultaneously: *Almāniyā* and *Djarmāeniya*. In Ottoman sources *Al(a)mān*, and occasionally *Djermāniya*, also occur next to *Nemče*, without further differentiation. It was only after the foundation of the Austrian Empire in 1804 that the Ottomans, in the course of the 19th century, adopted *Almanya* and *Awusturya* (*Aghusturya* being the older form) as different concepts. In Arabic, on the other hand, *al-Nimsā* was accepted as indicating Austria.

1. In Arabic sources.

Already in the 10th century, al-Masʿūdī (*Murūdj*, iii, 63 = § 906) mentions the Nāmdjīn as a tribe of the Slavs. Amongst the travellers and merchants who travelled through their territory (Germany), al-Masʿūdī's contemporary Ibrāhīm b. Yaʿḳūb [*q.v.*] deserves particular mention, although the name of the territory cannot be established from his account. The most comprehensive mediaeval source in Arabic concerning Austria is al-Idrīsī's *Nuzhat al-mushtāḳ* where information about Austrian toponyms is found in the various climes and sections. The name *al-Nimsā*, however, does not appear. The only Austrian region named specifically is Carinthia (*Ḳaranṭāra*), whose territory stretches out over wide parts of Austria, Hungary and other adjoining states. Cities in Styria, like Graz (*Ikrīzā*), and in Carinthia, like Villach (*Bilāḥ*), are described in greater detail, but Vienna (*Wiyāna*) appears only in an itinerary. The rivers Danube (*Nahr Danū*) and Drau (*Nahr D-r-wa*) are given as boundaries of Carinthia, while the Alps (*Munt Dj-w-z* – Mont [Mons] Jovis) are also attributed to other territories. Al-Idrīsī's criterion for including Austrian cities in his *Geography* apparently was their significance as trading places. He may have been informed by merchants.

Endeavours to identify an Austrian (Styrian) city from Abu 'l-Fidā's *Taḳwīm al-buldān* (Reinaud, *Géographie d'Aboulféda*, ii/1, 311, quoted after Ibn Saʿīd al-Maghribī, cf. *Kitāb al-Djughrāfiyā*, ed. al-ʿArabī 1970, 194) have been unsuccessful.

Bibliography: P. Engels, *Der Reisebericht des Ibrāhīm b. Yaʿqūb*, in *Kaiserin Theophanu*, ed. A. von Euw and P. Schreiner, i, Cologne 1991; H. Eisenstein, *Kärnten in al-Idrīsī's Geographie (1154)* in *WZKM*, lxxxiii (1993). (H. EISENSTEIN)

2. In Ottoman sources and in Ottoman-Habsburg relations.

The hereditary provinces of the Habsburgs had their first contacts with the Ottomans when Carniola, Styria and Carinthia were repeatedly attacked by Ottoman incursions. Sultan Bāyezīd II [*q.v.*] and the Emperor Maximilian I having sounded out diplomatic relations in 1497, 1504 and 1510-11, Ottomans and Habsburgs were brought into continuous, immediate and hostile contact through the political situation in Hungary after the battle of Mohács [*q.v.*] in 1526. Sultan Süleymān I [*q.v.*] undertook two campaigns against Habsburg territory, in 1529 against Vienna and in 1532 across southern Lower Austria, Styria and Carniola. After part of Hungary had been put under direct Ottoman rule in 1541, it was only in 1547 that Ferdinand I succeeded in concluding a treaty, which compelled him to pay to the sultan a yearly tribute of 30,000 golden ducats. This liability of the Habsburgs to paying tribute, interrupted only by war, lasted until the treaty of Zsitvatorok in 1606. At the beginning, the open state of war was interrupted by truce treaties, which were fixed for several years and repeatedly renewed and extended. Only in 1747 did Habsburg diplomacy succeed in concluding an unrestricted treaty (... *mesāgh-i sherʿī oldughī vedjhile müddet-i memdūde* ...). The wars of the 16th and 17th centuries found their origin in the conflict of interests about political power in Hungary. The unsuccessful attack against Vienna in 1683 of Ḳara Muṣṭafā Pasha [*q.v.*] was for the Ottomans the climax of a protracted war, marked by great losses, which led to losing Hungary to the Habsburgs. In the 18th century the latter, due to their alliances with Venice and Russia, and to their political ambitions on the Balkan Peninsula, became involved in three further wars with the Ottoman Empire.

After 1547 the Habsburgs continuously kept ambassadors at the Porte and, during the period of tribute—but only in times of peace—missions were sent yearly to deliver the tribute. After 1606 important embassies used to be sent on specific occasions like the ratification of a treaty or the access to the throne of a new sultan. At first, the Ottomans sent to Vienna *čāʾūshs* [*q.v.*], dragomans [see TARDJUMĀN] and the like in emergency cases only; in the 17th century they also began to send important missions but only for specific purposes. A permanent diplomatic representation of the Ottoman Empire in Vienna began only in 1797 (with a vacancy between 1823 and 1832).

The Treaties of Vienna of 1615 and of Karlowitz [see ḲARLOFČA] of 1699 already contained articles on reciprocal trade. In 1718 a separate commercial treaty was concluded at Passarowitz (Požarevac) [see PASAROFČA], in which it was permitted for Habsburg subjects freely to establish consulates in the ports and on the islands of the Mediterranean, and to organise free shipping on the Danube (the Black Sea excepted). In the twenties of the 18th century, commercial and navigation treaties were also concluded with local leaders of the Barbarian states which were part of the Ottoman Empire. An agreement of 1783 with the Ottomans aimed at protecting Habsburg subjects from piracy and settling questions of compensation. In the commercial treaty of 1784 Habsburg subjects were granted the privilege of free commercial navigation on the Black Sea, a right given to Russia already a year earlier.

Next to the Habsburg Emperors, the Dutch Republic and the Kings of Prussia were the only powers within the Holy Roman Empire to maintain independent diplomatic relations with the Ottomans before the 19th century. During the last war between the Ottomans and the Habsburgs (1788-91), Prussia, in the Convention of Reichenbach of 1790, forced the Emperor Leopold II to renounce any conquest of Ottoman territory.

Apart from the detailed description of the campaigns of Sultan Süleymān I in 1529 and 1532, of the siege of Vienna by Ḳara Muṣṭafā Pasha in 1683, and of the warfare in Hungary and later on in the Balkan Peninsula, Ottoman historiography contains, from the middle of the 17th century onwards, references to the political events in Europe, including the Holy Roman Empire. The data, at first sparse and sporadic (for instance in Kātib Čelebi, Müneddjim-Bashī Aḥmed, Muṣṭafā Naʿīmā, Silāḥdār Fīndīḳlīlī Meḥmed [*q.vv.*]), became increasingly extensive and ac-

curate in the course of the 18th century because diplomatic contacts intensified and interest in information grew. From the second half of the 17th century onwards, the official embassy reports (*sefāret-nāme*), the travel accounts of those who accompanied the important diplomatic missions, and individual treatises provided the Ottomans with a detailed and differentiated picture of the political situation in Europe. Among the travel accounts, a particular place is taken up by Ewliyā Čelebi's description of his journey to Vienna while in the train of the Ottoman embassy of 1665. Further information undoubtedly came from Ottoman prisoners of war: Ḥasan Esīrī left a description of the campaign of 1683 against Vienna, and ʿOthmān Agha of Temesvár provides us with information about his stay in Styria and in Vienna during his captivity.

Samples of the German language are given by Ewliyā Čelebi, who put together a highly imaginative etymology of the term *Nemče* (= *nem Čeh*/Hungarian *nem Cseh* "not Czech").

(M. Köhbach)

NEPAL, a Hindu kingdom with an area of 147,000 km² (80°-88° 15′E, 26° 20′-30° 10′N) rising up on the southern edge of the Himalayas between the Ganges plain (India) and Tibet (China). The southern plain and the central mountains, with a sub-tropical climate suitable for rice culture, nourish a dense population of Indian origin and who speak Indo-Aryan languages: the Hindus of the plain speak Hindi, and the Indo-Nepalese of the mountains speak the official language, Nepali, a branch of Pahāṛī; they dominate tribes speaking Muṇḍā and Tibeto-Burmese languages [see HIND. iii. Languages.]. The high valleys shelter a thinly-scattered population of Tibetans. The total population was 19,360,000 according to the 1991 census. It is almost 90% Hindu, and Hinduism is the official religion. The main religious minorities, whose numbers fluctuate from one census to another, are the Buddhists (between 5 and 10%) and the Muslims (*ca.* 3%).

The toponym Nēpāl, with no known etymology (written *Naypāl* or *Nīpāl*, نيپال), is attested from the 4th century AD in Sanskrit epigraphy, and was known to the Muslims of the 5th/11th century through al-Bīrūnī's India (Eng. tr. Sachau, *Alberuni's India*, London 1910, i, 98); it designated solely the valley of Katmandu (Kāṭhmāṇḍū). Hindu kings ruled there over an ethnically Tibeto-Burmese population, the Newār (largely Hindu with a strong Buddhist minority) which prospered thanks to trade with India, Tibet and China. The valley recognised the suzerainty of the Dihlī sultan ʿAlāʾ al-Dīn Khaldjī (695-715/1296-1316 [see KHALDJĪS]); it was raided by the Bengal sultan Shams al-Dīn Ilyās (746-59/1345-58) in 750/1349 (L. Petech, *Medieval Nepal*, Rome 1958, 103-4, 118-22, 177; *Hommage à Sylvain Lévi*, Paris 1964, 23). According to the chronicles, the first Muslim merchants coming from Kashmīr established themselves at Kāṭhmāṇḍū under Ratna Malla (1482-1512); their presence is attested from the 17th century onwards by the Catholic missionaries then established in Tibet and Nepal, and, from 1738 onwards by official Nepali documents. The remainder of what is now modern Nepal was shared out amongst some fifty kingdoms; the land of the plain cultivated by the petty rulers of the mountains came, in the 14th century, under the control of the Dihlī Sultans, those of Bengal and then the Mughal emperors; these petty rulers, like the kings of the Kāṭhmāṇḍū valley, paid tribute to them in the form of elephants. The population of the Nepal plain thus included some Muslims from that time; some of these, makers of glass bracelets above all, became established in the mountains during the 17th century.

With the decline of the Mughals, whilst the English East India Co. secured a foothold in northern India, the present Indo-Nepalese dynasty of Gorkha created the modern state of Nepal. Prithwī Narāyaṅ (1742-74) conquered the Kāṭhmāṇḍū valley in 1768-9 (despite armed intervention by the Nawwāb of Bengal and the British) and subdued the eastern districts, including Sikkim; his successors continued the policy of expansion towards the west until, in 1814, their lands became contiguous with those of the Sikhs. Prithwī Narāyaṅ secured British recognition and that of the puppet Mughal emperor Shāh ʿĀlam II (1759-1806) in a *farmān* of 1184/1771 (B. Āčārya, *Shrī 5 baṛā-mahārādjādhirādj Prithwī Narāyaṅ Shāh-ko sankśipta djīwanī*, Katmandu 1967, iv, 713-18). Tribute was paid from that time onwards to the British until the Anglo-Nepalese War of 1814-16 and the treaty of 1818 which blocked Gorkha expansion and set up the frontier between Nepalese and British territories. The Rāṅās, mayors of the palace who directed affairs in the country from 1846 to 1951, put relations with Britain on a normal footing; they helped them in 1857-8 to recover Lucknow, but gave refuge to some Shīʿī nobles from that city. The independence of Nepal was recognised in a treaty of 1923.

The evidence of travellers like Francis Hamilton and the British Residents in Nepal like Brian H. Hodgson, confirmed by the archives and by legal texts, has brought out the religious policy of the new dynasty. It strengthened the Hindu character of the kingdom. Faithful to the tradition already set forth by al-Bīrūnī (*op. cit.*, i, 19-20), it insisted on the impurity of Muslims; they were considered as "barbarians" (*mleččha*) and severely punished if they caused the pollution of Hindus of pure caste. It introduced new measures in forbidding them to proselytise (allowed

until then), as also were forbidden Christian missionaries, who were definitively expelled, together with their converts. The Muslims were nevertheless (apart from a temporary expulsion of Ka<u>sh</u>mīrī traders at the end of the 18th century) able to stay, to engage in commerce and to enjoy freedom to practise their religion. They did not have any personal law of their own; in regard to marriage (except for prohibited degrees), divorce, inheritance and the administration of pious foundations, they were always subject to Hindu law and answerable to Hindu judges. The discriminatory clauses regarding them were enshrined in the legal codes of 1854 and 1935; they remained in force until the Code of 1963. This last abolished the penalties to which Muslims were liable for breakages of the caste rules; but despite the suppression of the principle of religious discrimination in the 1962 Constitution, it retained the prohibition of proselytism, and this last was even inserted in the Constitution of 1990.

Meanwhile, with the fall of the Rāṅās in 1951, the land was opened up to modernisation. Censuses and ethnological fieldwork allow us to construct an ethnology of the Muslims of Nepal. Amounting to some 570,000 persons, they are almost all living on the plain, where they make up an average of 10% of the population there. They are petty traders, artisans and peasants; also, some 2,000 petty traders (Ka<u>sh</u>mīrīs and Hindūstānīs) live in the Kāthmāndū valley, whilst the 10-15,000 manufacturers of bracelets in the mountains to the west of Kāthmāndū live by agriculture and the peddling of ornaments. All of these originate from the Ganges plain and speak dialects of Hindi; stemming mainly from Hindus converted to Islam, they form a very hierachical society, an Islamic version of the Hindu caste system. They are almost all Ḥanafī Sunnīs, with a few Twelver <u>Sh</u>īʿīs attested in the plain. The religious life has an Indian character and is heavily impregnated with Ṣūfism and the cult of saints [see HIND. ii. Ethnography]. This fidelity to the cult of saints, current in the highest classes, amongst the Ka<u>sh</u>mīrīs of Kāthmāndū in particular, is under fire in the more popular circles from the reform doctrines (called "Wahhābism" by their opponents) of the Deoband [*q.v.*] and of the Ahl-i Ḥadī<u>th</u> [*q.v.*] schools introduced as far as the mountains by migrant workers who come back from the towns of India bearing cheap, edifying literature in Urdu; mosques and village Ḳurʾān schools have multiplied, and a few scores of Nepalis make the *ḥa<u>djdj</u>* each year.

The firm and constant policy of the monarchy has been to forbid all violence against religious minorities, so that, despite the legal discrimination under which they live, the Muslims have always felt themselves more secure in Nepal than in India. Facing an internal opposition more and more active since 1979, the monarchy has since then cultivated its Muslim subjects, whose vote is a valuable support.

Bibliography: For a general survey of Nepal, see M. Gaborieau, *Le Népal et ses populations*, Brussels-Paris 1978. On the history and position of the Muslims there, there are two outstandingly important pieces of evidence: F. Hamilton, *An account of the kingdom of Nepal*, Edinburgh 1819, repr. Delhi 1971; and B.H. Hodgson, *Some account of the system of law and police as recognized in the State of Nepal*, in *JRAS*, i/2 (1834), 258-79. The general body of sources (to be completed by the references given in the text of the article) are gathered together, and often edited for the first time, in Gaborieau, *Récit d'un voyageur musulman au Tibet*, Paris 1973; idem, *Minorités musulmans dans le royaume hindou du Népal*, Paris 1977. For the ethnology and political evolution of these minorites, see also Gaborieau, *Muslim minorities in Nepal*, in R. Israeli (ed.), *The crescent in the East Islam in Asia Major*, London 1982, 79-101; idem, *Ni Brahmanes, ni Ancêtres: colporteurs musulmans du Népal*, Paris 1992. (M. GABORIEAU)

NERGISĪ, NERGISĪ-ZĀDE MEḤMED EFENDI (d. 1044/1635), pre-eminent Ottoman prose stylist.

He was born in Sarajevo, probably around 994/1586, son of the *ḳāḍī* Nergis Aḥmed Efendi, and completed his education in Istanbul, becoming a protégé of Ḳāf-zāde Fayḍ Allāh Efendi (d. 1020/1611), from whom (and not, as in some accounts, from his son Ḳāf-zāde ʿAbd al-Ḥayy Fāʾiḍī Efendi) he received his *mülāzemet* [*q.v.*]. He may have served briefly as a *müderris*, but his principal employment was as *ḳāḍī* in various posts in Rūmeli, mainly in Bosnia. Following early appointments (during the period *ca.* 1022-27/*ca.* 1613-18) to Gabela and Čayniče, he was invited by Ḳāf-zāde Fāʾiḍī, then *ḳāḍī* of Salonica, to act as his *nāʾib* (early 1028/1619). On Ḳāf-zāde's dismissal in early 1029/1620, Nergisī again sought a *ḳāḍīlïḳ*, and was appointed, successively but with intervals, to Mostar (1030/1620-1) and shortly afterwards to Yeñi Pazar, to Elbasan (1034/1624-5), Banjaluka (1038/1628-9), and Monastir (1042/1632). In 1044/1634-5 he was appointed by Murād IV as *waḳʿa-nüwīs* for the Revan campaign, but died at its outset, near Gebze on the Gulf of Izmit, as the result of a fall from his horse (9 <u>Sh</u>ewwāl 1044/28 March 1635). (On Nergisī's career, see Ö.F. Akün, *Nergisī*, in *İA*, ix, 194-6.)

Though a minor figure as a *ḳāḍī*, Nergisī was recognised as one of the leading prose writers of his day, aided by his friendship with the Ḳāf-zādes and with fellow littérateurs such as Weysī and <u>Sh</u>ey<u>kh</u> al-Islām Yaḥyā among others. His principal works fall into three groups:

1. *<u>Kh</u>amse*, printed Būlāḳ 1255/1839 (once in *taʿlīḳ* script, once in *nes<u>kh</u>*), and Istanbul 1285/1868-9. In chronological order of composition, these five works are: (i) *<u>Gh</u>azawāt-i Mesleme* (1030/1620-1), a brief account (attributed to Ibn al-ʿArabī, Muḥyi l'-Dīn [*q.v.*], but generally considered spurious) of the campaign of the Umayyad general Maslama b. ʿAbd al-Malik [*q.v.*] against the Byzantines and his five sieges of Istanbul. The work was translated into French in 1741 (E. Blochet, *Catalogue des manuscrits turcs*, Paris, 1933 ii, 38). (ii) *Ḳānūn al-re<u>sh</u>ād*, written 1033/1623-4 as an accession gift for Murād IV. Initially a translation of a 16th-century Persian "mirror for princes" written for <u>Sh</u>āh Muḥammad <u>Kh</u>udābanda [*q.v.*], the work was considerably expanded with Nergisī's own observations on Ottoman history. (iii) *Me<u>sh</u>āḳḳ al-ʿu<u>shsh</u>āḳ* (1034/1624-5), originally a collection of ten love stories, of contemporary origin and significance, apart from two tales taken from the *te<u>dh</u>kire* of ʿĀ<u>sh</u>ïḳ Čelebi [*q.v.*]. Nergisī later re-used six of the stories in the *Nihālistān*. (iv) *Iksīr-i seʿāda* (or *Iksīr-i dewlet*, 1041/1632), a translation of part of al-<u>Gh</u>azālī's [*q.v.*] *Kīmiyāʾ al-saʿāda* on ethics. Nergisī's text became a popular Ottoman version and was separately printed several times. (v) *Nihālistān*, (1042/1632-3, his last work). Containing 25 stories arranged in five sections (*nihāl* = "offshoots"), this was compiled as a collection of ethical, exemplary and cautionary tales intended as an Ottoman literary and cultural *naẓīre* to Saʿdī's *Gülistān* and the *Bahāristān* of <u>Dj</u>āmi [*q.vv.*]. Like *Me<u>sh</u>āḳḳ al-ʿu<u>shsh</u>āḳ*, it too is significant for the use of contemporary allusions.

2. *Mün<u>sh</u>eʾāt*. Nergisī's autograph collection of his

own letters (finally totalling 38) was first made for presentation to Sheykh al-Islām Yaḥyā during the latter's first meshīkhat (1031/1622-3) and later expanded to include letters down to 1036/1626-7 (published in J.R. Walsh, *The* Esālībü 'l-mekātīb (Münşe'āt) *of Meḥmed Nergisī Efendi*, in *Archivum Ottomanicum*, i [1969], 213-302). Manuscripts of a later collection, probably made by Shaykh Meḥmed b. Meḥmed Sheykhī, contain over 50 letters.

3. *al-Waṣf al-kāmil fī aḥwāl al-wazīr al-ʿādil* (1038/1628), an account of the exemplary character and deeds of Murtaḍā Pasha as governor of Buda 1626-8. (On the various mss. of this unpublished work, see A.S. Levend, *Gazavāt-nāmeler ve Mihaloğlu Ali Bey'in gazavāt-nāmesi*, Ankara 1956, 105-6.)

Nergisī was also an accomplished poet, and renowned as a calligrapher both for his skill in the *taʿlīḳ* script, and for his speed of copying.

For two centuries after his death, Nergisī was honoured as master of the mature Ottoman *inshā'* prose, and his style was widely imitated. However, with the rising popularity of a simpler, more direct literary style in the *Tanẓīmāt* era and later, he was reviled for promoting what was considered a stilted and unnaturally affected style, a florid elegance which was held to have completely sacrificed sense to sound in a bombastic, overladen language. In the wake of this extreme critical reaction, his works have become largely neglected. It is nonetheless accepted that his influence upon the development of the Ottoman *inshā'* style was profound.

Bibliography: The scanty details on Nergisī's career are found mainly in his own works listed above; for entries (not always reliable) in Ottoman *tedhkire* and other biographical works, see the bibl. to Ö.F. Akün's essential article s.v. in *İA*, ix, 194-7.

(Christine Woodhead)

NESH'ET Khōdja Süleymān, an Ottoman poet. He was born in Edirne in 1148/1735, the son of the poet Aḥmed Rafīʿ Efendi, then in exile; the latter is known as *Muṣāḥib-i Shahriyārī*. With his father, who had regained the sultan's favour by writing a *sharḳī* which met with general approval, he came to Istanbul. He also accompanied his father on a journey to the Ḥidjāz, and the young *Ḥādjdjī*, on his way back, joined the Mewlewī order in Ḳonya. After his father's death, he devoted himself to study, especially Persian, in order to understand the *Methnewī*. In Persian, which he came to love passionately, he attained a high degree of perfection, with the result that he had more pupils than an ordinary school in his house in Mollā Gūrānī, where he taught Persian and expounded the *Methnewī* (*Methnewī-khwānlīḳ*). He enjoyed great prestige among the people. Later he attached himself to the Naḳshbandī Sheykh Bursawī Emīn Efendi. He held a fief, and therefore took part in 1182/1768 in the Russian campaign. He could use the sword as well as the pen. Nesh'et died in 1222/1807 and was buried outside the Top Ḳapu.

He received the nom-de-plume of Nesh'et from Djūdī. Nesh'et was a moderate poet but an admirable teacher. No-one would say an unkind word about him, and they winked at his smoking the *čibuḳ*, which was otherwise forbidden. He wrote poetry in Turkish and in Persian. Many of his pupils far surpassed him, such as Ghālib Dede [*q.v.*]. He left a *Dīwān*, collected together in 1200/1785 by his pupil Pertew Efendi, which was printed in two parts in Būlāḳ (1252/1836). His *Makhlaṣ-nāmes* (about 20 in the *Dīwān*) are distinctive in character; these are poems in which he bestowed epithets upon gifted pupils. In addition, he left writings on the Naḳshbandiyye: *Ṭūfān-i maʿrifet; Tardjamat al-ʿishḳ; Maslak al-anwār wa-manbaʿ al-asrār*. His *Terdjeme-i sharḥ-i dū-ʿbayt-i Mollā Djāmī* was printed at Istanbul in 1263. A biography of him by Pertew Efendi which was continued by Emīn Efendi is said to exist.

Bibliography: Bursalī Meḥmed Ṭāhir, *ʿOthmānlī müʾellifleri*, ii, 461; Muʿallim Nādjī, in *Medjmūʿa*, no. 8, 74-6; idem, *ʿOthmānlī shāʿirleri*, 64-70; *Khazīne-yi funūn*, Istanbul 1312, ii, 230 (*Eslāf*); Thüreyyā, *Sidjill-i ʿothmānī*, iv, 552; Sāmī, *Ḳāmūs al-aʿlām*, vi, 4576; Meḥmed Djelāl, *ʿOthmānlī edebiyyātī nümüneleri*, Istanbul 1312, 263; Flügel, *Die arabischen ... Hss. ... zu Wien*, i, 686; *İA*, art. *Neş'et* (Fevziye Abdullah Tansel). Two of his *ghazels* are given in Fahir İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 435-6.

(Th. Menzel)

NESHRĪ (d. before 926/1520), Ottoman historian.

Neshrī's one, partially-surviving, historical work, the *Djihān-nümā*, marks a pivotal point in both the development and the study of Ottoman historiography. However, very little is known with certainty about its author, aside from his *makhlaṣ* Neshrī, which occurs at the end of the history in a *ḳaṣīda* addressed to the reigning sultan Bāyezīd II [*q.v.*]. From scanty and largely unreliable references by later Ottoman writers such as Laṭīfī, ʿĀshīḳ Čelebi, ʿĀlī and Kātib Čelebi [*q.vv.*], it was long thought that his given name was Meḥmed and that he lived mainly in Bursa, for some time as *müderris* at the Sulṭāniyye *medrese*. References in the *Djihān-nümā* implying a personal knowledge of Bursa support the assumption of his residence there, and the style of his history suggests that he was a member of the *ʿulemā'*. Otherwise, there is nothing in the history or in other known contemporary sources to confirm either his name or his profession. A certain Neshrī Ḥüseyn b. Eyne Beg mentioned in a Bursa court register of 884/1479 may or may not be identical with the historian. The only explicitly personal information in the *Djihān-nümā* establishes that Neshrī was present in the Ottoman camp at the time of Meḥemmed II's death in 886/1481, and that his account of the subsequent Janissary riots in Istanbul is based on personal observation. The date of his death is also uncertain, though it is possible that, as stated by Laṭīfī, he lived into the reign of Selīm I (for biographical discussion, see F. Taeschner, *Ǵihānnümā. Die altosmanische Chronik des Mevlānā Meḥemmed Neschrī*, Leipzig, i, 1951, 9-14; M.C. Şehabeddin Tekindağ, *Neşrî*, in *İA*, ix, 214-15; V.L. Ménage, *Neshrī's History of the Ottomans: the sources and development of the text*, London 1964, 1-5).

Neshrī's *Djihān-nümā* was originally conceived as a universal history in six parts, but only the last section is known to be extant. This consists of an introduction, and three *ṭabaḳas* covering respectively the Oghuz Turks, the Saldjūḳs of Rūm and the Ottomans; it chronicles events down to 890/1485 (Bāyezīd II's conquest of Akkerman), and concludes with a list of the principal viziers and holy men of the Ottoman period, followed by the dedication to Bāyezīd II. The style is a relatively straightforward Ottoman prose. The work was probably completed between 892/1487 and Rabīʿ II 898/February 1493 (Ménage, *Neshrī's History*, 9). Neshrī's sources are not named in the text, but for the Ottoman period appear to have been principally ʿĀshīḳ-pasha-zāde's history, a chronological list, *taḳwīm*, of the mid-15th century, and an anonymous chronicle of the late 15th century (P. Wittek, *Zum Quellenproblem der ältesten osmanischen Chroniken (mit Auszügen aus Neśrī)*, in *MOG*, i [1921-2], 77-150; Ménage, *op. cit.*, 10-19). The *Djihān-nümā*

thus amalgamates the three principal Ottoman historiographical traditions then existing (H. İnalcık, *The rise of Ottoman historiography*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 152-67; Ménage, *The beginnings of Ottoman historiography*, in Lewis and Holt (eds.), *op. cit.*, 168-79). The *Djihān-nümā* became a principal source for many later Ottoman historians (e.g. Idrīs Bidlīsī, Saʿd al-Dīn, ʿĀlī, Solaḳ-zāde and Müneddjim-bashî [*q.vv.*]), and thus had a major influence upon subsequent interpretations of early Ottoman history. It was also one of the main sources used in Leunclavius's *Historiae Musulmanae Turcorum ... libri xviii*, Frankfurt 1591, and so entered into European writing on the Ottomans (Ménage, *Neshrī's History*, 31-40, on the "Codex Hanivaldus").

The *Djihān-nümā* has been published twice, once in facsimile (F. Taeschner, *Ǵihānnümā ...*, i [Codex Menzel], 1951, ii [Codex Manisa], 1955), and once as an edition with modern Turkish transcription (F.R. Unat and M.A. Köymen (eds.), *Mehmed Neşrî: Kitāb-i Cihān-nümā, Neşrî tarihi*, i, Ankara 1949, ii, Ankara 1957).

Bibliography: In addition to works mentioned above, see F. Babinger, *GOW*, 38-9; F. Arık, *Onbeşinci asır tarihçilerinden Neşrî'nin hayatı ve eserleri* Istanbul 1936; F. Taeschner, *Neşri tarihi elyazıları üzerine araştırmalar*, in *Belleten*, xv (1951), 497-505.

(CHRISTINE WOODHEAD)

NESĪMĪ, SEYYID ʿIMĀD AL-DĪN, known as Nesīmī, an early Ottoman poet and mystic, believed to have come from Nesīm near Baghdād, whence his name. As a place of this name no longer exists, it is not certain whether the *laḳab* should not be derived simply from *nasīm* "zephyr, breath of wind". That Nesīmī was of Turkoman origin seems to be fairly certain, although the "Seyyid" before his name also points to Arab blood. Turkish was as familiar to him as Persian, for he wrote in both languages. Arabic poems are also ascribed to him. Little is known of his life; part of it fell in the reign of Murād I (761-91/1360-89), as his biographers tell us. He was at first a member of the school of Shaykh Shiblī (247-334/861-945), but about 804/1401 he became an enthusiastic follower of Faḍl Allāh Ḥurūfī [*q.v.*], with whom he was undoubtedly personally acquainted. He championed the views of his master with ardour and at the risk of his life. The poet Refīʿī, author (811/1408) of the *Beshāret-nāme* (copies in London, cf. Rieu, *Cat.*, 164-5, and Vienna, cf. Flügel, *Katal.*, 461, 462, two mss.; the second more complete), and presumably a *Gendj-nāme* (in Vienna, cf. Flügel, *Kat.*, i, 720) was his pupil. A certain Shāh Khandān who was a dervish mystic is mentioned as his full brother. Nesīmī met a cruel death in 820/1417-18 at Aleppo, where he was flayed for his heretical poems, on a *fetwā* of the extremely fanatical *muftī*. He is considered the greatest poet and preacher of the Ḥurūfī sect.

His work consists of two collections of poems, one of which, the rarer, is in Persian and the other in Turkish. The Turkish *Dīwān* consists of 250-300 *ghazels* and about 150 quatrains, but the existing mss. differ considerably from the printed edition (Istanbul 1298/1881). No scholarly edition has so far been undertaken, but a study of his vocabulary is given by Jahangir Gahramanov, *Nasimi divanynyn leksikasy*, Baku 1970. The Persian *Dīwān* has been edited by Muḥammad Riḍā Marʿashī, *Khurshīd-i Darband. Dīwān-i ʿImād al-Dīn Nasīmī*, Tehran 1370 *Sh.*/1991. Nesīmī's spiritual influence on the dervish system of the earlier Ottoman empire was considerable. The pro-ʿAlid guilds, in particular, honour Nesīmī as one of their masters, testimony to whose far-reaching influence is found even in the earlier European travellers like Giov. Antonio Menavino (*ca.* 1540; cf. F. Babinger, in *Isl.*, xi. 19, n. 1, from which it is evident that Nicolas de Nicolay copied him and therefore cannot be regarded as an independent source, as Gibb, *HOP*, i, 356-7, thought) and Sir Paul Ricaut (17th century; cf. Gibb, *HOP*, i, 357 ff.). Nesīmī's importance as a poet and mystic can only be estimated and realised in connection with a thorough study of the older Ḥurūfī texts, among which a most important one is that mentioned but not recognised by W. Pertsch, *Pers. Handschr. Berlin*, 264-5, no. 221, by Sayyid ʿAlī al-Aʿlā (d. 822/1419) because it might show the connection of the Ḥurūfiyya with the Bektashiyya. Nesīmī's poems were made popular in earlier times, especially by the wandering Ḳalendar dervishes [see ḲALANDARIYYA] and were known to everyone.

Bibliography: Gibb, *HOP*, i, 343 ff.; J. von Hammer, *GOD*, i, 124-5; Abdülbâki Gölpınarlı, *Nesimi-Usuli-Ruhi*, Istanbul 1953; Kathleen Burrill, *The quatrains of Nesimi*, The Hague 1972. *İA*, art. s.v. (Gölpınarlı); also the Ottoman biographers of poets who, however, contribute practically nothing to the life history of Nesīmī. Some examples of his work are given in Fahır İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 154-6, 522-6.

(F. BABINGER*)

NEWʿĪ, YAḤYĀ B. PĪR ʿALĪ B. NAṢŪḤ, an Ottoman theologian and poet, with the nom de plume (*makhlaṣ*) of Newʿī, was born in Malghara [see MALḲARA] (Rumelia), the son of Shaykh Pīr ʿAlī, in 940/1533. Up to his tenth year he was taught by his learned father and then became a pupil of Ḳaramānī-zāde Meḥmed Efendi. His fellow pupils were the poet Bāḳī [*q.v.*] and Saʿd al-Dīn, the famous historian [*q.v.*]. He was an intimate friend of the former. He joined the *ʿulamāʾ*, became *müderris* of Gallipoli in 973/1565 and after filling several other offices became a teacher in the Medrese of Mihr u Māh Sulṭān [*q.v.*]. In 998/1598 he was appointed *Ḳāḍī* of Baghdād, but before he could take up office, Sultan Murād III appointed him tutor to his son Muṣṭafā and to the princes Bāyezīd, ʿOthmān and ʿAbd Allāh. When after Murād III's death (1003/1595) the usual slaughter of the princes deprived him of all his charges, he retired completely from public life and lived on a pension granted him by the new sultan. He died at Istanbul in Dhu 'l-Ḳaʿda 1007/June 1599 and was buried in the court of the Sheykh Wefāʾ mosque. His son was Newʿī-zāde ʿAṭāʾī [*q.v.*].

Newʿī was a man of great learning, and his encyclopædic knowledge was most clearly revealed in the best-known of his works, the *Natāʾidj al-funūn wa-maḥāsin al-mutūn*, in which he surveyed the twelve most important branches of learning; on it see [J. von Hammer] *Encyklopädische Übersicht der Wissenschaften des Orients*, part i, Leipzig 1804, 22 ff., and the German translation of the story of Shādān and Beshīr, *ibid.*, 24 ff., which forms the concluding section of this work. Bursalî Meḥmed Ṭāhir gives a list of other prose works in his *ʿOthmānlî müʾellifleri*, iii, 437-8, with references to the libraries in which they are. In poetry, Newʿī imitated the style of his contemporary Bāḳī without however reaching his level. His poems which were collected in a scarce *Dīwān* (ms. in Istanbul, Ḥamīdiyye library), lack ease and betray too readily the learned author who frequently makes his work difficult to understand with unusual words and obscure allusions. He tried his skill in different forms of verse, the *ḳaṣīda*, *ghazel* and *methnewī*, without however

attaining popularity in any one of them. His fame as a poet was completely overshadowed by that of his contemporary and friend Bāḳī. NewꜤī's high position as an author he owes to his learned work, particularly the already-mentioned encyclopædia, which was very popular, as is evident from the numerous mss. still in existence in European collections (e.g. Berlin, Bologna, Dresden, Leiden, London [3 copies], Uppsala, Vienna). A *Süleymān-nāme* by him (Paris, *Bib. Nat.*, cod. reg. 44, Cat. no. 308 und F. Babinger, *GOW*, 76) does not seem to be mentioned by his biographers. His son NewꜤī-zāde ꜤAṭāʾī wrote a very full life of him (418-27 of the *dhayl* to Ṭashköprüzāde's work), mentioning that he wrote over 30 *risāles* on *kalām, fiḳh, Ꜥaḳāʾid, manṭiḳ, taṣawwuf*, etc.

Bibliography: Meḥmed Thüreyyā, *Sidjill-i Ꜥothmānī*, iv, 634; Von Hammer, *GOD*, iii, 108; Gibb, *HOP*, iii, 171 ff.; Ḥādjdjī Khalīfa, *Fedhleke*, i, 120 ff., also the biographies of poets by Ḳinalī-zāde and ꜤAhdī; Brockelmann, II², 587-8, S II, 658; *İA* s.v. (Abdülkadir Karahan). (F. Babinger)

NEWꜤĪ-ZĀDE [see ꜤAṬĀʾĪ].

NEWRES, the names of two Ottoman poets.

1. ꜤAbd al-Razzāḳ, known as Newres, or more accurately, Newres-i Ḳadīm, "Newres the Elder", to distinguish him from ꜤOthmān Newres [see below], came from Kirkūk in northern ꜤIrāḳ and was probably of Kurdish origin. He seems, however, to have come to Istanbul at an early age to prosecute his studies. Here he became a *müderris* but in the year 1159/1746 entered upon a legal career. According to the *Sidjill-i Ꜥothmānī*, he held the office of *ḳāḍī* in Sarajevo and Kütahya. His sharp tongue, which found particular expression in daring and malicious chronograms (*tawārīkh*), earned him banishment to Rethymno (Crete) along with the poet Hashmet and then to Bursa; he was later, according to Wāṣif (*Taʾrīkh*, 211), sent back to Kütahya. In any case, he died in Bursa in Shawwāl 1175/May 1762 and was buried in the cemetery opposite the entrance to the mosque of Pīr Uftāde Meḥmed, the founder of the order of the Djalwatiyya. ꜤAbd al-Razzāḳ Newres composed a *Dīwān* in Persian and Turkish (printed Istanbul 1290 and probably 1304), and also a history of the war with Nādir Shāh in 1143/1730 in which he took part on the staff of Ḥekīm-Oghlu ꜤAlī Pasha. The little book called *Tebrīziyye-i Ḥekīm-Oghlu ꜤAlī Pasha* is written in ornate language and is of no historical value. The fair copy in the author's hand is preserved in the Berlin Staatsbibliothek (Cod. Or. 8°, 2186). Newres also enjoyed the reputation of being a distinguished *munshiʾ*. Excerpts from his *inshāʾ* are given by J. von Hammer in his *GOR*, ix, 643-4. His *Dīwān* is called *Mabāligh al-ḥikam*, which gives the year 1172/1758 for its completion (cf., however, a similarly titled work in Vienna: Flügel, *Cat.*, iii, 486, no. 1991).

Bibliography: See F. Babinger, *GOW*, 294-5, with further references; von Hammer, *GOD*, iv, 321-7; Gibb, *HOP*, iv, 133-9, vi, 287-90; *İA* art s.v. (Ömer Faruk Akın).

2. ꜤOthmān, called Newres or, to distinguish him from his older namesake, Newres-i Djedīd, came from Chios. He held several military posts in the capital and died there in 1293/1876 in retirement. He is buried in the Ḳaradja Aḥmed cemetery in Üsküdār. His collected poems have been twice printed at Istanbul in 1257 and in 1290 (by Yūsuf Kāmil Pasha) (*Dīwān-i ꜤOthmān Newres*). In 1302 there was published at the suggestion of ꜤAbd al-Karīm Nādir Pasha in Istanbul under the title *Ether-i nādir* specimens of his prose and verse. A Turkish translation of the *Gulistān* of SaꜤdī [*q.v.*] by him exists in ms. ꜤOthmān Newres had a very thorough command of the three languages of Islam and wrote poetry in all three.

Bibliography: Bursalī Meḥmed Ṭāhir, *ꜤOthmānlī müʾellifleri*, iii, 465-6; *İA*, art. s.v. (Fevziye Abdullah Tansel). (F. Babinger)

NEWROKOP, Nevrokop, a town in southwestern Bulgaria, in Ottoman times (*ca.* 1380-1912) *chef-lieu* of a *ḳāḍīlīḳ* of the *sandjaḳ* of Siroz (Serres) and a centre of Islamic life of considerable importance. Nevrokop is situated in a wide plain (30 × 10 km) between the Rhodopes and Pirin Mountains, at an altitude of 565 m, 20 km to the north of the present Greco-Bulgarian frontier. The river Mesta (Kara Su), whose valley constitutes the only traffic artery of any importance, passes the town a few kilometres to the east.

Nevrokop is the indirect successor of the ancient town of Nicopolis ad Mestum, whose ruins are situated 9 km to the east of the town, opposite the river. The *Notitiae Episcopatuum* mention this town as the seat of an archbishopric until the 11th century. Near the present town of Nevrokop, the ruins of a 9th-10th century castle and a settlement have been found, which are the more direct forerunner of the present town. The district in which Nevrokop is situated must have been conquered by the Ottomans between 1374 and 1383 (capture of the nearby key-fortresses of Drama and Serres; see SIROZ). With the capture of the Nevrokop valley and that of Razlog more to the northwest, connection could be made with the Thracian plain around Filibe (Plovdiv), by following the upper course of the Mesta and then across a low pass to the valley of Čepino, which is in direct communication with Thrace, which was in Ottoman hands since the late 1360s. The town is first mentioned with its present name in the Ottoman *Taḥrīr defter* Mal. no. 525 from 1445, in which it is described as a large Christian village numbering 137 households. With *ca.* 600 inhabitants, it was by far and wide the largest settlement in the area. After this date, Nevrokop was to develop rapidly and in a century changed into a predominantly Muslim town. The *Taḥrīr* T.D. 3 from 1453-4 has Nevrokop with 265 Christian and twelve Muslim households, or roughly 1250 inhabitants. Great changes occured in the interval 1454-1517, when Muslim civilians came to settle in the town, and Yürüks from Anatolia by way of the Aegean plains settled in or next to many formerly entirely Christian Bulgarian villages. The *Taḥrīr* T.D. 70, of which the actual census was taken in 1517, mentions Nevrokop as a town, containing 167 Muslim households and 319 households of Christians, or *ca.* 2070 inhabitants. The settlement, which in 1454 was only 4% Muslim now had 34% Muslims. Further rapid expansion is shown by the register T.D. 167 from 1529. By then the Muslims had gone up to 281 households and the Christians to 385. This gives a town of almost 4000 inhabitants, of which 42% was Muslim. The *Taḥrīr* of 1569/79 (KuK 194, Ankara) shows a different pattern. In the 40 years after 1529, the positions are reversed. The Muslims had grown slowly, to 318 households whilst the Christians had declined sharply, to 186 households. In the interval, some Islamisation of the local population must have taken place. The 1569-70 register shows that 14% of the Muslim households were of convert origin. This suggest that besides conversion, immigration must have played an important role. The outcome of these movements was that the population of the town was now composed of 63% Muslims. The number of *maḥalles* also show the reversal of the pattern: in 1529 5 Muslim *maḥalles* and 13 Christian *maḥalles*, in 1569 13 Muslim *maḥalles* and

6 of Christians. The transformation of Nevrokop from a Christian village into a predominantly Muslim town was stimulated by the erection of a monumental domed mosque and a school by Meḥmed Bey, son of the *Beylerbey* of Rumeli, Dayî Ḳarača Pas̲h̲a. The latter died in 1456 before Belgrade. His son Meḥmed must have erected his buildings in Nevrokop in the 1480s or 1490s, to which the stylistic features point. Shortly before his death in 1512, the favourite of Sultan Bāyezīd II, Ḳod̲j̲a Muṣṭafā Pas̲h̲a, founded another important mosque in Nevrokop, as well as a school and a *ḥammām*. The 1529 *Taḥrīr* mentions both buildings, as well as the fact that their founders were dead (*merḥūm*), and adds a *mesd̲j̲id* of Dāwūdlî. The register also mentions that Meḥmed Bey had constructed a bridge over the Kara Su and had allotted the yearly rent of 10 watermills in Nevrokop and Drama, 50 shops and rooms in Selānik and some important urban property in Filibe, totalling 57,000 *aḳčes*, for the upkeep of his foundations. The buildings of Ḳod̲j̲a Muṣṭafā Pas̲h̲a in Nevrokop were financed by his enormous *ewḳāf* in many places in Rumeli. These included also five villages in the *ḳaḍā'* of Nevrokop. An order in the *Mühimme defter* 6 from S̲h̲ewwāl 972/May 1565 discusses the problems of erecting a mosque and a *muṣallā* on orders of Sultan Süleymān for the memory of his son S̲h̲ehzāde Meḥmed . The *Taḥrīr* of 1569-70 gives other information on the growing importance of Nevrokop as an Islamic centre. In that year there were three Friday mosques and seven *mesd̲j̲ids*. The register mentions 12 imāms in the town and 14 muezzins besides four school teachers and a large number of craftsman, both Muslim and Christian (hatters, tanners, shoemakers, soapmakers, carpenters, blacksmiths, quiltmakers, goldsmiths).

In the villages of the *ḳaḍā'* of Nevrokop a similar process of slow Islamisation can be observed. According to the 1445 *Taḥrīr*, the entire district numbered not a single Muslim. An isolated few are mentioned in 1453-4, but by 1529, 13% of the rural population was Muslim and some 28% in 1569-70. This process had the same two aspects as in the town: settlement of a substantial number of Turkish (*Yürük*) settlers after 1517, secondly a creeping process of Islamisation of a part of the rural, Bulgarian-speaking population. By 1900 the entire *ḳaḍā'* of Nevrokop, with 123 villages, numbered 12,500 Turkish-speaking Muslims, 26,960 Bulgarian-speaking Muslims (Pomaks) and 35,310 Bulgarian Christians, the latter including some Greek-orientated Vlachs. These numbers show that Islam in the western Rhodope resulted from a slow process of colonisation and an even slower process of Islamisation, instead of being the result of one violent, government-ordered, campaign of mass Islamisation, which is supposed to have taken place in the second half of the 11th/17th century under the Köprülü administration. This last-mentioned viewpoint is usually taken in the Bulgarian historiography.

A 16th century list of bishoprics belonging to the Greek Orthodox Patriarchate of Constantinople mentions a "see of Nikopolis, that is Nevrokop", but names of bishops of Nevrokop are only known since 1622.

In the 17th century the expansion of the town must have slowed down. Kātib Čelebi mentions Nevrokop as the seat of a *ḳāḍîlîḳ* and noted the presence of rich iron mines near the town. The official list of *ḳāḍîlîḳs* of 1078/1667-8 has Nevrokop in the fourth rank of the twelve ranks of *ḳāḍîlîḳs* of Rumeli, which illustrates its importance. The most detailed description of Ottoman Nevrokop is given in vol. viii of the *Seyāḥat-nāme* of Ewliyā Čelebi, although the town appears under the wrong name of Vetrine (modern Neon Petritsi in Greece), which is historically and geographically impossible, since it never was a *ḳaḍā'* centre. Ewliyā called the town large and fine, with many mosques, dervish *tekkes*, *k̲h̲āns*, *ḥammāms*, schools and very beautiful houses and the seat of an elaborate provincial administration. In the 18th century, the town must have grown slowly. In 1847 the traveller Viquesnel saw a thousand houses (in 1569, 500), inhabited by Turks and a few Greeks and Bulgarians. He saw 12 minarets and a fairly large bazaar with many *k̲h̲āns* and coffee shops. In 1809-11 the Christian community of Nevrokop had constructed the small church of the Archangels Michael and Gabriel. In 1833-41 they built the large and monumental church of the Holy Virgin, expression of the changed conditions under the *Tanẓīmāt*. In the 1820s, the last great domed mosque of the town was built, of which only old photographs remain. The *Sālnāme* of the *wilāyet* of Selānik of 1324/1906-7 mentions that the town had 20 *maḥalles* with 1,432 houses, 598 shops, 12 Friday mosques, four *mesd̲j̲ids*, two churches and no less than eight *tekkes*, pointing to a well-developed Islamic life. Besides this, there were seven schools for Muslims and two for Christians. A Greek source from 1908 mentions that the town had 5,900 inhabitants: 3,865 Turks, 490 Muslim Gipsies, 595 Christians belonging to the Greek Orthodox church and 900 Christians belonging to the Bulgarian Exarchate. The same source mentions that the population of the *ḳaḍā'* of Nevrokop was in majority Muslim, sc. 51,000 of the 83,000 inhabitants (=61%). The *Sālnāme* of 1303/1885-6) gives slightly lower numbers but has the same percentage of Muslims. The statistics of Verković and Kănčev give 55% and 53% respectively, with slightly varying numbers.

The Bulgarian conquest of 1912, during the Balkan Wars, led to a mass exodus of the Muslim population of the town and, to a lesser extent, of the villages. Their place was immediately taken by Bulgarian refugees from the *ḳaḍā'*s of Drama and Serres, which had been conquered by the Greek army and were to remain part of the enlarged Greek state. The Bulgarian census of 1926 shows these changes clearly. By then the town numbered 1,057 Muslim inhabitants, but the number of Bulgarians stood as high as 5,882. The 1934 census show that the new trend continued: 824 Muslim and 7,726 Christian inhabitants. After 1912 the mosques, *tekkes* and *ḥammāms* disappeared one after the other. The oldest mosque of the town, that of Meḥmed Bey ben Ḳarača Pas̲h̲a, was the last to be given up. It still stands as a ruin (1990). Apart from a few Muslim Gypsy families, Islam has disappeared from Nevrokop, which after 1912 was rebuilt in a new fashion. In the late 1960s, culminating in the events of 1973, the Pomak population of the mountain villages of the Nevrokop district was put under heavy pressure when the Communist government tried to "lead them back into the Bulgarian nation" with help of the army units using poison gas. After the opposition had been broken, large sections of the Pomaks were deported to northern Bulgaria, given other names and scattered among purely Christian Bulgarian villages. After the end of Communist rule, many returned to their native homes, reverting to their simple Islamic community life. After their ordeal, they decided to identify completely with Turkish Islam, learning to speak Turkish instead of Bulgarian and identifying themselves as descendants of the Bulgarised Pečeneg and Kuman settlers in the Rhodope to which the 12th-13th century

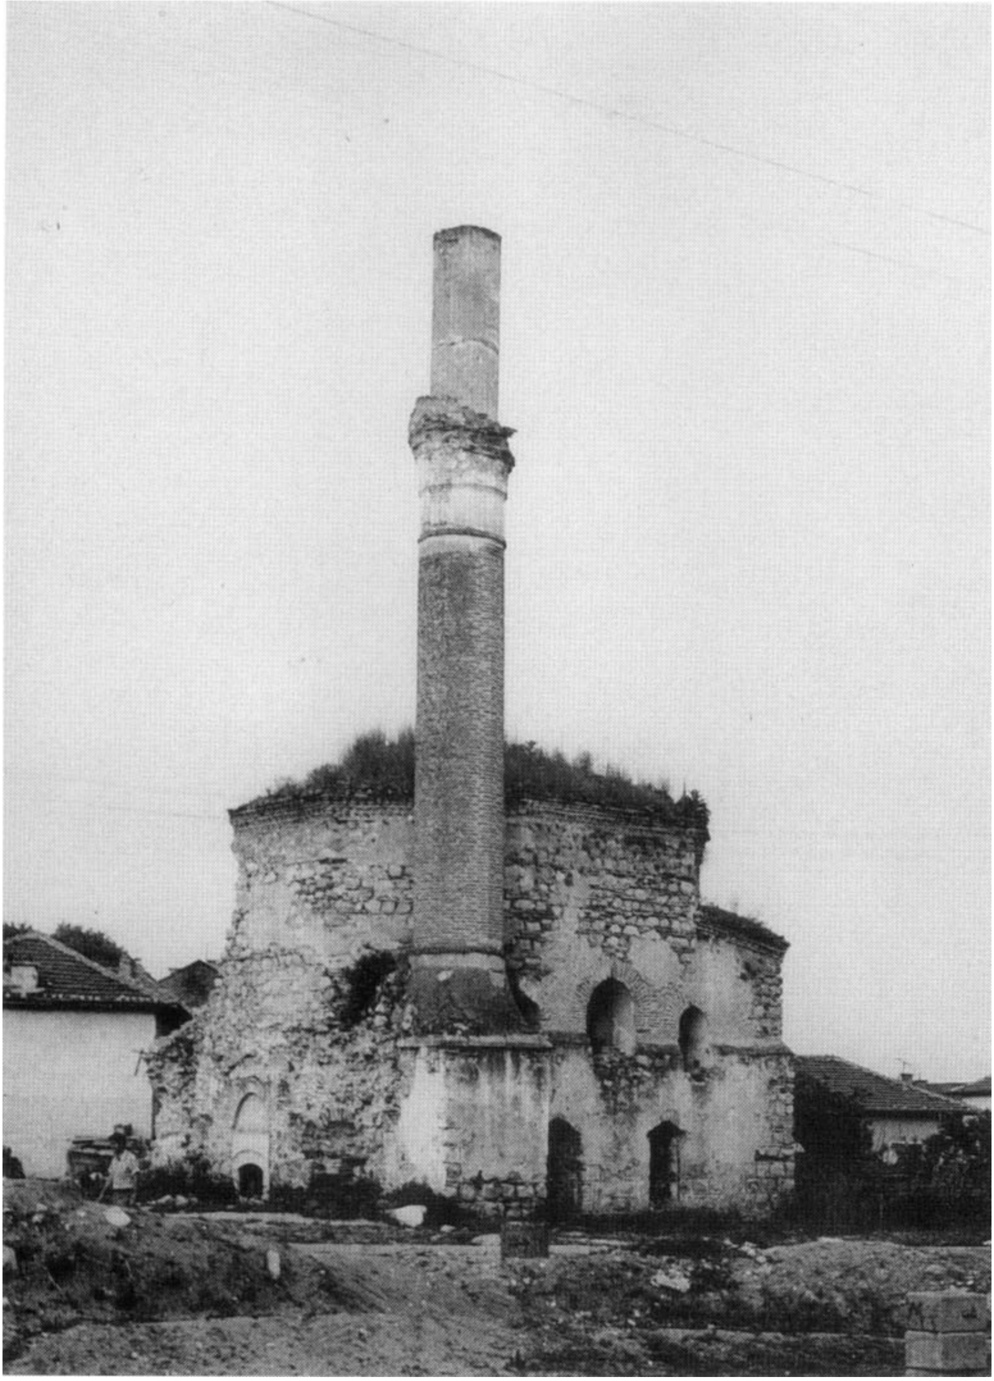
Byzantine sources refer. This process is now in full swing. The restoration of Islamic life to the Nevrokop villages has been seen in the large-scale rebuilding during 1991-2 of the mosques of the district destroyed in the assimilation campaign of 1985.

Nevrokop, which in 1978 rose to 17,805 inhabitants, saw its name changed to Goce Delčev (in 1950). Ottoman Nevrokop was the native town of some Ottoman men of letters. Among them is the very learned poet Raʿna Muṣṭafā Efendi, a Naḳshbendī dervish and for long in the service of Muḥammad ʿAlī of Egypt. He died in 1248/1832-3 in his native Nevrokop. It was very probably this man who constructed the last domed mosque in the town, showing close similarity with the buildings of Muḥammed ʿAlī in Kavalla (erected 1818-1821). Of more importance is Zührī Aḥmed Efendi, the founder of the Zühriyye branch of the Khalwetiyye order. Zühri Efendi died in Selānik/Thessaloniki in 1165/1751-2 and was buried in the *tekke* which he had himself founded in that city.

The Ottoman sources noted in the text are unpublished. (M. Kiel)

NEWSHEHIR, modern Turkish Nevşehir, a town of central Anatolia in the Cappadocia of classical antiquity. It lies 60 km/40 miles to the west of Kayseri [see ḲAYṢARIYYA] and 13 km/9 miles south of the Kızıl Irmak river [*q.v.*] at an altitude of approx. 1,180 m/3,600 feet (lat. 38° 38′ N., long. 34° 43′ E.). It is now the chef-lieu of an *il* or province of the same name; in 1970 the town had a population of 57,556 and the *il* one of 231,873.

The Newshehir region was in the 6th to 9th centuries AD known for its monastic caves, and became a frontier region during the Arab invasions. The inhabitants protected themselves by digging underground refuges into the soft tuff; these consisted of several floors, with tables and benches, water supply and cooking hearths. Often special arrangements prevented the smoke from escaping in times of danger, and thus betraying the hiding place. Most of these "underground cities" were discovered only in the 1950s, and little is known about them from written sources. The largest such shelters are located in Kaymaklı and Derinkuyu (Melegübü in 10th/16th century Ottoman sources), within the modern province of Nevşehir.



Until the Grand Vizierate of Ibrāhīm Pasha Newshehirli (killed in 1143/1730 [*q.v.*]), the settlement called Nevşehir today was known as the village of Mushkara, located in the judicial district (*ḳaḍā*) of Ürgüb. The latter *ḳaḍā* was sometimes included in the *sandjaḳ* of Niğde and at other times in that of Kayseri. Ibrāhīm Pasha, who was born in Mushkara, elevated it to the status of a town and renamed it Newshehir. He established a foundation, consisting of a mosque, library, *medrese*, and *ʿimāret*, and associated with it were shops and an official residence for the foundation administrator. Ibrāhīm Pasha also had the small Saldjūḳ fortress on the hilltop overlooking the settlement restored. The foundation inscriptions were composed by the major Istanbul poets of the time, among whom Ibrāhīm Pasha organised a competition explicitly for this purpose. Seyyid Wehbī's, Nedīm's and ʿĀṣim's inscriptions have been published (by Aḥmed Refīḳ, 1340/1921-22). These texts emphasise that the Grand Vizier owed everything to his master the Sultan (Aḥmed III [*q.v.*]), but also glorify the founder: one of them even contains his elaborate *curriculum vitae*.

Among the architects of the *külliyye*, we know a Sargis Khalfa, who supervised the construction process. Ibrāhīm Pasha also involved the Chief Architect Meḥmed Agha, ordering him to send some of his junior colleagues to visit the Muṣṭafā Pasha mosque in Gebze and other important vizierial mosques of western Anatolia. The architects were enjoined to study the aesthetic appearance of the buildings and also construction details, bringing back drawings for the Grand Vizier's inspection. The latter apparently reserved for himself the ultimate decision, and, taking an eclectic approach, consciously modelled his foundation on the buildings put up by 10th/16th century Grand Viziers.

As 12th/18th century Anatolia was only sparsely inhabited, many of the measures designed to further Newshehir were to the detriment of nearby Ürgüb. The seat of the district *ḳāḍī* was moved from Ürgüb to Newshehir, and so was the market; in spite of the distances involved, Ürgüb residents were ordered to henceforth conduct their business in Newshehir. Wealthy people recently settled in Kayseri were ordered to move to Newshehir, and to ensure a stable urban population, well-to-do residents of the new town were forbidden to move their families to Istanbul; 800 families of central Anatolian nomads were also to settle in Newshehir. Scrub land was assigned to the townsmen which they could convert into gardens and vineyards, and they were also granted the land of certain abandoned villages for farming and pasture. In the early 12th/18th century, the urban population must have been a few thousands.

In the 13th/19th century, Newshehir was a small town in the *sandjaḳ* of Niğde, in majority inhabited by Muslims, but with an active community of Turcophone Orthodox Christians. Out of 17,660 townsmen in 1316-17/1899, 10,972 were Muslims and 6,080 Orthodox. Grape cultivation and wine-making constituted one of the region's principal economic activities. The exchange of populations which followed the war between Greece and Turkey (1923) resulted in a decline of the vineyards, as the new settlers from Thrace were not familiar with viticulture. However as natural conditions (low rainfall, frosts in spring and fall) limited agricultural options, raisin and wine production soon resumed.

Down to the present day, the Newshehir district has remained an agricultural region. In 1978, 78.6% of the economically-active population was employed in agriculture (1965: 86.2%, 1955: 87.6%). The productivity of many agricultural enterprises is low, due to limited investment in erosion control, irrigation and seed selection. The employment of tractors and the cultivation of sugar beet and potatoes on irrigated land have, however, become sufficiently widespread to push down the demand for family labour. This

Mosque of Meḥmed Bey ibn Karadja Pasha, *ca.* 1490. Only surviving Ottoman building in Nevrokop.
(Photo: Arch. Julii Fǎrkov, 1992)

decrease particularly affects women; while in 1965, 46% of the labour force consisted of women, by 1975 this percentage had dropped to 41%. Since opportunities in manufacturing (cotton textiles, wine-production, food processing) are also limited, out-migration is widespread. In spite of a high birthrate, the district's population has recently declined.

From the 1960s onwards, tourism has become a significant source of gain, as both Turkish holiday-makers and foreign tourists have visited the cave churches of Göreme, the "underground cities" of Derinkuyu and Kaymaklı and the extraordinary tuff formations of this volcanic landscape. In 1982, the district recorded 50,000 Turkish and 82,000 foreign visitors, who have given a boost to retail trade, transportation and the manufacture of *objets d'art* from locally available agate. However, to date this injection of capital has had only a limited impact upon the region, as the owners usually prefer to invest in other parts of the country.

In the cultural life of the region, the former main lodge (*zāwiye*) of the Bektāshī order of dervishes once again has a role to play. The complex (located in the town of Hacıbektaş, *il* of Nevşehir) contains the mausolea of Ḥādjdjī Bektāsh and Balîm Sulṭān, constructed in the 9th/15th and 10th/16th centuries, as well as a meeting room and an elaborate domed kitchen. In the latter there is a large kettle, which an inscription identifies as a Janissary gift. A silver door was donated by an 11th/17th century governor of Ḳîrshehir [*q.v.*]. After the abolition of all dervish orders in 1925, the complex was allowed to deteriorate; but once a museum had been established, largely through community efforts, the building was restored and local residents voluntarily returned many former possessions of the lodge. Now the town of Hacıbektaş hosts an annual cultural festival. It is attended by a large number of Alevî families, who combine a visit to the shrine with attendance at concerts and recitals of a more secular nature.

NICOBARS, the name of a group of nineteen islands in the Indian Ocean, to the south of the Bay of Bengal and lying between lats. 6°40′ and 9°20′ N.; the largest southernmost of them, Great Nicobar, is 190 km/120 miles to the northwest of the northern tip of Sumatra. Their area is 1,953 km²/627 sq. miles. The Arabic geographers place them at 15 days' voyage from Sarandīb (= Ceylon) and 6 days' voyage from Kalah [*q.v.*] (= probably in the Malacca peninsula or, less probably, at Kedah).

The Nicobar Islands appear in Arabic travel and geographical literature as early as the *Akhbār al-Ṣīn wa 'l-Hind* (237/851), ed. and tr. J. Sauvaget, *Relation de la Chine et de l'Inde*, Paris 1948, § 7, text and tr. 5, comm. 38-9 (*Landjabālūs*, linked here with *Andāmān*, i.e. the Andaman Islands to the north, whose inhabitants are described as dark-skinned and cannibals); Ibn Khurradādhbih, 66 (*Alankabālūs*); al-Masʿūdī, *Murūdj al-dhahab*, i, 338-9 = § 372 (*Landjabālūs*); Buzurg b. Shahriyār, *K. ʿAdjāʾib al-Hind* (first half of the 4th/10th century), tr. G.S.P. Freeman-Grenville. *The book of the wonders of India*, London 1981, § 81, pp. 74-5 (*Ladjbālūs*). The forms *Lankabālūs*/*Landjabālūs*, etc., became the standard renderings for the Islands, appearing e.g. some two centuries later in al-Idrīsī's text and on his map, with the distances mentioned above for the Nicobars' distance from Ceylon and the Malay peninsula (tr. S. Maqbul Ahmad, *India and the neighbouring territories in the* Kitāb Nuzhat al-mushtāq ..., §§ 42-5, 48, tr. 32-3, 34, comm. 117-18). As characteristics of the islands' people are mentioned their unintelligible language (in fact, the Nicobarese languages are of the Austro-Asiatic family, either a branch of the Mon-Khmer group or a separate branch, in any case demonstrating older ethnic connections with South-East Asia and Indonesia); their white skins and nakedness; their hospitableness; and their trading of ambergris and coconuts for iron by means of dumb barter with the voyagers who called there en route from Ceylon to China; their diet of coconuts, freshly-caught fish, bananas, etc. (see the above references, plus *Ḥudūd al-ʿālam*, tr. Minorsky, § 4.10, p. 57, comm. 188; Minorsky, *Sharaf al-Zamān b. Ṭāhir Marvazī on China, the Turks and India*, London 1942, ch. xv, § 10, tr. 57-8, comm. 158-9).

Various explanations have been proffered for the name of the islands. Sauvaget, *op. cit.*, comm. 38, cited a Chinese phrase *lang-pʾo-lu-seu*, denoting western Sumatra, as the original of the Arabic form, though this seems less likely. Minorsky cited an etymology from *laṅkā* "island" + *Bālūs* = Baros on the southwestern coast of Sumatra, cf. *Ḥudūd al-ʿālam*, § 4.8, p. 57, comm. 187, but as more probable *al-Nankabār* or *Nakavvar*>Nicobar "the naked" (*Sharaf al-Zamān Ṭāhir Marvazī*, comm. 158-9). Certainly, on the Catalan Map of 1375 we have the *Insulae Nudorum*.

Marco Polo briefly mentions the island which he calls Necuvaran as being about 150 miles north of Sumatra (Sir Henry Yule, *The Book of Ser Marco Polo the Venetian*, London 1871, ii, 248-50), but there is much more detail on the island of Nicoveran in the account of the voyages of Friar Odoric of Pordenone (1316-30), who travelled from the Coromandel coast to Sumatra en route for China (Yule and H. Cordier, *Cathay and the way thither*, Cambridge 1915, ii, 248-50, describing the inhabitants as having dogs' faces (*Cinocofuli*), a detail more often attached to the Andaman islanders).

In more recent times, the Nicobars were probably visited by Portuguese missionaries, but in 1756 Denmark took them over as a colony affiliated to their trading factory at Tranquebar on the Coromandel coast. In 1848 the Danes formally relinquished sovereignty, and in 1869 Britain took formal possession of them. After an occupation by the Japanese 1942-5, the Nicobars passed in 1947 to India and are now part of the Union Territory of the Andaman and Nicobar Islands, with the seat of the Lieutenant-Governor at Port Blair in the Andamans. The population of the Nicobars (1961 census) is 14,563.

NIFFAR, NUFFAR, a ruined site, ancient Nippur, in southern ʿIrāḳ, situated in lat. 32°7′ N. and long. 45°10′ E., now in the *liwā* or province of al-Ḳādisiyya; close by lies the Khōr al-ʿAfak.

The site is very extensive. Rising 20 m above the

plain, it has proved to be one of the earliest cities to have developed in the region. Even before neighbouring Uruk and Akkad became political centres in the last centuries of the third millennium Nippur seems to have been a religious centre for the independent communities, no doubt because, according to the Sumerian version of the Flood Story, man was first created at Nippur. So it was here that Ur-Nammu, king of Ur built the temple for Enlil, the god of storms, with its great ziggurat. The associated library is one of the richest sources for Sumerian literature even though so many of the original documents have been lost; much of what remains was preserved accidentally since the clay documents were used as fill for the walls of later houses. A beautifully decorated chlorite vessel with a cat-like figure in conflict with a snake has been described as a representation of Inanna (Ishtar). When Layard visited the site in 1854 he was overcome by its appearance, and from 1889-1900 an American excavation under the supervision of J.P. Peters (University of Pennsylvania) carried out the first thorough study of the site. More recent excavations have been conducted by McGown (University of Chicago). It was being built on up to the Parthian period. But what Peters described as "Parthian columns" still standing when he was at the site had disappeared by 1948 when the Chicago team were there. The site is particularly suited to new historical assessments, as evidenced by the work of Stone, who integrates linguistic, archaeological and anthropological material in her study. In an unusual Akkadian satirical poem a poor man from Nippur, who has been oppressed by the mayor of his town, is able by his guile to humiliate his oppressor; this may well reflect the attitude of contemporary society to the place, for Nippur is often mentioned in lists of places that are excused the taxation burdens imposed on other towns.

Nippur was also an inhabited place in Muslim times; for example, we find it mentioned in 38 /659 on the occasion of a rising against the caliph ʿAlī (al-Ṭabarī, i, 3423, 3424) as well as during the Khāridjī troubles (*op. cit.*, ii, 929, 7); cf. also Yāḳūt, iv, 275, 798, and Ibn al-Faḳīh, 210. In the later Middle Ages we find Niffar mentioned as a Nestorian bishopric in the chronicles of the Patriarchs (*Akhbār Faṭārika kursī al-Mashriḳ*, ed. Gismondi, Rome 1897-9), of ʿAmr b. Mattā (83, 95,) and of Marī b. Sulaymān, in the period 900-1058 A.D. (cf. also Sachau, in *Abh. Pr. Ak. W.* [1909], no. 1, p. 31). When the town was abandoned by its inhabitants and became completely desolate we do not know. It was probably the result of one of the Turco-Mongol invasions, that under Hülegü or that under Tīmūr, which dealt their deathblow to so many flourishing places in Mesopotamia.

According to the cuneiform inscriptions, Nippur must have in ancient times lain on the Euphrates itself or at least in its immediate vicinity (cf. e.g. *OLZ*, xx, 142, n. 1); this fact forces us to the assumption that this river in the Babylonian period must have taken a much more easterly course below Babylon than in the middle ages and present day. The inner city is divided into two parts by a canal now dry but once navigable, which the natives call Shaṭṭ al-Nīl. This was an important watercourse which, according to Hilprecht, was in many places at one time 20-25 feet deep and 150-190 feet broad and which the modern inhabitants rightly describe not as a mere *nahr* (stream, canal) but as *shaṭṭ* (river).

According to the mediaeval Arab geographers, Nahr al-Nīl was the name of one of the canals leading off from the Euphrates to the Tigris. It still survives in its entirety; as in the Middle Ages, it starts from Babylon and flows a little above lat. 32°30′ N. in an almost straight line eastwards. The geographer Suhrāb or Ibn Sarābiyūn [*q.v.*], writing in the 4th/10th century, observes that this canal bears the name Nahr al-Nīl only after passing the town of al-Nīl (the modern ruins Nīliyye). At the present day, it is called only Shaṭṭ al-Nīl throughout its course. Somewhat east of Nīliyye a side-canal, now dry, branches off to the south for which, not only in its lower part where it flows by the ruins of Niffar but along its whole extent, the name Shaṭṭ al-Nīl, the same as that of the main canal, was and is usual. Yāḳūt, however, says (iv, 77, 798) that Niffar lay not on the Nahr al-Nīl but on the bank of the Nahr al-Nars, a canal dug, it is said, by the Sāsānid king Narsē b. Bahrām (293-303 A.D.) which leaves the Euphrates at al-Ḥilla a little below the Nahr al-Nīl and turns southeastward. It was presumably connected by a branch with the southern small canal of the same name which branches off from the Nahr al-Nīl, so that the occurrence of the two names Nahr al-Nīl and Nahr al-Nars for the river in Niffar is explained. It should be noted also that the nomenclature of the Babylonian canals changed several times already in the Middle Ages. On the Nahr al-Nīl or Shaṭṭ al-Nīl and Nahr al-Nars, see W.K. Loftus, *Travels and researches in Chaldaea and Susiana*, London 1857, 238; G. Le Strange, in *JRAS* (1895), 256, 260-1, and idem, *The lands of the eastern caliphate*, Cambridge 1905, 72-4; Streck, *Babylonien nach den arab. Geographen*, i, Leiden 1900, 30-1; Herzfeld, in Sarre-Herzfeld, *Archäolog. (M. Streck-[M.E.J. Richardson])

AL-NIFFARĪ, Muḥammad b. ʿAbd al-Djabbār, Ṣūfī mystic, whom the principal Ṣūfī biographers fail to mention, and who flourished in the 4th/10th century, and, according to Ḥādjdjī Khalīfa, died in the year 354/965, but more probably in *ca.* 366/976-7. His *nisba* refers to the town of Niffar [*q.v.*] in ʿIrāḳ, and one ms. of his works asserts that it was during his residence at Niffar and Nīl that he committed his thoughts to writing. Al-Niffarī's literary reliquiae consist of two books, the *Mawāḳif* and the *Mukhāṭabāt* (ed. A.J. Arberry, London 1935), together with a number of fragments. It is improbable that Niffarī himself was responsible for the editing of his writings; according to his principal commentator, ʿAfīf al-Dīn al-Tilimsānī (d. 690/1291), either his son or his grandson collected his scattered writings and published them according to his own ordering. The *Mawāḳif* consists of 77 sections of varying length, made up for the most part of brief apothegms touching on the main aspects of Ṣūfī teaching, and purporting to be inspired and dictated by God; the *Mukhāṭabāt* is similar in content, and is divided into 56 sections. Al-Niffarī's most characteristic contribution to mysticism is his doctrine of *waḳfa*. This term, which would appear to be used by him in a peculiarly technical sense, implies a condition in the mystic which is accompanied by direct divine audition, and perhaps even automatic script. *Mawḳif* is the name given to the state of the mystic in which *waḳfa* is classed higher than *maʿrifa*, and *maʿrifa*

is above *ʿilm*. The *wāḳif* is nearer to God than any other thing, and almost transcends the condition of *bas͟hariyya*, being alone separated from all limitation. Al-Niffarī definitely maintains the possibility of seeing God in this world; for he says that vision (*ruʾya*) in this world is a preparation for vision in the world to come. In several places, al-Niffarī distinctly touches on the theory of the Mahdī [*q.v.*], and indeed appears to identify himself with the Mahdī, if these passages are genuine; and this claim is seemingly in the mind of al-Zabīdī, when he describes al-Niffarī as *ṣāḥib al-daʿāwā wa 'l-ḍalāl*. Al-Tilimsānī, however, interprets these passages in an esoteric and highly mystical sense; and it does not accord with the general character of the author that he should make for himself such extravagant claims. Al-Niffarī shows himself in his writings to be a fearless and original thinker. While undoubtedly influenced by his great predecessor al-Ḥallād̲j̲ [*q.v.*], he acknowledges no obligations and has a thorough conviction of the reality of his own mission.

(A.J. ARBERRY)

NIFṬAWAYH, ABŪ ʿABD ALLĀH IBRĀHĪM b. MUḤAMMAD b. ʿArafa b. Sulaymān b. al-Mug͟hīra b. al-Muhallab b. Abī Ṣufra al-ʿAtakī al-Azdī, grammarian, lexicographer, *ak͟hbārī*, leading expert in poetry, Ḳurʾānic readings and well-authenticated *muḥaddit͟h*, who owed his nickname, derived from the term *nifaṭ* (naphtha) to his dark complexion; this name is formed according to the same pattern as that of Sībawayh, whom he admired, whose grammatical methods he followed and on whose *Kitāb* he composed a commentary. Born at Wāsiṭ in 244/858, he lived and studied in Bag͟hdād where he died on 12 Rabīʿ I 323/20 February 935.

He studied grammar and *lug͟ha* with the eminent scholars al-Mubarrad (d. 285/898), T͟haʿlab (d. 291/904) and Muḥammad b. al-D̲j̲ahm (d. 277/891). Among his masters in *ḥadīth*, his biographers mention numerous traditionists including Isḥāk b. Wahb b. Ziyād al-ʿAllāf (d. after 255/869 according to Ibn Ḥad̲j̲ar, *Tahd͟hīb al-Tahd͟hīb*, i, 259) and ʿAbbās b. Muḥammad b. Wāḳid al-Dūrī (d. 271/885). He studied the Ḳurʾān with, in particular, Ibn al-D̲j̲ahm and S͟huʿayb b. Ayyūb al-Ṣarīfīnī (d. 261/875), collected *ak͟hbār*, took an interest in *fiḳh* and in history and learned by heart a considerable quantity of poems, including the entire *dīwāns* of D̲j̲arīr, of al-Farazdaḳ and of D͟hu 'l-Rumma. He himself composed some short pieces, mostly in the *g͟hazal* genre of amorous poetry, numerous fragments of which have been preserved by Yāḳūt (*ʿUdabāʾ*, i, 257-71) and al-ʿĀmilī (*Aʿyān*, ii, 222-3).

His erudition and his reputation as an upright and rigorous scholar were recognised during his lifetime, and attracted to him a number of pupils, notably including the *faḳīh* and *adīb* al-Nahrawānī (d. 390/1000), the *muḥaddit͟h* Ibn S͟hād͟hān (d. 383/993), the biographer and *adīb* al-Marzubānī (d. 384/994), the grammarian Ibn K͟hālawayh (d. 370/980), the lexicographer al-Azharī (d. 370/980), the exegete al-Naḥḥās (d. 338/950), the *lug͟hawī* Abu 'l-Ḥasan al-ʿAskarī (d. 382/993), al-Masʿūdī (d. 345/956), Abu 'l-Farad̲j̲ al-Iṣbahānī (d. 356/967) and the philologist Abū ʿAlī al-Ḳālī (d. 356/967). The last-named is noted for having cited in his *Amālī* (ed. Dār al-Kutub n.d., i, 23, 30, 47 ff., ii, 83, 110, 191, 199 ff.), hundreds of verses which he had read in Nifṭawayh's presence or had heard recited, with critical comments, by him.

Of the various titles given him by his biographers, it is that of *naḥwī* which is most prominent. The majority of them, with the exception of al-Zubaydī (*Ṭabaḳāt*, 154), credited him, besides his mastery of the linguistic sciences and his integrity in the transmission of *ḥadīt͟hs* and in readings of the Ḳurʾān, with an outstanding grammatical ability which earned him admission to the prestigious *ṭabaḳa* which included among other grammarians of renown Ibn Kaysān (d. 299/911), al-Zad̲j̲d̲j̲ād̲j̲ (d. 311/923) and Abū Bakr al-Anbārī (d. 328/940) (see al-Azharī, *Tahd͟hīb*, i, 28; al-Suyūṭī, *Muzhir*, Cairo n.d., iii, 455). Furthermore, they stress that he was neither Baṣran nor Kūfan, but rather an eclectic who blended the two schools (*k͟halaṭa al-mad͟hhabayn*: *Fihrist*, 121). On the other hand, opinions differed regarding the school of *fiḳh* to which he belonged. Ibn Ḥad̲j̲ar (*Lisān*, i, 109) and al-ʿĀmilī (*Aʿyān*, ii, 220) classed him among the S͟hīʿīs. Al-Farg͟hānī (d. 398/1007), quoted by Yāḳūt (i, 270), relates that he adopted the point of view of the Ḥanbalīs who maintain that the noun is the thing named (*al-ism huwa al-musammā*). For others, more numerous, he was a *ẓāhirī* partisan of the Dāwūdiyya and was regarded as a master of it (*raʾasa fī-hi*; al-Ṣafadī, *Wāfī*, vi, 130; Ibn Ḥad̲j̲ar, *loc. cit.*).

It is highly probable that Nifṭawayh was, in *fiḳh* as in *naḥw*, an eclectic who stood aside from partisan controversies. His close friendship with the eminent Ẓāhirī jurist Ibn Dāwūd (d. 294/907) does not necessarily signify that he was exclusively Ẓāhirī, nor does the fact that the Ḥanbalī al-Barbahārī (d. 329/941) recited the funeral prayers at his burial indicate that he was a master of Ḥanbalism. Regarding other questions, this versatility of mind was superseded by fixed and frankly polemical opinions. Thus he categorically rejected the principle of derivation (*is͟htiḳāḳ*) among the Arabs and accused one of its proponents, the illustrious Ibn Durayd (d. 321/933), of having composed his dictionary (*al-D̲j̲amhara*) by altering (*g͟hayyara*) the *Kitab al-ʿAyn* of al-K͟halīl (d. 175/791). Regarding the origin of the language, he declared that Arabic was a natural (*ṭabīʿiyya* = *tawḳīfiyya*), not a conventional (*taʿlīmiyya* = *iṣṭilāḥiyya*) language, and he refuted the Muʿtazilī notion according to which the Ḳurʾān is created.

Ibn al-Nadīm (*Fihrist*, 121) lists fourteen of his works: 1. *K. al-Taʾrīk͟h*; 2. *K. al-Iḳtiṣārāt*; 3. *K. G͟harīb al-Ḳurʾān* (a very large book, according to al-Bag͟hdādī, *Taʾrīk͟h*, vi, 159); 4. *K. al-Muḳniʿ fi 'l-naḥw*; 5. *K. al-Istit͟hnāʾ wa'l-s͟hurūṭ fi 'l-ḳirāʾāt* (var. *Wāfī*, vi, 132, ... *wa 'l-s͟harṭ fi 'l-Ḳurʾān*; al-Ḳifṭī, *Inbāh*, i, 215: *al-Istīfāʾ fi 'l-s͟hurūṭ*); 6. *K. al-Ḳawāfī*; 7. *K. al-Radd ʿalā man ḳāla bi-k͟halḳ al-Ḳurʾān*; 8. *K. al-Mulaḥ*; 9. *K. al-Amt͟hāl*; 10. *K. al-S͟hahādāt*; 11. *K. al-Maṣādir*; 12. *K. al-Radd ʿalā man zaʿama anna 'l-ʿArab tas͟htaḳḳu 'l-kalām baʿḍahu min baʿḍ*; 13. *K. al-Radd ʿalā 'l-Mufaḍḍal fī naḳḍih ʿalā 'l-K͟halīl*; 14. *Fī anna 'l-ʿArab tatakallamu ṭabʿan lā taʿalluman*.

Yāḳūt revised the list of the *Fihrist* and added three titles to it: *K. al-Amt͟hāl fi 'l-Ḳurʾān*, *K. al-Wuzarāʾ* and *K. al-Bāriʿ*. Ibn K͟hayr (*Fahrasa*, 372, 376, 407) mentioned three other titles: *K. Aṭrag͟has͟hs͟ha* (= "to recover, regain strength", cf. *LA*, root *ṭ-r-g͟h-s͟h*) *fi 'l-lug͟ha*, *Masʾalat subḥān* and *K. al-Amālī*. Finally, Ismāʿīl Pas͟ha (*Hadiyya*, i, 5) adds a *Ḳaṣīda fī g͟harīb al-lug͟ha*.

With the exception of the brief survey (8 folios) *Masʾalat subḥān*, and a work entitled *al-Maḳṣūr wa ʾl-mamdūd* which is attributed to him but is mentioned in none of the biographies, all the other works have been lost. The *Masʾala* has been edited by Y. Muḥ. al-Sawwās, in *RAAD*, lxiv/3 (1989), 361-91, on the basis of the Ẓāhiriyya ms., *madjmūʿa* 79. In it Nifṭawayh examines 32 Ḳurʾānic verses containing the words *subḥān* or *tasbīḥ* and comments on them from a linguistic viewpoint, with the support of numerous examples drawn from ancient poetry, *ḥadīth* and Ḳurʾānic exegesis. As for *al-Maḳṣūr wa ʾl-mamdūd*, Ḥ. Sh. Farhūd believes it to be the work of Nifṭawayh and as such has published it in *Madjallat Kulliyyat al-Ādāb, Djāmiʿat al-Riyāḍ*, iv (1973) (cf. U. Haarman, in *Studia Arabica et Islamica, Festschr. for I. ʿAbbās*, Beirut 1981, 169 n. 31).

The majority of the lost works were known, however, either by the title or by the quotations drawn from them. A.Ḍ. al-ʿUmarī (*Nifṭawayh wa-dawruh fī ʾl-kitāba wa ʾl-taʾrīkh*, in *Madjallat Kulliyyat al-Ādāb*, Baghdād, xv [1972], 71-102) gives a list of the quotations which are to be found in literature, without any indication of title (cf. F. Sezgin, *GAS*, viii, 149). Certain of these works feature among the sources for *al-Amālī* of al-Ḳālī, for the *Iʿrāb al-Ḳurʾān* of al-Naḥḥās (ed. Ghāzī Zāhid, introd., 15, 48), for the *K. al-Murūdj* of al-Masʿūdī (§§ 11, 2889, 3391), for the *Siyar aʿlām al-nubalāʾ* of al-Dhahabī (vi, 69, vii, 55, x, 281, 302 ff.) and for *al-Khizāna* of ʿAbd al-Ḳādir al-Baghdādī (ed. ʿA. Muḥ. Hārūn, vi, 458, ix, 146, xiii, 26). Of his numerous recensions, it seems that only two have survived. In one, he edits the *dīwān* of Suḥaym ʿAbd Banī ʾl-Ḥasḥās (ed. Maymanī, introd., 7) and in the other, that of al-Samawʾal (ed. L. Cheikho, Beirut 1910).

The disappearance of almost all of his literary works cannot fail to raise questions. For, while it is generally accepted that the loss of a great many Arabic books is most often due to the natural or human scourges which have ravaged the Islamic metropolises, it is remarkable that all the works of a writer of Nifṭawayh's versatility should have suffered the same fate. It may be suspected that the loss of his work is to be accounted for, to a certain extent, by the eclecticism of this author in questions of *fiḳh*, his intransigence in questions of language (concerning *ishtiḳāḳ* and the nature of language), his polemics against the Muʿtazila or the absence of one or more disciples dedicated to passing on his teaching.

Furthermore, a point made by Ibn Khayr (*Fahrasa*, 395-6) may provide a partial explanation of the cause of this loss. In effect, he states that al-Ḳālī brought with him from Baghdād to Spain (in 220/942) a large quantity of the recensions and works of al-Nifṭawayh, in addition to those which he had left behind and which had been taken from him in Ḳayrawān.

(OMAR BENCHEIKH)

NĪGDE, modern Turkish form Niğde, a town of south-central Anatolia in a fertile trough between mountainous regions, hence important in earlier times as a station on the trade route connecting Cilicia with the interior of Anatolia and with Sinope on the Black Sea coast. It lies in lat. 37° 58' N. and long. 34° 42' E. at an altitude of 1,250 m/4,100 feet.

The town is first mentioned in the Turkish period; previously, the chief town of the district was Tyana (Ar. Ṭuwāna), but it is probable that the striking hill which commands the important road from Cilicia across the Taurus to Ḳaysāriyye at its entrance to a pass over the mountains had a fortified settlement upon it in the pre-Turkish period. The old place-name may be the origin of the modern one, an older form of which was Nekīde (Yāḳūt, iv, 811, Nakīdā; Ibn Bībī and others, also in inscriptions down to the 10th/16th century, Nakīda; the modern form Nīgde is already found in Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 99). In this particular district, some villages have retained their ancient names (Andaval-Andabalis, Melegop-Malakopaia), and considerable numbers of descendants of the original Christian inhabitants survived until the early 20th century (R.M. Dawkins, *Modern Greek in Asia Minor*, Cambridge 1916, 16 ff.).

Nīgde is first mentioned in connection with the partition of Saldjūḳ territory among the sons of Ḳilīdj Arslān II (685/1189), when it was allotted as an independent lordship to Arslān Shāh (Ibn Bībī, ed. Houtsma, in *Rec.*, iv, 11). Nīgde had perhaps previously belonged to the Danishmendids [*q.v.*], but Ewliyā Čelebi, iii, 189, cannot be taken as evidence of this. Kay Kāwūs I granted Nīgde to the Amīr-i Ākhūr Zayn al-Dīn Bashāra (Ibn Bībī, 44), who shortly before his death built the important mosque of ʿAlāʾ al-Dīn here (620/1223). In the 7th/13th century Nīgde was the headquarters (*sar-i lashkarī*) of one of the great military districts of the Saldjūḳs. Under Ḳilīdj Arslān IV, Ibn al-Khaṭīr Masʿūd held this office. At first an ally of the all-powerful Muʿīn al-Dīn Parwāne [*q.v.*], with whom he killed the sultan in 662/1264, he endeavoured to remove the young Kay Khusraw III out of the Parwāne's influence and brought him to Nīgde (674/1276). But the help for which he had appealed to Egypt came too late, and he succumbed to the Parwāne, who was supported by the Mongols (Ibn Bībī; Weil, *Gesch. d. Chalifen*, iv, 80-1). He built a well in Nīgde opposite the ʿAlāʾ al-Dīn mosque (666/1268). Under the Īlkhāns, there ruled in their name, or in the name of their Anatolian governor Eretna, Sunḳur Agha, who is known only from inscriptions and is, it is remarkable to note, not mentioned by Ibn Baṭṭūṭa, who visited Nīgde about 1333 (ii, 286-7, tr. Gibb, ii, 433); he made himself independent after the death of sultan Abū Saʿīd. He gave the town a large mosque, on the wall of which facing the Bezistān is a Persian inscription, in which he grants Christian foreigners exemption from *djizya* and *kharādj* (736/1335). The Saldjūk princess Khudāwand Khātūn, buried in 732/1332 in her splendid *türbe* built in 712/1312, on the other hand, probably did not rule

in Nīgde although she resided there. She was, if the lady buried beside her in 745/1344 was her daughter, the wife of the *amīr* Shudjāʿ al-Dīn, who is mentioned as the father of the lady on her sarcophagus; he ruled, according to al-ʿUmarī (ed. Taeschner, 31), in the Bulghardagh, where a *wilāyet* called Shudjāʿ al-Dīn is still mentioned in Saʿd al-Dīn (i, 517, following Idrīs) and where lies Uluḳi̊shla, which, according to Ḥādjdjī Khalīfa (*Djihān-numā*, 617), was also called Shudjāʿ al-Dīn. After the period of Sunḳur's rule, Nīgde probably passed directly to the Ḳaramānoghlu, who held it against the attacks of the Eretnid ʿAlāʾ al-Dīn ʿAlī (*ca.* 781/1379) (ʿAzīz b. Ardashīr, *Bezm u rezm*, 141 ff.). In 792/1390 Nīgde surrendered with other Ḳaramānid towns to the Ottomans, but was restored to the Ḳaramānids, who defended it successfully against Ḳāḍī Burhān al-Dīn, lord of Ḳaysāriyye and Siwās (*Bezm u rezm*, 424, 523). After Tīmūr's invasion, the power of the Ḳaramānids extended northwards as far as Deweli Ḳaraḥiṣār, which previously belonged to Ḳaysāriyye itself. Nīgde then ceased to be a frontier town. Apart from a temporary occupation by Mamlūk Egyptian troops in 822/1419 (Weil, v, 146 ff.), it enjoyed peace and prosperity and the special care of the Ḳaramānids, who had one of the bulwarks of their power there till the end of the dynasty. A series of buildings, the first of which not only in time but also in size and quality is the Aḳ Medrese of the year 812/1409, is evidence of their interest in the town. Nīgde surrendered in 875/1470 to the Ottoman general Isḥāḳ Pasha, who had the defences of the town restored. In 878/1473 the Ottoman *sandjaḳ-bey* of Nīgde, Koči Bey, forced Deweli Ḳaraḥiṣār, which still belonged to the Ḳaramānoghlu, to surrender to prince Muṣṭafā. The latter died on the way back at Nīgde (Saʿd al-Dīn, i, 517, 550).

The *sandjaḳ* of Nīgde belonging to the *beylerbeylik* of Ḳaramān, contained the *ḳaḍā*ʾs of Ürgüb, Bor, Dewelu, Deweli Ḳaraḥisār and Uluḳi̊shla. In about 1132/1720 the grand vizier Ibrāhīm Pasha transformed his birthplace of Mushkara in the *ḳaḍā*ʾ of Ürgüb into the imposing town of Newshehir [*q.v.*], and the fiefs for the garrisons of the decayed fortresses of Nīgde and Deweli Ḳaraḥisār were transferred to the new foundation (von Hammer, *GOR*[2], iv, 250-1). At the end of the Ottoman period, the *sandjaḳ* of Nīgde, to which the *ḳaḍā*ʾ of Aḳ Saray also belonged, contained 148,700 Muslims and 49,551 Christians, the latter mainly natives and mostly speaking Turkish. Nīgde was the residence of the metropolitan of Konya. The town numbered at this time 11,526 inhabitants, but in 1927 (after the exchange of populations with Greece) only 9,463.

Nīgde (now on the Kayseri-Ulukışla railway) consists of an upper town running north and south, now largely uninhabited (Tepe Wirāne), at the highest point of which in the north stands the imposing citadel, and the lower town (Shehr altı̊) which was also once surrounded by a wall. In the upper town is the ʿAlāʾ al-Dīn mosque, one of the oldest mosques in Anatolia, with an architect's inscription in Persian. Before the gate of the upper town at its south end is the Gothic-influenced mosque of Sunḳur (*ca.* 1330), showing influences from Little Armenia and Cyprus, and the bazaar. West of and below it is the Ḳaramānid Aḳ Medrese of 812/1409. A little apart to the west of the town, separated by a broad road, running north and south is the modern quarter of Ḳayabashi̊ with a few remains of the old cemetery and a group of *türbes*, among which that of Khudāwand Khātūn from the year 712/1312 is prominent.

Modern Niğde is also the chef-lieu of an *il* or province of the same name; in 1970 the town had a population of 84,427 and the *il*, which has good agricultural land where it can be irrigated, one of 408,684.

(P. Wittek*)

NIGER, the great river of West Africa, with its source in the southeastern Fūta Djallon [*q.v.*] at an altitude of 800 m/2,624 ft. It runs northeastwards to the Sahara Desert, and then it turns southeastwards before descending southwards and ending in its delta on the Gulf of Guinea, in present-day Nigeria [*q.v.*].

Under the name of al-Nīl, the Niger river appears early in Muslim geographical writing, perhaps first in Ibn al-Faḳīh [*q.v.*], whose *Kitāb al-Buldān* was completed after 290/903. For many centuries, however, Muslim geographical analysis of the river was straitjacketed by widespread deference to the Ptolemaic model linking the Niger to the Nile. The early geographers seem frequently also to have regarded the Niger and Senegal rivers as one and the same. It was the northernmost part of the Niger, the so-called Niger bend (*boucle* in French), flowing eastwards through the desert, which first became known to the outside world in some detail.

Two major centres of trade, political centralisation, and religious change here first attracted Muslim attention, Ghāna [*q.v.*] some distance west of the bend but with its sphere of influence extending to the river, and Gao [*q.v.*] (variously Kūkū, Kawkaw, KRKR, Kāghū, etc.) lying on the river after it has turned south at the eastern tip of the bend. Ghāna and Gao were known in the first half of the 3rd/9th century, even before the Niger. Al-Muhallabī [*q.v.*], who died in 380/990, was perhaps the first to associate Gao with the river; his own work is lost, but Yāḳūt quotes the following passage:

> Kūkū, the name of a people and a country of the Sūdān .... Their king pretends before his subjects to be a Muslim (*yuẓāhir bi 'l-islām*) and most of them pretend to be Muslim too. He has a town on the Nile, on the eastern bank, which is called Sarnāh, where there are markets and trading houses (*matādjir*) and to which there is continuous traffic from all parts. He has another town to the west of the Nile where he and his men and those who have his confidence live. There is a mosque there where he prays but the communal prayer-ground (*muṣallā* [*q.v.*]) is between the two towns. In his own town he has a palace which nobody inhabits with him or has resort to except a eunuch slave (*khādim maḳṭūʿ*). They are all Muslims ...

It seems unclear exactly how much of this is from al-Muhallabī; there is an internal inconsistency concerning the extent of local Islam. The passage, nonetheless, is interesting. The river here is a meeting-point, with markets and trading houses nearby, implying considerable trans-shipment between land and water transport. A religious meeting-point too: the reference to a pretended Islam may indicate "mixed" religion, with Muslim and traditional elements commingled; isolation within the royal palace may echo an earlier (and still surviving?)

divine kingship. The river is at the same time a barrier: Sarnāh, the trading town, is east of the Niger, outside the bend; in another town, on the western, inner bank, the king lives with his own people, with those in whom he has confidence—suggesting that there were some traders and other visitors whom the king mistrusted.

As well as a meeting-point, and a dividing line, the Niger was also a channel of communication. Abū ʿUbayd al-Bakrī [*q.v.*], writing in or before 460/1068, well described the route from Gh̲āna to Kawkaw, mentioning markets, agriculture, routes into the desert, and locating pagan Sūdān south of the river, Muslim Berbers to its north. Al-Bakrī places the town of Kawkaw inside the bend, curiously not mentioning any settlement on the opposite bank here. Journeying north and west along the Niger, from Gao back towards Gh̲āna, al-Bakrī has the traveller encounter the cannibalistic Damdam, whose local religion is described; whether these details are correct or not, they do suggest that the traveller is inside the bend, while the described route from Gh̲āna to Gao follows the northern, desert bank. Al-Bakrī vividly pictures Gao, comprising two towns, one Muslim, the other the royal residence. During the royal meals, a drum is beaten, women dance, and all business in the town ceases; leftovers are then thrown into the Niger with the courtiers boisterously shouting, the whole clearly indicating pre-Islamic ritual intimately associated with the river. The king is Muslim, "for they entrust the kingship only to Muslims".

The celebrated geographer, al-Idrīsī [*q.v.*], in the mid-6th/12th century, refers often to the Niger, but his double conviction that a branch of the Nile flowed westward across Africa, and that as all civilised life in Egypt depended upon the Nile, so in western Africa all cities must be riverain, makes his account less reliable than al-Bakrī's.

Because of its length (approx. 4,000 km/2,486 miles), difficulties of crossing, occasional rapids obstructing navigation, islands and inundation, and the different climate zones through which it flows, the Niger could also be a refuge. In 1591, with Moroccan invaders threatening the Songhay empire, then the major power on the Niger bend, the clerics of Timbuktu proposed evacuating the city southwards across the river—sound advice turned down because men of religion were judged unfit for counsels of war. An estimated 2,000 boats were available to evacuate Gao, but again no full-scale withdrawal occurred. The Moroccans, having occupied Timbuktu, and desperate for boats, cut down every tree, even stripping houses of their doors. A branch of the legitimate *askiya* dynasty retreated downstream from Gao, to the Dendi region, where, protected by rapids, forest, and the river barrier, an independent Songhay presence successfully survived. Comparable patterns of raiding and sanctuary-seeking, depopulation and repopulation, communication and conflict, recur at divers times and places: Samuel Crowther's 1854 journal, for example, of travel on the lower Niger and the Benue, gives many instances in the aftermath of the Sokoto *d̲j̲ihād*.

The liminal experience of river crossing figures in many accounts of pilgrimage, *d̲j̲ihād*, etc. Abdullahi dan Fodio's *Tazyīn al-waraḳāt* mentions several cases, one of special interest. Describing a raid across the Niger early in the Sokoto *d̲j̲ihād*, the prose version recounts the plucky, and lucky, finding of a practicable ford. The verse recension, coloured by the Ḳurʾān (VII, 160, XX, 77-80, XXVI, 63), elaborates:

When we came to the river it obeyed, parting
To the staff of (divine) assistance, all its creatures obedient,
Its water creatures were turned on their backs,
Their teeth and their fangs broken;
They became for us as food offered to a guest; like game animals they became tractable, and its water
Became like quails and manna—a limpid cup,
Until we returned...

(H.J. Fisher)

NIGER (The Republic of Niger, La République du Niger, D̲j̲umhūriyyat al-Nayd̲j̲ar), a modern state of West Africa, formerly the French colony of that name.

The Niger Republic is, to quote Djibo Mallam Hamani (though specifically of the Ayar Massif, which fills the north of it), a "carrefour du Soudan et de la Berbérie". Its geographical position on the map, and the multi-ethnic character of its societies, has had a profound effect on the Islamic life of the *Nigériens* throughout their history.

1. Geography and peoples

The Niger Republic covers an area of some 1,267,000 km^2. However, 800,000 of these are within the Sahara, much of which is uninhabited or is uninhabitable. The bulk of the remainder of the country is Sahel. It is only along the banks of the Niger river [*q.v.*] (where Niamey, the capital, is located) that there is any intensive cultivation and continuous settlement. Within the Sahara area are found the mountains of Ayar (Aïr [*q.v.*] or Azbin). This massif extends approximately 480 km from north to south and about 240 km from east to west. Within it there is a region of lush vegetation. Its capital is the important city of Agadès (Agadez) and this whole northerly massif contains some 600,000 inhabitants. Niger borders upon Libya and Algeria to the north, Chad to the east, Nigeria to the south and Mali and Burkina Faso, formerly Haute Volta, to the west. The total population of Niger is estimated to number upwards of 6,500,000 people; 97% of them are nominally Muslim, though this has not prevented ethnic tensions. All of them are Sunnīs and are Mālikī in *mad̲h̲hab*. Some 45% of these are Hausaphone. The remainder are very mixed; Songhai and Zerma comprise 21.2%; Fulanis 13.8%; Tuareg (Tamas̲h̲eg̲h̲-speakers), who are largely nomadic, 11.2%; and Kanuri (who border on Lake Chad) 7.5%. Other minorities include Tubu (Teda) in the region of Kawār and Agadem, Gourmantche and Arabophone Awlād Sulaymān, Kunta and Tād̲j̲akānt. The wealth of the country is principally in agriculture, in trans-Saharan trade, cattle herding and pastoral nomadism, and in the past, its salt caravans. Recent droughts have devastated the herds. The discovery of uranium at Arlit (in 1965) now makes Niger the world's fifth-largest producer.

2. Islam in Niger

Next to Mauritania [see MŪRĪTĀNIYĀ], Niger is, by repute, the most Islamised of the territories of former

French West Africa. Even so, pockets of paganism survive. For example, the Wodaabe Fulani are still pagan in many of their beliefs and in their practices (see Carol Beckwith and Marion Van Offelen, *Nomads of Niger*, London 1984, and A. Maliki Bonfigliori, *Dudal*, Cambridge-Paris 1988), though belief in magic, in charms, in *d̲j̲inn* and demonic forces is to be found amongst all the *nigérien* communities (see, for example, the *kel esuf* among the Ayar Tuareg, in D. Casajus, *La tente dans la solitude*, Cambridge-Paris 1987). Throughout its Islamic history, Niger has witnessed the growth of Ṣūfī [see TAṢAWWUF] movements of a kind and of a diversity unmatched elsewhere in the Sahelian countries. It has also been sensitive to puritan reformist movements inspired by the works of ʿAbd al-Karīm al-Mag̲h̲īlī [*q.v.*], by the teaching of S̲h̲ayk̲h̲ ʿUmar D̲j̲ibrīl, by the Sokoto *d̲j̲ihād* of Shehu ʿUt̲h̲mān dan (b.) Fodio (Fūdī) [*q.v.*] and by reformers inspired by the Wahhābiyya [*q.v.*]. The Tuareg scholar community (*inesleman*) has played a major rôle in composing literary works in Arabic, or in religious verse in Arabic and Tamas̲h̲eg̲h̲, out of all proportion to their meagre numbers (see below).

When Niger became independent in 1960, it was established as a secular republic. In the 1970s it sought closer ties with the Arab World. On August 15 1974, steps were taken to constitute a Niger Islamic association and plans were pursued to found an Islamic university. This has now been established at Say, south of Niamey. Students from all over Muslim West Africa are taught there. *Nigérien* students have been sent to study in the Arab East, and there is constant encouragement to teach classical Arabic at all levels. According to J.-L. Triaud, *Islam and state in the Republic of Niger (1974-81)*, in *Islam and the state in the world today*, ed. O. Carré, New Delhi 1987, 253, "The new regime has drawn from this Arabized group to fill high level posts in the Islamic structure. The students have in general received a solid grounding in Arabic and religious studies. They embody a position which could be termed 'moderate reformism', based on openness to the outside world, refusal of superstition and unsophisticated practices and opposition to simplistic or fanatical formulations. The creation of the Islamic Association is in many ways an alliance between the central power and these reformist leaders against little local Marabouts or against the activism of certain fundamentalist tendencies".

3. An outline of the important phases of Islamic history in Niger

Islam has become integrated into the life of the *nigériens* over the centuries through a gradual process of Islamisation. It has produced a number of Arabic scholars and poets worthy of a place beside those from Timbuctoo in Mali, or from several towns in Mauritania. The following periods, religious leaders, regions, cities and events, have played a key part in determining that Islamisation:

(a) The earliest encounters between the Arabs, led by the Companion, and commander 'Uḳba b. Nāfiʿ [*q.v.*] and the inhabitants of the oases of Kawār, on the Fazzān border. This was followed by commercial contacts between the communities of the Ibāḍiyya [*q.v.*] in the Fazzān and towards the region of Ayar (see, in particular, K. Vikør, *The Oasis of Salt, the history of Kawar, a Saharan centre of salt production*, Bergen 1979, 97-111). Vikør furnishes a useful selection of passages from important Arab geographers (159-76 together with English translation) including Ibn ʿAbd al-Ḥakam (d. 258/871-2), al-Yaʿḳūbī (wrote 278/891), al-Bakrī (wrote 460/1067-8), al-Idrīsī (wrote 548-1154), Yāḳūt (wrote 621/1224), Ibn al-At̲h̲īr (d. 630/1233), Ibn Saʿīd (wrote 638/1240) and al-Ḥarrānī (wrote *ca.* 1330). (See also T. Lewicki, *Etudes maghrébines et soudanaises*, i, Warsaw 1976, 59-60.)

(b) The establishment of Berber Massūfa Ṣanhād̲j̲a (who originated in Mauritania and Mali) centres in the vicinity of Takaddā (Teggidan Tesemt/Azelik), and later within the Ayar massif itself. The area was visited by Ibn Baṭṭūṭa [*q.v.*], in 754/1353, who mentions the names of two *ḳāḍīs*. Two noted scholars from Takaddā and its satellite Anū Ṣamman were al-ʿĀḳib b. ʿAbd Allāh, d. after 955/1548-9, and al-Nad̲j̲īb b. Muḥammad, d. after 1004/1595-6. Both of them wrote substantial works on the *Muk̲h̲taṣar* of al-K̲h̲alīl and left other religious compositions (see J.O. Hunwick, *The Central Sūdān before 1800, biographies and bibliographies*, in *Arabic literature in Africa*, no. 1, Northwestern University, Evanston 1985, 23-41). The great Algerian reformer ʿAbd al-Karīm al-Mag̲h̲īlī [*q.v.*] allegedly visited this area for a while on his way to Gao.

(c) The religious significance of the foundation of the Agadès sultanate, recognised by the caliphate, in the 15th century, its supplanting of Takaddā, its temporal subordination to the Askias and to Borno, its rôle as a clearing house for trans-Saharan commerce and its growth as a focus and haven for scholars who were in touch with D̲j̲alāl al-Dīn al-Suyūṭi [*q.v.*] by correspondence, and who visited the Arab East. Each and all made an impact on more southerly areas of Niger.

(d) The establishment of Ḳādiriyya lodges in Ayar, for example, at Agalal and in Agadès city. Other Ṣūfī orders followed. Prominent amongst them was the Shād̲h̲iliyya. Evidence of a S̲h̲ād̲h̲ilī presence in the city of Agadès in the mid-17th century may be found in the biography of S̲h̲ayk̲h̲ ʿUt̲h̲mān b. al-S̲h̲ayk̲h̲ ʿAlī al-Ḥuḍayrī whose compositions are cited in a manuscript (now being edited in Libya), of a work attributed to Aḥmad al-Dardīr al-Ḥuḍayrī. It contains the biographies of leading Fazzānī scholars. A specifically Tuareg and Fulani order that was founded by a little-known Oriental darwīsh, Sīdī Maḥmūd al-Bag̲h̲dādī, martyred in the early 16th century, has become the focal point of Ayar Ṣūfīsm in general. He would appear to have been an eclectic divine (the only Maḥmūdiyya found elsewhere is a sub-order of the Nuḳṭawiyya dating from about the same period, though it is to be doubted whether there can be any connection). Later, both the local Suhrawardiyya and the K̲h̲alwatiyya adopted, adapted and possibly "sanitised" many of the teachings and practices (*ādāb*) that were handed down in the Maḥmūdiyya.

Ṣūfīsm spread from Ayar into adjacent Azawag̲h̲, and at a later date into the Imanan canton, in Zerma country, and to a Ṣūfī *zāwiya* established, under Borno's aegis, at Kalumbardo, near Lake Chad, though within Niger's existing borders. In Agadès city, the sultanate attracted scholars and sustained a number of *ʿulamāʾ* and *fuḳahāʾ* who were revered amongst the city's mixed population.

(e) The reform movement of the Agadès-born D̲j̲ibrīl b. ʿUmar (died after 1198/1784). He visited Egypt and Mecca and his pupils included S̲h̲ayk̲h̲ ʿUt̲h̲mān b. Fūdī. The latter at a later date criticised his master's view that one who commits a grave sin (*kabīra*) becomes an unbeliever, a view that was akin to that used by earlier petty Tuareg *mud̲j̲āhidūn* from the Iborkarayan and Aït Awari in the region, in order to justify their razing of Ṣūfī centres in villages of Azawag̲h̲ and Ayar.

(f) The Sokoto *d̲j̲ihād* itself, during which the

Islamic movement embraced large Hausa areas of Southern Niger, especially Gobir, the Agadès sultanate, the Aït Awari (where Muḥammad al-Djaylānī their leader tried to settle his followers) and other Tuareg groups such as the Kel Geres. The Hausa and Zarma river areas were subject to inroads from the Iwillimmeden Tuareg whose "chaplains", the Kelessuk, were often adepts of the Kunta Ḳādiriyya and who habitually fabricated charms and potions and who issued *fatwās* and composed sermons.

(g) Sanūsī [*q.v.*] penetration into northern Niger from 1870 onwards. The revolt and struggle of Kaoussen against the French in Agadès and Ayar, were backed by German-Turkish military sponsors based in the Fazzān. The consequences of the French expedition, mounted from Zinder in 1906, and which achieved the defeat of Kaoussen's *mudjāhidūn* in 1916, was to lead to a mass emigration of population from Ayar and major destruction of its Muslim centres (see F.R. Rodd, *People of the veil*, London 1926, A. Salifou, *Kaoussan ou la révolte sennoussiste*, in *Etudes Nigériennes*, no. 33, Niamey 1973, and F. Fuglestad, *A history of Niger, 1850-1960*, Cambridge 1983).

(h) The current Islamic revival; this has included a Khalwatiyya headquarters in Ayar at Egandawel (accompanied by an agricultural settlement at Tabellot-Akririb) inspired by a revivalist, Mūsā Abatūl, a resurgence of Islamic practice in Agadès (see Aboubacar Adamou, *Agadez et sa région*, in *Etudes Nigériennes*, no. 44, 318-21), and growth of the Niassist Tidjāniyya amongst Hausa and Zerma, led by Shaykh al-Ḥādjdj Abū Bakar, from Kiota, near Dosso, who married a daughter of the master, from Kaolack in Senegal. The Niassists, the *madrasa* at Say, neo-Wahhābīsm, fundamentalism, and the Niger Islamic Association, and the reformist movement, strong around Maradi, aiming at an increase of wealth, and the building of *madrasas*, known as *izāla* (*djamā*ʿ*at izālat al-bid*ʿ*a wa-iḳāmat al-sunna*) to name the most important centres of power, all make a significant contribution or compete for the souls of the Muslims in Niger today.

NIGERIA, the largest of the West African coastal states.

i. Modern Nigeria

Nigeria was put together in 1914 from the former British protectorates of Northern and Southern Nigeria, to become the Colony and Protectorate of Nigeria. It is bounded in the south by the Gulf of Guinea, in the west by Benin, in the north by Niger, in the north-east by Chad [*q.v.* in Suppl.] and in the east by Cameroon. The administrative capital is Abuja. The chief towns include Lagos, Ibadan, Ilorin, Kano and Sokoto. The population as at 1984 was 88,148,000 in an area of 923,768 km²/356,574 sq. mls. This comprises more than 250 tribal groups, of which the largest are the Hausas [see hausa], the Fulani [see fulbe] and the Kanuri of Bornū [*q.v.*], in the north; the Yorubas in the south-west; and the Ibos in the east.

The terrain encompasses the sandy shoreline and mango swamps of the coast, behind which lies a belt of tropical rain forest. This gradually gives way to orchard savannah as one moves north, to the area of Zaria. From there on the country becomes progressively drier and more barren until one reaches the thin scrub savannah and the near-desert conditions of the immediate sub-Saharan north.

Nigeria has numerous rivers, of which the Niger [*q.v.*], the Benue and the Gongola have been historically important. The coastal areas have two rainy seasons. The highest annual rainfall exceeds 2,500 mm/100 ins. This decreases the farther north one travels. The northern dry season extends from October to April and is the time of the harmattan, the hot, dust-laden wind from the Sahara.

The main religions of Nigeria are Islam (*ca.* 50%);

Christianity (*ca.* 34%) and a receding African animism.

A.H.M. Kirk-Greene, in his *The linguistic statistics of northern Nigeria: a tentative presentation*, in *African language review*, vi (1967), 75-101, lists some fifty-three "'Other' northern languages" in addition to Hausa, Fulani, Kanuri (of Bornū), Tiv, Nupe and Yoruba that were still spoken in northern Nigeria *ca.* 1952. The total number of languages spoken in the whole of Nigeria has been put at 250. Hausa, Yoruba, Edo and Ibo are now the most widely used indigenous tongues. English is the official language of the present Federal Republic of Nigeria, although there is strong pressure in the north for Hausa to be adopted as the national language. The minor northern vernaculars, some of which are confined to individual villages, are becoming extinct, replaced mainly by Hausa.

On 1 October 1954, the Federation of Nigeria was established under British tutelage. It consisted of an Eastern Region, a Western Region and a Northern Region, together with the Southern Cameroons and the Federal Territory of Lagos. The Federation was granted independence on 1 October 1960, within the British Commonwealth. It consisted of Northern Nigeria, Western Nigeria, Eastern Nigeria and the Federal Territory of Lagos. In 1963 it became the Federal Republic of Nigeria.

Nigeria experienced widespread disturbances, a military coup and then a civil war during the period from 1966 to 1970. During this time the Republic of Biafra was declared in the former Eastern Region. It surrendered to the Federal Republic in 1970, at the end of the civil war. After a further period of military rule, a return to parliamentary government based on democratic elections was cut short by a military coup in 1983, followed by another in 1985. The Federal Republic is at present governed by a President with an Armed Forces Ruling Council, which appoints a Council of Ministers. In 1985 it comprised 19 states and a federal capital district. In 1991 the number of states was increased to 30.

Nigeria had a varied and mainly agricultural economy until oil production began in the late 1950s. This gave rise to an oil boom. It was short-lived. The country later suffered from the drop in world oil prices and sustained a damaging revaluation of its currency.

The recent general history of Nigeria, up to and including the declaration of independence, is most conveniently available in Sir Alan Burn's *History of Nigeria*, eighth revised edition, London 1972.

The following sections of this article will set out briefly the course and extent of the adhesion to Islam of certain non-Hausa peoples of Nigeria; and will consider recent trends in Islam in Nigeria.

ii. The *Banza Bakwai*

The modern Hausas believe they spring from seven traditional Hausa states, the *Hausa Bakwai* [see HAUSA]. They also distinguish seven neighbours—the *Banza Bakwai*, the "Bastard Seven"—not of Hausa stock, who have supposedly adopted the Hausa language and way of life, and with whom their history has been continuously involved. They are the people of Zamfara, Kebbi, Yauri, the Yorubas, the Nupes, the Kwararafas and the Gwaris. These people are now, for the most part, drawn together with the Hausas within modern Nigeria.

The kingdom of Zamfara was located north-west of present Zaria, between Kebbi and Kano. Islam was introduced there, reputedly in the 11th/17th century. It probably came as a consequence of Zamfara's involvement in the trans-Saharan and sub-Saharan trade. The so-called "Fulani" *d̲j̲ihād* overtook Zamfara early in the 13th/19th century. Its trading pre-eminence thereupon declined. It became absorbed into the Islamic empire of Sokoto [*q.v.*].

The ancient kingdom of Kebbi, located north-west of Zamfara, may have come under Islamic influences during the hegemony of the Songhay empire. Its ruling family had accepted Islam by 921/1515. Its inclusion among the *Banza Bakwai* is tenuous. For the Kebbawa appear to have used Hausa only as a trade language; while their claim to Islam is as ancient as that of the Hausas.

Yauri lies south-east of Kebbi, astride the route to the gold-bearing regions of the Volta. By 1025/1616 it seems that Muslim-Hausa traders were settled in the kingdom. Under their influence the Yaurawa were won over to Islam by the end of the 11th/17th century.

The Yorubas dwell south-west of the Niger-Benue confluence. They are yet more doubtful candidates to be regarded as *Banza Bakwai* than even the Kebbawa. They retain their ancestral tongue to this day. They use Hausa only as a *lingua franca*. Their Islam, though incomplete, has ancient roots. It surely stems from the Mandingo empire of Mali [*q.v.*], that reached its Islamic apogee in the 8th/14th century. This is reflected in the Yoruba word for a Muslim—*Imale*. Subsequent Yoruba history has included a tussle between the ancient cult of Oduduwa, centred on Ile-Ife, and an intrusive Islam from the north. A substantial Muslim community had developed among the Yorubas by *ca.* 1078/1667. As a result of political rivalries within the Yoruba empire of Oyo [*q.v.*], an Islamic party revolted against the traditional authority early in the 13th/19th century. Consequently, most Yorubas were drawn into the aftermath of the Islamic *d̲j̲ihād* [*q.v.* and also MUD̲J̲ĀHID] in the north and were formally incorporated into the empire of Sokoto, as the emirate of Ilorin, in 1246/1831. But other Yorubas remained outside the emirate, in Lagos and elsewhere. They have continued to be subject to Islamic influences, none the less.

Islam is less complete among the Yorubas than it is among the northern Hausas and Fulani. Many are Christians, or adhere to the ancestral belief system. It is not uncommon to find Muslims and Christians in the same Yoruba extended family.

The Nupes, located within the northern angle of the Niger-Benue Confluence, resemble the Yorubas in their continuing attachment to an ancestral cult and language. They were in trading contact with the Muslim Hausas as early as the 9th/15th century, and have experienced Islam from that point on. Yet there is no firm evidence of the official adoption of Islam among them until early in the second half of the 12th/18th century. Thereafter, there is evidence of a swing back to the traditional belief system among some Nupes, later in the century. In modern times, Islam has become stronger among them; but not all Nupes are Muslims, even today.

The Kwararafas are a warlike people inhabiting the Gongola and Benue valleys. They have been traditional enemies of the Hausas to their north. A Muslim tradition among them cherishes a fantastic legend of origin in Yemen, which echoes the *Sīra* [*q.v.*] story of the Prophet's letters to erstwhile hostile neighbours, calling them to Islam. It is surely an importation of visiting Muslims. It is as likely to reflect Kwararafa hostility to the Muslim Hausas as any conversions to Islam. It probably arose *ca.* 905/1500, as a result of the establishing of Islam in Zaria at that time. Despite their improbable legend of origin, Islam has until recently made scant impression upon the Kwararafas. Up until *ca.* 1370/1950, they remained substantially

committed to polytheism. However, more recent pressures for a uniform, Sunnī, Mālikī Islam throughout northern and riverain Nigeria now impinge upon them.

The Gwaris are scattered in the country of southern Zaria. Their Islam is of uncertain date and tenuous substance. Some venerate an *Allah Bango*, "Allah-of-the-book-boards", surely a reference to the presence of literate Hausa *malams* (Hausa = *ʿulamāʾ*) among them. Another of their deities is "Sheshu" or "Shekohi", probably reflecting Hausa "Shehu" (*shaykh*) ʿUthmān b. Fūdī [*q.v.*]. Yet another is "Mama", alias, no doubt, Muḥammad. While the origin of these Islamic fragments is uncertain, their most likely provenance is the Muslim drive south that followed the 13th/19th-century *djihād* in northern Nigeria. As is frequent among the Muslim Hausas' smaller neighbours, a reformist, Sunnī Islam has recently pushed aside most of what obtained before it. Islamic names and the ubiquitous Hausa *riga*, the Muslim gown, now make most Gwaris—at any rate in the towns and villages—indistinguishable from the surrounding Hausas.

This account, a more detailed version of which will be found in M. Hiskett's *The development of Islam in West Africa*, London and New York 1984, 110-19, covers most of the non-Hausa peoples of present Nigeria. There remain the Fulani [see FULBE], Borné [*q.v.*], the Ibos, *et alii*, of the former Eastern Region and certain smaller, animist groups such as the Dakarkaris and the Plateau people.

iii. Recent trends in Islam in Nigeria

Lugard's amalgamation of Southern and Northern Nigeria resulted in bundling the Ibos, Ibibios and other non-Muslim peoples of what, during the colonial period, was known as the Eastern Region, together with the Muslim northerners , in one federation. These people had remained untouched by Islam—except as potential slaves—up to the colonial occupations. Many had by this time become protégés of Christian missionaries from the Coast. They were mainly Roman Catholics. They continued under missionary tutelage until Nigerian independence, the civil war, the oil boom and a series of military coups, brought about sweeping changes.

During the colonial period these inveterate petty traders from the east flocked north in the train of the British. Because of their missionary education many became minor civil servants. They set up *Sabon Garis* "New Towns", outside the northern Muslim cities. With Nigerian independence approaching, they became the victims of ethnic and religious hostility on the part of the Muslim northerners, which their own posturing prior to the declaration of Biafra did nothing to diminish. Immediately before the outbreak of the civil war, a mass exodus of Ibos from the north, back to the east, took place, against the background of an ugly blood bath.

After the civil war, and in the more congenial atmosphere of the Nigerian oil boom, Ibos and other easterners returned to the north, as traders and in certain professional capacities that ranged from bank clerk to lecturer in the new northern Nigerian universities. However, they faced different conditions from those that had obtained under the British colonial administration. For there was among radical northern Muslims a wide consensus that such returning easterners should subscribe to Islam, as a condition of their new acceptability in the Muslim north. This was not official and was seldom openly expressed. It was, however, the unspoken extension of the policy of "Northernisation" that the old Northern Region had officially adopted during the terminal days of the colonial administration, and continued ever since. While Christian enclaves of eastern and Coastal Nigerians remain in northern townships, there are, nonetheless, an increasing number of "Musas", "Muhammadus", "Aliyus" *et alii* in northern Nigeria who, apart from such names and the Hausa-Muslim *riga*, display all the characteristics of a southern, Coastal Christian mission upbringing. How significant such conversions of convenience may be, is questionable. Nonetheless, they represent a widening of Islamic influence.

Such pressures have a precedent. From *ca.* 1380/1960 to his assassination in 1385/1966, the Sardauna of Sokoto, then Premier of the Northern Region, pursued a policy of "Islamisation", the purpose of which was to persuade—or coerce—all indigenous northern Nigerian peoples to accept Islam. It had the fervour of "Djihād of the Heart" behind it. It also involved some harassment, as well as bribery, of residual animist groups such as the Dakarkaris and the Plateau people. And it convinced, or allowed certain Ibo army officers to claim, that the Sardauna was preparing Holy War against all non-Muslims. This then became part of their justification for declaring an independent Biafra. In the event, the Sardauna's campaign resulted in widespread nominal conversions, in which chiefs, village heads, etc., adopted Islamic names in addition to their traditional ones. This was taken as sufficient to establish the Islam of their people as a whole. Once again, it is questionable how deep such mass "conversions" go. But certainly the Sardauna's essay after the hearts and minds of his non-Muslim countrymen has been a precedent after the renewal of which in a more thoroughgoing fashion, northern Muslim radicals now hanker. They enjoy some support in this among certain Yoruba Muslims.

The period from the end of the Second World War to the granting of northern independence in 1960, is known to the Hausas as *Zamanin siyasa*, "The Time of Politics". It saw the rise of Nigerian political parties, superficially resembling those of the British parliamentary system. In fact, the Northern Peoples' Congress (NPC) was identified with the interests of the aristocratic Fulani emirates and the "Native Authority" (NA) system that sustained them. It advocated a modified Islamic theocracy for independent northern Nigeria. This party was challenged in the north by the Northern Elements Progressive Union (NEPU), ostensibly mimicking the European left but also representing the ancient antagonism of Hausa commoners towards their Fulani overlords; and pursuing a tradition of Islamic dissidence. It was closely associated with the Tidjāniyya [*q.v.*] *ṭarīḳa*, that had, hitherto, reflected this dissidence. Both parties vied with one another in their claims to represent the true Islam, and excoriated the other for betraying that Islam. By and large, the establishmentarian NPC had the better of the radical NEPU, a consequence, no doubt, of the prevailing ethos of Sunnī, Mālikī conservatism at that time. Their tussle produced a plethora of ding-dong Hausa political verse, admirably recorded by Haruna Abdullahi Birniwa (*Conservatism and dissent; a comparative study of NPC/NPN and NEPU/PRP Hausa political verse from circa 1946 to 1983*, PhD thesis, University of Sokoto, Nigeria 1987, unpubl.).

The Nigerian civil war, the oil boom and the military administrations shattered the old Islamic party lineaments and created new interests and alliances. While the People's Redemption Party

(PRP), launched in 1978, continued to reflect certain attitudes of the old NEPU, the National Party of Nigeria (NPN), founded in the same year, had a more Federal base. It represented Christian-Yoruba and other minority-Christian interests, as well as those of the Muslim Hausas. Moreover, it eschewed Islamic theocracy. But the party system was short-lived in Nigeria. Under the military, party politics were banned. What has taken their place is a division between modernists and moderates on the one hand, who favour a democratic, pluralist federation; and on the other, Muslim iconoclasts who want no more truck with democracy and call for the north to return to Islamic theocracy. As the banners of radical-Muslim campus demonstrators put it, on the eve of the fall of the egregious Shagari administration on 31 December 1983, "Democracy is unbelief! We do not want a constitution! We want government by the Koran alone!" It is surely the military administration alone that keeps this tendency at bay.

Some recent scholarly comment has suggested that polygyny in Islam has given way to monogamy, as education and emancipation have their influence upon Muslim women. The assumption is unsafe in the case of Nigeria. Here, undoubtedly, some loosening of purdah has occured. Muslim women in Kano, Sokoto and elsewhere, teach in schools and universities and fulfil other professional roles. But there are unspoken conditions. Virtually all are married. They are expected to deport themselves with exemplary Islamic modesty. They are indeed educated. Some are university graduates. But this greater freedom has led them to see themselves not as victims of the Islamic system but as its articulate defenders. Most of them uphold Islamic polygyny within the strict construction of the Mālikī *maḏhhab*, and contrast what they regard as the admirable stability of the Muslim extended family with the decline of the Western nuclear family, the growth of the "one-parent family", abortion and the rest, which frankly horrify them.

As for the men, especially the Muslim academics to whom the growth of universities in the north has given considerable influence, many are among the most ardent advocates of polygyny, though once again with due regard for the law. They regard it as essential to defend an Islamic way of life, increasingly threatened by secularism. Whatever may be happening elsewhere in the Islamic *umma*, the decline of polygyny in northern Nigeria is not evident.

Expatriate Europeans have been largely replaced in northern Nigeria by Muslims from Pakistan, Egypt and the Republic of the Sudan, who now work as university lecturers, educationists, agriculturalists and in other roles once filled by Europeans. Some turn out to be tutors in an Islamic radicalism that resembles the popular notion of "fundamentalism". Especially influential have been Egyptian disciples of the *Ikhwān al-muslimīn* [*q.v.*]. Though an older generation of Sunnī, Mālikī *malams* still fights shy of such immoderation, a younger generation of Muslim activists has taken to it fervently. The Hausa Muslim tendency known as the *'Yan Izala* broadly mimics the stance of the Saudi Wahhābiyya.

The Middle East imbroglio, through the rise of Khomeini (al-Khumaynī [*q.v.* in Suppl.]) to the seizure of the Masdjid al-Ḥarām in Mecca in 1400/1979, had its repercussions in northern Nigeria. For, while the conservative Sunnī *malams* were chary of what was a largely Shīʿī enthusiasm, the activists had no such hesitations. In this they received encouragement from certain expatriate Muslims. For in the ardour of the times, these Sunnī radicals were ready to side with Shīʿīs they might otherwise have execrated. Likewise, President Muʿammar al-Ḳadhdhāfī (Gaddafi) became an object of radical Muslim admiration, until his meddling in Chad turned Nigerian sentiment against him. Indeed, many Nigerian Christians joined with their Muslim countrymen in hailing both al-Khumaynī and al-Ḳadhdhāfī. They thus illustrated the way in which so-called Islamic fundamentalism and more generalised third-world sentiment converge at many points.

The most spectacular Nigerian concomitant to the seizure of the Grand Mosque of Mecca and all it represented, was the gruesome Mai Tatsine riots that disturbed northern Nigeria from 1980 to 1984. This eruption, widely misunderstood as just another outbreak of Iranian-style Islamic radicalism, had complex origins. It is best described as a manifestation of traditional Islamic messianism—21 November 1979 marked the beginning of A.H. 1400, a fact that excited many Nigerian Muslims to apocalyptic expectations—mixed with resurgent African animism that was wholly un-Islamic. Thus the protests of outraged Sunnī *malams* that this was not Islam but downright *kafirci* (Hausa "unbelief"). An assessment of these events by M. Hiskett will be found in *The Mai Tatsine riots in Kano, 1980: an assessment*, in *Journal of Religion in Africa*, xvii/3 (1987), 209-23.

By 1985 the lid was still held down firmly on what seemed at that time to be a cauldron of Islamic militancy in Nigeria, by the Military Administration. This Administration's policy of increasing the number of states, which enjoy considerable internal autonomy, is apparently intended to reduce ethnic and religious tensions as far as is possible. It remains to be seen whether it will prove successful in restraining the Islamic radicalism that undoubtedly exists among northern Muslims.

Bibliography: Among printed books and articles, the following are useful: Mahdi Adamu, *The Hausa factor in West African history*, Zaria and Ibadan 1978, is essential for an understanding of Hausa-Muslim influences beyond Hausaland; G.N. Brown and M. Hiskett (eds.), *Conflict and harmony in education in tropical Africa*, London 1975, selected chapters; A. Christelow, *Religious protest and dissent in northern Nigeria: From mahdism to Qurʾānic integralism*, in *Journal Institute of Muslim Minority Affairs*, vi/2 (n.d.), 375-448; idem, *The 'Yan Tatsine disturbances in Kano—a search for perspectives*, in *MW*, lxxv/2 (1985), 69-84; Catherine Coles and Beverly Mack (eds.), *Hausa women in the twentieth century*, Madison, Wisconsin 1991; B.J. Dudley, *Parties and politics in northern Nigeria*, London 1968; H.J. Fisher, *Some reflexions on Islam in independent West Africa*, in *The Clergy Review* (March, 1968), 1-13; T.G.O. Gbadamosi, *The growth of Islam among the Yoruba*, London 1978; Government Printer, Enugu, *The north and constitutional developments in Nigeria: Nigerian crisis 1966*, v, Enugu n.d., gives the Ibo view of the background to the Nigerian civil war; A.H.M. Kirk-Greene, *The genesis of the Nigerian civil war and the theory of fear*, Scandinavian Institute of African Studies Research Report, no. 27, Uppsala 1975; K. Krieger, *Geschichte von Zamfara*, Berlin 1959; V.N. Low, *Three Nigerian emirates*, Illinois 1972, is useful for its account of the Kwararafas; P.M. Lubeck, *Islamic protest under semi-capitalism: 'Yan Tatsine explained*, in J.D.Y. Peel and C.C. Stewart (eds.), *Popular Islam south of the Sahara*, Manchester 1985, 369-89; P. Morton-Williams, *The Fulani penetration into Nupe and Yoruba in the nineteenth century*, A.S.A. Monographs, 7. History and social anthropology,

London and New York 1968; P.J. Ryan, *Imale: Yoruba participation in the Muslim tradition*, Missoula, Montana 1978; N. Skinner and Kabir Galadanci, *Wakar soja—a Hausa poem on the civil war*, in *Spectrum*, iii (1973), 97-125, for a Muslim-Hausa view of the civil war; D. Westermann and M.A. Bryan's *Languages of West Africa*, in *Handbook of African languages*, Part II, London (1952) includes a useful language map of West Africa.

Much of the most valuable work on recent developments in Islam in Nigeria will be found in unpublished MA and PhD dissertations. Birniwa's work, cited above, not only provides primary source material in the form of Hausa verse; it also includes an acute analysis of the history of the northern Nigerian political parties. Muhammad Sani Aliyu's *Shortcomings in Hausa society as seen by representative Hausa Islamic poets*, MA thesis, Bayero University, Kano 1983 unpubl., throws light on the *malam*'s reactions to secularism; Samaila Mohammed's *Some aspects of the culture and institutions of the Dakarkari people examined in the light of their contiguity with the Hausa people*, MA thesis, Bayero University, Kano 1982 unpubl., is an admirable study of contacts between the Muslim Hausas and an animist society; Abdullahi Bayero Yahya's *A critical anthology of the verse of Aljaji Bello Gidawa*, MA thesis, Bayero University, Kano 1983 unpubl., enshrines valuable source material for studying the genesis of NPC. (M. Hiskett)

NIGHT WATCHMAN [see ʿasas].

NIHĀL ČAND LĀHAWRĪ, Indian man of letters, Hindū by religion, was born in Dihlī, but left it in early life and went to Lahore where he lived for a considerable time. Owing to this circumstance he called himself Lāhawrī. Search for a livelihood led him to Calcutta. Here he was introduced to Dr. J.B. Gilchrist, who asked him to translate into *Hindī rekhta* the story of Tādj al-Mulūk and Bakāwalī. He consented, and thus became one of the famous band of Fort William translators. He made the translation from *Gul-i Bakāwalī*, a Persian rendering by Shaykh ʿIzzat Allāh, 1772, of an old Hindī story, which has been reproduced in Urdu verse by Dayā Shankar Kawl Nasīm [*q.v.*], in his well-known *mathnawī Gulzār-i Nasīm*.

Nihāl Čand called his work *Madhhab-i ʿishk*. It is in very good prose mixed with verse. The title gives the date 1217/1802. Apart from the above-mentioned facts, nothing is known about the writer.

Bibliography: M. Yaḥyā Tanhā, *Siyar al-muṣannifīn*, i, 117-19; Garcin de Tassy, *Histoire de la littérature hindouie et hindoustanie*, 2nd ed. Paris 1870, ii, 468-70; T. Grahame Bailey, *A short history of Urdu literature*, Oxford 1931, 82; R.B. Saksena, *Hist. of Urdu literature*, Allahabad 1927, 249.

(T.G. Bailey)

NIHĀWAND, a town in the Zagros Mountains of western Persia, in the mediaeval Islamic province of Djibāl [*q.v.*], situated in lat. 34° 13' N. and long. 48° 21' E. and lying at an altitude of 1,786 m/5,860 feet. It is on the branch of the Gāmāsāb which comes from the south-east from the vicinity of Burūdjird; the Gāmāsāb then runs westwards to Bisūtūn. Nihāwand lies on the southern road which, coming from Kirmānshāh (Ibn Khurradādhbih, 198), leads into central Persia (Iṣfahān) avoiding the massif of Alwand ('Ορόντης) which rises to the west of Hamadhān. Hence the importance of the town in the wars of Persia with her western neighbours.

The French excavations of 1931 (Contenau) showed that the site of Nihāwand was inhabited from prehistoric times. The ceramics ("I-bis style") which have been found there, seem to be older than those of style I and II of Susa. Ptolemy, VI, 2, knows of Νιφαυάνδα and according to Ibn Faḳīh, 258, the town already existed before the Deluge. In the Sāsānid period the district of Nihāwand seems to have formed the fief of the Kārin family (al-Dīnāwarī, 99). There was a fire-temple there. According to Ibn Faḳīh, 259, there could be seen on the mountains near Nihāwand two figures of snow in the form of a bull and a fish (similar talismans are said to have existed at Bitlīs also, cf. the steles of *wishap* ("dragons", protectors of waters) in Armenia west of Lake Sewan which combine these symbols, *Zap.*, xxiii/3 [1916], 409). The same legend is reflected in the name of the river Gāmāsāb (*Gāw-māsī-āb* = "water of the bull and fish"; *māsī* is the Kurdish form of the Persian *māhī*).

Among the products of Nihāwand, the Arab authors mention willow wood which was used for polo-sticks (*ṣawālidja*), aromatic reeds (*ḳaṣabat al-dharīra* or *al-ḳumḥa al-ʿirāḳiyya*) which were used like *ḥanūṭ* (a perfume put in coffins) and black clay used as wax for sealing letters. The district of Rūdrāwar [*q.v.*] was under Nihāwand (cf. de Morgan, *Mission*, ii, 136: *Rūdīlāwar*) and was famous for its abundance of saffron (al-Iṣṭakhrī, 199). For a list of the places more or less dependent on Nihāwand, cf. Schwarz, *Iran*, 505-9. In the Mongol period, Ḥamd Allāh Mustawfī's *Nuzhat al-ḳulūb* mentions three districts of Nihāwand: Malāyir (now Dawlatābād), Isfīdhān (= Isbīdhahān, see below) and Djahūḳ.

Near Nihāwand was fought the famous battle which decided the fate of the Iranian plateau and in which the Kūfī commander al-Nuʿmān b. Muḳarrin defeated the Sāsānid generals. The commander-in-chief is given different names: Dhu 'l-Ḥadjibayn Mardānshāh (cf. al-Balādhurī, 303 n. *e*; Marquart, *Ērānšahr*, 113 identifies him with the *darīkpet* Khurrazād) of Fīrūzān (cf. al-Ṭabarī, i, 2608; the latter also gives the names of his generals: Zarduḳ, Bahman Djādōya and the commander of the cavalry Anūshaḳ). The Arab camp was at Isbīdhahān and that of the Persians at Wāykhurd (?). The sources do not agree about the date: Sayf b. ʿUmar (al-Ṭabarī, i, 2615-19) gives the end at the year 18/639 or the beginning of 19/640 (cf. Wellhausen, *Skizzen und Vorarbeiten*, vi, 1899, 97), while Ibn Isḥāḳ, Abū Maʿshar and al-Wāḳidī, followed by Caetani, *Annali dell' Islām*, iv, 1911, 474-504, put the battle in 21/642.

The district of Nihāwand (formerly called Māh-Bahrādhān or Māh-Dīnār) was finally incorporated in the possessions of the Baṣrans and called Māḥ Baṣra ("the Media of Baṣra"; al-Balādhurī, 306).

Nihāwand is often mentioned in the period of the wars between the Ṣafawids and the Ottomans. In 998/1589 at the beginning of the reign of ʿAbbās I, the Ottoman vizier Čighāle-zāde [*q.v.*] built a fortress at Nihāwand (*ʿĀlam-ārā*, 372). After the death of Murād IV, a rebellion took place among the garrison of Nihāwand; the Ottomans were driven out by the Shīʿī inhabitants. As a result, in 1012/1603 war again broke out with Turkey (*ibid.*, 440). In the spring of 1142/1730 Nādir Shāh [*q.v.*] took Nihāwand again from the Turks.

In modern Persia, Nihāwand is the chef-lieu (population in 1960, 26,452) of a *shahrastān* of the same name (population 70,000) in the fifth *ustān* or province of Kurdistān.

NIHĀWANDĪ, ᶜAbd al-Bāḳī b. Abī Bakr Kurd, Indo-Muslim historian of the Mughal period (978-after 1046/1570-after 1637). Of Kurdish origin from Djūlak near Nihāwand [*q.v.*], he served the Ṣafawids as a tax official and eventually became a *wazīr* in the administration. But then he fell from grace, and like many Persians of his age, decided to migrate to India, and entered the service of the Khān-i Khānān [*q.v.*] Mīrzā ᶜAbd al-Raḥīm, one of Akbar's generals, subsequently holding official posts in the Deccan and Bihār. The Khān-i Khānān asked him to write a biography of himself, the *Maᵓāthir-i Raḥīmī*, completed by ᶜAbd al-Bāḳī in 1025/1616 (ed. Hidāyat Ḥusayn, Bibl. Indica, Calcutta 1910-31) an important source for the period, which also contains a history of Muslim India in his own and previous times, starting with the Ghaznawids [*q.v.*].

(C.E. Bosworth)

NIHĀYA (a.), a term of Islamic philosophy which (together with its negation *mā lā nihāya lahu*) is entirely governed by its lexical meaning. Ibn Manẓūr, in *LA*, defines it thus: "the extremity (*ghāya*) and final limit (*ākhir*) of a thing; and this is because its final limit prevents it from being prolonged (*yanhā-hu ᶜan al-tamādī*), so that it is stopped (*fa-yartadiᶜ*)". This definition of *nihāya* is based on its etymology, since the verb *nahā* means "to forbid". The *nihāya* is thus that which forbids access to something beyond a certain limit. Ibn Manẓūr explains the Ḳurᵓānic phrase *sidrat al-muntahā* (LIII, 14) by saying that it is the lotus "which one reaches by arriving at it and which one does not go beyond (*wa-lā yutadjāwaz*)".

This concept of not going beyond can apply to such realities as time, space and the division of bodies. Does time have a limit in the past (an original time) or in the future (a final time), limits before or beyond which there is no more time, or is there an extension of time into infinity, an eternity of time *a parte ante* (*al-lam-yazal*) which has never ceased to exist in the past, and *a parte post* (*al-lā-yazāl*) which will never end in the future? The same question can be put regarding space: does there exist an infinite space, or is all existing space limited? Likewise, is there or is there not a limit to the division of bodies; is a body composed of an infinite number of parts, or is it built up from a finite assemblage of indivisible atoms? But the concept of not going beyond is also applicable to the operations of thought: does it reach as far as definitive conclusions, i.e. can it define final and "completed" truths, without being obliged to to go back incessantly and infinitively in its reasonings, "until there is no *nihāya*", which is, in the eyes of logicians, the sign of a defect in a proof? One can thus discern that the concept of *nihāya* is involved in everything touching such problems as what is finite, the infinite and the undefined.

The question in regard to space and time was treated in the discussions of the opposing views of al-Ghazālī and Ibn Rushd in the two *Tahāfut*s. Is there a parallelism between space and time in regard to their limits? Al-Ghazālī, in an eristic form of augumentation against the philosophers, supports it. He remarks that the future and the past are relative to each other, since all future becomes a past, and all past is merely such in as far as it precedes the future. But these are equally relative to the human soul which, in its present form, represents these two dimensions of time thanks to its faculty of imagination (*wahm*, *tawahhum*) which, itself, cannot come to a halt, neither to an initial term nor to a final one. Hence it has no *nihāya*. But the same is true in regard to space; our imagination cannot stop at a higher or lower limit, so that one can conceive of an undefined growth of the world in space (or, contrariwise, an undefined contraction), which raises the question of our knowing whether the world could have been created greater or smaller than it in fact is. Further, one can ask oneself if it could have been created earlier or later. In effect, if spatial dimension accompanies a body, then temporal dimension accompanies movement. If one thus admits, in spite of the imagination, that the body of the world is limited and that it does not exist beyond the created world as it actually is, neither open space nor empty space, as the philosophers, following Aristotle and his theory of place (τόπος, cf. *Physics*, book IV), then they must be compelled to recognise that, beyond the movement of the world, there exists no empty time nor filled time, and, as a result, that the world has a temporal *nihāya* just as it has a spatial one. If the philosophers refuse to grant that the world has a first beginning at which one must stop when one traces back the succession of movements which are characteristic of it, despite being carried away by the imagination, then they are not in conformity with their own beliefs, since they admit a *nihāya* for space but refuse it for time whilst the case of time is identical with that of space.

Ibn Rushd replies that, if the future and past are relative to our own imagination, they are not then "things which exist in themselves; they have no existence outside the soul and are only a creation of the soul (*shayᵓ tafᶜalu ᵓl-nafs*)". The fact that the imagination goes beyond all spatial limit as much as beyond all temporal limit does not imply that, in reality, the case of time is the same as that of space. Or, to be precise, there exists, from the point of view of real existence, a great difference: this is that every body, as such, forms a whole, an ensemble which can be added up into a totality, which is not the case with movement which, on the contrary, by its very nature flows along and cannot be halted in a total stop. This is why, according to reason, and not this time according to the imagination, one can conceive of a spatial limit to the world, whilst one cannot conceive of a limit to movement and, consequently, to time, since time is made up of a enumerated number of movements, on which it depend. This is the explanation why, when there is a question of a reality which comes into existence (*al-muḥdath*) after its non-existence, one must not trace back the anteriority (*ḳabliyya*) of its non-existence to an act of the imagination, since if one does that, one suppresses the reality of what comes into existence (cf. *Tahāfut al-Tahāfut*, ed. Bouyges, Beirut, 72-80).

Another question regarding creation *ab aeterno* also brings in the concept of *nihāya*. The two *Tahāfut*s are clearly opposed on this point. How can one conceive of an eternal creation? asks al-Ghazālī, when the eternity of the world is impossible. In effect, the revolution of the Sun takes place over a year and that of Saturn over 30 years. The Sun's revolution is thus

one-thirtieth of the revolution of Saturn, or, putting it another way, for one revolution of Saturn, there are 30 revolutions of the Sun; for two revolutions of Saturn, there will be two times 30 revolutions of the Sun. When one takes a finite number *n* of revolutions of Saturn, one will have a finite number 30*n* revolutions of the Sun. The relationship between the totality of the revolutions of Saturn and the totality of the revolutions of the Sun remains the same in relationship to the parts of these totalities, i.e. 1:30. Ibn Rus͟hd replies, however, that if there are an infinite number of revolutions of Saturn and the Sun, this relationship disappears, since there is no conceivable relationship between infinity "once" and "30 times" infinity. Hence infinities of revolutions are impossible, and the world cannot have been created *ab aeterno*. These considerations are already to be found in the *Fiṣal* of Ibn Ḥazm. Furthermore, is the infinite number of these revolutions an even or an odd number, or both at the same time, or is it neither? One must say that it is either one or the other. But if one says that it is an equal number, it will become an odd number by the addition of a unity, and if one says that it is an odd number, it will become an even number by the subtraction of a unity. But how can one conceive adding a unity to or taking a unity away from what is infinite? One can only reply that the infinite number is neither odd nor even, which is contrary to the nature of the concept of number. Finally, Ibn Rus͟hd's reply rests on a completely Aristotelian principle: sc. that an infinite number of revolutions is only infinite in potentiality, and that there does not exist any act of any kind such that one can take it as a whole which is defined and genuinely capable of being totalised (cf. *Tahāfut al-Tahāfut*, 12-18).

Another question involving *nihāya* arises in regard to the division of bodies. Ibn Sīnā discusses it, in particular in his *Is͟hārāt* (ed. Sulaymān Dunyā, Cairo 1957, ii, 130 ff.). Should one come to a stop at indivisible atoms, in finite number, or not? If division proceeds to the infinite, are the final parts of which bodies are made up bodies themselves or something else? This question raises numerous difficulties. It is a fact that, if one defines a body geometrically as that which has three dimensions in space, sc. length, breadth and depth, it is always possible for the imagination to divide up a line, surface or volume infinitely. But how can one put together again a body from constituents thus arrived at? According to Ibn Sīnā, what makes up a body as such is not three-dimensionality but "corporeity" (*d͟jismiyya*), a principle which is not divisible, unlike geometrical dimension. It should be observed that Ibn Sīnā is raising here the important question of the continuous and the discontinuous.

The theologians also tackled this question of the constituting of bodies. Let us merely cite al-Naẓẓām [*q.v.*], a Muʿtazilī of the Baṣran school, who denied the existence of the indivisible part or atom. The division of bodies can go on infinitely, which brings into consideration their continuity and, at the same time, the question of the nature of space and the possibility of movement. He resolved it by his doctrine of the "leap" (*ṭafra*); a moving body which cannot pass by means of an infinite number of positions from A to B "leaps" from one point to another. ʿAbd al-Ķāhir al-Bag͟hdādī, in his *Farķ bayn al-firaķ*, remarks that this idea of the possibility of divisibility as far as the infinite brings in the thesis of the simultaneous occupation of bodies of a single space (*tadāk͟hul al-ad͟jsām fī ḥayyiz wāḥid*). In practice, as Ibn Sīnā discerned clearly, one cannot explain the contact of parts thus infinitely divided up in order to take into account the composition of the body, except by considering that they have two distinct extremities (*ṭarafān*), so that contact with one is different from contact with the other; which is contrary to the hypothesis of division to infinity. Furthermore, one must freely admit that the elements which are supposed to be in contact become completely penetrated within each other, which cannot explain the constituting of the volume of bodies.

These are the main problems which the concept of *nihāya* raises.

NIĶĀBA (A.), a term whose sense has been fixed in the 20th century for "trade union", i.e. association for defending the interests of and promoting the rights of wage and salary earners, can also however denote the liberal professions and even those of employers. The term derives from the corporative function of the *naķīb*, with the adjective *niķābī* (in practice applied as a substantive only to wage and salary earners) and the abstract *niķābiyya* "syndicalism"; there is no verbal form in this sense.

The term's usage became general after the First World War. Trade unionism, free from the theoretical non-differentiation between employers and employees of the guilds, is already attested in those countries in which capitalist enterprise was most advanced. In Algeria (1880 onwards) it referred primarily to the dominant Europeans, with some slight reference to the autochthonous peoples, and utilised the French term *syndicalisme*. In Egypt, where the corporative system was abolished in 1890, the first trade unions (1899 onwards), at first dominated by foreign or Ottoman-minority elements, but later mixed, became known as associations (*d͟jamʿiyya*). This term prevailed when Egyptian trade unionism was put on a nationalist basis (1908-14). *Niķāba* came into usage at the same time in the terminology of the Nationalist (*Waṭanī*) Party of Muḥammad Farīd [*q.v.*], from 1908 onwards. It referred to an agricultural co-operative, in the Italian co-operativist sense (*niķāba zirāʿiyya*) and at the same time to the *Niķābat al-Ṣanāʾiʿ al-Yadawiyya* (Union of Manual Workers), an educational and co-operative association under the patronage of Nationalist lawyers, with individual and group, interprofessional, membership, including artisans. It did not exclude the *d͟jamʿiyyāt*. Muḥammad Farīd's projects for labour legislation, inspired by British Labour Party's activity, established *niķāba* as the equivalent of trade union/syndicat. Henceforth, the Egyptian press used the term to translate the titles of trade unions formed by foreign workers.

In the Ottoman empire, the corporative system, although in decay, remained longer in usage, with mutual insurance societies only permitted to foreigners and to members of the minorities employed in the foreign concessionary companies. The first trade unions arose at the time of the strikes during the 1908 Revolution, which however hardly touched the Arab provinces. Laws were passed (1908-12) to counter and to regulate the movement. Trade unions were forbidden and the old corporations dissolved. They were replaced by professional associations, comprising employers and employed, with representativeness reserved for the former. In the Arab version, for a long time after the War, *niķāba* denoted corporative groups (*niķābat al-aṣnāf, n. al-ḥiraf wa 'l-ṣanāʾiʿ*), whilst *d͟jamʿiyya, pace* the case in Egypt, referred to legal "associations", not trade unions.

After the War, whilst modern Turkey adopted, in order to remove ambiguity, the loan form *sendika*, *niḳāba* became the predominant term in the Arab-speaking lands.

The history of Arab trade unionism went, briefly speaking, through three phases. Until the 1940s, under colonial domination, it became firmly established in Egypt, spread through the British and French mandates of the Near East and became general in the three countries of French North Africa. In this context, it acquired a strong political tinge, within the framework of the combined stakes of class and nationalism. The first vehicle of diffusion of the form and the term was the current which claimed to belong to the Communist International and the International Red Trade Union Movement, i.e. within the organic link between the Communist Party and trade unionism till the middle of the 1930s. In the Near East, where these organisations were independent of those of the metropolises, the first Egyptian federation (*Ittiḥād Niḳābat al-ʿUmmāl*) was crushed by the Wafdist repression of 1924, and the sole lasting effect of this current was in Lebanon. Trade unionisation was slower in Syria, and more pluralist there. In ʿIrāḳ, it enjoyed periods of expansion and contraction. The tendency of the mandatary or tutelary authorities was to suppress this movement, considered as a prop of nationalism, or at most to oppose to it the Ottoman regulations regarding associations, for long maintained in force. The demands made were as much juridical as economic, and in view of the resistance encountered, nationalist. With its class current broken, Egyptian trade unionism was taken over, through the exertion of political patronage, by the nationalist parties, on reformist lines close to the International Trade Union Federation, connected with the Second Socialist International. But the use of their capability of mobilising on the streets and in strikes served largely for these parties to embarrass their enemy in power. Once the power was taken over, repression began again. The presence of a colonial population in French North Africa allowed the securing of more rights. The lines of cleavage were those of the metropolis, opposing the reformist movement to the current class, until the reunification of the Confédération Générale du Travail (C.G.T.) in 1936. The second current, also anti-colonialist, was aimed, despite prohibitions and repression, at unionising the indigenous peoples and even supported, in Tunisia, a first experience of trade union federation on national class bases (C.G.T.T., 1924: *Djāmiʿat ʿUmūm al-ʿAmala al-Tūnisiyya*). The sole attempt at a take-over by a nationalist party failed (Tunisia, 1937-8). The implanting of Zionist trade unionism in Palestine (from 1920 onwards) did not favour an ethnic mix of workers. The Communist Party envisaged it, but failed. Arab associations or trade unions were formed, but without avoiding the cleavages of the two main nationalist clans.

The second phase, beginning in 1942 during the Second World War, was one of an increase in struggles and the acquisition of legal rights. Class orientations prevailed, but in pluralist structures, either running parallel to or in alliance with a national movement which led up to the first manifestations of political independence. This was also true for Palestine before the partition in 1948. The creation of the World Trade Union Federation (W.F.T.U.) from 1945 onwards favoured the exchange of experiences. Extended coverage was made (Sudan, Libya, Somalia and Aden). The politics of economic development increased the numbers of salaried members. The new governments used, however, the split in the World Trade Union Movement (I.C.F.T.U. after 1949) to install here an official trade unionism, and to forbid there all syndicalist activity. The context favoured the swallowing up of Maghribī trade unionism by the dominant nationalist parties.

The last phase is thus characterised by the permanent introduction of democratic stakes, until then never permanently resolved: liberty to form trade unions, and their autonomy regarding the state and political parties. Under the influence of the nationalist-reformist currents, dominant since the 1950s, an International Confederation of Arab Trade Unions (*al-Ittiḥād al-Duwalī li-Niḳābāt al-ʿUmmāl al-ʿArab* = I.C.A.T.U.), autonomous of the central world organisations but open to co-operation with them, was created in 1956. It assured inter-Arab trade union solidarity with repressed movements, at the same time getting involved politically in regional happenings (Arab-Israeli conflict, oil, etc.). It concerned itself with the harmonisation of Arab legislation on labour, after 1965 in liaison with the Arab Labour Organisation (*Munaẓẓamat al-ʿAmal al-ʿArabiyya* = A.L.O.). But apart from the two Yemens (unified in 1990) and Kuwayt, which had old-established federations, there is strong resistance within the Arab peninsula to expanding the labour legislation on trade union rights. Clandestine trade union structures are severely repressed there.

NIKĀḤ (A.), marriage (properly, sexual intercourse, but already in the Ḳurʾān used exclusively of the contract of marriage). In the present article, marriage is dealt with as a legal institution; for marriage customs, see ʿurs.

I. in classical islamic law
II. in the modern islamic world
1. The Arab, Persian and Turkish lands of the Middle East
2. In Muslim India up to 1930 [see ʿurs]
3. In Muslim India after 1930
4. In Indonesia
5. In East Africa
6. In Nigeria

I. In Classical Islamic Law

1. The essential features of the Muslim law of marriage go back to the customary law of the Arabs which previously existed. In this, although there were differences according to districts and the conditions of the individual cases, the regulations governing marriage were based upon the patriarchal system, which permitted the man very great freedom and still bore traces of an old matriarchal system. It is true that before the coming of Islam, a higher conception of the marriage state had already begun to exist, but the position of the woman was still a very unfavourable one. The marriage contract was made between the suitor and the "guardian" i.e. the father or the nearest male relative of the bride, the latter's consent not being regarded as necessary. But even before Islam it had already become generally usual for the dowry to be given to the woman herself and not to the guardian. In marriage, the woman was under the unrestricted authority of her husband, the only

bounds to which were consideration for her family. Dissolution of the marriage rested entirely on the man's opinion; and even after his death his relatives could enforce claims upon his widow.

2. Islam reformed these old marriage laws in far-reaching fashion, while retaining their essential features; here as in other fields of social legislation Muḥammad's chief aim was the improvement of the woman's position. The regulations regarding marriage which are the most important in principle are laid down in the Ḳurʾān in sūra IV (from the period shortly after the battle of Uḥud): "3. If ye fear that ye cannot act justly to the orphans marry the women whom ye think good (to marry), by twos, threes or fours; but if ye fear (even then) not to be just then marry one only or (the slaves) whom you possess; this will be easier that ye be not unjust. Give the women their dowry freely; but if they voluntarily remit you a part of it, enjoy it and may it prosper you.—26. Marry not the woman whom your fathers have married (except what is already past); for this is shameful and abominable and an evil way. 27. Forbidden to you are your mothers, your daughters, your sisters, your aunts paternal and maternal, the daughters of your brother and sister, your foster-mothers and foster-sisters, the mothers of your wives and the step-daughters who are in your care, born of your wives, with whom ye have had intercourse—but if ye have not had intercourse with them, it is not a sin for you—and the wives of the sons, who are your offspring, also that ye marry two sisters at the same time except what is already past; Allāh is gracious and merciful. 28. Further married women except (slaves) that you possess. This is ordained by Allāh for you. But he has permitted you to procure (wives) outside of these cases with your money in decency and not in fornication. To those of them that ye have enjoined give their reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allāh is all-knowing and wise. 29. If however any one of you has not means sufficient to marry free believing women (let him marry) among your believing slaves, whom you possess; Allāh best knows (to distinguish) your faith. Marry them with the permission of their masters, and give them their dowry in kindness; they should be modest and not unchaste and take no lovers". Also sūra II, 220 (uncertain date), the prohibition of marriage with infidels, male or female (cf. sūra IX, 10), sūra XXXIII, 49 (probably of the year 5), an exception in favour of the Prophet, and sūra V, 7 (of the farewell pilgrimage in the year 10), permission of marriage with the women of the possessors of a scripture. Other passages of the Ḳurʾān which emphasise the moral side of marriage are sūra XXIV, 3, 26, 32, and sūra XXX, 20. In Tradition, various attitudes to marriage find expression; at the same time, the positive enactments regulating it are supplemented in essential points. The most important is the limitation of the number of wives permitted at one time to four; although sūra IV, 3, contains no such precise regulation, this interpretation of it must have predominated very early, as in the traditions it is assumed rather than expressly demanded. The co-operation of the "guardian", the dowry and the consent of the woman is regarded as essential, and competition with a rival, the result of whose suit is still in doubt, is forbidden.

3. The most important provisions of Islamic law (according to the S̲h̲āfiʿī school) are the following. The marriage contract is concluded between the bridegroom and the bride's *walī* (guardian), who must be a free Muslim of age and of good character. The *walī* is in his turn bound to assist in carrying out the contract of marriage demanded by the woman, if the bridegroom fulfils certain legal conditions. The *walī* should be one of the following in this order: 1. the nearest male ascendant in the male line; 2. the nearest male relative in the male line among the descendants of the father; 3. do. among the descendants of the grandfather, etc.; 4. in the case of a freed woman the *mawlā* (manumitter) and (if the case arises) his male relatives in the order of heirs in intestacy [see MĪRĀT̲H̲, 6, *b*]; 5. the representative of the public authority (*ḥākim*) appointed for the purpose; in many countries it is the *ḳāḍī* or his deputy. In place of the *ḥākim* the future husband and wife may agree to choose a *walī* and must do so if there is no authorised *ḥākim* in the place. The *walī* can only give the bride in marriage with her consent, but in the case of a virgin, silent consent is sufficient. The father or grandfather, however, has the right to marry his daughter or granddaughter against her will, so long as she is a virgin (he is therefore called *walī mud̲j̲bir, walī* with power of coercion); the exercise of this power is, however, very strictly regulated in the interests of the bride. As minors are not in a position to make a declaration of their wishes which is valid in law, they can only be married at all by a *walī mud̲j̲bir*. According to the Ḥanafīs, on the other hand, every blood relative acting as *walī* is entitled to give a virgin under age in marriage without her consent; but a woman married in this way by another than her ascendant is entitled on coming of age to demand that her marriage be declared void (*fask̲h̲*) by the *ḳāḍī*. A bridegroom who is a minor may also be married by his *walī mud̲j̲bir*. As a kind of equivalent for the rights which the husband acquires over the wife, he is bound to give her a bridal gift (*mahr, ṣadāḳ*) which is regarded as an essential part of the contract. The contracting parties are free to fix the *mahr*; it may consist of anything that has value in the eyes of the law; if it is not fixed at the conclusion of the contract and if the parties cannot agree upon it, we have a case for the *mahr al-mit̲h̲l*, a bridal gift fixed by the *ḳāḍī* according to the circumstances of the bridegroom. It is not necessary to pay the *mahr* at once; frequently a portion is paid before the consummation of the marriage and the remainder only at the dissolution of the marriage by divorce or death. The wife's claim to the full *mahr* or the full *mahr al-mit̲h̲l* arises only when the marriage has been consummated; if the marriage is previously dissolved by the man, the wife can only claim half the *mahr* or a present (*mutʿa*) fixed arbitrarily by the man; these regulations go back to sūra II, 237-8 (cf. XXXIII, 48). In form, the marriage contract, which is usually prefaced by a solicitation (*k̲h̲iṭba*), follows the usual scheme in Muslim contracts, with offer and acceptance; the *walī* of the bride is further recommended to deliver a pious address (*k̲h̲uṭba*) on the occasion. The marriage must be concluded in the presence of at least two witnesses (*s̲h̲āhid*) who possess the legal qualifications for a witness; their presence is here not simply, as in other contracts, evidence of the marriage but an essential element in its validity. On the other hand, no collaboration by the authorities is prescribed. But since great importance is usually attached to fulfilling the formalities of the marriage contract, upon which the validity of the marriage depends, it is usual not to carry through this important legal matter without the assistance of an experienced lawyer. We therefore everywhere find men whose profession this is and who usually act under the supervision of the *ḳāḍī*. The part which they take is to pronounce the necessary formulae to the parties or even to act as authorised agents

of one of them, usually the *walī* of the bride. The most important impediments to marriage are the following: 1. blood relationship, namely between the man and his female ascendants and descendants, his sisters, the female descendants of his brothers and sisters as well as his aunts and great-aunts; 2. foster-relationship, which, by extension of the Ḳur'ānic law, by tradition is regarded as an impediment to marriage in the same degrees as blood relationship; 3. relationship by marriage, namely, between a man and his mother-in-law, daughter-in law, step-daughter, etc., in the direct line; marriage with two sisters or with an aunt and niece at the same time is also forbidden; 4. the existence of a previous marriage, in the case of a woman without limitation (inclusive of the period of waiting after the dissolution of the marriage, *ʿidda* [*q.v.*]), and in the case of a free man with the provision that he cannot be married to more than four women at once; 5. the existence of a threefold *ṭalāḳ* [*q.v.*] or of a *liʿān* [*q.v.*]; 6. social inequality; the man must not be by birth, profession, etc. below the woman (unless both the woman and *walī* agree); a free Muslim can only marry another's slave girl if he cannot provide the bridal gift for a free woman, and the marriage between a master (or mistress) and his slave (or her slave) is quite impossible (a master is however permitted concubinage with his slave); 7. difference of religion; there is no exception to the prohibition of marriage between a Muslim woman and an infidel, while the permission given in theory for marriage between Muslim men and the women of the possessors of a scripture is, at least by the Shāfiʿīs, so restricted by conditions as to be prohibited in practice; 8. temporary obstacles, such as the state of *iḥrām* [*q.v.*]. On the other hand, the law knows no minimum age for a legal marriage. If a marriage contract does not fulfil the legal requirements, it is invalid; the Ḥanafīs and especially the Mālikīs, but not the Shāfiʿīs, distinguish in this case between invalid (*bāṭil*) and incorrect (*fāsid*), according as the error affects an essential or unessential element in the contract; in the former case, there is no marriage at all, in the second, its validity may be attacked but (according to the Mālikīs) consummation removes any defect. Marriage does not produce any community of property between husband and wife, and the woman retains her complete freedom of dealing; but certain laws regarding inheritance come into operation [see MĪRĀTH, 6, *c*]. The man alone has to bear the expense of maintaining the household and is obliged to support his wife in a style befitting her station (*nafaḳa*); if he should not be in a position to do so, his wife may demand the dissolution of the marriage by *faskh* [*q.v.*]. The man can demand from his wife readiness for marital intercourse and obedience generally; if she is regularly disobedient, she loses her claim to support and may be chastised by the man. The latter, however, is expressly forbidden to take upon himself vows of continence (*īlā'* and *ẓihār*). Children are only regarded as legitimate if they are born at least six months after consummation of the marriage and not more than 4 years (the predominant Shāfiʿī view) after its dissolution; it is presumed that such children are begotten by the husband himself; the latter has the right to dispute his paternity by *liʿān*. Parentage can also be established by the husband's *iḳrār* [*q.v.*], while both recognition and adoption of illegitimate children are impossible.

4. The laws regarding the rights and duties of husband and wife cannot be modified by the parties at the drawing-up of the contract. This can, however, be effected by the man pronouncing a conditional *ṭalāḳ* [see ṬALĀḲ, vii.] immediately after the conclusion of the marriage contract; this shift to secure the position of the woman is particularly common among Indian Muslims. For the rest, the couple are left to private agreements which need not be mentioned in the marriage contract. The actual position of the woman in marriage is in all Muslim countries entirely dependent on local conditions and on many special circumstances. It is not a contradiction of this to say that the legal prescriptions regarding marriage are most carefully observed as a rule. In spite of certain ascetic tendencies, Islam as a whole has been decidedly in favour of marriage.—In modern Islam, the problem of the woman's position in marriage and polygamy is especially discussed between conservatives and adherents of modern social ideas. For the different views resulting from these conditions, see the works in the *Bibliography* cited below.

5. Alongside of the usual form of the old Arabian marriage, which in spite of its laxity aimed at the foundation of a household and the procreation of children, there existed the temporary marriage in which the pair lived together temporarily for a period previously fixed. Such temporary marriages were entered upon mainly by men who found themselves staying for a time abroad. It is by no means certain that these are referred to in sūra IV, 28, although the Muslim name of this arrangement (*mutʿa* [*q.v.*], "marriage of pleasure") is based on the literal meaning of the verse; it is, however, certain from Tradition that Muḥammad really permitted *mutʿa* to his followers especially on the longer campaigns. But the caliph ʿUmar strictly prohibited *mutʿa* and regarded it as fornication (*zinā'*) (a group of traditions already ascribes this prohibition to the Prophet). As a result, *mutʿa* is permitted only among the Shīʿīs but prohibited by the Sunnīs. The latter have, however, practically the same arrangement; those who wish to live contrary to the law as husband and wife for a certain period simply agree to do so without stipulating it in the marriage contract.

II. In The Modern Islamic World

1. The Arab, Persian and Turkish lands of the Middle East

i. *Impetus for reform*

Increasing dissatisfaction in recent years with traditional marriage law, particularly the discord between legal norms adapted to the patrilineal, patriarchal family, and changing social conditions, has spawned reforms motivated by a desire to adapt *sharʿī* norms to the transition from the extended to the nuclear family, to strengthen the position of women *qua* women and equitably to redefine the rights and duties of spouses.

Juristic basis for the reforms has been provided by a wide gamut of methods: the procedural expedient coupled with denial of judicial relief; the "eclectic" (*takhayyur*) expedient; stipulations in the marriage contract; extension of the court's discretion; penal and legal sanctions; "modernistic" interpretation of textual sources (neo-*idjtihād*); and substantive legislation with no apparent basis in the *sharīʿa* [see MAḤKAMA. 4. xiii, at VI, 40-1].

Relevant legislation: *Egypt*—Law No. 25, 1920; Law No. 56, 1923; Law No. 25, 1929; Code of Procedure No. 78, 1931; Law No. 62, 1976; Presidential Decree No. 44, 1979, repealed and re-enacted by Law No. 100, 1985; *Iran*—Family Protection Act, 1967, replaced by Family Protection Act, 1975 (repealed in 1979); *ʿIrāḳ*—Personal Status Law No. 188, 1959, amended by Act No. 11, 1963; *Israel*—Marriage Age Law, 1950, amended in 1960; Women's Equal Rights Law, 1951; Maintenance (Assurance of Payment) Law, 1972; *Jordan*—Law of Family Rights, No. 92, 1951, replaced by Law of Personal Status, No. 61, 1976; *Kuwait*—Law of Personal Status, 1980; *Lebanon*—[Ottoman] Family Rights Law, 1917 (hereafter referred to as Ottoman Family Law), put into effect by Decree No. 241, 1942 and reasserted in 1962; *North Yemen*—Family Law, 1978; *South Yemen*—Family Law, No. 1, 1974; *The Sudan*—Judicial Circulars: No. 17, 1915; No. 28, 1927; No. 41, 1936; No. 45, 1936; No. 54, 1960; *Syria*—Decree No. 59, 1953, on Personal Status Law, amended by Law No. 34, 1975; *Turkey*—Turkish Civil Code, 1926.

ii. *Impediments to marriage*

Sharʿī impediments to marriage, excepting foster relationship, have been completely abandoned in Turkey. A reform unique to Kuwait to safeguard the family's integrity prohibits a man's marrying a woman he has deliberately and viciously turned against her former husband.

iii. *Marriage guardian*

The marriage guardian's role has been virtually restricted to protecting the interests of wards physically mature but under the statutory age of competence for marriage. Moreover, the court is empowered to permit marriage even against the guardian's will. Under Ottoman family law (still applicable in Lebanon and Israel), as well as in Jordan, Syria, and ʿIrāḳ (all bound by the Ḥanafī school), the marriage guardian's right to contract a valid compulsory (*idjbār*) marriage, even with regard to minors, has almost completely been abolished through innovative changes in the minimun age for marriage (see below, v). In the Sudan (1960), the traditional Mālikī rule that an adult woman must be given in marriage by her guardian still obtains, although the woman's consent is now as a rule essential for its validity.

iv. *Equality in marriage*

Criteria for equality between spouses (*kafāʾa*), as well as the guardian's right to demand annulment of the marriage on grounds of inequality, have been curtailed. Ottoman family law explicitly mentions as criteria only profession and property (out of which the prompt dower can be paid and the wife's maintenance provided). In Jordan the only remaining criterion is property. In Kuwait religious piety is the sole criterion. In Syria equality is a matter of local convention, not law. So far ʿIrāḳ alone totally ignores this institution, implying its complete abandonment. However, a new criterion has emerged: parity in age between the spouses (see below, vi).

v. *Age of marriage*

Restrictions on child-marriage are intended to prevent the harmful social implications of premature marriage. Distinction has been made to this end between an age of competence for marriage and a minimum age below which marriage is never possible, the parties being presumed to be under puberty. Most Middle Eastern countries have followed the precedent set by Ottoman family law in prescribing the age of competence for marriage: eighteen for a boy and seventeen for a girl. Marriage below these ages is permissible, however, on proof of sexual maturity (see below). Simultaneously, traditional *sharʿī* (and Ottoman family law) age limits (nine for girls, twelve for boys), below which no claim of sexual maturity will be heard (in effect, minimum ages for marriage), have been raised: fifteen or sixteen for a boy, and between thirteen and sixteen for a girl. In Egypt (1923, 1931) no distinction is drawn between puberty and competence for marriage. Prescribed ages for marriage are eighteen for a boy and sixteen for a girl. Marriage below these ages is not permissible (nor registered—see below, viii) even on proof of sexual maturity. In the Sudan (1960) a pre-pubescent girl at least ten years old may be given in marriage with the consent of the court where there are grounds for anxiety about her morals.

Adolescents having reached the prescribed ages of puberty but not of competence for marriage may marry in the interim period of two or three years (irrelevant under Ḥanafī law), subject usually to the marriage guardian's consent and always to the court's permission. In Israel the "good defences" (physical maturity and the guardian's consent) against a charge of contravention of age-of-marriage legislation were abrogated (1950), but simultaneously a district judge was empowered to permit the marriage of a girl who was pregnant or had given birth or, since 1960, had reached the age of sixteen.

Ottoman family law concerning marriageable age has directly affected the validity of marriage. Marriage in violation of the provisions pertaining to the age of competence to marry and the conditions concerning permission to marry is deemed irregular (*fāsid*) with no legal effects before consummation. In North Yemen, the marriage of a boy (not a girl) below fifteen is not valid. Laws in other Middle Eastern countries evade this issue. Courts, however, tend to validate such marriages retroactively once the parties reach puberty.

Other devices intended to enforce reformist restrictions on child-marriage are prohibition of registration of any union in which the parties have not reached the

legal ages for marriage (Egypt, 1923; Kuwait; Israel, 1950), preclusion of courts from entertaining any matrimonial cause whatsoever in such marriages, i.e. the marriage is valid but not effective (*nāfidh*) (Egypt, 1923, 1931), and rendering the parties liable to statutory penalties (Jordan, Iran, Lebanon, Israel).

vi. *Disparity in age*

Prohibition, by means of registration, of a marriage in which there is a gross disparity in age between the parties (unless there is some genuine benefit in the union) is intended to defend the wife's interests. Jordan was the first to act on this issue: marriage of a woman under eighteen is prohibited if the husband-to-be is more than twenty years her senior, unless it is established in court that she consents of her own free will and that the marriage is in her interest. In Syria disparity in age may lead the court to withhold permission for marriage, taking into account the welfare of the parties. In South Yemen, marriage in which there is a twenty-year disparity in age is prohibited unless the wife has reached thirty-five.

vii. *Stipulations in the marriage contract*

Application of the mechanism of inserting stipulations benefiting the wife into the marriage contract (provided they do not conflict with marriage aims, affect the rights of others, or restrict the liberty of the husband), is intended mainly to improve the position of married women. Anchored in the Ḥanbalī school, this mechanism rests on voluntary agreement between spouses. Non-observance of a stipulation is grounds for dissolving the marriage at the wife's request without prejudice to her financial rights. Ottoman family law first introduced this mechanism. Jordan, Syria, ʿIrāḳ, Iran and Kuwait followed suit. The stipulations pertaining to marriage are (1) that the wife should not be removed from a locality agreed upon between the parties; (2) that the husband should not marry a co-wife (see below, ix); (3) that the wife may work outside the matrimonial home; and (4) that the wife may complete her studies (Kuwait).

viii. *Registration of marriage*

Registration (performed by the *sharīʿa* court or its authorised notary; in Syria, a district judge must review the marriage application), a wholly new departure from the traditional legal system, has become a necessary legal formality in most Muslim countries. Its purpose is to strengthen state control over marriage proceedings and to impose reforms relating to marriageable age and compulsory marriage (see above, iii). Registration is enforced by (1) the *sharīʿa* court's deeming an unregistered marriage (though not invalid under the *sharīʿa*) not effective (*nāfidh*), unless or until pregnancy becomes apparent (South Yemen, Lebanon, Syria); (2) considering the registration certificate as the sole proof of marriage, lacking which the parties will be denied judicial relief (Egypt 1931); and (3) making the solemniser, bridegroom (or both spouses), and witnesses liable to penal sanction (Jordan, ʿIrāḳ, North Yemen).

ix. *Polygamy*

Reforms aimed at consolidating monogamy restrict polygamy to the extent of complete abolition. Polygamy has been totally abolished as yet only in Turkey. In ʿIrāḳ it was first abolished (1959), only to be reduced to prohibition (1963). Complementary measures taken concerning polygamy are:

(1) Stipulation in the marriage contract (see above, vii). Ottoman family law allows a woman to stipulate in her marriage contract that her husband shall not marry another wife and that should he do so, either she or the polygamous wife will be divorced. Jordan followed suit, though the first wife may dissolve only her own marriage, not that of the co-wife.

(2) Prohibition. Polygamy has been prohibited (in Iran this presumably applies to both permanent and temporary marriage) unless permitted by court (district court in South Yemen) on the basis of "good defences": The court must be satisfied that the husband is financially able to properly maintain multiple wives (Syria; Iran, 1967); that the co-wives will be treated with equal justice (ʿIrāḳ, Iran, 1967); and that the first wife consents to the marriage, is unable or unwilling to co-habit, has been sentenced to imprisonment, is addicted to drink, drugs or gambling, has deserted the family or disappeared, or has become barren, insane or afflicted with incurable disease (Iran, 1967, 1975). In South Yemen a medical certificate to this effect is required. In ʿIrāḳ these defences are presumably implied by the phrase "some lawful benefit in the polygamous marriage". In Israel (1951) the defence available to Muslims *qua* Muslims against a charge of polygamy (prohibited by the Mandatary authorities) was abolished and replaced by two defences against such a charge: prolonged absence or mental illness of the spouse.

Prohibition of polygamy, unlike abolition, does not in itself invalidate polygamous marriage, though those failing to obtain the court's permission are liable to penal sanctions.

(3) Divorce. This obtains in circumstances where no stipulation barring co-marriage has been inserted in the marriage contract or where permission for polygamy has been granted by court. A woman finding the position of co-wife intolerable may dissolve her own marriage on grounds (anchored in the Mālikī school) of injury (extended to cover unequal treatment of co-wives), or disputes between the spouses (once again extended to cover cases of unequal treatment), in which case the marriage will be dissolved through the arbitration procedure. With slight variations this remedy obtains in the Sudan (1915), Lebanon and Israel (under Ottoman family law), Jordan, South Yemen, and ʿIrāḳ (1959). In Egypt (1979, 1985) the wife's option to dissolve the marriage lapses one year after the conclusion of the polygamous marriage. The husband and the solemniser must inform the first wife when a co-wife is taken, failing which they are liable to penal sanction. In Iran (before 1979), a wife who had not consented to a polygamous marriage might petition the court on these grounds asking for a certificate of impossibility of reconciliation and subsequent divorce.

x. *Void and irregular marriages*

Modern legislation in this respect aims to mitigate the harsh legal effects of prohibited marriages. Ottoman family law, and in its wake Jordan (1951) and Syria, reduced the category of void (*bāṭil*) marriage, entailing no legal effects whatsoever, solely to marriage of a Muslim woman to a non-Muslim. In Jordan this category applied also to the marriage of a man to a woman related to him within the prohibited degrees (*maḥram*) and (since 1976) to marriage of a Muslim man to an adherent of a non-revealed religion (*ghayr kitābiyya*). All other prohibited marriages are deemed irregular (*fāsid*) which, if consummated, entail some of the legal and financial effects of valid (*ṣaḥīḥ*) marriage.

Syria introduced an innovative reform (with no apparent basis in the *sharīʿa*) entitling the wife to maintenance even in a consummated irregular (*fāsid*) marriage, provided she was not aware of its irregularity. In ʿIrāḳ (1959) it is indicated, though not explicitly, that even in cases of void (*ghayr ṣaḥīḥ*) marriage, the woman is entitled to dower and must observe the waiting period.

The general aim of reformist legislation pertaining

to temporary marriage (*mutʿa*) is the curtailment of some of its legal effects to the point of complete abolition of the institution. Temporary marriage is no longer valid in ʿIrāḳ (1959), although a child born of such a liaison is considered legitimate with all attendant consequences. In Iran (before 1979) temporary marriages were valid, though it seems that mutual rights of inheritance between partners might no longer be created. Traditional *mutʿa* was reintroduced after the 1979 revolution. Under Ottoman family law, and in its wake Jordan, temporary marriage is deemed irregular, not void.

With the abolition of slavery in Saudi Arabia (1962), concubinage, i.e. a man's *sharʿī* right to have sexual relations with an unlimited number of his female slaves, ceased to exist.

xi. *Dower*

In Ottoman family law, and in its wake Jordan, Syria and ʿIrāḳ (1959), no mention is made regarding minimum dower, implying abandonment of *sharʿī* doctrine in this respect. In South Yemen, dower (prompt and deferred combined) must not exceed one hundred dīnārs, contrary to traditional doctrine which does not acknowledge a maximum dower.

Egypt (1929) and the Sudan (1935) introduced, via *takhayyur* with the Ḥanafī school, that where a married couple or their respective heirs dispute the amount of dower stipulated, the burden of proof falls on the wife. Syria, Kuwait, and Jordan (1976) followed suit.

Ottoman family law, and in its wake Jordan but not other countries, followed the view of those jurists within the Ḥanafī school who maintain, unlike others, that the wife must not be compelled to buy the trousseau (*djihāz*) out of her dower.

In Jordan (1976) any agreement that all or part of the dower be deferred shall be recorded in writing, otherwise the whole dower shall be deemed prompt. Non-payment of the prompt dower before consummation has become (since 1951), contrary to the Ḥanafī view, grounds for dissolution [see ṬALĀḲ].

xii. *Maintenance between the spouses*

General trends in this respect favour either one spouse or the other, depending on the circumstances.

(1) Definition of maintenance. In Jordan, and in its wake Syria, ʿIrāḳ, Egypt (1979, 1985) and Kuwait, the definition of maintenance has been extended to cover medical treatment in addition to traditional components. In Egypt (1979) maintenance also includes "everything that is requisite by custom," "custom" being replaced in 1985 by "*sharīʿa*".

(2) Criteria for fixing maintenance. Egypt (1929) and the Sudan (1936) and, with some variation, Kuwait, innovated via *takhayyur* that a wife's maintenance shall be calculated by exclusive reference to her husband's means, regardless of her own condition. Jordan, Syria, and Egypt (1979, 1985) followed suit with the proviso that the rate of maintenance must not be below minimum sufficiency.

Though maintenance may be increased or decreased depending on the husband's condition and the cost of living (as in traditional law) no application shall be heard before the expiration of a certain time period (six months in Syria and Jordan, one year in Kuwait, but no time period in ʿIrāḳ) from the date of the court order, save in exceptional emergencies.

South Yemen introduced an unprecedented innovation—in glaring contradiction to the *sharīʿa*—according to which spouses bear the expenses of their common life as well as the maintenance of their children according to their respective means and abilities. This reflects a radical concept, anchored in 1974 law, according to which a marriage is a contract between two parties equal in rights and duties.

(3) Arrears of maintenance. Egypt (1920), and ʿIrāḳ (1959) in its wake, acknowledged via *takhayyur* the principle of arrears of maintenance: maintenance of a wife who has submitted herself, even putatively, to her husband is deemed a debt owed by him from the time when he fails to support her, not (as in Ḥanafī law) from the time when she sues him in court. The Sudan (1927) adopted a less radical approach: arrears of maintenance still lapse on the death of either party unless the wife has been given judicial permission to raise maintenance on credit. In Jordan and Syria, as in Ottoman family law, arrears of maintenance are created solely by mutual agreement or by judicial judgment (in conformity with traditional law), however—contrary to the Ḥanafī school—they lapse only by payment or renouncement, not on the death of either party or on dissolution.

In Egypt (1931), and the Sudan (1936) in its wake, as a precaution against dubious claims for maintenance alleged to have been due over many years, courts were forbidden by the procedural expedient of denial of judicial relief from entertaining claims of arrears of maintenance in regard to any period more than three years (one year in Egypt since 1979) prior to the suit. In Syria the court will not allow the wife more than four months' arrears of maintenance.

(4) Provisional maintenance. In Syria, ʿIrāḳ, Kuwait and Egypt (1979, 1985) the court may order payment of provisional maintenance before handing down its final decision.

(5) Collection of maintenance. The Sudan (1915), and Egypt (1920) in its wake, decreed that if a husband has property out of which his wife's legally entitled maintenance can be obtained, a decree to this effect will be executed. In Lebanon, Israel (both under Ottoman family law), Jordan, and ʿIrāḳ, such a judicial decree is possible only if the husband is absent.

In ʿIrāḳ, where maintenance cannot be collected from the husband and in the absence of any person willing to lend money to the wife who, in her turn, is incapable of earning a living, maintenance shall be provided by the state. Egypt (1976) and Israel (1972) transferred the burden of maintenance payment fixed by judicial decree to governmental authority, which in turn recoups itself from the judgment debtor.

(6) Non-provision of maintenance as grounds for divorce. In Egypt (1920), Jordan, Syria, ʿIrāḳ, Iran (before 1979), and South Yemen, failure to provide the wife with maintenance due to unwillingness or hardship on the part of the husband (provided, in some of the countries, that he has no property out of which maintenance may be obtained, and that a period of delay has been exhausted) is deemed, via *takhayyur*, legal grounds for judicial divorce [see ṬALĀḲ].

(7) Maintenance of a working wife. Syria, ʿIrāḳ and Jordan (1976) explicitly deny the right to maintenance to a wife who works away from home without her husband's consent. In Egypt (1979, 1985) and Kuwait, however, the husband's permission for that purpose is not required, provided the wife's exercise of her right to a lawful job is not abused or in conflict with the family's interest, and that she was not forbidden by the husband to attend her work. This, with some variation, applied also in Iran (before 1979).

xiii. *Inheritance rights between the spouses* (see MĪRĀTH. 2. In modern Islamic countries, at VII, 111-13).

xiv. *Obedience*

Reform in this respect was aimed at correcting

injustice and abuse of women. In Egypt (1967) and the Sudan (1969), the institution of *bayt al-ṭāʿa* (i.e. police-executed enforced obedience of rebellious wives, which has no apparent basis in the *sharīʿa*) was abolished. In Egypt (1979) a disobedient wife wishing to object to the written request of the husband for her return to the conjugal home may do so, on *sharʿī* grounds, within ten days (30 days since 1985) of the court's request. The court will try to reconcile the parties, failing which it will refer them to arbitration. If arbitration is unsuccessful, judicial dissolution may be granted [see ṬALĀḲ].

2. In Muslim India up to 1930 [see ʿURS].

3. In Muslim India after 1930

Marriage in Islam, not being a sacrament but a contract between husband and wife, is literally termed in Indian Islam *ʿaḳd-e-nikāḥ* ("marriage contract"). Among Indian Muslims, however, *nikāḥ* is considered to be the establishment of relationship between the families of the bride and the groom, which is reflected in the formal procedure and series of ceremonies which precede the final *nikāḥ* ceremony.

In spite of the impact of modern education among Indian Muslims, allowing some degree of freedom in expressing preference for selecting marriage partner by both boys and girls, the formal *nikāḥ* proposal (*nikāḥ ka payghām*) is sent—or conveyed—by the elders of the boy to the elder family members of the girl. The ceremonial modesty requires some delay in accepting the proposal (*payghām*). After the formal declaration of engagement (*nisbat*), an auspicious date is fixed for the *nikāḥ*. Generally, the month of Muḥarram and the following thirteen days of Ṣafar are avoided for *nikāḥ* ceremony by both Sunnīs and Shīʿīs in commemoration of martyrdom of Imām Ḥusayn.

On the appointed day, the marriage party (*nikāḥ ki bārāt*), comprising the male relatives and friends of the groom's family, proceeds to the house of the bride, where they are received by the male members of that household. Soon afterwards, the preparations for the main ceremony begin, which includes changing of the groom's clothes into a completely new set prepared and provided by the bride's family. For the *ʿaḳd* ceremony, besides the *ḳāḍī* (usually a Mawlawī or Muslim religious scholar) and a *wakīl* (representing the bride), two witnesses are required. It is the privilege of the bride's family to choose a Mawlawī to act as *ḳāḍī*; whereas the *wakīl* (to be a neutral person in any unforeseen future dispute) is usually the bride's maternal uncle or her paternal or maternal aunt's husband. The two witnesses are selected from among the relatives of the bride. In order to obtain advance consent of the bride, the *wakīl* and the two witnesses proceed to the women's quarter, where the *wakīl* in a loud voice asks the bride three times her consent for her *ʿaḳd-e-nikāḥ* (specifying the name of the groom and the amount of her *mahr*), to which she is expected to respond in her modest and subdued voice. Thereafter, the *wakīl*'s party returns to the male gathering and informs the *ḳāḍī* that the bride's consent has been obtained for her *nikāḥ*. It is followed by a brief religious ceremony in which the *ḳāḍī* loudly recites in Arabic the marriage sermon (*nikāḥ ka khuṭba*), which consists of some Ḳurʾānic verses and a history of successful marriages in an Islamic context, citing those of Adam and Eve, Abraham and Hagar, Muḥammad and his four prominent wives, and ʿAlī and Fāṭima. After this recital, the *ḳāḍī* sits in front of the groom, facing towards him; the *wakīl* and both the witnesses, already sitting close to the groom, lean slightly towards him so that they can hear his consent clearly. The *ḳāḍī*, in a low voice as if maintaining secrecy, asks the groom three times in the following words (in the native language): "I marry you to such-and-such girl, daughter of so-and-so person against so much amount of *mahr*. Do you accept?" Each time the groom is expected to reply in clear voice, "I accept." After the acceptance, the *ḳāḍī* recites in Arabic a long prayer, again in a loud voice, blessing the newly-married couple with a future happiness like those of all the early marriages cited in Islamic history. This brings the *ʿaḳd-e-nikāḥ* to its conclusion, which is followed by a feast prepared by the bride's household. Finally, the *rukhṣati* (departure of the bride) with the groom's party back to the groom's house takes place.

4. In Indonesia

In Bahasa Indonesian, the country's national language, there are two words for marriage: *nikah* and *perkawinan*. *Nikah* generally refers to the conclusion of a marriage between Muslims. *Perkawinan* is a broader concept which prevails nowadays in national legislation, in popular use and even in Islamic writings. *Hukum perkawinan*, marriage law, includes the rules concerning polygamy, divorce and alimony (*nafkah*).

The sources of Indonesian marriage law include those of national law, religious law, *adat* law [see ʿĀDA] and colonial law. Over the past forty years, the relevance of colonial law and *adat* law has significantly decreased. Since Independence, efforts have been made to enact a national marriage law for all citizens. This goal was reached with Law no. 1 of 1974 concerning marriage and its executive regulations, which will be referred to as the "national law".

Historically speaking, customary or *adat* law came

first. Within Indonesian society, the relationship between *adat* law and Islamic law has been debated for centuries. The debate carried over to the Dutch when L.W.C. van den Berg claimed in the 1870s that Islamic law should be applied in its integrity to Muslims in Indonesia. Van den Berg was opposed by Snouck Hurgronje, who held the view that Islamic law should only be applied insofar as accepted by society through its customary law. This so-called "reception theory" came to prevail in the colonial government, and it was eventually incorporated in the colonial constitution of 1925. After independence, this theory lost favour in Indonesia. At the same time, the political appeal of *adat* law has considerably weakened. As a result, recent debates on marriage have mainly focussed on national law and Islamic law and the relationship between the two.

Law no. 1 of 1974 says that in order to be valid, a marriage has to be concluded according to religion and belief. For most Indonesians this means Islamic marriage law. Some provisions of the law seem to contain codified Islamic law. However, the wording of the law is not always unequivocal. As differences of interpretation arise, in conservative Muslim circles national law is considered binding upon Muslims but "God's law" provides the final standard: thus interpretations of the national law cannot go against Islamic law. Among liberal Muslims, modernists and nationalists, the supremacy of national law is honoured. The latter groups aim at improvement of the position of women and unification of the law, whereas the former tend to maintain the unfavourable position of women and hold the *umma* above the nation-state.

The marriage contract between Muslims is laid down in an *akta nikah*, which according to national law has to be approved by the Marriage Registrar, an official of the local Religious Office (*Kantor Urusan Agama, K.U.A.*) which is a branch of the Ministry of Religion. In practice, centrally-designed and printed model contracts are commonly used. Procedures are explained to the people with the help of citizens with a specific religious function in village or neighbourhood government. Besides these, however, *adat* ceremonies often take place at the time of the wedding. The national law permits in principle only monogamous marriages, but the religious courts may allow a man to marry more than one wife on certain grounds and conditions, such as the consent of the first spouse. National law has altogether forbidden polygamy between partners who belong to the civil service or the army.

Unilateral divorce, generally called *talak*, has been embedded in a court procedure as well. The judge first has to check whether there is a valid motive as specified by national law in a limitative list of divorce grounds. If this is the case, he functions as an official witness to the *talak*. The old custom of concluding *taklik talak* upon marriage has been continued through the uniform model contract that reiterate the same divorce grounds as those mentioned in national law.

In colonial times, the government had found various types of Islamic courts deciding marriage disputes among Muslims, in what was regarded to often be an unsystematic way. In the 1870s, L.W.C. van den Berg was commissioned to draft a law on Islamic courts. This became the Law on Priest Courts of 1882, which remained the basic law on Islamic jurisdiction until its replacement by Law no. 7 of 1989 concerning religious jurisdiction. This law has made the religious courts competent not only in all marriage and divorce cases between Muslims but also in matters of inheritance. The decisions of the religious courts, however, can be subject to final appeal to the Supreme Court, the *Mahkamah Agung*.

Religious courts, *K.U.A.*s and institutes of higher Islamic learning (*I.A.I.N.*) where the Islamic law is taught, are all under the jurisdiction of the Ministry of Religion. Interpretations of Sunnī schools other than the Shāfiʿī one have gained currency, contributing to flexibility of reasoning. In this respect mention has even been made of a fifth *mazhab*, the *mazhab Indonesia*. Nevertheless, Juynboll's *Inleiding* is still held in high esteem among Islamic scholars.

There are indications that the religious courts, the *K.U.A.*s and the local functionaries, do not always apply the law as it appears to have been intended by the national legislator. This happens notably when the national and the *sharīʿa* norms seem to be incongruent. Consequently, the protection of women as intended in the national law can be undermined. Also, marriages between partners of different religions, which have since long been allowed in national law, are becoming increasingly difficult in practice.

5. In East Africa

The number of Muslims in East Africa can only be estimated; it has been given as 20% of the total population, but 10% is more realistic. That is still more than six million persons; of these only a few hundred thousand live in Uganda, more than five million in Tanzania, and over a million in Kenya. They all follow the Shāfiʿī school, except the Indian Muslims, who are Ḥanafīs, or Ismāʿīlīs, Bohorās [*q.v.*], Twelver Shīʿīs and a few others. Of the African Muslims, only the Somalis retain their own language, except when they settle in the towns. All other Muslims in East Africa are Swahili-speaking, or adopt Swahili when converting to Islam. Marriage is probably the commonest reason for conversion for either sex.

In many ways, Islam requires few changes for a convert. The proposal for a marriage is made by a senior member of the family, usually but not necessarily, the groom's family. This proposer, the *mposa*, has to make numerous journeys between the two family homes until all the details of presents have been settled. The "bride price" is called *mahari* in many East African languages; it is an ancient custom, although strictly speaking *mahr* [*q.v.*] is not the same as the "bride price" of customary law. Some Swahili scholars insist that *mahari* should be only a token sum, others that it is payment to the bride's father for the trousseau, including furniture. On the Coast, some marriages are uxorilocal: the bridegroom moves in

with his wife. Elsewhere, almost always the bride is taken ceremoniously to the bridegroom's home. Traditional songs accompany every stage of the proceedings.

The preferred marriage partners are parallel cousins, in the paternal lineage; since many houses are the family homes of brothers living together, the bride and groom will have known each other since childhood. Since everyone has to obey his father, the latter can and does decide on the choice of partner for both his sons and his daughters.

The Ḳurʾānic impediments are not always enforceable, e.g. in many parts of Africa it is customary for a man in certain circumstances to marry two sisters; often it is obligatory for a man to marry his father's widows, his brother's widows (this is not forbidden in the Ḳurʾān), and even his father's brother's widows, so that he has to marry his aunts to raise seed for the patrilineal clan. In many African villages it is normal for any lactating woman to suckle a baby crying with hunger. A Muslim scholar's objections are shrugged off. As a result, two persons may marry who have sucked the same breast.

In Africa, many women cultivate their own plot of land within the area of land belonging to their husband's clan. They can sell their produce and cook for the family when it is their turn. As a result, they will not be so much affected by their husband's neglect as a townswoman would be. However, the husband is anxious not to neglect his wives because they might take lovers. In Africa, Islam has become diluted with local customs so that numerous forms of syncretism are found. Though most men have only one wife, the chiefs may have more wives than the four permitted by Islam. Since Africans are keen to have surviving children, the type of marriage called *mutʿa* [*q.v.*] is rare. Sailors and traders may have a wife in each of the towns where their business takes them more or less regularly, and have children by all of them. Although slavery was abolished at the beginning of the century, a rich man can still obtain a girl by paying her father *mahari*, which in this case acquires a new meaning. There is no minimum age for girls to marry, but the majority of the men will be in their twenties when marrying. *Kufu*, a husband of equal socio-economic class [see KAFĀʾA], is essential for a girl born of the *ḳabāʾila*, the established clans on the East Coast. If a virgin takes a lover of a lower class, this is considered a scandal that affects the whole family, to the extent that girls are known to have been executed for it.

6. In Nigeria

Whereas the Northern Region of Nigeria, as it then was, adopted a new penal and criminal code based on the Sudan code in 1960, the year of independence, personal law and family law have continued to be administered according to the traditional Mālikī *madhhab*. In practice, however, this has become much distorted by customary and non-canonical observances at which the strict *malams* (Ar. *ʿulamāʾ*) protest, mostly in vain. An illustrative example of this occurs in the poem *Hakuran zama da iyali* ("Living patiently with the family") by Alhaji Sadisu Lawal Sugogi:

The useless things that they have to provide (for the bride)
Place marriage beyond the reach of every husband.
Even those that wish to add another wife
Must certainly suffer financially as a result of this.
Once you enter into the marriage contract
It is with difficulties that you get out of it.

(Muhammed Sani Aliyu, *Shortcomings in Hausa society as seen by representative poets from ca. 1950 to ca. 1982*, M.A. diss. Bayero University, Kano 1983, unpubl.)

The Sultan of Sokoto, Abubakar III, on realising the extent of the problem, set up a committee in 1967 to examine alcohol and drug abuse and extravagant wedding customs. The committee's findings were largely ignored because it proved impossible to pass legislation to enforce compliance with the suggested regulations, including those relating to wedding gifts. The same fate met the recommendations of a second committee convened in 1969. Undeterred, and prompted by increased concern over drunkenness, prostitution and deviant marriage customs, the Sultan established a third committee, this time under the chairmanship of Alhaji Shehu Shagari, the first executive President of Nigeria from 1979 to 1983. This committee received 1,200 letters and conducted 600 interviews; its findings were summarised in a booklet *Nasiha ga Musulmi kan yaki da shashanci da almubazzaranci* ("Good advice to Muslims about the battle against immorality and extravagance") which was distributed in 1973 by the influential organisation *Jam'atu Nasaril Islam* ("People for the victory of Islam"). The Sultan said he wished *Nasiha ga Musulmi* to be a public record of the endeavours of the *ulama* to stem the tide; its tone was uncompromising. The following is an example:

There are some customs which give rise to such extravagance that marriage has become a kind of trade in itself. For that reason the custom known as *lefe* is abolished completely. Any dress-lengths of cloth the bridegroom intends to give to the bride should not be handed over to her until she is under his roof, whereupon he can give her as many dress-lengths as he likes and it is entirely his own business. It is expressly forbidden to allow them to be paraded about for inspection.

Some of the recommendations later became bye-laws of the Sokoto Local Authority but proved to be as unenforceable as before, especially in the climate created by the 1970s oil boom when newly-rich entrepreneurs and bureaucrats vied with each other in the marriage market.

In 1981 the Federal Law Reform Commission proposed a bill for the reform of the Marriage Act. It fail-

ed to recognise religious and cultural sensibilities and was therefore dropped. However criticisms continued to surface and women's groups, notably FOMWAN (The Federation of Muslim Women's Associations in Nigeria) aroused awareness of the issues through its nationwide organisation which had attracted university-trained Muslim women. In 1991 a four-day seminar, *Better Protection for Women and Children under the Law*, was organised by the Federal Ministry of Justice. Aisha Lemu, a FOMWAN executive member and the wife of the Grand Kadi of Niger State, addressed the seminar on the subject "Muslim women and marriage under the Shari'a". Her remarks on the financial and marital rights of Muslim women echoed some of the earlier views expressed in *Nasiha ga Musulmi*, but went further and blamed the courts for not implementing the law in respect of divorce and the custody of children. She said:

> The main problems faced by Muslim women in Nigeria are caused by pre-Islamic customs. In the North women who are ready to take their cases to the Shari'a courts can sometimes still fail to get their rights in the lower courts because of either ignorance of the Shari'a or corruption. However, if they are patient and persistent enough to appeal to the higher Shari'a courts their rights will be upheld.

In the multi-cultural context of Nigeria, which is a secular state, it is difficult to see how the Federal Law Reform Commission will be able to effect change without causing deep resentment in one section of the country or the other. Gradual shifts in attitude may, however, be engineered by women's pressure groups characterised by FOMWAN and others, notably *The Women's Commission* in Kano, which are backed by Muslim intellectuals predominantly based in Northern Nigerian universities.

NĪKBŪLĪ, Nikbūlī, the most commonly used Ottoman Turkish form of the Byzantine town of Nikopolis, modern Bulgarian Nikopol, a town on the southern bank of the Danube in lat. 43° 43' N. and long. 24° 54' E., famed as the scene of a battle between the Ottomans and the European Crusaders in 1396.

This Nikopolis, founded by Heraclius (*ca.* 575-642), has often been confused, especially in mediæval literature, with Nikopolis *ad Istrum* or *ad Haemum*, founded by Trajan in 101 in commemoration of his victory over the Dacians (ruins excavated near modern Niküp in the upper valley of the Dj̲antra by Mt. Haemus). The Byzantine Nikopolis is sometimes called Nikopolis Major to distinguish it from Trajan's Nikopolis and Nikopolis Minor on the opposite bank of the Danube near the Rumanian town of Tornu Magurele.

The importance of Nikopolis as a trade centre and military post is due chiefly to the command which it holds over the Osma and the Aluta, the two Danubian arteries reaching into the heart of Bulgaria and Rumania respectively. Situated on a naturally fortified plateau, it dominates the plains to the south, the Danube to the north, and the eastern gorge connecting the interior of Bulgaria with the river. The mediæval double walls and strong towers surrounding Nikopolis were destroyed by the Russians during their occupation of the city in 1810 and 1877.

Nikopolis was first captured from the Bulgarians in 791/1389 by ʿAlī Pas̲h̲a Čāndārlī [see ʿAlī Pas̲h̲a Čāndārlīzāde]. Seven years later, it was the scene of the famous battle in the Crusade which is called by its name. The acquisition of Bulgaria by the Turks and their continual irruptions north of the Danube into territories claimed by Hungary, together with a state of comparative peace in Western Europe in the last decade of the 14th century, made it both necessary and possible for most Catholic countries to participate in the expedition. An army of about 100,000 Crusaders (according to the most reliable estimates) from France, Burgundy, England, Germany, Italy, Spain, Hungary, Poland, Wallachia and Transylvania marched along the Danube, seized Vidin and Rahova, and finally set siege to Nikopolis while an allied Veneto-Genoese fleet blockaded the city from the river. The siege lasted about fifteen days, during which Bāyezīd I [*q.v.*] abandoned the siege of Constantinople, burnt the siege machinery, and summoned his Asiatic and European contingents to arms. A Turkish army of perhaps 110,000 men met at Adrianople and, marching through the Shipka Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopolis plain.

The battle took place on Monday 21 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 798/25 September 1396, and the Crusaders were completely routed owing to the superiority of Ottoman tactics and the dissensions amongst the leaders of the Christian host. Bāyezīd divided his army into two large sections. The first, consisting of two large bodies of irregular cavalry and of irregular infantry, occupied the slope of the hill. Between the cavalry vanguard and the infantry rearguard of this section, the Turks planted a field of pointed stakes. Beyond the skyline on the other slope of the hill, hidden from their unsuspecting enemy, the second and more important section, consisting of Bāyezīd with his Sipāhīs and Stephen Lazarović with his Serbs, watched for the right moment to advance against the exhausted Christians. These tactics proved to be effective when the Crusaders' vanguard of French and foreign auxiliaries defeated the Turkish irregular cavalry and, after forced dismounting to uproot the stakes, routed the irregular infantry and pursued them uphill to face the new and unseen forces. Meanwhile, a stampede of riderless horses produced confusion in the Crusaders' rear which comprised the Eastern European armies. Mircea and Laczković, who had no sympathy for Sigismund of Hungary, retired with their Wallachian and Transylvanian auxiliaries who constituted the left and right wings of the rearguard. After desperate fighting for the relief of the French and foreign contingents, the Hungarian nobles persuaded their king to board a Venetian galley and escape by way of Byzantium and the Morea to Dalmatia. The rest were either killed or captured, only to be massacred on the following day by Bāyezīd in order to avenge in this way the severe losses which he had sustained. A small number of nobles were, however, saved from the massacre for a ransom of 200,000 gold florins.

The immediate result of the Ottoman victory was the extension of the conquests into Greece and the submission of Wallachia to Ottoman suzerainty. More important, however, was the breathing-space it gave for the consolidation of the Turkish territories in Europe, which enabled the Ottoman empire to sur-

vive the critical struggles of the next decades.

In later history, Nikopolis plays only a minor part. During the wars of the 19th century it was thrice captured by Russian armies (September 1810; July 1829; July 1877), and by the Treaty of Berlin (13 July 1878) was included in the tributary principality of Bulgaria. The modern town of Nikopol (estimated population 1970, 5,715) lies in the province (*okrŭg*) of Pleven (Ottoman Turkish Plewne [*q.v.*]).

NĪKSĀR, the classical Neo-Caesarea in Bithynia, a town lying on the southern rim of the Pontic mountain chain of Asia Minor (the modern Turkish Kuzey Anadolu Dağları) on the right bank of the Kelkit river. It is situated at an altitude of 350 m/1,150 feet in lat. 40°35′ N. and long. 36°59′ E.

The nucleus of the town is picturesquely situated at the foot of a hill, crowned by the ruins of a mediaeval castle which was erected from the material provided by the numerous buildings of antiquity there. Here in remote antiquity was Cabira and after its decline Diospolis founded by Pompey, later called Sebaste. In Church history Nīksār is famous as the scene of a Council (314 A.D.) and as the birthplace of Gregory the miracle-worker. In the Muslim period it became important under the Saldjūḳs, of whom numerous and important buildings have survived to the present day. It became more important under the Dānishmandids [*q.v.*], whose founder Malik Dānishmand Aḥmad Ghāzī took Nīksār among other places. His grandson Muḥammad successfully resisted a siege by the emperor Manuel in Nīksār. His son Yaghibaşan (537-62/1142-66), of whom there survives an inscription of the year 552/1157, died in 562/1166, whereupon Nīksār was taken by the Byzantine emperor Manuel (Kinnamos, 296-7, 300) although only for a short time. In 799/1397 Nīksār passed to the Ottomans and gradually lost its former importance. It remained noted for its very prolific orchards, celebrated already in al-Ḳazwīnī's time (*Āthār*, ed. Wüstenfeld, Göttingen 1848) the special produce of which, very large and sweet cherries, pears, figs etc., were famous at all times. Ewliyā Čelebi (cf. *Seyāḥat-nāma*, ii, 389, v, 14; *Travels*, ii, 102) who visited Nīksār in 1083/1672, describes the town in his usual extravagant fashion, mentioning 70 schools, 7 monasteries, many mills and waterwheels and 500 shops with a large number of shoe-makers. The pomegranates there, he says, are the size of a man's head and weighed 1 *oḳḳa*.The remains of the Islamic period, so far as they bear inscriptions, have been published by Ismāʿīl Ḥaḳḳī, *Kitābeler* (Istanbul 1345/1927), 58-73. The *türbe*s (sepulchral cupolas) of Malik Ghāzī and of Ḥādjdjī Čiḳrīḳ are worth mentioning; among old dervish monasteries there are the Ishīḳ-tekke and the Ḳolaḳ-tekke. Nīksār has often been visited and described by modern travellers. The population before the First World War (*ca.* 4,000) was one-quarter Christian; they were mainly engaged in the silk and rice trades.

In modern Turkey, Nīksār is the centre of an *ilçe* or district in the *il* or province of Tokat. In *ca.* 1960 it had a population of 10,550.

NĪḲŪLĀʾŪS, the Arabised form of the name of Nicolaus of Damascus, born 64 B.C., distinguished politician (adviser of King Herod, friend of Emperor Augustus), and scholar of vast erudition and versatility. Greek fragments of his rhetorical, historical and biographical works have survived, but philosophical fragments are scarce. On the other hand, his literary legacy was unknown in the Orient, but Syriac and Arabic translations of his philosophical works have recently come to light.

1. The *Book on Plants*: *K. Arisṭūṭālīs fī 'l-nabāt, tafsīr Nīḳūlāʾūs* is probably an adaptation of Aristotle's lost work Περὶ φυτῶν. The Arabic translation was discovered in 1923, edited by Arberry (1933) and Badawī (1954). See now Drossaart Lulofs and Poortman, *Nicolaus De plantis, five translations*, in *Verh. Ak. Amst.* (1989) (= *DLP*). Because in the Latin version by Alfred of Sareshel (1200 A.D.) the words *tafsīr Nīḳūlāʾūs* were omitted, *De plantis* was attributed to Aristotle himself. Some 160 mss. testify to its popularity in the Middle Ages, and yet it was eclipsed by the Greek retroversion from Alfred's text (13th cent.), which from 1539 onwards figured as an appendix to all Greek editions of Aristotle, but was generally considered spurious. In 1841 Alfred's Latin version was edited by E.H.F. Meyer, who knew the title in Arabic from Ḥādjdjī Khalīfa (ed. Flügel v, 162, no. 10564). In his commentary, Meyer marked off a long digression (§§ 66-*ca.* 130) on the parts of plants that was borrowed from the *History of Plants* by Theophrastus, whose name was not mentioned. Apparently, Nicolaus inserted this detailed account because Aristotle used to maintain that the parts of plants were few and simple. A comparison with Theophrastus' Greek text shows that Nicolaus, in compiling, sometimes left out important words, e.g. restrictive particles, and had the habit of conflating parallel passages. Consequently, the tenor of the original work was often distorted and obscured. Obviously, he did the same to the Aristotelean part. Glossators swamped the text with enigmatic glosses and digressions on alien matters. Hence the rambling character of the book.

In the Orient, many authors have used the *K. al-Nabāt*, and though some of them (e.g. Ibn al-Ṭayyib) had a poor opinion of it, Ibn Rus͟hd appears to have written an epitome (*DLP*, 363 ff.). The fragment of a long commentary in Hebrew (Oxford Hunt. 576) is a clever imitation. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 73 ff., rightly asserts that the book has primarily been one of the few sources for the knowledge of Theophrastean botany among the Arabs. And indeed, Ibn Sīnā and Ibn al-Ṭayyib, for instance, had a strong preference for the relevant part which, of course, they attributed to Aristotle.

2. *On the Philosophy of Aristotle* in at least 13 books. In this extensive compendium of Aristotle's physical treatises, Nicolaus acted as a pioneer; at the time when commentators used to begin with *Logic*, he turned to the philosophy of nature. The remnants in Europe are very scarce, but a curtailed Syriac version in the mutilated Cambridge ms. Syr. Gg. 2.14 was discovered in 1901. Drossaart Lulofs edited the first five books in 1963 (= Nicol. *Philos.*). Owing to the rapidly increasing mutilation of the ms. leaves, the others are less accessible.

Some remarkable features are that: (a) throughout the whole work the same habit of compiling and the same use (and abuse) of conflation is observed as in *De plantis*; (b) a compendium of the *Metaphysics* is added and placed after (!) the *Physics*; (c) Ibn Rus͟hd's objections against Nicolaus' peculiar way of adjusting the *Metaphysics* to his purpose, which were discussed from Th. Roeper (1844) onwards, can now be explained (Nicol. *Philos.*, 27-34); and (d) abridged excerpts of *Meteorology*, i-iii, are interspersed with parts of Olympiodorus' *Commentary* in a very bad translation. In the Paris ms. B.N. Syr. 346, some of these comments are collected and wrongly ascribed to Nicolaus. In editing these quotations under Nicolaus' name, F. Nau (in *ROC*, xv [1910]) created confusion. (e) In Nicolaus' book, *Meteor.*, iv, is concerned with mineralogy and deviates from Aristotle because Nicolaus has supplemented Aristotle's own short and unfinished observations on the subject (at the end of *Meteor.*, iii) with quotations from Theophrastus, *De lapidibus*. So, just as in *De plantis*, Nicolaus turned to Theophrastus where Aristotle failed.

Large parts of the compendium have been translated from Syriac into Arabic, and both translations have been used by Oriental authors as a kind of source book of Aristotelian tenets. A case in point is Barhebraeus, who possessed an unabridged copy of Nicolaus in Syriac, of which in the *Candelabrum* and the *Butyrum sapientiae* he often availed himself without mentioning the Damascene (see *DLP*, 17-49). On the other hand, Ibn Rus͟hd inserted a lengthy passage from Nicolaus' (unabridged) summary of the *Metaphysics*, where his copy of the Arabic translation of Aristotle's work had a lacuna, see Ibn Rus͟hd, *Tafsīr mā baʿd al-ṭabīʿa*, 843.8-850.7 Bouyges = Nicol. *Philos.*, F. 22.

Bibliography: Th. Roeper, *Lectiones abulpharagianae*, Gedani 1844, 35-43, contain the first discussion of Nicolaus' philosophical fragments known at the time. See further the bibl. in H.J. NĪL, also *nīladj̲* (Persian, from Skr. *nīla* "blue") is *Indigo tinctoria* L., *Indigoferae*, the oldest known organic dye. It is the main component of natural indigo, which can be obtained from various kinds of indigofera (*Isatis tinctoria, Cruciferae*) and from the knotweed (*Polygonum tinctorium, Polygonaceae*). For thousands of years indigo has been used in India, China, as well as in Egypt, to paint and dye various fabrics. Classical antiquity knew indigo as a medicine; the Arabs cultivated the plant and produced the dye themselves.

The Arab translators of Dioscurides did not find an equivalent for *isāṭīs*, and so the early Arab authors confused the ἰσάτις of Dioscurides—Pliny's *glastum* (*Nat. Hist.* xxii, 2), *Isatis tinctoria*—with Dioscurides' ἰνδικόν, Pliny's *indicum* (xxxv, 27), Arabic *nīl* = *Indigo tinctoria*. In the Middle Ages, the Arabs used the word *nīl*—actually indigo—to indicate woad. However, they realised the difference: al-Suwaydī, *K. al-Simāt fī asmāʾ al-nabāt* (ms. Paris ar. 3004, fol. 198b, 10), referring to the identification of *isāṭīs* with *nīl*, only remarks that many scholars have a different opinion, but al-G͟hāfiḳī (in Ibn al-Bayṭār, *al-Dj̲āmiʿ*, Būlāḳ 1291, iv, 186, 28-30) expresses himself more clearly: Dioscurides' *nīl* (= ἰσάτις) is known in Spain under the name *al-samāʾī* ("the sky-blue"), but it is not much used in the land of the Franks, whereas the *nīl* of the dyers is said to be *al-ʿiẓlim*, the (Indian) *nīl*, whose description applies to indigo. The constant confusion between the two plants led to a series of Arabic synonyms, like *ʿiẓlim, wasma (wāsima), k͟hiṭr, nīla, tīn ak͟hḍar*, etc., which were used indifferently for the two plants.

Both isatis and indigo were used as medicines, especially as astringents, by way of compresses, for wounds, tumours and sores. Indigo was an important commercial product, used for colouring fabrics and wool. The main source of exports was always India, Bag͟hdād being the intermediate place of transfer. From here the dyeing plant reached mediaeval Europe as "Baghdad indigo" (see W. Heyd, *Histoire du commerce du Levant*, Leipzig 1885-6, repr. Amsterdam 1959, 626-9). Outside India, the indigo plant was also grown on Persian soil, in Kirmān and K͟hūzistān (see P. Schwarz, *Iran im Mittelalter*, 273, 276, 422). In modern times, it is mostly synthetic indigo which comes on the market.

AL-**NĪL**, the river Nile. The Nile is one of the large rivers (length *ca.* 6,648 km./4,132 miles) which from the beginning have belonged to the territory of Islam, and the valleys and deltas of which have favoured the development of an autonomous cultural centre in Islamic civilisation. In the case of the Nile, this centre has influenced at different times the cultural and political events in the Islamic world. Thus the Nile has, during the Islamic period, continued to play the same part as it did during the centuries that preceded the coming of Islam.

The name al-Nīl or, very often, Nīl Miṣr, goes back to the Greek name Νεῖλος and is found already in early Arabic literary sources, though it does not occur in the Ḳurʾān (in sūra XX, 39, the Nile may be meant by *al-yamm*). The Christian habit of calling the river Gēḥōn, after one of the rivers of Paradise, as found in the works of Ephraim Syrus and Jacob of

Edessa and in the Arabic-Christian author Agapius (*Patrologia Orientalis*, v, 596), is not followed by the Muslims who know only the Oxus under this name. Al-Zamakhsharī (*Kitāb al-Amkina*, ed. Salvedra de Grave, 127) mentions as another name al-Fayḍ, no doubt a poetical allusion to the yearly flood. Already in the Middle Ages, the word *baḥr* having come to acquire in Arabic the meaning of "river", the Nile is also called al-Baḥr or Baḥr Miṣr (cf. al-Maḳrīzī, ed. Wiet, i, 218), which is also the case with several separate parts of its river system, such as Baḥr Yūsuf or Baḥr al-Ghazal. In the Delta, the different ramifications of the river are occasionally also called Nile, but where necessary the main stream (*ʿamūd*) is distinguished from the minor branches (*dhirāʿ* or *khalīdj*) and the canals (*turʿa*).

The geography of the Nile is treated here only from a historico-geographical point of view so far as the knowledge of Islamic science is concerned. The geographical knowledge of the Nile among the Muslims, so far as we can learn from their literary sources, is based partly on direct observation, but for the most part on legendary or pseudo-scientific traditions which go back to local beliefs or to classical knowledge. For a long time during the Middle Ages the limit of Islamic territory on the Nile was well fixed; it ended at the first cataract near the island of Bilāḳ (Philae) to the south of Uswān (Assouan); here began, since the treaty (*baḳt* [*q.v.*]) concluded by ʿAbd Allāh b. Abī Sarḥ with the Nubians, the Nubian territory [see NŪBA], where for long centuries Christianity prevailed (al-Balādhurī, 236; Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. Torrey, 188). The first locality on Nubian territory, where tribute was paid, was called al-Ḳaṣr (al-Masʿūdī, *Murūdj*, iii, 40-1 = § 883).

Historical tradition has preserved parts of the alleged correspondence between ʿAmr b. al-ʿĀṣ and the caliph ʿUmar on the subject of Egypt, then newly-conquered; here the Nile is described as a river "whose course is blessed", while the flood and the inundations are praised in poetical terms (ʿUmar b. Muḥammad al-Kindī, *Faḍāʾil Miṣr*, ed. Østrup, 204; al-Dimashḳī, ed. Mehren, 109). The same correspondence reveals the perhaps historical fact that ʿUmar did not wish to see the Arab army established in Alexandria, because there would be then a great river between the army and the caliph (Ibn ʿAbd al-Ḥakam, 91; cf. also what is said on p. 128 about those who went to live in al-Djīza).

The principal towns by which the Nile passed in mediaeval Egypt in Upper Egypt, between Uswān and al-Fusṭāṭ, were Adfū (Edfu, on the left), Isnā (Esne, l.), Armant (l.), Ḳūṣ (r.), al-Aḳṣur (Luxor, r.), Ḳifṭ (r.), Ikhmīm (Akhmīm, r.), Usyūṭ (Asyūṭ, Suyūṭ, l.), al-Ushmūnayn (l.), Anṣina (r. opposite al-Ushmūnayn), Ṭaḥā (l.), al-Ḳays (l.), Dalāṣ (l.), Ahnās (l.) and Iṭfīḥ (Aṭfīḥ, r.). This succession of towns is given for the first time by al-Yaʿḳūbī (331-4), while Ibn Ḥawḳal (ed. de Goeje, 95) is the first to give a table of the distance between these towns, expressed in *barīds*, the entire distance being 21 days' journey (al-Idrīsī, ed. Dozy and de Goeje, 52, gives 25 days' journey for the same distance). Shortly before al-Ushmūnayn, there branched off on the left the canal that conducted the water to al-Fayyūm, which is known to Ibn al-Faḳīh (74) as Nahr al-Lāhūn and to al-Idrīsī (50) as Khalīdj al-Manhī: this canal, which according to unanimous tradition was dug by Joseph, occurs already on the ms. map from the year 479/1086, of Ibn Ḥawḳal in Istanbul, Top Kapu Saray ms. no. 3346 (reproduction on fol. 658 of *Monumenta Africae et Aegypti* by Youssouf Kamāl). It is the Baḥr Yūsuf of our days; on it was situated al-Bahnasā. The banks of the Nile in Upper Egypt are not very completely described by the geographers; one finds repeated everywhere the assertion that the borders were cultivated without interruption between Uswān and al-Fusṭāṭ (cf. al-Iṣṭakhrī, 50), but that the width of the cultivated territory varied during the river's course, dependent on the greater or lesser distance of the two mountain ranges that border the stream. Ibn Ḥawḳal (Istanbul ms., see above) describes two extremely narrow strips, one between Uswān and Atfū (now called Gebelein) and one between Isnā and Armant (now called Gebel Silsile). The curves in the course of the Nile, especially in the upper part of the Ṣaʿīd, are not indicated on the maps of al-Iṣṭakhrī and Ibn Ḥawḳal. The oldest extant Arab map of the Nile, however—which is at the same time the oldest Arab map that we know of—gives clear indications that its sinuous course was a known fact. This map is found in the Strasbourg ms. of the year 428/1037 of al-Khwārazmī's *Ṣūrat al-arḍ* and has been reproduced in the edition of that text by H. v. Mžik (*BAHUG*, iii, Leipzig 1926). The representation of the Nile here is connected with the classical tradition of astronomical geography; al-Khwārazmī himself, and after him Suhrāb (Ibn Serapion) and Ibn Yūnus (ms. 143 Gol. of the University Library at Leiden, where on p. 136 a special table is given of the towns lying on the banks of the Nile), give exact indications as to the longitudes and latitudes of the Nile towns, but these indications need many very uncertain corrections to allow of the reconstruction of a map, as von Mžik has tried to do for al-Khwārazmī in *Denkschr. Ak. Wiss. Wien*, lix, Vienna 1916, and J. Lelewel for Ibn Yūnus in pl. ii of the Atlas annexed to his *Géographie du Moyen-âge*, Paris 1850. But the fact that the course of the Nile runs from south to north was well known to all the Arabic sources, which often repeat the assertion that the Nile is the only river in the world for which this is the case. Only the text of Ibn Ḥawḳal seems to imply that the Nile reached al-Fusṭāṭ from the south-east (96).

The Delta of the Nile begins to the north of al-Fusṭāṭ, where the distance between the two mountain ranges widens, while these hills themselves become lower and pass gradually into the desert. Immediately below al-Fusṭāṭ began the canal that was dug by ʿAmr b. al-ʿĀṣ to link up the Nile with the Red Sea; this canal (Khalīdj Miṣr or Khalīdj Amīr al-Muʾminīn) was made in 23/644 according to Muḥammad b. Yūsuf al-Kindī (cited by al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ, ii, 143; cf. Yāḳūt, ii, 466) and served for the conveyance of provisions to the Ḥidjāz until the reign of ʿUmar b. ʿAbd al-ʿAzīz; afterwards it was neglected and even obstructed by the order of the caliph al-Manṣūr, so that, in the 4th/10th century, it ended at Dhanab al-Timsāḥ in the lakes to the north of al-Ḳulzum (cf. al-Masʿūdī, *Murūdj*, iv, 97 = § 1426).

The two principal arms of the Nile in the Delta began about 12 miles to the north of al-Fusṭāṭ (a little further than nowadays, according to Guest) and had, as now, a great number of ramifications which communicated in many ways and ended for the greater part in the big lakes or lagoons stretching behind the sea coast from west to east; these lakes were called in the Middle Ages: Buḥayrat Maryūṭ (behind Alexandria), B. Idkū, B. al-Burullus or B. al-Bushtīm and the very large B. Tinnīs, which last contained a large number of islands with Tinnīs as the most important. On the land tongue, where the two main arms

separated, was situated the town of Shaṭnāf. The western arm went as now to the town of Rashīd (Rosetta), after which it reached the sea; near the town of Shābūr a branch parted from this arm in the direction of Alexandria, ending in the Buḥayrat Maryūṭ; this branch was only filled with water in the time of the flood (see a very complete survey of the different "canals" of Alexandria by P. Kahle, in *Isl.*, xii, 83 ff.). The eastern arm ran, as is still the case, past Dimyāṭ (Damietta) and reached the sea shortly afterwards; it had several branches that went to the Buḥayrat Tinnīs, one of which continued one of the Nile mouths of antiquity. Though many sources, based on a pseudo-historical tradition, repeat after each other that there are seven Nile arms (Ibn ʿAbd al-Ḥakam, 6; further, al-Khʷārazmī, Ḳudāma, Suhrāb, al-Masʿūdī, Ibn Zūlāḳ), the more realistic authors (Ibn Khurradādhbih, al-Yaʿḳūbī, Ibn Rusta, al-Iṣṭakhrī, Ibn Ḥawḳal, al-Idrīsī) only know of the two main arms. These were linked up by a canal system which, in the Middle Ages, differed considerably from the present situation. The chief sources from which we know them are Ibn Ḥawḳal and al-Idrīsī, who give itineraries following the different branches, but as the places named in these itineraries have been identified only in part, an integral reconstruction is not yet possible (on this problem cf. R. Guest, *The Delta in the Middle Ages*, in *JRAS* [1912], 941 ff., and the map annexed to this article). The description in the text of Suhrāb (ed. von Mžik, *BAHUG*, v) has little value as an endeavour to trace back to his time (4th/10th century) the seven legendary arms; among these arms special attention is paid to the "arm of Saradūs", which, according to tradition, was dug by Hāmān (Ibn ʿAbd al-Ḥakam, 6; cf. Guest, *op. cit.*, 944, and Maspéro and Wiet, *Matériaux*, in *MIFAO*, xxxvi, 104). Al-Maḳrīzī has preserved a detailed description of the canal system in the province of al-Buḥayra, to the east of Alexandria, from the *Kitāb al-Minhādj* of Abu 'l-Ḥasan al-Makhzūmī, who wrote in the 6th/12th century (*MIFAO*, xlvi, 167 ff.). It seems possible that a study of the ancient maps (especially the Delta map of the Istanbul ms. of Ibn Ḥawḳal and the maps of al-Idrīsī) may be useful for a more complete reconstruction of the mediaeval situation.

The Nile arms have always been decisive for the administrative division of the Delta, which the sources call by the name of Asfal al-Arḍ or Asfal Arḍ Miṣr. The region to the east of the eastern branch was called al-Ḥawf; the texts of al-Iṣṭakhrī and Ibn Ḥawḳal place al-Ḥawf to the north of the Nile, which may be understood in connection with the view referred to above that the Nile at al-Fusṭāṭ had a direction from S.E. to N.W. The region between the two main arms was called al-Rīf (a name sometimes used for the entire Delta as well) or Baṭn al-Rīf, while the country to the west of the western arm was called al-Buḥayra and later al-Ḥawf al-Gharbī, the original Ḥawf being called then al-Ḥawf al-Sharḳī. The three sections were divided into *kūras*, the limits of which were determined by the more important branches; the bigger administrative units of later times [see MIṢR] depended likewise on the river system. The present geographical aspect of the Delta is the result of the new irrigation works that began in the 19th century under Muḥammad ʿAlī; the most conspicuous new canals are the Maḥmūdiyya canal, dug from Fūwa on the western arm to Alexandria, the Tawfīḳiyya, Manūfiyya and Buḥayriyya canals that were completed in 1890, and the Ismāʿīliyya canal, which links up the Nile with the Suez canal.

As to the knowledge of the course of the Nile to the south of Egypt, the Islamic geographical literature begins rather late to give information based on direct observation. At first, these sources content themselves with saying that the Nile comes from the country of the Nūba; for the rest, there were ancient sources of a different kind that helped to complete the geographical conception of the course of the great river. This conception involved also the origin of the Nile, covered since antiquity by a veil of mystery. The real origin of the Nile always remained unknown to Muslim scholars and travellers. It is a curious fact, however, that the information on this subject which we find uniformly repeated in the Islamic sources from the treatise of al-Khʷārazmī (*ca.* 215/830) onwards gives an idea of the origin of the Nile which does not correspond entirely to the data furnished by the classical sources. This conception makes the Nile emerge from the Mountains of the Moon (Djabal al-Ḳamar) to the south of the equator; from this mountain come ten rivers, of which the first five and the second five reach respectively two lakes lying on the same latitude; from each lake one or more rivers flow to the north where they fall into a third lake and it is from this lake that the Nile of Egypt begins. This conception is largely schematised and corresponds only partly to Ptolemy's description of the Nile sources; Ptolemy knows only of two lakes, not lying on the same latitude and does not speak of a great number of rivers coming from the Mountains of the Moon. The third lake especially is an innovation (cf. von Mžik, in *Denkschr. Ak. Wiss. Wien*, lxxxix, 44); in later authors such as Ibn Saʿīd and al-Dimashḳī this third lake is called Kūrā and may be connected with some notion of Lake Chad (the same authors change the name of Djabal al-Ḳamar into Djabal al-Ḳumr, which pronunciation is commented on by al-Maḳrīzī, ed. Wiet, i, 219), but this is not probable for the time of al-Khʷārazmī; the knowledge of more equatorial lakes, however, may perhaps be traced to the experiences of the two centurions despatched by Nero to explore the Nile and who reached, according to Seneca, a marshy impassable region, which has been identified with the Baḥr al-Ghazal. The system described by al-Khʷārazmī of the origin of the Nile is represented on the map in the Strasbourg ms. and is repeated many times after him (Ibn Khurradādhbih, Ibn al-Faḳīh, Ḳudāma, Suhrāb, al-Idrīsī and later authors). Al-Masʿūdī, in describing a map he has seen, does not speak of the third lake (*Murūdj*, i, 205-6 = § 215) and Ibn Rusta (90) says that the Nile comes from a mountain called B.b.n and also knows only two lakes. Al-Iṣṭakhrī and Ibn Ḥawḳal, on the contrary, frankly admit that the origin of the Nile is unknown, which is also illustrated by their maps. Still the system of al-Khʷārazmī continued to be a geographical dogma and is found as late as al-Suyūṭī. Al-Khʷārazmī also took over from Ptolemy a western tributary of the Nile, which comes from a lake on the equator; this river is called by Ptolemy Astapos and may perhaps be identified with the Atbara. A later development, which connects with the Nile system a river that flows to the east in the Indian Ocean, is found for the first time in al-Masʿūdī (*Murūdj*, i, 205-6, ii, 383-4 = §§ 215, 796); this view is later taken up again by Ibn Saʿīd and al-Dimashḳī.

Another category of notions about the origins of the Nile is connected with the Jewish and Christian traditions which make the Nile come from Paradise. Mediaeval cosmographical theory places Paradise in the extreme East, on the other side of the sea (cf. the maps of Beatus), so that the Nile, like the other rivers

of Paradise would have to cross the sea. This state of things is actually described in an old tradition, probably of Jewish origin, of a man who went in search of the sources of the Nile and had to cross the sea, after which he reached Paradise (al-Masʿūdī, *Murūdj*, i, 268-9 = § 288 and *Akhbār al-zamān*, ms. Vienna, fol. 156a-b; al-Muḳaddasī, 21). With this origin in Paradise is perhaps connected the view, which all sources attribute to al-Djāḥiẓ in his lost *Kitāb al-Buldān*, that the Nile and the Mihrān [*q.v.*] (Indus) have the same origin (cf. al-Masʿūdī, *Tanbīh*, 55), a view which is sarcastically criticised by al-Bīrūnī (*India*, 101). To the same origin may go back the idea, often found in Islamic sources, that, when the Nile rises, all the rivers of the earth go down in level.

Thirdly, there is a cycle of geographical conceptions which link up the western part of Africa with the river system of the Nile. Herodotus already had sought a western origin and Pliny quotes the *Lybica* of King Juba of Mauritania, who makes the Nile rise in western Mauritania. Marquart (*Benin-Sammlung*, 125 ff.) explained this view from a corruption of the name of the river Nuhul, which he identifies with the Wādī Nūl and which has its origin in the Mauritanian Atlas. Traces of this western Nile are to be found in Ibn al-Faḳīh (87) who, following an authority of the time of the conquest, places the origin of the Nile in al-Sūs al-Aḳṣā. Al-Bakrī for the first time identifies this western Nile with the river Niger, although we find already in al-Masʿūdī the knowledge of a great river, far to the south of Sidjilmāsa (*Murūdj*, iv, 92-3 = § 1420). Al-Bakrī describes the Nile as passing through the territory of the Sūdān (ed. de Slane, 172) and enumerates a number of Berber and Sūdān tribes and their towns which border the river; the westernmost town is with him Ṣanghāra, followed in an eastern direction by Takrūr, Sillā, Ghāna, Tiraḳḳā and finally the country of Kawkaw. After al-Bakrī, a similar description is given by al-Idrīsī, but this last author goes back to another source than al-Bakrī when he places the mouth of the Nile in the neighbourhood of the salt town Awlīl, thus identifying the lower course of this Nile with the Senegal (Marquart, *op. cit.*, 171). Al-Idrīsī likewise shows himself informed on the course of the Nile to the east of Kawkaw, though he is in doubt whether Kawkaw is situated on the Nile itself or on a side arm (ed. Dozy and de Goeje, 11); he finally derives this western Nile from the third of the big Nile lakes mentioned above, thus connecting the Nile of the Sūdān with the Nile of Egypt in one river system. So long as the complete text of al-Bakrī is not known, we cannot ascertain if this conception goes back already to that author. Al-Idrīsī's Nile course is clearly indicated on his maps of the 1st to the 4th sections of the first climate. After him, it is especially Ibn Saʿīd who described the western Nile in this way and who was followed again by Abu 'l-Fidāʾ. Al-Dimashḳī (ed. Mehren, 89) gives the same representation; this last author even makes the third lake, which he calls like Ibn Saʿīd the lake of Kūrā, give birth to three rivers: the Nile of the Sūdān, the Nile of Egypt, and a third river running in eastern direction towards Maḳdishū [*q.v.*] in the Zandj country on the Indian Ocean. This last river, which was also connected by al-Masʿūdī with the Nile (see above) is probably identical with the Webi river in Somalia.

While the geographical authors constructed in this way the Nile system with a good deal of credulity and imagination, the real knowledge of the Nile south of Egypt advanced but slowly. The southernmost point reached by the Arab conquerers was Dongola [*q.v.*] (al-Kindī, ed. Guest, 12), and it was well-known that this town was situated on the Nile; its latitude and longitude are given by al-Khʷārazmī and Suhrāb. Al-Yaʿḳūbī (*Taʾrīkh*, i, 217) knows that, in the country of the Nūba called ʿAlwa, whose people live behind the Nūba in the region called Muḳurra, the Nile divides into various branches; this same author, however, places Sind behind ʿAlwa. Al-Masʿūdī (*Murūdj*, iii, 31-2 = § 873) knows that the country of the Nūba is divided into two parts by the Nile. Ibn Ḥawḳal (Istanbul ms.) describes two places where there are cataracts (*djanādil*), namely the one above Uswān, which is the "first cataract", and one near Dongola, of which it is not certain whether the "second" or the "third" cataract is meant. About the same time, however, a traveller named Ibn Sulaym al-Uswānī wrote a valuable description of the middle Nile course, which has been preserved in al-Maḳrīzī's *Khiṭaṭ* (ed. Wiet, in *MIFAO*, xlvi, 252 ff.). This Ibn Sulaym, on whom al-Maḳrīzī's *Kitāb al-Muḳaffā* gives some information (cf. Quatremère, *Mémoires sur l'Egypte*, ii), had been sent by the Fāṭimid general Djawhar to the king of the Nūba on a diplomatic errand, and was the author of a *Kitāb Akhbār al-Nūba wa 'l-Muḳurra wa-ʿAlwa wa 'l-Budja wa 'l-Nīl* (Fr. tr. G. Troupeau, in *Arabica*, i/3 [1954], 276-88), in which a detailed description is given of these countries. He says that the region between Uswān and Dunḳula is inhabited in the north by the Marīs [*q.v.*] and more to the south by the Muḳurra [*q.v.*]; the northern part is barren and the great cataracts are correctly described. The country between Dunḳula and ʿAlwa (this last spot is the region of Kharṭūm [*q.v.*]) is described as highly flourishing; the big winding of the Nile here is perfectly known to Ibn Sulaym. The Nile "is divided" then into seven rivers; from the description it is clear that the northern one of these rivers is the Atbara, coming from the east; further south the "White Nile" and the "Green Nile" join near the capital of ʿAlwa, and the "Green Nile", which comes from the east, is again the result of four rivers, one of which comes, as the author thinks, from the country of the Ḥabasha, and one from the country of the Zandj; this last, incorrect, statement may have been influenced by learned tradition. Between the "White Nile" and the "Green Nile" there stretches a large island (*djazīra*, as it is still called on our maps), which has no limits in the south. This is about the only description in mediaeval Islamic literature that shows how far the knowledge of the middle Nile really went. Only a little of it seems to have reached the systematic geographic treatises; al-Idrīsī, e.g., describes this part of the river in a way which only shows that he did not make good use of the inadequate sources that were at his disposal.

The exploration of the upper Nile and its sources since the end of the 18th century was the work of European travellers. They discovered, or perhaps rediscovered, the really large Nile lakes and identified the Ruwenzori mountain range with the Moon Mountains, the name of which was found again by the explorer Speke in the name of the Unyamwezi country, the "country of the moon". A part of the exploration of the Nile was due, however, also to Egyptian initiative. The well-known military expedition of 1820-2 under Muḥammad ʿAlī's son Ismāʿīl Pasha, during which the city of Kharṭūm was founded, established Egyptian domination in the Egyptian Sūdān and opened the way for further scientific exploration. In the years 1839-42 three Egyptian expeditions went up the White Nile, and during the reign of Ismāʿīl Pasha b. Ibrāhīm [*q.v.*] the Egyptian government

repeatedly tried to cleanse the swamps of the White Nile above Sobat from the masses of vegatation (*sudd*) which hindered navigation.

The yearly flood of the Nile (*ziyāda, fayḍ, fayaḍān*) is the phenomenon to which Egypt has been at all times indebted for its fertility and prosperity, as it provides, in compensation for the almost complete lack of rain in the country, a natural and almost regular irrigation for the lands on its borders and in the delta. It is the foundation of all cultural life and justifies entirely the attribute *mubārak* so often given to the river. On the same account, the Nile is considered, as well as the Euphrates, as a "believing" river (al-Maḳrīzī, ed. Wiet, *MIFAO*, xxx, 218). The flood deeply influences the private and public life of villagers and townsfolk alike, and already the oldest Islamic traditions about Egypt reflect the feelings of wonder and thankfulness that animated the people of Egypt before them (Ibn ʿAbd al-Ḥakam, 109, 205). Having reached its lowest level towards the end of May at Aswan and in the middle of June at Cairo, the Nile begins to rise again, reaching its highest level in the beginning of September at Aswan and in the beginning of October at Cairo. This regularity brings about a similar regularity in the methods of irrigation in the several parts of Egypt, in the times of the sowing and reaping of the different crops and consequently in the modes of levying the land taxes (e.g. al-Maḳrīzī, ed. Būlāk, i, 270, which text comes from Ibn Ḥawḳal); all the dates referring to these occupations have always continued to be fixed according to the Coptic solar calendar.

There is much discussion in the literary sources about the causes of the flood. The most ancient belief, which at the same time corresponds best with reality, was that the flood is caused by heavy rainfalls in the countries where the Nile and its tributaries have their origin. This is expressed in a somewhat exaggerated way in a tradition that goes back to ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ, according to which all the rivers of the world contribute, by divine order, with their waters to the flood of the Nile (Ibn ʿAbd al-Ḥakam, *loc. cit.*, and 149). This implies the belief that all other rivers fall while the Nile rises, but, on the other hand, it is sometimes observed that other rivers also show the same phenomenon of rising and falling, especially the Indus, and this again is considered as a proof of the common origin of the two rivers (al-Maḳrīzī, ed. Wiet, *MIFAO*, xxx, 227). There are, however, other views, which attribute the cause of the flood to the movement of the sea, or to the effect of the winds; these views have been inherited from sources of the pre-Islamic period, among others from the treatise on the flood of the Nile attributed to Aristotle, and they are discussed and refuted at length in a special chapter of al-Maḳrīzī's *Khiṭaṭ* (*MIFAO*, xxx, 236 ff.).

Up to the 19th century, the irrigation system of Egypt continued along the same lines. When the flood began, all the outlets on both sides of the main stream and its principal arms in the Delta were closed, to be opened again about the time of the highest flood, when the water level had reached the necessary height according to the different places. The most important of these yearly "openings" was that of the canal (*Khalīdj*) of Cairo, which, until recent times, remained a public festival. In Cairo the flood is complete (*wafāʾ al-Nīl*), when it has reached 16 *dhirāʿ*s, generally in the first decade of the Coptic month of Mesore (about the midst of August), and this was proclaimed everywhere in the town (cf. the description by Lane, *Manners and customs*, ch. XXVI, and E. Littmann, *Ein arabischer Text über die Nilschwelle*, in *Festschrift Oppenheim*, Berlin 1933, 66 ff.; cf. for older times, al-Ḳalḳashandī, iii, 516).

The height of the level of the Nile has been measured since olden times by the Nilometers [see MIḲYĀS]. Many of these *miḳyās* are recorded by the sources, the southernmost being that of ʿAlwa and the most celebrated the one of al-Fusṭāṭ, constructed by Usāma b. Zayd al-Tanūkhī in *ca.* 92/711 and often restored afterwards (a complete survey of all the *miḳyās* is given in Omar Toussoun, *Mémoire sur l'Histoire du Nil*, ii, 265 ff.). These instruments generally were made of stone, with marks upon them, but they were sometimes of other material (e.g. a fig-tree near the monastery of Safanūf in Nubia; cf. Evetts, *Churches*, 262). The level necessary for the operations of irrigation varied in different places; in the capital the average level had to be 16 *dhirāʿ*s above the lowest level of the Nile; if the flood surpassed 18 *dhirāʿ*s it became dangerous, while a flood not exceeding 12 *dhirāʿ*s meant famine (cf. e.g. al-Idrīsī, 145, 146). In the history of Egypt, the years after 444/1052 and especially the year 451/1059 were notorious for the famine and disaster caused by the failure or practical failure of the flood. A historical account of the flood from the years 152-1296/769-1879 is given in Omar Toussoun, *Mémoire sur l'Histoire du Nil*, ii, 454 ff.

The regulation of the main stream and its branches are ascribed to the ancient Egyptian kings (al-Maḳrīzī, on the authority of Ibn Waṣīf Shāh), but no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fayyūm [*q.v.*], which all the sources ascribe to the prophet Yūsuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arabic sources contain some vivid descriptions of the large stretches of water, above which rose the villages, communication between the villages being only possible by means of boats during that time of the year (al-Masʿūdī, *Murūdj*, i, 162-3 = § 778; Ibn ʿAbd al-Ḥakam, 205). From the reign of Muḥammad ʿAlī [*q.v.*] new irrigation works were planned with the aim of making the country more productive, a possibility at which already the mediaeval authors hinted more than once. The first efforts, however, failed. About 1840 was begun the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfīḳiyya, Manūfiyya and Buḥayriyya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the cataracts near Philae above Aswan in 1902, which was raised again in 1912 and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barrages higher up enabled at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Makwār, near Sennār on the Blue Nile above Kharṭūm, which permits the irrigation of the region called al-Djazīra, between the Blue Nile and the White Nile. This work was finished in 1925 and was completed by a similar barrage on the White Nile (1937), on the Atbara (1964) and on the Blue Nile (1966). In this way, the control of the Nile waters passed to a certain extent out of Egypt itself; it recalls the days of the great famine in 451/1059, when the Egyptians thought that the Nubians were holding up

the flood of the Nile. The same problem came up in the 1930s with regard to the new project of constructing a dam on the frontier of the Sūdān and the Belgian Congo, and the question was raised whether this dam would prove a *fāʾida ʿādjila* or a *fāʾida ādjila* for Egypt (cf. the newspaper *al-Balāgh* of 17 March 1934). Since the establishment of the Egyptian Republic in 1953, the most notable change in the Egyptian part of the Nile's course has been the construction (1959-71) of the High Dam (*al-Sadd al-ʿĀlī*) at Aswān, *ca.* 965 km/600 miles upstream from Cairo, with the aim of providing controlled water for irrigation in the lower Nile valley, protection against unusually high floods and the generation of hydroelectric power. The reservation formed behind the barrage, Lake Nasser, stretches 480 km/300 miles upstream well into the Sudan. Whilst there have been great benefits for land reclamation and increased power generation in Egypt, there have on the other hand been indications of some deleterious effects also for the ecology of the Nile valley, such as increased salinisation of the river valley in Lower Egypt and alterations to the water flow in the Sudd region of southern Sudan.

It has already been shown how the flood of the Nile was the occasion of popular festivals such as the opening of the canal of Cairo. But in other respects also, the Nile is connected with traditional customs of a religious character, which are to be traced back through the Greco-Christian period into very ancient times. When the Arabs conquered Egypt, the sacrifice of the "Nile Bride" was still in use; every year a richly apparelled young virgin was thrown into the Nile to obtain a plentiful inundation. According to a tradition first recorded by Ibn ʿAbd al-Ḥakam (150), this custom was abolished by ʿAmr b. al-ʿĀṣ and the Nile resumed its flood after a note of the caliph ʿUmar had been thrown into it requiring the river to rise if the flood was willed by God. In later times, a symbolic offering of a girl called *ʿArūsat al-Nīl* was still practised on the Coptic *ʿĪd al-Ṣalīb* (Norden, *Travels in Egypt and Nubia*, 1757, 63-5); Lane (*Manners and customs*, ch. XXVI) mentions a round pillar of earth, near the dam of the canal of Cairo, which pillar was called *al-ʿArūsa*. Another custom, practised formerly by Christians and Muslims alike, was to bathe in the Nile on the eve of the Epiphany, in memory of the Baptism of Christ (cf. Evetts, *Churches*, 129). Al-Masʿūdī (*Murūdj*, ii, 364-5 = §§ 779-80) describes this festival, which he calls *Laylat al-Ghiṭās*, for the year 330/942. Lane describes the same ceremony, but in his time the Muslims did not take part in it. But bathing in Nile water in general procures *baraka* (cf. W. Blackman, *The Fellāḥīn of Upper Egypt*, 32, with regard to bathing in the Baḥr Yūsuf).

The quality of the Nile water is a matter of discussion in medical treatises. Ibn Sīnā (*al-Ḳānūn fi 'l-ṭibb*, ed. Būlāḳ 1294, i, 98; cited by al-Maḳrīzī) holds that the circumstance that a river flows from south to north has a bad influence on the water, especially when a south wind blows, and on this account he thinks that the abundant praise given to the Nile is exaggerated. The Egyptian physician Ibn Riḍwān (d. 453/1061) says that the Nile water reaches Egypt in a pure state, owing to healthy conditions in the country of the Sūdān, but that the water is spoilt by the impurities that mix with it on Egyptian soil (cited by al-Maḳrīzī, *MIFAO*, xxx, 275 ff.). This same author describes very clearly the turbid condition of the water when the flood begins. He discusses likewise the influence of the Nile on the climate of Egypt and the medicinal properties of its water.

Other authors speak at length of the fauna of the Nile, giving especial attention to the fish. A very long list of fishes is given by al-Idrīsī (16 ff.), with a description of their often curious qualities. The animals most frequently described by the geographers are, however, the crocodiles, and the animal called *saḳanḳūr*, which is said to be the result of a cross between a crocodile and a fish, but which seems to be in reality a kind of skunk.

The possibilities which the Nile afforded for navigation are best seen from the historical sources. Seagoing vessels do not seem ever to have entered its arms, while the traffic on the river was maintained by small craft; various names of Nile boats occur in literature; in the 19th century the vessel called *dhahabiyya* is especially known. In earlier times, the term *zallādj* is used for a Nile boat (al-Kindī, *Kitāb al-Umarāʾ*, ed. Guest, 157; Dozy, *Supplément*, s.v.). The skill of the fishermen in their sailing boats on the lakes in the Delta is often recorded; in shallow places, however, as well as on the inundated lands, boats had to be moved by means of oars or poles. The rapids between Egypt and Nubia were, as nowadays, an insurmountable barrier to river traffic; the loads were conveyed along the shore to the other side of the falls (Ibn Ḥawḳal, ms. Ahmet III, no. 3346, fol. 86).

The cataracts above Aswan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia (cf. J. Kraus, *Die Anfänge des Christentums in Nubien*, diss. Münster 1930). Islam penetrated only slowly into Nubia and became more generally disseminated in the Sūdān only in the 19th century [see NŪBA; SŪDĀN].

Something has been said already about the praises of the Nile and its descriptions in poetical terms, by which this river has contributed to Arabic literature. Al-Maḳrīzī (*loc. cit.*, 270 ff.) cites some fragments of poems in praise of the Nile and its flood; among the poets whom he names are Tamīm b. al-Muʿizz [*q.v.*] (d. 375/985) and Ibn Ḳalāḳis (d. 567/1172). Further, Yāḳūt (i, 592, iv, 865) cites some poems which he attributes to Umaiya b. Abi 'l-Ṣalt; this poet is probably Abu 'l-Ṣalt Umayya b. ʿAbd al-ʿAzīz (d. 528/1134) who wrote a treatise *al-Risāla al-Miṣriyya*, from which also al-Maḳrīzī makes quotations. The earliest Arabic poems on the Nile are probably those found in the *Dīwān* of Ibn Ḳays al-Ruḳayyāt [*q.v.*], the court poet of ʿAbd al-ʿAzīz Ibn Marwān at the beginning of the 8th century. Several treatises have been especially devoted to the Nile. Ibn Zūlāḳ (d. 387/997) says in his *Faḍāʾil Miṣr* ms. arabe no. 1818 of the Bibliothèque Nationale at Paris, fol. 31a) that he has written a book on the importance and the salutary qualities of the Nile, which now seems to be lost. Further, there are a treatise *Tabṣirat al-akhyār fī Nīl Miṣr wa-akhawātihi min al-anhār* (ms. in Algiers; cf. Brockelmann, II², 666), and two short opuscula by Djalāl al-Dīn al-Maḥallī (d. 863/1459) and al-Suyūṭī, which are found together in the ms. Or. 1535 of the British Museum (Rieu, *Suppl.*, no. 1198; Brockelmann, II², 138).

Bibliography: As the aim of the present article is to give only an account of the Nile from the point of view of Islam and its history, it seems superfluous to quote here even the most important modern works and articles belonging to the abundant bibliography of the Nile. The earlier Islamic authors have all been named in the text; the later ones, such as Yāḳūt, ʿAbd al-Laṭīf, Abu 'l-Fidāʾ, al-Ḳalḳashandī, al-Maḳrīzī, al-Suyūṭī (*Ḥusn al-*

muḥāḍara), al-Nuwayrī and others are in most cases a compendium of earlier earlier views and statements. A very important later Islamic source is *al-Khiṭaṭ al-Tawfīḳiyya* by ʿAlī Bās͟hā Mubārak. The Islamic literary sources have been used in the following works: Else Reitemeyer, *Beschreibung Aegyptens im Mittelalter*, Leipzig 1903, 31-61; J. Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Egypte*, in *MIFAO*, xxxvi, 215 ff.; and very profusely, Omar Toussoun, *Mémoire sur l'Histoire du Nil*, i, ii, iii, in *Mémoires présentés à l'Institut d'Egypte*, viii, ix, x, Cairo 1925. The last of these three volumes contains a series of cartographical reconstructions. A number of ancient Islamic maps of the Nile are to be found in the *Mappae Arabicae*, ed. K. Miller, Stuttgart 1926-30, and more completely in vol. iii of the *Monumenta cartographica Africae et Aegypti* by Youssouf Kemal; in this same work all the geographical references to the Nile are also to be found in a chronological order.

(J.H. KRAMERS*)

NĪLŪFER K͟HĀTŪN, wife of the Ottoman sultan Ork͟han and mother of Murād I [*q.vv.*], apparently the Greek Nenuphar (i.e. Lotus-flower) (cf. J. von Hammer, *GOR*, i, 59), was the daughter of the lord of Yārḥiṣār (Anatolia, near Bursa; cf. Ḥād͟djdjī K͟halīfa, *D͟jihān-numā*, 659) and according to one story was betrothed to the lord of Belokoma (Biled͟jik). ʿOt͟hmān [*q.v.*], the founder of the dynasty which bears his name, is said to have kidnapped and carried her off in 699/1299 and to have destined her to be the wife of his son Ork͟han [*q.v.*], then only 12 years old. Idrīs Bitlīsī, and following him Nes͟hrī, tell the story of the rape, but the Byzantine sources make no reference to it. Nīlūfer K͟hātūn became the mother of Murād I and also of Süleymān Pas͟ha. The river which flows through the plain of Bursa bears the same name, as also does the bridge over it in front of the town and monastery there. The bridge and monastery are said to have been endowed by Nīlūfer K͟hātūn. Nothing more is known of her life. She was buried beside Ork͟han in his *türbe* at Bursa. That Ibn Baṭṭūṭa, ii, 323-4, tr. Gibb, ii, 453-4, really means Nīlūfer K͟hātūn by Bayalūn K͟hātūn, which both F. Giese (cf. *ZS*, ii [1924], 263) and F. Taeschner (cf. *Isl.*, xx, 135) think to be obvious, as they take *B.y.lūn* to be a corruption of *N.y.lūf.r*, is, however, by no means proved, because Bayalūn is a name which occurs again in Ibn Baṭṭūṭa for a Byzantine princess (cf. ii, 393-4). Besides, the mention in Ibn Baṭṭūṭa, who paid his respects to the princess at her court in Iznīḳ (*ca.* 740/1339), is very brief. F. Taeschner suggests that Nīlūfer (cf. Pers. *nīlūfar* "water lily" and Greek i.e. λουλούφερον and νούφαρα with the same meaning) has been derived from the Greek. Nīlūfer was and is also popularly known as Lulufer (e.g. in the early Ottoman chronicles) or Ulufer, as in the river Ülfer Čay; cf. F. Taeschner, *op. cit.*, 135-6.

Bibliography: von Hammer, *GOR*, i, 59-60; *Sid͟jill-i ʿot͟hmānī*, i, 86 (according to Nes͟hrī); F. Taeschner, in *Isl.*, xx, 133-7; *İA*, art. *Nilüfer Hatun* (C.B.). (F. BABINGER)

NĪMĀ YŪS͟HĪD͟J, modern Persian poet, born ʿAlī Isfandiyārī on 11 November 1897 in Yūs͟h, a village in the Āmul township of Māzandarān, died in 1960. His pen name, Nīmā Yūs͟hīd͟j, which he later took for himself, and which has come to replace his real name in popular use, described his place affiliation, since Yūs͟hīd͟j, in the local dialect, means "a native of Yūs͟h". The poet's father, Ibrāhīm Nūrī, was a farmer and cattleman. Nīmā Yūs͟hīd͟j's early boyhood was spent in the tribal environment which distinguished the life of his region. He received his initial education in his native village and subsequently went to Tehran where he was enrolled in the Saint Louis High School, an institution operated by Roman Catholic missionaries. From there he graduated on 15 June 1917, acquiring a competent knowledge of the French language. Together with French, he also learned Arabic, which he studied in a separate school. During his school days, he came to know the poet Niẓām Wafā, who was a teacher at the Saint Louis High School, and whose encouragement and guidance initiated Nīmā Yūs͟hīd͟j into the art of composing poetry.

After his graduation, Nīmā Yūs͟hīd͟j was in and out of work for several years. The jobs which he held were short-lived, and there were periods when he had no regular employment. His first assignment involved a low-paid job in the Ministry of Finance. Subsequently, he worked as a school teacher, first in Āstārā and afterwards in Tehran. When the journal *Mūsīḳī* came out in early 1939 under the auspices of the Ministry of Education, he was appointed as a member of its editorial board, a position which he held until the journal ceased publication at the end of 1941. To this journal he contributed numerous poems as well as a series of articles dealing with the individual and social basis of creative arts. The articles were later published as a book under the title *Arzis͟h-i aḥsāsāt* ("The value of feelings"). After the suspension of *Mūsīḳī*, Nīmā Yūs͟hīd͟j remained without work for some years. In 1326/1947-8 he found a job in the printing and publication department of the Ministry of Education. He continued to work in that capacity till the time of his death, which took place in early January 1960.

Nīmā Yūs͟hīd͟j's writings began to appear in print from 1921. Among the first journals to publish his works were *Naw bahār* and *Ḳarn-i bīstum*. Some of his poems were included in the *Muntak͟habāt-i āt͟hār*, a literary anthology published in 1342/1923-4. Until the poet's association with the journal *Mūsīḳī*, his works appeared sporadically. After that, they began to be published on a more regular basis. During the forties and fifties, his poetical works came out in *Payām-i naw*, *Nāma-yi mardum*, *K͟hurūs-i d͟jangī*, *Andīs͟ha-yi naw*, *Kawīr*, and several other journals upholding new literary tendencies. A volume of his selected poems appeared in 1955, and a complete edition of his verse was published in 1364/1985-6.

The earliest work of Nīmā Yūs͟hīd͟j was his long poem *Ḳiṣṣa-yi rang-parīda* ("The pale story"), which was published in 1921. It was composed in the *mat͟hnawī* form, employing the same metre as the one used in D͟jalāl al-Dīn Rūmī's *Mat͟hnawī*. Its theme was personal, and it showed the poet's involvement with love and its unhappiness, alienation from society, and disgust with city life and its people. In spite of its conventional form and style, the poem represented a departure from the ordinary trend, in that it depicted a new sensibility based upon the Western concept of literary romanticism.

The next important work of Nīmā Yūs͟hīd͟j, and in fact his masterpiece, was another long poem entitled *Afsāna* ("Myth"). Composed in 1922, it was published partially, soon afterwards, in *Ḳarn-i bīstum*. This poem, which evokes a vague comparison with Alfred de Musset's *Les Nuits*, may be said to have heralded the beginning of modernism in Persian poetry. It contained a dialogue between a lover, dismayed by his experience, and the Myth which consoles him in his sorrow. Besides setting a new example in amatory verse, *Afsāna* was unique for its impres-

sionistic approach to the subject as well as for using an imagery derived from personal observation.

Many of Nīmā Yūshīdj's poems had a strong social appeal. Notable specimens reflecting this aspect of his verse included *Maḥbas* ("Prison"), *Khānwāda-yi sarbāz* ("The soldier's family"), *Āy ādamhā!* ("O you people!"), *Nāḳūs* ("The bell"), *Kār-i shab pā* ("The night watchman"), and *Murgh-i āmīn* ("The amen bird"). Works such as these show a predilection for popular causes, and pro-leftist sympathies could be discerned among them.

Nīmā Yūshīdj left an unmistakable mark on contemporary trends in Persian poetry. The generation of poets that emerged after the forties recognised him as their leader. One of his most important contributions was his effort to provide Persian poetry with a new formal structure, and he was the first to popularise free verse, which became the major vehicle of expression for future poets.

(Munibur Rahman)

NIʿMAT ALLĀH b. **AḤMAD** b. **Ḳāḍī Mubārak**, known as Khalīl Ṣūfī, author of a Persian-Turkish dictionary entitled *Lughat-i Niʿmat Allāh*. Born in Sofia, where as an enameller he made a reputation as an artist, he moved to Istanbul and there entered the Naḳshbandī order. Association with the Naḳshbandī dervishes made him more closely acquainted with literature and especially with Persian poetry. Niʿmat Allāh decided to make accessible to others the knowledge he had acquired by an ardent study of Persian literature, and thus arose his lexicographical work, which he probably compiled at the instigation and with the assistance of the famous Kemāl Pasha-zāde (d. 940/1533 [*q.v.*]). He died in 969/1561-2 and was buried in the court of the monastery at the Edirne gate in Istanbul. His work, which survives in a considerable number of manuscripts, is divided into three parts: verbs, particles and inflection, and nouns. His sources were: 1. *Uḳnūm-i ʿAdjam* (see Oxford, Bodleian, Uri, 291, no. 108); 2. *Ḳāsima-yi Luṭf Allāh Ḥalīmī* (Ḥādjdjī Khalīfa, iv, 503); 3. *Wasīla-yi maḳāṣid* (Flügel, *Vienna catalogue*, i, 197); 4. *Lughāt-i Ḳarā-Ḥiṣārī* (Rieu, 513a); 5. *Ṣiḥāḥ-i ʿAdjam* (Ḥādjdjī Khalīfa, vi, 91 and *Leiden catalogue*, i, 100). Besides making careful use of these sources, Niʿmat Allāh added much independent material, of which his dialect notes and ethnographical observations are especially valuable. This work is of considerable scientific importance and deserves greater attention than it has so far received.

Bibliography: O. Blau, *Über Niʿmatullah's persisch-türkisches Wörterbuch*, in *ZDMG*, xxx (1877), 484; Rieu, *Catalogue*, 514b; Ḥādjdjī Khalīfa, vi, 362. The dictionary was partly used by Golius for the Persian part of Castell's *Lexicon Heptaglotton*. The best mss. are Dorn, *St. Petersburg catalogue*, no. 431 (p. 426) and Fleischer, *Dresden catalogue*, no. 182.

NIʿMAT ALLĀH b. **ḤABĪB ALLĀH HARAWĪ**, a Persian historian. His father was for 35 years in the service of the Great Mughal Akbar (963-1014/1556-1605) where he was a *khāliṣa* inspector. Niʿmat Allāh himself was for 11 years historian to Djahāngīr (1014-37/1605-28), then entered the service of Khān-Djahān Lōdī [*q.v.*] whom he accompanied in 1018/1609-10 on the campaign against the Deccan. Soon afterwards he became acquainted with Miyān Haybat Khān b. Salīm Khān Kākar of Sāmāna, who persuaded him to write a history of the reign of Khān-Djahān. Niʿmat Allāh began his work in Malkāpūr in Dhū 'l-Ḥidjdja 1020/February 1612 and finished it on 10 Dhu 'l-Ḥidjdja 1021/2 February 1613. The work is dedicated to Khān-Djahān, and is entitled *Taʾrīkh-i Khāndjahānī* and consists of a *muḳaddima*, 7 *bābs* and a *khātima*. It deals with the history of the Afghāns, beginning with their legendary descent from the Banū Ismāʿīl and treats with special fullness of the history of Bahlūl Lodī, Shīr Shāh Sūr and Nawwāb Khān-Djahān Lōdī. The last chapters are devoted to the genealogy of the Afghān tribes and the reign of Djahāngīr. The *khātima* contains biographies of famous Afghān *shaykhs*. There is also an abbreviated version of the work entitled *Makhzan-i Afghānī*.

Bibliography: H. Ethé, in *GIPh*, ii, 362-3; Rieu, *Catalogue*, 210a, 212a, 903b; Elliot and Dowson, *History of India*, v, 67-115. The shorter version is translated by B. Dorn, *History of the Afghans: translated from the Persian of Neamet Ullah*, in *Orient. Transl. Fund*, London 1829-36. See also Storey, i, 393-5, 1302; Storey-Bregel, ii, 1209-14.

(E. Berthels)

NIʿMAT-ALLĀHIYYA, a Persian Ṣūfī order that soon after its inception in the 8th/14th century transferred its loyalties to Shīʿī Islam. The Niʿmat-Allāhiyya first took root in south-eastern Persia where it continued to prosper until the time of Shāh ʿAbbās. For the next two centuries it survived only in the Deccani branch that had been established in the 9th/15th century. Reintroduced into Persia with considerable vigour in the early 13th/late 18th century, the Niʿmat-Allāhiyya became the most widespread Ṣūfī order in the country, a position it has retained until recent times.

1. The founder and the development of his order.

The eponym of the order, Shāh Niʿmat Allāh Nūr

al-Dīn b. ᶜAbd Allāh Walī (sometimes designated additionally as Kirmānī, especially in Indian sources) was born in Aleppo, in either 730/1329-30 or 731/1330-1. His father was a *sayyid*, claiming descent from Ismāᶜīl b. Djaᶜfar (which may help to account for the loyalty given the Niᶜmat Allāhī order by several Nizārī *imāms* of the Ḳāsim-Shāhī line), and his mother was descended from the Shabānkāra rulers of Fārs. The stylistic superiority of Niᶜmat Allāh's Persian to his Arabic writings suggests that he must have been brought to a Persian-speaking environment while still a child. In any event, he is recorded to have studied during his early youth in Shīrāz with theologians such as Sayyid Djalāl al-Dīn Khʷārazmī and ᶜAḍud al-Dīn al-Īdjī (d. 756/1355). Niᶜmat Allāh was initiated into Ṣūfism by the well-known Yemeni historian and *muḥaddith*, ᶜAbd Allāh al-Yāfiᶜī (d. 768/1367), whose spiritual lineage went back through three generations to Abū Madyan (d. 590/1194). Niᶜmat Allāh joined al-Yāfiᶜī's circle in Mecca when he was twenty-four years of age, and stayed with him until his death. Most probably it was al-Yāfiᶜī, who frequently described the Ṣūfīs as "kings" in his writings, who bestowed the title of Shāh on Niᶜmat Allāh.

After the death of his master, Niᶜmat Allāh embarked on a long series of travels. These brought him first to Egypt, where he spent a period of retreat in the cave on Mt. Muḳaṭṭam that had been used for the same purpose by the Bektāshī saint Ḳayghūsuz Abdāl [*q.v.*]. He then travelled through Syria and ᶜIrāḳ to Adharbāydjān, meeting in Ardabīl with the progenitor of the Ṣafawids, Shaykh Ṣadr al-Dīn and possibly with Ḳāsim al-Anwār (although the latter can have been little more than an adolescent).

It was in Transoxiana that Niᶜmat Allāh first presented himself as a *murshid* and the propagator of a new order. Conditions there must have appeared propitious, for the Turkic nomads of the area, awaiting Islamisation, offered a vast pool of potential recruits on which other Ṣūfī *shaykhs* were already drawing. It was, however, precisely the extent of Niᶜmat Allāh's success in establishing *khānaḳāhs* in several locations and, more importantly, in recruiting a large number of nomads in the area of Shahr-i Sabz that aroused the suspicion of Tīmūr [*q.v.*] and led to Niᶜmat Allāh's expulsion from Transoxiana. Accounts differ regarding the precise circumstances of his departure; several of them attribute it to the jealousy of Amīr Kulāl (d. 772/1370), the spiritual master of Bahāʾ al-Dīn Naḳshband (J. Aubin, *Matériaux pour la biographie de Shah Niᶜmatullah Wali Kirmani*², 12-15). There is, however, no mention in the sources on Amīr Kulāl of any clash with Niᶜmat Allāh, which could, after all, have been presented in favourable and even triumphant terms. On the other hand, the clearly deliberate omission of Niᶜmat Allāh by the Naḳshbandī ᶜAbd al-Raḥmān Djāmī from his *Nafaḥāt al-uns* may indeed reflect some inherited distaste for the founder of the Niᶜmat-Allāhiyya.

From Transoxiana, Niᶜmat Allāh went first to Ṭūs and then to Harāt, arriving there probably in 774/1372-3. He emerged from a period of seclusion to marry the granddaughter of Amīr Ḥusayn Harawī, a well-known poet, and to engage in agriculture, a pursuit he continued to follow for the rest of his life and to recommend to his disciples as "the true alchemy". At the suggestion of the followers whom he acquired while in Harāt, he moved the following year to Kirmān, an area which may have seemed desirable because of its comparative remoteness from the main centres of power of the day. At first he settled in Kūhbanān, outside the city; it was there that Shāh Khalīl Allāh, his only son, was born. Later he moved to the city itself and then to its suburb of Māhān, leaving the Kirmān area only rarely to visit Yazd, Taft and, in 816/1413-14, Shīrāz, in response to an invitation by Iskandar b. ᶜUmar Shaykh, the Tīmūrid governor of Fārs. Niᶜmat Allāh died in Māhān in 834/1430-1 and was buried in the proximity of the *madrasa* and *khānaḳāh* he had constructed there.

This last period in the life of Niᶜmat Allāh was by far the most fruitful. Apart from his disciples in Kirmān, he had several thousand devotees in Shīrāz, who are said to have included the Ṣūfī poet Shāh Dāᶜī Shīrāzī, the theologian Mīr Sayyid Sharīf Djurdjānī and the gastronome-poet Bushāḳ-i Aṭᶜima (by contrast, a somewhat later poet, Ḥāfiẓ, is said to have condemned Shāh Niᶜmat Allāh obliquely for his claims to spiritual eminence, in the poem that begins "Might those who transmute the soil with their gaze also glance briefly on us?", *Dīwān*, ed. Ḳazwīnī and Ghanī, Tehran n.d., 132-3).

Shāh Niᶜmat Allāh also wrote profusely; many hundreds of treatises have been attributed to him. Even allowing for exaggeration and misattribution and taking into account the fact that many of the "treatises" are brief notes or communications, the size of Shāh Niᶜmat Allāh's literary corpus remains impressive. His writings include exegetical essays on the Ḳurʾān and the dicta of earlier *shaykhs* and, more importantly, treatises that expound leading themes in the Ṣūfism of Ibn ᶜArabī, especially *waḥdat al-wudjūd*. He also composed a commentary on Ibn ᶜArabī's *Fuṣūṣ al-ḥikam*, claiming that he had been vouchsafed a perfect comprehension of the book by inspiration from the Prophet, just as the author had received the book itself from the same infallible source.

Better known and more widely read than Niᶜmat Allāh's treatises is, perhaps, his *Dīwān*, which consists for the most part of verses expounding *waḥdat al-wudjūd* with a particular emphasis on the impossibility of ontological multiplicity. Despite the manifest influence on Niᶜmat Allāh's poetry of ᶜAṭṭār and Rūmī, his fondness for the technical terminology and conventional symbols of Ṣūfism detracts heavily from the poetic effect of his verse. The most frequently cited poems in his *Dīwān* are those of prophetic or apocalyptic nature which have been interpreted as foretelling events as diverse as the rise of the Ṣafawids, the separation of Bangladesh from Pakistan and the Islamic Revolution in Iran of 1978-9. These verses, the authenticity of at least some of which is open to question, have tended to make of Shāh Niᶜmat Allāh the Persian equivalent of Nostradamus (Browne, *LHP*, iii, 463-73).

There can be little doubt that Niᶜmat Allāh remained a Sunnī throughout his life. His master al-Yāfiᶜī was a Shāfiᶜī, and he himself frequently cited the *ḥadīths* of Abū Hurayra in his works, something unthinkable in a Shīᶜī author. Nonetheless, elements that may have facilitated the later transition of the Niᶜmat-Allāhiyya to Shīᶜism are also to be encountered in his writings. These include a belief in Twelve Poles (*aḳṭāb-i dawāzdah-gāna*) of the spiritual universe and an emphasis on *wilāya* as the inner dimension of prophethood.

Shāh Niᶜmat Allāh Walī was succeeded by his son Shāh Khalīl Allāh, then fifty-nine years of age. Not long after his father's death, he was summoned to the court of the Tīmūrid Shāhrukh in Harāt. According to the hagiographical sources, this invitation was a sign of the monarch's veneration for him, but it is more likely that Shāhrukh sensed a political danger in

the strength and number of the Niᶜmat-Allāhīs. That relations between Khalīl Allāh and the ruler were not altogether harmonious is shown by Shāhrukh's refusal to exempt the family lands from taxation. For whatever reason, some time between 836/1432 and 840/1436, Khalīl Allāh decided to leave Persia. Entrusting the shrine at Māhān to one of his sons, Mīr Shams al-Dīn, he departed for the Deccan with his two other sons, Muḥibb al-Dīn Ḥabīb Allāh and Ḥabīb al-Dīn Muḥibb Allāh.

Aḥmad Shāh Bahman, the ruler of the Deccan [see BAHMANIDS], had already sent a delegation to Shāh Niᶜmat Allāh inviting him to settle at Bīdar [*q.v.*] in his kingdom. Formerly a devotee of the Čishtī saint Gīsū darāz, he was searching for a new preceptor, one who might enjoy prestige among the immigrant élite, the so-called Āfāḳīs, on which he was coming increasingly to rely. Shāh Niᶜmat Allāh had refused the invitation, but he sent Aḥmad Shāh a letter of initiation that also granted him the title of *walī*. Some years later, Aḥmad Shāh sent a second delegation to Māhān, this time asking for Khalīl Allāh to be sent to the Deccan. This request, too, was refused, but his grandson Nūr Allāh was sent by way of compensation. Aḥmad Shāh received him with great honour, giving him his daughter in marriage and elevating him over all the indigenous Ṣūfīs by naming him *malik al-mashāyikh*.

Now that Khalīl Allāh had finally come, he and his party were greeted with similar enthusiasm. Although links with Persia were not entirely broken, the leadership of both the Niᶜmat-Allāhī family and order was now to remain in the Deccan for several generations: Khalīl Allāh died in 860/1456, and was succeeded in turn by Ḥabīb al-Dīn; Mīr Shāh Kamāl al-Dīn; Burhān al-Dīn Khalīl Allāh II; Mīr Shāh Shams al-Dīn Muḥammad; Mīr Shāh Ḥabīb al-Dīn Muḥibb Allāh II; Mīr Shāh Shams al-Dīn Muḥammad II; Mīr Shāh Kamāl al-Dīn II; and Mīr Shāh Shams al-Dīn Muḥammad III. The leadership of the Niᶜmat-Allāhī order then passed out of the family to a certain Mīr Maḥmūd Dakkanī. Although the Niᶜmat-Allāhīs retained their influence among the Deccani aristocracy even after the dynasty that had brought them there was replaced by the Ḳuṭb Shāhīs [*q.v.*], they never succeeded in putting down roots among the population at large.

The Niᶜmat-Allāhīs who stayed in Persia initially enjoyed good relations with the Ṣafawids. One of them, Mīr Niẓām al-Dīn ᶜAbd al-Bāḳī, was appointed *ṣadr* by Shāh Ismāᶜīl in 917/1511-12, and subsequently became the *wakīl-i nafs-i humāyūn* (regent). ᶜAbd al-Bāḳī's son mediated between the next Shāh, Ṭahmāsp, and his brother in 956/1549, and the new reign saw several marriages between the Niᶜmat-Allāhī family and the Ṣafawid house. The relationship began to sour in the time of Shāh ᶜAbbās I when one member of the family, Amīr Ghiyāth al-Dīn Mīr-mīrān, became involved in an Afshār rebellion in Kirmān. Thereafter, although members of the family continued to hold the posts of *naḳīb* and *kalāntar* in Yazd until at least 1082/1671-2, the Niᶜmat-Allāhiyya seems to have disappeared from Persia as a functioning Ṣūfī order. The only trace left of its existence consisted of the Niᶜmatī gangs that, oblivious to their Ṣūfī origins, waged intermittent warfare with their Ḥaydarī rivals in a number of Persian cities, often with royal encouragement.

The Niᶜmat-Allāhī order was reintroduced into Persia by a certain Maᶜṣūm ᶜAlī Shāh Dakkanī, sent there for the purpose by Riḍā ᶜAlī Shāh Dakkanī (d. 1214/1799), the grandson and second successor of Mīr Maḥmūd Dakkanī. With his ecstatic mode of preaching, Maᶜṣūm ᶜAlī Shāh swiftly gained a large following, particularly in Shīrāz, Iṣfahān, Hamadān, and Kirmān. The resurgent Niᶜmat-Allāhiyya had, however, to confront the hostility of the Shīᶜī *mudjtahids*, newly invigorated by the triumph of the Uṣūlī doctrine which assigned them supreme authority in all religious affairs. Maᶜṣūm ᶜAlī Shāh and several of his followers fell victim to this hostility; he was put to death himself at Kirmānshāh in 1212/1797-8, while *en route* from Nadjaf to Mashhad, by Āḳā Muḥammad ᶜAlī Bihbahānī, a *mudjtahid* popularly known as *ṣūfīkush* ("Ṣūfī killer").

Maᶜṣūm ᶜAlī Shāh's principal companion and disciple was Nūr ᶜAlī Shāh of Iṣfahān, a prolific author in both poetry and prose. His works are replete with theopathic utterances; themes of *ghulāt* Shīᶜism that seem to echo the verse of Shāh Ismāᶜīl; and criticisms of the Shīᶜī *ᶜulamāʾ*. (The combination of these elements suggests that the renascent Niᶜmat-Allāhiyya of the time had doctrinally little in common with the order as first established by Shāh Niᶜmat Allāh and his immediate descendants.) Particularly provocative of *ᶜulamāʾ* indignation was, no doubt, Nūr ᶜAlī Shāh's assertion that the Ṣūfī master is the true deputy (*nāʾib*) of the Hidden Imām. Nūr ᶜAlī Shāh accompanied his master on all his journeys except the last, fatal one, dying himself the same year in Mawṣil, allegedly from poison administered by agents of Bihbahānī.

Four years later, Bihbahānī himself died, and the antagonism between the Niᶜmat-Allāhīs and the *ᶜulamāʾ* began to decline. This development was furthered by the adoption of more circumspect doctrines and attitudes by the Niᶜmat-Allāhīs themselves, which permitted them to establish themselves as a lasting although subordinate element of Persian religious life. No longer seeming subversive, the Niᶜmat-Allāhīs also ceased to arouse the hostility of the Ḳādjār monarchs, one of whom, Muḥammad Shāh, himself became an initiate of the order. The Niᶜmat-Allāhī order was thus able to grow throughout the 13th/19th century. However, as it expanded, it divided into several, often mutually hostile branches, only the more important of which will be mentioned here.

Muḥammad Djaᶜfar Kabūdar-āhangī Madjdhūb ᶜAlī Shāh (d. 1238/1823) was the last leader to exercise undisputed control over the whole order. Three separate claimants to the leadership arose after him: Kawthar ᶜAlī Shāh (d. 1247/1831); Sayyid Ḥusayn Astarābādī; and Zayn al-ᶜĀbidīn Shirwānī Mast ᶜAlī Shāh (d. 1253/1837-8). The first became the eponym of a sub-order known as the Kawthariyya, which has survived down to the present, although with a very small membership; its best-known leader in modern times was Nāṣir ᶜAlī Shāh Malik-niyā (still living in the late 1970s). The line descended from Astarābādī also reached into the 20th century, producing one of the most celebrated Persian Ṣūfīs of recent times, Sayyid Ḥusayn Ḥusaynī Shams al-ᶜUrafāʾ (d. 1353/1935), after whom it is retrospectively known as the Shamsiyya. Its following, too, has generally been very restricted.

The main line of Niᶜmat-Allāhī descent is that which passes through Mast ᶜAlī Shāh. He was the author of several important works refuting the legalistic criticisms that were still being directed against Niᶜmat-Allāhī Sufism (see in particular his *Kashf al-maᶜārif*, Tehran 1350 *Sh.*/1971) and three compendious travelogues, valuable for the detailed information they contain on the Ṣūfīs of diverse affiliations whom Mast ᶜAlī Shāh met in the course of his travels.

After the death in 1278/1861 of Zayn al-ᶜĀbidīn

Raḥmat ᶜAlī Shāh, the successor of Mast ᶜAlī Shāh, a further trifurcation took place, one more serious than the first because it affected the main body of the Niᶜmat-Allāhīs. The first of the three claimants to leadership was Saᶜādat ᶜAlī Shāh Ṭāwūs al-ᶜUrafāʾ (d. 1293/1876 in Tehran), who is said to have been a Ṣūfī of the traditional ecstatic type, the clarity of whose heart was unclouded by any learning. His successor, Sulṭān ᶜAlī Shāh Gunābādī from Bīdukht in Khurāsān, was a man of quite different type. He studied philosophy with the celebrated Mullā Hādī Sabzawārī before embarking on the Ṣūfī path, and even after beginning to train his own *murīds* he continued to give instruction in the formal religious sciences at his *khānaḳāh* in Bīdukht. He wrote a well-regarded commentary on the Ḳurʾān of a mystical-philosophical nature, entitled *Bayān al-saᶜāda*. Murdered by an unknown assailant in 1327/1909, he was succeeded by his son, Ḥādjdj Mullā ᶜAlī Gunābādī Nūr ᶜAlī Shāh-i Thānī (d. 1337/1918). This introduction of hereditary succession gave rise to a new sub-order known as the Gunābādī, with reference to the area surrounding Sulṭān ᶜAlī Shāh's place of origin. Ḥādjdj Mullā ᶜAlī was succeeded first by Ṣāliḥ ᶜAlī Shāh (d. 1386/1966) and then by Riḍā ᶜAlī Shāh Tābanda (still living in 1992). Although the Gunābādīs generally eschew the designation Niᶜmat-Allāhī and cannot therefore be regarded as representing the main line of the Niᶜmat-Allāhī order, they have been for several decades the largest single group of Niᶜmat-Allāhī descent in Iran. It is no doubt because of the sober, *sharīᶜa*-oriented nature of their Ṣūfism that they have been able to retain this position even after the establishment of the Islamic Republic.

The Ṣafī-ᶜAlī-Shāhiyya, another offshoot of the Niᶜmat-Allāhī order emerging from the dispute over the succession to Raḥmat ᶜAlī Shāh, developed in a quite different direction. Its eponym, Ḥādjdj Mīrzā Ḥasan Iṣfahānī Ṣafī ᶜAlī Shāh, spent some time in India promoting his father's mercantile interests before returning to Iran and becoming a disciple of Raḥmat ᶜAlī Shāh. On the death of his master, he initially accepted the authority of Munawwar ᶜAlī Shāh, another of Raḥmat ᶜAlī Shāh's disciples, but the following year he declared himself the immediate successor of Raḥmat ᶜAlī Shāh and proclaimed his independence. Like his contemporary and rival, Sulṭān ᶜAlī Shāh Gunābādī, he also wrote a commentary on the Ḳurʾān, but it was widely criticised, both because of its contents and because it was composed in verse. On Ṣafī ᶜAlī Shāh's death in 1316/1899, the leadership of the order was assumed by Ẓahīr al-Dawla Ṣafā ᶜAlī Shāh, minister of the court and brother-in-law of the ruling monarch, Muẓaffar al-Dīn Shāh; not surprisingly, this gave a somewhat aristocratic complexion to the Ṣafī-ᶜAlī-Shāhiyya. Given the incipient westernising tendencies among the Iranian political élite, it was perhaps natural that a further transformation should also have set in during Ṣafā ᶜAlī Shāh's lifetime. He established a twelve-man committee to supervise the operations of the order which under its new designation *Andjuman-i Ukhuwwat* ("Society of Brotherhood") was effectively transformed into a pseudo-masonic lodge; many of its members were, in fact, also initiates of *Bīdārī-yi Īrān* ("The Awakening of Iran"), the first masonic lodge in Iran affiliated with the French Grand Orient. The society abandoned virtually all the traditional rites of Ṣūfism, but continued to flourish among certain classes until the advent of the Islamic Republic, when its activities were brought to an end, together with those of all other masonic organisations. Its last leader was ᶜAbd Allāh Intiẓām (d. 1982).

It is the line of a third claimant to the succession of Raḥmat ᶜAlī Shāh, Ḥādjdj Muḥammad Āḳā Munawwar ᶜAlī Shāh (d. 1310/1884) that has the best claim to be regarded as the main line of Niᶜmat-Allāhī descent; its adherents continue to designate themselves exclusively as Niᶜmat-Allāhī, although the clarificatory expression "line of Dhu 'l-Riyāsatayn" (an epithet borne by the third successor to Munawwar ᶜAlī Shāh) is sometimes additionally used. Munawwar ᶜAlī Shāh was succeeded in turn by Wafāʾ ᶜAlī Shāh (d. 1336/1918), Ṣādiḳ ᶜAlī Shāh (d. 1340/1922) and Ḥādjdj Mīrzā ᶜAbd al-Ḥusayn Dhu 'l-Riyāsatayn Muʾnis ᶜAlī Shāh (d. 1372/1953). A man of wide erudition, Muʾnis ᶜAlī Shāh enjoyed great respect during the thirty years he directed the order, but its unity could not be maintained on his death. The traditional pattern of discord reasserted itself as thirteen claimants to the succession came forward. The most visibly successful of them was Dr. Djawād Nūrbakhsh, a psychiatrist. He managed to recruit many members of Tehran high society at a time when the profession of a certain type of Ṣūfism was becoming fashionable; to build a whole series of new *khānaḳāhs* around the country; and to publish a large quantity of Niᶜmat-Allāhī literature, including many of his own writings. As the Islamic Revolution of 1978-9 approached victory, Nūrbakhsh left Iran, and he now administers a mixed following of Iranian émigrés and Western converts resident in many cities of Europe and North America.

2. Niᶜmat Allāh and his family at the Bahmanī court of South India.

When Khalīl Allāh b. Niᶜmat Allāh arrived in the Bahmanī capital Bīdar after his father's death in 834/1431, he established there a *khānḳāh* for his kinsfolk and followers, and his own tomb (*čawkhandī*) became a prominent landmark near the royal tombs, where many of his descendants still live. The Bahmanī sultan Aḥmad Shāh's own tomb is liberally embellished with extracts from the *dīwān* and other writings of Niᶜmat Allāh (the texts are given *in extenso*, with translations, in G. Yazdani, *Bidar, its history and monuments*, Oxford 1947, 115-28, with some illustrations on Pls. LXIX-LXXIV).

The tomb of Niᶜmat Allāh at Māhān, some 20 miles/36 km south-east of Kirmān in eastern Persia, was erected in 840/1437 by Aḥmad Shāh Bahmanī's orders, although the splendid dome dates from the time of the Ṣafawid Shāh ᶜAbbās I and the minarets at the entrance are from the early Ḳādjār period.

Bibliography: See also R.M. Eaton, *The Sufis of Bijapur 1300-1700*, Princeton 1978, 56 ff.; H.K. Sherwani, *The Bahmanis of the Deccan*², Delhi 1985, 133-4. Sherwani's accounts differ slightly from those in Yazdani, *Bidar*, and are based on fuller information. (J. Burton-Page)

NIᶜMAT KHĀN, called ᶜĀLĪ, Mīrzā Nūr al-Dīn Muḥammad, son of Ḥakīm Fatḥ al-Dīn Shīrāzī, a Persian author, was born in India and came of a family several of whom had been distinguished physicians in their ancestral home in Shīrāz. He entered the service of the state under Shāh-Djahān (1037-68/1628-57) and was appointed keeper of the crown jewels with the title of *dārūgha-yi djawāhir-khāna*. He attained his highest honours under Awrangzīb (1069-1118/1659-1707), who gave him the title of Niᶜmat Khān (1104/1692-3), which was later changed to Muḳarrab Khān and then to Dānishmand Khān. He died at Dihlī on 1 Rabīᶜ II 1122/30 May 1710. Niᶜmat Allāh, who wrote under the *takhalluṣ* of ᶜĀlī, was exceedingly prolific and wrote a number of works in prose and verse, of which the following are the most important: 1. *Waḳāʾiᶜ-i Ḥaydarābād*: a description of the siege of Ḥaydarābād by Awrangzīb in 1097/1685-6. This work is characterised by a biting wit and describes the siege in a satirical form, which procured the little book the greatest popularity; 2. *Djang-nāma*, a chronicle which covers the last years of Awrangzīb's reign and the war which broke out after his death among his sons; 3. *Bahādur-Shāh-nāma*, a chronicle of the first two years of the reign of Shāh ᶜĀlam Bahādūr-Shāh (1119-24/1707-12); 4. *Ḥusn u ᶜIshḳ*, also called *Katkhudāyī* or *Munākaḥa-yi Ḥusn u ᶜIshḳ*, an allegorical love story, an imitation of the celebrated *Ḥusn u Dil* of Fattāḥī [*q.v.*]; 5. *Rāḥat al-ḳulūb*, satirical sketches of a number of contemporaries; 6. *Risāla-yi hadjw-i ḥukamāʾ*, anecdotes of physicians and their incompetence; 7. *Khān-i niᶜmat*, a work on cookery; 8. *Ruḳaᶜāt*, letters to Mīrzā Mubārak Allāh Irādat Khān Wāḍiḥ, Mīrzā Muḥammad Saᶜīd, the head of the imperial kitchen, and others, which were very highly thought of as models of a choice style of letter writing; 9. a lyrical *Dīwān*; 10. a short *Mathnawī* without a title, which deals with the usual Ṣūfī ethical themes. This survey shows a great versatility on the part of Niᶜmat Khān, but it must be pointed out that, with the exception of the satirical works which are really original and of great value for the characterisation of his age, none of them rises above the level of pale imitations of classical models.

Bibliography: H. Ethé, in *GIPh*, ii, 334, 336-8; Rieu, *Catalogue*, 268a, 702b, 703a, 738b, 744b, 745a, 796a, 807a, 938b, 1021a, 1049b; *Dīwān*, lith. NIMR, Fāris, Syro-Lebanese journalist, scientist and politician, born in Ḥasbayyā, South Lebanon, in 1855 to an Arab Orthodox family, died in 1951. He studied Arabic, English, German and mathematics in Jerusalem, Mount Lebanon and Beirut. In 1870 he entered the Syrian Protestant College (SPC, subsequently renamed the American University of Beirut), and graduated with a Bachelor degree in Arts and Science. In 1874 he was appointed assistant to the American missionary Dr Cornelius Van Dyck (1818-95) in the Astronomical Observatory at SPC, and taught subjects such as Latin, chemistry and astronomy. During the same year, and after his conversion to Protestantism, he joined the Beirut Masonic Lodge, becoming eventually its Master. Together with four other Christians he formed in 1875 a secret society which agitated for Syrian independence within the Ottoman empire by means of posting anonymous placards in Beirut and other Syrian cities.

In 1876 Fāris Nimr and his colleague at the SPC Yaᶜḳūb Ṣarrūf (1852-1927) began to publish, under the patronage of Van Dyck, the famous scientific magazine *al-Muḳtaṭaf*. His adoption of Darwinism

under the influence of Dr Edwin R. Lewis (d. 1907), a chemistry teacher at the SPC, seems to have alienated various influential individuals and institutions, including the Board of Trustees of his college. Consequently, in 1885 the SPC terminated his contract and that of his colleague Ṣarrūf. This decision prompted both Nimr and Ṣarrūf to transfer their magazine to Cairo.

Once in Egypt, Nimr was received with open arms by British and Egyptian officials. In 1888 he married the daughter of the British Consul in Alexandria, and one year later he founded a daily evening paper, *al-Muḳaṭṭam*. Subsidised by the British Agency in Cairo, *al-Muḳaṭṭam* accepted the principle of the British occupation of Egypt while criticising at the same time the details of certain policies and attitudes connected with European influence. His editorship of *al-Muḳaṭṭam* and that of *The Sudan Times*, an English and Arabic bi-weekly founded in 1903, consumed much of his time and energy, forcing him to give up his work in *al-Muḳtaṭaf*.

In 1907 Nimr announced the foundation of a new political organisation, the Liberal National Party. Its main aim was to refute the nationalist ideas of the Egyptian leader Muṣṭafā Kāmil (1874-1908 [*q.v.*]), but this was a short-lived and marginal episode in his career. Nimr continued the publication of his newspapers until his death in 1951. The new régime of the Free Officers closed down both *al-Muḳaṭṭam* and *al-Muḳtaṭaf* in 1952.

NIMRŪD, a ruined site of ancient Assyria, now in northern ʿIrāḳ some 30 km/20 miles south of al-Mawṣil [*q.v.*] in lat. 36°5′N. and long. 43°20′E.

The ruins on the plateau of Nimrūd are those of the ancient Assyrian city of Kalkhū, apparently mentioned in Gen. x. 11-12 as Calah. It is mentioned in Syriac sources, but the mediaeval Islamic geographers mention it only incidentally and under differing names; thus Yāḳūt, i, 119, iii, 113, says that al-Salāmiyya is in the vicinity of the ruins of the town of Athūr, which can only mean the ruins of Kalkhū. The modern name Nimrūd for the site appears first in Niebuhr, who was in al-Mawṣil in 1776, and the name is probably modern, being associated in the popular local mind with the legendary hunter Nimrod first mentioned in Gen. x. 8-9 and connected in Muslim legend, as in the Haggada, with Abraham [see NAMRŪD].

The ziggurat at Nimrūd is one of the most impressive landmarks in northern ʿIrāḳ and the recent discovery (in 1988 and 1989) of more than one thousand items of gold jewellery (earrings, necklaces, brooches, armlets and other items) has revived the flames of popular interest in what was already considered to be one of the most important cities of ancient Assyria. It was first built as an alternative capital to Ashur by the 13th century king Shalmaneser I after he had viciously reasserted his political authority in the land of Urartu (southern Armenia). But sited as it was at the important confluence of the Upper Zāb and the Tigris, it was naturally developed by later Assyrian kings as their main residence. Ashurnasirpal (883-859) moved there from Ashur, providing a water supply from the river and a sewerage system. He settled there people from many different parts of his empire and developed parkland. His successors all contributed to extensions and improvements there. Here lived Sammurammat, the queen of Shalmaneser III (858-824 B.C.) made famous in Greek traditions as Semiramis, and the recently discovered gold belonged to Yabay, the queen of Tiglath-Pileser III (744-727), Banitu, the queen of Shalmaneser V (726-722) and Ataliya, the queen of Sargon II (721-705). Amidst the archives associated with the great temple of Nabu (in Greek Nebo, the god of knowledge) and his consort Tashmetum, which was called Ezida, "the house of truth", there was found the "will of Esarhaddon (680-669), a document in which he decrees that after his death one of his sons should become king of Babylon, and the other, Ashurbanipal, the king of Assyria. In fact, Ashurbanipal was the last king to control Assyria and Nimrūd was overthrown by the revolutionary forces before the final attack on Nineveh brought the Assyrian empire to an end. The two hundred letters found in the archives are an important addition to our knowledge of Assyrian statecraft.

From the ruins excavators have retrieved many marvellous limestone reliefs which decorated the inner walls of the palace rooms most of which, along with those from Khorsābād [*q.v.*] and Nineveh [see NĪNAWĀ], have found their way to museums in the West (especially the British Museum). Fragments of beautifully glazed bricks (which presuppose a sophisticated knowledge of industrial chemistry using tin-glaze) dating back to the 9th century have also been found. The site has provided the largest collection of carved ivory which was worked by expatriate Phoenician craftsmen resident (probably obligatorily) in what must have been one of the major artistic centres of the time in the Fertile Crescent. The life-sized female mask exquisitely carved from one piece of ivory is especially famous.

The importance of the site was recognised by the 19th century British excavator Layard, who dug there in 1845-51, but the archaeological work of Mallowan, who followed his footsteps in this century from 1949 to 1958, has been much more thoroughly recorded. Bronze saddlery fittings and Aramaic mason's marks which have been found confirm that there is still much more to be learned about the position of foreign workmen at the site.

NIMS (A.), masculine noun (pl. *numūs, numūsa*) denoting the ichneumon or Egyptian mongoose (*Herpestes ichneumon*), a small carnivore of the family Viverridae, native to Africa and common in Egypt, Morocco and Palestine. In Egypt, with the geographical sub-species *pharaonis*, the ichneumon was called "Pharaoh's rat" (*faʾr Firʿawn*) and sometimes "Pharaoh's cat" (*ḳiṭṭ Firʿawn*), since in the time of the Pharaohs it enjoyed a sacred status and was embalmed after its death. In the Maghrib there is the sub-species *numidicus* (Moroccan Berber *sarrū*, Kabyle *izirdi*, Tunisian *zīrda*). In the Aïr district of the Sahara there is the sub-species *phoenicurus saharae* and, in the rest of Africa, the sub-species *albicaudus* (white-tailed). Persia is the home of the sub-species *persicus* or *auropunctatus*, which is given the Arabic name *djuraydī 'l-nakhl* "palm-tree rat" in ʿIrāḳ. Afghānistān and India have the sub-species *griseus* or *mongo* (Indian mongoose) and *edwardsi*.

For the Greeks, Aristotle and Herodotus (*History*,

ii, 67) had already mentioned the ichneumon (ἰχνεύμων "which follows the trail of the crocodile") as a major domestic destroyer of the rodents and reptiles infesting the households of Egypt as well as of the eggs of the crocodile. Aristotle gives details (*History of animals*, Fr. tr. J. Tricot, Paris 1957, ii, 453, 601) of the stratagem used by this mongoose when biting a snake to death; it rolls beforehand in slippery clay so that the reptile cannot take a grip on its body which it tries in vain to enwrap.

On the other hand, al-Djāḥiẓ describes, quoting an anonymous source (*Ḥayawān*, iv, 120) another tactic of the ichneumon which belongs to fable. At the approach of the snake, the wily mongoose huddles itself up, emptying its lungs as far as possible, and plays dead; the reptile wraps itself around its body to choke it and, abruptly, the mongoose takes a deep breath to inflate its rib-cage, which has the effect of breaking the snake into several pieces like an over-tensed spring.

After al-Djāḥiẓ, the few Arab authors who have mentioned the ichneumon confine themselves to repeating these accounts; this is true in the case of Ibn al-Faḳīh al-Hamadhānī (3rd/9th century) (Fr. tr., *Abrégé*, 76, 252), of al-Masʿūdī (4th/10th century) (*Murūdj*, ii, 57 = § 492) and of al-Damīrī (*Ḥayāt*, ii, 365). However, there is no doubt that the ichneumon was useful in Egypt, and because of the ease with which it was tamed it successfully played the role of the domestic cat; tradesmen, watchmen and caretakers could not dispense with this valued ally which rid them of unwanted guests—rodents and reptiles being especially abundant in the humid regions of Lower Egypt. The only precaution to be taken with this mongoose was to deny it any access to chicken coops and dovecotes, for the safety of their occupants and of their eggs.

The extreme vigilance of this small carnivore passed into metaphor and it was said of someone who had sharp eyesight *ʿaynuhu ka-ʿayn al-nims* "he has the eye of an ichneumon". To describe somebody as *nims* was to express admiration for his great perspicacity.

In some parts of the Islamic world such as the Maghrib and Lebanon, the term *nims* has been erroneously applied to the weasel (*Mustela nivalis* [see IBN ʿIRS]). According to fable, both these creatures enter the stomach of the crocodile, when it is sunbathing, to devour its entrails, not being content with stealing its eggs, like those of turtles, snakes and birds. As a result of similar confusion, some Arabic dialects employ *nims* to identify various other members of the sub-family Mustelidae such as the stone-marten (*Martes foina*), the polecat (*Mustela putorius*) and the ferret (*Mustela putorius furo*); the term is even found erroneously applied to that other viverrine, the civet (*Genetta genetta*). As for the two expressions *ḳūr* and *lashak* which Dozy attributes to the ichneumon (*Supplément*, s.vv.), one is found in a manuscript of the Escurial and the other in al-Idrīsī, where the context is the topic of the crocodile; they do not seem to have any connection with the mongoose.

As is the case with every animal studied, al-Damīrī does not fail to list the specific qualities of various organs of the ichneumon. Thus if a dovecote is fumigated with the burning tail of an ichneumon, all the pigeons are put to flight irrevocably. The spleen mixed with the white of an egg is an excellent eyewash, curing conjunctivitis. A *ḳīrāṭ* of blood diluted in a woman's milk and poured into the nose of a lunatic restores his reason. A broth made from the animal's penis and taken as a drink cures retention of urine. The right eye wrapped in linen reduces the four-day fever of an invalid; on the other hand, in the same conditions, the left eye causes the recurrence of this fever. An ointment based on mashed brain mixed with horse-radish juice and oil of rose is a violent irritant of the skin, the equal of scabies; only a mixture of the animal's excrement with oil of jasmine can suppress its noxious effect. Finally, the same excrement diluted in water and swallowed plunges the drinker into agony and into terror of demons which he imagines are in pursuit of him.

In botany, the Arabic name of the ichneumon is given to two plants: (a) *al-nims* is, in the Maghrib, Downy koelaria (*Koelaria pubescens*) a graminaceous plant related to Fescue grass (*Festuca*); (b) *biṭṭīkh nims* "ichneumon melon" or *biṭṭīkh ʿayn al-nims* "ichneumon's eye melon" is a nickname given to the watermelon (*Citrullus vulgaris*, of the variety *ennemis*).

(F. VIRÉ)

NĪNAWĀ. 1. An extensive area of ruins in northern ʿIrāḳ, on the left bank of the Tigris and opposite the city of al-Mawṣil [*q.v.*]. Where the river Khawsar joins the Tigris was a natural place to build a city and those early settlers of the seventh millennium spawned the greatest metropolis of Ancient ʿIrāḳ. Sedimentation has now moved the main course of the Tigris more than a kilometre westwards. In 1932 R. Campbell Thompson dug a pit 30 m deep from the top of the mound to virgin soil. At the lowest level he found obsidian flints from Southern Armenia (Van) and later pottery can be traced to Southern ʿIrāḳ (Uruk, Halaf and Ur types are represented). It seems always to have been a place where different cultures easily met, so when Sennacherib, who had campaigned far and wide to extend his empire, laid out the walls of his great city containing a "palace with no equal", he was building in a long tradition.

Epigraphic and archaelogical research of the last decades has shown that it must have measured 180 x 190 m and contained 80 rooms, many of which were lined with beautifully carved limestone reliefs depicting and recording his domination of the surrounding nations. To walk all round the walls means a journey of 12 km, and access was through one of fifteen large gates. Tariq Madhloum's excavations of one of them have shown it to be an extremely elaborate construction with an arched ramp crossing two watercourses. Sennacherib had brought water from the hills to the city by constructing an aqueduct at Jerwan 40 km away. Later kings continued to build, but many of their splendid monuments were ruined once and for all when the military alliance led by Babylon smashed and burned their way through the city in 612 B.C. to mark the end of the Assyrian Empire and the beginning of the Babylonian.

It is very easy to reach the site across the river from al-Mawṣil and the visitor will notice two important

areas. The first, Ḳoyundjik, was an old Yazīdī village whose inhabitants were massacred in 1836; it has also been known as al-Ḳalʿa "the citadel". Here Layard began his excavations on behalf of the British Museum from 1845-51 and found the rich library of Ashurbanipal; it was shipped to London and still today it represents one of the richest archives we have of Sumerian and Akkadian literature. Because it contained many late copies of important historical, religious and scientific literature it provides special opportunities to study how texts were transmitted in the scribal circles of the ancient Near East. The other important area is Nabī Yūnus where Esarhaddon carried out building works. This place has a rich aetiological tradition with the prophet Yūnus (Jonah), whose mission to convert the terrible Assyrians was accomplished because God brought him there in the "belly of the great fish", and is mentioned in Jewish, Christian and Muslim sources [see YŪNUS]. Hence both a monastery and then a mosque were in turn built on the ancient mound, known as Tall al-Tawba "hill of repentance". The tomb of Nabī Yūnus has long been the most esteemed shrine of northern ʿIrāḳ, much visited by Sunnīs, and the large modern cemetery on the east of the mound continues the old tradition of corpses being brought there for burial. Outside the eastern wall of the former city is the sulphurous thermal spring known as ʿAyn Yūnus and visited by pilgrims for its curative powers; and some local inhabitants perpetuate the tradition that the "great fish" is buried at Ḳoyundjik.

Jacobsen and Seton Lloyd, *Sennacherib's aqueduct at Jerwan*, Chicago 1935; Government of Iraq, Directorate-General of Antiquities, *Nineveh and Khorsabad, a note on the ruins for visitors*, Baghdād 1943. (M.E.J. RICHARDSON)

2. A place in central ʿIrāḳ, after which a district (*nāḥiya*) was named, to which Karbalāʾ [*q.v.*] belonged (cf. Yāḳūt, iv, 470). Nīnawā is frequently mentioned in the history of the Muslim wars of the first three centuries of the Hidjra: e.g. in connection with the tragedy of Karbalāʾ of 61/680 when al-Ḥusayn met his death (al-Ṭabarī, ii, 287, 307, 309), in 122/739 in connection with the fighting with the ʿAlid Zayd b. ʿAlī ([*q.v.*] and Ṭabarī, ii, 1710), in the account of the subjection of a later ʿAlid rebel in 251/865 (al-Ṭabarī, iii, 1620, 1623; Ibn al-Athīr, vii, 110), and lastly in the history of the Ḳarmaṭian troubles in 287/900 (al-Ṭabarī, iii, 2190). Nīnawā (Ninā, Ni-na-a) is mentioned in old Babylonian inscriptions as a place not very far from Babylon (cf. e.g. *ZA*, xv, 217). It is not to be confused with a place of the same name mentioned in old Babylonian cuneiform inscriptions as a suburb or quarter of the South Babylonian Lagash (the modern ruins of Telloh). On the Nineveh in Babylonia of the cuneiform inscriptions, see Hommel, *Grundriss der Gesch. u. Geogr. des alten Orients*, Munich 1904-26, 392-3 and *passim* (consult the Index, 1083, s.v. Ni-ná-a or Ninua). According to A. Musil, *The Middle Euphrates*, New York 1927, 43, 44, the site of Nīnawā is marked by the mound of ruins called Ishān Nainwa, below the modern town of Musayyib, 2 miles east of the Euphrates and about 20 north-east of Karbalāʾ, in 32°45′N. (see Musil's map).

Bibliography: Given in the article.

(M. STRECK)

NING-HSIA, a Muslim autonomous region in Northwest China under the People's Republic of China.

The province of Ning-hsia was created in 1929 separately from the province of Kansu [*q.v.*] under Republican China. After the PRC was established in 1954, the greater part of Ning-hsia province was incorporated into Inner Mongolia (Nei-Mengku) and the central part was newly-raised to the status of Ning-hsia Hui-tsu Autonomous Region in 1958, with its present boundaries redrawn in 1976. This Region is situated along the middle reaches of the Yellow River and its tributaries, and it borders on Inner Mongolia in the north, on Kansu in the west and southeast, and on Shen-hsi in the east. The capital is at Yin-chʿuan.

Ning-hsia is the most densely-populated region of *Hui-tsu* ("Islamic race") in the PRC. Its population is 3,895,500, of which *Hui-tsu* number 1,235,207, forming about one-third of the total population (1982 statistics). The origin of the Ning-hsia Muslims goes back to 13th century Yüan times, when the Mongol dynasty ruled China and when many Muslims emigrated from West and Central Asia to the Ning-hsia region. They were soon naturalised, as was also the case in other provinces, and consequently, communities of *Hui-min* or *Hui-tsu*, that is Chinese-speaking Muslims, were formed. Historical materials show that there were many Muslims there since early Ming times down to Chʿing times (15th-19th centuries), and they had regional relations with co-religionists of Kansu, Chʿing-hai and Sinkiang. Ning-hsia Muslims are traditionally Sunnīs of the Ḥanafī school, and among them there have always been a number of Ṣūfī groups, such as the Djahriyya (a branch of the Naḳshbandiyya [*q.v.*]), the Khafiyya or Khufiyya, Ḳādiriyya, Ikhwān, etc., and they still prevail among present-day Ning-hsia Muslims. These last have now more than 1,400 *masdjids* (*chʿing-chen ssu*), distributed over the region, and a class of religious leaders including *ahongs*, *khalīfa*s, *mullā*s, *murshids*, etc. Ning-hsia was the headquarters of Ma Hua-lung's [*q.v.*] Northwest Hui Rebellion (1862-77), and his successors have been leaders of the Djahriyya order of Ning-hsia until the present time; but Ning-hsia Muslims now coexist with the Han Chinese under the PRC régime.

NĪRANDJ (A.), derived from Persian *nayrang*, *nīrang*, pl. *nīrandjāt*, *nīrandjiyyāt* (Ibn Sīnā, ms. Paris; Brockelmann, S I, 828), *nārandjiyyāt* (al-Djināʿī, ms. Strasbourg 4212, fol. 102b), designates, in the two languages, the operations of white magic, comprising prestidigitation, fakery and counter-fakery, the creating of illusions and other feats of sleight-of-hand (*ḥiyal*). A certain al-Ḥasan b. Muḥammad al-Iskandarī al-Kūshī al-ʿAbdarī described the whole set of these operations in his work *Fi 'l-ḥiyal al-bābiliyya li 'l-khizāna al-kāmiliyya* (ms. Bursa, Haraççioğlu 1221, ff. 119, 18.5 × 14 cm, *naskhī*, copied in 881/1476 from another ms. of the same *Khizāna* dated 632/1234). Both author and work are virtually unknown, and it seems useful to give here the titles of the chapters, as already given by the present author in *Sources orientales*, vii, Paris 1966, 184-5:

I. The principles of this art; how to get to know it; appreciation of its subtlety and finesse.
II. Tricks involving the air and atmospherical vapours.
III. Lamps and wicks; description of them in seances.
IV. Tricks with fire and the illusions produced in the minds of the spectators.
V. The making of talismans and the trickery involved in the conjuration of spirits.
VI. Bottles; the devices and tricks that can be done with them.
VII. Cups and glasses; the satisfaction which they can bring about.
VIII. Eggs; devices and tricks in their usage.
IX. The sowing of seed, germination and fruits outside their seasons.
X. Wax effigies; their putting together, taking apart and reconstitution.
XI. The taming of animals by means of traps on terra firma, and by fishing in the sea.
XII. The concealment of hidden objects and the ruses used to uncover thefts.
XIII. Enthusiasm for the manual arts and the transformation of colours and dyes.
XIV. Writing, the preparation of the ink well (read *layḳ* and not *līḳ*, the black powder of collyrium), the removal of writing and the colour of the paper.
XV. The natural characteristics and the distinction between drunkenness and sleep.

(Cf. the classification of magic and its branches given by Ḥādjdjī Khalīfa, *Kashf*, i, 34-5 (and vi, 412: definition of the *ʿilm al-nīrandjāt*), set forth in T. Fahd, *La divination arabe*, 40; see also KIHĀNA.)

According to al-Djāḥiẓ (*Ḥayawān*, iv, 369 ff.), Musaylima al-Kadhdhāb [*q.v.*] practiced *nīrandjāt*; he was the first to get an egg inside a bottle and to stick back on again the wings of birds which had been cut off (cf. Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 206, ed. ʿUkkāsha, 405). Al-Djāḥiẓ adds (cf. G. van Vloten, in *WZKM*, viii [1894], 71-3) that the pseudo-prophet had learnt these tricks in the markets frequented by the Arabs and Persians (Ubulla, Baḳḳa, Anbār and Ḥīra), which would explain the borrowing of the term *nīrandj* from Middle Persian.

But if the name itself comes from the Persian world, the matter which it denotes is found in a literary genre already in vogue since Hellenistic times, in late Antiquity and in the Middle Ages. This involves the literature of *physica* (*khawāṣṣ*), whose great disseminator, if not originator, is said to have been the "Pythagorean Bolus of Mendes (*ca.* 200 B.C.), who, under the pseudonym of the philosopher Democritus, is said to have gathered together everything marvellous and extraordinary which, in the realm of the natural sciences, both popular and learned fantasy, the experience of artisans and cultivators, and the charlatanry of the astrologers and magicians, had found" (P. Kraus, *Jâbir*, ii, 61). It was W. Wellmann who made the work known (see *Die φυσικά des Bolos Demokritos und der Magier Anaxilaos von Larissa*, in *Abh. Pr. Ak. W*, phil.-hist. Kl. (1928), 7; for other works on the subject, see Kraus, *loc. cit.*, n. 1). An apocryphal work in Syriac, attributed to Aristotle and probably dating from the 6th century, the *Ktābā da kʿyānāyātā* (= *physica*), marks the transition between the Greek literature and the abundant literature of the genre in Arabic, whose obvious representatives are ʿAlī b. Rabban al-Ṭabarī, Muḥammad b. Zakariyyāʾ al-Rāzī, Ps. al-Madjrīṭī, ʿUbayd Allāh b. Djibrīl b. Bukhtīshūʿ, al-Ḳazwīnī, al-Djildakī, Dāwūd al-Anṭākī, the numerous authors of books on agriculture, zoology, pharmacopeias and lapidaries (Kraus, *loc. cit.*). The work which best preserves this ancient heritage is the *K. al-Khawāṣṣ al-kabīr* of Djābir b. Ḥayyān [*q.v.*], set forth by P. Kraus (*op. cit.*, i, 148-52) and summarised by him (ii, 64-95). This work of Djābir's is an important source for numerous popular writings, still in manuscript. Two of them worth mentioning are: *al-Mukhtār fī kashf al-asrār wa-hatk al-asrār* and the *K. al-Ḥalāl fi 'l-alʿāb al-sīmāwiyya* (= σημεῖα) of ʿAbd al-Raḥmān al-Djawbarī, publ. Damascus 1302/1884; these were used by E. Wiedemann in several of his works, notably in his *Über das Goldmachen und die Verfälschung von Perlen nach al Gaubarī*, in *Beiträge zur Kenntnis des Orients*, v (1905-6), 77-96, repr. in E. Wiedemann, *Gesammelte Schr. zur arab.-islam. Wiss.-gesch.*, 1. Bd, Frankfurt 1984, 262-81.

Finally, one should note that in the *Ghāyat al-ḥakīm* of Abū Maslama (and not Abu 'l-Ḳāsim Maslama) Muḥammad al-Madjrīṭī (see Fahd, *Sciences naturelles et magie dans Ghâyat al-ḥakîm du Ps.-Madjrîṭî*, in *Ciencias de la naturaleza en Al Andalus. Textos y estudios*, i, ed. E. García Sanchez, Granada 1990, 11-21), *nīrandj* denotes amulets which have an extraordinary power over men and over natural phenomena, such as the magic ring which brings under its power anyone who looks at it, the amulet which protects against bad weather, that which neutralises the action of arms wielded by an enemy and that which calms the passions and desires of soldiers, who risk bringing about the victory of the enemy. The making of these *nīrandjāt* requires perfect precision and careful precautions against the poisonous materials which they comprise. These last include above all philtres having their effect through absorption or fumigations by means of powders and strange balms and greases (242 ff.).

Also to be classed under this name are the acts done by magicians; in the time of ʿUthmān's caliphate, a magician entered and left the stomach of a cow (*Aghānī*, iv, 186). Ibn Khaldūn speaks of magicians who had only to point their finger at a piece of clothing or a skin, whilst mumbling certain words, for that object to fall into shreds; with the same gestures, fixing upon sheep, they could instantaneously cleave them. These people were called *baʿʿādjūn* "cleavers", a name which already figures in the *Nabataean agriculture*, used by Ibn Khaldūn. A description of their art can be found in a treatise called *al-Khinzīriyya* (*Muḳaddima*, iii, 129/178, and 131-2/181-2); F. Rosenthal, *The Muqaddimah*, iii, 165 n. 781, connects this name with the family of Ibn Abī Khinzīr which furnished some governors of Sicily in the 4th/10th century).

Bibliography: In addition to references in the article, see KHAWĀṢṢ AL-ḲURʾĀN and al-Bāḳillānī, *K. al-Bayān ʿan al-farḳ bayn al-muʿdjiza wa 'l-karāmāt wa 'l-ḥiyal wa 'l-kihāna wa 'l-siḥr wa 'l-nārandjāt*, ed. as *Miracle and magic* by R.J. McCarthy, in *Publs. of al-Ḥikma University of Baghdad*, Beirut 1958.

(T. FAHD)

NIRĪZ, a place in Ādharbāydjān on the road from Marāgha [*q.v.*] to Urmiya [*q.v.*] south of the Lake of Urmiya. The stages on this route are still obscure. At about 15 *farsakhs* south of Marāgha was the station of Barza where the road bifurcated; the main road continued southward to Dīnawar, while the northwestern one went from Barza to Tiflīs (2 *farsakhs*), thence to Djābarwān (6 *farsakhs*), thence to Nirīz (4 *farsakhs*), thence to Urmiya (14 *farsakhs*); cf. Ibn Khurradādhbih, 121 (repeated by Ḳudāma with some variations); al-Muḳaddasī, 383.

The distance from Urmiya indicates that Nirīz was in the vicinity of Sulduz [*q.v.*], which would find con-

firmation in the etymology from *ni-rēz* "flowing". Sulduz lies in the low plain, through which the Gādir flows to the Lake of Urmiya. At the present day the name Nirīz is unknown, but a Kurdish tribe of the region of Sāwdj-bulaḳ [*q.v.*] bears the name of Nirīzhī.

After the Arab conquest, a family of Ṭāʾī Arabs settled in Nirīz. The first of these semi-independent chiefs was Murr b. ʿAlī al-Mawṣilī, who built a town at Nirīz and enlarged the market of Djābarwān (cf. al-Balādhurī and al-Yaʿḳūbī, ii, 466). One of his sons, ʿAlī, was among the rebels of 212/827 whom the governor of Ādharbāydjān Muḥammad b. Ḥamīd al-Ṭūsī deported to Baghdād, but ʿAlī succeeded, it seems, in returning to his lands (cf. Ibn Khurradādhbih, 119). Abū Rudaynī ʿUmar b. ʿAlī, appointed in 260/873 governor of Ādharbāydjān by the caliph, made war on his predecessor ʿAlī b. Aḥmad al-Azdī and killed him (al-Ṭabarī, iii, 1886). He was supported by the Khāridjīs. Cf. the account in Sayyid Aḥmad Kasrawī, *Pādshāhān-i gumnām*, Tehran 1929, ii, 27, 34.

In the 4th/10th century, al-Iṣṭakhrī, 186, and Ibn Ḥawḳal, ed. Kramers, 337, tr. Kramers and Wiet, 329-30, mention the Banū Rudaynī as a dynasty already forgotten which had reigned over Dākharkān (read Djābarwān), Tabrīz (read Nirīz) and Ushnuh al-Ādhariyya [see USHNŪ].

Bibliography: In addition to references given in the article, see *Ḥudūd al-ʿālam*, comm., 493; Minorsky, *Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran (circa A.D. 950)*, Cairo 1955, tr. 40, comm. 82-3.

(V. MINORSKY)

NĪRĪZ, in Fārs [see NAYRĪZ].

AL-**NĪSĀBŪRĪ**, AL-ḤASAN B. MUḤAMMAD b. Ḥabīb b. Ayyūb, Abu 'l-Ḳāsim, was a famous littérateur and Ḳurʾānic scholar who died in either Dhu 'l-Ḥidjdja or Dhu 'l-Ḳaʿda, 406/1015-16.

One of the most learned men of Nīshāpūr, Abu 'l-Ḳāsim was considered the leader of his time in Ḳurʾānic sciences. He was not only a grammarian but was also knowledgeable in *maghāzī* (the accounts of the expeditions and raids of the Prophet) [*q.v.*], stories, and biography-history. Al-Nīsābūrī was a Karrāmī [see KARRĀMIYYA], who later became a Shāfiʿī. He transmitted *ḥadīth*s [*q.v.*] on the authority of, among others, the famous Nīshāpūrī Shāfiʿī traditionist Abu 'l-ʿAbbās al-Aṣamm (d. 346/957-8 [*q.v.*]). For personality, we have but one anecdote. He owned a well and an orchard and obliged guests to pay for his hospitality, the rich with money, the poor with labour. Works attributed to al-Nīsābūrī on the Ḳurʾānic sciences, including exegesis (*tafsīr*), for which Ḥādjdjī Khalīfa cites one work. Sezgin notes the existence of a *Kitāb al-Tanzīl wa-tartībih*, only a few folios in length.

Al-Nīsābūrī is most famous for his *ʿUḳalāʾ al-madjānīn* [see MADJNŪN], a collection on intelligent madmen, a work in the entertaining and informative sub-genre of *adab* [*q.v.*], sc. character literature. In the introduction to the work, al-Nīsābūrī places himself in the *adab* tradition, citing names like the famous al-Djāḥiẓ (d. 255/868-9 [*q.v.*]) and Ibn Abi 'l-Dunyā al-Ḳurashī (d. 281/894 [*q.v.*]). After a standard philological introduction, anecdotes centre on flag-bearers for the character type, like Buhlūl, as well as the famous Madjnūn Laylā [*q.v.*], and a number of anonymous men and women. Most fascinating in these anecdotes is their range, which extends from the silly to the elusively mystical.

(FEDWA MALTI-DOUGLAS)

NĪSĀN, the seventh month in the Syrian calendar. Its name is taken from the first month of the Jewish religious (seventh of the civil) year with the period of which it roughly coincides. It corresponds to April of the Roman year and like it has 30 days. On the 10th and 23rd Nīsān, according to al-Bīrūnī, the two first stations of the moon rise (the numbering of these two as first and second shows that the numbering was established by scholars for whom Nīsān was the first month) and on the 15th and the 16th set. In 1300 of the Seleucid era (989 A.D.), according to al-Bīrūnī, the stars of the 28th and 1st stations of the moon rose and those of the 14th and 15th set, while the rising and setting of the 2nd and 16th stations of the moon took place in Ayyār.

Bibliography: Bīrūnī, *Āthār*, ed. Sachau, 60, 70, 347-9; cf. also the *Bibl.* to TAMMŪZ.

(M. PLESSNER)

NĪSĀNIDS or Banū Nīsān, the name of a family of *ruʾasāʾ* (pl. of *raʾīs* [*q.v.*]), of a fabulous richness, who held power at Āmid [see DIYĀR BAKR] in the 6th/12th century under the nominal suzerainty of the Inālid [*q.v.*] Turcomans. They even placed their name on coins. Their rule came to an end with the conquest of the town by Ṣalāḥ al-Dīn [*q.v.*], who accused them of having cultivated the friendship of, and even to have provided assistance for, the Assassins [see ḤASHĪSHIYYA].

Bibliography: Ibn al-Athīr, xi, 103, 297; Abū Shāma, ii, 39; Cl. Cahen, *Mouvements populaires*, in *Arabica*, v/3 (1958), 20.

(ED.)

NISBA (A.), the adjective of relation formed by the addition to a noun of the suffix $-iyy^{un}$ in the masc. sing., $iyyat^{un}$ in the fem. sing., *-iyyūna* in the masc. pl. and $-iyyāt^{un}$ in the fem. pl. As a result of the increasingly frequent omission of the *tanwīn*, the long syllable of the masc. sing., henceforward in the final position, is abbreviated to **-iy*, and subsequently this diphthong is reduced to the vowel *-ī*, transliterated thus but further abbreviated to *-i* in pronunciation. A different, no longer productive, *nisba* formation is the pattern $fa^{c}āli^{n}$/*al-faʿālī*, fem. $fa^{c}āliya^{tun}$: $yamāni^{n}$, from *al-Yaman*, $sha^{\prime}āmi^{n}$, from al-*Shaʾm*, $tahāmi^{n}$, from $Tihāma^{tu}$.

1. In Arabic morphology

In general, the formation of these adjectives is a simple matter, the suffixation taking place directly without modification of the vocalisation or consonantal structure of the nouns to which it is applied: *shams* "sun", *shamsī* "solar"; *ḳamar* "moon", *ḳamarī* "lunar"; *Miṣr* "Egypt", *Miṣrī* "Egyptian", etc. It should be noted, however, that in certain cases alterations occur for which the grammarians have been at pains to codify rules. Only the most frequent modifications will be cited here: omission of the *tāʾ marbūṭa*: *Baṣra*; transformation of the final *-ā* (ا or ى) into *-aw-*: *dunyā* "world", *dunyawī* "material, etc."; *maʿnā* "sense, etc.", *maʿnawī* "semantic, etc.", even after omission of the final *-tāʾ marbūṭa*: *nawāt* "nucleus", *nawawī* "nuclear"; similarly the feminine

ending -*ā*ʾᵘ is transformed into -*āwī*: *ṣaḥrā*ʾ "desert", *ṣaḥrāwī* "belonging to the desert". There is a tendency to amplify short words by reinstating (or adding) a third radical (*w* or *y*): *ab* "father", *abawī* "paternal", *akh* "brother", *akhawī* "fraternal", *dam* "blood", *damawī* "sanguine, etc."; an *h* also appears sometimes: *shafat*ᵘⁿ "lip", *shafawī*/*shafahī* "labial". A *w* is even substituted for *y* in *ḳarawī* (instead of **ḳaryī*) "rustic", from *ḳarya* "village".

The internal vocalisation is modified in a number of *nisba*s formed from proper nouns of the pattern $R^1aR^2īR^3$, $R^1aR^2īR^3a$, $R^1uR^2ayR^3$ and $R^1uR^2ayR^3a$: *Balawī*, from *Balīy*, *Madanī*, from *al-Madīna* (but also *Madīnī*), *Ḳurashī*, from *ḳuraysh*, and *Muzanī*, from *Muzayna*. The two forms with or without -*ī*- > -*a*- also exist as a means of avoiding confusion: *Djazarī*, from al-Djazīra "Mesopotamia", but *djazīrī* "insular", from *djazīra* "island".

Since the Middle Ages, but especially in modern times, the *nisba* in the feminine has served to create a host of abstract nouns, apparently to be formed at will according to requirements: *insān* "man", *insāniyya* "humanity"; *taʿbīr* "expression", *taʿbīriyya* "expressiveness". There is also recourse to the intensive suffix -*ānī*: *nafs* "soul", *nafsī* "psychological", *nafsānī* "psychic", for example. Finally, certain particles and pronouns are used to support relative adjectives and abstract nouns: *kayfa* "how", *kayfī* "qualitative, etc.", *kayfiyya* "modality, etc."; *kam* "how much", *kammī* "quantitative", *kammiyya* "quantity"; *huwa* "he", *huwiyya* "identity"; *anā* "I", *anāniyya* "egotism".

In theory, a relative adjective is never formed from a plural (*lā yunsab ʿalā djamʿ*) but even in the earliest times this rule enunciated by the grammarians was already being circumvented: *Aʿrāb* "Bedouins", *Aʿrābī* "bedouin"; *Baṭāʾiḥ* "marshes in the vicinity of Baṣra", *Baṭāʾiḥī*, etc. Since mediaeval times, usages of this type have proliferated, especially for the formation of nouns of profession: *kitāb* "book", pl. *kutub*, *kutubī* "bookseller"; alongside *faraḍī* "specialist in *farāʾiḍ*" [*q.v.*], the form *farāʾiḍī* is also encountered. In certain cases, the plural appears to be artificial: *makhzan* [*q.v.*] "government of Morocco", has no plural in this sense, but *makhāzinī* > *mkhāzni*, pl. *mkhāzniyya*, denotes a horseman paid by the state; similarly, *kafta* "skewers" (no pl.) gives *kafāʾitī* "seller of skewers", etc.

Finally, it should be noted that in names such as Shawḳī, the suffix is not that of the *nisba*, but the personal pronominal affix of the first person.

2. In Arabic nomenclature

In nomenclature, the *nisba* or "noun of relation" is one of the components of the mediaeval Arabic proper name. Its function is to express the relation of the individual to a group, a person, a place, a concept or a thing. It is most often preceded by the definite article *al*-. Numerous *nisba*s are employed in the contemporary period in the function of family names.

In general, the individual who is the subject of a reference in a mediaeval Arabic biographical register possesses among the various elements of his name—along with *ism, kunya, laḳab* [*q.vv.*], professional designations—one or more *nisba*s which testify to inherited or acquired characteristics, to his path through life, geographical as well as intellectual, to his religious opinions and to the links that he has with his contemporaries. Inherited, the *nisba* relates the individual to a group, such as tribe, tribal subdivision, dynasty, family, eponymous ancestor, etc.; to a place, such as a country, region, city, village, quarter, street, etc.; or even to a nickname or a professional designation handed down by his ancestors. Acquired, the *nisba* takes into account the activity of the person: it originates with the names of places in which he has been resident, those of persons with whom he has established favourable links, the ideas which he has defended and his beliefs. Alternatively, the *nisba* may refer to quoted remarks or to a physical peculiarity. The following are examples of *nisba*s which denote the connection to a tribe: *al-Kindī* "of the tribe of Kinda"; to an ancestor: *al-Ḥusaynī* "the descendent of al-Ḥusayn"; to a place: *al-Dimashḳī* "the Damascene"; to a school of thought: *al-Mālikī* "the disciple of the Mālikī legal school"; to an event: *al-Badrī* "he who took part in the battle of Badr". There are also examples of *nisba*s which are rare, if not unique, and are analogous to nicknames; *nisba*s which denote a connection with a text: a person bears the *nisba* al-ʿAntarī because he has copied the *Sīrat ʿAntar* (F. Rosenthal, *A history of Muslim historiography*², Leiden 1968, 47); connection with a poetical work: one who knew by heart the *Maḳāmāt* of al-Ḥarīrī is called al-Maḳāmātī (G. Gabrieli, *Il nome proprio arabo musulmane*, in *Onomasticon arabicum, introduzione e fonti*, Rome 1914, § 205).

*Nisba*s derived from professional designations should be considered separately, in that their termination in -*ī* appears to be optional: the cotton trader is called, apparently arbitrarily, *al-kaṭṭān* or *al-kaṭṭānī*. Other professional designations appear only with the -*ī* termination, such as *al-ṣaydalānī*, the chemist.

Role and limits of the nisba

In the earliest Arabic inscriptions, written in Sabaic script, the term *dhū* "he of ..." was used to signify the relationship of the member of a tribe to his group (see Ch. Robin, *Les plus anciens monuments de la langue arabe, dans l'Arabie antique de Karibʾīl à Mahomet. Nouvelles données sur l'histoire des Arabes grâce aux inscriptions*, in *REMM*, lxi, 114-15). Subsequently, the *nisba* had the function of indicating to which tribe an individual belonged, either through his origins (*ṣarīḥ*ᵃⁿ) or through links of clientage, for example in the capacity of *mawlā* [*q.v.*]. This "tribal" *nisba* implicitly contains the genealogy of the tribe. Having in one's name an element such as al-Kindī signifies belonging to the tribe of the Banū Kinda, with its eponymous ancestor, its achievements, its history and its territory which forms a part of the *dār al-Islām* [*q.v.*].

It is also to the *dār al-Islām* that the *nisba*s refer which are acquired by individuals on the basis of geographical names. It may in fact be stated that the names listed by the biographers do not contains *nisba*s formed on the basis of the names of places which do not belong to the *dār al-Islām*. If an individual changes his abode, like the scholars who are identified by the sources as having travelled in search of knowledge, henceforward his *nisba*s, formed on the basis of the names of places in which he has resided, may be added to his name (a citizen of Damascus who goes to Baghdād will be called al-Baghdādī "the Baghdādī" on his return; while in Baghdād he would be known by the name of al-Dimashḳī, "the Damascene". On his death, a biographer could preserve in the wording of the name of this person both these *nisba*s: al-Dimashḳī (with the added detail: *al-Dimashḳī al-aṣl*, originally from Damascus), al-Baghdādī. But if he leaves the *dār al-Islām*, to travel for example to China (al-Ṣīn), India (Bilād al-Hind) or to Asia Minor (al-Rūm), countries which belong to the *dār al-ḥarb* [*q.v.*],

he will not bear the *nisbas* al-Ṣīnī, al-Hindī or al-Rūmī except in cases where these are employed as nicknames (see Ibn al-Athīr, *al-Lubāb*, ii, 64: "he is called *al-Ṣīnī* because he has returned from China and he spends his time copying Chinese characters"). The individuals recorded in the biographical sources with the *nisbas* al-Ṣīnī, al-Hindī or al-Rūmī are natives of these countries; they are not, as a general rule, travellers who have become long-term residents in these countries, for in such cases the biographer would have described them as *nazīl*, followed by the name of the place in question.

In the context of the *dār al-Islām*, two further aspects of the process of formation of *nisbas* should be noted: (a) Within the confines of the *dār al-Islām*, there are some quasi-mythical regions such as Khurāsān, the cradle of Ṣūfism. The *nisba* Khurāsānī is found in the names of scholars who are not natives of this region, who have not even visited it, but who seek to ally themselves with Ṣūfī masters, claiming a spiritual heritage emanating supposedly from Khurāsān (see *Les Cent et une Nuits*, tr. M. Gaudefroy-Demombynes, Paris 1911, 3; J. Sublet, *Le voile*, 169, with a further example: the *nisba* al-Ḳayrawānī, which could represent the Far West).

(b) In the spiritual centre of this *dār al-Islām* are the holy cities of Islam, Mecca and Medina, the names of which can only be used in the form of a *nisba* in specific circumstances. Performing the Pilgrimage does not confer the right to call oneself Makkī or Madanī. One who resides as a guest-scholar in a mosque or an educational establishment is entitled to the epithet *mudjāwir* [*q.v.*] or *djār Allāh*. Only those who are natives or established citizens of these places may use these *nisbas* which, furthermore, have become (without the article, such as Makkī and Madanī) what are known as proper nouns, *ism ʿalam* [*q.v.*], borne primarily, so it seems, by Sunnīs living in a Shīʿī milieu who are anxious to affirm their orthodoxy (see Sublet, *Le voile*, 99-102, 170-1). Also worthy of note are *isms* in the form of a *nisba* without the article, such as Balkhī and Bīrī (cf. Ibn al-Athīr, *al-Lubāb*, i, 140, 161).

In the Mamlūk period, *nisbas* have a specific role in the composition of the names of the Mamlūk slaves who, originally, have only an *ism*. They acquire a *nisba* formed on the basis of the name of the merchant who has imported them (for example, Azdamur al-Mudjīrī, see Ibn al-Dawādārī, *Kanz al-durar* (*Die Chronik des Ibn al-Dawādārī*), ed. Munajjid-Roemer-Haarmann, Cairo 1960 ff., ix, 71). When circumstances require it, the addition of one or more *nisbas* deriving from the name of the master who gives them their freedom is possible (the sultan Baybars I, for example, bore the *nisbas* al-Ṣāliḥī al-Nadjmī, which derived from the name of his master (al-Malik) al-Ṣāliḥ Nadjm (al-Dīn Ayyūb). In Ayalon, *Names, titles and "nisbas" of the Mamluks*, in *IOS*, v (1975), 189-231, there is a list of these *nisbas* which were to be replaced, in the Circassian period, by the expression *min* followed by the name of the master (for example, Ṭūmānbāy min Ḳānṣawh).

The feminine nisba

The *nisbas* of women whose names are recorded in the mediaeval biographical sources are masculine or feminine, the two forms being capable of co-existing in the same name, according to whether the biographer considers them as forming part of the patrilineal genealogy or as elements of the woman's name. The order in which he writes the elements of the name, and in particular the *kunya*, seems to have a bearing on the gender of the *nisba* or *nisbas*. For example, where the *kunya* is placed at the beginning of the name, as in Umm al-Khayr *wa-tusammā* Saʿīda bint Muḥammad b. Ḥasan al-Ṭabarī al-Ḥusaynī al-Makkī, the *nisbas* are in the masculine form, being a part of the patrilineal genealogy. In the alternative formula, the *kunya* is placed after the genealogy and before the *nisbas*, as in Saʿīda bint Muḥammad b. Ḥasan Umm al-Khayr al-Ṭabariyya al-Ḥusayniyya al-Makkiyya; the *nisbas* placed after the *kunya* composed with Umm are in the feminine (see especially the volume devoted to female biographies by al-Sakhāwī, *al-Ḍawʾ al-lāmiʿ li-ahl al-ḳarn al-tāsiʿ*, Cairo 1934, xii). These feminine *nisbas* are seldom likely to supply information regarding the places visited by the women; some women performed the Pilgrimage, but they travelled far less than men, and if they were scholars, men tended to travel to them to receive or convey *ḥadīths* and to study texts under their supervision.

Children generally inherit the *nisbas* of their father, very rarely those of their mother. If sons or daughters are mentioned in the text of an article devoted to their mother, they are currently designated by their *ism* followed by the *nisba* most often used to designate their father or their father's family; for example: ʿĀʾisha bint al-Ḥarīrī... *wa-kānat* Umm Aḥmad al-Ḥidjāzī (see Sublet, *Le voile*, 117).

Composite (murakkab) *nisbas*

Derived from composite names, of persons and of places in particular, these *nisbas* can have two forms: (a) A contracted form, e.g. the *nisba* ʿAbshamī corresponds to the name ʿAbd Shams, ʿAbdalī to ʿAbd Allāh, Marḳasī to Imruʾ al-Ḳays, Dāraḳuṭnī to the place-name Dar al-Ḳuṭn, Bābaṣrī to Bāb al-Baṣra and Rasʿānī to Raʾs al-ʿAyn.

(b) A simple form derived from one of the two elements of the name, e.g. the *nisba* Muṭṭalibī corresponds to ʿAbd al-Muṭṭalib, Bakrī to Abū Bakr, Zubayrī to Ibn al-Zubayr and Fakhrī to Fakhr al-Dīn.

On the other hand, certain *nisbas* are formed on the basis of several names. In the *Muʿdjam al-buldān*, Beirut 1979, i, 456, Yāḳūt gives the place name Baghdakhzarḳand. This is a fictitious name derived from a composite *nisba*, al-Baghdakhzarḳandī, borne by a single individual whose origin it describes: his father was Baghdādī, his mother Khazariyya and he was born in Samarḳand. Two other examples given by G. Gabrieli, *Il nome proprio*, § 20: al-Ṭabarkhazī is a composite of Ṭabarī (of Ṭabaristān) and Khʷārazmī (of Khʷārazm); Shafʿanatī is a composite of Shāfiʿī and Ḥanafī, denoting one who was a Shāfiʿī and subsequently became a Ḥanafī.

A particular case: the fictitious nisba

Al-Suyūṭī mentions among the ten types of *ansāb* (*nasab* or genealogy and *nisba*) which he describes (*al-Muzhir*, ii, 444-7): *man nusiba ilā 'smihi wa 'smi abīhī*, giving the example of the name Numayr b. Abī Numayr al-Numayrī. The *nasab* is b. Abī Numayr, literally, "son of the father of al-Numayr" and the *nisba* al-Numayrī. This is one of the formulas used to give an identity to a person born of an unknown father (the supposed father is sometimes given the name of monetary units such as Dīnār or Dirham) or to an individual without a genealogy, a slave, for example. The *nisba* al-Numayrī is likewise derived from the *ism*; it appears with the name of the father as a repetition of this *ism*.

The nisba *in the sources*

The average number of *nisbas* borne by an individual (scholar, man of science, soldier or prince) whose biography is recorded in the mediaeval Arab sources is five. But this does not apply to the naming of eminent persons, for whom the biographer supplies

only one or two *nisbas*, which often form part of the name by which the individual is best known (Sublet, *Le voile*, 104-7). The fragile distinction between *nisba* and nickname is apparent here, as in the works devoted to *ansāb*. The latter in fact combine not only the *nisbas* (pl. *nisab*) a part of which refers to genealogy (*nasab*, pl. *ansāb*) and to the eponymous ancestor, but also *laḳabs* (nicknames) and professional designations. A specific form of biographical literature is devoted to homographic *ansāb*. The authors experiment with possible readings of the various consonantal patterns with their vocalisations and they determine the identity of those who bear these *nisbas*, these *laḳabs* and these professional designations, with the object of avoiding confusion between individuals, and in certain instances the authors of these erudite works have other objectives in mind, as in the case of Ibn Mākūlā [*q.v.*].

Bibliography: Dictionaries of genealogy include Samʿānī, *al-Ansāb*, 13 vols., Ḥaydarābād 1962 ff.; available also are a facsimile of the complete manuscript, ed. D.S. Margoliouth, Leiden-London 1912, a summary with additions by ʿIzz al-Dīn Ibn al-Athīr, *al-Lubāb fī tahdhīb al-Ansāb*, 3 vols., Cairo 1938, and Beirut 1980, and a supplement to Ibn al-Athīr by Suyūṭī, *Lubb al-lubāb fī taḥrīr al-Ansāb*, ed. P.J. Veth, Leiden 1842, repr. Baghdād n.d.; Ḥāzimī Hamdānī Muḥammad b. Abī ʿUthmān, *Kitāb ʿUdjālat al-mubtadiʾ wa-fuḍālat al-muntahī fi ʾl-nisab*, Cairo 1965. Dictionaries of homographs include Dhahabī, *al-Mushtabih fi ʾl-ridjāl asmāʾihim wa-ansābihim*, 2 vols., Cairo 1962, and Ibn Ḥadjar al-ʿAsḳalānī, *Tabṣīr al-muntabih bi-taḥrīr al-mushtabih*, 4 vols., Cairo 1964. On the nomenclature of *ḥadīth*, see ʿAbd al-Ghanī al-Azdī, *al-Muʾtalif wa-mukhtalif*, Ḥaydarābād 1909, and Ibn Mākūlā ʿAlī b. Hibat Allāh, *al-Ikmāl fī rafʿ al-irtiyāb ʿan al-muʾtalif wa ʾl-mukhtalif min al-asmāʾ wa ʾl-kunā wa ʾl-ansāb*, 6 vols. Ḥaydarābād 1962, and Ibn al-Ṣābūnī, *Takmilat ikmāl al-Ikmāl fi ʾl-ansāb wa ʾl-asmāʾ wa ʾl-alḳāb*, Baghdād 1957; Ibn Khaṭīb al-Dahsha, *Tuḥfat dhawī ʾl-irab fī mushkil al-asmāʾ wa ʾl-nisab* (... *über Namen und Nisben bei Buḫārī, Muslim, Mālik*), ed. T. Mann, Leiden 1905. On South Arabia, Hamdānī, *al-Iklīl min akhbār al-Yaman wa-ansāb Ḥimyar (Südarabische Muštabih)*, ed. Löfgren, Bibliotheka Ekmaniana no. 57, Uppsala-Leiden 1953, 1-54. Comprehensive works include G. Gabrieli, *Il nome proprio* (ref. in the article); J. Sublet, *Le voile du nom. Essai sur le nom propre arabe*, Paris 1991. (Jacqueline Sublet)

3. In Persian and Turkish

In Persian, the suffix *-ī* (MP-*īk*) is used to form relative adjectives, but with *-gī/djī* after the silent *hāʾ* at the end of words: (a) from places, e.g. Iṣfahānī, Dihlawī, Sāwadjī; some apparently irregular ones go back to earlier forms of place names, e.g. Rāzī < Rayy, Sagzī < Sidjistān/Sīstān. (b) from concrete nouns to form adjectives indicating function or craft, e.g. *khānagī* "domestic" < *khāna*, *kalʿadjī* "garrison soldier" < *kalʿa*, *shikārī* "hunter, pertaining to hunting" < *shikār*.

In Turkish, the suffix *-li* in its various realisations is used for relative adjectives of place, e.g. Izmirli, Ḳonyalî, Merzifonlu, Üsküblü, and—*dji/či* in its various realisations for adjectives denoting functions, professions, crafts, etc., e.g. *eskidji* "old clothes dealer", *awdjî* "hunter", *mumdju* "candlemaker", *baḳîrdjî* "coppersmith", *sütdjü* "milk seller". Several of these forms have survived in the colloquial Arabic speech of such lands as Egypt and the Levant, former parts of the Ottoman empire, e.g. *postadjī* "postman", *boyadjī* "shoe-cleaner", *ḳahwadjī* "coffee-house proprietor, servant", *sufradjī* "waiter".

NIṢF al-NAHĀR (a.) "half of the day", "midday", is used in astronomy in the expression which denotes the "meridian circle" (*dāʾirat niṣf al-nahār*) passing through the two poles of the horizon (*ḳuṭbā ʾl-ufuḳ*) of a place, which it cuts at the two cardinal points (*djiha*, *watid*) North and South and through the two poles of the celestial equator (*muʿaddal al-nahār*, etc.). As the demarcation between the East and West of a place, the meridian serves as the determination of the longitude (*ṭūl* [see ḳubbat al-arḍ]) and for fixing the hour of midday prayer [see mīḳāt] by the passage of the Sun (*zawāl*). (Ed.)

NISH (in Serbian, Niš), the second town of Serbia, situated at a height of 214 m/650 feet in a fertile plain surrounded by mountains, on the two banks of the Nišava not far from its junction with the Morava. It forms an important communications centre, for roads and railway lines, on the international routes to Sofia-Istanbul and Salonica-Athens. The most important part of the town lies on the right bank, with the remains of the fortress on the right one.

In antiquity, Nish (Naïssus, Niz, Nissa, etc.) belonged at first to the Roman province of Moesia Superior and later became the capital of Dardania. Nish's greatest claim to fame is that it was the birthplace of Constantine the Great (306-37) and attained great prosperity in ancient times. The Romans had a state munition works here.

In the time of the migrations of the Huns, Nish was taken after a vigorous resistance by Attila (434-53) and destroyed but rebuilt and refortified very soon afterwards by Justinian I (527-65). By the middle of the 6th century, the first forces of the Slavs who had entered the Balkan peninsula in their endeavour to found states at the expense of the Byzantine empire appeared before Nish. Nish was thus in the 9th century usually in the hands of the Bulgars and until 1018 it belonged to a Slav state founded in Macedonia in 976 by the emperor Samuel. The Byzantines held it from 1018 to the end of the 12th century, when we find it described as large and prosperous; al-Idrīsī who calls it "Nīsu" (also on his map of 1154, ed. K. Miller) lays special emphasis on the quantity and cheapness of food and the importance of its trade. But even then it did not enjoy peace. In 1072 the Hungarians reached the town on a marauding campaign; in 1096 its inhabitants had to defend themselves in a strenuous battle "at the Bridge" against the Crusaders, in which the latter suffered very heavily, and in 1182 the town was taken by Bela III supported by the Serbian prince Nemanja. A little later Nemanja took Nish and the whole country as far as Serdica (Sofia). The town suffered considerably in these troubled times. The Third Crusade (1189) found it almost empty and practically destroyed. In spite of this, Nemanja was able to receive the emperor Barbarossa in Nish with great ceremony. From this time until the Turkish conquest Nish was generally in Serbian hands.

In the earlier Turkish chronicles (e.g. Shükrullāh, Urudj b. ʿĀdil, ʿĀshîḳpashazāde, Neshrī (Nöldeke), Anonymous Giese), there is no mention of the taking of Nish: Saʿd al-Dīn (i, 92-3), Ḥādjdjī Khalīfa and Ewliyā Čelebi, then von Hammer (*GOR*², i, 157) and Lane-Poole (*Turkey*⁵, 40) on the other hand, assume that it took place in the reign of Murād I in 777/1375-

6. The Serbian chronicles, however, definitely give 1386, and this year, which Gibbons strongly urged as the correct date (*The foundations of the Ottoman Empire*, Oxford 1916, 161-2), is now generally accepted.

During the Turkish period (1386-1878) Nis̲h̲ had chequered fortunes. In 1443 it was taken by the Christian army under king Vladislav III and John Hunyadi and destroyed. After the fall of Smederevo in 1459 the Serbian despotate became a Turkish province and Nis̲h̲ was even more securely in Turkish hands. For several days after 20 June 1521 a great fire raged in Nis̲h̲ which would have destroyed it completely if the Beglerbeg Aḥmed Pas̲h̲a, who was leading an army against Hungary at the time, had not come at the last moment to its assistance (F. Tauer, *Histoire de la campagne du Sultan Suleyman Ier contre Belgrade en 1521*, Prague 1924, 26 (Persian text), 31 (tr.)).

Western travellers who visited Nis̲h̲ in this period (Dernschwam, Contarini, etc.) were not particularly attracted by it.

Turkish writers give us an idea of the appearance of Nis̲h̲ in the 17th century. Ḥād̲j̲d̲j̲ī K̲h̲alīfa (*ca.* 1648) describes it as a great town and *ḳāḍīlīḳ* in the *sand̲j̲aḳ* of Sofia. The description which Ewliyā Čelebi (*ca.* 1660) gives is much fuller: it is a fortified town in the plain with 2,060 houses, 200 shops, three mosques (1. G̲h̲āzī K̲h̲udāwendigār; 2. Muṣlī Efendi; 3. Ḥusayn Ketk̲h̲udā), 22 schools for children, several *masd̲j̲ids*, dervish *tekkes*, fountains, baths, many vineyards and gardens, etc.

On 23 September 1689, Nis̲h̲ was taken by the Austrians under Lewis of Baden but abandoned the very next year to the Turks (1690). In 1737 Nis̲h̲ was again taken by the Austrians under Seckendorf but left to the Turks again after two months' occupation. It is to this period that the city owes its fortifications.

When in 1804 the Serbians under Karadjerdje rebelled against the Turks, they soon won a number of successes and in 1809 were able to build redoubts against Nis̲h̲, in which Stevan Sindjelić, one of Karadjeordje's voivods, on May 31 blew up himself and the attacking Turks. Nis̲h̲ was nevertheless not relieved and the Turks built the so-called Čele-Kula ("tower of skulls") with the heads of the Serbians killed there, of which A. de Lamartine gave a moving description on his way home in 1833 (cf. *Voyage en Orient*, Paris 1859, 255-6). It was not till 11 January 1878 that Nis̲h̲, hitherto the capital of a Turkish *liwā*, finally passed from the Turks. This induced many Muslims to migrate to Turkey.

Lying on the military road between Istanbul and Vienna and therefore exposed to every campaign, Nis̲h̲ was by no means favourably situated to become a centre for the development of even a modest intellectual life. It appears, at least according to Gibb, that Nis̲h̲ produced no Turkish poets or authors, except perhaps Sünbülzāde Wehbī (end of the 18th century), who celebrated in song his meeting with the young Sara in the Turkish camp at Nis̲h̲ (*HOP*, iv, 259). In Nis̲h̲, however, two Turks worked for a time who later were to become celebrated: 1. Aḥmed Luṭfī (1815-1907), afterwards imperial historiographer, served in Vidin and Nis̲h̲ from April 1845 (*GOW*, 384); 2. the famous statesman and author of the Turkish constitution of 1876, Midḥat Pas̲h̲a [*q.v.*], was appointed governor of Nis̲h̲ and Prizren in 1861. (On the work that he did at Nis̲h̲ between 1861 and 1864, see especially N. Göyünç, *Midhat Paşa'nın Niş valiliği hakkında notlar ve belgeler*, in *IÜEF Tarih Enstitüsü Dergisi*, xii [1981-2], 279-316.)

At the end of the Ottoman period (1878), Nis̲h̲ had 19 mosques, but because of the rapid disappearance of the city's Muslim population, their number speedily diminished; after 1886, there remained only "a few" (cf. *De Paris à Constantinople*, Collection des Guides Joanne, Paris 1886, 92). The next-to-the-last was destroyed in 1896 by a violent flood, and the last one, within the fortress, is still in place. As for the local Muslims, they were already no more than 3.7% of the 35,384 inhabitants of the town in 1931. According to the statistics of December 1933 (established on the basis of the marriage registers of the local imāmate), Nis̲h̲ had at that time 1,982 Muslims spread over 365 households, chiefly Gypsies (the others being Serbo-Croat, Turkish and Albanian speakers). These Gypsies called themselves Muslims, bore Muslim names and married according to Islamic law, etc., but also observed some of the Christian festivals and from time to time prayed in churches. There still existed at this time in Nis̲h̲ a regional *s̲h̲arīʿa* court (set up in October 1929 after the abolition of the former jurisdiction of the local *muftī*, whose authority till then had extended over the whole of the former kingdom of Serbia, cf. *Glasnik Islamske Vjerske Zajednice*, i/11 [Belgrade 1934], 30-1). The new court extended over a part of that of the older jurisdiction (19 districts), whilst the rest were dependent on the *ḳāḍī* of Belgrade. The Muslims of Nis̲h̲ also had a district *wakf meʿārif* council, a community council (*dzematski medzlis*) and a office for registration (*imāmat*). All these institutions disappeared in the course of the Second World War, and one only finds in Nis̲h̲ now individual Muslims dependent on the *muftī* of Belgrade.

(Fehim Bajraktarević-[A. Popovic])

NIS̲H̲ĀN (p.), means a sign, banner, seal (and hence letter of a prince), or order/decoration. As a loanword in Ottoman Turkish, it basically denoted a sign or mark and also designated the sultan's signature, or *ṭug̲h̲ra* [*q.v.*] and, by extension, a document bearing it (its scribe was a *nis̲h̲ānd̲j̲ī* [*q.v.*]); the standards of the Janissaries or *Yeñi Čeri* [*q.v.*]; the insignia on military, naval and other uniforms; and,

later, decorations bestowed by the sultan. In 19th and 20th century literary Arabic, *nishān (also nīshān)*, similarly a loanword, had essentially the same connotations. This entry considers orders/decorations alone. These are to be distinguished from medals (Persian *madāl*, Turkish *madālya*, Arabic *madāliya* or *midāliya*—all from Italian *medaglia*). The former, awarded by a sovereign ruler for extended service (frequently coinciding with promotion or retirement), were richly elaborate; medals, in contrast, designated a specific occasion and were rarely bejewelled. Among Muslims and others, the main intent of both was military (rewarding prowess), administrative (for officials), political (for foreign dignitaries and ambassadors), social (determining status in society) and cultural (encouraging educators and intellectuals).

While other marks of appreciation (e.g. coins or clothes) may have been bestowed by ʿAbbāsid caliphs and Saldjūḳ rulers, the practice of granting *nishāns* was institutionalised in Ḳādjār Persia, the Ottoman Empire and Afghānistān, visibly patterned on Western European practice in the early 19th century.

1. In the Middle East

Persia. The prevailing pattern was a star of bejewelled sunrays surrounding a central design; *nishāns* were worn on the breast, frequently with a coloured sash. Every new *nishān* was first issued on the basis of a *farmān* [*q.v.*], setting down its classes (*martaba*), subdivided into degrees (*daradja*) and the type and colour of the sash (*ḥamāyil*), as well as the services meriting reward and categories of recipients. The orders, manufactured at the government mint in Tehran, were accompanied by a document and, at times, a gift of money as well. Some orders had to be returned upon the recipient's death. The most noteworthy *nishāns* were the following: the *Nishān-i Khūrshīd* (Order of the Sun), instituted by Fatḥ ʿAlī Shāh in 1807, who renamed it (in 1810) *Nishān-i Shīr ū Khūrshīd* (Order of the Lion and Sun) to increase its prestige. For generations, this remained a distinguished honour for notable Persians and foreigners, such as military officers and ambassadors to Tehran. It was an eight-pointed star, richly bejewelled and enamelled (each degree less costly than the one above it), with a central circle exhibiting a crouching lion and a sun rising behind its back. On the *nishān* for military recipients, the lion was standing and holding a sword. Fatḥ ʿAlī also instituted a Red Crescent *nishān*, for foreigners, together with a green sash; and later a *Nishān-i Ẓafar* (Order of Victory), established in Tabrīz in 1243/1827-8, for notables. His successor, Muḥammad Shāh, decreed a *farmān* in 1252/1836-7 establishing all details of the *Nishān* of the Lion and Sun, its divisions and artistic characteristics, eligibility criteria and nomination procedures. He also established a *Nishān-i Timthāl-i Humāyūn* (Order of the Royal Portrait—of Muḥammad Shāh), first distributed, apparently, to those responsible for law and order in Southern Persia.

Nāṣir al-Dīn Shāh's long reign witnessed more activity in this domain. He laid down the formal rules for the *Nishān-i Timthāl-i Humāyūn* in a *farmān* dated 1855: it was to comprise ʿAlī's portrait, to be worn by the Shāh alone, or the Shāh's portrait, to be bestowed only on the Grand Vizier or distinguished military commanders. A later *farmān* of his, in 1287/1870, introduced three new orders to replace that of the Lion and Sun: the highest was the *Nishān-i Aḳdas* (Most Sacred Order), mostly for foreign rulers, less frequently for prime ministers (local and foreign), local governors and members of Persia's royal family; the *Nishān-i Ḳuds* (Order of Holiness), for ranking ambassadors and Persian governors; finally, the *Nishān-i Muḳaddas* (Sacred Order), for governors and generals. Their allocation was to be determined by a grand master, appointed by the Shāh. Yet another *farmān*, dated 1290/1873, established the *Nishān-i Āftāb* (Order of the Sun), intended for queens and royal princesses; one of the first recipients was Queen Victoria. The sun was represented by the full face of a female beauty. During his brief reign, Nāṣir al-Dīn Shāh's son, Muẓaffar al-Dīn Shāh, instituted a *Nishān-i Timthāl-i Humāyūn*, first bearing his father's likeness, then his own. The succeeding Ḳādjārs do not seem to have innovated *nishāns*, although they did insert their own respective likenesses.

The Pahlawīs, as a new dynasty, introduced new *nishāns*, although some borrowed old *motifs*. Their details and awarding were published in the *Gazette d'Iran*. The highest civil order was the *Nishān-i Pahlawī* (Pahlawī Order), whose first class, with a collar, was worn only by the Shāh and the Crown Prince; the second, with a sash, and the third, with a riband, were bestowed on foreign heads of state and crown princes. *Nishān-i tādj-i Īrān* (Order of the Crown of Īrān), a star with the Persian crown at its centre, was awarded to high civil servants and, in special cases, to high-ranking foreigners. *Nishān-i humāyūn* (Royal Order), for distinguished persons, consisted of a star with an encircled lion and sun at its centre. In 1938, due to religious opposition, it was altered so that no human face appeared on the sun. The highest military *nishāns* were *Nishān-i Dhu 'l-Faḳār* (Order of Dhu 'l-Faḳār), introduced in 1922, for gallantry in action, with ʿAlī's figure in the centre; *Nishān-i Liyāḳat* (Order of Merit) and *Nishān-i Iftikhār* (Order of Honour) were reserved for officers. Several other *nishāns* and medals were established by Riḍā Shāh and continued under Muḥammad Riḍā Shāh, as reported annually in the *Iran Almanac and Book of Facts* (Tehran). The Islamic Republic of Iran abolished them all.

Ottoman Empire. *Nishāns* were regarded as signs of sovereignty and the sultans jealously guarded their exclusive prerogative to grant them. In the second half of the 19th century, there were attempts by the Princes of Bulgaria, starting with Alexander von Battenberg, to strike and award their own *nishāns*. One, sent by Prince Alexander to Alfonso XII of Spain, had to be returned by the latter because of Ottoman pressure. Ismāʿīl Pasha [*q.v.*], Khedive of Egypt, did not strike his own *nishāns*, but obtained permission from the sultan's court to award Ottoman ones.

From ʿAbd ül-Medjīd I's reign, each *nishān* was prepared and distributed according to regulations (*niẓām-nāma*) published in the official *Düstūr*. Struck at the mint or *ḍarb khāna* [*q.v.*], it usually had the form of a star, crescent or sunrays. As in Persia, each was a work of art, made of precious metals and gems, frequently accompanied by a sash (*sherīṭ*) or riband. Presented by the Sultan or dispatched via a delegate, it was boxed and awarded with a specially-written *berāt* [*q.v.*], phrased in stylised language, mentioning the name of the recipient, the *nishān* and its class (if any), and the reason for the award. No one was permitted to wear a *nishān* without a suitable *berāt*, for which the recipient had to pay, the price varying with time and degree. Some *nishāns* had only one degree (*rütbe*), others up to five. Above the first degree, even more prestigious *nishāns* were elaborately adorned with diamonds or brilliants and called *muraṣṣaʿ*. These and first-degree *nishāns* were usually worn with a sash across the breast, with a small medal attached to the hip, resembling (but not identical to) the larger and

more valuable one worn on the breast. Lower degrees had only one decoration, tied around the neck with a riband or pinned to one's breast. All were of gold or silver (according to their degree), mostly enamelled in the centre and bejewelled. When presented to military personnel, many *nis̲h̲āns* had interlocking swords added at the top. Persons awarded a higher degree were expected to return the lower one. Most *nis̲h̲āns* could be inherited, but not worn by heirs, who were requested to pay a fee to keep them.

Medals predated *nis̲h̲āns* in the Ottoman Empire; Maḥmūd I, ʿOt̲h̲mān III and ʿAbd ül-Ḥamīd I each issued a medal. The first *nis̲h̲ān* dates from the reign of Selīm III. There were still no decorations with which to reward Admiral Nelson following his 1798 destruction of the French navy at Abū Ḳīr in Egypt, but the matter was then accorded initial consideration. In 1216/1801, following the battle of Alexandria, the *Nis̲h̲ān-ī Hilāl*, or *Hilāl Nis̲h̲ānī* (Order of the Crescent), sometimes called that of the *Waḳāʾiʿ-i Miṣriyye* (Order of the Battles of Egypt), was struck to be worn as a pendant around the neck. Made of gold and adorned with diamonds, its central ornaments were an enamelled crescent and the Ottoman arms. Its first recipients were an Ottoman naval officer, Aḥmed, and a British one, Hutchinson; later, it was presented to one of Napoleon I's generals, Sebastiani de la Porta.

During Maḥmūd II's reign, in 1831, the *Nis̲h̲ān-ī Iftik̲h̲ār* (Order of Honour) was struck, with a crescent or star (depending on degree) at its centre. With this order, the sultan initiated the practice of distributing *nis̲h̲āns* among military officers, NCOs and administrative officials. The *Taṣwīr-i Hümāyūn Nis̲h̲ānī* (Order of the Imperial Portrait), struck a year later, comprised Maḥmūd II's portrait, in miniature, on ivory, in a rectangular frame ornamented with brilliants, set among yellow and pink roses, surrounded by blue flowers. Aware of criticism in religious circles for using a human portrait, the sultan presented this *nis̲h̲ān* to the *S̲h̲eyk̲h̲ ül-Islām* himself (1248/1832).

Several *nis̲h̲āns* were issued during ʿAbd ül-Med̲j̲īd's reign. Some were smaller, more modest ones, rewarding the services of various officers, officials, engineering service personnel and others. These awards and many others were all recalled and sent back to the mint. Nonetheless, this remained an era of artistically significant *nis̲h̲āns*, three of which merit special mention: the *Nis̲h̲ān-ī Iftik̲h̲ār* differed from the one similarly named under Maḥmūd II. Oval-shaped, it resembled a flat medal. The base was a golden plaque; the flowery *ṭug̲h̲ra* at its centre was silver-plated, surrounded by 32 silver sunrays, and the upper part was of gold. It bore a total of 160 gems. The *Nis̲h̲ān-ī Imtiyāz* (Order of Distinction) had only one degree, but its makeup varied with the reward which the sultan thought suitable for services rendered. Thus in 1257/1841, Muṣṭafā Res̲h̲īd Pasha [see RES̲H̲ĪD PAS̲H̲A, MUṢṬAFĀ], Minister for Foreign Affairs, was rewarded for ably solving the problem of Egypt a year earlier with a beautiful ornamented *Nis̲h̲ān-ī Imtiyāz*, whose centre bore the *ṭug̲h̲ra* within a red enamel laurel twig surrounded by 35 bejewelled sunrays. The *Med̲j̲īdī Nis̲h̲ānī* (Order of ʿAbd ül-Med̲j̲īd, popularly known as *Med̲j̲īdiyye*) was struck in 1268/1851. While the number of *nis̲h̲āns* struck for foreigners was not pre-determined, the quantity struck for Ottomans was: 1st degree, 50; 2nd, 150; 3rd, 800; 4th, 3,000; 5th, 6,000. In the centre of seven sections of sunrays, the *ṭug̲h̲ra* appeared as a sun in relief, around which the following terms were inscribed in gold: *ṣadāḳat* (fidelity), *ḥamiyyet* (patriotism) and *g̲h̲ayret* (zeal). This was awarded to the military, civil servants and intellectuals (succeeding sultans continued to award it). Not surprisingly, the regulations governing this Order stipulated that anyone guilty of treason, robbery, murder or corruption would have to return it.

The enamel-on-gold *Nis̲h̲ān-ī ʿĀlī Imtiyāz* (Order of High Distinction), struck during ʿAbd ül-Azīz's reign, in 1861, greatly resembled the earlier *Nis̲h̲ān-ī Imtiyāz*. The *Nis̲h̲ān-ī ʿOt̲h̲mānī* (Ottoman Order), struck in the following year, was presented only to previous recipients of the *Med̲j̲īdī Nis̲h̲ānī*. Again, the number of pieces produced was strictly limited in advance (although foreigners were excluded from this quota), as well as the payment, by degree, for the accompanying *berāt*. The sultan's *ṭug̲h̲ra* was again the centre-piece, on red enamel and gold, surrounded by 35 sunrays.

During ʿAbd ül-Ḥamīd II's reign, the number of *nis̲h̲āns*, old and new, increased so much that their intrinsic value declined. This was due not only to his long reign, but also to his large-scale distribution of *nis̲h̲āns* among both Ottomans and foreigners as a means of gaining allies and saving the Empire. Even on such occasions as the sinking of the Ottoman frigate *Ertog̲h̲rul*, in a storm off the coast of Japan, *nis̲h̲āns* were sent to the local people who had tried to rescue and tend the shipwrecked. Only the more important orders will be mentioned. The *S̲h̲efḳat Nis̲h̲ānī* (Order of Compassion) was struck in 1878 for Ottoman women (and, in rare cases, for foreign ones) who had made efforts to help during wars, earthquakes, floods and similar disasters. This first Ottoman *nis̲h̲ān* for women was in gold and silver, in the form of a five-cornered star with a violet-coloured enamel at its centre, bearing ʿAbd ül-Ḥamīd's *ṭug̲h̲ra* and the words *insāniyyet* (humanity), *muʿāwenet* (assistance) and *ḥamiyyet* (patriotism). Like ʿAbd ül-ʿAzīz, ʿAbd ül-Ḥamīd issued his own version of *Nis̲h̲ān-ī ʿĀlī Imtiyāz*. Struck in 1878, it was designed for military personnel, administrators and intellectuals—both Ottoman and foreign—who had performed exceptional services for the Empire. Of one degree only (plus the bejewelled, *muraṣṣaʿ* one), it looked like a rayed sun with golden laurel twigs at its base. The sultan's *ṭug̲h̲ra* was inscribed on green enamel, surrounded by the inscription *ḥamiyyet* (patriotism), *g̲h̲ayret* (zeal), *s̲h̲ed̲j̲āʿat* (courage) and *ṣadāḳat* (fidelity). The *k̲h̲ānedān-ī Āl-i ʿOt̲h̲mān Nis̲h̲ānī* (Order of the Ottoman Dynasty), struck in 1892, was intended for rulers of foreign states and their families, as well as members of the reigning Ottoman family and Turkish personalities who had excelled in service. Golden, oval-shaped, with the *ṭug̲h̲ra* at its centre, surrounded by a red enamel frame, it was usually worn on a grand formal uniform. The *Ertog̲h̲rul Nis̲h̲ānī* (Order of Ertog̲h̲rul), named for one of the Sultan's ancestors, was struck in 1901. Shaped like a star with gold enamel at its corners, it was intended for those whom ʿAbd ül-Ḥamīd particularly liked.

In the time of Meḥemmed V Res̲h̲ād and the Young Turks, more *nis̲h̲āns* were struck. The *Maʿārif Nis̲h̲ānī* (Education Order), issued in 1910, was intended for persons distinguishing themselves publicly in teaching, culture and the arts. Made of gold-plated silver, the *ṭug̲h̲ra* was again in the centre on a red enamel background, surrounded by a white enamel crescent and terminating in a small five-pointed star joined to a green enamel laurel. An inscription set out the *nis̲h̲ān*'s intent: *ʿUlūm we-fünūn we-ṣanāʾiʿ-i nefīse*. Eligible recipients had to have been

employed for at least five years (3rd degree), ten (2nd) and another ten (1st). Teachers who had failed at their jobs could be requested to return their *nis̲h̲āns*. Foreigners were equally eligible for this award. The *Meziyyet Nis̲h̲ānī* (Order of Excellence), considered even more prestigious then the *Med̲j̲īdī Nis̲h̲ānī* and the *Nis̲h̲ān-i ʿOt̲h̲mānī*, was planned in 1910 and intended for both Ottoman and foreign subjects in the highest offices. This *nis̲h̲ān*, however, was never issued. The same is true of the *Zirāʿat Liyāḳat Nis̲h̲ānī* (Order of Capability in Agriculture), planned in 1912 for men particularly successful in agriculture. It was designed with a three-word inscription: *ḥürriyyet* (liberty), *ʿadālet* (justice) and *müsāwāt* (equality)—a common slogan in the Young Turk decade. The *Med̲j̲lis-i Mebʿūt̲h̲ān Aʿḍālarïna Mak̲h̲ṣūṣ Nis̲h̲ānï* (Order for the Members of Parliament) was issued in 1916 to all members in the 1916-19 Parliament. Made up of heptagonal groups of sunrays, its centre was a crescent-and-star in gold on white enamel.

In the successor states of the Ottoman Empire, heads of state variously continued to bestow orders and medals. In Turkey, a law passed in Parliament on 26 November 1934 and published in the *Resmî Gazete* three days later, forbade wearing Ottoman *nis̲h̲āns* (unless won in war) or foreign decorations. Instead, the state provided the *Istiklâl madalyasï* (Independence Medal), approved by Parliament in 1920 and distributed in 1923 to Members of Parliament and later to all those who fought or assisted in the War of Independence. In Egypt, King Fuʾād instituted several orders: the *Ḳalādat Muḥammad ʿAlī* (Muḥammad ʿAlī Collar) for a limited number of kings; the *Ḳalādat Fuʾād* (Fuʾād Collar), for heads of state and eminent Egyptians; the *Nis̲h̲ān Muḥammad ʿAlī* (Order of Muḥammad ʿAlī), sometimes called *al-Wis̲h̲āḥ al-akbar* (The Highest Decoration), for Prime Ministers, both Egyptian and foreign; the *Nis̲h̲ān Ismāʿīl* (Order of Ismāʿīl), for prominent Egyptians and others; the *Wis̲h̲āḥ al-Nīl* (Nile Decoration), for ministers and pashas; and the *Wisām al-Kamāl* (Decoration of Perfection), for women only. King Fārūḳ introduced no new orders, while the Republic did, e.g. the *Wisām al-Nīl* (Nile Decoration), for heads of state, and the *Wisām al-istiḥḳāḳ* (Order of Merit).

Ottoman Empire. *Nis̲h̲āns* can be found in many museums in Turkey (such as the Topkapı and the military and naval museums in Istanbul) and elsewhere and in many private collections, worldwide. Copies of the *berāts* accompanying them, for 1262-1337/1845-1918, are housed in the Başbakanlık Arşivi, *Hümayun nişan defterleri*, vols. 1-44. Foreign recipients of *nis̲h̲āns* were generally listed in the official *sālnāmes*. Regulations (*niẓām-nāme*) governing the awards were printed in *Düstūr*, e.g. 1st series, suppl. vols. (*d̲h̲eyl-i düstūr*), iv, Istanbul 1302, 2-3. See also Meḥmed Tewfīḳ, *Nis̲h̲ān-ï ittiḥād. (J.M. Landau)

2. In the Mag̲h̲rib

In North Africa, it was Tunisia which, whilst part of the Ottoman empire, was the first to award decorations. The oldest and most popular one is the *Nis̲h̲ān al-Iftik̲h̲ār* ("Order of Honour"), begun in 1837 by Aḥmad Bey, modified in 1855, then on 29 Muḥarram 1300/10 December 1882 and on 1 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1304/21 August 1887, before being definitively regulated by a beylical decree of 22 S̲h̲aʿbān 1315/16 January 1898 (apart from a few later modifications relating to the rights of chancellery).

The *Nis̲h̲ān al-Iftik̲h̲ār* had at the outset only one class, whose insignia was a silver, enamelled plaque, oval in shape, on which the name of the Bey was picked out encrusted with diamonds. Later, it became an order arranged hierarchically in five classes. The highest decoration (the Grand Sash) was a silver plaque with carved faces, rounded and raised in its centre, in the form of a star with ten rays radiating outwards intertwined with each other; in the centre of the plate, on a green enamelled field, the name of His Highness the Bey stood out in incised silver letters. This decoration was worn over the left side of the breast, by means of a green silk ribbon with a double red bordering; this ribbon, 85 mm wide, had to be worn cross-wise over the right shoulder; at its ends, a

knot supported the plaque of a Commander (see below). The plaque of a Grand Officer was smaller and was worn on the right side of the breast. The plaque of a Commander, smaller still, differed only in detail; a green ribbon four cm wide had a double red bordering which allowed the insignia to be worn below the neck. The decoration of an Officer, smaller still, was supported by a green ribbon with a double edging, with a rosette, which was pinned on the left side of the breast. The decoration of a Knight (first and second classes) was simpler, but the ribbon was the same as for the other classes. The *Nis̲h̲ān al-Iftik̲h̲ār* was awarded on the recommendation of the Prime Minister for Tunisian nationals, and of the Foreign Affairs Minister for other recipients.

In the same year as the *Nis̲h̲ān al-Iftik̲h̲ār* was instituted (1837), the Bey founded the *Nis̲h̲ān al-Dam* ("Order of the Blood") for himself and members of his family, but this decoration was also granted to the Prime Minister and to foreign sovereigns and their families. Its insignia was a rounded plaque of gold, with rings set with diamonds, and it was worn crosswise by means of a green ribbon with two thin red borders. After the promulgation of the Fundamental Pact (*ʿAhd al-Amān* [see DUSTŪR, i]), the Bey Muḥammad al-Ṣādiḳ in 1860 created a special order, the *Nis̲h̲ān ʿAhd al-Amān*, reserved for princes and for Tunisian ministers, but also granted to generals and civilian officials of high rank. The insignia was a plaque in gold, round in shape, with a red enamelled surface and set with emeralds, and it was worn cross-wise by means of a green ribbon with two red borders on each side. In 1874 the same Bey inaugurated the *Nis̲h̲ān ʿAhd al-Amān al-Muraṣṣaʿ*, whose insignia was a golden plaque set (*muraṣṣaʿ*) with diamonds, but this decoration was granted only to a limited number of Tunisian dignitaries and foreign personalities: Marshal Lyautey, General de Gaulle and King Alfonso XIII of Spain. These four orders were thus placed in the following order of importance: *Dam*, *ʿAhd al-Amān al-Muraṣṣaʿ*, *ʿAhd al-Amān* and *Iftik̲h̲ār*. All were abolished in 1957.

Once Tunisia became independent, it acquired three new orders plus a certain number of medals. The *Nis̲h̲ān al-Istiḳlāl* ("Order of Independence") was founded by a decree of 6 September 1956 and reorganised by the law 59-32 of 16 March 1959; it was intended to reward civil or military services from the time of the war of national liberation and has five classes (of Knight with Grand Cross). On the same day, law 59-33 instituted the *Nis̲h̲ān al-D̲j̲umhūriyya al-Tūnisiyya* ("Order of the Tunisian Republic") meant to reward the services of those who had contributed to the establishment of the republic; it also had five classes. Finally, the Order of 7 November 1987 (beginning of the new era) was set up by the law 88-78 of 2 July 1988 to reward the merits of those who had either contributed to the re-establishment of the sovereignty of the people and the strengthening of democracy or had worked for the consolidation of the gains of 7 November; it likewise has five classes. The President of the Republic is the Grand Master of these three orders, which may also be given to foreigners.

Furthermore, the government ministerial departments are able to grant decorations and medals for rewarding services rendered: the Medal of Honour of the State Security Service, of the National Guard, of Civil Defence, of the Prison and Rehabilitation Services, and for the Safety of the Head of State and of official figures, all medals stemming from the Ministry of the Interior. The Ministry of Education and Science has the National Order of Merit for the Universities set up by the law 85-41 of 15 April 1985 and comprising three classes, and the National Order of Merit for Teaching created by the law 79-41 of 15 August 1979, also of three classes; the president of the Republic is the Grand Master of these two orders. The Ministry of Public Health has a medal, whilst that of Agriculture has an Order of Merit for Agricultural Services set up by the law 71-44 of 28 July 1971 and comprising two grades, those of knight and officer. The Ministry of Youth and Children has two medals, for Merit in Sport and Merit of Youth. The Ministry of Social Affairs has the Medal of Social Merit and the Medal of Labour. There was attached to the Ministry of Culture the National Order of Cultural Merit created by the law 66-61 of 5 July 1966, but replaced, by law 69-23 of 27 March 1969, by the Medal of Culture, which also has five classes. Finally, the Ministry of National Defence has the Military Medal, whose holders form an Order, and the Medal commemorating the Battle and the Evacuation of Bizerta set up by the law 63-45 of 12 December 1963.

(This information concerning Tunisia has been kindly communicated by the National Foundation Beit Al-Hikma [*Bayt al-Ḥikma*] which had been given the task of drawing up a report on the Tunisian decorations.)

In Morocco, a dahir (*ẓahīr*) of 1 Ramaḍān 1386/14 December 1966 regulated the kingdom's orders; this document, which followed and summed up earlier ones, was itself modified or completed by the dahirs of 26 Ramaḍān 1388/17 December 1968, of 12 Rabīʿ II 1396/12 April 1976 and of 3 Rabīʿ II 1403/18 January 1983.

In descending hierarchical order, the nine orders designated by the term *wisām*, and not *nis̲h̲ān*, were as follows. (1) *al-Wisām al-Muḥammadī*, reserved for monarchs or heads of foreign states, the royal family and foreign princes. It has three classes. For the outstanding class, a gold plaque whose base in green enamel is surrounded by jewels and which is worn suspended from a collar of gold or of precious stones; for the other two classes, there is only a plaque, without the jewels for the third one. (2) *Wisām al-Istiḳlāl* ("Order of Independence") intended for those who contributed to the achievement of independence. It has three classes also: for the outstanding one, the gold medal forms a star with eight points hung from a red ribbon with black vertical stripes. For the other classes, the medal is in silver or bronze respectively. (3) *Wisām al-Walāʾ* ("Order of Fidelity"), meant for persons who have shown their devotion to the sovereign. It has only one class, and the plaque is a star in gold with five points. (4) *Wisām al-ʿArs̲h̲* ("Order of the Throne") is meant to reward civil and military officials. It has five classes; the gold medal (silver for the fourth class) is worn hung from a red band, with a green stripe on each side. (5) *al-Wisām al-ʿAskarī* ("Military Medal") is for private soldiers and NCOs in time of war, and also for general officers holding the *Wisām al-ʿArs̲h̲*. It has only one class; the medal is bronze, oval in shape, with a white and red ribbon. (6) *Wisām al-Istiḥḳāḳ al-ʿAskarī* ("Medal for Military Merit") is for career officers. It has five classes; the outstanding class comprises a gold plaque plus a gold medal with a green ribbon with a red border; the first class, a plaque and medal of silver; the others, only a medal in silver or bronze. (7) *Wisām al-Istiḥḳāḳ al-Waṭanī* ("National Order for Merit"), meant for civil and military officials. It has three classes, a gold medal for the outstanding level, one of silver or bronze for the other two, and red ribbon with

wide edges. (8) *al-Wisām al-ʿAlawī*, the celebrated Ouissam Alaouite, which has five classes. The highest (the Grand Sash), has for its insignia a plaque 84 mm in diameter with five clusters of silver rays, surmounted by a golden star 40 mm in diameter with five white enamelled branches, a red cord, held together by a cluster of palm leaves in green enamel with a 16 mm golden circle in its centre, on a red enamelled ground. This plaque is worn on the left side of the breast. Also, a gold star 60 mm in diameter, identical on both sides to that of the plaque, with a circle 25 mm in diameter in its centre; the second side bears a representation of the royal parasol, red in colour, on a golden ground; this star is hung from a ring of golden foliage by a wide ribbon in bright orange, 10 cm wide with, on each side, a white stripe. The Grand Sash is worn over the shoulder from right to left. For the rank of Grand Officer, the plaque is the same as above; it is worn on the right side of the breast, the star of an Officier (see above) on the left side. The Commander wears a star identical with that of the Grand Sash hung from a bright orange neck band 37 mm wide, with a white stripe on each side. The star of an Officer is like that of the Grand Sash with the same measurements as the star of the plaque; the ribbon, bright orange and 37 mm wide, has a white stripe on each side and bears a white-striped rosette. The insignia of a Knight is the same, except that it is hung from a silver (and not gold) ring and has no rosette. (9) *Wisām al-Mukāfaʾa al-Waṭaniyya* (no information about this order). (Ch. Pellat)

NIS̲H̲ĀND̲J̲Ī, secretary of state for the Sultan's *ṭug̲h̲ra*, chancellor, in Ottoman administration.

The Sald̲j̲ūḳs and Mamlūks already had special officials for drawing the *ṭug̲h̲ra*, the sultan's signature. As their official organisation was inherited in almost all its details by the Ottomans, this post naturally was included. Its holder was called *nis̲h̲ānd̲j̲ī* or *tewḳīʿī*. The *nis̲h̲ānd̲j̲ī* held the same rank as the *defterdārs* [*q.v.*] and indeed even preceded them, for we find *defterdārs* promoted to *nis̲h̲ānd̲j̲īs* but never a *nis̲h̲ānd̲j̲ī* becoming a *defterdār*. The *nis̲h̲ānd̲j̲ī* was included among the "pillars of the empire" (*erkān-i dewlet*). The part which he played varied in course of time. Besides being secretary of state for the imperial *ṭug̲h̲ra* (*nis̲h̲ān*), he had originally considerable legislative powers and he was called *muftī-yi ḳānūn* (to distinguish him from the *muftī* proper, i.e. the *S̲h̲ayk̲h̲ al-Islām*). In his office, the texts of the laws were prepared under his supervision. Most of the Ottoman codes of law (*ḳānūn*) that have come down to us go back to *nis̲h̲ānd̲j̲īs*. As they had moreover the right to approve the contents of documents put before them for the imperial *ṭug̲h̲ra*, they had no slight influence on the business of administration. Of their official career we know that, according to the *Ḳānūn-nāme* [*q.v.*] of Meḥemmed II, they had to be chosen from teachers acquainted with law (*müderris*), apparently because they had to display legislative ability, or from the *defterdārs* and *ruʾasāʾ ül-küttāb*. As their authority diminished more and more in course of time, so did their influence, and finally they were limited to preparing the *ṭug̲h̲ra*. According to Mouradjea d'Ohsson (*Tableau de l'Empire Ottoman*, iii, 373), the *nis̲h̲ānd̲j̲īs* received from the state a salary of 6,620 piastres. On their official dress, see von Hammer, *GOR*, viii, 431, according to whom they wore red, in contrast to the other *k̲h̲od̲j̲agān* who wore violet.

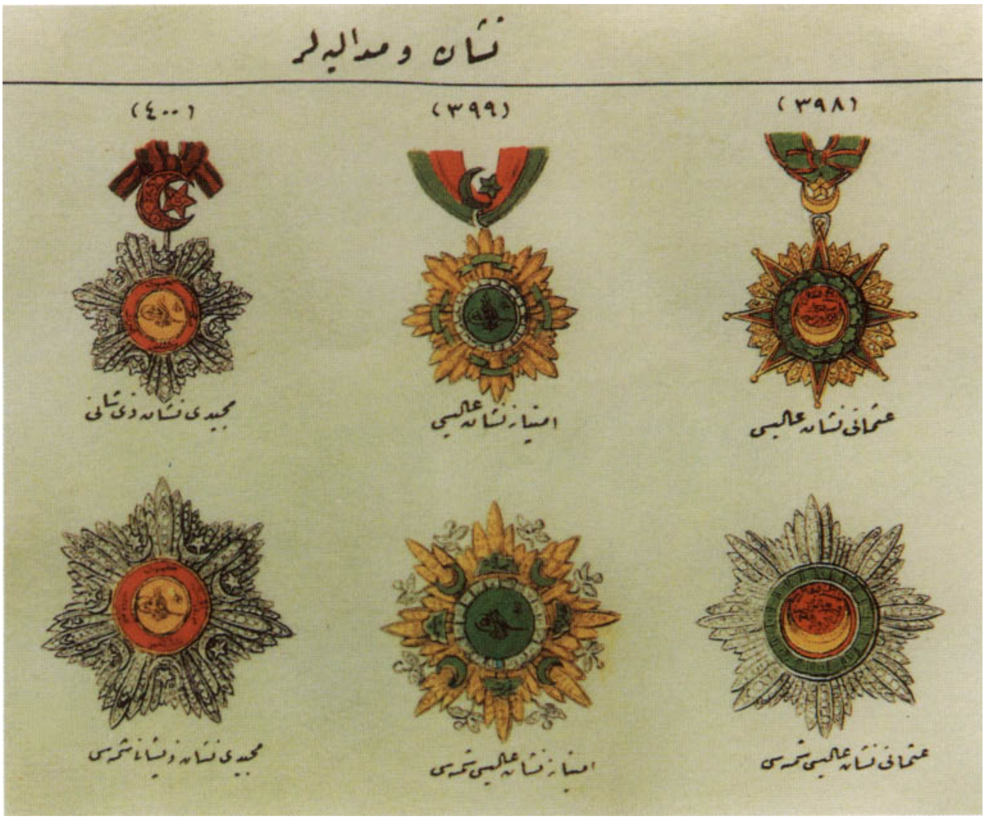
(F. Babinger)

NĪS̲H̲ĀPŪR, the most important of the four great cities of K̲h̲urāsān (Nīs̲h̲āpūr, Marw, Harāt and Balk̲h̲), one of the great towns of Persia in the Middle Ages.

The name goes back to the Persian Nēw-S̲h̲āhpūr ("Fair S̲h̲āpūr"); in Armenian it is called Niu-S̲h̲apuh, Arab. Naysābūr or Nīsābūr, New Pers. Nēs̲h̲āpūr, pronounced in the time of Yāḳūt Nīs̲h̲āwūr, now Nīs̲h̲āpūr (Nöldeke, *Ṭabarī*, 59, n. 3; G. Hoffmann, *Auszüge*..., 61, n. 530). The town occasionally bore the official title of honour, Īrāns̲h̲ahr.



Nīs̲h̲āpūr was founded by S̲h̲āhpūhr I, son of Ardas̲h̲īr I (Ḥamza al-Iṣfahānī, ed. Gottwaldt, 48), who had slain in this region the Turanian Pahlčak (Pālēžak) (*Städteliste von Ērān*, § 13); some authors say it was not founded till the time of S̲h̲āhpūhr II (al-Ṭabarī, i, 840; al-T̲h̲aʿālibī, ed. Zotenberg, 529).

In the wider sense, the region of Nīs̲h̲āpūr comprised the districts of al-Ṭabasayn, Kūhistān, Nisāʾ, Bāward, Abars̲h̲ahr, D̲j̲ām, Bāk̲h̲arz, Ṭūs, Zūzan and Isparāʾin (al-Yaʿḳūbī, *Buldān*, ed. de Goeje, 278; cf. al-Ṭabarī, i, 2884); in the narrower sense, Nīs̲h̲āpūr was the capital of the province of Abars̲h̲ahr (Armen. *Apar as̲h̲k̲h̲arh*, the "district of the 'Απάρνοι"; Marquart, *Ērānšahr*, 74; idem, *Catalogue of the provincial capitals of Ērānshahr*, 52), which was in turn divided into 13 *rustāḳs* and 4 *ṭassūd̲j̲* (names in al-Iṣṭak̲h̲rī, 258; Ibn Ḥawḳal, 313; Ibn K̲h̲urradād̲h̲bih, 24; al-Yaʿḳūbī, 278; Ibn Rusta, 171). The latter were: in the west Rēwand (now Rīwend), in the south al-S̲h̲āmāt, Pers. Tak-Āb, in the east Pus̲h̲tfrōs̲h̲an (now Pus̲h̲t Farūs̲h̲) and in the north Māzūl (now Māsūl); cf. al-Mukaddasī, 314-21.

In the Rēwand hills to the northwest of the town was one of the three most sacred fire-temples of the Sāsānids, that of the fire Burzīn-Mihr (G. Hoffmann, *op. cit.*, 290). Yazdad̲j̲ird II (438-57) made Nīs̲h̲āpūr his usual residence.

In the year 30/651 or 31/652 the governor of Baṣra, ʿAbd Allāh b. ʿĀmir [*q.v.*], took Nīs̲h̲āpūr (al-Ṭabarī, i, 3305; al-Balād̲h̲urī, 404), whose governor Kanārang (χαναράγγης: Marquart, *Ērānšahr*, 75) capitulated. The town was then insignificant and had no garrison. During the fighting between ʿAlī and Muʿāwiya (36-7/656-7), the Arabs were again driven out of Nīs̲h̲āpūr by a rising in K̲h̲urāsān and Ṭuk̲h̲āristān (al-Ṭabarī, i, 3249, 3350; al-Balād̲h̲urī, 408; al-Dīnawarī, 163). Pērōz III, the son of Yazdad̲j̲ird III and of the daughter of the Kanārang of Nīs̲h̲āpūr, is said to have lived for a period in Nīs̲h̲āpūr. K̲h̲ulayd b. Kaʾs was sent in 37/657-8 by ʿAlī against the rebellious town (al-Dīnawarī, *op. cit.*). Muʿāwiya reappointed ʿAbd Allāh b. ʿĀmir governor of Baṣra in 41/661-2 and commissioned him to conquer K̲h̲urāsān and Sid̲j̲istān. The latter in 42/662-3 installed Ḳays b. al-Hayt̲h̲am al-Sulamī in Nīs̲h̲āpūr as governor of K̲h̲urāsān. Ziyād b. Abī Sufyān in 45/665-6 made K̲h̲ulayd b. ʿAbd Allāh al-Ḥanafī governor of Abars̲h̲ahr (Nīs̲h̲āpūr). ʿAbd Allāh b. K̲h̲āzim rebelled in 63/683 against the Umayyads. He fell in 73/692 at Marw fighting against ʿAbd al-Malik, whereupon Umayyad rule was restored in K̲h̲urāsān.

Until the time when the Ṭāhirid governor of K̲h̲urāsān ʿAbd Allāh b. Ṭāhir (213-30/828-45 [*q.v.*]) made it his capital, Nīs̲h̲āpūr was of less consequence than the Arabs' first capital, Marw [*q.v.*]. But soon, helped by its more salubrious climate, it overtook

Some *nis̲h̲āns* of the late Ottoman Empire (above with a riband, below with a pin for the breast). From right to left: *Nis̲h̲ān-i̊ ʿOt̲h̲mānī*; *Nis̲h̲ān-i̊ ʿālī imtiyāz*; *Med̲j̲īdī nis̲h̲ānī*. From Mahmut Shevket's manuscript, *ʿOt̲h̲mānli̊ ḳi̊yāfet-i ʿaskariyye*, Istanbul University Library, Türkçe Yazma 9393; with the kind permission of Istanbul University Library.

Marw in political importance, and also became a centre of economic activity (above all for its famed textiles, including luxury *ʿattābī* and *saḳlāṭūnī* cloths, cf. al-Thaʿālibī, *Laṭāʾif al-maʿārif*, tr. Bosworth, *The book of curious and entertaining information*, 133) and of cultural life. It ceased to be a provincial capital after the Ṣaffārid *amīr* Yaʿḳūb b. al-Layth in 259/863 took over Khurāsān from the Ṭāhirids and entered the city, and for some 30 years control of it oscillated between the Ṣaffārids and various warlords and military adventurers like Rāfiʿ b. Harthama [*q.v.*] until ʿAmr b. al-Layth was defeated and captured by the Sāmānid Ismāʿīl b. Aḥmad in 287/900 (see Barthold, *Turkestan down to the Mongol invasion*, 217-25; Bosworth, in *Camb. hist. of Iran*, iv, 114-21). But then under the Sāmānids (4th/10th century), it attained especial prosperity as the provincial capital of Khurāsān again and the base and residence of the commander-in-chief of that province. Arts and crafts, such as ceramic production, were notable, and the general prosperity of Nīshāpūr was reflected in the formation of an influential bourgeoisie, composed of merchants, craftsmen, officials and scholars and religious figures from the two main *madhhabs* of Khurāsān, the Ḥanafīs and the Shāfiʿīs, and from their rivals for popular support there, the members of the ascetic and pietistic sect of the Karrāmiyya [*q.v.*]. From this social group, which R.W. Bulliet has called a patriciate, stemmed notable scholars like Abū Muḥammad al-Djuwaynī and his son the Imām al-Ḥaramayn Abu 'l-Maʿālī [*q.vv.*] and the traditionist al-Ḥākim al-Naysābūrī, Ibn al-Bayyiʿ [*q.v.*], and also ambitious statesmen like Maḥmūd of Ghazna's minister Ḥasanak [*q.v.*] from the Mīkālī [*q.v.*] family (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994:1040*, Edinburgh 1963, 145-202; Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972). The large number of traditionists and lawyers which the city produced was undoubtedly a stimulus to the production of several biographical dictionaries of Nīshāpūr scholars, beginning with that of Ibn al-Bayyiʿ (d. 405/1014) in eight or twelve volumes, the starting-point for various continuations and epitomes (see R.N. Frye, *City chronicles of Central Asia and Khurasan. The Taʾrīx-i Nīsāpūr*, in *Zeki Velidi Togan'a armağan*, Istanbul 1950-5, 405-20; facs. texts in idem, *The histories of Nishapur*, The Hague 1965; the *Muntakhab min al-siyāḳ li-taʾrīkh Naysābūr* of al-Ṣarīfīnī, ed. Muḥ. Aḥmad al-ʿAzīz, Beirut 1409/1989).

The Arabic geographers describe Nīshāpūr at this time as a thickly populated town divided into 42 wards, 1 *farsakh* in length and breadth (al-Iṣṭakhrī, 254) and consisting of the citadel, the city proper and an outer suburb in which was the chief mosque built by the Ṣaffārid ʿAmr. Beside it was the public market called al-Muʿaskar, the governor's palace, a second open place called Maydān al-Ḥusayniyyīn and the prison. The citadel had two gates and the city four: the Gate of the Bridge, the Gate on the road from Maʿḳil, the Gate of the Fortress (*Bāb al-Ḳuhandiz*) and the Gate of the Takīn Bridge. The suburbs also had walls with many gates. The best known market places were *al-Murabbaʿa al-Kabīra* (near the Friday Mosque) and *al-Murabbaʿa al-Ṣaghīra*. The most important business streets were about fifty in number and ran across the city in straight lines intersecting at right angles; all kinds of wares were on sale in them (on the products and exports of Nīshāpūr, see G. Le Strange, *The lands of the Eastern Caliphate*, 429-30). Numerous canals were led from the Wādī Saghāwar, which flowed down from the village of Bushtankār or Būshtakān and drove 70 mills, whence it passed near the city and provided the houses with an ample water supply. Gardens below the city were also watered in this way. The district of Nīshāpūr was regarded as the most fertile in Khurāsān.

The town suffered many vicissitudes after this period. A great famine broke out there in 401/1011. At the beginning of the 5th/11th century Nīshāpūr was the centre of the pietist Karrāmīs led by the anchorite Abū Bakr Muḥammad b. Isḥāḳ. The Saldjūḳ Ṭoghrīl Beg first occupied the town in 428/1037 and subsequently made it his capital. Alp Arslān also seems to have lived there (cf. Barhebraeus, *Chron. Syr.*, ed. Bedjan, 243). In Shawwāl 536/May 1142 the Khwārazmshāh Atsïz took the town for a time from the Saldjūḳ sultan Sandjar. When it was sacked by the Ghuzz in 548/1153 the inhabitants fled, mainly to the suburb of Shādyākh which was enlarged and fortified by the governor al-Muʾayyid. Ṭughān Shāh Abū Bakr ruled the city during 569-81/1174-85 and his son Sandjar Shāh during 581-3/1185-7.

In Rabīʿ I or II 583/May or June 1187 the Khwārazmshāh Tekish took Nīshāpūr and gave it to his eldest son Malik Shāh. At the end of 589/1193 the latter received Marw and his brother Ḳuṭb al-Dīn Muḥammad became governor of Nīshāpūr. Malik Shāh died in 593/1197 in the neighbourhood of Nīshāpūr. ʿAlāʾ al-Dīn Muḥammad (as Ḳuṭb al-Dīn called himself after his father's death) took Marw and Nīshāpūr in 598/1202 from the Ghūrids Ghiyāth al-Dīn and his brother Shihāb al-Dīn.

In addition to the wars and rebellions (e.g. 604-5/1207-8) which afflicted the town, it suffered from repeated earthquakes (540/1145, 605/1208, 679/1280). Yāḳūt who visited it in 613/1216 but stayed in Shādyākh, could still see the damage done by the first earthquake and by the Ghuzz, but nevertheless thought the town the finest in Khurāsān. The second earthquake was particularly severe; the inhabitants on this occasion fled for several days into the plain below the city.

In 618/1221 the Mongols under Čingiz Khān sacked the city completely (see Djuwaynī-Boyle, i, 169-78). Although Nīshāpūr's palmiest days were ended by the Mongol devastations, it soon revived from the effects of these. The city's centre had been displaced to Shādyākh after the earthquakes of the early 7th/13th century, and the same cause lay behind its reconstitution on a third site towards the end of that same century. Ḥamd Allāh Mustawfī describes it in the 8th/14th century as highly flourishing, with extensive protective walls (*Nuzha*, 148-9, tr. 147-8), whilst Ibn Baṭṭūṭa calls it "Little Damascus" for its fertility and productiveness, and praises the *madrasas* and throngs of students which he saw there (*Riḥla*, iii, 80-2, tr. Gibb, iii, 583-5).

Thereafter, Nīshāpūr slowly declined in importance until its modest revival in the later 19th century. In 1890 G.N. Curzon found the Nīshāpūr region still fertile, and the famous turquoise mines in the district called Bār-i Maʿdin some 50 km/35 miles northwest of the town were still being profitably worked; but the walls of the town itself were ruinous (*Persia and the Persian question*, London 1892, i, 260-7). The modern town of Nīshāpūr is situated in lat. 36° 13' and long. 58° 49' E., and lies in an altitude of 1193 m./3,913 ft. and on the east side of a plain surrounded by hills. To the north and east of the town lies the ridge of Binālūd-Kūh, which separates it from the valley of Mashhad and Ṭūs. At its foot spring a number of streams, among them the Shūra Rūd and the river of Dizbād (Mustawfī) which irrigate the lands of

Nī**sh**āpūr and disappear in the salt desert to the west. North of the town in the mountains was the little lake of Čashma Sabz out of which, according to Mustawfī, run two streams, one to the east and the other to the west. The tombs of her famous sons ʿUmar Khayyām and Farīd al-Dīn ʿAṭṭār [*q.vv.*] are still shown in the town. According to the 1365*sh*/1986 census, Nīshāpūr had a population of 109,258.

(E. Honigmann-[C.E. Bosworth])

NĪSHĀPŪRĪ, Ẓahīr al-Dīn, Persian author who wrote a valuable history of the Saldjūḳs during the reign of the last Great Saldjūḳ of Persia, Ṭoghrïl (III) b. Arslan [*q.v.*]; he must have died *ca.* 580/1184-5. Nothing is known of his life except that Rāwandī [*q.v.*] states (*Rāḥat al-ṣudūr*, ed. M. Iqbál, 54) that he had been tutor to the previous sultans Masʿūd b. Muḥammad [*q.v.*] and Arslan b. Ṭoghrïl (II). His *Saldjūḳ-nāma* was long believed lost, but was known as the main source for Rāwandī's information on the Saldjūḳs up to the latter's own time (see *Rāḥat al-ṣudūr*, Preface, pp. XXVI, XXIX); hence it is essentially Nīshāpūrī's material which was utilised for the Saldjūḳs by later authors like Rashīd al-Dīn, Ḥamd Allāh Mustawfī and Ḥāfiẓ-i Abrū [*q.vv.*]. The *Saldjūḳ-nāma* is a concise, soberly-written history in Persian, of especial value for the history of the later sultans up to the accession of Ṭoghrïl (III) in 571/1176; see for an estimate of its worth, Cl. Cahen, *The historiography of the Seljuqid period*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 73-6. After its rediscovery, it was indifferently published at Tehran in 1322/1953.

Bibliography (in addition to references in the text): Barthold, *Turkestan*, 30; Storey-Bregel, ii, 342-5 no. 639; K.A. Luther, *The Saljūqnāmah and the Jāmiʿ al-tawārīkh*, in *Procs. of the colloquium on Rashīd al-Dīn Faḍlallāh, Tabrīz-Tehran 1348/1969*, Tehran 1971, 26-35. (C.E. Bosworth)

NITHĀR (a.), verbal noun of *nathara* "to scatter, spread abroad", in the pre-modern Middle East, the showering of money, jewels and other valuables on occasions of rejoicing, such as a wedding, a circumcision, the accession of a ruler, the victorious return from a military campaign, the reception of a diplomatic envoy, recovery from illness, etc. It was thus in part one aspect of the general practice of largesse and presentgiving by superiors to inferiors [see hiba, inʿām, khilʿa] but also an aspect of charity to the poor. On occasion, the whole of the state treasury might be disbursed in this way (see Spuler, *Iran*, 347). *Nithārs* are often mentioned in descriptions of court festivities under the early Ghaznawid [*q.v.*] sultans; see Gītī Falāḥ Rastgār, *ʿĀdāb u rusūm u tashrīfāt dar bār-i Ghazna az khilāl-i Taʾrīkh-i Bayhaḳī*, in *Yād-nāma-yi Abu 'l-Faḍl-i Bayhaḳī*, Mashhad 1349 *sh*/1970, 412 ff.

Bibliography: Given in the article. (Ed.)

In India. The occasions for the distribution of largesse to the court and to the multitudes attending processions have been detailed in marāsim. 5, and mawākib. 5, above; and references to the smaller coins used in the *nithār* are made in mughals. 11. Numismatics.

There are few specific references to *nithār* in Indian dynasties before the Mughal period, although it was an ancient Indian custom and so likely to have been perpetuated (cf. N.N. Law, *Ancient Hindu coronations and allied ceremonials*, in *Ind.Ant.* [June 1919], 84 ff.) in the Dihlī sultanate and elsewhere; for example, the shower of gold and silver coins, and jewels, over the head of a recent conqueror is referred to in the account of the conquest of Mālwā by Muẓaffar II of Gudjarāt and by Sikandar b. Muḥammad Mandjhū in the *Mirʾāt-i Sikandarī*, and ʿAlāʾ al-Dīn Khaldjī is said to have used *mandjanīḳs* [*q.v.*] to scatter coins and "golden stars" among the Dihlī populace.

There are many references in the early Mughal period to the practice under Bābur and Humāyūn (*Tūzuk-i Bāburī*, tr. Beveridge, 43; Gulbadan Begam, *Humāyūn-nāma*, 112 *et passim*), when not only small gold and silver coins but also small gold and silver fruits (almonds, walnuts and filberts) and flowers were so scattered. This would appear to have been a Čaghatāʾī custom inherited by the Mughals, and it persisted until at least the time of Farrukhsiyar. Fanny Parks (*Wanderings of a pilgrim in search of the picturesque*, London 1850) speaks of the custom of showering coins and jewels over the head of the new ruler in the Lakhnaʾū court. For the scattering of coins among the populace, besides the half- and quarter-rupees, smaller coins, usually thinner than those of the standard currency and not standing in any regular fractional relation to it, of gold as well as silver, and many of dainty and excellent workmanship, were known especially from the reign of Djahāngīr; *nithārī* was for a short time the name of his quarter-rupee, though *nithār*, *nūr afshān* and *khayr ḳabūl* are all used for largesse-coins in his reign. Occasions for the scattering of *nithār* were especially the Imperial festivals and processions on anniversaries of accession-date, the emperor's solar and lunar birthdays, the births and marriages of royal princes and princesses, the formal weighing of the emperor against gold, silver and jewels, the *āb-pāshī* ceremony, ceremonial visits to Akbar's tomb and to the tombs of certain *pīrs* (especially at Fatḥpur Sīkrī and Adjmēr), and so on. It seems certain that much largesse-money was struck at provincial mints, possibly in connection with imperial visits, as many of the dated *nithārs* correspond with dates in the chronicles.

Bibliography: In addition to references in the article, see especially S.H. Hodivala, *Niṣārs*, no. XIV in *Historical studies in Mughal numismatics*, Calcutta 1923; references *passim* in the coin catalogues mentioned in the *Bibl.* to mughals. 11.

(J. Burton-Page)

NIYĀḤA (a.) "lamentation", the noun of action from *nāḥa* "to weep with great cries, lamentations, sighings and affliction". The term is used to designate the activity of professional mourners who play a great role in funeral ceremonies all around the Mediterranean. If it is mentioned here, it is because this practice, considered to be a legacy of paganism, was condemned by the Prophet. Indeed, he is made to say "Three pre-Islamic customs (*akhlāḳ*; *Usd al-ghāba*, *fiʿl*) are not to be retained by the Muslims. They are: invoking the planets in order to receive rain (*istisḳāʾ bi 'l-kawākib*), attacking genealogies (*al-ṭaʿn fi 'l-nisba*) and lamenting the dead (*al-niyāḥa ʿalā 'l-mayyit*)" (al-

Ṭabarī, Appendix, extract from the *Dhayl al-Mudhayyal*, iii[4], 2387; Ibn al-Athīr, *Usd al-ghāba*, i, 299).

Weeping for the dead was something which could be done not only by women but also by men, some of whom become wellknown for this; the *Aghānī* cites, e.g. Ibn Suraydj (i, 99-100).

The pagan character of this practice is displayed in a text of Ibn Saᶜd, *Ṭabaḳāt*, i/1, 88, where it is written: "At the death of his son Ibrāhīm, the Prophet wept (*bakā*). Someone said to him, O Messenger of God, did you not forbid weeping?—He replied, I forbade raising one's voice (*nawḥ*) in two instances, both equally stupid and impious: a voice raised in a state of happiness (which shows itself) in celebrations, disporting and diabolical chantings (*mazāmīr shayṭān*) and a voice in times of misfortune (which shows itself) in mutilating one's face, tearing of clothes and a diabolical mourning cry (*rannat shayṭān* = the *nēnia* of the Romans = a funeral lament). My personal tears express my compassion (*raḥma*). Whoever has no compassion (for others), (these last) will have no compassion for him."

Another account, given by the same author (91), confirms the previous one. There was an eclipse of the sun on the day of Ibrāhīm's death; people saw in it a relationship of cause and effect. The Prophet rebutted this relationship and then let his tears flow. People said to him, "You are weeping, you, the Messenger of God!"—He replied, "I am a man; the eyes shed tears, the heart breaks and we say nothing which will irritate the Lord."

Finally, one should add that, amongst the ancient Arabs, the position of the woman weeping for her husband served as an indication of her future intentions. If she did this standing (*ḳāʾima*), it was assumed that she would not marry again (*Aghānī*, ii, 138).

Bibliography: In addition to references given in the article, see M. Abdesselem, *Le thème de la mort*, Tunis 1977, index s.vv. lamentations, mourners, etc. (T. Fahd)

NIYĀZĪ, an Ottoman poet and mystic. Shams al-Dīn Meḥmed known as Miṣrī Efendi, Shaykh Miṣrī, whose *makhlaṣ* was Niyāzī, came from Aspūzī, the former summer capital of Malaṭya (cf. Ewliyā Čelebi, iv, 15; von Moltke, *Reisebriefe*, 349), where his father was a Naḳshbandī dervish. Niyāzī was born in 1027/1617-18. The statement occasionally found that Soghanlï was his birthplace is not correct.

His father instructed him in the teaching of the order, then he went in 1048/1638 to Diyārbakr, later to Mārdīn where he studied for three years and finally to Cairo. There he joined the Ḳādirī order, travelled for seven years and finally settled down in the Anatolian village of Elmalï, once notorious as a centre of heresy, to devote himself to study under the famous Khalwetī Shaykh Umm-i Sinān (d. 1069/1658). He stayed with him for twelve years until he was sent by the Shaykh as his deputy to ᶜUshshāḳ near Izmīr. After the death of his master, he moved to Bursa, where a pious citizen, Abdāl Čelebi, built a hermitage for him. The fame of his sanctity and his gifts of prophecy spread more and more and finally reached the ears of the grand vizier Köprülü-zāde Aḥmed Pasha [see KÖPRÜLÜ], who invited him to Edirne, entertained him with great honour for 40 days and finally sent him back to Bursa. When in 1083/1672 the army set out for Kameniec in Podolia [see ḲAMĀNIČA], he was summoned to Edirne; where he had great audiences as a preacher. As he had allowed himself to drop Kabbalistic allusions (*kelimāt-i djifriyye*), he gave offence and was banished to Lemnos. There he spent some years in exile until he received permission to return to Bursa. The fact that during his stay on the island it was spared Venetian attacks was interpreted as a miracle wrought by this holy man. But when he stirred up the people by "kabbalistic" preaching he was again banished to Lemnos in Ṣafar 1088/May 1677. All kinds of prophecies which were fulfilled, as well as the story that his coming had been foretold by Ibn al-ᶜArabī [*q.v.*], strengthened his reputation as a holy man and miracle-worker. He spent ten years on Lemnos until in 1101/1689 the vizier Köprülü-zāde Muṣṭafā Pasha allowed him to return to Bursa. In the next year he was summoned to Edirne; he again excited the people by political utterances and mystical allusions so that the Ḳāʾimmaḳām ᶜOthmān Pasha had him taken, with all respect, by a guard of Janissaries and Čawushs out of the mosque and sent directly via Gallipoli to Bursa. From there he was again banished to Lemnos, but died on 20 Radjab 1105/17 March 1694. The date 1111/1699 given by von Hammer, *GOD*, iii, 588, must therefore be wrong.

Unfortunately, the contemporary notices give no information about the nature of the sermons by Niyāzī which gave offence from the political as well as religious point of view. The historian Demetrius Kantemir said Niyāzī was secretly a Christian. His *Dīwān*, in Arabic and Turkish, does not justify this suggestion, although the poem declared by von Hammer (*GOD*, iii, 589) to be apocryphal, given in translation by Kantemir, is really taken from his *Dīwān*, as Gibb, *HOP*, iii, 315, has proved. No study has yet been made of the *Dīwān* or of Niyāzī's position in the religious life of a Turkey generally.

The order founded by Niyāzī once possessed several monasteries on Greek soil, in Modoni, Negroponte (Eghriboz), Saloniki, Mytilene, also in Edirne, Bursa and Izmir. Cf. thereon the study by V.A. Gordlevski, *Tarikat Mïsri Niyazi*, in *Dokladï Akademii Nauk SSSR* (1929), 153-60.

The main source for the history of Niyāzī's life and work is the rare Turkish treatise of Moralïzāde Luṭfī (= Muṣṭafā Luṭfullāh), *Tuḥfat al-ᶜaṣrī fī manāḳib al-Miṣrī*, published at Bursa in 1308/1890-1.

Niyāzī's poems were repeatedly published 1254 and 1259 at Būlāḳ, also 1260 and 1291 in Istanbul; cf. thereon von Hammer, in *Wiener Jahrbücher*, lxxxv, 36, and *JA*, ser. 4, vol. viii, 261. On his numerous other works, only available in mss., cf. Bursalï Meḥmed Ṭāhir, *ᶜOthmānlï müʾellifleri*, i, 173-4, with references to where they are preserved, and Abdülbâkî Gölpınarlı, *İA* art. s.v.

Bibliography: In addition to the works mentioned by J. von Hammer, *GOD*, iii, 587 ff., and Gibb, *HOP*, iii, 312 ff., and Bursalï Meḥmed Ṭāhir, *ᶜOthmānlï müʾellifleri*, i, 172 ff., cf. also the biographies of Ottoman poets by Shaykhī, Sālim, ᶜUshshāḳī-zāde, etc.; Rāshid, *Taʾrīkh*, i, 89, 193; J.B. Brown, *The Darvishes*[2], London 1927, 203-5. On Niyāzī's religious attitude, cf. D. Kantemir, *Geschichte des osmanischen Reiches*, Hamburg 1745, 636-7, 642, also Mouradgea d'Ohsson, *Tableau de l'Empire Ottoman*, iv, 626, also von Hammer, *GOR*, vi, 337, 364, 578, vii, 161 (his tomb on Lemnos); L. Massignon, *al-Hallâj, martyr mystique de l'Islam*, i, Paris 1922, 428 ff., 440. The Vienna ms. no. 1928 (cf. Flügel, *Katal.*, iii, 474 ff.) contains besides the *Diwān* many other works of Niyāzī; cf. thereon Rieu, *Catal. of Turk. mss. in the Brit. Mus.*, 261.

(F. Babinger)

NIYĀZĪ BEY, Aḥmed (1873-1912), Young Turk officer and one of the protagonists of the Ottoman

constitutional revolution of 1908. Niyāzī hailed from Resen (he was called Resnelī, i.e. "from Resen"), and was an Albanian by birth.

He went to military *rushdī* and *iʿdādī* schools in Monastir (Bitola) before entering the military academy (*Ḥarbiyye*) in Istanbul, where he graduated as a second lieutenant in 1896. After his graduation he saw service in the European provinces of the Empire and he made a name for himself during the battle of Beshpînar in the 1897 Greek-Ottoman war. He was promoted to first lieutenant, captain and eventually adjutant-major, while serving with the Third (Macedonian) Army between 1898 and 1908. Between 1903 and 1908 he was in command of the Third Light Rifle Batallion in Ohrid and constantly engaged in combating the guerrilla warfare of Bulgarian bands in the area.

When the *ʿOthmānli Ḥürriyet Djemʿiyyeti* (Ottoman Freedom Committee), which later merged with the Paris-based *Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*] (Committee of Union and Progress), began to spread among the officers of the Third Army, Niyāzī was an early member. In July 1908, the Society suspected that a decision to break up and divide the Ottoman Empire had been reached by King Edward VII of England and Tsar Nicholas during their discussions at Reval, and it decided to act to force the restoration of constitutional rule in order to ward off foreign intervention. Niyāzī was the first of a number of Young Turk officers, who, on the orders of the Committee, started an insurrection in Macedonia. On Friday, 3 July 1908 he took to the hills with about two hundred men and began to demand the restoration of the constitution in cables sent to the authorities. He was soon followed by other officers, such as Enwer [*q.v.*].

After the restoration of the constitution on 24 July, Niyāzī, together with Enwer, was launched by the C.U.P. as one of the *Ḥürriyyet Ḳahramānlari* ("Freedom Heroes") and he toured the Empire, receiving a rapturous welcome from the crowds. Later in the year the C.U.P. decided to have Niyāzī's memoirs (which were partly ghosted) published as *the* account of the revolution to the exclusion of all others.

One reason for this was probably that, unlike most of his Young Turk colleagues, Niyāzī did not have political ambitions and devoted himself to military matters. When, on 13 April 1909, a counter-revolution broke out in Istanbul and the constitutionalists were driven from the city, Niyāzī was instrumental in raising the Albanian volunteers who made up an important part of the *Ḥareket Ordusu* ("Operational Army") that reconquered the capital for the C.U.P. and the constitution two weeks later.

Niyāzī fought in Tripolitania during the Ottoman-Italian war of 1911 and then retired to his native Resen. On 17 April 1913 he was killed by an Albanian nationalist in Valona, while on his way to Istanbul.

NIYYA (A.), intention. The acts prescribed by the Islamic *sharīʿa*, obligatory or not, require to be preceded by a declaration by the performer, that he intends to perform such an act. This declaration, pronounced audibly or mentally, is called *niyya*. Without it, the act would be *bāṭil* [*q.v.*].

The *niyya* is required before the performance of the *ʿibādāt*, such as washing, bathing, prayer, alms, fasting, retreat, pilgrimage, sacrifice. "Ceremonial acts without *niyya* are not valid", says al-Ghazālī (*Iḥyā*ʾ, Cairo 1282, iv, 316). Yet a survey of the opinions of the lawyers regarding the *niyya* in connection with each of the *ʿibādāt* would show that there is only unanimity about the *niyya* as required before the *ṣalāt*.

Further, the *niyya* must immediately precede the act, lest it should lose its character and become simple decision (*ʿazm*). It must accompany the act until the end (Abū Isḥāḳ al-Shīrāzī, *Tanbīh*, ed. Juynboll, 3). Its seat is the heart, the central organ of intellect and attention. Lunatics, therefore, cannot pronounce a valid *niyya*.

So the *niyya* has become a legal act of its own. It is usually called obligatory, but in some cases, e.g. the washing of the dead, commendable. It can even be asked what the intention of the *niyya* is. According to al-Bādjūrī (i, 57), four conditions must be fulfilled in a *niyya*: he who pronounces it must be Muslim, *compos mentis*, well acquainted with the act he wants to perform, and having the purpose to perform this act. In some instances *adjmaʿa* is used, where the later language has *nawā* (e.g. al-Nasāʾī, *Ṣiyām*, *bāb* 68; al-Tirmidhī, *Ṣawm*, *bāb* 33).

The term does not occur in the Ḳurʾān. It is found in canonical *ḥadīth*, but the passages show that is has not yet acquired in this literature the technical meaning and limitation described above. The development of this technical use appears to have taken place gradually, probably aided by Jewish influence. In Jewish law, the *kawwānā* has a function wholly analogous to the *niyya*. Al-Shāfiʿī (d. 204/820) appears to be acquainted with the *niyya* in its technical sense (*Kitāb al-Umm*). In canonical *ḥadīth*, i.e. the literature which, generally speaking, reflects the state of things up to the middle of the 2nd/8th century, neither the verb *nawā* nor the noun *niyya* appear to have any special technical connection with the *ʿibādāt*. On the contrary, *niyya* has here the common meaning of intention.

In this sense, it is of great importance. Al-Bukhārī opens his collection with a tradition, which in this place is apparently meant as a motto. It runs: "Works are only rendered efficacious by their intention" (*innamā 'l-aʿmāl bi 'l-niyya* or *bi 'l-niyyāt*). This tradition occurs frequently in the canonical collections. It constitutes a religious and moral criterion superior to that of the law. The value of an *ʿibāda*, even if performed in complete accordance with the precepts of the law, depends upon the intention of the performer, and if this intention should be sinful, the work would be valueless. "For", adds the tradition just mentioned, "every man receives only what he has intended"; or "his wages shall be in accordance with his intention" (Mālik, *Djanāʾiz*, trad. 36). In answer to the question how long the *hidjra* is open, tradition says: "There is no *hidjra* after the capture of Mecca, only holy war and intention" (al-Bukhārī, *Manāḳib al-Anṣār*, *bāb* 45; *Djihād*, *bāb* 1, 27; Muslim, *Imāra*, trad. 85, 86, etc.). This higher criterion, once admitted, may suspend the law in several cases (cf. Snouck Hurgronje, *Islam und Phonograph*, in *TBGKW*, xlii, 393 ff. = *Verspr. Geschriften*, ii, 419 ff.). So the intention, in this sense, becomes a work of its own, just as the intention in its juridical application. Good intention is taken into account by God, even if not carried out; it heightens the value of the work. On the other hand, refraining from an evil intention is reckoned as a good work (al-

Bu<u>kh</u>ārī, *Riḳāḳ*, *bāb* 31). In this connection, the (post-canonical) tradition can be understood, according to which the intention of the faithful is better than his work (*Lisān al-ʿArab*, xx, 223; cf. al-<u>Gh</u>azālī, *Iḥyāʾ*, iv, 330 ff., where this tradition is discussed). In similar instances, *niyya* comes near to the meaning of *i<u>kh</u>lāṣ* [*q.v.*].

NĪZAK, ṬAR<u>KH</u>ĀN, ruler of the northern branch of the Hephtalite confederation which had in pre-Islamic times ruled both north and south of the Hindu Kush, from what is now Soviet Central Asia to northern India, that people known to the Arab historians as Hayṭal (<* Habṭal), pl. Hayāṭila [*q.v.*] (see on them, R. Ghirshman, *Les Chionites-Hephtalites*, Cairo 1958, 69 ff.). It is unclear whether the Ṭarkhān element of his name is in fact a personal name or the well-known Central Asian title (on which see Bosworth and Sir Gerard Clauson, in *JRAS* [1965], 11-12).

The power of the northern Hephthalites, whose dominions were centred on Bā<u>dh</u>ghīs [*q.v.*] in what is now northern Af<u>gh</u>ānistān, was threatened by the advance of Arab armies under the command of Ḳutayba b. Muslim [*q.v.*]. Uncertain of Nīzak's strength, Ḳutayba at first made peace with him, on condition that Nīzak provide military aid for his campaigns into Transoxania (87-90/706-9). But in 90/709 Nīzak led a rising against Ḳutayba of the Hephthalites and Turkish rulers of the upper Oxus lands, seeking help also from the Kābul-<u>Sh</u>āh, apparently fearing that the Arabs were going to secure an irreversible grip on these eastern fringes of <u>Kh</u>urāsān unless stopped. However, Ḳutayba and his brother ʿAbd al-Raḥmān defeated and captured Nīzak (91/710), and executed him, contrary to an earlier promise of *amān*, on the direct orders of the governor of the East al-Ḥa<u>djdj</u>ā<u>dj</u>. The collapse of the revolt marked the end of Hephthalite power north of the Hindu Kush, though the southern Hephthalite kingdom, centred on Zābulistān [*q.v.*], survived for some two centuries as a barrier to Muslim expansion through southern Afghanistan (see Bosworth, *Sīstān under the Arabs*, Rome 1968, index s.v. Zunbīl).

(C.E. Bosworth)

NIẒĀM (a.), the honorific title which became characteristic of the rulers of the Indo-Muslim state of Ḥaydarābād [*q.v.*], derived in the first place from the fuller title Niẓām al-Mulk borne by the Mu<u>gh</u>al noble Ḳamar al-Dīn Čīn Ḳilič <u>Kh</u>ān [see niẓām al-mulk], who became governor of the Deccan in 1132/1720 and who also bore the title of Āṣaf <u>Dj</u>āh. The process of the identification of the title Niẓām with the rulership of Ḥaydarābād was strengthened by the long reign there (1175-1217/1762-1802) of Āṣaf <u>Dj</u>āh's fourth son Niẓām ʿAlī <u>Kh</u>ān, and henceforth the ruler was known in British Government of India parlance as "His Highness the Niẓām".

Bibliography: See H. Yule and A.C. Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*², London 1903, 628. (Ed.)

NIẒĀM BADA<u>KH</u>SHĪ, Indo-Muslim scholar of the 10th/16th century. He studied law and *ḥadī<u>th</u>* under Mawlānā ʿIṣām al-Dīn Ibrāhīm and Mullā Saʿīd in his native province of Bada<u>kh</u>s<u>h</u>ān in eastern Af<u>gh</u>ānistān and was looked upon as one of the most learned men of his age. He was also the *murīd* (disciple) of <u>Sh</u>ay<u>kh</u> Ḥusayn of <u>Kh</u>ʷārazm. His attainments procured him access to the court of Sulaymān, prince of Bada<u>kh</u>s<u>h</u>ān, who conferred upon him the title of Ḳāḍī <u>Kh</u>ān. Subsequently, he left his master and went to India. At Kānpūr, he was introduced to the Mu<u>gh</u>al Emperor Akbar (963-1014/1556-1605). He received several presents, and was appointed *Parwānčī* writer. Akbar soon discovered in him a man of great insight, and made him a "Commander of One Thousand" (*yak hazārī*). He also bestowed upon him the title of <u>Gh</u>āzī <u>Kh</u>ān after he had distinguished himself in several expeditions. He died in Oudh at the age of seventy in 992/1584. He is the author of the following works: 1. *Ḥā<u>sh</u>iyat <u>Sh</u>arḥ al-ʿAḳāʾid*, a commentary on al-Taftāzānī's commentary on the *ʿAḳāʾid* of al-Nasafī; 2. several treatises on Ṣūfism.

Bibliography: ʿAbd al-Ḳādir al-Badāʾūnī, *Munta<u>kh</u>ab al-tawārī<u>kh</u>*, iii, 153; <u>Sh</u>āh Nawāz <u>Kh</u>ān, *Maʾā<u>th</u>ir al-umarāʾ*, ii, 857; Āzād, *Darbār-i Akbarī*, 815; Abu 'l-Faḍl ʿAllāmī, *Āʾīn-i Akbarī*, tr. Blochmann, 440. (M. Hidayet Hosain)

NIẒĀM AL-DĪN AḤMAD b. Muḥammad Muḳīm al-**HARAWĪ** (d. 1003/1594), a Persian historian, author of the celebrated *Ṭabaḳāt-i Akbar<u>sh</u>āhī*. He was a descendant of the famous *<u>sh</u>ay<u>kh</u>* of Harāt, ʿAbd Allāh Anṣārī. His father <u>Kh</u>ō<u>dj</u>a Muḳīm Harawī was major-domo to Bābur (932-7/1526-30 [*q.v.*]) and later vizier to the governor of Gu<u>dj</u>arāt Mīrzā ʿAskarī. Niẓām al-Dīn himself held several high military offices under the Great Mu<u>gh</u>al Akbar and became in 993/1585 *Ba<u>kh</u>s<u>h</u>ī* of Gu<u>dj</u>arāt and in 1001/1593 even *Ba<u>kh</u>s<u>h</u>ī* of the whole empire. According to Badāʾūnī (ii, 397), he died on 23 Ṣafar 1003/18 October 1594, aged 45. At his father's instigation he took up historical studies while quite a boy. His fondness for this subject increased as time went on and induced him to try writing himself. The lack of a complete history of India made him decide to fill the gap, and thus arose his celebrated work, called the *Ṭabaḳāt-i Akbar<u>sh</u>āhī* or *Ṭabaḳāt-i Akbarī* or *Taʾrī<u>kh</u>-i Niẓāmī* which was finished in 1001/1593. Niẓām al-Dīn used 27 different sources for this work, all of which he mentions by name, and in this way produced a very thorough piece of work on which all his successors have relied. He deals with the history of India from the campaigns of Sebüktigīn (366-87/977-97) to the 37th year of Akbar's reign (1001/1593). The work is divided into a *muḳaddima* which deals with the <u>Gh</u>aznawids, and nine *ṭabaḳāt* : 1. the Sultans of Dihlī from Muʿizz al-Dīn <u>Gh</u>ūrī to Akbar (574-1002/1178-1594); at the end of this part are biographies of famous men at Akbar's court, *amīrs*, *ʿulamāʾ*, poets, writers and *<u>sh</u>ay<u>kh</u>s*; 2. the rulers of the Deccan (748-1002/1347-1594): the Bahmanī, Niẓām<u>sh</u>āhī, ʿĀdil<u>sh</u>āhī and Ḳuṭb<u>sh</u>āhī ones; 3. the rulers of

Gudjarāt (793-980/1390-1572); 4. the rulers of Mālwa (809-977/1406-1569); 5. the rulers of Bengal (741-984/1340-1576); 6. the Sharḳī dynasty of Djawnpūr (784-881/1381-1476); 7. the rulers of Kashmīr (747-995/1346-1567); 8. the history of Sind from the Arab conquest (86/705) to 1001/1593; 9. the history of Multān (847-932/1444-1525). The whole work was to have as a *khātima* a topographical description of India, but it was apparently never finished by the author.

(E. BERTHELS)

NIẒĀM AL-DĪN AWLIYĀʾ, SHAYKH, a widely venerated saint of the Čishti order [see ČISHTIYYA] who raised his *silsila* to a pan-Indian position, was born at Badāʾūn [*q.v.*] (in U.P.) *ca.* 640-1/1243-4. He was given the name Muḥammad but became known by his title Niẓām al-Dīn. His grandfather had migrated to India from Bukhārā under the stress of Mongol invasions. His father died when he was a boy of tender age. His mother, Bībī Zulaykhā, a lady of fervent piety, brought him up and moulded his thought and character. In Badāʾūn, Shādī Muḳrī taught him the Ḳurʾān, and Mawlāna ʿAlāʾ al-Dīn Uṣūlī gave instruction on the works of al-Ḳudurī and the *Hidāya*. At the age of sixteen he reached Dihlī in order to complete his education. Mawlānā Kamāl al-Dīn Zāhid, a pious and dedicated scholar, taught the *Mashāriḳ al-anwār* to him and he committed it to memory. During this early period Niẓām al-Dīn lived in Dihlī with his mother and sister under conditions of appalling poverty. At the age of twenty he left for Adjodhan (later known as Pak Pātan [*q.v.*], and joined the discipline of Shaykh Farīd al-Dīn Gandj-i Shakar [*q.v.*]. Three years later, the Shaykh appointed him as his chief successor and directed him to settle in Dihlī and work for the expansion of the order. For about half a century he lived and worked in Dihlī in order to propagate the Čishtī mystical way and transformed the Čishtī order into a movement for mass spiritual culture (Baranī's *Ḥasrat-nāma* as cited in *Siyar al-awliyāʾ*, 346-7). As a result, Čishtī *khānaḳāhs* came to be established all over the country. According to Ghawthī Shaṭṭārī, he sent 700 deputies to different parts of the country. Shaykh Niẓām al-Dīn Awliyāʾ died in Dihlī in 18 Rabīʿ II 725/3 April 1325. Muḥammad b. Tughluḳ [*q.v.*] built a dome over his grave. His mausoleum is visited by hundreds of thousands of people every year. The area where the tomb stands is known as *Basti Niẓām al-Dīn*.

The Shaykh maintained an attitude of dignified aloofness from the court and never meddled in political affairs. His *khalīfa*s were not permitted to accept government service or to consort with kings.

An erudite scholar of *ḥadīth*, with deep insight in Islamic jurisprudence, he was respected for his learning and large numbers of the *ʿulamāʾ* of Dihlī owed spiritual allegiance to him. He gave a revolutionary direction to religious activity by emphasising that service of mankind brought greater spiritual reward then mere formal prayers (*Fawāʾid al-fuʾād*, 13-14). His *khānaḳāh* was a welfare centre where free food was served to all visitors, and money was distributed to the needy and the poor on a very large scale. Enormous *futūḥ* (unasked-for gifts) came to him, but he distributed everything and kept nothing for himself. Baranī (*Taʾrīkh-i Fīrūz-Shāhī*, 343-7) has given a graphic account of his popularity in Dihlī.

The Shaykh's way of thinking endeared him to the people. He believed in returning evil with good, forgiving the insolent and adopting non-violent and pacifist ways towards those inviting retaliation. He looked upon bringing happiness to the hearts of men as the *summum bonum* of his mystic activity. He believed in hating the sin, not the sinner. His heart went out in sympathy to the weak and the downtrodden, and the thought of people who had slept on the shops and the mosques without food made morsels stick in his throat (*Siyar al-awliyāʾ*, 128).

The principal *khalīfa*s of the Shaykh who worked to propagate his teachings were: Shaykh Naṣīr al-Dīn Čirāgh in Dihlī, Shaykh Ḳuṭb al-Dīn Munawwar in the Pandjāb, Mawlānā Burhān al-Dīn Gharīb in the Deccan, Mawlāna Ḥusām al-Dīn in Gudjarāt, Mawlānā Wadjīh al-Dīn Yūsuf in Čanderi and Mawlānā Sirādj al-Dīn ʿUthmān in Bengal. Amīr Khusraw, the famous Persian poet, and Ḍiyāʾ al-Dīn Baranī, the famous historian of medieval India, and Mawlānā Shams al-Dīn Yaḥyā and Mawlānā Fakhr al-Dīn Zarrādī, eminent scholars of the period, were among his disciples. Fīrūz Shāh Tughluḳ referred to him as *Sulṭān al-mashāyikh* ("King of the saints"), and throughout the centuries people of all walks of life have paid respectful homage to his memory.

The site where Humāyūn's tomb now stands was then a village known as Ghiyāthpūr, and the Shaykh had his hospice there. Part of his *khānaḳāh*, the *Čilla-khāna*, still stands (Bāyazīd Bayāt, *Taʾrīkh-i Humāyūn wa Akbar*, Calcutta 1941, 234).

Bibliography: Two collections of his utterances —the *Fawāʾid al-fuʾād*, compiled by Ḥasan Sidjzī (Nawal Kishore, Lucknow 1884), and *Durar-i-Niẓāmī*, compiled by ʿAlī Djāndār (ms. Sālār Djang Museum, Ḥaydarābād 61/5-99), and two biographical accounts—*Kiwām al-ʿaḳāʾid* by Djamāl Ḳiwām al-Dīn (ms. Osmania University Library, Ḥaydarābād) and *Siyar al-awliyāʾ* of Mīr Khwurd (Muḥibb-i Hind Press, Dihlī 1885) supply all the basic details about his life, thought and activities. For other sources, Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1860; Ḥamīd Ḳalandar. *Khayr al-madjālis*, ed. K.A. (K.A. NIZAMI)

NIẒĀM AL-DĪN, MULLĀ MUḤAMMAD, leading scholar and mystic of early 18th-century Awadh and the consolidator of the Niẓāmī *madrasa* curriculum which came to be used through much of South Asia down to the 20th century. Niẓām al-Dīn was the third son of Mullā Ḳuṭb al-Dīn Sihālwī whose murder in 1103/1692 led to the emperor Awrangzīb recompensing him and his three brothers by assigning them the property of a European indigo merchant in Lucknow and by granting them pensions to support their scholarship; they and their descendants came to be known as the Farangī Maḥall family [*q.v.* in Suppl.].

Niẓām al-Dīn, who was fourteen at the time of his father's death, studied under Mullās ʿAlī Ḳulī of Djaʾis, Amān Allāh of Benares and Naḳshband of Lucknow. On finishing his education he established the teaching tradition in Farangī Maḥall, including amongst his many pupils not only members of his own family and the forerunners of the Khayrābād school of *maʿḳūlāt* studies but also students from Bengal and much of Awadh. At the same time through his powerful relationship with the illiterate Ḳādirī mystic, Sayyid ʿAbd al-Razzāḳ of Bānsa (d. 5 Shawwāl 1136/27 June 1724) he established his family's connections with the most dynamic saint of the region, who has been to the present day the prime source of the family's spiritual inspiration. He died on 1 Djumādā 1161/29 April 1748. His son ʿAbd al-ʿAlī Baḥr al-ʿUlūm (d. 12 Radjab 1225-13 August 1810) [*q.v.*] ranks with Shāh ʿAbd al-ʿAzīz of Dihlī [*q.v.*] as the leading Indian scholar of his day.

Niẓām al-Dīn's greatest achievement was the consolidation of the Dars-i Niẓāmiyya. Through this curriculum the tradition of *maʿḳūlāt* scholarship, which had been boosted by the migration of many Persian scholars to northern India from the time of Faḍl Shīrāzī's arrival at Akbar's court in 1583, and which had been brought to new heights by the scholars of Awadh in the late-17th and early-18th centuries, was spread through much of India. Tradition has it that in developing this curriculum Niẓām al-Dīn was merely giving form to the customs of his father. These meant directing the student only to the most difficult and most comprehensive books on each subject so that he was both forced to think and had a chance of finishing his education while still a youth. They also meant in practice a strong bias towards the rational as opposed to the transmitted sciences. Champions of the curriculum assert that this need not necessarily be the case; the *Dars* was not a specific course of books but a special way of teaching.

Niẓām al-Dīn's writings reveal him to be at the heart of the development of Persian traditions of *maʿḳūlāt* scholarship in northern India. Among his more prominent works were: his notes on Mullā Ṣadrā's commentary on al-Abharī's [*q.v.*] *Hidāyat al-ḥikma*, his notes on Djalāl al-Dīn Dawānī's [*q.v.*] commentary on the *ʿAḳāʾid* of ʿAḍud al-Dīn Īdjī [*q.v.*] and his notes on the *Shams al-bāzīgāh* of Maḥmūd Djawnpūrī and his commentaries on the *Manār al-anwār* of Ḥāfiẓ al-Dīn al-Nasafī and on the *Musallam al-thubūt* of Muḥibb Allāh al-Bihārī [*q.v.*], his father's pupil. His writings also show him to be a supporter of the reformed understanding of Ibn al-ʿArabī promulgated by the 17th-century scholar and mystic, Shāh Muḥibb Allāh Ilāhābādī. This understanding is instinct in his record of the sayings and doings of his *pīr*, Sayyid ʿAbd al-Razzāḳ of Bānsa, *Manāḳib al-Razzāḳiyya*, in which, while supporting Ibn al-ʿArabī's concept of the "unity of being" (*waḥdat al-wudjūd*), he nevertheless insisted on a full observance of the *sharīʿa*. Niẓām al-Dīn's combination of *maʿḳūlāt* scholarship and moderate *wudjūdī* Ṣūfism remained the style of the Farangī Maḥall family and their followers through much of India down to the 20th century. Niẓām al-Dīn's shrine in Lucknow remains celebrated for the solace it can bring the mentally disturbed and scholars in difficulty.

Bibliography: The basic modern source for Niẓām al-Dīn is Muḥammad Raḍā Anṣārī, *Bānī-i Dars-i Niẓāmī*, Lucknow 1973; among other sources comprising the family tradition are: Niẓām al-Dīn Farangī Maḥallī, *Manāḳib al-Razzāḳiyya*, Lucknow 1313; Walī Allāh Farangī Maḥallī, *al-Aghṣān al-arbaʿa*, Nadwa ms., Lucknow; Alṭāf al-Raḥmān Ḳidwāʾī, *Aḥwāl-i ʿulamāʾ-i Farangī Maḥall*, 1907; ʿAbd al-Bārī, *Āthār al-uwal*, n.d., and *Malfūẓ-i Razzāḳī*, Kanpur 1926; Mawlawī ʿInāyat Allāh, *Tadhkira-yi ʿulamāʾ-i Farangī Maḥall*, Lucknow 1928; other major sources are: Ghulām ʿAlī Āzād Bilgrāmī, *Maʾāthir al-kirām*, Ḥaydarābād 1913, and *Subḥat al-mardjān*, Bombay 1303/1886; Faḳīr Muḥammad Laḥawrī, *Ḥadāʾiḳ al-ḥanafiyya*, Lucknow 1324/1906; Nawwāb Ṣiddīḳ Ḥasan Khān, *Abdjad al-ʿulūm*, Bhopal 1296/1878; Faḍl Imām Khayrābādī, *Tarādjim al-fuḍalāʾ*, Eng. trans. Bazmee Anṣārī, Karachi 1956; for broad context and interpretation see: F. Robinson, *Perso-Islamic culture in India from the seventeenth to the early twentieth century*, in R.L. Zingel-Ave Lallemant eds., *Islam and the Indian regions 1000-1750 AD*, forthcoming, and idem, *Problems in the history of the Farangi Mahall family of learned and holy men*, in N.J. Allen *et al.*, eds., *Oxford University Papers on India*, i/2, Delhi 1987. (F. ROBINSON)

NIẒĀM AL-MULK, ABŪ ʿALĪ AL-ḤASAN B. ʿALĪ B. ISḤĀḲ AL-ṬŪSĪ, the celebrated minister of the Saldjūḳid sultans Alp Arslān [*q.v.*] and Malikshāh [*q.v.*]. According to most authorities, he was born on Friday 21 Dhu 'l-Ḳaʿda 408/10 April 1018, though the 6th/12th century *Taʾrīkh-i Bayhaḳ* of Ibn Funduḳ al-Bayhaḳī [*q.v.*], which alone supplies us with detailed information about his family, places his birth in 410/1019-20. His birth-place was Rādkān, a village in the neighbourhood of Ṭūs, of which his father was revenue agent on behalf of the Ghaznawid government. Little is recorded of his early life. The *Waṣāyā-yi Khʷādja-yi Niẓām al-Mulk*, however (for a discussion of the credibility of which see *JRAS* [1931], *The Sar-gudhasht-i Saiyidnā*, etc.), contains several anecdotes of his childhood, and is also responsible for the statement that he became a pupil in Nīshāpūr of a well-known Shāfiʿī doctor Hibat Allāh al-Muwaffaḳ. On the defeat of Masʿūd of Ghazna at Dandānḳān [*q.v.* in Suppl.] in 431/1040, when most of Khurāsān fell into the hands of the Saldjūḳs, Niẓām al-Mulk's father ʿAlī fled from Ṭūs to Khusrawdjird in his native Bayhaḳ, and thence made his way to Ghazna. Niẓām al-Mulk accompanied him, and whilst in Ghazna appears to have obtained a post in a government office. Within three or four years, however, he left the Ghaznawid for the Saldjūḳ service, first attaching himself to Čaghrī-Beg's [*q.v.*] commandant in Balkh (which had fallen to a Saldjūḳid force in 432/1040-1), and later, probably about 445/1053-4, moving to Čaghrī's own headquarters at Marw. It seems to have been now, or soon after, that he first entered the service of Alp Arslān (then acting as his father's lieutenant in eastern Khurāsān) under his *wazīr*, Abū ʿAlī Aḥmad b. Shādhān. And he so far won Alp Arslān's regard as on Ibn Shādhān's death to be appointed *wazīr* in his stead (then, probably, receiving his best-known *laḳab*). During the period between the death of Čaghrī-Beg in 451/1059 and that of Ṭughrīl-Beg in 455/1063, therefore, Niẓām al-Mulk had the administration of all Khurāsān in his hands.

The fame which he thereby acquired, and the fact that by now Alp Arslān was firmly attached to him, played a considerable part in prompting Ṭughrīl-Beg's *wazīr* al-Kundurī [*q.v.*], first, before his master's death, to scheme for the throne to pass to Čaghrī's youngest son Sulaymān, and then, after it,

to do his utmost to prevent Alp Arslān's accession. For he calculated that Alp Arslān, on becoming sultan, would retain Niẓām al-Mulk rather than himself in office. In the event, al-Kundurī, who soon found himself too weak to oppose Alp Arslān, and thereupon sought to retrieve his position by acknowledging his claim, was retained in his post on the new sultan's first entry into Rayy. But a month later Alp Arslān suddenly dismissed him and handed over affairs to Niẓām al-Mulk. Al-Kundurī was shortly afterwards banished to Marw al-Rūdh, where ten months later he was beheaded. His execution was undoubtedly due to Niẓām al-Mulk, whose fears he had aroused by appealing for help to Alp Arslān's wife.

During Alp Arslān's reign, Niẓām al-Mulk accompanied him on all his campaigns and journeys, which were almost uninterrupted. He was not present, however, at the famous battle of Malāzgird [*q.v.*], having been sent ahead with the heavy baggage to Persia. On the other hand, he sometimes undertook military operations on his own, as in the case of the reduction of Iṣṭakhr citadel in 459/1067. Whose, his or Alp Arslān's, was the directing mind in matters of policy, it is hard to determine. Its main points, however, appear to have been the following: first, the employment of the large numbers of Türkmens that had immigrated into Persia as a result of the Saldjūḳ successes, in raids outside the *Dār al-Islām* and into Fāṭimid territory: hence the apparently strange circumstance that Alp Arslān's first enterprise after his accession, despite the precarious condition of the empire he had inherited, was a campaign in Georgia and Armenia [see AL-KURDJ]; secondly, a demonstration that the sultan's force was both irresistible and mobile, coupled with clemency and generally with reinstatement for all rebels who submitted; thirdly, the maintenance of local rulers, Shīʿī as well as Sunnī, in their positions as vassals of the sultan, together with the employment of members of the Saldjūḳ family as provincial governors; fourthly, the obviation of a dispute over the succession by the appointment and public acknowledgement of Malikshāh [*q.v.*], though he was not the sultan's eldest son, as his heir; and lastly the establishment of good relations with the ʿAbbāsid caliph al-Ḳāʾim [*q.v.*], as the sultan's nominal overlord.

Niẓām al-Mulk did not really come into his own until after the assassination of Alp Arslān in 465/1072. But thenceforward, for the next twenty years, he was the real ruler of the Saldjūḳ empire. He succeeded from the outset in completely dominating the then eighteen-year-old Malikshāh, being assisted in this purpose by the defeat of Ḳāwurd's [*q.v.*] attempt to secure the throne for himself (for which service Niẓām al-Mulk received the title *atābeg* [*q.v.*], thus bestowed for the first time). Indeed, in one aspect the history of the reign resolves itself into repeated attempts by the young sultan to assert himself, always in vain.

Malikshāh undertook fewer campaigns and tours than his father, the prestige of the Saldjūḳ arms now being such that few would risk rebellion, and warlike operations being left largely to the sultan's lieutenants, as they had not been under Alp Arslān. Nevertheless, from Iṣfahān, which had by now become the sultan's normal place of residence, Malikshāh visited the greater part of his empire accompanied by Niẓām al-Mulk.

Policy continued on the same lines under Malikshāh as under his father. Niẓām al-Mulk, however, was notably less tender than Alp Arslān had been to insubordinate members of the Saldjūḳ family, insisting at the outset on the execution of Ḳāwurd, and, later, on the blinding and imprisonment of Malikshāh's brother Tekesh.

He also reversed during the earlier part of Malikshāh's reign the conciliatory policy originally pursued under Alp Arslān towards the caliph. He had been rewarded for the friendly attitude he first evinced—which formed a welcome contrast to that of al-Kundurī—by the receipt from al-Ḳāʾim of two new *laḳabs*, viz. *Ḳiwām al-Dīn* and *Raḍī Amīr al-Muʾminīn* (the latter believed to be the earliest of this type in the case of a *wazīr*); and up to 460/1068, his relations with the caliph's *wazīr* Fakhr al-Dawla Ibn Djahīr [see DJAHĪR, BANŪ] became more and more cordial; so much so, indeed, that al-Ḳāʾim in that year dismissed Ibn Djahīr, chiefly on account of his too-subservient attitude to the Saldjūḳ court. To secure this attitude in the caliph's *wazīr* was, however, the very aim of Niẓām al-Mulk; and on Fakhr al-Dawla's dismissal he sought to impose a nominee of his own in a certain al-Rūdhrāwarī, and subsequently in the latter's son Abū Shudjāʿ. Al-Ḳāʾim, to avoid this, reappointed Fakhr al-Dawla, though on condition that his relations with the Saldjūḳids should in future be more correct. In fact, they soon grew strained, till Niẓām al-Mulk came to attribute any unwelcome event in Baghdād to Fakhr al-Dawla's influence. For many years, matters were prevented from coming to a head by the tact of Fakhr al-Dawla's son, ʿAmīd al-Dawla [see DJAHĪR, BANŪ], who won Niẓām al-Mulk's favour so far as to marry in turn two of his daughters, Nafsā and Zubayda; but in 471/1078 Niẓām al-Mulk demanded Fakhr al-Dawla's dismissal, which the caliph al-Muḳtadī [*q.v.*] (who had succeeded in 467/1075), was obliged to grant. Niẓām al-Mulk now hoped to obtain the office for his own son Muʾayyid al-Mulk; but to this al-Muḳtadī would not agree. Henceforward, accordingly, his dislike was deflected to al-Muḳtadī himself, and to Abū Shudjāʿ, his former protégé, whom the caliph now created deputy *wazīr* in an effort to conciliate him, leaving the vizierate itself unoccupied till the next year, when he appointed ʿAmīd al-Dawla. But in 474/1082 Niẓām al-Mulk in turn demanded the dismissal and banishment of Abū Shudjāʿ, and at the same time composed his quarrel with Fakhr al-Dawla, when the latter was sent on a mission to Iṣfahān, concerting with him a plan by which Fakhr al-Dawla should watch his interests at Baghdād. As a result, al-Muḳtadī, who gave in with a bad grace, lost all confidence in the Banū Djahīr, and two years later replaced ʿAmīd al-Dawla with the offensive Abū Shudjāʿ; whereupon Fakhr al-Dawla and ʿAmīd al-Dawla fled to the Saldjūḳid headquarters. Niẓām al-Mulk, on this, vowed vengeance on al-Muḳtadī, and at first seems even to have contemplated the abolition of the caliphate (see Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*), as a prelude to which he commissioned Fakhr al-Dawla to conquer Diyār Bakr from the Marwānids [*q.v.*], the sole remaining Sunnī tributaries of any consequence. The Marwānids were duly ousted by 478/1085, whilst al-Muḳtadī, on his side, showed himself consistently hostile to Niẓām al-Mulk. But the latter's feelings towards the caliph were in the following year completely transformed as a consequence of his first visit to Baghdād (for the wedding of al-Muḳtadī to Malikshāh's daughter). The caliph received him very graciously; and thenceforward he became a champion of the caliphate in face of the enmity which developed between al-Muḳtadī and Malikshāh as a result of the marriage.

The celebrity of Niẓām al-Mulk is really due to the fact that he was in all but name a monarch, and ruled

his empire with striking success. It was not his aim to innovate. On the contrary, it was to model the new state as closely as possible on that of the Ghaznawids, in which he had been born and brought up. His position was similar to that of his forerunners, the Barmakids [see BARĀMIKA], and the notable Būyid *wazīr*, the Ṣāḥib Ismāʿīl b. ʿAbbād [*q.v.*]. All three may be said to have represented the old Persian civilisation (progressively Islamicised, of course) in the face of a rise to empire of barbarian conquerors, Arab, Daylamī and now Türkmen. The monarchs were in each case equalled, if not surpassed, by their *wazīrs*, and most of all in the case of Niẓām al-Mulk. For with him the invaders aspired to an emperor's position whilst still quite unacclimatised to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, *Turkestan*, 308). But in revenge, the Saldjūḳs' lack of acclimatisation stood in the way of a complete realisation by Niẓām al-Mulk of the now traditional Perso-Muslim state. Hence the lamentations that recur in the *Siyāsat-nāma*.

The *Siyāsat-nāma* or *Siyar al-mulūk*, written by Niẓām al-Mulk in 484/1091 with the addition of eleven chapters in the following year, is in a sense a survey of what he had failed to accomplish. It scarcely touches upon the organisation of the *dīwān*, for instance, partly, it is true, because the book was intended as a monarch's primer, but also because Niẓām al-Mulk, having absolute control of the *dīwān*, as opposed to the *dargāh* (cf. again Barthold, 227), had succeeded with the assistance of his two principal coadjutors, the *mustawfī* Sharaf al-Mulk and the *munshī* Kamāl al-Dawla, in exactly modelling this, his special department, on traditional lines. Of the *dargāh*, on the other hand, Niẓām al-Mulk complains that the sultans failed to maintain a sufficient majesty. They were neither magnificent (though he approves their daily free provision of food), formal, nor awe-inspiring enough. At their court, accordingly, the formerly important offices of *ḥādjib*, *wakīl* and *amīr-i ḥaras* had declined in prestige. Nor, as had his model potentates, would they maintain a sound intelligence or *barīd* [*q.v.*] service, whereby corruption might be revealed and rebellion forestalled. The *Siyāsat-nāma* consists in all of fifty chapters of advice illustrated by historical anecdotes. The last eleven chapters, added shortly before the *wazīr*'s assassination, deal with dangers that threatened the empire at the time of writing, in particular from the Ismāʿīlīs (on the work, see *Bibl.*, 3).

Niẓām al-Mulk's situation resembled that of the Būyid administrators in another respect. He was faced, as they had been, with the problem of supporting a largely tribal army, and solved it likewise by a partial abandonment of the traditional tax-farming system of revenue collection for that of the *iḳṭāʿ* or fief [*q.v.*], whereby military commanders supported themselves and their troops on the yield of lands allotted to them. Since in the decay of the ʿAbbāsid power provincial *amīrs* had tended to assume the originally distinct and profitable office of *ʿāmil*, the way for this development had been paved. The Būyids had later attempted to restore the older system; but the establishment of numerous local minor dynasties had favoured the new. Niẓām al-Mulk now systematised it in the larger field open to him. In the *Siyāsat-nāma* he insists, however, on the necessity of limiting the rights of fief-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject, Becker, *Steuerpacht und Lehnswesen*, in *Isl.*, v [1914], 81-92, and IḲṬĀʿ).

In the absence of the intelligence service he desired, Niẓām al-Mulk contrived to intimidate potential rebels and suppress local tyranny by a judicious display of the might and mobility of the Saldjūḳid arms. He also insisted on the periodical appearance at court of local dynasts such as the Mazyadids [*q.v.*] and ʿUḳaylids [*q.v.*], and proclaimed the sultan's accessibility to appeals for the redress of wrongs by means of notices circulated throughout the empire and exposed in public places (see al-Māfarrukhī, *Maḥāsin-i Iṣfahān*). He also gained the powerful support of the *ʿulamāʾ*, especially those of the Shāfiʿī school, of which he was an ardent champion, by the institution of innumerable pious foundations, in particular of *madrasas*, the most celebrated being the Niẓāmiyya of Baghdād (opened 459/1067), the earliest west of Khurāsān (see below), by the general abolition of *mukūs* (taxes unsanctioned by the *sharīʿa*) in 479/1086-7; and by undertaking extensive public works, particularly in connection with the *ḥadjdj*. After the Ḥidjāz had returned from Fāṭimid to ʿAbbāsid allegiance in 468/1076, he exerted himself to make the ʿIrāḳ road safe from brigandage for pilgrims, as well as to diminish their expenses; and from the next year until that of his death, the journey was accomplished without mishap. It was not until the second half of Malikshāh's reign that the full effects of Niẓām al-Mulk's achievement made themselves felt. By 476/1083-4, however, such were the unwonted security of the roads and the low cost of living that reference is made to them in the annals.

Niẓām al-Mulk was naturally much sought after as a patron. The poet Muʿizzī [*q.v.*] accuses him of having "no great opinion of poetry because he had no skill in it", and of paying "no attention to anyone but religious leaders and mystics" (see Niẓāmī ʿArūḍī Samarḳandī, *Čahār maḳāla*, tr. Browne, 46). But though his charity, which was profuse (see for example, al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, iii, 41), went in large measure to men of religion—among them the most notable objects of his patronage being Abū Isḥāḳ al-Shīrāzī [*q.v.*] and Abū Ḥāmid al-Ghazālī [*q.v.*]—, he was clearly a lavish patron also of poets, as is attested by the *Dumyat al-ḳaṣr* of al-Bākharzī [*q.v.*], the greater part of which is devoted to his panegyrists. In another sphere, the inauguration of the Djalālī calendar [*q.v.*] in 466/1074 was probably due to his encouragement, since at this time his ascendancy over Malikshāh was at its most complete.

Niẓām al-Mulk's name is especially associated with the founding of a series of colleges whose ethos and teachings were closely connected with the Ashʿarī *kalām* and the Shāfiʿī legal school, of which the vizier himself was an adherent. His reasons for the setting-up of a chain of *madrasas* in the main cities of ʿIrāḳ, al-Djazīra and Persia (and especially in his home province of Khurāsān) [see MADRASA. I. 4] are not entirely clear. But in the context of the age, with its reaction against Muʿtazilism in philosophy and dialectics and against political Shīʿism as manifested in the preceding Būyid and north Syrian amīrates and the still-powerful Fāṭimid caliphate in Egypt and southern Syria, it seems possible that he aimed at training a body of reliable, Sunnī-oriented secretaries and officials who would run the Great Saldjūḳ empire when Niẓām al-Mulk had moulded it along the right lines and thus further the progress of the Sunnī political and intellectual revival. In his patronage of such institutions as these colleges, he was by no means an innovator, for the Sunnī *madrasa*-building movement had been under way since the later part of the 4th/10th century, and other leading figures in the Saldjūḳ state were equally active in founding and

endowing *madrasas* and associated institutions like hostels for students, such as the Ḥanafī official of Alp Arslān's, the *mustawfī* Abū Saᶜd, who built a *madrasa* attached to the shrine of Abū Ḥanīfa in Baghdād, and Niẓām al-Mulk's enemy at the court of Malikshāh, the *mustawfī* Tādj al-Mulk Abu 'l-Ghanāʾim (d. 485/1093), founder of the Tādjiyya college there (see G. Makdisi, *Muslim institutions of learning in eleventh-century Baghdad*, in *BSOAS*, xxiv [1961], 1-56; C.E. Bosworth, in *Camb. hist. of Iran*, v, 70-4). Niẓām al-Mulk may have intended to give an impetus to the spread of his own Ashᶜarī and Shāfiᶜī views (although, in fact, the Baghdād Niẓāmiyya, where the great Abū Ḥāmid al-Ghazālī had taught, declined in the 6th/12th century, when the Ḥanbalī institutions of learning there showed greater vitality), but it seems reasonable to impute to him a wider vision of a Sunnī political, cultural and intellectual revival in the central and eastern lands of Islam, in which his own colleges would play a contributory role.

For the first seven years of Malikshāh's reign, Niẓām al-Mulk's authority went altogether unchallenged. In 472/1079-80, however, two Turkish officers of the court instigated Malikshāh into killing a protégé of the *wazīr*; and in 473/1080-1, again, the sultan insisted on disbanding a contingent of Armenian mercenaries against Niẓām al-Mulk's advice. Malikshāh now began to hope, indeed, for the overthrow of his mentor, showing extraordinary favour to officials such as Ibn Bahmanyār and, later, Sayyid al-Ruʾasāʾ Ibn Kamāl al-Mulk, who were bold enough to criticise him. Ibn Bahmanyār went so far as to attempt the *wazīr*'s assassination (also in 473), whereas Sayyid al-Ruʾasāʾ contented himself with words. But in each case, Niẓām al-Mulk was warned; and the culprits were blinded. In the case of Ibn Bahmanyār, in whose guilt a court jester named Djaᶜfarak was also implicated, Malikshāh retaliated by contriving the murder of Niẓām al-Mulk's eldest son Djamāl al-Mulk, who had taken Djaᶜfarak's execution into his own hands (475/1082). After the fall of Sayyid al-Ruʾasāʾ in 476/1083-4, however, the sultan left plotting till, some years later, a new favourite, Tādj al-Mulk, caught his fancy.

All went well with Niẓām al-Mulk till 483/1090-1. In that year, however, occurred the first serious challenge to the Saldjūḳid power, when Baṣra was sacked by a force of Ḳarmaṭians [see ḲARMAṬĪ]; and almost simultaneously their co-sectary the Assassin leader al-Ḥasan b. al-Ṣabbāḥ [*q.v.*] obtained possession of the fortress of Alamūt [*q.v.*], from which repeated attacks failed to dislodge him. Meanwhile, moreover, an awkward problem had arisen over the succession to the sultanate, on account of the death in turn of Malikshāh's two eldest sons, Dāwūd (474/1082) and Aḥmad (481/1088). These sons had both been children of the Ḳarākhānid princess Terken Khātūn (see Rashīd al-Dīn, *Djāmiᶜ al-tawārīkh*), who had borne the sultan a third son, Maḥmūd, in 480/1087. She was eager for Maḥmūd to be formally declared heir. Niẓām al-Mulk, however, was in favour of Barkiyārūḳ [*q.v.*], Malikshāh's eldest surviving son by a Saldjūḳ princess. Hence Terken Khātūn became his bitter enemy, and joined with Tādj al-Mulk, who was in her service, in instigating Malikshāh against the *wazīr*.

Tādj al-Mulk accused Niẓām al-Mulk to the sultan, who by this time was in any case incensed with the *wazīr*'s championship of al-Muḳtadī, of extravagant expenditure on the army and of nepotism; and Malikshāh's wrath was finally inflamed beyond bearing by an unguarded reply made by Niẓām al-Mulk to a formal accusation of these practices. But even so, he did not dare to dismiss him. (The earliest historian to assert that he was dismissed is Rashīd al-Dīn Faḍl Allāh, who appears to have misunderstood the purport of some verses by al-Naḥḥās quoted in the *Rāḥat al-ṣudūr* of Rāwandī, and really composed after the *wazīr*'s death.)

Niẓām al-Mulk was assassinated on 10 Ramaḍān 485/14 October 1092 near Siḥna, between Kanguwar and Bisutūn, as the court was on its way from Iṣfahān to Baghdād. His murderer, who was disguised as a Ṣūfī, was immediately killed, but is generally thought to have been an emissary of al-Ḥasan b. al-Ṣabbāḥ. Contemporaries, however, seem to have put the murder down to Malikshāh, who died suddenly less than a month later, and to Tādj al-Mulk, whom Niẓām al-Mulk's retainers duly tracked down and killed within a year. Rashīd al-Dīn combines the two theories, stating that the *wazīr*'s enemies at court concerted it with the Assassins. The truth is therefore uncertain; but as Rashīd al-Dīn is one of the earliest historians to whom the Assassin records were available, his account would seem to deserve attention.

The extraordinary influence of Niẓām al-Mulk is attested by the part played in affairs after his death by his relatives, despite the fact that only two appeared to have displayed much ability. For the next sixty years, except for a gap between 517/1123 and 528/1134, members of his family held office under princes of the Saldjūḳid house.

Of Niẓām al-Mulk's family, Ḍiyāʾ al-Mulk is remarkable as being his son by a Georgian princess, either the daughter or the niece of Bagrat I, formerly married, or at least betrothed, to Alp Arslān, after the campaign of 456/1064.

See further, on the sons and descendants of Niẓām al-Mulk in the 6th/12th century, NIẒĀMIYYA.

NIẒĀM AL-MULK Čīn Ḳilič <u>Kh</u>ān, Ḳamar al-Dīn, founder of the Indian Muslim state of Ḥaydarābād in the early 12th/18th century and a dominant figure in the military affairs of the decaying Mu<u>gh</u>al empire from his appointment as governor of the Deccan by the Emperor Farru<u>kh</u>-siyar [*q.v.*] till his death in 1161/1748. In the early years of his governorship he was the deadly foe of his rivals for influence in the empire, the Bārha Sayyids [*q.v.* in Suppl.], and after his victory over them at <u>Sh</u>akarkheldā in 1137/1724, virtually independent ruler in Ḥaydarābād with the additional title of Āṣaf <u>Dj</u>āh. For further details, see ḤAYDARĀBĀD, b. ḤAYDARĀBĀD STATE, and MUḤAMMAD <u>SH</u>ĀH B. <u>DJ</u>AHĀN <u>SH</u>ĀH.

Bibliography: T.W. Haig (ed.), *The Cambridge hist. of India*, iv, *The Mughul period*, 331, 336, 341-3, 346-50, 377 ff., and see the bibls. to the articles mentioned above. (Ed.)

NIẒĀM-<u>SH</u>ĀHĪ (i.e. *Ilčī-yi Niẓām-<u>sh</u>āhī* "ambassador of the Niẓām-<u>Sh</u>āh" of the Dakhan), a Persian historian whose real name was <u>Kh</u>ᵂūr<u>sh</u>āh b. Ḳubād al-Ḥusaynī. Born in Persian ʿIrāḳ, he entered the service of Sultan Burhān [see NIẒĀM-<u>SH</u>ĀHĪS]. The latter being converted to the <u>Sh</u>īʿa, sent <u>Kh</u>ᵂūr<u>sh</u>āh as ambassador to Ṭahmāsp <u>Sh</u>āh Ṣafawī. Reaching Rayy in Ra<u>dj</u>ab 952/September 1545, he accompanied the <u>Sh</u>āh to Georgia and <u>Sh</u>īrwān during the campaign of 953/1546 against Alḳāṣ Mīrzā. He stayed in Persia till 971/1563, perhaps with occasional breaks. He died at Golkonda on 25 <u>Dh</u>u 'l-Ḳaʿda 972/24 June 1565.

<u>Kh</u>ᵂūr<u>sh</u>āh's chief work is the *Taʾrī<u>kh</u>-i Ilčī-yi Niẓām-<u>sh</u>āh*, a general history from the time of Adam based on such sources as al-Ṭabarī, al-Bayḍāwī, *Taʾrī<u>kh</u>-i guzīda*, *Ẓafar-nāma*, *Ḥabīb al-siyar*, the "Memoirs of <u>Sh</u>āh-Ṭahmāsp", etc. The book is divided into a preface and seven *maḳāla*, each of which is again divided into several *guftār*. The most important part of this work is that which refers to the reign of Ṭahmāsp <u>Sh</u>āh (in the Brit. Mus. ms. Or. 153, written in 972/1565, the events come down to 969/1561-2) and to the local dynasties of the Caspian provinces: Māzandarān, Gīlān, <u>Sh</u>īrwān. The two manuscripts in the British Museum show differences in their contents: Add. 23,513 (written in 1095/1684) has passages added by some continuator and taken from the *<u>Dj</u>ihān-ārā* of Aḥmad b. Muḥammad <u>Gh</u>affārī. The later additions of Or. 153 come down as late as 1200/1786.

According to Firi<u>sh</u>ta, "<u>Sh</u>āh <u>Kh</u>ᵂūr<u>sh</u>āh", during the reign of Ibrāhīm Ḳuṭb-<u>Sh</u>āh of the Deccan (957-988/1550-80) also wrote a history of the Ḳuṭb-<u>Sh</u>āhīs [*q.v.*]. It is difficult to reconcile this with a continuous stay in Persia from 952 to 971.

Bibliography: Rieu, *Catalogue*, 107-11; Schefer, in his *Chrestomathie persane*, Paris 1885, ii, 56-103 (notes 65-133), printed the sections relating to the Caspian provinces. See also Storey, i, 113-14, 1239; Storey-Bregel, i, 406-8. (V. Minorsky)

NIẒĀM <u>SH</u>ĀHĪS, one of five Deccani dynasties, with its capital at Aḥmadnagar [*q.v.*] which emerged in South India as the Bahmanī [*q.v.*] kingdom disintegrated. The chroniclers of the Niẓām <u>Sh</u>āhīs emphasise territorial and power disputes and religious (and possibly racial) tensions. The history of the dynasty splits into four periods. Under the first four rulers, 895-994/1490-1586, there was the vigorous establishment of the kingdom. Under the five rulers from 994-1008/1586-1600, there was intensive internal dissension. The period from 1008-35/1600-26, although with Niẓām <u>Sh</u>āhī rulers on the throne, was dominated by a Ḥaba<u>sh</u>ī (of black African origins) prime minister who restored much of the kingdom's economic and political viability. By 1041/1632 the state was destroyed, with formal dispersal of the territories of the Aḥmadnagar kingdom occurring in 1046/1636.

The founder of the dynasty, later known as Aḥmad Niẓām <u>Sh</u>āh Baḥrī, was the son of a high official in the Bahmanī court. He held various posts under the Bahmanīs and in 895/1490 he declared independence from them and consolidated the areas in northern and western Mahāra<u>sh</u>tra under his rule as Aḥmad Niẓām <u>Sh</u>āh. Under the first four rulers (Aḥmad, 895-915/1490-1510; Burhān I, 915-60/1510-53; Ḥusayn I, 961-72/1554-65; and Murtaḍā I, 972-97/1565-88) the kingdom prospered despite military skirmishing with neighbouring Islamic successor states, with the Hindu state of Vi<u>dj</u>ayanagar, and with the first Mu<u>gh</u>al incursions in the 990s/1580s. Burhān I converted to <u>Sh</u>īʿism, the choice reflecting to some extent the underlying tension between those considered natives (*de<u>sh</u>is*) and those considered outsiders (*parde<u>sh</u>is*). Potentially, there were racial implications as well. Many of the foreigners were generally fairer than the Deccanis, but there were many Ḥaba<u>sh</u>ī officers in the court and the exact causes for the continuous realignment of loyalties are rarely clear.

Militarily, the high point of this period came in <u>Dj</u>umādā II 972/January 1565. The six major Deccani states aligned and realigned themselves attempting to extend their boundaries. In the early 1560s, the armies of Vi<u>dj</u>ayanagar became particularly rapacious and the Islamic kingdoms reached an accommodation. The major armies gathered in Talikota to organise an assault on the Vi<u>dj</u>ayanagar forces and also, apparently, for a certain amount of pre-battle carousing. In <u>Dj</u>umādā II 972/January 1565 the forces marched out of Talikota and moved against the enemy, decisively defeating them and putting an end to that kingdom.

The rapid turnover in Niẓām <u>Sh</u>āhī rulers from 996/1588 to 1008/1600 reflects the dissension and turmoil in the higher ranks of the Aḥmadnagar court. Ḥusayn II, a parricide, ruled during 997-8/1588-9. He was succeeded by a paternal cousin, Ismāʿīl, who ruled in 998-9/1589-91. Ismāʿīl was succeeded by his own father, Burhān II, 999-1003/1591-5, who had been a member of the Mu<u>gh</u>al court for some years but, having manoeuvred his way on to the Niẓām <u>Sh</u>āhī throne, had to deal with serious Mu<u>gh</u>al forays into the Deccan. Burhān II was succeeded by his son and Ismāʿīl's brother, Ibrāhīm, for four months in 1003/1595. Rival leaders put forth different candidates for the throne, and Bahādur, son of Ibrāhīm and strongly backed by Čand Bībī, was finally declared ruler only to be captured and imprisoned by

the Mughals after the fall of Aḥmadnagar in Ṣafar 1009/August 1600.

Čand Bībī was a daughter of Ḥusayn I and, as part of unending Deccani negotiations and realignments, had been married to ʿAlī ʿĀdil Shāh of Bīdjāpūr [q.v.]. After his assassination in 1580, she was regent to their young son, Ibrāhīm ʿĀdil Shāh II. Later in the 1580s and in the early 1590s, Čand Bībī went back and forth between Bīdjāpūr and Aḥmadnagar as a sort of "emissary for safe keeping", as various leaders struck different bargains. After Burhān II was shot in 1003/1595, she was among those leaders who supported his grandson Bahādur to succeed him. By December of that year, the Mughals (led by Akbar's son Mūrād [q.v.], who died in Shawwāl 1007/May 1599 in the Deccan), who had been skirmishing, raiding, and attempting to seize territory in the Deccan, began the siege of Aḥmadnagar. In Djumādā II 1004/February 1596 they successfully mined one of the walls of the fort, and Čand Bībī valiantly led the rebuilding of that wall. She emerged with enough stature to unite some of the feuding Aḥmadnagar leaders and became a local heroine. In March, the occupants of the fort sued for peace and the Mughals withdrew.

In 1007/1599 the Mughals took Burhānpūr in Berār [q.vv.] which then served as their base of operations for attacking the Deccani states. The following year, accompanied by Akbar, the Mughals again set siege to Aḥmadnagar, this time led by his son Dāniyāl (died in Dhu 'l-Ḳaʿda 1012/April 1604 in the Deccan). In the town and fort of Aḥmadnagar, the internal feuding had reached such a pitch that one faction accused Čand Bībī of planning to betray the Niẓām Shāhī forces and incited a mob which killed her. In Ṣafar 1009/August 1600 the Mughals took Aḥmadnagar.

The third period of Niẓām Shāhī history was dominated by Malik ʿAnbar [q.v.], an Abyssinian slave who was a soldier in the Niẓām Shāhī armies, then went to Bīdjāpūr as a soldier, and finally returned to Aḥmadnagar in the 1590s. He fought for the Niẓām Shāhīs against the Mughals and oversaw the installation of the first two of the last three rulers, Murtaḍā II (1008-19/1600-10) and Burhān III (1019-41/1610-32), followed by Ḥusayn III (1041-2/1632-3).

The bickering and skirmishing continued in the Deccan, and Malik ʿAnbar, an able general and politician, carved out larger territories for the Niẓām Shāhīs. He formed new alliances, embracing Hindu leaders who were later to become leaders of the Marāthā [q.v.] forces. With these leaders, more effective ways of waging war were developed, and swift moving, mounted soldiers of the Niẓām Shāhī armies would quickly attack the Mughal forces and then retreat into the hills and prepare for the next swift attack and retreat. Dissension among the sons of Djahāngīr pervaded the Mughal court, which was also embroiled in power and territorial disputes, and helped to frustrate repeated Mughal attempts to occupy the Deccan. In the meantime, Malik ʿAnbar embarked on a major land reform, similar to that done by Rādjā Ṭodar Mall [q.v.] for Akbar. In 1025/1616 the Mughals put Aḥmadnagar under siege yet again. In the end, Djahāngīr's son Khurram was victorious and received the title Shāh-Djahān. Malik ʿAnbar's administration and generalship continued, as did Mughal inability to secure the Deccan.

In Shaʿbān 1035/May 1626 Malik ʿAnbar died at the age of 80. In Muḥarram 1036/October 1626 in Burhānpūr, Parwīs, heir apparent to the Mughal throne and in charge of the Mughal forces trying to invade the Deccan, died. A year later, Djahāngīr died, and was succeeded by his only living son, Shāh-Djahān. In 1039/1630 Shāh-Djahān returned to Burhānpūr in a re-attempt at conquering the Deccan. Malik ʿAnbar had been followed in office by his son Fatḥ Khān, who was a schemer rather than a leader and administrator, although he was finally imprisoned by the inept Burhān III. The cohesiveness of the state began to disintegrate, hastened by a terrible famine in the Deccan and Gudjarāt during 1039-41/1630-2. Shāh-Djahān worked on bribing and suborning the leaders of the Niẓām Shāhī factions. In 1038/1629, partially as a result of Mughal tactics, Burhān III attempted to murder a group of Marāthā leaders, driving several factions from his court to that of the Mughals.

At Burhānpūr in Dhu 'l-Ḳaʿda 1040/June 1631, however, Shāh-Djahān's wife died in childbirth (having already borne eight sons and six daughters for him). Shāh-Djahān ultimately returned to the north to plan and oversee the building of the Tāj Maḥall [q.v.] among other matters. Burhān III brought Fatḥ Khān back into power but, in 1041/1632, the latter poisoned the sultan and tried to put Ḥusayn Niẓām Shāh III on the throne. It was, in effect, the end of the dynasty. The following year, Fatḥ Khān had schemed himself into such a hopeless position that he took Ḥusayn III to Agra to petition Shāh-Djahān for help. In Rabīʿ I 1043/September 1633 Fatḥ Khān's lands were restored to him and Ḥusayn III was imprisoned.

In the Deccan, warring factions continued to fight. Shāhdjī Bhōnslē attempted to install a puppet, Murtaḍā Niẓām Shāh III, but was not successful. In 1045/1636 Shāh-Djahān reached an agreement with Ibrāhīm ʿĀdil Shāh which divided the Niẓām Shāhī territories between the two of them and specified that Shāhdjī Bhōnslē was not to enter the court of either of them until he surrendered the territories which he still held. Shāhdjī's son, Shivādjī, was the creator of the Marāthā confederacy, the armies of which, in 1761, attacked Shāh-Djahān's descendants on the plain of Pānīpat [q.v.], north of Dihlī.

During the years that Aḥmadnagar (founded in 899/1494) was the Niẓām Shāhī capital, it was (like Golkonda [q.v.] under the Ḳuṭb Shāhīs and Bīdjāpūr under the ʿĀdil Shāhīs) a centre not only for soldiers but also for travellers, traders, artisans, craftsmen, painters, writers, scholars, holy men, architects, builders and those dissatisfied with their lot in other places in South Asia, Persia and the Middle East and beyond. European travellers and traders visited the Niẓām Shāhī court. On the west coast, there was fierce competition among the Niẓām Shāhīs, the ʿĀdil Shāhīs, the rulers of Vidjayanagar, and other groups (including pirates) for the trade increasingly dominated by the Portuguese. For the Deccani rulers, the most important item in this trade was horses and the rulers of Vidjayanagar (until 972/1565) reputedly paid the full price assessed at embarkation for every horse delivered to them whether alive or dead.

The Niẓām Shāhīs and many of their high officials commissioned palaces, mosques, gardens, tanks, canals, bath houses, hospices, hospitals, tombs, etc., the remains of many of which are still extant. The early rulers and nobility commissioned many canals as well as palaces/pleasure houses/gardens. Indeed, a tomb near the impressive tomb of Aḥmad I is reputed to mark the burial site of the elephant which captured the ruler of Vidjayanagar in 1565. The most famous Niẓām Shāhī architect and builder was Ṣalābat Khān II, an official under Murtaḍā I and Ḥusayn II. He not only extended the system of canals and tanks, but

rebuilt the Farāh Bakhsh Gardens. His own tomb is outside the city on a hill; unlike other tombs of the period, it is an extremely tall building with stairs to the top. It is said he wished to make it even higher so that he could see as far as Dawlatābād [*q.v.*].

There was an interest in literature and painting as well; an illustrated *Taʿrif-i Ḥusayn Shāhī* (*ca.* 972-6/*ca.* 1565-9) survives at the Bharata Itihasa Samshodhaka Mandala in Poona and a portrait of Burhān II is in the Bibliothèque Nationale in Paris. Some other miniatures have been attributed to the Niẓām Shāhī court and a few artists in the Mughal court came from the Niẓām Shāhī one. Unfortunately, the wars with the Mughals and subsequently with the Marāthās led to the despoiling and destruction of the libraries that contained the volumes of literature and science, many no doubt illustrated, that must have been in Niẓām Shāhī mosques, schools, and homes.

(MARIE H. MARTIN)

NIẒĀM-Ï DJEDĪD (T.), literally, "new system, re-organisation", the new military units created by the Ottoman sultan Selīm III (1203-22/1789-1807 [*q.v.*]).

The Treaty of Sistova between the Ottoman Empire and Austria (August 1791) and that of Jassy between the Empire and Russia (January 1792) meant that Turkey had to recognise the loss of the Crimea and the fact of Russian control over much of the Black Sea, although Austria withdrew from its conquests in Serbia, Bosnia and the Danube Principalities. Moreover, the European powers were shortly to become increasingly pre-occupied with the threats posed to them by the extension of the French Revolutionary spirit and its ideas within Europe. Turkey thus had a breathing-space within which Selīm III could reorganise affairs in his remaining dominions and prepare against further threats to Turkey's territorial integrity. Above all, the sultan and his reform-minded advisers realised now that military and naval reforms were vital, although it was still hoped to reform and improve the existing military forces of the feudal cavalry, the Sipahīs, and the Janissaries, and the root-and-branch reform measures necessary to save the empire could not yet be contemplated and were probably not yet envisaged in the minds of contemporaries.

Selīm's efforts to improve the fighting efficiency and to reduce the bloated numbers of the traditional types of forces were not very successful, but reform was more successful in the newer, more technical arms: the artillery, the mortar-throwers, the mine-layers and sappers, the gun transport corps, etc., where younger officers trained by Baron de Tott two or three decades before and, after 1794, by further French advisers, made these corps the most efficient part of the Ottoman army.

However, the sultan decided that the only way forward in regard to the fighting forces themselves, sc. the cavalry and infantry, was to inaugurate a new infantry force parallel to, but entirely separate from, the older forces, so as not to alarm the latter unduly. Hence in 1793 Selīm created his "New Order", the *Niẓām-ï Djedīd*, to be a corps of troops properly trained in the European manner, with European-type discipline and with modern weapons. To finance these and other reforms, he initiated a special fund, the "New Revenue", *Īrād-ï Djedīd*, from taxes on brandy, tobaccoo, coffee, silk, wool, sheep and the yields from the fiefs of *tīmār*-holders in Anatolia who had neglected their duties in war and were therefore deprived of their fiefs.

The *Niẓām-ï Djedīd* was originally a volunteer body, and was originally formed from various nationalities, including Austrian and Russian deserters who had fled to Turkish territory during the 1787-92 war with Austria and Russia, hence at first it enjoyed little prestige amongst the Turks themselves. But by 1800 it comprised three regiments, with barracks well-removed from proximity to the older troops, at Lewend Čiftlik to the north of Istanbul and at Üsküdār, and by July 1801 its strength had reached 27 officers and 9,263 men. After 1802, a system of conscription was introduced into Anatolia, although the greater power of local magnates in Rumelia prevented its extension to the Balkans. Hence by the end of 1806 the *Niẓām-ï Djedīd* comprised 1,590 officers and 22,685 men, roughly half of them stationed in Anatolia and half in Istanbul. A large contingent of the new troops helped in the successful defence of Acre in Palestine led by Aḥmed Djezzār Pasha [see AL-DJAZZĀR PASHA, AḤMAD, in Suppl.] against the attacks of Bonaparte during March-May 1799. The sultan employed foreign officers and advisers, mainly from England, Sweden and Spain, to train the soldiers and to oversee the management of arsenals, ship-building yards and fortifications. Extensive barracks and ammunition depots were built. The "New Revenue" earmarked for military purposes and supplying the necessary funds, amounted by 1797-8 to 60,000 purses, i.e. 48 million francs (see Djewdet, *Taʾrīkh*, viii, 139-40).

Internal difficulties, and, especially, the increasing number of opponents of reform, prevented the sultan from completely realising his plans. In 1805-6 Selīm established a new *Niẓām-ï Djedīd* corps at Edirne, with men to be recruited for it from the Balkans by conscription. But the power of local magnates there and the influence of the conservatives in the capital, including the Janissaries and the *ʿulamāʾ*, forced him to retreat from his design. A revolt against the sultan of Janissary auxiliaries (*yamaḳs*) broke out in May 1807; Selīm yielded to pressure from his enemies and disbanded the *Niẓām-ï Djedīd* before his enforced abdication, and *Niẓām-ï Djedīd* officers and men were hunted down and slaughtered in the general reign of terror. Under the new sultan, Muṣṭafā IV [*q.v.*], an attempt was made in 1808 by the *ser ʿasker* Muṣṭafā Pasha Bayraḳdār [*q.v.*] secretly to reconstitute the *Niẓām-ï Djedīd* under the new designation of *Niẓāmlï ʿAsker*, with the Austrian renegade Süleymān Agha, who had previously commanded the corps stationed at Lewend Čiftlik, charged with this task, but without success (see Zinkeisen, *GOR*, vii, 552-3).

It was only after the murder of the imprisoned former sultan Selīm and the overthrow of the feeble puppet Muṣṭafā in favour of Maḥmūd II [*q.v.*], son of Selīm's predecessor ʿAbd al-Ḥamīd I [*q.v.*], that more successful and more lasting measures in the direction of modernising the Ottoman Empire, its administration and armed forces, could eventually be embarked upon. For by then it had become clear that the previous *Niẓām-ï Djedīd* had represented merely a tinkering with an old system which was incapable of being transformed into a modern one; a totally new start was necessary.

(F. Babinger-[C.E. Bosworth])

NIẒĀMĪ ʿARŪḌĪ SAMARḲANDĪ, Aḥmad b. ʿUmar b. ʿAlī, took the *taḵẖalluṣ* of Niẓāmī and the honorific Nadjm al-Dīn (or Niẓām al-Dīn); he was usually called ʿArūḍī (the "prosodist") to distinguish him from other Niẓāmīs (particularly the great Niẓāmī of Gandja [*q.v.*], cf. the anecdote quoted by E.G. Browne, *Lit. hist. of Pers.*, ii, 339). According to Browne, Niẓāmī is one of the most interesting and remarkable Persian writers of prose: "one of those who throw most light on the intimate life of Persian and Central Asian Courts in the twelfth century of our era". He was a court poet who served faithfully the Ghūrid [*q.v.*] princes for 45 years (he would thus be born at the end of the 5th/11th century), according to what he tells us at the beginning of the *Čahār maḳāla*, the only work by him that has come down to us. His verse has been lost, at least except for fragments; Dawlatshāh (ed. Browne, 60-1) only gives one couplet which does not seem to be by him. ʿAwfī (*Lubāb*, ed. Browne, 207-8) quotes five poetical fragments (mostly occasional pieces) and adds that Niẓāmī composed several *mathnawī*, the titles of which have not survived. The only biographical information we possess about Niẓāmī comes from himself. In 504/1110-11 he was in Samarḳand collecting traditions relating to the poet Rūdakī (*Čahār maḳāla*, text, 33); in 506/1112-13 he met ʿUmar Khayyām in Balkh (*ibid.*, 63) and three years later he was living in Harāt (*ibid.*, 44); in the following year (510/1116-17), finding himself in poverty in Nīshāpūr (*ibid.*, 9), he went to Ṭūs in the hope of gaining the favour of the Saldjūḳ Sultan Sandjar [*q.v.*] who was encamped outside the town (40-1); in Ṭūs he visited the tomb of Firdawsī (51) and collected information about him which he put in his book (47-8). Encouraged by Muʿizzī [*q.v.*], Sandjar's poet-laureate, he succeeded in attracting the prince's attention; his fame and fortune probably date from this time; in 512/1118-19 we find him again at Nīshāpūr (69); and again in 514/1120-1 when he heard from the lips of Muʿizzī an anecdote about Maḥmūd and Firdawsī (50-51); in 530/1136 he returned to this town and visited the tomb of Khayyām (63); and in 547/1152 he fled into hiding after the defeat of the Ghurīd army by Sandjar near Harāt (87). His "Four Discourses" (*Čahār maḳāla*) were probably written in 551/1156. For the remainder of his life we have no data. There is reason to believe he practised medicine and astrology (cf. text, 65, 87). As to his poetry, in spite of the satisfaction he expresses with it, it is not of the first rank, to judge by the fragments that survive; in any case, it was very inferior to his prose, which Browne says is almost unequalled in Persian.

The *Čahār maḳāla* consists of four discourses, each of which deals with one of the classes of men whom the author regards as indispensable in the service of kings: secretaries, poets, astrologers and physicians. Each discourse begins with general considerations, which are followed by anecdotes, often from the writer's personal experience. The number of these anecdotes, which form the most interesting and valuable part of the book, is about forty; some give valuable information on the literary and scientific state of Persia. We may say that the "Four Discourses" (especially the second) and ʿAwfī's *Lubāb* are the two old works which deal systematically with Persian poetry. Dawlatshāh made a great deal of use of it (cf. Browne, *Sources of Dawlatshāh*, in *JRAS* [1899], 37-69). We may specially point out that it is to Niẓāmī that we owe the earliest notice of Firdawsī and the only contemporary reference to Khayyām. On the other hand, we must point out the historical inaccuracy of certain passages, even in the case of events in which Niẓāmī claims to have taken part. His book is mentioned or quoted by ʿAwfī (*Lubāb*), Ibn Isfandiyār (*Hist. of Ṭabaristān*), Mustawfī Ḳazwīnī (*Tārīkh-i guzīda*), Djāmī (*Silsilat al-dhahab*), Ghaffārī (*Nigāristān*). Ḥādjdjī Khalīfa speaks of a *Madjmūʿ al-nawādir* which he thinks is different from the *Čahār maḳāla*; but Mīrzā Muḥammad Ḳazwīnī has shown that this is another title of the same book.

Bibliography: Niẓāmī ʿArūḍī's work has been edited in full by Mīrzā Muḥammad Ḳazwīnī and tr. by E.G. Browne, Pers. text, 1910, English tr., 1921, French tr. Isabelle de Gastines, *Les quatre discours*, Paris 1968; lith. ed. Tehran 1305/1887, and an edn. by Muḥammad Muʿīn, Tehran 1333 *sh.*/1954. Cf. *GIPh*, ii, index; Browne, *LHP*, ii, index; J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 221-2; Ḥādjdjī Khalīfa, ed. (H. Massé)

NIẒĀMĪ GANDJAWĪ, Djamāl al-Dīn Abū Muḥammad Ilyās b. Yūsuf b. Zakī Muʾayyad, one of the greatest Persian poets and thinkers. He was born and spent most, if not all, of his life in Gandja (called Elisavetpol and Kirovabad during the Imperial Russian and Soviet periods), Niẓāmī being his pen-name. In recognition of his vast knowledge and brilliant mind, the honorific title of *ḥakīm*, "learned doctor," was bestowed upon him by scholars. From his poetry, it is evident that he was learned not only in mathematics, astronomy, medicine, jurisprudence, history, and philosophy but also in music and the arts. His work is a synthesis of Persian literary achievements up to his time.

The traditional biographers, and some modern researchers, differ by six years about the exact date of his birth (535-40/1141-6), and as much as thirty-seven years about the date of his death (575-613/1180-1217). Now there is no doubt, however, that he died in the 7th/13th century, and the earlier dates must be discarded as erroneous. UNESCO recognised the 1141 date as his birth date and declared 1991 the year of Niẓāmī. To honour the 850th anniversary of his birth, there were international Niẓāmī congresses held in 1991 in Washington, Los Angeles, London and Tabrīz.

Usually, there is more precise biographical information about the Persian court poets, but Niẓāmī was not a court poet; he feared loss of integrity in this role and craved primarily for the freedom of artistic creation. His five masterpieces are known collectively as the *Khamsa*, Quintet, or the *Pandj gandj*, the Five Treasures. The five epic poems represent a total of close to 30,000 couplets and they constitute a breakthrough in Persian literature. Niẓāmī was a master in the genre of the romantic epic. In erotic sensuous verse, he explains what makes human beings behave as they do, revealing their follies and their glories, all their struggles, unbridled passions and tragedies.

Though he did not write for the stage, he could be

called a master dramatist. The plot in his romantic stories is carefully constructed to enhance the stories' psychological complexities. The characters work and grow under the stress of action to discover things about themselves and others and to make swift decisions. He delineated simple people with as much insight and compassion as the princely heroes in his *mathnawīs*. Artisans were particularly dear to him. Painters, sculptors, architects and musicians are carefully portrayed and often play crucial roles. The romance of Khusraw and Shīrīn is a very important source of information about the role of artists in pre-Mongol Persia as well as the education and training methods of the artists. The *Khamsa* serves as a principal source of our knowledge of 6th/12th century Persian musical composition and instruments. There have been few poets other than Niẓāmī in the long and rich history of Persian literature who have had such an influence and impact on poets, calligraphers, miniature painters, musicians and, in recent times, on people of the theatre, film and ballet, and his influence has extended beyond Persia proper to such adjacent regions as Central Asia, the Caucasus, Asia Minor and Muslim India.

Considered as one of the greatest poems of the Near and Middle East, the number of imitations of, and sequels to, Niẓāmī's *Khamsa* or the separate poems of it is without precedent. The most popular have always been the three romantic epics: *Khusraw wa Shīrīn*, *Laylā wa Madjnūn*, and *Haft paykar*. Besides the *Khamsa*, an incomplete *Dīwān* of Niẓāmī's poetry exists.

Makhzan al-asrār, The Treasury of Mysteries, is the first *mathnawī* poem in Niẓāmī's *Khamsa*. It is a didactico-philosophical poem with mystical overtones. It is the shortest *mathnawī* of the quintet and is comprised of some 2,260 couplets written in the *sarīʿ maṭwī mawḳūf* metre. Most probably it was completed in the year 582/1184-5, though the majority of scholars have tended to consider the year 570 or 572 as the date of its completion, and was dedicated to a patron of art and culture, Fakhr al-Dīn Bahrāmshāh of the Turcoman Mengüdjek [*q.v.*] dynasty of Erzindjan; according to some historians and biographers, Niẓāmī was richly rewarded by Bahrāmshāh for the poem.

To Niẓāmī, truth was the very essence of poetry. On this principle, he attacks the court poets who sell their integrity and talents for earthly returns. The Islamic law served as the loom on which the philosophy of his *Makhzan al-asrār* was woven in intricate patterns. He was looking for universal justice, and is trying to protect the poor and humble people and to put under scrutiny the excesses of the powerful of the world. The guidelines for people in the poem are accompanied by warnings of the transitory nature of life. *Makhzan al-asrār* is an emulation of Sanāʾī's *Ḥadīḳat al-ḥaḳīḳa*, and Niẓāmī acknowledges this but stresses his own superiority. The similarities between Sanāʾī's poem and Niẓāmī's are in the ethico-philosophical genre, but Niẓāmī used a different metre and organised the whole poem in a different way.

The language of Niẓāmī is unconventional. He introduces new and lucid metaphors and images as well as coining new words. Almost each couplet in *The Treasury of Mysteries* is enigmatic, making the poem one of the most difficult to understand in all of Persian literature. The difficult language, with its extremely austere ethical demands, made this poem not very popular among the general public. Nevertheless, it became a model for countless numbers of imitators throughout the East; in Persia alone, there were about forty first-class imitations of *Makhzan al-asrār*.

Although some scholars consider *Makhzan al-asrār* a mystical poem, the mysticism with its symbolism is apparent only in the introduction, which is infused with the essence of Ṣūfī thought. In the main body of the book one can detect scattered mystical overtones, but it is up to the reader to arrive at the final interpretation.

Structurally, the poem begins with a large body of introductory matter which contains about 825 couplets or a little more than one-third of the whole book. Here, Niẓāmī established a pattern for the introductory chapters not only of his later epics but also for almost all epics written thereafter. They include verses in worship of God, followed by a chapter of praise and veneration of the Prophet and a description of Muḥammad's ascension to the heavens. The twenty *maḳalāt* or discourses that follow cover some 1,400 couplets.

Khusraw wa Shīrīn is the second poem of Niẓāmī's *Khamsa* and the first of his romantic epics. Its protagonists are Khusraw II (590-628), the last great Sāsānid monarch, known as Parwīz [*q.v.*], the Victorious, and his mistress Shīrīn. Their love was recorded by many subsequent Islamic writers, and Firdawsī devoted more than 4,000 couplets to Khusraw II's reign in his *Shāh-nāma*. It was Niẓāmī, however, who gave the story a real structural unity. Infusing it with his own profound experience of love and expanding it with his thoughts on religion, philosophy, and government, he created a romance of great dramatic intensity. The story has a constant forward drive with exposition, challenge, mystery, crisis, climax, resolution, and finally, catastrophe. The action increases in complexity as the protagonists face mounting complications. Khusraw and Shīrīn are not able to meet for a long time, despite their untiring efforts and the help of their confidant. Then, after they do meet, they are forced apart by the political marriage of Khusraw and Maryam. When Khusraw promises Shīrīn to Farhād as a prize for completing a feat of daring and endurance, the story nearly comes to a premature conclusion.

After the death of Maryam and the murder-suicide of Farhād, it seems that all obstacles are removed and the lovers will be united. But Niẓāmī introduces an affair between Khusraw and a girl from Iṣfahān that further complicates and delays his union with Shīrīn. Finally, on the lovers' wedding night, Niẓāmī creates a bizarre episode, a humorous entr'acte that gives the reader or listener a chance to take a deep breath before the epic's tragic climax. Khusraw gets drunk and Shīrīn replaces her presence in the nuptial chamber with that of a knotty, wizened old crone. Through these dramatic devices, Niẓāmī makes a powerful commentary on human behaviour.

Niẓāmī's deep understanding of women is strongly expressed in *Khusraw wa Shīrīn*. Shīrīn is the central character and there is no question that she is a poetic tribute to Niẓāmī's wife Āfāḳ. She is well educated, independent, fearless, resourceful, imaginative, erotic and humorous. Her loyalty knows no bounds. That she is a queen rather than a commoner, as is the case in Firdawsī's *Shāh-nāma*, gives the story a stately quality. Her association with Armenia is, perhaps, a reflection of its geographical proximity to Gandja, and she is, like the Byzantine Maryam, a Christian; Niẓāmī was a pious Muslim, but he tolerated and respected other religions.

Shīrīn's sense of justice is so great that she forswears Khusraw's love until he should regain his throne, thus fulfilling his responsibility to his people. Even after they are married, she continues to exert a

strong influence on Khusraw, educating him as always through example and love; as a result, the country flourished, justice was observed and strengthened, and science, religion and philosophy thrived.

The tension between the strength of Shīrīn and the weakness of Khusraw is enhanced dramatically by Niẓāmī's tight control of plot and setting, and in his development of the towering figure of Farhād. Episodes of meeting and of missing, of searching and of waiting, are richly entwined with scenes of the barren desert and of luxurious court life; asceticism vies with sensuality.

Niẓāmī's use of allegories, parables and words with double meaning raised the Persian language to a new height. The poem is written in the light, flowing, graceful *hazadj musaddas maksūr* metre, deliberately imitating that used by Gurgānī in *Vīs u Rāmīn*. There are about 6,500 couplets.

Its exact date of completion is uncertain. The year 576/1180 is given in some manuscripts, but many scholars believe, on internal evidence, that it was finished after 581/1184. Nor are the three dedicatory invocations—to the Saldjūḳ Sultan Ṭoghrīl III and to his regents, the Atabegs Muḥammad Djahān Pahlawān and Ḳīzīl Arslan—useful in establishing a secure date. Although the first Atabeg was the ruler of Gandja, where Niẓāmī lived, and the second one gave Niẓāmī title to a village, these dedications may well have been added by Niẓāmī for political reasons or may be later interpolations. The earliest extant text, dating from 763/1362, was written some 150 years after Niẓāmī's death and is suspected to contain many apocryphal verses.

The great Persian authority on Niẓāmī, Waḥīd Dastgirdī, calls *Khusraw wa Shīrīn* "the best historical fable of love and chastity, the treasure of eloquence, counsel and wisdom," whilst Bertels believed that *Khusraw wa Shīrīn* is "one of the great masterpieces of world literature. For the first time in the poetry of the Near East, the personality of a human being has been shown with all its richness, with all its contradictions and ups and downs."

Laylā wa Madjnūn is perhaps the most popular romance in the Islamic world. Versions appear in prose, song, and poetry in almost every language within the vast area stretching from the Chinese border to the Atlantic ocean. But because of the psychological depth and universality invested in the story, Niẓāmī's epic still serves as the model for all others. It was commissioned by Abu 'l-Muẓaffar Akhsitān Shirwān-Shāh, a Caucasian ruler proud of his Persian origin and a benefactor of Persian culture.

For centuries, the legend of Laylā and Madjnūn had been a popular theme of the short love poems and songs of the Bedouins, and during the early days of the Muslim era, it had been absorbed and embellished by the Persians. Madjnūn is traditionally identified with a poet known as Ḳays b. al-Mulawwaḥ, who probably lived in the second half of the 1st/7th century in the Nadjd desert of Arabia. Although it is probable that there was more than one love-crazed poet called Madjnūn, possessed by a djinn or a genie, the Russian scholar Kračkovski in 1946 erased most doubts as to his historical identity.

Neither the arid desert setting nor the spare plot of Madjnūn and Laylā's romance inspired Niẓāmī's poetic vision, but he could not refuse the royal commission. And so he expanded and deepened the plot and the personalities, creating from the fragmentary versions a full-scale dramatic poem.

For his romance, Niẓāmī chose an easy metre, the short *hazadj musaddas*. *Laylā wa Madjnūn* is comprised of at least 4,000 distichs. Niẓāmī wrote that it took him "less than four months" to compose it, which implies a trance-like state of writing. The exact number of distichs has long been a source of controversy, especially since those that are considered apocryphal alter the plot significantly. Waḥīd Dastgirdī's critical edition, based on thirty manuscripts copied between the 8th/14th and 11th/17th centuries, totals 4,650 distichs, of which Dastgirdī considers 600 to be spurious, added by later writers and scribes, who also transposed an additional 400 distichs to cover their handiwork. Gelpke consider Dastgirdī's the only authoritative text and based his prose adaptation of the poem upon it. Browne, Massé and Arberry, however, translated many passages as authentic which Dastgirdī and Gelpke consider interpolations. E.É. Bertels, the Russian editor of the Persian text published in 1965, found 4,659 distichs valid, using the ten most famous manuscripts. It is, of course, possible that Niẓāmī himself rewrote the poem, making his own changes and additions. Many of the great poets who imitated Niẓāmī included so-called spurious passages and plots, and their poetic sensibility should be respected.

Some manuscripts of *Laylā wa Madjnūn* bear the date 584/1188 as the year of completion, others, 588/1192; still others, as was common in copied manuscripts, give both dates. The earlier year is supported in the text by an *abdjad* dating. Whatever its length and its exact date of completion, there is no doubt that Niẓāmī used all the material, written and oral, available to him, adding, altering and transforming as his poetic genius prompted, in order to create this tragic masterpiece.

Niẓāmī's originality lies in his psychological portrayal of the richness and complexity of the human soul when confronted with intense and abiding love. Madjnūn's compulsions, anxieties, frustrations, and passions are not slighted as he moves inexorably toward an ideal love that involves renunciation and, ultimately, transcendence. Many critics have interpreted this as mystical love; but if there is a mystic strain in Niẓāmī, it is subtle and covert; it never destroys or blurs the sharp psychological and the physical identity of its protagonist. It is virtually impossible to draw a clear line in Niẓāmī's poetry between the mystical and the erotic, the sacred and the profane. The psychological profile of Laylā is less deeply drawn, but her enduring love is no less extraordinary an achievement.

Laylā and Madjnūn are scourged by separation, social ostracism, self-denial, and spiritual and physical suffering from the very beginning until their tragic ends. It is quite possible that, to soften the tragedy, Niẓāmī wrote a second version, weaving into it the love story of Zayd for his cousin Zaynab, which parallels that of Madjnūn and Laylā; the couples become messengers for one another and to some degree are able to mitigate the relentless curse of separation.

The expanded version of *Laylā wa Madjnūn* closes with a vivid dream sequence of Paradise. Madjnūn and Laylā, sitting on magnificent carpets, are radiantly embracing, wine cups in hand. Many scholars believe this to be an interpolation, but if its date can be drawn from the moving dedication to the Shirwān-Shāh's crown prince, in which Niẓāmī counsels his own son Muḥammad, addressing him as a boy of fourteen, the entire Zayd-Zaynab addition may well be Niẓāmī's own work.

Imitators of Niẓāmī's *Laylā wa Madjnūn* can be

listed by the hundreds, and the romance is popular even today. According to Bertels and A.A. Ḥikmat, counting only the most famous versions, there are twenty in Persian, forty in Turkish, three in Azeri Turkish, one in Uzbek, one in Kurdish and two in Tajik [see further, MADJNŪN-LAYLĀ].

Haft paykar is the fourth and the most intricate poem of Niẓāmī's *Khamsa*. It is a bedazzling exploration of the pleasures of love. At the same time, it can be interpreted as mystical. The seven stories told by the seven princesses can be interpreted as the seven stations of human life, or the seven aspects of human destiny, or the seven stages of the mystic way. In fact, the title of the story can be translated as the "Seven Portraits", the "Seven Effigies", as well as the "Seven Princesses". The poem is also known as the *Haft gunbad* or "Seven Domes".

In Islamic cosmology, the earth was placed in the centre of the seven planets: the moon, Mercury, Venus, the sun, Mars, Jupiter and Saturn. These were considered agents of God, and in their motion influenced beings and events on earth. Niẓāmī firmly believed as well that the unity of the world could be perceived through arithmetical, geometrical, and musical relations. Numbers were the key to the one interconnected universe; for through numbers multiplicity becomes unity and discordance, harmony. Hence Niẓāmī used seven, the number that has always been pre-eminent among the people of the East, as the major motif of *Haft paykar*; for in Islam, seven is considered as the first perfect number.

In *Haft paykar*, the phantasmagoric movement of its hero, Bahrām Gūr, as he visits each princess, covers a symbolic path between black, or the hidden majesty of the Divine, and white, or purity and unity. The princesses and their pavilions are manifestations of specific planets, specific climes, colours, and days. The pavilions are domed, representing the structure of the heavens. Niẓāmī illustrates the harmony of the universe, the affinity of the sacred and the profane, and the concordance of ancient and Islamic Iran.

The number seven casts its magic spell throughout the *Haft paykar*. Completed in the year 593/1197, the *Haft paykar* was commissioned by and dedicated to the prince of Maragha, ʿAlāʾ al-Dīn Kurp Arslan, who allowed the already famous Niẓāmī a free hand in choosing his theme. The poet chose an historical figure for his hero, the Sāsānid emperor and hero Bahrām Gūr, the "wild ass" or "the hunter of wild asses" [see BAHRĀM].

The main body of *Haft paykar* brings Niẓāmī's full creative power into play. It is made up of the stories told by the seven princesses to enchant Bahrām Gūr. Each has been installed in her own paradisial pavilion in a specially built seven-domed palace near to his own. Bahrām passes from one to another on succeeding days of the week, loving each and enthralled by each. There are stories within stories within stories, playing sensually on all the perceptions. The colours and ornamentation of the pavilions, the associated colours of the garments, the sparkling jewels of Bahrām and the princesses appeal to the visual instincts. The continuous background music pleases the ear. The musky perfumes and the pungent incense excite the olfactory nerves. Taste is aroused by mellow wines and exotic foods, and touch by the finest silks and brocades. All these serve as aphrodisiacs, stimulating sensual desire. But Niẓāmī, always true to moderation, tempers the erotic with restraint and hedonistic pleasure with responsibility to affairs of state. In spite of his delight in fabricating a myriad of tantalising scenes and metaphors, the essence of this *mathnawī* is that the physical passions are most preciously enjoyed when set in a context of virtue, simplicity, and kindness.

Haft paykar is written in graceful *khafīf* hexameters, and is estimated to contain from 4,637 to 5,136 couplets.

The Persian legend of Alexander the Great seems to overshadow all of the other fantastic Alexander stories, not only in the tales of the successful accomplishment of many a "mission impossible" but especially concerning the nature of his career. In Persia he rose from the stature of an evil foreign conqueror of the country to that of a national hero king, and even more, to that of a great prophet of God, preparing the nations for Islam [see AL-ISKANDAR].

Out of the many stories of Alexander in Persian literature, that of Niẓāmī is unsurpassed. It is a highly imaginative, dramatic and refined epic. In it, heroic behaviour is muted by psychological characterisation, piety and mysticism are balanced by common sense and situational humour, philosophy is counteracted by romanticism, and nationalism is softened by cosmopolitan ideals of Islam. The virtuosity of Niẓāmī's storytelling and his unbridled fantasy are matched by the brilliance of his language which is full of dazzling imagery and extended metaphor.

Niẓāmī's account of the adventures of Alexander the Great is probably the first work in Persian literature that is divided into two parts. The first half is called *Sharaf-nāma* (The Book of Honour) and the second part *Iḳbāl-nāma* (The Book of Wisdom). The two parts are also known, especially in India, as the *Iskandar-nāma-yi barrī* (The Adventures of Alexander by Land), and the *Iskandar-nāma-yi baḥrī* (The Adventures of Alexander by Sea). The two parts, although constituting a full span of Alexander's life from birth to death under the general title of *Iskandar-nāma*, are treated by the poet as two separate entities, each covering a cycle in Alexander's life. In the first cycle, Alexander appears as the conqueror of the world, in the second, as the philosopher and prophet.

The introduction to the first part of the *Iskandar-nāma* is a little more than twice as long as the introduction to the second part. The introductions reflect the length of both parts; the *Sharaf-nāma* contains about 6,800 couplets and the *Iḳbāl-nāma* about 3,680 couplets, making *Iskandar-nāma*, with about 10,500 couplets, the longest poem of Niẓāmī's *Khamsa*.

Confusion has been created among scholars by various dates given for the completion of the poem, as well as by the various people to whom it or its parts are dedicated in the available manuscripts. Some of them have considered the *Iskandar-nāma* to be the fourth of Niẓāmī's epic quintet, written in 587/1191 and dedicated to ʿIzz al-Dīn Masʿūd I, the Zangid ruler of Mawṣil (572-89/1176-93). But because this date is contrary to many references and events in the text which would indicate a later date, some scholars believe that the work was dedicated to ʿIzz al-Dīn Masʿūd II, of the same dynasty (607-15/1211-18). If this is the case, then the span of Niẓāmī's life would have to be stretched and the date of his death moved from the traditional one of 599/1203 or 605/1209 to some time after ʿIzz al-Dīn Masʿūd II came to the throne in 607/1211.

In the preface to the *Sharaf-nāma*, Niẓāmī declares that he has already completed four *mathnawīs*. This would indicate that the *Iskandar-nāma* was the fifth and last of his epic poems and was, therefore, composed after 593/1197, the date of completion of *Haft paykar*.

Those whose names have come down to us in association with the manuscripts are: Nuṣrat al-Dīn

Djahān Pahlawān from the rulers of Ādharbāydjān, ʿIzz al-Dīn Masʿūd from the rulers of Mawṣil, and Nuṣrat al-Dīn Abū Bakr Pīshkīn (Bīshkīn) from the rulers in the Caucasus.

No doubt Pseudo-Callisthenes' account of the life of Alexander was known to Niẓāmī [see ISKANDAR NĀMA], but it was, however, Firdawsī who was his source of inspiration in composing the *Iskandar-nāma*. He, therefore, chose for it the heroic epic *mutaḳārib* metre which Firdawsī had employed in his *Shāh-nāma*. The *Sharaf-nāma*, the first portion of the *Iskandar-nāma*, is devoted to Alexander's conquest of the world. His conquest, however, was already shaped by the idea of his future prophetic mission. It was, therefore, not for an empire that Alexander set out to conquer but for the purpose of liberating oppressed peoples; assisting the Egyptians in their struggle against the Zangīs; rescuing Queen Nushāba from the hands of the Russians; freeing the Persian people from the enslavement of Darius and the Zoroastrian priests; securing safe passage through bandit territories; guiding travellers on land and sea; and assisting in building towns.

The second part of the *Iskandar-nāma*, the *Iḳbāl-nāma*, portrays Alexander as a great sage and prophet. With the advent of Islam, Alexander found his place as Dhu 'l-Ḳarnayn in Ḳurʾān, XVIII, 83/82-98, which encouraged Muslims to glorify him. After the conquest of the world, Alexander devoted his time to the spiritual gains of his conquests. He transported scholarly tomes from all parts of the known world to be translated for his library and surrounded himself with the greatest minds in the ancient world. Niẓāmī is not specific in describing Alexander's religion, but it is a kind of monotheism which prepares the way for Islam. Like Caesar who conquered the future lands of Christendom, Alexander conquered the future domain of Islam, so that he is the archetype of the ideal ruler and a wise prophet.

By comparison with his other *mathnawīs*, the *Iskandar-nāma* is very uneven. In the others, the stories not directly related to the main current are held together structurally, giving an impression of wholeness, whereas in the *Iskandar-nāma* they are loosely woven into the massive structure.

NIẒĀMĪ, Ḥasan, a Persian historian whose full name was Ṣadr al-Dīn Muḥammad b. Ḥasan. Born in Nīshāpūr, he went on the advice of his *shaykh Muḥammad Kūfī to* Ghaznī to give an opportunity to his remarkable talents as a stylist. A severe illness forced him to leave Ghaznī, and he went to Dihlī were he obtained an appointment as court historian to the Ghūrid Sultans and began, in 602/1206, his great historical work *Tādj al-maʾāthir fi 'l-taʾrīkh*, which brought him great fame. It deals with the history of the first three sultans of Dihlī—the Ghūrid Muḥammad b. Sām (588-602/1192-1206), and his slaves Ḳuṭb al-Dīn Aybak (602-7/1206-10) and Shams al-Dīn Iltutmish (607-33/1210-35). The book begins with the capture of Adjmēr by Muᶜizz al-Dīn in 587/1191 and ends with the appointment of Nāṣir al-Dīn Muḥammad as governor of Lahore (614/1217). An Appendix contains a panegyric of Iltutmish and his campaigns of conquest. The work was very highly esteemed in the Muslim East as a model of elegant style. It is written in high-flown and difficult language and has a large number of poetical passages inserted in it. It is only with difficulty that the historical facts can be extricated from the medley of rhetoric, but nevertheless the book is of undeniable value for the history of India and Afghānistān.

NIẒĀMIYYA, a term often used in the sources for Saldjūḳ history to designate the partisans and protégés of the great vizier Niẓām al-Mulk [*q.v.*], after his death attached to and operating with the sons and descendants of Niẓām al-Mulk. The influence of these partisans was especially notable in the years just after Sultan Malik Shāh's death in 485/1092, when they actively promoted the cause of and secured the sultanate for Berk-yaruḳ b. Malik Shāh [*q.v.*] against his infant half-brother Maḥmūd, the candidate of Malik Shāh's widow Terken Khātūn and her ally the vizier Tādj al-Mulk Abu 'l-Ghanāʾim. In this present article, it is the descendants of Niẓām al-Mulk, who filled many offices in the administrations of the Great Saldjūḳ sultans and also, at times, of the ᶜAbbāsid caliphs, who will be considered.

At least nine of Niẓām al-Mulk's sons achieved some office, civil and/or military, in the decades after his assassination in 485/1092. There was a distinct feeling among contemporaries that, in accordance with the belief that the arcana and the expertise of certain professions or skills were handed down within the families of their original exponents, the supreme capability of Niẓām al-Mulk would manifest itself in his progeny. On the whole, this faith was unjustified.

Shams al-Mulk ᶜUthmān was *ᶜāriḍ al-djaysh* for Sultan Muḥammad b. Malik Shāh [*q.v.*], and then *mustawfī* and an inefficient vizier to Sultan Maḥmūd b. Muḥammad [*q.v.*] in the years 516-17/1122-3. No fewer than three of Niẓām al-Mulk's sons served Berk-yaruḳ as vizier: Muʾayyid al-Mulk ᶜUbayd Allāh, Fakhr al-Mulk al-Muẓaffar and the drunken and incompetent ᶜIzz al-Mulk Ḥasan. Fakhr al-Mulk also served Sandjar b. Malik Shāh [*q.v.*] as vizier until his assassination in Khurāsān in 500/1106 by a Bāṭinī. Muʾayyid al-Mulk was probably the most talented and competent of the sons of Niẓām al-Mulk, but was dismissed by the sultan in 488/1095 through the intrigues of Berk-yaruḳ's mother Zubayda Khātūn and Muʾayyid al-Mulk's rival Madjd al-Mulk al-Balasānī; after then, he served Muḥammad b. Malik Shāh as vizier until Berk-yaruḳ defeated his brother in battle at Hamadān in 494/1101 and executed his former vizier as a renegade. Fakhr al-Mulk had served Tutush b. Alp Arslan [*q.v.*], Saldjūḳ ruler in Syria, before entering the service of Berk-yaruḳ, and subsequently went to serve Sandjar until 500/1107 (his son Naṣīr al-Dīn Ṭāhir was also later to serve as Sandjar's vizier from 527/1133 till his own death in 548/1153). Djamāl al-Mulk Muḥammad b. Niẓām al-Mulk (d. 473/1080-1) was governor of Balkh during his father's lifetime; and ᶜImād al-Mulk Abu 'l-Ḳāsim was vizier to Malik Shāh's brother Böri Bars (d. 488/1095), the governor of Herat.

Of the next generations, in addition to Fakhr al-Mulk's son Naṣīr al-Dīn Ṭāhir (see above), his brother Ḳiwām al-Mulk Ṣadr al-Dīn Muḥammad served Sandjar 500-11/1107-17, whilst Naṣīr al-Dīn Ṭāhir's son Niẓām al-Mulk Ḳiwām al-Dīn Ḥasan served Sulaymān Shāh b. Muḥammad, briefly sultan in Baghdād 555-6/1160-1. Another of Niẓām al-Mulk's great-grandsons, Shams al-Dīn Yaᶜḳūb b. Isḥāḳ b. Fakhr al-Mulk, is mentioned as a patron of the local historian of Bayhaḳ, ᶜAlī b. Zayd Ibn Fun-

duḳ [*q.v.*] (Yāḳūt, *Irshād*, v, 216); with this generation, the descendants of Niẓām al-Mulk fade from public life and from mention in the sources.

Finally, of the great vizier's collaterals, his brother Abu 'l-Ḳāsim ʿAbd Allāh's son Abu 'l-Maḥāsin Shihāb al-Dīn functioned as Sandjar's vizier 511-15/1117-21; and Ibn Funduḳ mentions several other collateral relatives as living in the Bayhaḳ district in the later half of the 6th/12th century.

Bibliography: See M.F. Sanaullah, *The decline of the Saljūqid empire*, Calcutta 1938, 40 ff.; ʿAbbās Iḳbāl, *Wizārat dar ʿahd-i salāṭīn-i buzurg saldjūḳī*, Tehran 1338/1959; Carla L. Klausner, *The Seljuk vezirate, a study of civil administration 1055-1194*, Cambridge, Mass. 1973. There are genealogical tables of the family of Niẓām al-Mulk and his collaterals in Iḳbāl, *op. cit.*, after p. 318; the table in Zambaur, *Manuel*, 223, is incomplete and not wholly accurate.

al-NIẒĀMIYYA, al-MADRASA, the designation given to the colleges of Sunnī instruction founded in ʿIrāḳ, al-Djazīra and Persia by the great Saldjūḳ vizier Niẓām al-Mulk [*q.v.*]. See for these, madrasa, I. 4, and niẓām al-mulk. (Ed.)

NIZĀR b. MAʿADD, common ancestor of the greater part of the Arab tribes of the north, according to the accepted genealogical system. Genealogy: Nizār b. Maʿadd b. ʿAdnān (Wüstenfeld, *Geneal. Tabellen*, A. 3). His mother, Muʿāna bint Djahla, was descended from the pre-Arab race of the Djurhum [*q.v.*]. Genealogical legend, which has preserved mythological features and folklore relating to several eponyms of Arab tribes, is almost silent on the subject of Nizār (an etymological fable about his name: *Tādj al-ʿarūs*, iii, 563, 15-17 from the *Rawḍ al-unuf* of al-Suhaylī (i, 8, 8-10) is without doubt of very late origin, as is shown by the connection which is established with the prophetic mission of Muḥammad; the same etymology from *nazr* "insignificant" is further found in Ibn Durayd, *Kitāb al-Ishtiḳāḳ*, 20, 6; *Mufaḍḍaliyyāt*, ed. Lyall, 763, 16, without the story in question). Tradition has more to say about his four sons Rabīʿa, Muḍar, Anmār, Iyād and about the partition of the paternal heritage among them, in connection with which they visited the Djurhumī *ḥakam* al-Afʿā. Their adventures on the journey (they are able to describe minutely the appearance of a camel they have never seen from the traces it has left) form the subject of a popular story which has parallels among other peoples; its object is to make the origins of the *ḳiyāfa* [*q.v.*] go back to the most remote period (al-Mufaḍḍal b. Salama, *al-Fākhir*, 155-6, and the sources there quoted; al-Ṭabarī, i, 1108-10, etc.); it perhaps is of interest to note that the story was known to Voltaire who introduced it into his *Zadig*.

As Robertson Smith showed a century ago (*Kinship and marriage in early Arabia*[2], 5 ff., 283-9), and as Goldziher has confirmed by numerous quotations (*Muhammedanische Studien*, i, 78-92), the name Nizār only appears late in Arab poetry, while that of Maʿadd (which is found as early as the Byzantine historians Procopius and Nonnosus) appears quite early in it, although its ethnic character is rather vague (as to that of ʿAdnān, still more comprehensive, one of the oldest historians of Arab poetry, Muḥammad b. Sallām, d. 230/844-5, had already pointed out that his name was almost unknown in ancient poetry, *Ṭabaḳāt al-shuʿarāʾ*, ed. Hell, 5, 1; cf. Ibn ʿAbd al-Barr, *al-Inbāh ʿalā ḳabāʾil al-ruʾāh*, Cairo 1350, 48). Before the Umayyad period, the only trace we find of the use of Nizār as an ethnic is in a verse of the pre-Islamic poet Bishr b. Abī Khāzim (in the *Mufaḍḍaliyyāt*, 667, 15) and in another of Kaʿb b. Zuhayr (in al-Ṭabarī, i, 1106, 10); in the verse of Ḥassān b. Thābit, ed. Hirschfeld, lx, 2, the reference is to another Nizār, son of Maʿīṣ b. ʿĀmir b. Luʾayy (Wüstenfeld, *Tabellen*, P. 15) belonging to the Ḳuraysh. The line in Umayya b. Abi 'l-Ṣalt, ed. Schulthess, i, 10, in which the descent of the Thaḳīf from Nizār is celebrated, is apocryphal and is connected with the well-known dispute regarding the origin of the Thaḳīf. The story of the verdict of al-Aḳraʿ b. Ḥābis al-Tamīmī in favour of Djarīr b. ʿAbd Allāh al-Badjalī against Khālid b. Arṭāt al-Kalbī (*Naḳāʾiḍ*, ed. Bevan, 141-2; cf. Ibn Hishām, *Sīra*, ed. Wüstenfeld, 50), in which there is a reference to Nizār and which is placed before Islam, is not less suspect; its object is to defend the northern origin of the Badjīla (descendants of Anmār), often disputed, as well as that of their brethren the Khathʿam [*q.v.*], and to refuse the same origin to the Kalb, descendants of the Ḳuḍāʿa, to which it was attributed just at the time of the strife that raged around the succession to Yazīd I. The *radjaz* verses quoted by Ibn Hishām, *Sīra*, 49 (and often elsewhere; they are sometimes attributed to ʿAmr b. Murra al-Djuhanī, a contemporary of the Prophet, and sometimes to a certain al-Aflaḥ b. al-Yaʿbūb, otherwise unknown), in which we find used, with reference to Ḳuḍāʿa, the verb *tanazzara* "to announce oneself to be descended from Nizār" may be regarded as apocryphal. No stress need be laid on the isolated reference in al-Balādhurī (*Futūḥ*, ed. de Goeje, 276, 16) to the quarters (*khiṭaṭ*) of the Banū Nizār in Kūfa contrasted with those of the Yamanīs; his language simply reflects the position in the author's time or that of his sources, later than the great upheavals of the first century a.h.

It is only from this period, and, to be more exact, after the battle of Mardj Rāhiṭ (65/684 [*q.v.*]) won by the Kalb over the Ḳays, that we begin to find the name Nizār recurring with increasing frequency. It occurs mainly in political poetry: Djarīr, al-Farazdaḳ, al-Akhṭal, al-Ḳuṭāmī and Zufar b. al-Ḥārith use it to designate the common source of the tribes of the north, contrasting it with the terms "Yaman" or "Ḳaḥṭān". The expression *Ibnā Nizārin* "the two sons of Nizār" becomes regular; it indicates the Muḍar (Ḳays ʿAylān) and the Rabīʿa as belonging to one ethnic group; they were previously regarded as unrelated to one another. The tribes descended from Anmār (cf. above) and Iyād (the fourth son of Nizār; but other sources make him a son of Maʿadd) appear only rarely as members of the group. This is what the genealogical systematisation seeks to explain by alleged migrations of Anmār and Iyād into the groups of Yamanī tribes.

But the application of the term Nizār continued to remain vague, more so than those of Ḳays, Muḍar and Rabīʿa, which represent very large groups, but more precise than that of Maʿadd, of which it tends to take the place. This is due to the fact that the term Nizār corresponds to a political ideal rather than to a historical reality; in the latter, the reigning dynasty, claiming descent from Ḳuraysh (themselves, consequently, Nizārīs) had as their henchmen the Kalb, one of the most powerful Yamanī tribes, while the Azd, another tribe of the south, bound to the policy of their most illustrious representatives, the Muhallabids [*q.v.*], were sometimes on the side of the Umayyads and sometimes against them. It was this complicated position that gave rise to the attempt to separate the Ḳuḍāʿa (i.e. the Kalb) from the southern stock in order to make them descendants of Nizār. The story told in *Aghānī*, xi, 160-1, al-Bakrī, *Muʿdjam*,

ed. Wüstenfeld, 14-15, is intended to explain the separation of the Ķuḍāʿa from the rest of the Nizār as a result of the murder of the Nizārī Ya<u>dh</u>kur b. ʿAnaza by the Ķuḍāʿī Ḥazīma b. Nahd. The lines in <u>D</u>jarīr (*Naķāʾiḍ*, 994) sum up very completely the way in which the Ķuḍāʿa-Kalb were connected with the Nizār, while elsewhere (e.g. *ibid.*, 261: al-Farazdaķ) Ķuḍāʿa and Nizār are opposed. Later, at the end of the Umayyad period and especially in the period of the struggle in <u>Kh</u>urāsān which was the prelude to the fall of the dynasty, Nizār (also in the form *Nizāriyya*) became the regular designation which was contrasted with *Yamaniyya*: henceforth the Banū Nizār were to be the representatives of northern Arabism; as early as the period of decline of the Umayyads, the poet al-Kumayt b. Zayd al-Asadī [*q.v.*] had composed a long poem, the *Mu<u>dh</u>ahhaba*, exalting the Nizār at the expense of the Ķaḥṭān; nearly a century later, the Yamanī Diʿbil [*q.v.*] replied to him; these poetical jousts on which the *ʿaṣabiyya*, tribal rivalry, of the two great ethnic groups of the Arabs was nourished, continued down to quite a late date, especially among the Zaydīs of the Yaman.

From what has been said, it is evident that we cannot speak of Nizār as a tribe which had a real historical existence nor, as is the case with the Maʿadd, as a comprehensive term indicating an effective grouping together of a number of tribes of different origin. Nizār is simply a fictitious invention, a label intended to serve political interests. One must, however, ask whence the name came and what were the precedents which suggested its use in the sense above outlined. It is possible that the history of the four sons of Nizār (cf. above), a popular story, the nature and diffusion of which seem to take it back to a very early period and which originally had nothing to do with genealogical tradition, supplied the names on which the *nassābūn* later gave their imagination free play. But this is a pure supposition, which would have to be confirmed by definite proofs.

NIZĀR B. AL-**MUSTANṢIR**, Fāṭimid claimant, born on 10 Rabīʿ I 437/26 September 1045. On the death of his father, having been displaced by his youngest brother al-Mustaʿlī [*q.v.*], Nizār fled to Alexandria, took the title of al-Muṣṭafā li-Dīn Allāh, and rose in revolt early in 488/1095 with the assistance of the governor, Naṣr al-Dawla Aftakīn, who was jealous of al-Afḍal, and the population of the city. He was at first successful in driving back al-Afḍal and advanced as far as the outskirts of Cairo, supported by Arab auxiliaries. Al-Afḍal again took the field against him, and after a short siege in Alexandria he surrendered towards the end of the same year, was taken to Cairo, and there immured by order of al-Mustaʿlī.

By the Ismāʿīlī organisation in Persia [see AL-ḤASAN B. AL-ṢABBĀḤ and ISMĀʿĪLIYYA], Nizār was recognised as the rightful successor of al-Mustanṣir, and this, with its offshoots in Syria, formed a new group (*al-daʿwa al-<u>d</u>jadīda*), opposed to the Mustaʿlian group (*al-daʿwa al-ķadīma*), now known as <u>Kh</u>ō<u>d</u>jas [*q.v.*] and Bohorās [*q.v.*] respectively. A party of the Nizāriyya at first held to the belief that Nizār was not dead and would return as the Mahdī or in company with him, but the majority held that the line of Nizār was continued by the Grand Masters of Alamūt [*q.v.*].

NIZĀRĪ ĶUHISTĀNĪ, ḤAKĪM SAʿD AL-DĪN b. <u>Sh</u>ams al-Dīn b. Muḥammad, Persian poet, born 645/1247-8 in Bīr<u>d</u>jand [*q.v.*], where he died in 720/1320-1. The name Nizārī was not only his nom-de-guerre as a poet, but also seems to indicate the loyalty of his family to Nizār [*q.v.*], the pretender to the Fāṭimid imāmate in the late 5th/11th century whose claim was supported by most Persian Ismāʿīlīs. Reliable facts concerning his life can only be deduced from his own works. According to Borodin, followed by Rypka, he would have been attached to the court of the Kart [*q.v.*] Maliks of Herat, but Bayburdi identified the patrons mentioned by Nizārī as local rulers and Mongol officials in the near vicinity of his native Ķuhistān. The most important were <u>Sh</u>ams al-Dīn ʿAlī <u>Sh</u>āh (reigned 688-708/1289-1308), who belonged to a dynasty ruling over Sīstān, and the *wazīr* ʿAlāʾ al-Dīn Hindū, the representative of the Īl-<u>Kh</u>āns in Khurasan. He worked for them both as an official and as a court poet. In 678-9/1280-1 he made a journey to the Transcaucasian lands, in his days the centre of Mongol power. In the *Ma<u>d</u>jālis al-ʿu<u>sh</u><u>sh</u>āķ* of Kamāl al-Dīn Gāzurgāhī mention is made of two encounters with Saʿdī [*q.v.*] which however belong to the realm of biographical fiction. The same applies probably to the statement in the same source that he ended his life as a humble farmer.

The literary output of Nizārī was considerable, but it has only been preserved in few copies. The most important are the manuscripts of his collected works extant in libraries of St. Petersburg (Public State Library, dated 837/1434) and Dushambe (Academy of Sciences, dated 972/1564-5). They are both divided into fifteen parts, comprising volumes of *ķaṣīdas*, *<u>gh</u>azals*, quatrains and other lyrical forms, as well as several *ma<u>th</u>nawīs*. His earliest work, the *Safar-nāma*, contains a lively and valuable description of his journey to Transcaucasia. *Adab-nāma* (695/1295-6), in the metre *mutaķārib*, is a didactical poem after the fashion of Saʿdī's *Būstān*. The romance *Azhar u Mazhar* (written about 700/1300-1), a poem in *haza<u>d</u>j* of about 10.000 lines, is situated in the Arabian desert. The plot was inspired by the *<u>Kh</u>usraw-nāma* of Farīd al-Dīn ʿAṭṭār [*q.v.*]. A *tenzone* between Night and Day, in the metre *<u>kh</u>afīf*, was written by Nizārī to vindicate himself when he was accused of heretical convictions. *Dastūr-nāma* (710/1310) is a short didactical work in *mutaķārib* (edited and translated by <u>Ye</u>.E. Bertel's in *Vostočniy Sbornik*, Leningrad 1926, i, 37-104).

Nizārī's name remained relatively obscure in the history of Persian literature. His Ismāʿīlī background is noticeable in his works although this is often hidden behind Imāmī <u>Sh</u>īʿī formulations more acceptable to his environment. There is also a strong Ṣūfī element, especially in the *<u>gh</u>azals*, which constitute the most important part of his lyrical poetry. Some of these poems were cited by the mediaeval anthologists <u>D</u>jā<u>d</u>jarmī [*q.v.*] and Dawlat<u>sh</u>āh. A competent critic like <u>D</u>jāmī [*q.v.*] compared his poetic "taste" (*salīķa*) to that of Ḥāfiẓ [*q.v.*]. Modern Russian and Tadjik

scholars have stressed his freedom of thought and the irreverent tone to be heard in his poetry.

Bibliography: Apart from the *Dastūr-nāma*, the works of Nizārī remained unpublished to date. A detailed analysis of his life and works can be found in Č.G. Bayburdi, *Žizn' i tvorčestvo Nizari*, Moscow 1966. See further: Djādjarmī, *Mu'nis al-aḥrār*, ed. M.Ṣ. (J.T.P. de Bruijn)

NIZĀRIYYA, a major branch of the Ismāʿīliyya [*q.v.*], whose beginnings can be traced to the succession dispute following the death of the Fāṭimid [*q.v.*] Imām and caliph al-Mustanṣir bi'llāh (d. 487/1094). Those who gave their allegiance to Nizār, al-Mustanṣir's eldest son, as the designated successor and *imām*, and subsequently to those claiming descent from him, were called Nizāriyya. One of the most important figures in consolidating Nizārī identity in its early phase, particularly in Persia, was the well-known figure and *dāʿī* Ḥasan-i Ṣabbāḥ [*q.v.*], under whose leadership the Nizārīs were able to establish a confederation of principalities in Persia and Syria, linked to the mountain stronghold of Alamūt [*q.v.*]. The period also marks a re-interpretation of Fāṭimid Ismāʿīlī doctrine, with a greater emphasis on the role of the Imām as the authoritative interpreter of Muslim doctrine and practice.

The Nizārī polity in Persia lasted over 150 years, before its brutal destruction by the Mongols, ending in 654/1256. The various communities in Syria and Persia subsequently struggled to survive under sometimes adverse conditions, and much of their history and development during this period is little known. However, the *daʿwa* successfully initiated missionary activity leading to the emergence of a community in the Indian Subcontinent, principally in Pandjāb, Sind and Gudjarāt, referred to as the Khōdjas [*q.v.*]. Over the next centuries, sporadic contact was maintained between the Imāms, living in different parts of Persia, and the Nizārī communities of Syria, the Subcontinent and Central Asia, each with their own distinctive literary heritage and tradition.

In its modern phase, Nizārī history has been distinguished by the transference of the *imāma* from Persia to British India in the 19th century and then to Europe, where the present headquarters of the current Imām, Shāh Karīm, Aga Khān (*Āghā Khān* [*q.v.*]) is located. Nizārī communities are found today in over 25 countries in Asia and Africa, as well as in Great Britain, Europe and the United States and Canada, where, based on a common constitution, they have organised strong community institutions. These are complemented by a development network headed by their Imām, concerned primarily with the development of the countries and peoples in which they live.

(Azim Nanji)

NIZĪB, Nīzīb, the Ottoman Turkish forms for modern Turkish Nizip, a town and district of southeastern Turkey, lying in the plain to the southeast of the Kurt Dağları mountain chain on the Nizip river, a right-bank tributary of the Euphrates, 17 km/10 miles to the west of Birecik [see bīredjik], in lat. 37° 02′ N. and long. 37° 47′ E. at an altitude of 534 m/1750 feet. Nizīb and its surrounding district, extending to Kilis and the Syrian frontier, have long been famed for their extensive olive groves and sesame fields.

Ewliyā Čelebi visited Nizīb in the 11th/17th century and describes it as "an inhabited town in the middle of an unfertile district on the edge of a high hill, with inns, mosques, baths and a small market but without vineyards or gardens". Nizīb at this period was the residence of a judge on the salary scale of 150 *aḳčes*.

During the war (1831-40) between the Turks and Egypt under Muḥammad ʿAlī, Nizīb became the scene of a celebrated battle. Ibrāhīm Pasha, adopted stepson and general of Muḥammad ʿAlī, had crossed the Syrian frontier by the end of 1831 and after several victories advanced as far as Ḳonya, where he inflicted such a defeat on the Turks at the end of 1832 that they had to cede by the peace of Kütāhiya (1833) the whole of Syria to Muḥammad ʿAlī and the government of Adana to Ibrāhīm himself, both recognising the sovereignty of the sultan. But neither the sultan nor Muḥammad ʿAlī were satisfied with this, and both made preparations for another war. For this purpose, Maḥmūd II combined the four *wilāyets* of Diyārbakr, Kharpūt, Raḳḳa and Sīwās under one governor with the title of vizier, Čerkes Ḥāfiẓ Meḥmed Pasha (on his career, see *Sidjilli-i ʿothmānī*, ii, 99-100), and commanded him to cross the Euphrates at the beginning of 1839. It was not till some time later, however, that fighting actually began. Moltke and the military experts in Čerkes Ḥāfiẓ Meḥmed's army then advised him not to cross the river but only to display his strength and frighten the Egyptian army into retreating; but Meḥmed Pasha would not take this advice, crossed the Euphrates and fought a battle at Nizīb, where he was completely defeated by Ibrāhīm Pasha on 24 June 1839.

Besides this great defeat on land, the Turks a few days later suffered an equally severe loss at sea. The traitorous *Ḳapudān-i Deryā* Aḥmed Fewzī Pasha, known as Firārī (i.e. "fugitive", "deserter"; details in *Sidjill-i ʿothmānī*, i, 294-5), led the Turkish fleet, which was sent to Syrian waters at the time of the battle of Nizīb, to Alexandria and handed it over to Muḥammad ʿAlī. The Egyptians, however, were unable to take advantage of the victory at Nizīb because the Great Powers intervened and Muḥammad ʿAlī's aspirations were in 1841 limited to the hereditary governorship of Egypt. The defeat at Nizīb

led in the domestic politics of Turkey to the speedy proclamation of the *tanẓīmāt* reforms [*q.v.*].

The modern town of Nizip is in the *il* or province of Gaziantep and is the chef-lieu of an *ilçe* or district of the same name comprising 115 villages. In 1960, the estimated population of the town was 19,300 and of the district 68,200.

(F. Bajraktarević*)

NIZWA, a town of inner ʿUmān. It lies in an oasis on the eastern side of the Djabal Akhḍār in central ʿUmān. It is divided between a walled lower town (*Nizwat al-Sufāla*) and an upper walled town (*Nizwat al-ʿAlāya* or *Samad al-Kindī*), which are situated on either side of the Wādī Kalbu. The water supply of ʿAlāya is provided by the *Faladj Dāris* and that of Sufāla is provided by the *Faladj Ghunduk*. Sprenger suggested that Ptolemy's *Ravana/Rabana/Rouana basileion* should be identified with either Nizwa or Rustāk, but this remains unproven. At the onset of Islam, Nizwa appears to have been the seat of the local Azdī Āl Djulandā princes, and it was subsequently to become the capital of the country. Even during occupation by an ʿAbbāsid army under Muḥammad b. Nūḥ in 277/890 during the caliphate of al-Muʿtamid, Nizwa remained the capital of the country and the election place of the Ibāḍī *Imāms* of ʿUmān under the Āl Djulandā and under their successors. It was only in later times that it was supplanted by Rustāk and Maskaṭ, although it never lost its importance as a centre of Ibāḍī teaching and scholarship. From the death of the second Ibāḍī *Imām*, al-Wārith, who drowned at Nizwa in a flood in the Wādī Kalbu, Nizwa was to become the usual burial place of the *Imāms*.

Al-Mukaddasī in the 4th/10th century mentions Nizwa, listing it among the principal *kaṣabas* of ʿUmān along with Maskaṭ, Ṣawḥār and Djulfār. Its name is merely mentioned by al-Idrīsī, but Yākūt in the 6th/13th century knew of it as a mountainous region with a number of large villages, where the local people were adherents of Ibāḍī doctrines [see ibāḍiyya]. In subsequent centuries, Nizwa seems to have retained its importance under its Nabhānī rulers, although it was eventually to give way to Rustāk and in the civil wars of the early 17th century, power shifted from the interior to the coast at Maskaṭ, with Nizwa losing its political importance.

The main mosque, the traditional place of election to the Imāmate, and *sūk* are in Sufāla, as is the *ḥiṣn*, a rectangular enclosure containing a massive circular tower, known as the *kalʿa*, *ca.* 43 m across at the level of the gun-platform. The *kalʿa* is the most prominent monument in Nizwa and the largest artillery tower in ʿUmān. It is attributed to the Yaʿrubī *Imām* Sayf b. Sulṭān (d. 1059/1649) and took 12 years and much gold and silver to build. It was designed to command the approaches to Nizwa from all directions, forming part of defences controlling the Wādī Samāʾil, the main access leading from the interior of ʿUmān to the Bāṭina coast. It was among the earliest towers in ʿUmān built as an artillery platform, and it was also able to withstand artillery bombardment because of its solid construction, with the lower 14 m of the main tower filled entirely with packed earth and stone. The water supply was secured by wells and a *faladj* which runs below the tower. According to Lt. Wellsted, dry well shafts in the tower were used as magazines for the artillery.

The first detailed description of the town was provided by Wellsted in 1835, who found Nizwa a stone-built town with houses of two storeys, an appearance which was little changed in 1975. In the early 1900s the largest tribe residing at Nizwa was the Banū Riyam, with a large number of houses of Banū Hina and Āl Bū Saʿīd, and a small number of households from other tribes.

The long association of Nizwa with the Imāmate revived in modern times when discontent with the Āl Bū Saʿīd sultan at Maskaṭ led to a coalition against his authority, culminating in 1913 in the election to the Imāmate of Salīm b. Rashīd al-Kharūsī, supported by an alliance of al-Ghāfirī and Hināwī tribal confederation, which seized Nizwa and installed the *Imām* at the ancient capital. Although a *modus vivendi* was eventually reached, Nizwa and its surroundings remained beyond the authority of Maskaṭ until 1955, when Sultan Saʿīd b. Taymūr entered Nizwa in a progress through the interior as far as Buraymī. However, between 1957 and 1959, the Imāmate based at Nizwa broke into open rebellion, backed by Saudi Arabia and by Arab nationalists in Cairo. The rebellion ended with the seizure of Nizwa by British troops and the Sultan's forces in 1959.

The surrounding oasis is said to have 25,000 palm trees, and accounts refer to the presence of sugar cane, cotton, and indigo among the crops of Nizwa. Traditional local manufactures include metal working, including gold and silver, and weaving. The latter is ancient, for Yākūt mentions a distinctive ornamental textile decorated with silk. According to Wellsted, the women would prepare cotton yarn, and men would work the looms. This division of labour was still apparent in the 1970s. In the 1970s, the oil wealth of ʿUmān brought growing prosperity to Nizwa and a transformation of its traditional economy, while the construction of tarmac roads improved its links with the rest of the country.

(G.R.D. King)

NOGHAY, a Turkic-speaking people whose language belongs, together with Kazak and Karakalpak, to the Caspian branch of the Kïpčak-Turkic group. They number approximately 60,000, living mainly on a territory stretching to the west of the Caspian Sea between the Kuma and Terek rivers, a region sometimes referred to as the Noghay

Steppes. In the administrative aspect, the majority lived within the boundaries of the Dagestan Autonomous S.S.R., whilst others fell under the jurisdiction of Čečeno-Ingushetia and the Stavropol'skiy kray. All these regions belonged to the Russian Federation of the Soviet Union, but their administrative future within Russia, after the dissolution of the Soviet Union in December 1991, is unknown.

1. Ethnogenesis and early habitats. The stabilisation of the Noghay ethnos went hand in hand with the formation of the Noghay state. The latter was formed by Edigü (in Russian sources, Edigey), the famous military commander of the Tatar state of the Golden Horde. The Noghay *ulus* (appanage) seceded from the Golden Horde in the 1390s, their original homeland being the vast pasture lands between the Emba and Yayïķ (now Ural) rivers. During the reign of Nūr al-Dīn, son of Edigü (1426-40), the Noghay tribes began to extend towards the Volga, and up to the 1550s they occupied the large territory between the Yayïķ and the Lower Volga rivers. In the 15th-16th centuries the Noghay Horde was a significant Tatar state, one of the successor states of the Golden Horde, comprising various Turco-Mongolian tribes which later on took an active part in the formation of numerous modern Turkic peoples, including the Ķazaķs, the Ķaraķalpaķs, the Bashkirs and the Ķazan Tatars. The leading political force of the Noghay Horde was undoubtedly the Mangït tribe, from which Edigü himself, the founder of the state originated. That is why even their self-appellation during the first century of their stately independence was *Mangït* [*q.v.*].

The Noghay ethnos was formed of various Turkic and Turkicised Mongol tribes coming together under the sovereignty of Edigü's successors. Even the Mangït tribe was of Mongol origin, although the family genealogy of the Edigü clan, obviously due to pious Muslim influence, traced back their alleged descent to the Prophet Muḥammad's time. The widest extension of the Noghay Horde was in the first half of the 16th century, when its historical rôle was at its zenith, and they actively participated in the wars of Muscovy, the Ķazan and the Crimean Khānates.

The application of the name Noghay to the Mangït-led confederation has not yet been satisfactorily explained. The term Noghay was first used for the Noghays in the Russian sources at the end of the 15th century, and it spread in Russia and Europe during the 16th century. According to the most accepted interpretation, the ethnonym Noghay is connected to the name of Noghay, famous warlord and *amīr* of the Golden Horde in whose army the Mangït tribe must have been a leading force. On the other hand, two facts severely hamper this theory: (a) it needs further elucidation why the ethnonym Noghay came into use only 150 years after Noghay's death in 1300; and (b) while Edigü's figure has been immemorialised in an extensive folk-epos, Noghay's personality has fallen out of folk-memory.

2. Economy and society. Up till the 1860s, the Noghays were *par excellence* nomadic stock-breeders (horse, sheep, cattle, camel). They had practically no agriculture (only millet was known) or handicrafts; all these products were acquired through trade and/or as booty. All adult males were warriors (200,000 in the 1550s), the total amount of inhabitants being approximately 350,000. Their society was organised according to clan and tribal principles, with an increasing number of feudal features from the 16th century onwards. The head of the political structure was the *biy*, whose sons and other male relatives, the *murzas*, stood at the head of the *ulus* or appanage. It was an amalgam of the clan and feudal system. The central power was very limited, and the *murzas* pursued sovereign foreign policies. Second in rank was the *nūraddīn* (called so after Edigü's son), whose duty was defending the western borderland, while the *kekovat* (third in rank) was in charge of the eastern frontier. The capital of the Noghays was Saraycïķ on the eastern bank of Lower Volga. In addition to the tribal-feudal aristocracy, the Muslim religious dignitaries, especially the *sayyids*, also played an important role in the Noghay social structure.

3. Noghay-Russian contacts. From 1489 onwards, exchange of envoys had become regular between Russia and the Noghay Horde. After Ismāʿīl's death (1563), the heyday of the Noghay Horde was over and it soon dissolved. Part of them accepted Russian suzerainty, other tribes fell under Crimean Tatar and Ottoman rule, while the eastern part was assimilated by the Ķazaķs. In the 17th-18th centuries, a few independent Noghay hordes survived (e.g. the Yedisan, the Djemboyluķ, etc.), lingering between the Russian and Ottoman great powers. In the 1780s, subsequent to the annexation of the Crimean Khanate by the Russians, most Noghay groups fell under Russian jurisdiction. In 1858-66 a mass emigration of the Noghays to Turkey took place, but most of them were disappointed in their new homeland and returned to Russia. From the 1870s onwards, the Noghays have gradually been settled and forced to abandon their nomadism for agriculture. The vicissitudes of the Noghays continued in the Soviet era, their administrative borders being changed several times. During the past few years they have been struggling for more cultural and regional autonomy within the Russian Federation.

(I. Vásáry)

NOUAKCHOTT, the capital of Mauritania [see mūrītāniyā]. It was created *ex nihilo* near a site occupied by a small village and a ksar [see ķaṣr]. The choice of its situation was made the object of serious studies, since it was necessary that it should be accessible, easily supplied with drinking water and distant

enough from the Senegal River to escape inundations like that of 1950. Several plans of urban design were put forward even before independence was conceded to Mauritania (1960), and construction work, begun in 1958, has not ceased since that date in order to respond to a rapidly-increasing demographic growth because of the tendency of the nomads to become sedentarised and fixed and because of the massive migration of the peoples of the interior, driven forth by the desiccation which became severe during the years 1968-73 and searching for work. With an estimated population in 1974 of 100,000, the number of inhabitants rose to 600,000 by 1992.

Situated in the midst of sand dunes, 7 km from the ocean, Nouakchott is the only real town of the country, and comprises three parts: a westernised official and business centre (ministries, embassies, banks, trading establishments), better-quality residential quarters and, further out, the area of more or less precarious habitations of the less favoured population elements (in 1971, there were still 200 tents of nomads within the urban area). It has a relatively temperate climate (annual average of max. temp. 32°, and minima 11°); rainfall is very variable from year to year, but the average is considered to be 135 mm. Water supply, from the wells in the Trarza, is a serious problem, and the town has a water-purifying plant. Retail trade is in the hands of Lebanese immigrants, who are always very active. External trade, in particular represented by the import of manufactured products and foodstuffs, and by the export of copper, hides and gum, has developed since 1966, thanks to the construction of docks 7 km to the south-south-west of the capital. Electricity is provided by a central generator, and telephone installations exist in the government offices and in private homes. Communications within the town are not always easy since metalled roads are still sparse, and vehicles often get stuck in the sands once they leave the main roads. Connections with outside countries, and even with the interior of the country, are now more and more by air travel, thanks to the modern airport of Nouakchott and the improvised landing-strips which many places of middling importance possess. It is in fact extremely difficult to maintain roads and even tracks amidst moving sands.

There remains an interesting question: the origin of the name Nouakchott, which even the Mauritanian government, which uses the French language, customarily spells thus. Its etymology has given rise to apparently endless controversies. For Mokhtar Ould Hamidoun and Cyr Descamps, *Que veut dire Nouakchott?*, in *Notes Africaines*, no. 118 (1969), 62-4, the town's name means "place where, when one digs a well, the water appears at a level where shells are found profusely". In reality, the Arabic form *Anwākshūṭ* is sufficiently clear, since it can be broken up as follows: *a-n-wakshut*, i.e. in Berber, "that of shells and shellfish", where *a* is a demonstrative pronoun, and *n* the copula introducing the state of annexation of the word *akeshshuḍ* (whose final emphatic is normally unvoiced to pass into Arabic as *ṭ*). It should be noted that in the Berber speech of Morocco, in which this word exists, it means "woods".

Bibliography: This is quite abundant, and has been felicitously utilised by J.-R. Pitte, *Nouakchott, capitale de la Mauretanie*, Paris 1977, to which one can refer. (J.-F. STASZAK and ED.)

NOYAN (pl. *noyad*), a Mongolian title, rendered in the Muslim chronicles of the Mongol and Tīmūrid periods in the Arabic script as *nūyān*, *nūyīn*, *nuyin*, etc. In the pre-Činggisid period the *noyad* were the hereditary clan chieftains. Under Činggis Khān and his successors, the title was granted initially as a military rank. According to the *Secret History of the Mongols*, § 191 [tr. Cleaves, 119], in 1203 Činggis Khān organised his army according to the decimal system so often used before in steppe armies, with groups of ten, a hundred and a thousand, each under the command of a *noyan*. Hence the term came to mean "commander" (Boyle) or "captain" (Cleaves). The *noyad* have been called the "new aristocracy" of the Mongol Empire, and were a means by which the Mongol rulers, in constructing their imperial machinery, were able to transcend the old clan system. The *noyad* were granted substantial rights of autonomy within their domains, and people and pasture in perpetuity. Under the Yüan régime in China, the term was used to refer to all officials serving in public posts (26,690 in the early 14th century, according to one reckoning).

Hsiao, *The military establishment of the Yuan dynasty*, Cambridge, Mass. 1978; D.M. Farquhar, *The government of China under Mongolian rule*, Stuttgart 1990

(D.O. MORGAN)

NUʿAYM B. ḤAMMĀD al-Khuzāʿī al-Marwazī, Abū ʿAbd Allāh, a traditionist originally from Marw al-Rūdh [*q.v.*] who lived for a while in Egypt but above all in Baghdād where, having been invited to recognise the created nature of the Ḳurʾān in the course of the *miḥna* [*q.v.*], he refused to give his opinion and was thrown into one of the prisons at Sāmarrā; he died there on 13 Djumādā I 228/18 February 843 (but other dates around this are also given). He received from Sufyān b. Muʿāwiya, ʿAlī b. al-Mubārak and other *muḥaddiths* [see ḤADĪTH] traditions which he in turn transmitted, notably to Yaḥyā b. Maʿīn or al-Bukhārī. He is nevertheless judged to have been suspect and is even freely accused by some scholars, such as al-Nasāʾī and al-Dāraḳuṭnī, of fabricating *ḥadīths* in support of the most rigorous form of Sunnī doctrine, of which he was a fervent defender. He is said, moreover, to have been a member of the Djahmiyya [*q.v.*] at one period, before changing his views and accusing Abū Ḥanīfa and ʿAmr b. ʿUbayd of having favoured the dissemination of this group's ideas. Whilst being thus discredited as a traditionist, he nevertheless acquired a reputation as a scholar regarding succession law (*farāʾiḍ* [*q.v.*]), to the point that he is sometimes dubbed Fāriḍ or Faraḍī.

His biographers attribute to him "some" books, but it is only known that he left behind a *Kitāb al-Fitan wa 'l-malāḥim*, of which there is a ms. in the B.L., London (9449) and which was abridged by Naṣr Allāh b. ʿAbd al-Munʿim al-Tanūkhī (604-73/1207-74; see F. al-Bustānī, *Dāʾirat al-maʿārif*, s.v. Ibn Shuḳayr, iii, 263c, who does not however cite this abridgement).

und ihre Überlieferung in Spanien, in *Navicula Tubingensis. Studia in honorem Antonii Tovar*, Tübingen 1984; Ziriklī, ix, 14; Kaḥḥāla, xiii, 97; Sezgin, *GAS*, i, 104-5. (Ch. Pellat)

NUʿAYMA, MĪKHĀʾĪL (spelled Naimy in English language publications), modern Arabic author (b. 1889, Biskinta, Lebanon, d. 1989 in Lebanon). He received his schooling at the "Russian" school founded by the "Russian Imperial Orthodox Palestine Society" in Biskinta, the training college instituted by the same society in Nazareth and the Diocesan Seminary in Poltava, Ukraine. In 1911 he joined his emigrant brothers in the USA, who financed his studies at the University of Washington in Seattle. There he became a member of the "Free Syria" movement which stood for an independent Syria and Lebanon under French protection. Later, he would become secretary of this movement in which most of Nuʿayma's literary friends took part. It may be regarded as a forerunner of *al-Rābiṭa al-ḳalamiyya*.

Mīkhāʾīl Nuʿayma obtained bachelor degrees in Law and in English Literature in 1916 and went to New York where his old-time friend Nasīb ʿArīḍa was publishing the Arabic literary magazine *al-Funūn* ("The Arts"). In New York he established contacts with Djubrān Khalīl Djubrān [see djabrān khalīl djabrān], Rashīd Ayyūb and Īlīyā Abū Māḍī. For his living he worked for the Russian delegation at the Bethlehem Steel Factories to purchase arms until Russia withdrew from the war in November 1917. He was then conscripted into the USA army and sent to France where he witnessed the last battles of the war. Early in 1919 he returned to New York and in 1920 he founded with his literary friends *al-Rābiṭa al-ḳalamiyya* (English, Arrabita = "The Pen League"). He earned his living as a travelling salesman. In 1932 he returned to Lebanon to devote himself to his pen.

Nuʿayma's literary career started in Poltava, where he became acquainted with the works of the great Russian authors of that time. He especially admired Tolstoy and his Yasnaya Polyana. He composed poetry during this period and he kept a diary. During his stay in Seattle he began to contribute critical essays to *al-Funūn*, calling for drastic changes in Arabic poetry and in criticism. He also contributed a serialised play *al-Ābāʾ wa 'l-banūn* ("Parents and Children"), which appeared in book form in 1917 in New York. His critical essays were published in *al-Ghirbāl* ("The Sieve") in 1923 at Cairo with a foreword by Maḥmūd ʿAbbās al-ʿAkkād [*q.v.* in Suppl.]. In Seattle he became acquainted with the teachings of theosophy which were to have a permanent influence on his writings, culminating in the English-language publication *The book of Mirdad*, Beirut 1948, translated by the author as *Kitāb Mirdād*, Beirut 1952, and in books like *al-Yawm al-akhīr* ("The last day"), Beirut 1963, *Ayyūb* ("Job"), Beirut 1967 and *Yā ibn Ādam* ("O son of Adam"), Beirut 1969.

Nuʿayma published one collection of poetry *Hams al-djufūn* ("Eyelids' whispering") Beirut [1943], which inspired Muhammad Mandūr [*q.v.*] to call this new type of poetry *shiʿr mahmūs* ("whispered poetry"). Nuʿayma further wrote some 80 stories which he collected in the volumes *Kān mā kān* ("Once upon a time"), Beirut 1937, *Akābir* ("Notables"), Beirut 1956 and *Abū Baṭṭa* ("The fat-calved man"), Beirut 1959.

Nuʿayma's biography of Djubrān (Arabic edition, Beirut 1934, English edition, New York 1950), showing the weaker sides of Djubrān, produced a fierce shock to those who had already lifted Djubrān beyond good and evil. Nuʿayma's most impressive work is his autobiography *Sabʿūn* ("Seventy"), Beirut 1959-60, in which he describes his early years in Biskinta, Nazareth and Poltava (vol. i), his life in the USA and the formation of Arrabita (vol. ii), and his life in Lebanon from 1932 until 1959 (vol. iii).

Other works by Nuʿayma include: *al-Marāḥil* ("Stages"), Beirut 1933; *Zād al-maʿād* ("Food for the road"), Cairo 1936; *al-Awthān* ("The idols"), Beirut 1946; *Karam ʿalā darb* ("A vineyard by the road"), Cairo 1946; *Liḳāʾ*, Beirut 1946, translated as *Till we meet ...*, Beirut 1957; *Ṣawt al-ʿālam* ("The voice of the world"), Cairo 1948; *Mudhakkarāt al-arḳash*, Beirut 1949, translated as *Memoirs of a vagrant soul*, Beirut 1952; *al-Nūr wa 'l-daydjūr* ("Light and darkness"), Beirut 1950; *Fī mahabb ar-rīḥ* ("Windward"), Beirut 1953; *Durūb* ("Roads"), Beirut 1954; *Abʿad min Mūskū wa-min Washintun* ("Very far from Moscow and from Washington"), Beirut 1957; *Hawāmish* ("Marginals"), Beirut 1965; *Fī 'l-ghirbāl al-djadīd* ("In the new sieve"), Beirut 1972; *Nadjwā al-ghurūb* ("Confidential whispers at sunset"), Beirut 1973; *al-Madjmūʿa al-kāmila* ("The complete works") 8 vols., including *Maḳālāt mutafarriḳa* (= vol. vii, Uncollected essays) and *Rasāʾil* (= vol. viii, Letters), Beirut 1970-4.

NŪBA, the mediaeval Islamic form for the land of Nubia, lying to the south of Egypt, and its peoples.

1. Definition

The names Nubia, Nubian, Nūba are commonly used without scientific precision and it is only in the linguistic sense that they have an unambiguous meaning. The frontier separating Nubia from Egypt proper is well defined as the first cataract of the Nile in the neighbourhood of Aswān, and the area where Nubian is spoken nowadays ends in the vicinity of the 18th parallel, but the southern limit of Nubia is sometimes placed as far south as the junction of the Atbara and the Nile or even the confluence of the two Niles. Nubia is often sub-divided into Lower Nubia from Aswān to Wādī Ḥalfa and Upper Nubia from Wādī Ḥalfa southwards, but neither term has any political or administrative significance.

The mediaeval Arabic writers are equally vague about the southern extent of Nubia: the region immediately bordering on Egypt, which bore the name of Marīs [*q.v.*], seems to have been regarded as Nubia *par excellence*; to the south of it lay Muḳurra with its capital at Dongola (Dunḳula, Dumḳula), and beyond this the kingdom of ʿAlwa, the capital of which was Sōba, near the site of the modern Kharṭūm. According to the 4th/10th century author ʿAbd

Allāh b. Aḥmad b. Salīm (Sulaym?, quoted by al-Maḳrīzī) Marīs and Muḳurra had distinct languages, and the frontier between them was situated three post-stations (*barīd*) to the south of the Third Cataract; politically, however, Marīs formed part of Muḳurra and this probably accounts for the fact that Ibn Salīm immediately afterwards places the commencement of Muḳurra at a day's journey from Aswān. The frontier between Muḳurra and ʿAlwa was the district of al-Abwāb, a name still in use for the country round Kabūs̲h̲iyya in Berber province. ʿAlwa is generally placed outside Nubia, and the preamble to the treaty which governed the political relations between Nubians and Arabs makes its provisions incumbent on "the chief of the Nubians and all people of his dominions .... from the frontier of Aswān to the frontier of ʿAlwa"; yet al-Masʿūdī speaks of ʿAlwā as part of Nubia and states that it is under the political suzerainty of Muḳurra. According to Yāḳūt, *Buldān*, ed. Beirut, v, 308-9, Nubia extends along the Nile a distance of eighty days journey, Dongola being situated halfway at forty days' distance from Aswān; of ʿAlwa he speaks, with obvious exaggeration of the distance, as a people beyond Nubia three months' journey from the king of the Nūba, whose official title is "King of Muḳurra and Nūba".

Marquart, *Die Benin-Sammlung des Reichsmuseums für Völkerkunde*, Leiden 1913, pp. ccxlviii ff. See also ʿALWA, DONGOLA, AL-MUḲURRA. (S. HILLELSON)

2. History

(a) Up to the Fāṭimid period

Nubia was called in Pharaonic times the Land of Kus̲h̲ [*q.v.*], and is vaguely mentioned in Herodotus and other Greek authors as part of the land of the Aethiopes; the name Nubia has been used since mediaeval times (see W.Y. Adams, *Nubia, corridor to Africa*, Princeton 1977, 13). In the Arabic sources it is often imprecisely described as part of the *Bilād al-Sūdān* "land of the blacks", although the term Sudan with concrete references to a political entity appears only after the Turco-Egyptian conquest of 1821 (Y.F. Hasan (ed.), *Sudan in Africa*, K̲h̲arṭūm 1985, 1 ff.).

Nubians were renowned as archers and were recruited by the Pharaohs and the Ptolemies as mercenaries. In Roman times, there were military camps in Dodekaschoinos, i.e. the northernmost part of Nubia, but the Roman military presence ended in 298 A.D. when Diocletian withdrew the last Roman guards from the region and established the Roman frontier at Syene (modern Aswān). Meanwhile, the rest of Nubia formed a separate kingdom, already in existence since 750 B.C., inhabited by an African people and with its capital first at Napata and then at Meroe. But the latter state collapsed in the mid-4th century with the invasion of king ʿEzānā of Axum, after which various unknown peoples came in and merged with the existing population of Nubia, and amongst all these ethnic groups the names of the Blemmyes and Noubades are notable (see V. Christides, *Ethnic movements in southern Egypt and northern Sudan*: *Blemmyes-Beja in Late Antique and early Arab Egypt until 707 A.D.*, in *Listy Filologicke*, ciii [1980], 129-43; L. Török, *Late Antique Nubia*, Budapest 1986, 27 ff.). In spite of their rivalry, these two groups seem to have tried to unite against the Byzantines in the mid-5th century, but the Byzantine emperors used Nubia in a grandiose plan to dominate the Red Sea region and extend their influence as far as Yemen (see Christides, in *Annales d'Ethiopie*, ix [1972], 115-46). Within Nubia south of Dodekaschoinos, three independent kingdoms emerged, sc. Nobatia, Makuria or Muḳurra [*q.v.*] and Alodia or ʿAlwa [*q.v.*].

The Arab conquest of Egypt inevitably affected Nubia, and according to the *Futūḥ al-Bahnasā*, Bed̲j̲a-Blemmyes [see BED̲J̲A] and Noubades participated in the Byzantine defence of Upper Egypt against the Arabs (see J. Jarry, in *Annales Islamologiques*, ix [1970], 9-20). The first Arab raids against Nubia took place before the final conquest of Egypt in 645 A.D., but these were probably defensive actions against the harryings of the Nubians rather than evidence of a definite plan to invade the distinctly inhospitable region of Nubia, just as the Arabs' use of the shipyard at Clysma or Ḳulzum [*q.v.*] was aimed at safeguarding the flow of grain across the Red Sea against Bed̲j̲a-Blemmyes pirates there. An Arab raid under Nāfiʿ b. ʿAbd al-Ḳays al-Fihrī took place in 21/641-2 and another by ʿAbd Allāh b. Abī Sarḥ in 31/651-2, when the Muslims penetrated as far as Dongola [*q.v.*], destroying its basilica. After this, a truce was made between the Arabs and the Nubians, sealed by the celebrated *baḳt* (*q.v.*, and also P. Forand, *Early Muslim relations with Nubia*, in *Isl.*, xlviii [1971], and M. Hinds and H. Sakkout, in Wadād al-Ḳāḍī (ed.), *Studia Arabica et Islamica, Festschrift for Iḥsān ʿAbbās*, Beirut 1981, 210 ff.). This comprised a trade agreement but was also a bilateral treaty of non-aggression and non-intervention between the two powers, and in future times was to play a significant role in Arab-Nubian relations.

During the Umayyad period, trade relations were important: Egyptian exports to Nubia included cereals and wine, whilst Nubia exported mainly slaves but also iron and camels, furnished by the Bed̲j̲a-Blemmyes. An Arabic papyrus of 141/758, just after the fall of the Umayyads, sent from the governor of Egypt to the king of Nubia, refers to the mistreatment of Arab merchants (see Hinds and Sakkout, *op. cit.*; J.M. Plumley, *An eighth-century Arabic letter to the King of Nubia*, in *Jnal. of Egyptian Archaeology*, lxi [1975], 241-5; and in general, Christides, *Nubia and Egypt from the Arab invasion of Egypt until the end of the Umayyads*, in *Procs. of the Seventh Internat. Conference for Nubian Studies*, *Geneva 1990*). Towards the end of the Umayyad period, the king Kyriakos invaded Egypt in order to release the Patriarch Anba Mīk̲h̲āʾīl, who had been imprisoned by the Muslims; and it was to Nubia that two children of the last Umayyad caliph, Marwān II [*q.v.*], fled after the ʿAbbāsid Revolution (see Y.F. Hasan, *The Arabs in the Sudan*, Edinburgh 1967, 28 ff.; G. Vantini, *Christianity in the Sudan*, Verona 1981, 75 ff.).

During the ʿAbbāsid period, Nobadia gradually became incorporated in Muḳurra, whilst ʿAlwa followed a similar cultural pattern to the other states, so that a degree of homogeneity was achieved throughout Nubia; it was not however until the 9th century that the Bed̲j̲a-Blemmyes seem to have formed an organised kingdom, when we hear of a punitive raid into their land of 218/831 under the Arab general ʿAbd Allāh b. D̲j̲ahm, ended by a peace agreement in which an annual tribute to the Arabs of camels was promised (see al-Yaʿḳūbī, *Taʾrīk̲h̲*, i, 218; al-Maḳrīzī, *K̲h̲iṭaṭ*, ed. Wiet, Cairo 1927, iii, 272-5; Hasan, *The Arabs and the Sudan*, 38-41). Later in this century, the presence of gold mines in their land seems to have become generally known to the Muslims, for al-Mutawakkil in 241/855-6 sent his general Muḥammad b. ʿAbd Allāh al-Ḳummī on a successful expedi-

tion against the Bedja in order to secure access to the gold mines in their country on the western shores of the Red Sea (al-Ṭabarī, iii, 1428-33, tr. J.L. Kraemer, Albany 1989, 141-5).

Over the next centuries, relations between Nubia and the Muslims revolved round the twin facts of the *baḳt*, with disputes over the number of black slaves to be delivered to the caliphs and with the penetration of Muslim traders into Nubia and the land of the Bedja-Blemmyes (seen in the number of Arabic inscriptions on tomb stones there from the mid-3rd/9th century onwards), and with the constant interference of the rulers of Nubia in the Christian church affairs of Egypt, since the Nubian kingdom was deeply theocratic, with the ruler as priest-king.

Under the Fāṭimids of Egypt, the *baḳt* continued to be sent, with the conqueror Djawhar sending an immediate embassy to King George II of Nubia (969-1002) regarding it, although the emphasis now seems to have been on the sending of beasts and exotica (see B.I. Beshir, *New light on Nubian-Fāṭimid relations*, in *Arabica*, xxii [1975], 15-24). The Fāṭimids managed to penetrate deeply into Nubia and to protect the maritime trade in the Red Sea, with a special fleet constructed against piracy there (al-Ḳalḳashandī, *Ṣubḥ*, iii, 468-9, 524). The Christian Church in Nubia continued to be dependent on the Patriarchate of Alexandria, with Monophysitism in the ascendant in Nubia after the Arab conquest of Egypt but with the emergence of a stronger Melkite element in the more tolerant Fāṭimid times, reflected in Nubia also; see U. Monneret de Villard, *Storia della Nubia cristiana*, Rome 1938, 128 ff.

(b) From the Ayyūbid period to the 16th century

With the advent to power in Egypt of the Ayyūbids [*q.v.*] in 567/1171, Nubian affairs came into some prominence when in 568/1172-3 a coalition of the dispossessed Fāṭimids' black troops (*al-sūdān*) and the Nubians attacked an island just south of Aswān, provoking intervention by the troops of Ṣalāḥ al-Dīn under the sultan's brother Shams al-Dawla Tūrān Shāh, who devastated Ibrīm (which had apparently reverted to Nubian control since the Ikhshīdid capture of it in 345/957) and carried off a large number of captives. Soon after this, in *ca.* 1208, Abū Ṣāliḥ al-Armanī (see on him, Graf, *GCAL*, ii, 338-40) composed his account of the churches and monasteries of Egypt (ed. and tr. B.T.A. Evetts and A.J. Butler, Oxford 1894-5), which contains some interesting details about Marīs, al-Muḳurra, and ʿAlwa, but must be used with caution owing to the confusion in the writer's mind between Nubia and Abyssinia and his uncritical use of older authorities.

The factors which brought about the disintegration of the Nubian kingdom and the islamisation of the country were the immigration of Arab tribes, the rise of the Banu 'l-Kanz [*q.v.*], and the intervention in Nubian affairs of the Mamlūk rulers of Egypt, especially during the reigns of al-Ẓāhir Baybars [*q.v.*] and al-Manṣūr Ḳalāwūn [*q.v.*].

The Banu 'l-Kanz are first heard of in 397/1007 when the Fāṭimid caliph al-Ḥākim, as a reward for services rendered, conferred the hereditary title of *Kanz al-Dawla* on Abū Makārim Hibat Allāh, a chief of the Rabīʿa Arabs who had settled on the borderland between Egypt and the Sūdān. Already in the 4th/10th century the Rabīʿa had gained control of the mines of al-ʿAllāḳī and imposed their rule on the Bedja [*q.v.*] with whom they allied themselves by intermarriage. Another section, settled near Aswān, fraternised with the local Nubians, and the tribe, formed by this amalgamation and ruled by the Kanz al-Dawla dynasty, came to be known as the Banu 'l-Kanz; they are represented by the Kenūz of the present day. During the period of the Mamlūks, they were virtually in independent control of Upper Egypt, alternately in alliance with or in revolt against the Mamlūk government, and though repressed at times with a heavy hand, they remained a powerful tribe until the Ottoman conquest of Egypt. Before this event, however, they had played their part, together with nomad Arabs and Mamlūk troops, in the destruction of Nubian independence.

The Baḥrī Mamlūks, for reasons not apparent in our sources, departed from the traditional policy of Muslim Egypt, and actively intervened in Nubian affairs. The pretext for the expeditions undertaken by the generals of Baybars and Ḳalāwūn were non-payment of the tribute and, more frequently, the championship of Nubian pretenders who had solicited Egyptian support in order to gain the throne. On several occasions, such protégés of the Mamlūk government were installed in Dongola [*q.v.*] only to lose the throne again as soon as the Egyptian troops withdrew.

A formal treaty concluded with one of these kings virtually established an Egyptian protectorate. Meanwhile, the disintegration of the kingdom went on under the pressure of Arab immigration, and Arab chiefs who married into the royal house took advantage of the matrilinear line of succession to grasp at the throne. The age-long Christianity of Nubia was gradually undermined and in the 8th/14th century Muslim kings begin to appear. The first king to bear a Muslim name was Sayf al-Dīn ʿAbd Allāh Barshambū, a nephew of the Christian king David, who was installed by a Mamlūk force sent out by Sultan al-Nāṣir Muḥammad b. Ḳalāwūn under ʿIzz al-Dīn Aybak in 716/1316; the new king ʿAbd Allāh was, however, speedily overthrown by Kanz al-Dawla. From the manual for secretaries, *al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf* of Ibn Faḍl Allāh al-ʿUmarī [*q.v.*] (written in 741/1340), we learn that at this date Christian kings still alternated with Muslims, and Ibn Baṭṭūṭa in 753/1352 (iv, 396) speaks of the Nubians as Christians, but mentions a Muslim king (Ibn Kanz al-Dīn). Of the conversion of the common people we have no details: no doubt it was brought about by the absorption of the native inhabitants, or those who survived, in the Arab tribes.

The immigration itself has left little trace in the pages of the historians, though the outlines of the process can be reconstructed from occasional references and from oral tradition. The nomads who had entered Egypt in the wake of the first conquest can never have found that country congenial to their mode of life, and the rise of non-Arab dynasties tended to make conditions still less attractive, while the Sūdān seemed to offer all the advantages, from the nomads' point of view, that Egypt denied. For a long time, the

kingdom of Dongola formed an effective barrier to southward expansion, but a gradual infiltration of Arabs must have begun at a comparatively early date, even though the end of the process was not accomplished for several centuries.

The early stages of the movement are seen in the conditions depicted in the story of Abū ʿAbd al-Raḥmān al-ʿUmarī, the events of which are laid in the reign of Aḥmad b. Ṭūlūn (i.e. the later 3rd/9th century) (al-Maḳrīzī's *Kitāb al-Muḳaffā*, quoted by Quatremère, *Mémoire sur la Nubie*, ii, 59-80). Arabs of Rabīʿa and Djuhayna, led into the Sūdān by that adventurous prince, have fraternised with the Bedja and exploit the mines of the Eastern Desert, but the Nile is forbidden them and Nubia is too strong to be attempted by force of arms. A fratricidal struggle in the Nubian royal house provides an opportunity for an alliance between the Arabs and a princely pretender to the throne. Acts of unblushing treachery are committed on both sides and in the end the Arabs have the worst of the encounter. The end of the process is seen in the 8th/14th century, when the kingdom of Nubia ceased to exist except as a puppet state controlled by the Muslim Arab tribes who gradually overran the country, a process noted by Ibn Khaldūn (*ʿIbar*, Beirut 1956-71, v, 922-3) as having led to something like anarchy in Nubia. The ascendancy of the nomads clearly affected Nubian Christianity adversely. The Churches of Alexandria and Nubia gradually became disassociated with each other, and churches and monasteries in Nubia must have been looted and dispersed at this time, although Nubian pilgrims were noted in Jerusalem (where in the 14th century the Nubians possessed a chapel in the Church of the Holy Sepulchre which soon, however, passed to the Armenians and then the Georgians) as late as *ca.* 1480.

Of ʿAlwa [*q.v.*] further to the south, little is heard at this time. It was a reservoir of slave manpower, frequented by Muslim slave traders and by merchants from al-Muḳurra to the north who came to collect slaves to pay the *baḳt*. Mamlūk pressure on al-Muḳurra (see above) was felt in ʿAlwa, and already in the time of Ibn Khaldūn (later 8th/14th century) we hear of branches of Djuhayna "close to the Abyssinians", that is to say no doubt on the upper reaches of the Blue Nile in the southern Djazīra. The kingdom of ʿAlwa nevertheless lingered on precariously and Nubian Christianity was still a living memory in the time of the Portuguese Alvarez (1520-7), but in *ca.* 1500 the capital Sōba fell to an alliance of Ḳawāsma Arabs (a branch of Rufāʿa-Djuhayna) and the negroid Fundj [*q.v.*], who here for the first time appear in history.

The 9th/15th century is almost completely barren of records relating to Nubia, and the historical memory of the present inhabitants remembers little of pre-Fundj days. With the coming of the Fundj, who soon extended their influence to Dongola, the history of Nubia is merged in that of the Sūdān, and the Nubians, now Muslims and deeply affected by racial mixture with their conquerors, survive only as a linguistic minority on the northern fringe of their ancient kingdom.

Lower Nubia, however, was politically separated from the Fundj kingdom by the Ottoman sultan Selīm I, who annexed the country south of Aswān as far as the neighbourhood of the Third Cataract, and garrisoned it with Turkish and Bosnian mercenaries (called Ghuzz by the people of the Sūdān).

For the subsequent history of the region, see FUNDJ; AL-MAHDIYYA; AL-SŪDĀN.

3. Languages

The name Nub(i)a is first attested in Eratosthenes (*ca.* 200 B.C.). Its etymology is probably an autochthonous word for "slave". The term *Nūba* was originally applied by the Arabs to the Nile Nubians and later extended to cover other enslaved groups. It has since come to represent an ambiguous linguistic designation based on geography. About 50 tribes living in the Nūba Mountains (*Dār Nūba*) of Southern Kordofan province, Sudan (an area of about 30,000 square miles), can be denoted as *Nūba*. Many are from diverse racial and linguistic backgrounds, having fled to the region as a result of the Arab slave trade of the 17th-19th centuries. Almost all are Muslims, except for some Hill groups. Many *Nūba* tribes are named after the hills in which they reside.

The Nūba (Mountains) languages belong to two families: (1) (Niger-)Kordofanian, and (2) the East Sudanic branch of Nilo-Saharan, which contains Songhai, Fur, Maban, etc.

(Niger-)Kordofanian is subdivided into Niger-Congo, the Kadugli-Krongo group (thought by some to be Nilo-Saharan), and Kordofanian proper. The latter, whose linguistic development occurred in the Nuba Mountains, has the longest history. Among the better known Kordofanian languages are the Heiban group, Moro and Otoro. Some Kordofanian languages go by different designations; thus Koalib (30,000 speakers) is also called Ka/owalib, N(g)irere, Rere, Nuba, Lgalige and Abri.

East Sudanic is subdivided into eastern and western branches, plus Kuliak and Nilotic (e.g., Shilluk, Dinka, Bari). An example of a Proto-East Sudanic reconstruction is PES **telo(ng)* "cow" > Birked *tei*, Kadaru *ti*, Majang *tang*, Murle *tang*, Gaam *tɔɔ* and Mongo *teenge* (Ross 1991).

The eastern group, which includes such languages as Daju (spoken in Chad), Nyimang and Temein, has three subdivisions: Eastern Jebel, Nubian and Surma. The Nubian group (disparagingly called *Barābra* by Arabs) is well documented, and has five constituents: (1) Central, including Birked (extinct) and Dongolāwī (Kenzī or Matoki); (2) Hill Nubian (Kadaru, Ghulfan, Debrī); (3) Unclassified Hill Nubian (Dair, Dilling, Karko, Wali); (4) Northern Nubian (Nobiin or Maḥas-Fadidja [Fadicca]); and (5) Western Nubian or M(e)īdōb. Thelwall and Schadeberg (1983) note that Birked and Hill Nubian once formed a single unit. Dongolāwī, with over a million speakers, is sometimes called Ratana, originally an Arabic pejorative label (< A. *raṭāna* "gibberish"), and has a 67% lexical similarity with Nobiin; cf. Nubi or Ki-Nubi (*rutáán núbi*), an East African Arabic creole emanating from the Sudan in the 19th century.

More is known about the Nubian past than that of

any other East Sudanic people. Although the Nubians established their Empire of Cush in *ca.* 850 B.C. with its capital at Meroe, Meroitic (written in a script derived from Egyptian Demotic) is unrelated to any form of Nubian. Lexicostatistics has shown that in the first millennium B.C., Nubians migrated from Dārfūr to the Nile. Old Nubian developed in the 6th century A.D. with the rise of the Christian Nubian kingdoms. It is a direct ancestor of Nile Nubian and is closest to Nobiin. All Old Nubian texts (the last in 1484 A.D.) appear to come from the Nobiin north. The geographical distribution of the two major Nubian dialects continues to remain puzzling. The Kenūz, who inhabit Upper Egypt north of Wadi Halfa and came from Dongola, speak a Nubian dialect hardly distinguishable from the Dongolāwī. However, these two groups are separated by the Nobiin, who are located along the Nile between them.

4. The modern peoples of Nubia

The Barābra, as a separate group from the Danāgla, are collectively referred to by other Sudanese as Ḥalfāwiyyin (literally: those who come from the town of Ḥalfa). The term Nūbiyyin (Nubians), on the other hand, refers to both the Barābra and the Danāgla. The Barābra live in Aswān Province in upper Egypt and the Northern State of Sūdān. The Danāgla live only in the Northern State. Both groups are small-scale cultivators, skilful boatmen and are renowned for their domestic service. Date-palms are grown as a cash crop and cultivators have taken advantage of mechanical irrigation, introduced early this century, to cultivate more land with a variety of crops. The narrow strips of arable land on the banks of the Nile are insufficient to meet the demands of a rising population, hence the Barābra and Danāgla are forced to emigrate. They are adaptable and enterprising, the men seeking work opportunities in other parts of Egypt, Sūdān and, more recently, in the oil-rich countries of the Arab world where they are engaged in various professions. Wherever they go they maintain a strong cultural identity and keep links with their homeland. Though the Barābra and Danāgla have been influenced by Arab culture and Islam, their cultural identity is manifest in their dialects, traditions and attitudes. Even in urban centres in Sūdān and Egypt this identity is maintained in the social clubs which they have established.

As a result of the agreement between Sūdān and in Egypt in 1959 to resettle the Nubians affected by the creation of the High Dam reservoir lake (the Nūbā Lake in Sūdān and Lake Nāṣir in Egypt), it is estimated that about 50,000 Sudanese and 70,000 to 120,000 Egyptian Nubians lost their homes, land and their date-palms. The resettlement scheme, located in eastern Sūdān along the upper Aṭbara River near the Sūdān-Ethiopia border, known as Khashm al-Girba, absorbed 40,000 Sudanese Nubians in 1964-5. Here the relocated Nubians were granted landholdings and new homes; a new town was named Ḥalfa al-Djadīda (New Ḥalfa) as a replacement to old Ḥalfa which was inundated by the reservoir lake. The new villages established by the scheme were named after those which had been inundated in their homeland. Many amenities were introduced and planners were anxious to recreate the traditional architecture and physical layout of the submerged villages. Despite their displacement, the Nubians have accepted the inevitable and established good relations with the neighbouring nomadic tribes. The Nubians in Egypt, who were affected by the inundation, were resettled in the region of Kom Ombo, about 60 km/35 miles north of Aswān, and the resettlement area was named New Nubia.

Before and since Sūdān's independence in 1956, the Barābra and Danāgla have played a part in the country's cultural development and politics. They are generally devout Muslims and most of them belong to the Mīrghaniyya (Khatmiyya [*q.v.*]) *ṭarīḳa*. They are keen to take advantage of education facilities and show an aptitude for the educational professions and business. Many have achieved prominent positions in government, politics, the arts and in the civil service. Three Nubian singers are popular and famous: the late Khalīl Faraḥ, Muḥammad Wardī and Ḥamza ʿAlāʾ al-Dīn. The most remarkable figure was Muḥammad Aḥmad [*q.v.*], the Mahdī of the Sūdān (d. 1885), who was a Dongolāwī, though his family claim to be *sharīfs*. Another Dongolāwī who has gained political prominence is Djaʿfar Muḥammad Numayrī, a military officer, who came to power through a military coup and ruled Sūdān from 1969 until 1985.

(AHMED AL-SHAHI)

NŪBĀR PAS̲H̲A (1825-99), a high-ranking official, statesman, and reformer of Armenian origin who held positions under six viceroys of Egypt at a time when the country was falling under European influence and control. Born in Smyrna and educated in France and Switzerland, Nūbār was translator for Ibrāhīm Pas̲h̲a [*q.v.*], Chief Translator for ʿAbbās Ḥilmī I [*q.v.*], Secretary and Director of Communications and Railways for Saʿīd Pas̲h̲a, and, under the Khedive Ismāʿīl Pas̲h̲a [*q.v.*], Chief Translator, Director of Public Works, Head of Foreign Affairs, and Director of Commerce. He also served as President of the Council of Ministers under Ismāʿīl and two subsequent viceroys, and was foreign minister in fact for over two decades. Nūbār was personally involved in many of the major developments of the time, particularly the Alexandria-Cairo railway project (1851), the Suez Canal arbitration award (1864), the procuring of the 1873 *firmān*, the establishment of the Mixed Courts (1875), and the political crisis of 1875-9. He also served as an agent in negotiating some of the private and public loans taken out by Saʿīd and Ismāʿīl, and helped reorganise Egypt's transportation system.

Crucial to Nūbār's rise and success were the well-placed connections of his family, which included in-laws in Istanbul and a powerful uncle in the Egyptian court, who secured him his first position; the support of European diplomatic representatives (something which occasionally brought him into the ruler's disfavour); and his own extraordinary ability to make himself useful to viceroys in need of men who knew and understood Europe (Nūbār was entirely Western in culture and spoke all the major languages of Europe).

In his memoirs, Nūbār presents himself as a grand reformer and defender of Egypt. Declaring his aim to be that of limiting the power of both the European consuls and the viceroy, Nūbār discusses his strategy for the independence and development of Egypt, which included an increase in its transit trade, the build-up of the ports of Alexandria and Suez, the introduction of European technicians and expertise, and the establishment of the rule of law by means of Mixed Courts, which, he claims, could have protected the country against exploitation.

Yet Nūbār did more to advance the cause of Europe than any other official in the viceroy's service. The Alexandria-Cairo railway project (which Nūbār had suggested to ʿAbbās Ḥilmī I) increased British influence; the huge indemnity imposed upon Egypt by the Suez Canal arbitration enriched European money lenders and despoiled the Egyptian treasury; the loans Nūbār helped negotiate led to Egypt's bankruptcy and the establishment of European fiscal control (in his memoirs, Nūbār denies all responsibility for Egypt's debt); and the Mixed Courts became instruments of European political intervention. Between 1875 and 1879, Nūbār allied himself with Europe in a successful effort to bring down the ruler, Ismāʿīl Pas̲h̲a, weakening the political structure and opening the way to a rebellion and the British occupation. Blinded by his own ambition to be maker of politics, Nūbār misjudged the amount of power that was left to local politicians and ended his days as an official in a British-controlled administration.

(F.R. HUNTER)

NUBĀTA B. **ʿABD ALLĀH** AL-ḤIMMĀNĪ AL-TAMĪMĪ, Abu 'l-Asad, minor poet of the early ʿAbbāsid period whose verses are known only from citations in other works and whose dates of birth and death are unknown. A native of Dīnawar in western Persia, he was in the circle of the caliph al-Mahdī's vizier al-Fayḍ b. Abī Ṣāliḥ S̲h̲īrawayh, and was a companion of the famous singer ʿAllawayh [*q.v.* in Suppl.].

(ED.)

NUBUWWA (A.), "prophecy", Hebrew *nəbūʾa*, substantive derived from *nabī* "prophet", Hebrew *nābī(ʾ)*, term denoting in the first instance the precognition given by the divinity (Yahweh, the Baʿl, Allāh) to the prophet and the prediction made by the latter of future contingencies. In the second instance, *nubuwwa* is identified with *waḥy*, "revelation", which simultaneously comprises dogmas, cultic regulations, moral education, precepts of social and political order. In fact, for the early Muslims, prophecy was regarded as being the source of all knowledge having any degree of superiority. "The Prophet is the way and the prophets are the guides," wrote al-Kisāʾī (quoted by Yāḳūt, iv, 741).

In early times, the later Muslim *nabī* is almost identical to the Aramaic *ḥāzē* and to the Hebrew *rōʾeh* (cf. T. Fahd, *Divination*, 112 ff.). I Samuel ix, 9, reads: "In former times, in Israel, when a man went to enquire of God, he said 'Come, let us go to the seer (*rōʾeh*); for he that is now called prophet (*nabī*) was in former times called seer." It is for this reason that Muḥammad had considerable difficulty convincing his fellow-citizens that his inspiration was fundamentally different from that of seers of various specialities (*kāhin*, *ḥāzī*, *ʿarrāf*, etc.). He himself, at the outset of his vocation, dreaded being a *kāhin* (Ibn Saʿd, *Ṭabaḳāt*, i/1, 129-30). ʿUmar b. al-K̲h̲aṭṭāb, before his conversion, considered him as such (*Usd*, iv, 74). The intervention of revelation was required to convince him otherwise. "It is the word of an illustrious prophet," the Ḳurʾān states, "and it is not that of a poet, O men of little faith; nor is it that of a diviner, O men of little memory. It is a revelation (*tanzīl*) from the Master of the Universe" (LXIX, 40-3; cf. LII, 39-34; LXXXI, 19-25). The characteristic features of the Ḳurʾānic text sowed doubt in the minds of his fellow-tribesmen; the latter observed, especially in the first revelations, the distinguishing marks of the oracles of soothsayers, these being rhythm, the arrangement of components of a phrase, the concern

for verbal equilibrium, the choice of a vocabulary full of images, the use of uncommon words, as well as the manner of "veiling the head" at the moment of inspiration and of "enwrapping himself" (cf. LXXIII, 1; LXXIV, 1; Ibn Hishām, *Sīra*, 184; al-Ṭabarī, i, 1890, l. 10).

The triumph of Islam at Medina, followed by the conquest of Mecca, put an end to such reservations; the apostasy (*ridda*) of the Yemeni tribes of Madhhidj in 11/632, under the leadership of al-Aswad, soothsayer and conjuror, who "entranced the hearts of those who heard him speak" (al-Ṭabarī, i, 1796), was the last manifestation of an entire Arab pagan tradition to which Islam put an end by the principle *lā kihāna baʿd al-nubuwwa* "no more divination after prophecy" (or rather, after "prophethood"). Henceforward, the gift of penetrating the mysteries of God is reserved for the Prophet alone, and the djinns who used to listen at the gates of Heaven, and inspire the *kuhhān*, are prevented from doing so by angels entrusted with the task of pelting them with shooting stars (XV, 15-18; XXXV, 6-9; XLV, 12; LXVII, 5; Ibn Hishām, 129-30; Ibn Saʿd, i, 1, 110).

However, *kihāna* [*q.v.*] is not formally forbidden either in the Ḳurʾān or in the Sunna; what is forbidden is, first, to visit a *kāhin* and believe what he says: this is to deny the revelation made to Muḥammad (Wensinck, *Concordance*, iv, 196); and second, to charge a fee in the capacity of *kāhin* (*op. cit.*, 505). Nowhere in the Ḳurʾān is there a prohibition analogous to that of Leviticus, xix, 31, where it is written "Do not turn to those that evoke spirits nor to soothsayers; do not consult them lest you be defiled by them." "This reluctance of the Prophet to deny any intrinsic worth to the content of divination is due to the conception, current in his time, of prophecy and of its intermediaries" (T. Fahd, *Divination*, 68).

Prophecy was, in fact, regarded as an extension of divination. For Ibn Khaldūn, for example, "a veil separates men from the unknown which nobody knows, except he to whom God reveals it in dreams or through the path of saintliness" (ii, 177/205). According to him, the difference between the prophet and the soothsayer resides, in the first place, in the absence of the ecstatic state in the case of the soothsayer, an absence which renders him incapable of a universal vision of the created being and of contingencies, and in the second place, in the imperfection of his source of information, subject to limitations which do not affect that of the prophet (i, 181-85/206-11; summarised in Fahd, *op. cit.*, 45 ff.).

As to this source of information, for the true prophets it emanates from angels, their inspirers and their guides; for soothsayers and false prophets it emanates from demons, their inspirers and seducers, while djinn, conceived after the fashion of man, can be either good or bad informants.

God has made the angels his envoys (*rusul*) (Ḳurʾān, XXXV, 1). The function of the "envoy" is to bear the message of the one who sends him. The demon is likewise an envoy and even the source of his message is the same as that of the angel; only the content is different. In fact, the angel who saved the life of Isaac, on the point of being sacrificed to Yahweh (Genesis, xxii, 11 ff.) was sent by the same Yahweh who permitted Satan, present before Him "with the sons of God", to test Job (Job, i, 6; cf. I Kings, xxii, 21 ff.)

Muslim authors, faced with the ambivalence of the divine message and its bearers, have established a distinction between "the angels of mercy", created from light, and "the angels of punishment", created from fire (al-Muṭahhar al-Maḳdisī, *Badʾ*, i, 160, quoting Ibn Isḥāḳ), a distinction inspired by Ḳurʾān, LXVI, 6, which gives the impression that angels exist which are spiritual (*rūḥānī*), corporeal (*djismānī*), capable of growth (*nāmī*) and inanimate (*djāmid*) (*op. cit.*, 170), a notion comparable with the Neo-Platonic distinction between igneous and aerial demons and demons formed from earth (cf. Porphyrus, *De Abst.*, ii, 46; Proclus, *In Tim.*, ii, 11, 10; St. Augustin, *De civitate Dei*, x, 9, 2).

Demoniacal inspiration is opposed by the Ḳurʾān on account of the fascination which it exerts upon the minds of men. The typical example is that of poetic inspiration. Ḳurʾān, XXVI, 220-6, reads: "Shall I tell you to whom the demons (*shayāṭīn*) reveal? They reveal to every great liar and great sinner; they tell what they are supposed to have heard (at the gates of Heaven); but they are mostly liars. As for poets, they are followed only by the misled." It is not to be forgotten that the poets, described as *kilāb al-djinn* "the dogs of the djinns", were originally givers of oracles for their tribes (al-Djāḥiẓ, *Ḥayawān*, vi, 71; Goldziher, *Abhandlungen*, i, 17; Fahd, *Divination*, 74 f.).

The concept of inspiration and revelation in the formative years of Islam was influenced by that of angelology and of demonology, which was rudimentary and anthropomorphic (cf. in this context, T. Fahd, *Anges, démons et djinns en Islam*, in *Sources Orientales*, viii, Paris 1971, 155-213). The demeanour of the Prophet, at the moment of the onset of revelation, illustrates this point. Questioned about the processes of the revelation which he received, Muḥammad replied, "Revelation came to me in two manners: either Djibrīl brought it to me and communicated it to me as a man communicates with another man, but this eluded me; or it came to me like the ringing of a bell, such that it penetrated into my heart; this no longer eluded me" (Ibn Saʿd, i/1, 131 f.; cf. al-Bukhārī, ii, 309 = 59 *khalḳ*, 6). "His physical condition was affected: he grew mournful, and his face darkened; he had the appearance of someone intoxicated and felt a great weight, to such an extent that his camel cried out and its legs buckled beneath him" (Ibn Saʿd, *loc. cit.*; Fahd, *Divination*, 76). A *ḥadīth* has him say, "The divine revelation comes to prophets in waking as well as in sleep," and he adds, "My eye sleeps, but my heart is awake" (Ibn Hishām, 266; Ibn Saʿd, i/1, 113; other references in Fahd, *Divination*, 77, n. 1).

Finally, it should be noted that the initial identity of the source of information of the prophet and of the demon is further attested by the use of the verb *waḥā* "to reveal", and its derivatives, for one as for the other, as emerges from Ḳurʾān, VI, 111, where it is stated, "Thus we have appointed against every prophet an adversary (who is none other than) demons of human kind and of djinn who *reveal* to one another pleasing discourse (intended) to lead astray."

Still more suggestive regarding the manner of conceiving the phenomenon of prophecy in Islam are its "distinctive signs" (*ʿalāmāt, dalāʾil, imārāt al-nubuwwa*). An entire literature exists on this subject (cf. references in Fahd, *Divination*, 79, nn. 2 and 3). Ibn Khaldūn supplies a summary of these signs. "The mark (*ʿalāma*) of this type of men," he writes, "is, first, that they are in a state, during the onset of revelation (*waḥy*), of absence (*ghayba*) accompanied by choking (*ghaṭīṭ*), appearing to the eye like a loss of consciousness (*ghashy*) an unconsciousness (*ighmāʾ*), whereas in reality it is nothing other than a deep absorption (*istighrāḳ*) induced by the encounter with the spiritual kingdom and by the new faculty of com-

prehension which transcends the human faculty in an absolute manner. Then, from this ecstasy the man returns gradually towards a state of human awareness, either by hearing a sound of human speech which he attempts to understand, or by seeing represented before him the image of a person who speaks to him of that which the person has brought from the presence of God. Then this state is dissipated, once the man has absorbed that which has been communicated to him" (i, 165-6/185).

The second mark of the prophet is the moral infallibility (*ʿiṣma*), by virtue of which the man is naturally drawn towards goodness and purity (*ibid.*). The third mark is expressed in his activity on behalf of religion, of worship, prayer, alms and chastity, virtues which he practises and which he induces others to practise (i, 167/187). The fourth assumes that the prophet is of noble descent, well-regarded among his kinsfolk (i, 168/188). The fifth consists in miracles and marvels (in words and in actions, adds Ḥād̲j̲d̲j̲ī K̲h̲alīfa, i, 427) which prove the veracity of his statements. The greatest miracle in Islam is the Ḳurʾān (i, 171/194).

But the most important of these marks, according to Ibn K̲h̲aldūn, is that faculty, granted by God to the prophet, of abstracting himself from human nature, in the state of inspiration and of ecstasy (i, 178/202). He who does not exhibit these signs has no right to claim the ability to penetrate the unknown; he is nothing other than a liar seeking to sell his wares (i, 209/240).

For more thorough information concerning these marks, see, in particular, al-Māwardī (d. 450/1058), *K. Aʿlām al-nubuwwa*, Cairo 1319/1901 ff.; Abū Ḥātim al-Rāzī, same title, extracts published by P. Kraus in *Orientalia*, n.s. v (1936), 35-56, 358-78; al-D̲j̲āḥiẓ (d. 255/869), *K. al-Ḥud̲j̲d̲j̲a fī tat̲h̲bīt al-nubuwwa*, ed. Sandūbī in *Rasāʾil al-D̲j̲āḥiẓ*, Cairo 1933; Abu 'l-Ḥusayn al-Rāwandī (d. 250/864), *K. al-Zumurrud*, in which the author opposes the traditional doctrine of prophecy and introduces some foreign elements (cf. P. Kraus, in *RSO*, xiv [1933-4], 93-129, 335-79); Fak̲h̲r al-Dīn al-Rāzī (d. 606/1209), *ʿIṣmat al-anbiyāʾ*, Cairo 1355/1936.

Other signs announce the coming or the presence of the Prophet. Ibn Saʿd classifies these in two categories: signs prior to the vocation of Muḥammad (i/1, 96-111) and signs following the start of the revelation (112-26). This is a collection of miraculous sayings and deeds relating to the birth and infancy of the Prophet, often belonging to a typology the elements of which were diffused in the popular domain, owing to apocryphal biographies of Jesus and of other prophets (cf. on this subject Fahd, *Problèmes de typology dans la Sira d'Ibn Isḥāq*, in *La vie du prophète Mahomet*, Paris 1983, 67-75).

This group of signs is augmented by a chorus of predictions announcing the coming of the Prophet, made by idols, soothsayers, leading personalities of the period, Jews, Christians, demons and djinns, etc., predictions emanating from the whole of nature, a kind of *praeparatio coranica*, testifying by their spirit, their form and their expression, to the concept held by early Islam of prophecy and of its intermediaries: a spirit removed from any metaphysical and psychological pre-occupation, a form showing small regard for realities and fundamentally marked by excess of imagination; finally, an expression which has no qualms about being simplistic, often full of picturesque imagery (for details, cf. Fahd, *Divination*, 81-8).

This conception evolved considerably with the elaboration of philosophy and of theology in Islam. For Ibn Sīnā, prophecy is "one of the conditions necessary to the order which is demanded by the unfolding of *fayḍ*, so that it may expand to the point required" (M.-A. Goichon, *La distinction de l'essence et de l'existence d'après Ibn Sīnā*, Paris 1937, 334, see also further, 314-34; *S̲h̲ifāʾ*, lith. Tehran 1313/1886, ii, 646 ff.; *Nad̲j̲āt*, ed. Cairo 1331/1913, 498 ff.; *It̲h̲bāt al-nubuwwa*, in *Tisʿ rasāʾil*, 6th *risāla*. On Ibn Sīnā's concept of prophecy, as it became known to scholars by means of Latin translations, cf. B. Decker, *Die Entwicklung der Lehre von der prophetischen Offenbarung von Wilhelm von Auxerre bis zu Thomas von Aquin*, diss. Breslau 1940, 15-24).

"For him, it is the Intelligences and the Souls of celestial bodies which transmit to the human soul certain hidden things, it being understood that the recipients possess particular perceptions and particular wills, emanating from a particular opinion" (Goichon, *Directives et remarques*, Paris-Beirut 1951, 507-8). And if the soul is of strong substance, it attains to ecstasy under a spiritual influence which sometimes "takes genuine control and then illumines the imagination in an evident manner". It is then that the soul is raised to the level of prophecy (*op. cit.*, 514). Finally, for him, the necessary conditions whereby a man may be a prophet are clarity and lucidity of intelligence, the perfection of the imaginative faculty and the ability to make himself obeyed by exterior matter (cf. *Psychologie d'Ibn Sīnā*, ed. Ján Bakoš, Prague 1956, i, 189-97 = *S̲h̲ifā*, Physics, *fann* vi, *maḳāla* 4, ch. 4). See also L. Gardet, *Quelques aspects de la pensée avicennienne*, in *Revue Thomiste*, xlv (1939), 714; Decker, *op. cit.*, 16 ff. A brief analysis of Ibn Sīnā's doctrine concerning prophecy and the perception of the unknown is to be found in al-S̲h̲ahrastānī, *Milal*, ed. Cureton, 309 ff. (Metaphysics) and 425 (Physics), German translation by Haarbrücker, ii, Halle 1851, 317-18, 327-32.

Al-G̲h̲azālī accepted the doctrine of Ibn Sīnā and developed it further. In fact, in the last six chapters of the Latin version of *Maḳāṣid al-falāsifa* (tr. Dom. Gundisalvi, Venice 1506, of which the portion entitled *Metaphysics* has been edited by J.T. Muckle, *Algazel's Metaphysics, a medieval translation*, Toronto 1933; Arabic text ed. Cairo 1331/1912), which deal with vision, prophecy and marvels, al-G̲h̲azālī revives Avicennan ideas (which he is to refute the same year, in 488/1095, in the *Tahāfut*, ed. M. Bouyges, Beirut 1927, 255-67; L. Gauthier, *La theorie d'Ibn Rochd sur les rapports de la religion et de la philosophie*, Paris 1909, 138-41) and reveals them in a clear and expressive style. For him, the vision of the unknown, in the state of waking, is subject to two conditions. On the one hand the soul must free itself from corporeal links and remove itself from the veil of the senses by a force which is peculiar to it; it is then elevated to the higher world where things appear to it in an instant brief as a lightning-flash. This is the first mode of prophecy. The other mode, decidedly imperfect in comparison to the first, comes about in the normal exercise of the senses. In fact, the temperament predisposed to melancholy and amazement and easily alienated from the senses enables the soul to withdraw from the body and to see and hear with eyes open that which normally it sees and hears only through the opaque veil of the senses (cf. *Metaphysics*, ii, 5,7, quoted by Decker, *op. cit.*, 25 f.). This agreement of the theologian with the philosopher on the subject of prophecy remains an isolated phenomenon; in fact, as M. Horten writes (*Texte zu dem Streite zwischen Glauben und Wissen in Islam. Die Lehre vom Propheten und der Offenbarung bei den islamischen Philosophen Farabi, Avicenna und Averroes*, Bonn 1913, 12), "in der Theorie über die

Prophetie stimmt er mit den Philosophen überein, die er sonst bekämpft." Whereas, in the *Tahāfut*, theories which present precognition and prophecy as the results of perfect nature, are countered by al-Ghazālī with the notion of revelation of things unknown, made by God to the prophet as to the dreamer, either directly or through the intermediary of an angel (see 260-1; cf. 252, 289, etc.).

Ibn Rushd does not share this view. For him, prophecy, dream and divination are three names denoting a single and identical reality. Our ignorance of the possible derives from our ignorance of the nature of being. Knowledge of this nature is either anterior to its object: it is the knowledge from which it follows, called *al-ʿilm al-ḳadīm*, prior or anterior knowledge; or it is posterior, *al-ʿilm al-ghayr ḳadīm*, or subsequent knowledge. "Knowledge of the unknown is nothing other than the knowledge of this nature" (*Tahāfut al-Tahāfut*, ed. Bouyges, Beirut 1930, 533, ll. 2-3). It is the result of this knowledge which is called, in popular usage, *ruʾyā*, dream, nocturnal vision, and, by the prophets, *waḥy*, revelation (*op. cit.*, 532-3; on Ibn Rushd's doctrine of prophecy, see L. Gauthier, *op. cit.*, 124-58). This represents a fairly deep fissure in the rationalist system which bears his name, on account of his role as an arbiter in the conflict, then current, between theology and philosophy.

With Maimonides (d. 601/1204, see IBN MAYMŪN), the brilliant disciple of Ibn Rushd, the Avicennan trend is revived. In fact, in chapters 32 to 48 of the second part of his monumental study of Jewish religious philosophy, intitled *Dalālat al-ḥāʾirīn* (= *Moreh Nebūkīm*), edited and translated into French by S. Munk under the title *Le guide des égarés. Traité de théologie et de philosophie*, i-iii, Paris 1856-66, Maimonides reveals at some length his opinion of prophecy and the various modes of perceiving the unknowable. According to him, prophecy is an emanation from God which, through the intermediary of an active intellect, influences first the rational faculty and subsequently the imaginative faculty; it is the highest degree of man and the ultimate perfection which the species may attain, and this state is the highest perfection of the imaginative faculty (ch. 35, tr. ii, 281). It assumes the existence in the man of a natural disposition which makes of him "a superior man, perfect in his rational and moral qualities" (ch. 32, tr. ii, 261 f.). Three perfections are required of the prophet: perfection of the rational faculty, perfection of the imaginative faculty and perfection of morals (ch. 36, tr. ii. 287). Dream and prophecy both belong to "the highest and most noble" activity of the imaginative faculty, which takes place only when the senses are in repose and cease to function; it is then that there occurs a certain emanation (*fayḍ*) which is the origin of true dreams and of prophecy and which "differs only in quantity and not in quality" (*Gen. Rabba*, c. 17, 44). In visions and in dreams, all the degrees of prophecy are contained (ch. 36, tr. ii, 282 ff. On Maimonides' conception of prophecy, see Z. Diesendruck, *Maimonides' Lehre von der Prophetie*, in *Jewish studies in memory of Israel Abrahams*, New York 1927, 82 ff.; Decker, *Entwicklung*, 37-8).

This close connection established by Maimonides between dream and prophecy corresponds precisely to the conception current in the early days of Islam. In fact, Tradition relates that before acceding to the full light of revelation as such, Muḥammad initially had dreams described as "veracious" (*ruʾyā ṣādiḳa*), supplying to him, in the words of L. Massignon (*Annuaire du College de France*, 41st year, 85), "in the form of isolated touches, light and sound, which he was unable to coordinate, that alphabet of ecstasy which he attempted later to represent, in the form of isolated consonants, at the heading of certain sūras (such is, at least, he adds, the reconciliation that we suggest)." This statement is based on the testimony of ʿĀʾisha, "The beginning of the prophecy of the Messenger of God, when God wished to make him His agent and the instrument of His mercy towards creatures, (was manifested) by veracious dreams; every dream which he saw in his sleep was as clear as the dawn. This made him love solitude; nothing was more pleasant to him than to be alone" (Ibn Hishām, 151; Ibn Saʿd, i/1, 129). A *ḥadīth* confirms this remark of ʿĀʾisha. The Prophet is quoted as saying, "There exist no signs announcing prophecy other than the good dream; the Muslim sees it or it is seen for him" (Ibn Saʿd, ii/2, 18; cf. Ibn Khaldūn, iii, 81/115). The term *bushrā* in Ḳurʾān, X, 64, is interpreted as *ruʾyā ḥasana* (al-Ṭabarī, *Tafsīr*, xi, 84 ff.). These "signs" or "preambles" form an integral part of prophecy, since the dream is said to be "a part of prophecy", an assertion repeated in all the prefaces of oneirocritical treatises. *Ḥadīth* goes further, specifying, following the Babylonian Talmud (*Berakhōt*, 57b, quoted by Maimonides, *op. cit.*, ii, 36), the proportions whereby dream is related to prophecy. The Prophet is quoted as saying: "The dream of the Believer is one of the forty (sixty, in the Talmud) parts of prophecy," a statement which al-Dīnawarī (*al-Ḳādirī fi 'l-taʿbīr*, ms. Paris, fol. 34b) explains as follows. "The Prophet means that the majority of prophets—peace be upon them!—did not see the angel, with the exception of a minority among them. It is during their sleep that they received the revelation." This amounts to saying that the Prophet first came to prophecy at the lowest level, i.e. the dream. It was at Ḥirāʾ that he graduated, for the first time, from dream to prophecy. In the year of his vocation—his fortieth year—he withdrew for a month of annual retreat (*taḥannuth*), accompanied by his wife. As he slept, the angel Gabriel appeared to him with a piece of some kind of silken fabric on which there was writing (*namaṭ min dībādj fīhi kitāb*). He said to him "Read!" "I cannot read" he replied. The angel stuffed the fabric into his mouth, almost suffocating him. "I believed," he says, "that this was death!" Then he released him, repeated the same question and inflicted the same treatment on him a second time, then a third. The fourth time, to escape this torture, Muḥammad asked him: "What must I read?", and the angel made him recite the beginning of the sūra *al-ʿAlaḳ* (XCVI, 1-5). Muḥammad adds, "I recited that which he had said, it was then that he finally left me. I woke up (*hababtu min nawmī*). (This phrase) was then as if inscribed in my heart. I went forth (wandering) and when I reached the middle of the mountain I heard a voice from Heaven saying 'O Muḥammad, you are the Messenger of God and I am Gabriel'. I stopped, watching him, neither advancing nor retreating, then I looked away from him towards the horizons and the sky; whichever way I turned, I saw him just as he was. I remained in this position, neither advancing nor retreating, until Khadīdja sent men to look for me. Her envoys arrived at the high places of Mecca and returned from there, and I was still in the same position. Then he parted from me and I parted from him, returning to my wife" (Ibn Hishām, 152-3; cf. the vision of Ezekiel, i, 4 ff.).

This account, combining the triple appeal of the vocation of Samuel with the initiation, through absorption of the prophetic message, of Ezekiel (ii, 8 ff.; cf. Jeremiah, v, 10) comprises two parts: the

first took place in sleep, the second in a state of waking. Here there is a typical example of transference from dream to ecstasy (on dream and prophecy, cf. Fahd, *Divination*, 266-9, and on the dreams of Muḥammad, 255 ff.).

AL-**NUDJAYR**, a fortress in Ḥaḍramawt [*q.v.*] where in 12/633 during the caliphate of Abū Bakr [*q.v.*] rebels under al-Ashʿath b. Ḳays [*q.v.*] took refuge against Ziyād b. Labīb al-Anṣārī, the Prophet's governor.

Late in the year 11/633, Abū Bakr had decided that Islamic authority could only be effectively imposed on the Yemen by military force. In particular, he was worried by the situation in Ḥaḍramawt where al-Ashʿath b. Ḳays, the leader of Kinda, had refused to give him the oath of allegiance as caliph. Abū Bakr entrusted the task to al-Muhādjir b. Abī Umayya, the governor of Ṣanʿāʾ, who marched eastwards from the capital to Ḥaḍramawt via Mārib. There al-Muhādjir received a letter from Ziyād, the Muslim governor in Ḥaḍramawt, urging him to proceed thither with speed. Leaving some of his army behind in Mārib, al-Muhādjir marched on Ḥaḍramawt. The rebels, in particular of Banū Muʿāwiya, a branch of Kinda (Madʿadj, 56, table 3), finally sought refuge in the fortress of al-Nudjayr. They could not, however, break out from the siege of the stronghold which was under the combined command of al-Muhādjir and Ziyād. The Banū Muʿāwiya finally surrended. Al-Ashʿath signed an agreement with the Muslim leaders, securing safe conduct for himself and his family. In return he opened the gates of al-Nudjayr. The Banū Muʿāwiya blamed al-Ashʿath for his betrayal, as many of their number were killed. However, the agreement put an end to serious anti-Muslim rebellion in Ḥaḍramawt and ensured a much stronger hold over the area by the Muslim authorities.

Al-Nudjayr is not mentioned further in the historical works and al-Hamdānī (87), writing in the 4th/10th century, describes the place as a ruin.

(G.R. Smith)

AL-**NUDJŪM** (A.), the stars. There are two words in Arabic carrying the notion of "star", *nadjm*, pl. *nudjūm* (from the root *n-dj-m*, "to rise"), and *kawkab*, pl. *kawākib* (see *WKAS*, i, 440 b 28; cf. already Babyl. *kakkabu*; a reduplication of a basic root *KB* "to burn, to shine"). For the etymologies of the two words, see Eilers [1], 96 ff.; [2], 115; [3], 6 f. Both words occur frequently in the Ḳurʾān. In LV, 6, it remains in dispute whether *al-nadjm*ᵘ is to be understood as "the plants, or grasses" (as maintained by I.Y. Kračkovskiy and A. Fischer) or as "the stars" (see the recent German translation by R. Paret, and his commentary, 465, also the English translation of R. Bell and his *A commentary on the Qurʾān*, Manchester 1991, ii, 330). *Al-nadjm* is also used, in Arabic, as an alternative name for the Pleiades (otherwise called *al-thurayyā*; see Kunitzsch [2], nos. 186, 306). The two words are used indiscriminately in the general sense of "star(s)", but *kawkab* can mean "planet(s)" specifically, according to context.

The following article is subdivided into three sections, for the fixed stars, the planets and other celestial objects.

I. The fixed stars

The Arabs—inhabitants of the Arabian Peninsula, mostly Bedouins—had a good knowledge of the stars since ancient times. They used the fixed stars for orientation in their nightly desert travels (*ihtidāʾ*), to determine seasons and to predict weather, especially rain. They had proper names for a good dozen prominent stars or other celestial objects, names of old standing, the meanings of most of which had been obscured or lost in the course of time so that they became the object of speculation of the Arabic philologists and lexicographers of later times. For these, no modern "translations" can be given, cf. *al-ʿayyūḳ* (α Aurigae, Capella), *al-shiʿrā* (α Canis Maioris, Sirius—also mentioned in the Ḳurʾān, LIII, 49), *al-simāk* (*al-s. al-rāmiḥ*, "the lance-bearing Simāk", α Bootis, Arcturus; and *al-s. al-aʿzal*, "the unarmed Simāk", α Virginis, Spica), etc.; cf. Kunitzsch [2], 20 f. For some of these old names there exist parallels in Babylonian astronomy; cf. Kunitzsch [8].

In addition, several hundred names for smaller, less conspicuous stars and asterisms were invented, most probably by poets, at various times and in various tribes and regions; see the name lists in Kunitzsch [2] and [7]. All these names were later assembled by the Arabic philologists and lexicographers in the so-called *anwāʾ* books (for these, see the bibliographies in AL-

ANWĀʾ and AL-MANĀZIL). In contrast to ancient Greek (and modern) astronomy, where large constellations are made up of numerous stars, in the indigenous Arabic stellar lore one star mostly represents one individual (mostly of a species of animals), a name in the dual represents two such individuals and a name in the plural represents a group of individuals. There are only a few Arabic constellations formed from a number of stars, such as e.g. the several *athāfī*, "fireplace(s) formed by a triangle of three stones on the ground" (cf. Kunitzsch [2], nos. 17-19). A classified survey of the asterisms of the old Arabs was given by Ideler, 407-28.

Of Iranian star names, only a few are known, and their astronomical identification remains uncertain; cf. Scherer 113 f., 118 f.; Eilers [1], [3]. Genuine Turkish star names are discussed by Bazin and Roux. In Islamic times the astronomers and poets of the Islamic world generally used the Arabic star names (but see the planets). Much of the Arabic stellar lore has lived on into modern times although the astronomical identifications and the calendrical usage may now differ; see the modern studies cited in AL-MANĀZIL and, for the Tuaregs, Bernus-Sidiyene.

Tradition has it that certain prominent fixed stars were worshipped by Arabic tribes in pre-Islamic times (cf. the allusion to *al-shiʿrā*, Sirius, in Ḳurʾān, LIII, 49), but, as it seems, these contentions still lack positive evidence; see Henninger.

Apart from perhaps some star names (see above), the old Arabs had also inherited from Babylonia—at unknown times, through unknown ways—some of the zodiacal constellations. But with them, several of these constellations were transferred to celestial areas different from their places in Babylonian and Greek (and modern) astronomy. Suffice it here to mention as a famous example *al-djawzāʾ* (a female name of uncertain signification) which, in the series of the zodiacal constellations, corresponds to Gemini, but which is located in the stellar figure known in Greek (and modern) astronomy as Orion; for more details, see MINṬAḲAT AL-BURŪDJ.

The old Arabs themselves developed a popular stellar system of so-called *anwāʾ* (sing. *nawʾ*), stars and asterisms mostly situated near the path of Sun and Moon which were used for calendrical purposes and weather predictions [see AL-ANWĀʾ]. Later, the *anwāʾ* were merged into the system of the 28 lunar mansions which the Arabs received from outside, perhaps from India, and which divided the ecliptic according to the Moon's monthly revolution into 28 portions, each mansion being marked by a star or asterism carrying the name of the corresponding *nawʾ* located in that place [see AL-MANĀZIL; also Varisco].

The old Arabic stellar lore was much used in poetry. The poets liked to cite star names and to use them for comparisons or for poetic allusions to calendrical and meteorological events connected with them, and the like; cf. Kunitzsch [10], items xxvi and xxvii; Kunitzsch-Ullmann.

The period of indigenous, old Arabic folk astronomy ended with the expansion of Islam, when the Arabs came into contact with ancient Greek and Hellenistic science. Through, and after, the translations from Greek (and sometimes Persian and Indian) into Arabic, the period of Greek-based "scientific" astronomy in the Islamic civilisation begins which, in some areas, continued down to the 19th century.

The knowledge of the fixed stars (*al-kawākib al-thābita*, or simply *al-thawābit*) in the "scientific" astronomy of the Islamic period was completely based on and influenced by ancient Greek theory and material. The physical qualities and behaviour of the stars were understood according to the cosmological theories of Aristotle and Ptolemy: the stars were invariably fixed to the eighth sphere (beyond the planets), thus being unable to change places relative to each other, and were invariable in substance, size and colour. The eighth sphere (hence the stars fixed to it) performed a constant movement from West to East about the poles of the ecliptic, the so-called "precession" (*ḥarakat* or *sayr al-kawākib al-thābita*), which Ptolemy—following Hipparchus—assumed at a rate of 1° in 100 years. The astronomers of the caliph al-Maʾmūn arrived at an improved rate of 1° in 66½ years (*al-Zīdj al-mumtaḥan* [*Tabulae probatae*], 214/829-30), which afterwards—simplified as 1° in 66 years—was adopted by most of the succeeding authors of star catalogues (al-Battānī, al-Ṣūfī) and smaller star tables; another prominent value was 1° in 70 years (cf. the survey in Nallino, *al-Battānī, Opus astronomicum*, i, 292 f.; see also Mercier [1]).

The iconographical and topographical division of the stellar sky into constellations was also completely taken over from the Greeks. Here the main source was the star catalogue in Ptolemy's *Almagest* (epoch: A.D. 138) comprising 1,025 stars arranged in 48 constellations and registered with ecliptical coordinates, longitude and latitude, and (apparent) magnitudes. Of the *Almagest* several translations into Arabic were made from the late 8th to the late 9th centuries (cf. Kunitzsch [5], 15-82). The versions of al-Ḥadjdjādj and of Isḥāḳ b. Ḥunayn (the latter emended by Thābit b. Ḳurra) have survived into our time (the star catalogue from these two versions was edited by Kunitzsch [11], vol. i); the "old" version made before al-Ḥadjdjādj's was used in the star catalogue of al-Battānī, and many coordinate values from it are also cited by Ibn al-Ṣalāḥ. These sources supplied the Arabic-Islamic astronomers with the terminology and nomenclature of the 48 constellations and the 1,025 individual stars and provided them with the basic coordinate values for these stars (for a complete survey of the names of the 48 constellations, followed by Greek, Arabic and Latin indexes, see Kunitzsch [5], 169-212; the complete terminology for the individual stars, again followed by Greek, Arabic and Latin indexes, is given in *ibid.*, 212-370). The Arabs also knew Aratus (3rd cent. B.C.) as the inventor of the constellations and cited from his *Phaenomena* and the *Scholia in Aratum* (cf. Sezgin, vi, 75-7; further, al-Bīrūnī, *Tafhīm*, 72; Ibn al-Ṣalāḥ, 54 f., 71).

The Arabic term for "constellation" was *kawkaba*, pl. *kawkabāt* (adapted from Ptolemy's ἀστερισμός), or *ṣūra*, pl. *ṣuwar*.

Apart from the textual tradition, iconographic documents from (Late) Antiquity seem also to have reached the Islamic period conveying to the Muslim astronomers the outlines of the pictorial representation of the 48 classical constellations. An early example for the continuation of classical iconographic material into Islamic times is the fresco in the cupola of the bath in the desert castle of Ḳuṣayr ʿAmra (*ca.* 711-15 [see ARCHITECTURE]) showing a celestial hemisphere with constellation figures (cf. Saxl; Beer [1], [2]; Almagro). Also, instruments such as celestial globes and astrolabes of Greek provenience or tradition must have reached the Muslims; Ibn al-Ṣalāḥ (18, 72 f.) mentions the description of a Greek globe datable *ca.* A.D. 738, and Ibn al-Ḳifṭī (*Taʾrīkh al-Ḥukamāʾ*, 440) reports the existence of a globe made of copper (*nuḥās*), attributed to Ptolemy himself, in Cairo in 435/1043-4.

Several Islamic astronomers established star

catalogues in the manner of Ptolemy's catalogue: al-Battānī (only 533 out of Ptolemy's 1,025 stars; epoch A.D. 880; precession value = Ptolemy + 11°10′; edited in Nallino, *al-Battānī, Opus astronomicum*; cf. Kunitzsch [10], item v; Ibn al-Ṣalāḥ, Appendix ii, 97 ff.); Abu 'l-Ḥusayn al-Ṣūfī (complete, accompanied by drawings of the constellations; epoch 964; precession value = Ptolemy + 12°42′; *Kitāb Ṣuwar al-kawākib*, ed. Ḥaydarābād 1373/1954, French tr. H.C.F.C. Schjellerup, St. Petersburg 1874, repr. Frankfurt-am-Main 1986; cf. Kunitzsch [10], item xi); al-Bīrūnī (complete; epoch 1031; precession value = Ptolemy + 13°0; in *al-Ḳānūn al-masʿūdī*, ed. Ḥaydarābād, iii, 1375/1956, Russian tr. S.A. Krasnovaya and M.M. Rozhanskaya, in *Istoriko-astronomičeskiye issledovaniya*, viii, Moscow 1962, 92-150,with comm. by B.A. Rosenfeld, in *ibid.*, 177-86); and Ulugh Beg (complete; epoch 1437; textually depending on Naṣīr al-Dīn al-Ṭūsī's Persian translation of al-Ṣūfī's Book on the Constellations; astronomically claiming his own observation for the majority of the stars and dependence on al-Ṣūfī for the rest; edited by Th. Hyde, Oxford 1665; a modern recension of the coordinate values was made by Knobel; cf. further, Evans, 162-5; Shevchenko).

Besides these great, complete catalogues, innumerable smaller star tables were drawn up by Muslim astronomers of all times, mostly listing fundamental stars for use on astronomical instruments such as the astrolabe (see Kunitzsch [10], item i; for some edited specimens, see *ibid.*, items ii-iv, and Kunitzsch [3], I A and XII A).

The pictorial representation of the 48 classical constellations in Islamic astronomy, in books, on celestial globes and elsewhere, mainly follows the patterns set up by the drawings in al-Ṣūfī's Book on the Constellations; al-Ṣūfī, in turn, must have followed traditions from Late Antiquity (for the textual description of the stars he generally follows the *Almagest* version by Isḥāḳ-Thābit; in the star coordinates he chooses between the various translations of the *Almagest* and faithfully repeats the *Almagest* values in his star tables, notwithstanding his criticism of many of them). For each constellation al-Ṣūfī gives two drawings, one as seen in the sky, the other as seen on the celestial globe (where the figures are viewed from outside, on the convex surface of the globe, i.e. human figures seen in the sky looking towards the observer with their faces and front sides are seen on the globe with their back sides towards the observer; al-Ṣūfī, however, gives a "falsified" globe view, just the mirror image of the sky view representation; the reason for this is not obvious; most probably he just follows older models of Late Antique tradition; perhaps the intention was to keep the figures showing their faces to the observer under all conditions).

Outside the books, the fixed stars were used on various astronomical instruments. The astrolabe especially, but also quadrants, were instructed with the most important fundamental stars (see ASṬURLĀB; Kunitzsch [12]). While in the great star catalogues after Ptolemy, the stars were registered with ecliptical longitude and latitude, for use on the astrolabe another set of coordinates was more practical: *mediatio coeli* (*tawassuṭ*, or *mamarr*—passage at the meridian) and declination (*al-buʿd ʿan muʿaddil al-nahār*). These were usually obtained (from the ecliptical values) by calculation. Many astronomical handbooks (*zīdj*) and treatises on the astrolabe contain tables of astrolabe stars with one or both sets of these coordinates. Furthermore, the stars and their constellations used to be represented on celestial globes (up to now, a number of more than 130 celestial globes in the Islamic area has been found and registered, see Savage-Smith); here the stars were entered according to ecliptical coordinates; the styling of the constellation figures normally followed the models introduced by al-Ṣūfī. Celestial globes are the only form of mapping the entire sky known from Islamic astronomy; no plane star maps from the Islamic Middle Ages have been found, although some astronomers (e.g., al-Bīrūnī, *Kitāb Tasṭīḥ al-ṣuwar wa-tabṭīḥ al-kuwar*, ed. A. Saidan, in *Dirāsāt/al-ʿUlūm al-ṭabīʿiyya* [Univ. of Amman], iv [1977], 7-22; cf. Berggren; Richter-Bernburg) discuss the construction of plane star charts. Instead of complete star maps we only have al-Ṣūfī's isolated drawings of the individual constellations. The late Persian astrolabist Muḥammad Mahdī al-Yazdī produced two astrolabes, to each of which he added a plate carrying, on both sides, maps of the northern and the southern celestial hemispheres with all constellations. One of these instruments is dated 1065/1654-5 (in Riyāḍ; it was on display in the exhibition *Saudi-Arabia, yesterday and today* in Washington D.C., July 1989; see the accompanying catalogue *Islamic science and learning*, 14); the other one, dated 1070/1659-60, was described by W.H. Morley, *Description of a planispheric astrolabe...*, London 1856, 48 f. (repr. in *Arabische Instrumente in orientalistischen Studien*, ed. F. Sezgin, i, Frankfurt-am-Main 1990, 302 f.). These veritable sky maps are, however, inspired by contemporary European star charts; they include, in the southern hemisphere, near the South Pole, some of the non-classical southern constellations which were introduced in the 16th and 17th centuries. Hence these plates reflect a new development in Islamic astronomy, with the influx of modern Western knowledge.

The question, to what extent the star tables and catalogues of Muslim astronomers represent the result of their own independent observation, is not always easy to answer. It appears convincing that a star table or catalogue with ecliptical coordinates, whose latitudes are identical to Ptolemy's and whose longitudes show a constant increase over Ptolemy's, was obtained by calculation rather than by observation. When the latitudes differ and the longitudes show varying differences against Ptolemy's, one would rather be inclined to assume independent observation. A few well-known outstanding examples of independent observation are: the table of 24 stars measured by al-Maʾmūn's astronomers and transmitted in *al-Zīdj al-mumtaḥan* ("*Tabulae probatae*"; epoch 214/829-30; cf. Kunitzsch [10], item iii), or the star catalogue of Ulugh Beg (see above), although for this latter one the question seems not yet definitely answered. Personal observations of Ptolemy's stars were made by Ibn al-Ṣalāḥ (d. 1154), as can be understood in many places in his treatise *Fī sabab* .... Also, the most famous and most detailed Islamic author on the fixed stars, al-Ṣūfī (903-86), re-observed all of Ptolemy's stars and added, in his *Book on the Constellations*, to the description of each of the 48 constellations a special section reporting his criticism. Nevertheless, in the tables of his catalogue he merely repeated Ptolemy's coordinate values and did not enter any new or "better" values found by himself, except for the magnitudes. Since most of the *zīdjs* (astronomical handbooks with tables; cf. below) of the Islamic period are still unedited, it would be premature now to present final statements. It may be that in them one or another star table will be found that is built upon an author's own observations.

Surveys of the 48 Ptolemaic constellations are also

found—apart from the great star catalogues mentioned above—in some other works: Muḥammad b. Aḥmad al-Khwārazmī (*ca.* A.D. 980), *Mafātīḥ al-ʿulūm*, ed. G. van Vloten, Leiden 1895, 210-13; al-Bīrūnī, *Tafhīm* 69-72 (on 77-81 follows a survey of indigenous old-Arabic star names, and on 81-5 the lunar mansions are listed); Zakariyyāʾ al-Ḳazwīnī, *ʿAdjāʾib al-makhlūḳāt*, ed. Wüstenfeld, i, 29-41 (this section is extracted from al-Ṣūfī's *Book on the Constellations*; the section was separately edited and translated by L. Ideler and served as the nucleus for his voluminous study on the history of star names; on 41-51 follows a description of the 28 lunar mansions which is extracted from Ibn Ḳutayba's *Kitāb al-Anwāʾ*, cf. ed. Ḥaydarābād 1375/1956, 17 ff.). Of some interest for the continuity of the tradition is *Le traité sur les constellations* by Severus Sebokht, in Syriac, written in A.D. 660, i.e. in early Islamic times, but much before the famous Greek-Arabic translations; ed. F. Nau, in *Revue de l'Orient Chrétien*, xxvii (1929-30), 327-410, xxviii (1931-2), 85-100. About 600 years later another Syriac description of the 48 constellations was given by Bar Hebraeus (Abu 'l-Faradj b. al-ʿIbrī) in his *Livre de l'ascension de l'esprit*, ed. Nau, Paris 1899-1900, text i, 110 ff., tr. ii, 94 ff., which now, however, is a mixed text including both Syriac and Arabic elements (cf. Kunitzsch [1], 32 f.).

A rare use of the 48 constellations was made by the Persian poet Fakhr al-Dīn Gurgānī in his epic *Vīs u Rāmīn* (written *ca.* A.D. 1050), where he presents a horoscope which is greatly expanded by including all the constellations of the fixed stars in the astrological configuration (cf. Kunitzsch [10], item xxviii; in a subsequent article in *Isl.*, lx [1983], 297-301, O. Neugebauer has dated this horoscope to A.D. 968).

The Arab seafarers in the Indian Ocean in the 15th and 16th centuries, Aḥmad b. Mādjid and Sulaymān al-Mahrī, still knew and used some of the classical constellations and star names, though often in distorted form and in modified astronomical application. Especially Ibn Mādjid [*q.v.*] takes pride in naming the classical books he had studied, among them al-Ṣūfī's *Book on the Constellations* (here called *Kitāb al-Taṣāwīr*). On the other hand, the star nomenclature of these *muʿallims* contains several names of unknown and sometimes certainly non-Arabic origin. For discussions of these names, see the Index given in Kunitzsch [10], item xxix.

In astrology it was mostly the planets whose influence was considered. But since oldest times, the fixed stars could also be included in the astrological procedures. Already Ptolemy in his astrological handbook, the *Tetrabiblos* (*Kitāb al-Arbaʿa*), assigned to all the constellations and the major stars individually the "temperament" (κρᾶσις, A. *mizādj*, Lat. *complexio, temperamentum*) of one or two planets, cf. *Tetrab.* i, 9. Subsequently, lists of stars with their temperaments were drawn up, or in purely astronomical star tables the temperaments were added in a separate column. Further, to certain fixed stars was ascribed a bad influence on health, especially of the eyes, and also these stars were assembled in special lists. All this material reached the Arabic-Islamic civilisation, in the same way as the astronomical knowledge, and we find it reproduced directly, or in various adaptations, in Arabic texts.

Of the *Tetrabiblos* several Arabic translations were made (not all edited until now; cf. Sezgin, vii, 41 ff.). The famous astrologer Abū Maʿshar included in his comprehensive *al-Mudkhal al-kabīr*, ii, 1, a survey of the 48 classical constellations (without adding the astrological temperaments; see the facsimile ed.—made from ms. Istanbul, Carullah 1508, dated 327/938—by F. Sezgin, Frankfurt-am-Main 1985, 111 f.). For lists of stars doing harm to the eyes (cf. *Tetrab.*, iii, 12) see again Abū Maʿshar, *Mudkhal*, vi, 20 = facs. Frankfurt 351 f. (cf. Kunitzsch, *apud* Hübner 358 f.), and al-Bīrūnī, *Tafhīm*, 272-4 (§ 460). Another list of unlucky stars of Abū Maʿshar is in Kunitzsch [10], item xvii, 113-19. A very recent specimen for a horoscope introducing the fixed stars is the horoscope of Asad Allāh Mīrzā, 1830; cf. Elwell-Sutton (esp. 16-27, 94 f.). One ancient tradition on the "Thirty Bright Stars" appeared in Arabic under the name of Hermes; it must have come through (Middle) Persian mediation, because its badly distorted star names show signs of Persian influence (cf. Kunitzsch [10], item xiii), and the term for the fixed stars here used, *al-kawākib al-biyābāniyya* (in mediaeval Latin translation *stelle beibenie*), is Persian (from Pahlavi *a-wiyābān-īg*, which literally renders Greek ἀπλανής, the common term for the fixed stars; cf. W.B. Henning, *apud* Kunitzsch [10], item xiv, esp. 265; al-Bīrūnī's explanation of the term *al-kawākib al-biyābāniyya* as "desert stars", from New Persian *biyābān* "desert", in *Tafhīm*, 46 (§ 125), was mere guesswork and popular etymology). The Hellenistic astrological compilation in five parts ascribed to Zoroaster also reached the Arabs through a Persian intermediate stage; the star names in the chapter on the fixed stars of its fifth part, *Kitāb al-Mawālīd*, were transformed into Persian and were retained in this form in the Arabic version; cf. the ed. of the chapter in Kunitzsch [13]. Another tradition, on stars causing weather disturbances, tempest, etc., containing star names of unknown origin and meaning, has been found until now only in Byzantine and mediaeval Latin versions and it is uncertain whether an Arabic stage was also involved in its transmission; cf. Kunitzsch [10], items xv-xvi.

Yet another use of star names occurred in lot books (*kutub al-faʾl*) where they took the role of "judges" answering questions or guiding the interrogator to further questions. An example is the *Liber Alfadhol*, a lot book attributed to Hārūn al-Rashīd's astrologer al-Faḍl b. Sahl, of which also Latin and old German versions exist and which contains 144 "judges" carrying star names (including a few astronomical terms); cf. Kunitzsch, *apud* Lutz, 321-36, and idem, in *ZDMG*, cxviii (1968), 297-314, and cxxxiv (1984), 280-5. For other texts of this kind cf. Kunitzsch, *apud* Lutz, 321 n. 1; Kunitzsch [6], esp. 281 f.; Wetzstein.

In addition, it may be mentioned that Arabic texts of all the kinds described were translated into Western languages, into Byzantine Greek from the 11th century onwards and into Latin, in Spain, from the late 10th century onwards. In this way, Arabic star and constellation names became widely known in mediaeval and Renaissance Western science, and more than 200 "Arabic star names" can still be found in modern star atlases and astronomical textbooks today.

Since it is impossible to give here lists of the many Arabic star and constellation names, once more the literature is cited where all these names are completely listed and explained: for indigenous old Arabic star names, see Kunitzsch [2] and [7]; for the lunar mansions, see AL-MANĀZIL; for the zodiac, see MINṬAḲAT AL-BURŪDJ; for the nomenclature of stars and constellations derived from Greek sources, mostly the *Almagest*, see Kunitzsch [5]; for specimens of Arabic star names in Byzantine texts, see Kunitzsch [10], item ii (types I and II); for Arabic star names in mediaeval Western and modern astronomical use, see

Kunitzsch [1] and [3] and Kunitzsch-Smart; and for the special usage of names with the navigators of the Indian Ocean, see the Index in Kunitzsch [10], item xxix.

Arabic star names and their use in Western science have been the object of philological and historical studies over centuries, starting with G. Postellus' treatise *Signorum coelestium vera configuratio aut asterismus*, Paris 1553; cf. a short survey in Kunitzsch [1], 23 f. The Arabic matter in the popular book of R.H. Allen, *Star-names and their meanings*, New York 1899 (repr. New York 1963), is often incorrect and misleading, cf. the warnings in Kunitzsch [10], item xxiv. Also, modern Arabic authors have paid their tribute to the subject, cf. M.H. Jurdak [Djurdāḳ], A. Malouf [Maʿlūf] and A.H.M. Samaha [Samāḥa], cited in the bibliography of Kunitzsch [1]; the most recent author is A.R. Badr, *Asmāʾ al-nudjūm fi 'l-falak al-ḥadīth, uṣūluhā wa-taṭawwuruhā*, in *RAAD*, lix (1404/1984), 81-96, 290-333, 761-89, lx (1405/1985), 86-103.

II. THE PLANETS

As in all civilisations, the five planets visible to the naked eye were also known to the old Arabs, because they had names for them which were obviously originally Arabic and were not obtained, through translation, from outside. There seems, however, not to have existed a special term for the planets (as distinct from the fixed stars) with the Arabs in their "pre-scientific" period. Some commentators assume that the terms *al-khunnas* and *al-kunnas* in Ḳurʾān, LXXXI, 15-16, may refer to the planets; cf. *WKAS*, i, 387 a 2 ff., 442 b 41 ff. (not to be confused with the term *al-khussān* which, according to Ibn Durayd, *Djamhara*, i, 67 a 1-3, s.r. *kh-s-s*, designates the stars around the (North) Pole that never set, i.e. the circumpolar stars). In the "scientific" period of Arabic-Islamic astronomy which was based on translations from Greek, the most common terms for the planets (οἱ πλανώμενοι, sc. ἀστέρες) were (*al-kawākib*) *al-mutaḥayyira* (referring to the five planets alone) and (*al-kawākib*) *al-sayyāra* (for the five planets plus Sun and Moon), cf. al-Khʷārazmī, *Mafātīḥ*, 210, 228; al-Bīrūnī, *Ḳānūn*, iii 987; *WKAS*, i, 442 b 28 ff., 35 ff. Other terms, in certain translated texts, were *al-kawākib al-mutaḥarrika* (*WKAS*, i, 442 b 39), *al-k. al-sayyāḥa*, *al-k. al-djāriya* and *al-k. al-ḍālla* (*ibid.*, i, 580 b 27 ff.).

The following table shows the names of the planets in Arabic, adding some alternative names used in the Western Arabic and Spanish Arabic area, and in Persian:

	Arabic	Western Arabic	Persian
Moon	*al-ḳamar*		*māh*
Mercury	*ʿuṭārid*	*al-kātib*	*tīr*
Venus	*al-zuhara*		*[a]nāhīd*
Sun	*al-shams*		*mihr, khurshīd*
Mars	*al-mirrīkh*	*al-aḥmar*	*bahrām*
Jupiter	*al-mushtarī*		*hurmuz[d]*
Saturn	*zuḥal*	*al-muḳātil*	*kaywān*

For the etymologies of the names in Arabic and Persian, see Eilers [2] and [3]. The "Persian" name *kaywān* is of Babylonian origin (cf. *WKAS*, i, 518 b 9 ff.). For Jupiter another Arabic name of unknown background was *al-birdjīs*; cf. Ibn Ḳutayba, *Anwāʾ*, 126 f.; Eilers [3], 81 ff. A survey of the planets' names in seven languages (Arabic, Greek, Persian, Syriac, Hebrew, Sanskrit and Khʷārazmian) was given by al-Bīrūnī, *Āthār*, 192 (= tr. Sachau, 172). In Arabic poetry in ʿAbbāsid and later times, the Persian names were often used. In astronomy and astrology the names could be abbreviated by using only the last letter of the Arabic name, cf. Elwell-Sutton, 66. Further, the symbols for the planets introduced in Greek texts were also adopted by Arabic-Islamic astronomers and astrologers, see al-Bīrūnī, *Tafhīm*, 199 (§ 329); Ullmann, 345 f. The Arabic names shown above (including the Western Arabic alternative names) were also retained in many mediaeval Latin translations from the Arabic, in astronomical and astrological contexts. The complete set of the seven names even appears in Wolfram of Eschenbach's epic *Parzival* (*ca.* A.D. 1210), 782, 6 ff.; see Kunitzsch [4].

Planetary theory in Arabic-Islamic astronomy was mainly based on the teachings of Ptolemy in his *Almagest*. The planets rotate on seven successive spheres (*falak* [*q.v.*]) about the earth, the Moon being the nearest to the earth, in the first sphere, and Saturn being the farthest, in the seventh sphere; the eighth sphere was held by the fixed stars. The lower planets (below the Sun), Moon, Mercury and Venus, were called *al-kawākib al-sufliyya*, and the upper planets (beyond the Sun), Mars, Jupiter and Saturn, were *al-kawākib al-ʿulwiyya*. The lowest point in a planet's orbit was called *ḥaḍīḍ*, the farthest point was *awdj* (from Sanskr. *ucča*, cf. D. Pingree, in *Viator*, vii [1976], 161; afterwards Latinised as *aux*, genitive *augis*). The two points of intersection of a planet's orbit with the ecliptic were each called by the Persian term *al-djawzahar* [*q.v.*] or—translated from Greek συνδεσμός—*ʿuḳda*, node. The ascending node (ἀναβιβάζων) especially was called *raʾs* (*al-tinnīn*) "(the Dragon's) head, *caput* (*draconis*)", and the descending node (καταβιβάζων) *dhanab* (*al-tinnīn*), "(the Dragon's) tail, *cauda* (*draconis*)". The planets performed a forward movement (*istiḳāma*) along the ecliptic (*ilā tawālī al-burūdj*); at certain times they became stationary (*wuḳūf, iḳāma*) and then performed a retrograde movement (*rudjūʿ*); this ended in a second stationary position after which they resumed the normal forward movement.

The knowledge about the planets' physical behaviour—motion, size, distances, etc.—was mainly laid down in the so-called *zīdjs*, i.e. comprehensive handbooks containing both theoretical chapters and the relevant tables. The word *zīdj* (pl. *zīdjāt, azyādj, ziyadja*) is of Persian origin (already in Pahlavi, *zīk*) and originally meant the thread(s) in weaving; from the arrangement of the threads in a piece of woven cloth it was extended to the network of lines drawn for astronomical tables and finally transferred upon complete works of tables with their introductory theoretical text. Very few such works have been edited so far, e.g. *al-Zīdj al-ṣābiʾ* of al-Battānī (ed. and tr. C.A. Nallino, i-iii, Milan 1899-1907); the Latin translation (by Adelard of Bath) of Maslama al-Madjrīṭī's redaction of the *Zīdj* of Muḥammad b. Mūsā al-Khʷārazmī (ed. A. Bjørnbo, R. Besthorn and H. Suter, Copenhagen 1914; Eng. tr. and comm. O. Neugebauer, Copenhagen 1962); al-Bīrūnī's *al-Ḳānūn al-masʿūdī* (ed. Ḥaydarābād, i-iii, 1954-6; Russian tr. P.G. Bulgakov *et alii*, i-ii, Tashkent 1973-76; survey of the contents in English by E.S. Kennedy, in *Al-Abḥāth*, xxiv [1971], 59-81). About 130 *zīdjs* were listed, and twelve of the most important abstracted, in Kennedy [1]. More abstracts are in Toomer [1]; Mercier [2]. Of great historical interest are also works such as *The Book of the reasons behind astronomical tables* (*Kitāb fī ʿilal al-zīdjāt*) of ʿAlī b. Sulaymān al-Hāshimī (ed.

and tr. F.I. Haddad, E.S. Kennedy and D. Pingree, New York 1981) which has preserved material lost, or not yet found, in the original; of the same character is *El libro de los fundamentos de las Tablas astronómicas* by the Spanish-Jewish scholar Abraham b. ʿEzra (written in Latin in A.D. 1154; ed. J.M. Millás Vallicrosa, Madrid-Barcelona 1947).

Popular estimated values for the (sidereal) revolution of the planets are mentioned by Ibn Ḳutayba, *Anwāʾ*, 127. According to him, Saturn travels in each of the twelve zodiacal signs 32 months (i.e. a total revolution of 32 years); Jupiter 1 year (i.e. a total revolution of 12 years); Mars 45 days (i.e. a total of roughly 1½ years); the Sun 1 month (i.e. a total of 1 year); Venus 27 days (i.e. a total of 324 days); Mercury 7 days (i.e. a total of 84 days); and the Moon 2⅓ nights (i.e. a total of 28 nights). He also mentions that Venus and Jupiter are of bright white colour, Saturn is yellowish, Mars is red, and Mercury also red, but it is seen only rarely because of its vicinity to the Sun.

Scientific astronomy has received and continued to use the precise Greek data in the *Almagest* and has, in the course of time, improved upon many of them, based on new independent observation. For details, one has to consult the *zīdj*s and their abstracts mentioned above.

While, on the whole, Ptolemaic astronomy remained valid in the Arabic-Islamic civilisation until in recent times contacts began with modern Western astronomy, on the other hand serious criticism of Ptolemy's planetary theory was brought forward by several Muslim astronomers. Among the names here to be mentioned are Ibn al-Hay̲th̲am (in Egypt, d. shortly after 432/1041; cf. Sezgin, v, 251 ff.); D̲j̲ābir b. Aflaḥ (*Geber*, Spain, 1st half 12th cent.; cf. R.P. Lorch, *The Astronomy of Jābir ibn Aflaḥ*, in *Centaurus*, xix [1975], 85-107); al-Biṭrūd̲j̲ī (*Alpetragius*, Spain, 2nd half 12th cent. [*q.v.*]; idem, *On the principles of astronomy*, ed. and tr. B.R. Goldstein, i-ii, New Haven 1971). In the East, an important name was further—besides Naṣīr al-Dīn · al-Ṭūsī—Ibn al-S̲h̲āṭir (Damascus, 14th cent.), cf. the collection of papers *The life and work of Ibn al-Shāṭir*, ed. Kennedy and I. Ghanem, Aleppo 1976; Kennedy [2], section "Planetary theory"; idem, *Planetary theory: late Islamic and Renaissance*, in *Awrāḳ*, v-vi (1982-3), 19-24; Goldstein, *The status of models in ancient and medieval astronomy*, in *Centaurus*, xxiv (1980), 132-47; G. Saliba, *Theory and observation in Islamic astronomy: the work of Ibn al-Shāṭir of Damascus*, in *Journal for the History of Astronomy*, xviii (1987), 35-43. There have been observed similarities between certain new methods and solutions of problems in planetary theory by some 13th and 14th century Islamic astronomers and those of Copernicus. But it would be difficult to interpret these coincidences in terms of Arabic influence on Copernicus, since no direct lines of transmission from the Orient to Renaissance Western astronomers has been ascertained so far.

Islamic astronomers also devised—like Western scientists of late mediaeval and Renaissance times—instruments for the demonstration of the planets' movements, the so-called equatoria, see Kennedy [2], section "Equatoria"; Comes.

For the use of the planets in astrology and some of their astrological properties, see MINṬAḲAT AL-BURŪD̲J̲.

III. OTHER CELESTIAL OBJECTS

a. *Nebulae*. Ptolemy in the star catalogue of the *Almagest* had described five of his 1,025 stars as "nebulous". However, all of these were star clusters or double stars appearing to the naked eye as "nebulous", but not nebulae according to modern astronomical understanding. It was Abu 'l-Ḥusayn al-Ṣūfī who, in his *Book on the Constellations*, independently and for the first time mentioned the Andromeda Nebula (M 31 = NGC 224), calling it *laṭk̲h̲a saḥābiyya*, a "nebulous spot". In one of the drawings of the constellation of Andromeda he marked the position of the nebula by a number of small dots; see Kunitzsch [9]. As for the Magellanic Clouds, in the southern celestial hemisphere, near the South Pole, invisible from the Arabian Peninsula, a first reference to them seems to be in Yāḳūt, *Muʿd̲j̲am al-buldān*, ed. Wüstenfeld, i, 501 f., where Yāḳūt cites several unnamed travellers (*g̲h̲ayr wāḥid mimman s̲h̲āhada tilka 'l-bilād*) who described that they saw in the sky a spot (*ṭāḳa*) about the size of the Moon looking like a white cloud (*ḳiṭʿat g̲h̲aym bayḍāʾ*); this description may refer to the Larger Magellanic Cloud (Nubecula Maior) which is better visible than the Smaller one. Later, the Arabic navigators of the Indian Ocean, Aḥmad b. Mād̲j̲id (d. *ca.* 1500) and Sulaymān al-Mahrī (1st half 16th cent.), knew and described the Magellanic Clouds (*al-saḥābatān*) in their writings. Ibn Mād̲j̲id even specified (in his poem *al-Sufāliyya*) that one of them is clearly visible (*bayyina li 'l-ʿayn*, i.e. the Larger Magellanic Cloud) and the other appears weak (*ṭamsāʾ*, i.e. the Smaller Magellanic Cloud); cf. I. Khoury, ed., *Sulayman al-Mahri's works*, iii, Damascus 1393/1972, 302. The assumption of L. Massignon that the asterism *al-baḳar* "the Cows", mentioned by al-Ṣūfī (cf. Kunitzsch [2], nos. 59 and 23), was identical with the Magellanic Clouds was rightly refuted by W. Petri, in *Die Sterne*, xxxviii (1962), 74-7.

b. *Comets*. The common Arabic term for a comet is (*kawkab*) *d̲h̲ū d̲h̲anab* or *kawkab al-d̲h̲anab* "star with a tail". Also, the Greek term κομῆται was translated as *al-kawākib d̲h̲awāt al-d̲h̲awāʾib* (Aristotle). According to Greek cosmology, comets were regarded as atmospherical phenomena in the sublunar sphere, see Aristotle, *Fi 'l-samāʾ wa 'l-āt̲h̲ār al-ʿulwiyya* (Meteorology), ed. A.R. Badawi, Cairo 1961, 15 ff.; *Aristoteles' Meteorologie*, ed. P.L. Schoonheim, Leiden 1978, 70 ff.; Ḥunayn b. Isḥāḳ, *Kompendium der aristotelischen Meteorologie*, ed. H. Daiber, Amsterdam-Oxford 1975, 58 ff.; *Aetius Arabus*, ed. Daiber, Wiesbaden 1980, 168 ff. Little attention was consequently paid to comets by the Islamic astronomers, because for them they were no regular celestial phenomena such as the planets, Sun and Moon and the fixed stars. On the other hand, since they were regarded as bad omens, they were often registered by historians, biographers, etc., and in astrology (cf. already Ptolemy, *Tetrabiblos*, ii, 9 and 13). In the latter category of literature, special subgroups of comets were distinguished according to their apparent forms in the sky and were given various extra names. Some such names were already mentioned by Ptolemy, *Tetrab.*, ii, 9; for more names in Antiquity, cf. *inter alios* Lydus, *De ostentis*, ed. C. Wachsmuth, Leipzig 1897, 28 ff., 35 ff., 165 f. (from Pliny, *Nat. hist.*), 166 f. A pseudepigraphic tradition ascribed a list of ten such names to Aristotle or Apuleius; see further A. Bouché-Leclercq, *L'astrologie grecque*, Paris 1899 (repr. Brussels 1963), 357 ff., esp. 359 n. 1.

For the Islamic area, see Kennedy [2], 311-18 (first published 1957); idem, *Astronomical events from a Persian astrological manuscript*, in *Centaurus* xxiv (1980), 162-77 (with an appendix by O. Gingerich, 178-80). Several of the texts published by L. Thorndike, *Latin treatises on comets between 1238 and 1368 A.D.*, Chicago 1950, reflect Arabic material of this sort.

c. *Shooting Stars, Meteors*. Together with comets,

shooting stars were included, in ancient cosmology, among the atmospherical phenomena of the sublunar sphere; see Aristotle, *Fi 'l-samā'*, ed. Badawi, 18 ff.; *Meteorologie*, ed. Schoonheim, 74 ff.; Ḥunayn b. Isḥāḳ, *Kompendium*, *loc. cit.* above; *Aetius Arabus*, *loc. cit.* above. The common Arabic terms for them were *s͟hihāb*, pl. *s͟huhub*, and *nayzak*, pl. *nayāzik* (of Persian origin); cf. C.A. Nallino, *Raccolta di scritti*, v, Rome 1944, 377-93 (first published in *RSO*, viii [1919-21]). Their quick movement in the sky when falling towards the earth was well known and was described as *inkiḍāḍ*, *inṣibāb*, etc. Shooting stars (*s͟huhub*) are several times mentioned in the Ḳur'ān (XV, 18; XXXVII, 10; LXVII, 8-9); the implication here is that *d͟jinns* or *s͟hayṭāns* who try to spy on the angels are driven away by throwing *s͟huhub* at them. This myth (the "Sternschnuppenmythus") afterwards often served as a motif in poetry, cf. Kunitzsch [10], item xxvi, 248 f. with n. 23. The quick motion of the shooting stars was also often used in poetical comparison, especially in the description of animals, cf. Kunitzsch [10], items xxvi, 247 f., and xxvii, 104 with n. 18. In astrology, shooting stars mostly ranged in the same rank with comets as bad omens, cf. Ptolemy, *Tetrab.*, ii, 13; Bouché-Leclercq, *op. cit.*, 362; Pseudo-Ptolemaeus, *Centiloquium*, *apud* Nallino, *loc. cit.*

d. *Novae* or *Supernovae*. The Arabic language, and the Islamic astronomers, had no specific terms for novae. This was quite natural since, according to classical and the subsequent Islamic cosmology, the heavenly bodies—Sun, Moon, the planets and the fixed stars—were not capable of any changes in substance, magnitude or (for the fixed stars) location. Therefore the idea of "new" stars was basically alien to their imagination. If a phenomenon of this kind was really observed, it had to be subsumed under the well-known categories, mainly among the sublunar phenomena such as comets. Authors describing such objects had to use the terms current for other known phenomena. There are two famous supernovae that were reported by Islamic authors: one in A.D. 1006, see Goldstein, *Evidence for a supernova in A.D. 1006*, in *The Astronomical Journal*, lxx (1965), 105-14. The best source here is ʿAlī b. Riḍwān's commentary on Ptolemy's *Tetrabiblos*; in describing the object ʿAlī uses the terms *at͟har* (lit. "trace") and *nayzak* (properly, "shooting star"; cf. above). Ibn al-At͟hīr and Ibn al-D͟jawzī, in reporting the same event, spoke of *kawkab kabīr yus͟hbihu 'l-zuhara*, "a large star similar to Venus" (Goldstein, *loc. cit.*, 107, 113 f.); the anonymous *Annales regum Mauritaniae* describe the object as *nad͟jm ʿaẓīm* [var. *g͟harīb*] *min d͟hawāt al-d͟hawā'ib*, "a great [var. wondrous] star from among the comets", and further on call it a *nayzak* ("shooting star"; Goldstein, *loc. cit.*, 108, 114). The second supernova was that of A.D. 1054; in mentioning it, Ibn Abī Uṣaybiʿa, *ʿUyūn*, ed. A. Müller, i, 242, 14-15, calls it *al-kawkab al-āt͟hārī*, "the star leaving traces". On the subject, see also T. Velusamy, *Guest stars: historical supernovae and remnants*, in *History of Oriental Astronomy* (*IAU Colloquium 91*), Cambridge 1987, 265-70.

e. *Sunspots*. Ibn al-Ḳifṭī, *Ta'rīk͟h al-Ḥukamā'*, ed. Lippert, 156, cites from a book by Muḥammad b. Hilāl b. al-Muḥ[as]sin al-Ṣābi' a report copied by the latter from a notice on comets written by D͟jaʿfar b. al-Muktafī bi'llāh; here it is also reported that on Tuesday, 19 Rad͟jab, in the year 225 (25 May 840), during the caliphate of al-Muʿtaṣim, there appeared in the Sun, near its centre, a black spot (*nukta sawdā'*); the report continues that al-Kindī said that this spot lasted for 91 days. It was taken as a bad omen, and indeed, some time afterwards al-Muʿtaṣim died. The report further says that al-Kindī had also maintained that the spot may have been caused by a passage of Venus in front of the Sun (*kusūf al-zuhara li 'l-s͟hams wa-luṣūḳuhā bihā hād͟hihi 'l-mudda*).

f. *Paranatellonta*. The paranatellonta are constellations, or portions of constellations, co-ascending or reaching other fundamental points of the sphere together with the decans (i.e. sections of 10 degrees) of the zodiac. The observation of the paranatellonta has belonged to astrological practice since Antiquity. The constellations here used include, besides the classical Greek constellations, a number of exotic, Egyptian and other figures, the so-called *sphaera barbarica*. Texts describing the paranatellonta are known, *inter alia*, from Teukros the Babylonian (perhaps 1st cent. A.D.), in Arabic Tīnkalūs, or Tankalūs͟hā al-Bābilī. An Arabic version of the paranatellonta for the 36 decans of the zodiac was inserted by Abū Maʿs͟har in his astrological *Kitāb al-Mudk͟hal al-kabīr*, Book vi, ch. 1. The text was edited by K. Dyroff as Appendix vi, *apud* F. Boll, *Sphaera*, Leipzig 1903, 482-539. Abū Maʿs͟har gives as the epoch for the positions of the constellations in his text the year 1160 Seleucid era = Oct. 848-Sept. 849. For each decan (here called *wad͟jh*) Abū Maʿs͟har registers in a first section the paranatellonta (*ṣuwar*) according to the "Persians, Chaldaeans and Egyptians". The ascription to the Persians is correct insofar as Abū Maʿs͟har used a Persian translation from a Greek redaction of Teukros' text probably dating from A.D. 542 and afterwards converted into new Persian (cf. Boll, *op. cit.*, 416; see also Sezgin, *GAS*, vii, 71 ff.). In a second section there follows the description of the paranatellonta according to the Indians. As Boll has shown, what there is described in this section are, however, not the paranatellonta, but rather the figures symbolising the decans themselves in Indian tradition (cf. Boll, 414 f.). The third section describes the paranatellonta formed from the 48 classical Ptolemaic constellations. Through Latin translations of Abū Maʿs͟har's work and through other channels, the paranatellonta and their nomenclature became of considerable influence in mediaeval and Renaissance Western astrological speculation (see the survey in Boll, 419 ff.). The astrologer Ibn Hibintā also included a description of the paranatellonta in his compilation *al-Mug͟hnī* which, according to Sezgin, *GAS*, vii, 71 f., offers—at least in parts—a better text than Abū Maʿs͟har.

g. *Modern nomenclature of objects on the Moon, the planets and their satellites*. A last echo of the grandeur of the mediaeval Islamic astronomers is found in the modern nomenclature of features on the surfaces of the Moon, the planets and their satellites. In his map of the Moon (1651), Giovanni Baptista Riccioli introduced as names for the craters on her visible side the names of famous astronomers and scientists from various nations and times, a nomenclature which became standard until now in international astronomy. Among them there are the names of thirteen personalities of outstanding fame in astronomy and the science from the Islamic Middle Ages (two of them were added in 1837 by J.H. Mädler). All these names are spelled in their Latinised form as introduced and vulgarised in the West through the translations of the 12th century in Spain; examples are *Albategnius* [al-Battānī], *Alfraganus* [al-Farg͟hānī], *Alhazen* [al-Ḥasan, Ibn al-Hayt͟ham], *Almanon* [the ʿAbbāsid caliph al-Ma'mūn, famous as a patron of the translations from Greek into Arabic and of the sciences generally], *Azophi* [al-Ṣūfī], etc.; for details, see Mohd. A.R. Khan, *Names of thirteen Muslim*

astronomers given to some natural features of the Moon, in *IC*, xxvii (1953), 78-85. In recent times, after the exploration of the far side of the Moon, this kind of historical nomenclature has been continued. Among the names set up here—and which are approved of by the International Astronomical Union—there are five more of Islamic scientists: *Abul Wáfa* [Abu 'l-Wafā'], *al-Biruni* [al-Bīrūnī], *Avicenna* [Ibn Sīnā], *Ibn Yunus* [Ibn Yūnus] and *Omar Khayyam* [ʿUmar Khayyām]. With the exploration of the planets and their satellites by spacecraft, the naming of objects on their surfaces continues and will honour many more of the astronomers and scientists of Islamic civilisation.

At the end of this article, it should be mentioned that the textual tradition of the astronomical and astrological literature in the Islamic area was accompanied by a rich tradition of illustrations. In purely astronomical texts we find—beside the tables—the geometrical and other diagrams illustrating the various technical demonstrations and—in al-Ṣūfī's *Book on the Constellations* and in his imitators such as al-Ḳazwīnī in the *ʿAdjāʾib al-makhlūḳāt* or Shahmardān in the *Rawḍat al-munadjdjimīn*—drawings of the constellations. In astrology, moreover, there are illustrations of the planets, the decans, the zodiacal signs, the paranatellonta and other items. This rich tradition was continued, together with the translations of texts, in the West where illustrations inspired by the Arabic manuscripts are found in innumerable manuscripts and many early printed editions of the 15th to the 17th centuries.

Final hints: for details on the seasonal asterisms of the old Arabs, see AL-ANWĀʾ; for the Poles, see AL-ḲUṬB; for the Milky Way, see AL-MADJARRA; for the lunar mansions, see AL-MANĀZIL; and for the zodiac, see MINṬAḲAT AL-BURŪDJ.

In East Africa.

The Swahili people living along the East Coast of Africa between Mogadishu and Mozambique have a long tradition of sailing the Indian Ocean, to fish and to trade. Thus, from the Middle Ages, they have been familiar with the major stars and constellations of the tropical region as well as with the planets and their movements. Some of this vast knowledge of the Swahili navigators has been written down in manuscripts in Swahili in Arabic script. Some of these have survived and are now in the University Library, Dar es Salaam. In Swahili this science is called *elimu ya nujumu* or *elimu ya nyota* "knowledge of the stars", to be distinguished from *tanjimu* "astrology". So far, 105 Swahili names for planets, stars and constellations have been identified; the majority are adapted from Arabic. Native Swahili (i.e. Bantu) words are the sun *jua*, the moon *mwezi* and the Milky Way, *Njia Nyeupe* "the white path", also called *Mkokoto wa kondoo wa Sumaili* "the path along which Ismail's sheep was dragged", referring to the tale of the ram which God sent to replace Ismāʿīl as a sacrifice (Ḳurʾān, XXXVII, 107), an event still celebrated by Swahili Muslims. *Kilimio* "the Pleiades", lit. "What one cultivates by", is the Bantu-Swahili name; this constellation was well-known in pre-Islamic times because its appearance marks the moment when the rains should begin and so, the moment for the planting of millet.

A few of the star names are of Persian origin, e.g. *shahini* "royal white falcon" (Alshain, Beta Aquilae); *zanu* "knee" (Rukbat, Alpha Sagittarii); *bahu* "shoulder" (Gamma Orionis).

Most curious is the fact that the Swahili people have a solar calendar based on the Persian model; it is not known how, or when, this calendar came to be adopted by the Swahili. The New Year is called *nauruzi*, *noruzi*, or *nairuzi* (the latter form of this Persian word being the Indian alternant, though the Hindi dictionary gives *nauroj* for the Parsi New Year). This date falls when the sun enters the sign of Aries, the Ram (Swahili *Hamali*) on the 21st or 22nd of March [see further, NAWRŪZ. 2. In East Africa]. However, this calendar is now replaced by the Islamic lunar calendar, which in turn is regarded with less favour than the European (*Kizungu*) calendar since the latter permits a fairly accurate prediction of the start of the two rainy seasons.

Several other astronomical terms are also adapted from Arabic, e.g. the word for a comet, *shihabu* or *shuhubu*, also *nyota msafiri* "travelling star"; *ghurubu* "descent" and *shuruki* "ascent", though for the former *mshuko* is also used. The word for conjunction is *uungano* (Ar. *iḳtirān*); opposition is *uelekeano* (Ar. *muḳābala*, *muwādjaha*).

The most-watched heavenly body is the new moon, *hilali*, *mwezi mpya*, whose appearance is eagerly awaited on the last evening of Ramadhani. Loud cheers greet its appearance.

Swahili astrologers concentrate first and foremost on the signs of the Zodiac, *Buruji za Falaki*, whose names are all from Arabic:

Hamali,	Aries	*Mizani*,	Libra
Thauri,	Taurus	*Akarabu*,	Scorpio
Jauza,	Gemini	*Kausi*,	Sagittarius
Saratani,	Cancer	*Jadi*,	Capricornis
Asadi,	Leo	*Dalu*,	Aquarius
Sumbula,	Virgo	*Hutu*,	Pisces

Each sign creates a particular character in the person who was born under it, according to the Swahili *munajimu* or astrologer.

The Swahili names of the Planets are: Mercury, *Utaridi*; Venus, *Zuhura*; Mars, *Mirihi*; Jupiter, *Mushitari*; and Saturn, *Zohali*.

NUDJŪM (AḤKĀM AL-), "decrees of the stars", expression denoting astrology [see also MUNADJDJIM].

Astrology comprises two branches: natural astrology, consisting in the observation of the influences of the stars on the natural elements, and judicial astrology, consisting in the observation of the influences of the stars on human destiny. The scientific term which describes them is Ptolemaism (derived from the astrological work of Ptolemy, entitled Κλαυδίου Πτολεμαίου τῶν πρὸς Σύρον ἀποτελεσματικῶν, ed. F. Boll and Ae. Boer, in *Bibliotheca Teubneriana*, Leipzig 1940, translated into Arabic under the title of *K. al-Arbaʿa* (= *Tetrabiblos*). With the *Centiloquium*, translated into Arabic as *K. al-Thamara* (= καρπός), which, being erroneously attributed to Ptolemy (cf. T. Fahd, *La divination arabe*, 233), is regarded by the Arabs as constituting the fifth book of the aforementioned, this work forms the basis of Arab astrology (cf. *Ptolemy's Tetrabiblos or Quadripartite being five books on the influence of the stars, newly translated into English from the Greek paraphrase of Proclus with notes..., followed by the Centiloquy*, translation by J.M. Ashmand, London 1822, 272 pp.; on the two works, see F. Sezgin, *GAS*, vii, 41 ff.).

According to Ibn Khaldūn, *Muḳaddima*, ii, 185-202/217-37, and Ḥadjdjī Khalīfa, *Kashf*, vi, 306 ff., the science of astrology has the object of drawing from the cyclical and permanent movements of the celestial bodies indications which have a bearing on this world of change and corruption. It comprises three parts: *mathematica* (*ḥisābiyyāt*), *physica* (*ṭabīʿiyyāt*) and *fantasmagorica* (*wahmiyyāt*). The first two are the ancestors of astrometry and astrophysics and constitute astronomy (*ʿilm al-hayʾa* [*q.v.*]), a science which has a merely descriptive role, while that of astrology is considerably more diverse. Astrology assumes a knowledge of astronomy, although it is probably anterior to it.

Under the heading of natural astrology, numerous procedures exist. Two of these are well known: *ʿilm al-anwāʾ* denotes the knowledge of the periods defined by the heliacal rising and the acronychal setting of certain stars (see ANWĀʾ, also Sezgin, *GAS*, vii, 336 ff., and Fahd, *Divination*², 412-17). The art of inspecting the sky to detect any signs of rain was known in Oriental

and Greco-Roman Antiquity (cf. *ibid.*, 407-8). The pre-Islamic Arabs practised it; on account of its association with the astral cult, it was denounced by the Prophet (al-Bukhārī, i, 136).

More important is the art of drawing indications (*dalāʾil*) from the totality of atmospherical phenomena; these indications are gathered together in books bearing the title *malḥama*. The best known is that attributed to the Prophet Daniel (see MALĀḤIM, and *Divination*, 408-12).

This literary genre comprises a large number of astrological collections and agricultural almanacs, bringing together all the knowledge accumulated over the centuries in the region of the Near and Middle East, knowledge drawn from Arabic translation and adaptation of Sanskrit, Pahlavi, Greek and Syriac writings. One of these collections (Aya Sofya 2684, 139 fols., *naskhī* of 906/1499, 27.5 × 18 cm) has been described in *Divination*, 488-95. It is divided into three parts: (1) book of conjunctions, concerning relationships between the stars (fols. 1b-105a); (2) meteorological divination according to Daniel (fols. 106b-117a); and (3) the heliacal rising of Sirius according to Hermes (fols. 117-132). In an appendix, there is a compilation of indications drawn from the occasion of Nawrūz [*q.v.*], of the Coptic month of Ṭawba and the festival of Easter (fols. 137a-139b). For agricultural almanacs, see Fahd, *Le calendrier des travaux agricoles d'après* al-Filāḥa al-nabaṭiyya, in *Orientalia Hispanica* (*Mélanges Pareja*), i, Leiden 1974, 245-72; Sezgin, *GAS*, vii, 306 ff. on astrometeorology.

Since the articles ANWĀʾ and MALĀḤIM cover the subject of natural astrology in sufficient depth, the topic of judicial astrology may now be addressed; this too has been dealt with in a number of articles, in particular DJAFR, ḤURŪF and KHAṬṬ, which are processes of divination in which astrology plays an important role.

Judicial astrology is applied in two important areas of human life: genethlialogy (*mawālīd*) and hemerology (*ikhtiyārāt*), areas in which great interest was taken in the mediaeval Arab and Islamic world. A rich corpus of literature on these subjects is available.

I. *Genethlialogy*. This is the art of deducing portents from the position of the stars at the time of birth, an art already practised in Assyro-Babylonian times (cf. Ch. Fossey, *Présages tirés des naissances*, in *Babyloniaca*, v, Paris 1914; L. Dennefeld, *Babylonisch-assyrische Geburtsomina*, in *Assyriologische Bibliothek*, xxii, Leipzig 1914; B. Meissner, *Über Genethialogie bei den Babyloniern*, in *Klio*, xix [1925], 432-4).

The ancient Arabs deduced portents from signs and events observed at the time of birth, but without explicit reference to the stars; these tended rather to be omens relating to *faʾl* or to *djafr* [*q.vv.*]. Examples are to be found in *Divination*, 480-1. Genethlialogy was born in the ʿAbbāsid period under Persian influence; in this period, the practice of drawing the horoscope of the new-born became an established custom.

But the literature which has survived attributes the origin of this art to Hermes and Ptolemy. An anonymous manuscript of Aya Sofya (2704, fols. 27a-43a and 44a-60b, *naskhī*, undated, 20 × 14 cm) contains two opuscules entitled *K. Mawālīd al-ridjāl* and *K. Mawālīd al-nisāʾ ʿalā raʾy Hirmis wa-Baṭlamyūs* (on the numerous writings attributed to them in Arabic astrological literature, see Sezgin, *GAS*, vii, 41 ff., 50 ff.; cf. *Hermetis philosophi de revelationibus nativitatum*, ed. H. Wolf, Basel 1559; F. Boll, *Eine arabisch-byzantinische Quelle des Dialogs Hermippos*, in *SB Heidelberger Akad.* [1912], no. 18, ch. viii; *Taḥwīl sinī 'l-mawālīd li-Abī Maʿshar*, ed. C. Bezold, 23-5, text, and 8-12, German tr.).

A third source was known and used by the Arab astrologers, this being the Ἀνθολογίαι of Vettius Valens, an eminent astrologer of the period of Hadrian and Antoninus Pius; this work was translated into Pahlavi under the title of *Vizīdhak* (anthology), annotated by Buzurdjmihr, a courtier of Kisrā Anūshirwān (531-78), to whom it is attributed, and translated into Arabic as the *K. al-Mawālīd* (see Nallino, *Raccolta*, v, 238 ff.; Sezgin, *GAS*, vii, 38 ff.). The same title is also attributed to a Babylonian astrologer, Teukros, known to the Arabs as Tankalūsha, who lived at the beginning of the 1st century A.D. and who is the author of an astrological work, called Περὶ τῶν παρατελλόντων, translated into Pahlavi and thence into Arabic in the 2nd or 3rd/ 8th or 9th century as *K. al-Mawālīd ʿalā 'l-wudjūh wa 'l-ḥudūd*, used by Abū Maʿshar in his *K. al-Mudkhal al-kabīr*, according to an extract made by Rhetorios (6th century A.D.). The Arabic text was published and translated into German by K. Dyroff and F. Boll, *Sphaera*, Leipzig 1903 (repr. Hildesheim 1967), 482-539 (cf. Sezgin, *GAS*, vii, 11 ff., 71-3, 80-1; Nallino, *Raccolta*, v, 246 ff.; idem, *Tracce di opere greche giunte agli arabi per trafila pehlevica*, in *ʿAjab-náma, E.G. Browne Festschrift*, Cambridge 1922, 345-63; AL-NUDJŪM. III. f.).

A fourth source in Pahlavi was used by the Arab astrologers: this is the *K. Zarādusht fī 'l-nudjūm wa-taʾthīrātihā wa 'l-ḥukm ʿalā 'l-mawālīd*. On the Arabic writings attributed to Zarathustra, D. Pingree (quoted by Sezgin, *GAS*, vii, 84) writes: "Thus, as the original Zaradusht text, having a Hellenic origin, was revised in Sassanian Iran in about 550 and then expanded with material from the Pahlavi Dorotheos in about 650, so the latter was revised in about 400, when it was expanded with material both from the Pahlavi Valens and from a Pahlavi translation of a Sanscrit text" (*Māshāʾallāh: some Sassanian and Syriac sources*, in *Essays on Islamic philosophy and science*, New York 1975, 5-14, cf. 8; V. Stegemann, *Astrologische Zarathoustra—Fragmente bei den arabischen Astrologen Abū 'l-Ḥasan ʿAlī b. Abī 'r-Ridjāl* (*11. Jh.*), in *Orientalia*, N.S., vi [1937], 317-36).

From the Sanskrit, al-Bīrūnī (*Taḥḳīḳ mā li 'l-Hind*, 122 ff.) translated the *K. al-Mawālīd al-ṣaghīr* (*ibid.*, 122) of Varāhamihira, identified by D. Pingree (*Astronomy and astrology in India and Iran*, in *Isis*, liv [1963], 234) with the *Laghujātaka*, and cited the *K. al-Mawālīd al-kabīr* by the same author, as well as a *K. al-Mawālīd* by Kalan Buram al-Malik (= Kaljana-Varnan). A *K. al-Mawālīd* is also attributed to Kanaka, astrologer at the court of Hārūn al-Rashīd (ms. Çorum 3001/5, fols. 156-159a, 11th/17th century; for the Pahlavi and Sanskrit writings, see Sezgin, vii, 68-97).

The first Arab astrologer to take an interest in genethlialogy is the eminent Jewish scholar Māshāʾallāh (d. *ca.* 200/815 [*q.v.*]). Two works bear his name: *K. al-Mawālīd*, where the topics addressed are as follows: (1) knowledge of the beginning of the formation of the foetus and the observation of its stages before birth, (2) knowledge of the position of the heliacal star at the moment of birth, (3) education, (4) knowledge of the age by means of *al-hīlādj* (the *alhyleg* of the Europeans), its positions and those of the stars which are responsible for it, and (5) the form of the body, its external appearance and temperament. This work is often quoted by Arab astrologers dealing with this question. It has been the subject of two Latin

versions (cf. L. Thorndike, *The Latin translations of astrological works by Messahala*, in *Osiris*, xii [1956], 49-72; E.S. Kennedy and D. Pingree, *The Astrological History of Māshā'allāh*, Cambridge, Mass. 1971).

Ibn al-Nadīm mentions a *K. al-Mawālīd al-kabīr* by the same author, comprising 14 chapters, which is known only from its Latin translation, made by Hugo de Santalla, with the title *Libellus de navitatibus 14 distinctus capitulis* (Oxford, Bodl. Savile 15, 72 fols.). A *K. Taḥwīl sinī 'l-mawālīd*, quoted by Ibn al-Nadīm, is known only from a Latin manuscript (B.N. Paris, Latin 7324, fols. 1-24) bearing the title *De revolutionibus nativitatum*, a title also attributed to Abū Maʿshar, translated from the Greek according to F.J. Carmody (*Arabic astronomical and astrological sciences in Latin translation. A critical bibliography*, 95) and edited at Basel in 1559, under the name of Hermes (cf. L. Thorndike and Pearl Kibre, *A catalogue of incipits of medieval scientific writings in Latin*, revised and expanded ed., 1516).

A summary composed by ʿUmar b. al-Farrukhān using writings of Hermes, Dorotheos, Ptolemy and others, bearing the title *K. al-Mawālīd*, exists in mss. (cf. Sezgin, *loc. cit.*, 112). It was translated into Latin, under the title *De nativitatibus*, by Johannes Hispalensis (Carmody, 38-9) and edited by N. Pruckner as an appendix to *Firmicus maternus*, Basel 1551, 118-41.

Other writings bearing the same title, where the same sources are extensively quoted, are attributed to various eminent astrologers, including the following:

Abū ʿAlī al-Khayyāṭ, a disciple of Māshā'allāh, known to Europeans as Albohali. His work was translated into Latin as *De iudiciis nativitatum*, by Plato of Tivoli and Abraham b. Ḥiyya, known as Savasorda (cf. Carmody, 49-50; Sezgin, vii, 120-1, where the titles of the 38 chapters are given). This opuscule was edited by Joachim Heller in 1546 and 1549, and dedicated to Melanchthon (cf. M. Steinschneider, *Europ. Übersetz.*, 46).

Sahl b. Bishr, Zahel to Europeans, famous for his horoscopes; his work comprises two parts, of 8 and 10 chapters (Sezgin, vii, 126).

Abū Bakr al-Ḥasan b. al-Khaṣīb (or al-Khaṣībī), Abubather to Europeans; his work was translated into Latin, as *Liber de nativitatibus*, by Salio (or Solkeen), a canon of Padua, in 1218 (or 1248 or 1244), with the aid of a certain David Albubather, edited in Venice in 1492 and translated into German in the 15th century (cf. Steinschneider, *op. cit.*, 75, no. 107).

The author who brilliantly concludes this series of genethlialogical writings is Abū Maʿshar al-Falakī (d. 272/886 [*q.v.*]), the greatest astrologer of the Arab and Latin Middle Ages. Numerous examples of the genre bear his name: (1) *K. Aḥkām taḥwīl sinī 'l-mawālīd*, a horological work in 9 chapters, preserved in numerous manuscripts (cf. Sezgin, vii, 142). The Arabic text has been edited and partially translated into German by C. Bezold (see above), translated into Greek in the 10th century and edited by D. Pingree, Albumasaris, *De revolutionibus nativitatum*, Leipzig 1968. The editor describes its contents in the *Dictionary of scientific biography*, i, 1970, 37, no. 19. (2) *K. al-mawālīd* (*al-kabīr* and *al-ṣaghīr* according to Ibn al-Nadīm), of which numerous manuscripts exist (Sezgin, 144-5). (3) *K. Aḥkām al-mawālīd* (*ibid.*, 145; D. Pingree, *op. cit.*, 39). (4) *K. Mawālīd al-ridjāl wa 'l-nisā'*, on the subject of the birth of men and of women (several mss. indicated in Sezgin, vii, 145; for the contents, see J.M. Faddegon, *Notice sur un petit traité d'astrologie attribué a Albumasar (Abū Maʿshar)* in *JA*, ccxiii [1928], 150-58; D. Pingree, *op. cit.*, 38, no. 29).

With Abū Maʿshar, genethlialogical literature reached its apogee. The following generation confined itself to reproducing and annotating his writings (cf. *Divination*, 482-3).

II. *Hemerology and menology*. It has been observed that genethlialogy is concerned with the fate of individuals and permits the compilation of their horoscope, starting from the date of birth. The *ikhtiyārāt* (καταρχαί, choices) consist rather in establishing the calendar of the auspicious (*saʿd*) and of the inauspicious (*naḥs*). Choice depends upon years, months, days of the week and even hours. "Deciding the moment for action or for abstention, compiling, in terms of this moment, the list of things which may be undertaken with success and those which should be renounced, constituted one of the principal prerogatives of the astrologer who, in the ʿAbbāsid period, became a permanent functionary in the court of the caliph and at conferences of military leaders" (*Divination*, 483; cf. F. Boll, *Sternglaube und Sterndeutung. Die Geschichte und das Wesen der Astrologie*, 3rd ed. by W. Gunkel, Leipzig-Berlin 1926; C.A. Nallino, *Raccolta*, v, 38 ff.). Aḥmad Amīn, quoting al-Aṣmaʿī, states that the choice of *ḳāḍī* and of *imām* in the Umayyad period was made by means of astrological procedures (*Ḍuḥā 'l-Islām*, 27, 28 ff.).

The discernment of auspicious and inauspicious days has existed among many peoples (for the ancient Orient, see R. Labat, *Hémérologies et ménologies d'Assur*, Paris 1939; idem, *Le Calendrier babylonien des travaux, des signes et des mois*, Paris 1965; F. Chabas, *Le calendrier des jours fastes et néfastes de l'année égyptienne* (Papyrus Sallier iv), Paris undated; A. Lods, *Le rôle des oracles dans la nomination du roi, des prêtres et des magistrats chez les Israélites, les Égyptiens et les Grecs*, in *MIFAO*, lvi [1942], 91-100 = *Mélanges Maspero*, i).

The Arabs were aware of this procedure and practised it. Various accounts testify to it (cf. *Divination*, 483 ff. and IKHTIYĀRĀT, of which the current article is the completion). It emerges that it was under Persian influence that astrology acquired respectability in the court of the caliph and among the ruling class. "In order to imitate the Sāsānid kings, the ʿAbbāsid caliphs, who in most cases had Persian tutors (in particular al-Rashīd and al-Ma'mūn), adopted customs which were at odds with the Arab spirit and Islam. This process of adaptation gave rise to the translations from the Pahlavi made by Ibn al-Muḳaffaʿ, essentially comprising manuals for the education of princes (*Fürstenspiegel*), such as *Kalīla wa-Dimna*, the *K. al-Tādj* and the *K. al-Ā'īn*" (*Divination*, 485. On these writings, see F. Gabrieli, *Opera di Ibn al-Muqaffaʿ* in *RSO*, xiii [1932], 197-247; idem, *Etichetta di corte e costumi sasanidi nel* Kitāb aḫlāq al-mulūk *di al-Ǧāḥiẓ*, *ibid.*, xi [1928], 292-305).

According to the *Bāb al-ʿIrāfa*, attributed to al-Djāḥiẓ, "the astrologers had examined the days of the week, judging them and appraising them in the interests of the king. They said, 'Each day has its star (*ṭāliʿ*) which dominates it and its character which this star necessarily confers upon it.' Accordingly, they determined for each day of the week the tasks appropriate to it" (for details, see *Divination*, 485-6).

The auspicious and inauspicious character of days of the week depended on the planets to which they were dedicated. Similarly, the hours of the day were dedicated to the seven planets and characters conferred on them (cf. ms. Konya, Müze Kütüph. 5333, fols. 179a-181b, *naskhī* of 833/1429-30, 28 × 18 cm, *al-Ḳawl ʿalā 'khtiyārāt al-ayyām wa 'l-aʿmāl fīhā min al-khayr wa 'l-sharr*). Various procedures were employed for the arrangement of the material: enumeration of

the days of the month with the comment "good" or "bad" for such-and-such a thing (ms. Esat Ef. 3554, *naskhī* of 1088/1677, 19.5 × 14 cm, attributed to Dja'far al-Ṣādiḳ), enumeration of actions advisable or inadvisable during the lunar months and the choice of days in any month, with justification (ms. Saray, Revan 1741, fols. 98a-107a, *naskhī*, 20 × 15 cm). More complex is the procedure described in the Köprülü ms. Fazıl Paşa 164, fols. 1-54b ((*naskhī* of 871/1466-7, 18 × 14 cm) arranged in the following manner: (1) Explanation of the method of application (fols. 1b ff.); (2) double column of actions; (3) circle of months; (4) thirty columns relating to the month and to the rubrics; (5) thirty rubrics: names of prophets, questions, positions of the moon, judgment according to the lunar houses; and (6) the lunar houses (for details, see *Divination*, 487).

The majority of Arab astrologers have left behind treatises or chapters relating to hemerology and menology. The following are the best known:

'Umar b. al-Farrukhān al-Ṭabarī, one of the earliest Arab astrologers, *K. al-Ikhtiyārāt* (ms. Alexandria, Balad 2033-d/2, fols. 42a-52b, 6th/12th century).

Sahl b. Bishr, Zahel to the Europeans, *K. al-Ikhtiyārāt 'alā 'l-buyūt al-ithnay 'ashar*, in 12 chapters corresponding to the number and names of the signs of the Zodiac (ms. Nuruosmaniye 2785/1, fols. 1-11b, 6th/12th century; Escurial, 919/2, fols. 36-44, 8th/14th century), translated into Latin as *De electionibus*, ed. Venice in 1493 and Basel in 1551, by Nicolas Pruckner, as an appendix to *Firmicus maternus*, 102-14 (Thorndike, *Cat.*, 985, 988; Carmody, 41), a dubious attribution according to Sezgin (*GAS*, vii, 127). Also attributed to him is *Fatidica* or *Fastitica pronostica*, translated by Hermann of Carinthia (Thorndike, 1424; Carmody, 44-5). In his *K. al-Awḳāt* (Escurial 919/4, fols. 47-53, 7th/13th century), translated into Latin as *Liber temporum* (Carmody, *op. cit.*), he gives the significations of times in judicial astrology; attributed to him also is *De significatione temporis ad iudicia*, ed. Venice 1493 (Thorndike, *Cat.*, 1411).

Abū Yūsuf Ya'ḳūb al-Kindī, *Ikhtiyārāt al-ayyām* (ms. Leiden, Or. 199/2, fols. 19-20; cf. E. Wiedemann, *Über einen astrologischen Traktat von Al-Kindi*, in *Archiv für Gesch. d. Naturwiss. und Technik*, iii [1912], 224-6, where the contents are described).

Abū Ma'shar, to whom three hemerological writings are attributed: *K. al-Ikhtiyārāt*, translated into Latin as *Electiones planetarum* (Carmody, 96); *Ikhtiyārāt al-sā'āt*, translated probably as *Flores de electionibus* by John of Seville (Thorndike, 180, 738, 945; Carmody, 97); *al-Ikhtiyārāt fi 'l-a'māl wa 'l-ḥawā'idj min umūr al-salāṭīn* (ms. Rabat D 769, fols. 1-73, 567/1171; cat. no. 2571).

'Alī b. Aḥmad al-'Imrānī (d. 344/955), Haly Imrani to Europeans, *K. al-Ikhtiyārāt*, translated into Latin by Plato of Tivoli in collaboration with Abraham b. Ḥiyya, known as Savasorda (Thorndike, *Cat.*, 1363, 1007; Carmody, 138) and by John of Seville as *Regule de electionibus* (Thorndike, 1707; Carmody, 139).

Al-Isrā'īlī, astrologer of al-Ḥākim bi-Amr Allāh (386-411/996-1021), wrote for his master a treatise on *ikhtiyārāt* in the form of 133 aphorisms, translated into Latin as *Liber capitulorum Almansoris*, by Plato of Tivoli (cf. J.-Cl. Vadet, *Les aphorismes latins d'Almansor. Essai d'interprétation*, in *Annales Islamologiques*, v [1963], 31-130).

Abū Sa'īd al-Sidjzī, *K. al-Ikhtiyārāt*, in three lengthy sections (for the titles see Sezgin, *GAS*, vii, 179).

Abū 'l-Ḥasan Ibn 'Alī b. Abi 'l-Ridjāl, known to Europeans as Haly Aben Ragel or Abenragel or even Albohazan, author of popular astrological writings widely circulated in the East and the West. Attributed to him is a *De electionibus* in 103 chapters (ms. Vatican 4082, fols. 161-84; Thorndike, *Cat.*, 734; on his work, see V. Stegemann, *Beiträge zur Geschichte der Astrologie I*, Heidelberg 1935).

Fakhr al-Dīn al-Rāzī, *al-Ikhtiyārāt al-'alā'iyya*, in 9 chapters, translated by the author from Persian into Arabic (cf. ref. in M. Ullmann, *Die Natur- und Geheimwissenschaften*, 340).

As has been seen, the two main areas of judicial astrology considered in this article were widely known and practised in the mediaeval East and West. The principles which govern them derive from the observation and interpretation of the connections and interactions of stars. Knowledge of these connections constitutes the essence of astrological divination, of theurgy and of the talismanic art (cf. on this topic, Fahd's contribution to vol. vii of *Sources Orientales*, entitled *Le monde du sorcier en Islam*, Paris 1966, 157-204; summarised in *Encyclopedia of Religion*, art. *Magic*; reprinted in L.E. Sullivan (ed.), *Hidden truths. Magic, alchemy and the occult*, New York-London 1989, 122-30).

Bibliography: Numerous references to Arab astrological literature are to be found in vol. vii of Sezgin's *GAS*, Leiden 1979, 3-199 and in M. Ullmann's *Die Natur- und Geheimwissenschaften in Islam*, Leiden 1972, 271-358 (Handbuch d. Orientalistik, i, Abt., Erg. vi, 2. Absch.); see also C. (T. FAHD)

NŪḤ, the Noah of the Bible, is a particularly popular figure in the Ḳur'ān and in Muslim legend. Al-Tha'labī gives 15 virtues by which Nūḥ is distinguished among the prophets. The Bible does not regard Noah as a prophet. In the Ḳur'ān, Nūḥ is the first prophet of punishment, who is followed by Hūd,

Ṣāliḥ, Lūṭ, Shuʿayb and Mūsā. Ibrāhīm is one of his following (*shīʿa*) (XXXVII, 81). He is the perspicuous admonisher (*nadhīr mubīn*, XI, 27; LXXI, 2), the *rasūl amīn* "the true messenger of God" (XXVI, 107), the *ʿabd shakūr*, "the grateful servant of God" (XVII, 3). God enters into a covenant with Nūḥ just as with Muḥammad, Ibrāhīm, Mūsā and ʿĪsā (XXXIII, 7). Peace and blessings are promised him (XI, 50). Muḥammad is fond of seeing himself reflected in the earlier prophets. In the case of Nūḥ, the Muslim Ḳurʾān exegetes have already noticed this (see Grünbaum, *Neue Beiträge*, 90). Muḥammad puts into the mouth of Nūḥ things that he would himself like to say and into the mouths of his opponents what he himself has heard from Nūḥ's opponents. Nūḥ is reproached with being only one of the people (X, 72-4). God should rather have sent an angel (XXIII, 24). Nūḥ is wrong (VII, 58), is lying, deceiving (VII, 62), is possessed by *djinn* (LIV, 9), only the lowest join him (XI, 29; XXVI, 111). When Nūḥ replies: "It is grievous to you that I live among you, I seek no reward, my reward is with God (X, 72-4; XI, 31); I do not claim to possess God's treasures, to know his secrets, to be an angel and I cannot say to those whom ye despise, God shall not give you any good" (XI, 31-3), we have here an echo of Muḥammad's defence and embarrassment about many of his followers. The Ḳurʾān pictures events as follows: God sends Nūḥ to the sinful people. Sūra LXXI, which bears his name, gives one of these sermons threatening punishment for which other analogies can be found. The people scorn him. Allah commands him to build an ark by divine inspiration. Then the "chaldron boils" (XI, 42; XXIII, 27). The waters drown everything; only two of every kind of living creature are saved and the believers whom Nūḥ takes into the ark with him. But there were very few who believed. Nūḥ appeals even to his son in vain; the latter takes refuge on a mountain but is drowned. When Nūḥ bids the waters be still, the ark lands on mount Djūdī ([*q.v.*] XI, 27-51). Not only Noah's son but also his wife (with Lūṭ's wife) are sinners (LXVI, 10). From the *Haggada* is developed, as Geiger shows, the following elements of this Ḳurʾānic legend of Nūḥ: 1. Nūḥ appears as a prophet and admonisher; 2. his people laugh at the Ark; 3. his family is punished with hot water (main passages: *Talm. Sanhedrin*, 108a-b; *Gen. Rabba*, xxix-xxxvi).

The post-Ḳurʾānic legend of Nūḥ, as in other cases, fills up the gaps, gives the names of those not mentioned in the Ḳurʾān, makes many links, e.g. connects Nūḥ with Farīdūn of the Persian epic, although it is pointed out that the Magi (Persians) do not know the story of the flood. Nūḥ's wife is called Wāliya and her sin is that she described Nūḥ to his people as *madjnūn*. The names of Nūḥ's sons, Sām, Ḥām and Yāfith are known to Ḳurʾān exegesis from the Bible, but this exegesis also gives the name of Nūḥ's sinful son who perished in the flood, Kanʿān, "whom the Arabs call Yām". The Ḳurʾānic statement that Nūḥ was 950 years of age at the time of the flood (*ṭūfān*) (XXIX, 13, 14) is probably based on Gen. ix. 39, which says Nūḥ lived 950 years in all. Also, it serves as a basis for calculations which make Nūḥ the first *muʿammar*; according to the *Kitāb al-Muʿammarīn* of Abū Ḥātim al-Sidjistānī (ed. Goldziher, in *Abh. zur arab Philologie*, ii), who begins his book with Nūḥ, he lived 1,450 years. Yet in his dying hour he describes his life as a house with two doors through one of which one enters, while he leaves through the other. Muslim legend knows the Biblical story of Nūḥ, his times and his sons, but embellishes it greatly, and in al-Kisāʾī it becomes a romance. From the union of Ḳābil's and Shīth's descendants arises a sinful people which rejects Nūḥ's warnings. He therefore at God's command builds the Ark from trees which he has himself planted. As he is hammering and building the people mock him: "Once a prophet, now a carpenter?", "A ship for the mainland?" The Ark had a head and tail like a cock, a body like a bird (al-Thaʿlabī). How was the Ark built? At the wish of the apostles, Jesus arouses Sām (or Ḥām) b. Nūḥ from the dead and he describes the Ark and its arrangements: in the lower storey were the quadrupeds, in the next the human beings and in the top the birds. Nūḥ brought the ant into the Ark first and the ass last; it was slow because Iblīs was clinging to its tail. Nūḥ called out impatiently: "Come in even if Satan is with thee"; so Iblīs also had to be taken in. The pig arose out of the tail of the elephant and the cat from the lion. How could the ox exist beside the lion, the goat alongside the wolf, or the dove beside the birds of prey? God tamed their instincts. The number of human beings in the Ark varies in legend between seven and eighty. ʿŪdj b. ʿAnaḳ was also saved along with the believers. Ḳābil's race was drowned. Nūḥ also took Adam's body with him, which was used to separate the women from the men, for in the Ark continence was ordered, for man and beast. Only Ḥām transgressed, and for this was punished with a black skin. The whole world was covered with water and only the Ḥaram (in al-Kisāʾī, also the site of the sanctuary in Jerusalem) was spared; the Kaʿba was taken up into heaven and Djibrīl concealed the Black Stone (according to al-Kisāʾī, the stone was snow-white until the Flood). Nūḥ sent out the raven, but finding some carrion it forgot Nūḥ; then he sent the dove, which brought back an olive leaf in its bill and mud on its feet; as a reward it was given its collar and became a domestic bird. On the day of ʿĀshūrāʾ every one came out of the Ark, men and beasts fasted and gave thanks to God.

There are many contacts with the *Haggada*: the (different, it is true) partitioning of the Ark, Nūḥ's anxiety about the animals, Ḥām's sin and punishment (*Sanhedrin*, 108a-b). The story that the giant ʿŌg escaped the Flood is also taken from the *Haggada* [see ʿŪDJ B. ʿANAḲ]. But Muslim legend goes farther than the Bible and Haggada in depicting Muḥammad, who sees himself in Nūḥ.

Bibliography: Principal passages are Ḳurʾān, VII, 57-62; XI, 27-51; XXIII, 23-31; XXVI, 105-22; XXXVII, 73-81; LXXI (whole); Ṭabarī, i, 174-201; Ibn al-Athīr, i, 27-9; Thaʿlabī, *Ḳiṣaṣ al-anbiyāʾ*, Cairo 1325, 34-8; Kisāʾī, *Ḳiṣaṣ al-anbiyāʾ*, ed. Walker, *Biblical characters in the Koran*, Paisley 1931, 113-21; D. Sidersky, *Les origines des légendes musulmanes*, Paris 1933, 26-7; H. Speyer, *Die biblische Erzählungen im Qoran*, Grafenhainichen *ca.* 1938, 84-115.—On the name Nūḥ: Goldziher, in *ZDMG*, xxiv (1870), 207-11; on Nūḥ as *muʿammar*: Goldziher, *Abhandlungen zur arabischen Philologie*, ii, Leiden 1899, pp. lxxxix and 2. (B. HELLER)

NŪḤ (I) B. NAṢR B. AḤMAD, Sāmānid *amīr* of Transoxania and Khurāsān (331-43/943-54), given after his death the honorific of *al-Amīr al-Shahīd* ("the Praiseworthy").

Continuing the anti-S̲h̲īʿī reaction which marked the end of the reign of Nūḥ's father Naṣr [*q.v.*], the early years of the new reign were dominated by the vizierate of the pious Sunnī *faḳīh* Abu 'l-Faḍl Muḥammad Sulamī, but very soon, ominous signs of decline began to appear in the state. There were revolts in the tributary kingdom of K̲h̲ʷārazm [*q.v.*] and in K̲h̲urāsān under its governor Abū ʿAlī Čag̲h̲ānī, whom Nūḥ attempted to replace by the Turkish commander Ibrāhīm b. Sīmd̲j̲ūr. In 335/947 Abū ʿAlī succeeded in temporarily placing on the throne at Buk̲h̲ārā Nūḥ's uncle Ibrāhīm b. Aḥmad. Although this putsch collapsed and the *Amīr* now appointed Manṣūr b. Ḳaratigin as governor of K̲h̲urāsān, Abū ʿAlī was able to withdraw to his family territories on the upper Oxus [see ČAG̲H̲ĀNIYĀN] and to preserve a dominant role in the state and in external warfare against the Būyid *amīr* Rukn al-Dawla [*q.v.*] until *Amīr* Nūḥ died in Rabīʿ II 343/August 954.

The costs of quelling internal rebelliousness and of the wars in northern Persia caused a financial crisis during Nūḥ's reign, with the army often going unpaid and the subjects complaining of increased taxation burdens. Hence Nūḥ left to his son and successor ʿAbd al-Malik a divided and disaffected kingdom, whose fortunes no subsequent *amīrs* were able to restore.

Bibliography: The main primary sources are Gardīzī and Ibn al-Athīr, both utilising material from the lost *Taʾrīkh Wulāt K̲h̲urāsān* of Sallāmī; and Nars̲h̲ak̲h̲ī, *Taʾrīk̲h̲-i Buk̲h̲ārā*, tr. Frye, 97-8. Of studies, see Barthold, *Turkestan*, 246-9; R.N. Frye, in *Camb. hist. of Iran*, iv, 151; Erdoğan Mercil, *Simcûrîler. II. Ibrâhim b. Sîmcûr*, in *Tarih Enstitüsü Dergisi*, no. x-xi (1979-80), 91-6. See also SĀMĀNIDS. (C.E. BOSWORTH)

NŪḤ (II) B. MANṢŪR B. NŪḤ, Sāmānid *amīr* initially in Transoxania and K̲h̲urāsān, latterly in the first province only (366-87/977-97), given after his death the honorific *al-Amīr al-Raḍī* ("the Well-pleasing").

The last of his line to enjoy a reign of any significant length, Nūḥ succeeded his father Manṣūr (I) [*q.v.*] at the age of 13, real power being in the hands of his mother and the vizier Abu 'l-Ḥusayn ʿUtbī, the last vizier to the Sāmānids worthy of the title. However, authority in the state fell more and more into the hands of the great military commanders, such as Abu 'l-Ḥasan Sīmd̲j̲ūrī and his son Abū ʿAlī, Fāʾiḳ K̲h̲āṣṣa and Tās̲h̲. Warfare against the Būyids went badly, and only the death in 372/983 of ʿAḍud al-Dawla [*q.v.*] prevented a Būyid invasion of K̲h̲urāsān. In the confusion, Abū ʿAlī secretly connived with Bug̲h̲ra K̲h̲ān Hārūn, chief of the Turkish Ḳarak̲h̲ānids in the steppes to the north of Transoxania [see ILEK-K̲H̲ĀNS], to partition the Sāmānid kingdom, with Abū ʿAlī to have the lands south of the Oxus. Bug̲h̲ra K̲h̲ān entered Buk̲h̲ārā in 382/992, but soon withdrew. With K̲h̲urāsān also out of his control, Nūḥ remained ruler of the Zarafshān valley only, and in 383/993 he called in Sebüktigin [*q.v.*] from G̲h̲azna [see G̲H̲AZNAWIDS] against Abū ʿAlī and Fāʾiḳ. Sebüktigin and his son Maḥmūd [*q.v.*] established themselves in the former Sāmānid dominions, now threatened by a further Ḳarak̲h̲ānid invasion from the north, but in 386/996 Sebüktigin and the Ḳarak̲h̲ānid Ilig Naṣr made an agreement whereby the latter took over the whole basin of the Syr Darya, whilst Sebüktigin became complete master over K̲h̲urāsān. Nūḥ himself died in Rad̲j̲ab 387/July 997, with the final end of Sāmānid rule in Transoxania only two years away.

Bibliography: The main primary sources are ʿUtbī, Gardīzī, Nars̲h̲ak̲h̲ī, tr. Frye, 99-100, and Ibn al-At̲h̲īr. Of studies, see Barthold, *Turkestan*, 252-64; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of G̲h̲azna*, Cambridge 1931, 30-2; R.N. Frye, in *Camb. hist. of Iran*, iv, 154-8; Erdoğan Mercil, *Sîmcûrîler. III*, in *Tarih Dergisi*, no. xxxiii (1980-1), 126-32, *Sîmcûrîler. IV*, in *Belleten*, no. 195 (1986), 547-67, *Sîmcûrîler. V*, in *Tarih Dergisi* (1987-8), 123-38. See also SĀMĀNIDS. (C.E. BOSWORTH)

NŪḤ B. **MUṢṬAFĀ**, Ottoman theologian and translator, was born in Anatolia but migrated while still quite young to Cairo where he studied all branches of theology and attained a high reputation. He died there in 1070/1659. He wrote a series of theological treatises, some of which are detailed by Brockelmann, II², 407-8, S II, 432. His most important work, however, is his free translation and edition of S̲h̲ahrastānī's celebrated work on the sects, his *Terd̲j̲eme-i Milal we-niḥal* which he prepared at the suggestion of a prominent Cairo citizen named Yūsuf Efendi (cf. Brockelmann, I², 551, S I, 763). It exists in manuscript in Berlin (cf. Pertsch, *Kat.*, 157-8), Gotha (Pertsch, *Kat.*, 76), London (cf. Rieu, *Cat.*, 35-6), Upsala (cf. Tornberg, *Codices*, 213), Vienna (cf. Flügel, *Kat.*, ii, 199) etc., and was printed in Cairo in 1263. On the considerable differences between this Turkish translation and the original Arabic, cf. Rieu in the British Museum Catalogue, 35b. In his *Mémoire sur deux coffrets gnostiques du moyen âge, du Cabinet de M. le Duc de Blacas*, Paris 1832, 28 ff., J. von Hammer gave some extracts from the latter part of the work. He also wrote on it in the *Wiener Jahrbücher*, lxxi, 50, and ci, 4.

In 1150/1741 a certain Yūsuf Efendi wrote a life of Nūḥ b. Muṣṭafā which exists in ms. in Cairo (*Cat.*, vii, 364).

Bibliography: In addition to references in the text, see Muḥibbī, *K̲h̲ulāṣat al-at̲h̲ar*, Cairo 1868, iv, 458. (F. BABINGER)

NUḤĀM (A.), substantive of collective type (*nomen unitatis, -a*), denoting in ancient Arabic texts the Greater Flamingo ("flaming one") or phoenicopter (the Φοινικόπτερος "purple-winged" of the Greeks and the *iṣṣūr nūri* "bird of light" of the Akkadians), this being *Phoenicopterus ruber roseus* or *antiquorum* of the order of the Phoenicopteridae (*nuḥāmiyyāt*) which resemble waders with their long legs and palmipeds with their webbed feet. The term *nuḥām*, drawn from the root *n-ḥ-m*, which evokes the notion of growling, was given to this large and graceful bird on account of its discordant cries composed of howls and bellows. The same applies to *mirzam*, another mediaeval name for the flamingo, as the root *r-z-m* also contains the notion of growling.

Among the six Phoenicoperidae classified according to ornithological systems, the Greater Flamingo, the only species known in Arab lands, is present throughout the periphery of the Mediterranean, on the western shores of the Red Sea, in the Persian Gulf and in Kuwait; its chosen habitat is in marshy regions such as the estuaries of the Nile, the S̲h̲aṭṭ al-ʿArab, the S̲h̲aṭṭ al-D̲j̲arīd in Tunisia and the Rhône (Camargue), from which it draws its subsistence, living in large flocks. The southern coasts of Arabia are occasionally visited by the Lesser Flamingo (*Phoenicopterus minor*) which normally inhabits Somalia and Eritrea; it has no specific name in Arabic, being confused with its larger cousin.

Each region of the Arabic language has given the flamingo names belonging to local dialects; thus in Egypt, it is the *bas̲h̲arūs̲h̲* (old French "becharu", "bacerux"), which in Tunisia has become *s̲h̲abrūs̲h̲* by

metathesis. Also found are the terms *nuḥāf*, *niḥāf*, *surkhāb*, and it is sometimes nicknamed *rahū 'l-mā'* "aquatic crane". For the Muslim bands of crossbow-archers (*rumāt ḳaws al-bunduḳ*) of the Middle Ages, the flamingo counted among the fourteen "obligatory birds" (*ṭuyūr al-wādjib*) required for scoring points in competitions. Hunters also called it *mirzam* and *turundjān*, this last term being the only one which refers to the striking colour of the plumage.

According to Islamic law, consumption of the flesh of the flamingo is permitted; it is said to be, apparently, quite agreeable, not tasting excessively of fish, and according to a *ḥadīth* (related by al-Damīrī but regarded as dubious), the Prophet is said to have eaten it. On the other hand, it is known that the Romans used the tongue of this bird in a number of sophisticated dishes. Gastronomic interest apart, the flamingo was credited with several specific qualities (*khawāṣṣ*) in the therapeutic field; its fat, used as an ointment, was a remedy against hemiplegia (*fālidj*) and maladies of the joints. The same afflictions could also be treated by means of a plaster consisting of a mixture of oil and the paste obtained after the whole body of the bird, including plumage, had been boiled for a long period. Finally, the tongue of the flamingo, dried and soaked in oil, then pounded, produced a medication for the treatment of otitis.

Of the ancient Arab naturalist writers, only al-Damīrī mentions the *nuḥām*, to which he attributes bizarre behaviour, resulting from total ignorance of the ethology of this elusive bird. Thus he says that the female flamingo is fertilised by an oral regurgitation on the part of the male and not by copulation. Once the eggs have been laid on the pyramid of dried mud which serves as a nest, the male comes and covers them with his droppings, and only the warmth of the sun guarantees their incubation. The chicks hatch in an inanimate state, and it is the female who brings them to life, breathing air into their beaks; all of this is pure fable.

In poetry, the only mention of the flamingo is found in the work of the poet Ṣafī al-Dīn al-Ḥillī of the 8th/14th century, who calls it *mirzam*, in a list of the fourteen "obligatory birds" contained in a long *urdjūza* of twenty-nine stanzas each with five hemistiches dedicated to the memory of the caliph al-Nāṣir li-Dīn Allāh (575-622/1180-1225 [*q.v.*]), who reorganised the *futuwwa* of crossbow archery.

(F. Viré)

NUḤĀS, the word most often used in Arabic for copper (Cu).

Next to gold and silver, this is one of the oldest known metals. The word is evidently common to all Semitic languages: Hebrew *nᵉḥōšeṯ*, Aramaic *nᵉḥāšā*, Ethiopic *nāḥes*; the Greek word χαλκός appears in transliteration as *khalḳūs*. Because the alchemists wanted the materials they used to be kept secret, there exist many pseudonyms for copper, which moreover were often changed and are for the greater part incomprehensible. The alchemists attach it to the planet al-Zuhara, i.e. Venus (see the survey in E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, ii, 603-4). Most of these pseudonyms cannot be defined unambiguously; they certainly do not only indicate pure copper but also copper minerals such as primary ore, secondary products of erosion or sedimentary formations. According to al-Bīrūnī, copper is called in Greek *khalḳūs*, in Syriac *nuḥāsā*, in Arabic *al-nuḥās*, *al-miss* (in ʿIrāḳ and Khurāsān) and *al-ḳiṭr* (i.e. brass) (*K. al-Djamāhir fī maʿrifat al-djawāhir*, Ḥaydarābād 1355/1936, 244-5). Shams al-Dīn al-Dimashḳī distinguishes three kinds of copper: the red-white Greek one (*rūmī*), the red and dry Cypriot one (*ḳubrusī*) and the blood-red one from Sūs (in Khūzistān). He describes the extraction as follows: the quicksilver in the quarry having attracted and absorbed the sulphur, the heat in the quarry causes the sulphur to dominate the quicksilver; after that, the mass is transformed into a red rock which has a pungent taste. Fire or a long stay in the earth occasionally makes it slate-like, occasionally it oxidises into verdigris (*zindjār*, the ἰὸς ξύστος of Dioscorides), or it acquires a surplus of sulphur in the quarry and then becomes antimony (*rūsakhtadj*), which is pulverised to obtain the collyrium called *rāsukht*. Dipped several times in bee honey, it takes on a golden colour. A needle, sickle, knife or sword made from copper thus treated and dipped in the blood of a billy-goat (*dam al-tays*) causes incurable wounds, and the sickle prevents the herb from growing (al-Dimashḳī, *Nukhbat al-dahr*, ed. A.F. Mehren, Leiden 1874, repr. Amsterdam 1964, Ar. text 54, tr. 59-60).

Of primary importance for Arabic mineralogy became the so-called "Book of Stones of Aristotle". Its influence can be perceived not only from the great number of manuscripts but also through the rich secondary tradition. In J. Ruska's edition, *Das Steinbuch des Aristoteles*, the "stone" copper is described under no. 59, where the best among the numerous kinds of copper is said to be the red one, mixed with black. Verdigris (*zindjār*) is explained as a green substance hidden inside this kind of copper, which can be extracted by the use of vinegar. When brass (*ṣufr*) is cast and vitriol (*zādj*) and borax (*bawraḳ* [*q.v.*]) are added, something emerges which resembles gold and is solid as if it were gold. Food and drink taken from a brass vessel are harmful, occasionally lethal. If a victim of facial paralysis (*laḳwa*) enters a darkened house and looks at himself in a mirror made of *ṭāliḳūn* (a copper alloy = μεταλλικόν, hardly καθολικόν as in Dozy, *Supplement*, ii, 19), the paralysis disappears. Hot *ṭāliḳūn* dipped in water drives flies off and prevents

eyelashes from growing again after they have been depilated with a pair of tweezers. For these qualities of *ṭāliḳūn*, which probably is identical with "Chinese iron" (*khār čīnī*, *ḥadīd ṣīnī*), see also J. Ruska (tr.), *Das Steinbuch aus der Kosmographie des... al-Ḳazwīnī*, Kirchhain, N.L. 1896, 28, and M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden-Cologne 1972, 409 f.

Special healing properties were of old attributed to "burnt copper" (*aes ustum*), see Dioscorides, *De materia medica*, ed. M. Wellmann, v, 76, κεκαυμένος χαλκός/Arab. tr. ed. Dubler and Terés, v, 59, *al-nuḥās al-muḥraḳ*: this copper preparation possesses astringent, dehydrating, diluting and purifying power and scars sores. Taken with honey, it is an emetic. This copper is made from nails coming from destroyed or sunken ships. The nails, sprinkled with sulphur and salt, are made white-hot in a kiln inside a closed melting-pot made of clay. According to the description, the σῶρυ of Dioscorides (Greek text v, 102, Arab. tr. *ṣūrī*, v, 84) is also a product of the copper quarry and resembles burnt copper.

Al-Tamīmī describes how copper ore, set aglow in a kiln, disintegrates into its components, among which is copper; in the Nīshāpūr region a copper quarry is said to exist, from which turquoise (*fayrūzadj*) was extracted at the same time and therefore said to be a "copper-like" substance; next, al-Tamīmī develops a theory on the nature of verdigris (see Jutta Schönfeld, *Über die Steine. Das 14. Kapitel aus dem "Kitāb al-Muršid" des Tamīmī*, Freiburg 1976, 57, 81, 119).

According to the *Ḥudūd al-ʿālam*, tr. Minorsky, there were layers of copper in the mountains of Bārdjān in the province of Kirmān (65), in Farghāna (115-16), Georgia (68), Kirmān (124), Sardan (Fārs, 129), Spain (154) and Ṭūs (103). Elsewhere, too, Persia is mentioned as the most important land of copper export: from Sardan it was exported to Baṣra and other regions, lucrative layers of copper ore were found near Damindān (in Kirmān), in the region of Iṣfāhān and in Djibāl (Media) (see P. Schwarz, *Iran im Mittelalter*, 158, 268, 868). In the 3rd/9th century the copper quarries near Iṣfāhān paid taxes of 10,000 *dirhams*, and Bukhārā supplied copper for the shining domed roofs of the minarets (Mez, *Renaissance*, 416). According to Ibn Khaldūn, the river bed of the Tiber (*sic*) was said to be covered with copper (Ibn Khaldūn, tr. Rosenthal, i, 151).

AL-**NUKHAYLA**, a town in ʿIrāḳ, near al-Kūfa. It is known mainly from the accounts of the battle of Ḳādisiyya [*q.v.*]. From the statements collected by Yāḳūt regarding its position, it appears that two different places of this name had later to be distinguished, namely one near al-Kūfa on the road to Syria, which is several times mentioned in the time of the caliphs ʿAlī and Muʿāwiya, and another, a watering station between al-Mughītha and al-ʿAḳaba, 3 *mīls* from al-Ḥufayr, to the right of the road to Mecca. Several encounters took place there during the second battle of Ḳādisiyya. According to al-Khalīl in al-Bakrī, this al-Nukhayla was in the Syrian steppe (*al-bādiya*); Ibn al-Faḳīh also seems to be thinking of this region. Caetani assumes that the reference in both cases is to the same place on the edge of the desert. According to Musil, it perhaps corresponds to the modern Khān Ibn Nukhayle about 22 km/14 miles S. S. E. of Karbalāʾ and 64 km/40 miles N. N. W. of al-Kūfa.

AL-**NUKKĀR** (AL-NAKKĀRA, AL-NAKKĀRIYYA) "deniers": one of the main branches of the Khāridjī sect of the Ibāḍiyya [*q.v.*]. The existence of this sect has already been proved by E. Masqueray, A. de C. Motylinski and R. Strothmann; cf., however, the opinion of G. Levi della Vida, according to whom al-Nukkār is simply "an insulting epithet applied to Khāridjīs in general" [see ṢUFRIYYA]. The name al-Nukkār comes from the fact that the members of this sect refused to recognise the second Ibāḍī *imām* of Tāhert, ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān b. Rustam [see RUSTAMIDS]. The other names given to this sect are: 1. *al-Yazīdiyya*, from the name of the chief theologian of the sect ʿAbd Allāh b. Yazīd al-Fazārī al-Ibāḍī (cf. below: to be distinguished from another Ibāḍī sect which bears the same name and was founded by a certain Yazīd b. Anīsa. 2. *al-Shaʿbiyya*; we believe this name should be derived from that of Shuʿayb b. al-Muʿarrif (see below). 3. *al-Mulḥida* (to be distinguished from another Muslim sect of this name = *al-Bāṭiniyya*). 4. *al-Nukkāth* (*al-Nakkātha*); the *nisba* from this name is *al-Nākithī*. 5. *al-Nadjwīya* (and not النجوية as Strothmann writes it, *Berber und Ibāḍiten*, 274, n. 4). 6. *Mistāwa*; this last name, which seems to be Berber (perhaps to be connected with the Berber tribe of *Meztaoua*, mentioned by Ibn Khaldūn, *Histoire des Berbères*, i, 182) was with the Nukkār the most used.

The Ibāḍī historical tradition of North Africa, fixed towards the end of the 5th/11th century by Abū Zakariyyāʾ Yaḥyā b. Abī Bakr al-Wardjlānī [*q.v.*], places the first appearance of the Nukkār sect at the time of the election of ʿAbd al-Wahhāb (in 168/784-5, according to Ibn ʿIdhārī, *al-Bayān al-mughrib*, tr. Fagnan, Algiers 1901, 283), and names as the founder of the sect Abū Ḳudāma Yazīd b. Fendīn al-Ifranī, who was later joined by a learned dissenting Ibāḍī from Cairo, Shuʿayb b. al-Muʿarrif. According to this tradition, the origins of the Nakkārī sect are closely connected with the Maghrib. On the other hand, from information supplied by the Ibāḍī theological

works, one may judge that there were other founders of the Nakkārī sect in addition to Ibn Fendīn and Shuᶜayb. They are mentioned in a *risāla* of Abū ᶜAmr ᶜUthmān b. Khalīfa al-Mārighnī (an Ibāḍī author of North Africa of this name was living in the 6th/12th century, cf. T. Lewicki, *Quelques textes inédits en vieux berbère*, in *REI* [1934], 278), dealing with the different Muslim sects (of which there is a manuscript in the library of the University of Lwów, no. 1088 II in the collection of mss.): ᶜAbd Allāh b. Yazīd al-Fazārī, ᶜAbd Allāh b. ᶜAbd al-ᶜAzīz, Abu 'l-Muʾarridj ᶜAmr b. Muḥammad al-Sadūsī, and Ḥātim b. Manṣūr (fol. 1 b). According to passages in the *Kitāb al-Siyar* of Abu 'l-ᶜAbbās al-Shammākhī and Abū Zakariyyāʾ's book, one can distinguish among these individuals the representatives of three diverse tendencies in the Ibāḍiyya, or rather, of three separate schisms. The synthesis of these different ideas seems to have been the work of Shuᶜayb after the death of Ibn Fendīn (E. Masqueray, *Chronique d'Abou Zakaria*, Algiers 1878, 74-5). The earliest was the schism of ᶜAbd Allāh b. ᶜAbd al-ᶜAzīz, Abu 'l-Muʾarridj, Ḥātim b. Manṣūr and Shuᶜayb, to which the Nakkārī sects owes its legal principles. The date of the secession of this group is perhaps rather earlier than the revolt of Ibn Fendīn: according to the Ibāḍī books, they detached themselves from the Ibāḍiyya in the time of Abū ᶜUbayda Muslim b. Abī Karīma al-Tamīmī, the Ibāḍī *imām* of Baṣra who lived in the first half of the 2nd/8th century (cf. T. Lewicki, *Une chronique ibāḍite*, in *REI* [1934] 72). It should be noted that two doctors of this group, Shuᶜayb and ᶜAbd Allāh b. ᶜAbd al-ᶜAzīz, also fought against the Ḳadarī tendencies in the Ibāḍiyya represented by Ḥamza al-Kūfī and ᶜAṭiyya; it is even said in connection with Shuᶜayb that he had sympathies with the Djabriyya [*q.v.*]. Almost contemporary with the schism of Shuᶜayb and his companions seems to have been that of ᶜAbd Allāh b. Yazīd al-Fazārī, author of a theological system, later adopted by the Nakkārīs, and a traditionist highly esteemed by the Ibāḍīs (cf. T. Lewicki, *Une chronique*, 70). These two Ibāḍī schools were absorbed after 168/784-5 by that of Ibn Fendīn.

As to the latter, we know that he was one of the members of *al-shūrā*, the council constituted by ᶜAbd al-Raḥmān b. Rustam following the example of ᶜUmar b. al-Khaṭṭāb and composed of six men who, after the death of ᶜAbd al-Raḥmān, were to choose the future *imām*. Ibn Fendīn had facilitated the election of ᶜAbd al-Wahhāb, by conducting active propaganda in his favour among the Berbers, but afterwards he demanded of the new *imām* the adoption of two conditions (*sharṭ*), quite in keeping no doubt with the Berber spirit of the Ibāḍīs of the Maghrib but quite foreign to the principles of Ibāḍī teaching: firstly, that he should only act in concert with a regular *djamāᶜa*, and secondly, that he should resign if he found any one more worthy (*afḍal*) than himself. ᶜAbd al-Wahhāb, supported by the Ibāḍī doctors of the east whom he consulted, opposed the views of Ibn Fendīn, who in his turn was supported by Shuᶜayb, who came with his followers to Tāhert to join the malcontents. The "Deniers" attacked the partisans of ᶜAbd al-Wahhāb, known as al-Wahbiyya (on this name, see Strothmann, *Berber und Ibāḍiten*, 274, n. 4). The sources mention two great battles, in which Ibn Fendīn was killed and ᶜAbd al-Wahhāb won the day. The Nakkārīs withdrew, probably to the east of Barbary. Among the fugitives was Shuᶜayb, who settled in Tripolitania. It was at this period that the complete rupture occurred between the Nukkār and the Wahbī section of the Ibāḍiyya, followed immediately by a *barāʾa* or excommunication of Shuᶜayb and his followers by the Wahbī doctors.

Soon the Nakkārī propaganda became very active, but it was not till the end of the 3rd/9th century, after the fall of the imāmate of Tāhert (in 296/908-9) and the establishment of the dynasty of the Fāṭimids in the Maghrib, that the Nukkār acquired a preponderance among the Ibāḍīs of North Africa. The whole of the south of Tunisia and Algeria, from the Djabal Nefūsa [*q.v.*] to Tāhert, became Nakkārī. The historians speak of a vigorous propaganda by the Nukkār, the centres of which were, in addition to Tripolitania, the Djabal Awrās and the island of Djarba. As a result of this propaganda several Wahbī Ibāḍī districts were converted to the new sect. The Nakkārīs organised an imāmate separate from that of Tāhert. We know the name of a Nakkārī *imām* who lived towards the end of the 3rd/9th century: Abū ᶜAmmār ᶜAbd al-Ḥamīd al-Aᶜmā. It was his disciple Abū Yazīd Makhlad b. Kaydād [*q.v.*] who in the first half of the 4th/10th century was the leader of a formidable Nakkārī rising in the Maghrib, which almost succeeded in its endeavour to destroy the Fāṭimid state. Abū Yazīd was elected by the Nukkār assembled in the Djabal Awrās as "the *shaykh* of the true believers", Abū ᶜAmmār giving place to him (in keeping with the teaching on *al-afḍal*). He tried to put into practice the teachings of Ibn Fendīn; he formed a council of twelve members called *ᶜazzāba* who were to rule, in conjunction with him, the Nakkārī imāmate. But later he associated himself with the Khāridjī extremists by authorising *istiᶜrāḍ* [*q.v.*] or religious murder on the model of the Azraḳīs [see AZĀRIḲA].

After the defeat and death of Abū Yazīd, the influence of the Nukkār diminished and several tribes went back to Wahbism. Nevertheless, the Nakkārīs again took part in the general rising of the Wahbīs against the Fāṭimids in 358/968-9 and later in 431/1039-40 we find them mentioned in connection with a great rising of this sect on the island of Djarba. In the 6th-8th/12th-14th centuries they are again mentioned in the district of Yefren to the east of Djabal Nafūsa, on the island of Djarba, among the Banū Warghamma in southern Tunisia, and in the oases of Bilād al-Djarīd, Rīgh and Wārdjlān. Remnants of the Nakkārī sect have survived to the present century and, according to A. de C. Motylinski, Nukkār could be found *ca.* 1900 on Djarba and in Zawāgha.

Thanks to the exposition given by Abū ᶜAmr, we are acquainted with the main principles which separated the Nukkār from the Wahbī Ibāḍīs. They number seven. Besides the doctrine regarding *sharṭ*, mentioned above, a fundamental tenet of the Nukkār was their thesis that the names of God are created. Another Nakkārī tenet concerns the relations of man and woman. For other details of their teaching, see al-Barrādī, *Kitāb al-Djawāhir al-muntaḳāt*, Cairo 1302, ii, 171-2.

Several Wahbī Ibāḍī theologians refuted the Nakkārī teachings in their works, some of them quite early. For example, al-Barrādī mentions the refutations of the thesis of ᶜAbd Allāh b. ᶜAbd al-ᶜAzīz and Shuᶜayb by a Wahbī doctor of the 2nd/8th century named Abū ᶜAmr al-Rabīᶜ b. Ḥabīb (*Kitāb al-Djawāhir*, 172) and al-Wisyānī mentions a scholar of Sāhil in Tunisia named Muḥammad b. Abī Khālid who lived earlier than the 5th/11th century and refuted the Nakkārī doctrines in his various works.

AL-NUḲRA, a plain west of the D̲j̲abal Ḥawrān on the border of Trachonitis in Transjordan. The name *al-Nuḳra* ("the cavity") is quite modern. It is applied to an area which includes the two districts of al-Bat̲h̲aniyya (with its chief town Ad̲h̲riʿāt) and Ḥawrān (west of the hills of the same name), i.e. the whole northern half of modern Jordan. In the wider sense, al-Nuḳra includes all the country from al-Lad̲j̲āʾ, D̲j̲aydūr and al-Balḳāʾ to the foot of the D̲j̲abal Ḥawrān, in the narrower sense only the southern part of this; in any case it stretches from al-Ṣanamayn to the D̲j̲abal al-Durūz (Ḥawrān). To al-Nuḳra belong Mūʿatbīn or Mūʿtabīn, Tubnā (now Tibne), al-Mahad̲j̲d̲j̲a, Obṭaʿ, ʿOlmā, al-Musayfira and al-Faddayn already mentioned in Syriac texts of the pre-Muslim period.

NUḲṬAT AL-KĀF, an early work on the Bābī [*q.v.*] movement.

In 1910, E.G. Browne published a work entitled *Kitáb-i Nuqṭatu 'l-Káf*, a Persian history of the early Bābī movement, based on a "unique" manuscript (Suppl. persan 1071) in the Bibliothèque Nationale. This manuscript had been bought by the library in 1884, in a sale of books belonging to the late Comte de Gobineau. Authorship of the history was ascribed by the Bābī leader Ṣubḥ-i Azal [*q.v.*] to Ḥād̲j̲d̲j̲ī Mīrzā D̲j̲ānī, a Kās̲h̲ānī merchant killed in 1852.

Browne's text soon became the centre of a controversy that still continues. The Bahāʾī leader, ʿAbbās Effendi ʿAbd al-Bahāʾ, maintained that the work was a forgery produced by the Azalī Bābīs. This thesis was developed by the Bahāʾī scholar Mīrzā Abu 'l-Faḍl Gulpāygānī and his nephew Sayyid Mahdī in their *Kas̲h̲f al-g̲h̲iṭāʾ* and, more recently, by H.M. Balyuzi. While this conspiracy theory is clearly unfounded, internal evidence suggests that the history was not written by Mīrzā D̲j̲ānī. Recent conjectures favour authorship by his son or nephew, possibly in collaboration with a brother, using notes prepared by him. Some version of the *Nuḳṭat al-kāf* served as the basis for the later Bahāʾī *Tārīkh-i D̲j̲adīd* and its recensions. In spite of the controversy, there can be no doubt that the *Nuḳṭat al-kāf* remains one of the most important sources for the early history of Babism.

A full discussion of the problems of authorship, provenance, and dating may be found in MacEoin, together with a list of the twelve or so manuscripts now known to be in existence (Appendix 8).

NUḲṬAWIYYA, an offshoot of the Ḥurūfiyya sect [*q.v.*] that after an incubation lasting a century emerged as a significant movement of politico-religious opposition in Ṣafawid Persia and, in India, played some role in the origination of Akbar's *Dīn-i Ilāhī* [*q.v.*]. Given its similarities not only with Ḥurūfism but also with Nizārī Ismāʿīlism, it may be regarded as one more link in the long chain of Persian heresies.

The designation Nuḳṭawiyya is said to be taken from the doctrine that earth is the starting point (*nuḳṭa*) of all things, the remaining three elements being derived from it; the term may also refer, however, to the use of two, three, or four dots, variously arranged, as cryptic abbreviations in the writings of the sect. The designation Maḥmūdiyya is also encountered, this being derived from the name of the founder, Maḥmūd Pasīk̲h̲ānī. Born at the village of Pasīk̲h̲ān near Fūman in Gīlān, Maḥmūd followed Faḍl Allāh Astarābādī (d. 796/1384), the founder of Ḥurūfism, until he was expelled from the movement for alleged arrogance (hence the epithets *Maḥmūd-i mardūd* "Maḥmūd the rejected" and *Maḥmūd-i maṭrūd* "Mahmud the banished"). He is said to have proclaimed himself the Mahdī and the bringer of a new dispensation in 800/1397, i.e. at the beginning of the 9th Islamic century. Virtually nothing is known of his life other than that he was still residing in Astarābād in 818/1415 when he finished the writing of one of his books, *D̲j̲awāz al-sāʾirīn*. He died in 831/1427-28, supposedly a suicide, having cast himself into the waters of the Aras, but this is dismissed as a calumny by the Nuḳṭawīs themselves.

Maḥmūd Pasīk̲h̲ānī is said to have written sixteen books and 1,001 treatises (*nusk̲h̲a*) in exposition of his doctrines; none of these has ever been published in full (for extracts from his principal work, *Mīzān*, see, however, Raḥīm Riḍā-zāda Malik's notes to his edition of Kayk̲h̲usraw Isfandiyār, *Dabistān-i mad̲h̲āhib*, ii,

233-6, and Ṣādiḳ Kiyā, *Nuḳṭawiyān yā Pasīkhāniyān*, Tehran 1320 *Sh.*/1941, 73-132).

Nuḳṭawī works were composed in an extremely opaque style and are marked by frequent recourse to abbreviations and special signs similar to those found in Ḥurūfī literature, but the main themes of Maḥmūd Pasīkhānī's teaching can easily be comprehended. They consist in the first place of a peculiarly materialist type of metempsychosis according to which the particles of the body do not disintegrate on death but are absorbed as a single mass into the soil. They then re-emerge in vegetable or solid form, possibly to be consumed by animals or men, the level of existence on which they are finally reintegrated being dependent on the degree of virtue and knowledge attained by their previous owner. When a being rises or descends from one level of existence to another, the traces of his former existence are still visible and can be discerned by the insightful, a process known as *iḥṣā*ʾ "enumeration" (whence yet another designation for the sect, Iḥṣāʾiyya). Thus dogs can be recognised as having been Ḳizilbāsh Turks, their tails being a trace of the swords they once carried and the word used in Persian to shoo away a dog, *čikh*, being identical with Turkish *čiḳ*; and waterfowl should be identified as transmogrified clerics, still obsessed in their new existence with making ablutions. Maḥmūd Pasīkhānī himself claimed to be the reincarnation on a higher plane both of the Prophet Muḥammad (something allegedly indicated in Ḳurʾān, XVII, 79 "your Lord will raise you to a praiseworthy station", *maḳām maḥmūd*) and of ʿAlī, citing a *ḥadīth* in which the Prophet is reported to have said that he and ʿAlī were of one flesh. Other personal reincarnations are those of Moses in Ḥusayn b. ʿAlī and the Pharaoh in Yazīd; it was because Yazīd remembered being drowned in the Red Sea at the hands of Moses when he was the Pharaoh that he took care to keep Ḥusayn away from the water of the Euphrates.

Pasīkhānī is reputed never to have married, and his doctrine recommends celibacy. The celibate are said to have reached the rank of *wāḥid* (a word which has the crucial numerical value of 19) and to be capable of advancing to the rank of *Allāh*, this being none other than man in his ultimate essence, termed "the manifest compound" (*al-murakkab al-mubīn*); the Nuḳṭawīs therefore summarised their creed as *lā ilāha illā 'l-murakkab al-mubīn*. Nuḳṭawīs disinclined to celibacy (who for some reason are designated as *amīn*, "trustworthy") are advised to copulate not more than once a week. This disdain of marriage earned the Nuḳṭawīs accusations of incest, promiscuity and pederasty from their opponents.

Also central to Nuḳṭawī doctrine was a cyclical concept of time, one clearly influenced by Ismāʿīlī antecedents. The total life of the world is said to consist of 64,000 years, divided into four periods of 16,000 years that are known respectively as *ẓuhūr* "outwardness", *buṭūn* "inwardness", *sirr* ("concealment") and *ʿalāniyya* ("manifestation"). Each of these periods is divided in turn into an 8,000-year "Arab epoch" (*dawra-yi istiʿrāb*), during which the guidance of humanity is entrusted to a "perfected Arab messenger" (*mursal-i mukammal-i ʿArab*), and an 8,000-year "Persian epoch" (*dawra-yi istiʿdjām*), presided over by a "perfected Persian expositor" (*mubayyin-i mukammal-i ʿadjam*). The emergence of Maḥmūd Pasīkhānī signified the beginning of one such "Persian epoch". This exaltation of Persian-ness is apparent also in the assertion that Gīlān and Māzandarān have now superseded Mecca and Medina.

It was during the reign of Shāh Ismāʿīl I that the Nuḳṭawī movement first surfaced, significantly enough in the village of Andjudān near Kāshān, a principal centre of post-Alamūt Nizārī Ismāʿīlism. Shāh Ṭāhir, thirty-first Imām of the Muḥammad-Shāhī Nizārī line, is reported to have so angered Shāh Ismāʿīl by gathering around him in Andjudān Nuḳṭawīs and other religious deviants that he had to flee precipitately to India (Maʿṣūm ʿAlī Shāh Shīrāzī, *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ed. Muḥammad Djaʿfar Maḥdjūb, Tehran 1339 *Sh.*/1960, iii, 136). Another instance of Nuḳṭawī-Ismāʿīlī symbiosis is provided by Murād Mīrzā, thirty-sixth Imām of the Ḳāsim-Shāhī Nizārī line, whose combined Nuḳṭawī and Ismāʿīlī following in Andjudān was broken up by Shāh Ṭahmāsp in 981-2/1573-4 and who was himself put to death (Aḥmad Thattawī, *Taʾrīkh-i Alfī*, cited in Kiyā, 36). Mention may also be made of two poets: Wuḳūʿī of Nīshāpūr whose beliefs are said to have been intermediate between Nuḳṭawism and Ismāʿīlism (Kiyā, 35), and Abu 'l-Ḳāsim Muḥammad Kūhpāyaʾī Amrī Shīrāzī, who praised two of the Ḳāsim-Shāhī Nizārī Imāms in his *Dīwān* and may have been a crypto-Ismāʿīlī (W. Ivanow, *A guide to Ismaʿili literature*, London 1933, 108).

Amrī Shīrāzī first came to the fore in the time of Shāh Ṭahmāsp, who entrusted him with the administration of *awḳāf*, belonging to the Ḥaramayn but located in Persia, and who also employed his brother, Mawlānā Abū Turāb, famed as a master of the occult sciences, as court calligrapher. Denounced for heresy in 972/1565, the brothers were blinded and went into seclusion. In 984/1576, the last year of Ṭahmāsp's reign, still more Nuḳṭawīs were apprehended in Kāshān; they included the poet Ḥayātī, who was jailed for two years in Shīrāz before making his way to India.

Other centres of Nuḳṭawī activity were developing meanwhile in Sāwa, Nāʾīn, Iṣfahān and—most importantly—Ḳazwīn. Nuḳṭawism was propagated in Ḳazwīn by Darwīsh Khusraw, the son of a well-digger, who had gone to Kāshān to learn the Nuḳṭawī doctrines and established his headquarters in a mosque on his return. Denounced by the *ʿulamāʾ*, he was interrogated by Shāh Ṭahmāsp but giving suitably evasive answers was released with instructions no longer to hold forth in the mosque. On the death of Ṭahmāsp, he resumed his public preaching with such success that he was able to build a *takya* which came to house two hundred of his followers. Despite a further round of executions of Nuḳṭawīs in Kāshān in 994/1586 which numbered among its victims two musicians, Afḍal Dū-tārī and Mīr Bīghamī, Darwīsh Khusraw remained unmolested throughout the reigns of Ismāʿīl II and Khudābanda into the early years of rule by Shāh ʿAbbās.

Shāh ʿAbbās began by establishing a friendly and even intimate relationship with Darwīsh Khusraw, and was even initiated into the Nuḳṭawiyya, with the grade of *amīn*, by Darwīsh Turāb and Darwīsh Kamāl Iḳlīdī. The Ṣafawid chroniclers (e.g. Iskandar Beg Munshī, *ʿĀlam-ārā-yi ʿAbbāsī*, Tehran 1350 *Sh.*/1971, i, 444), followed by most later historians, maintained that Shāh ʿAbbās cultivated the Nuḳṭawīs only as a means of surveillance. It is, however, possible that he had a genuine interest in their teachings. They had already attempted to proclaim Shāh Ṭahmāsp as the Mahdī, and when they made a similar connection between their chiliastic theories and the person of Shāh ʿAbbās, he may well have contemplated the possibility of using Nuḳṭawism as a new ideological basis for the Ṣafawid state. It seems probable at the

very least that his lifelong disregard for religious proprieties should have been in part the result of his exposure to Nuḳṭawī teachings (ʿAlī Riḍā Dhakāwatī Ḳarāgūzlū, *Nagāhī dīgar ba Nuḳṭawiyya*, 59-60).

The Nuḳṭawī movement was, however, not without its dangers for Shāh ʿAbbās. In 999/1591, a Nuḳṭawī insurrection centred on Iṣṭihbānāt broke out in Fārs; he had it mercilessly repressed, and the blinded poet Amrī was arrested in Shīrāz and torn to pieces at the bidding of the *ʿulamāʾ*. Shāh ʿAbbās's relations with Darwish Khusraw began to sour two years later when he was presumptuously warned by the Nuḳṭawī leader, on the eve of a campaign against rebels in Luristān, that unless he returned to Ḳazwīn by 1 Muḥarram 1302/27 September 1593, a Nuḳṭawī adherent, other than the Shāh himself, might be compelled for astrological reasons to seize the throne. When Shāh ʿAbbās was encamped at Kharraḳān, he was brought a similarly patronising message by Darwīsh Kūčik Bahla-dūz ("gauntlet-maker"), a principal lieutenant of Darwīsh Khusraw, warning him again to return as quickly as possible and offering to send 50,000 armed Nuḳṭawīs to aid in the suppression of the rebellion. By now thoroughly alarmed, Shāh ʿAbbās ordered Malik ʿAlī the *djārčībāshī* back to Ḳazwīn to attack the Nuḳṭawī *takya* and arrest its inmates in advance of his own return to the capital. The stealth employed in executing this command suggests that there was indeed the potential for a full-scale Nuḳṭawī insurrection in Ḳazwīn. The *djārčībāshī* surrounded the *takya* before dawn and sought an audience with Darwīsh Khusraw on the pretext of presenting him with a robe of honour. As he was draping the cloak around his shoulders, he suddenly felled him with a powerful blow to the head, and the soldiers rushed in, killing many Nuḳṭawīs and arresting the others. Among those captured was Darwīsh Kūčik; he committed suicide by ingesting a large amount of opium, promising to return swiftly in a new incarnation. Darwīsh Khusraw himself was interrogated by the *ʿulamāʾ* and publicly tortured to death over a period of three days, after which his body was exhibited on the gibbet for a week.

It happened that soon after these events a comet appeared in the heavens. This was interpreted by Djalāl al-Dīn Yazdī, the court astrologer, to mean that the king would be in mortal danger during 7-10 Dhu 'l-Ḳaʿda 1002/25-8 July 1594. He therefore proposed that a substitute ruler worthy of death be placed on the throne for the duration of the critical period. Shāh ʿAbbās then asked one of the Nuḳṭawī captives, Darwīsh Yūsufī Tarkish-dūz ("quiver-maker") for his interpretation of the comet, and he replied that it was a sign that one of the Nuḳṭawīs would soon assume rule. The monarch countered that Darwīsh Yūsufī was the most suitable Nuḳṭawī for the throne, and immediately divested himself of the paraphernalia of monarchy and seated Darwīsh Yūsufī on the throne. At the end of the three days, during which Darwīsh Yūsufī made use of his glory only to have himself surrounded by handsome youths, he went straight from the throne to the scaffold, and Shāh ʿAbbās took back his regalia. This curious episode, illustrative both of Shāh ʿAbbās's imaginative sadism and of his superstitiousness, has inspired at least two literary treatments: a short story by the Ādharbāydjānī writer Fatḥ ʿAlī Ākhūndzāda (= Akhundov, d. 1878: *Aldanmīsh kävakib*: *hekayati Yusufshah*, in *Äsärläri*, Bākū 1987, i, 209-34, Russian tr. Aziz Sharifov, *Obmanutyye zvezdy, rasskaz o Yusuf-shakhe*, in Akhundov, *Izbrannoye*, Moscow 1956, 29-57) and a novel by Djalāl Āl-i Aḥmad (d. 1969: *Nūn wa 'l-ḳalam*, Tehran 1340 Sh./1961).

Mass arrests and executions of Nuḳṭawīs then ensued in other cities, including once again Kāshān, where the discovery of a list of leading Nuḳṭawīs among the papers of the poet Mīr Sayyid Aḥmad Kāshī permitted the sect to be uprooted from the area once and for all. Shāh ʿAbbās personally beheaded Kāshī when he was in the midst of reminiscing concerning a previous existence, and then deftly bisected his headless trunk before it fell to the ground. He had a further confrontation with Nuḳṭawīs during his pilgrimage to Mashhad in 1010/1600-1; he discovered that his caravan had been infiltrated by his erstwhile initiators into the sect, and they were accordingly put to death in the caravanserai at Kūsha. The last Nuḳṭawī to be executed during the reign of Shāh ʿAbbās was the astrologer Mullā Ayāz, put to death in 1020/1611.

Although curiously enough the Nuḳṭawīs continued to regard Shāh ʿAbbās as one of their own, discounting his hostility to them as a sign of immaturity, many of them found it prudent to take refuge in India. These refugees included an impressive number of poets: Wuḳūʿī Nīshāpūrī, Ḥayātī Kāshānī, ʿAlī Akbar Tashbīhī Kāshānī, Mullā Ṣūfī Māzandarānī (Āmulī), Ḥakīm ʿIbād Allāh Kāshānī and ʿAbd al-Ghanī Yazdī. Adjusting their calculations to make Akbar yet another candidate for millennarian rule, the Nuḳṭawīs found favour with the Mughal emperor and assisted him in the formulation of his imperial cult, the *Dīn-i Ilāhī*. One of their number, Mīr Sharīf Āmulī, even sat on the nineteen-member committee that elaborated the cult. It is possible, too, that Akbar's chief confidant, Abu 'l-Faḍl ʿAllāmī, had Nuḳṭawī sympathies; a letter from him was found among the papers of Mīr Sayyid Aḥmad Kāshī, and it was he who moved Akbar to write a letter to Shāh ʿAbbās, fruitlessly urging on him the merits of religious tolerance. The emperor Djahāngīr did not entirely turn his back on the Nuḳṭawīs, but their visible presence in India did not last long.

A brief resurgence of the Nuḳṭawī movement took place in Persia during the reign of Shāh Ṣafī I. In Ḳazwīn, a certain Darwīsh Riḍā who claimed alternately to be the Mahdī and his deputy gathered a vast following that allowed him to seize control of the city. The movement was bloodily suppressed and Darwīsh Riḍā was beheaded in 1041/1631-2. His followers expected him to return from the dead, and when the following year they discovered an obscure farrier who resembled him, they renewed their uprising, with the same result as before.

This marked the end of the Nuḳṭawiyya as a movement with insurrectionary capabilities. Some thirty years later, Raphael du Mans remarked on the presence in Iṣfahān of a ragged group of dervishes known as Maḥmūdīs (*Estat de la Perse en 1660*, ed. Ch. Schefer, Paris 1890, 87-8), but they were evidently too insignificant to warrant suppression. Despite its impressive longevity in the face of repression, the Nuḳṭawī movement never had a chance of long-term success, being composed almost entirely of artisans and literati in an age when the application of tribal power was decisive (the Ustādjlū chieftain Būdāḳ Dīn-oghlī was the sole member of the Ṣafawid military aristocracy whom the Nuḳṭawīs were able to recruit).

A few vestiges of the Nuḳṭawiyya can nonetheless be traced in post-Ṣafawid Persia. According to Muḥammad ʿAlī Nāẓim al-Sharīʿa, Sayyid Muḥammad ʿAlī the Bāb was taught the doctrines of Nuḳṭawism during his confinement in Mākū and incorporated them directly in his *Bayān* (*Ḥadīda muḥammā*, quoted in Ḳarāgūzlū, *Nagāh-i tāzaʾī ba manābiʿ-i Nuḳṭawiyya*, 38). This is unproven, but there

are undeniable similarities between Nukṭawism and Bābism: a belief in metempsychosis, extravagant interpretations of Ḳurʾān and *ḥadīth*, a claim to have abrogated the Islamic *s͟harīʿa*, and a fixation on the number nineteen. Also in the early nineteenth century, the Niʿmatullāhī Ṣūfī Zayn al-ʿĀbidīn S͟hīrwānī (d. 1253/1837-38) reports having met Nukṭawīs who concealed themselves in the guise of Ṣūfīs (*Bustān al-siyāḥa*, reprint, Tehran n.d., 182). A contemporary researcher, Nūr al-Dīn Mudarrisī Čahārdihī, mentions having met in Bihbahān a certain Bābā Muḥammad who regarded himself as a Nukṭawī, but he seems to have been nothing more than an isolated eccentric (*Sayrī dar taṣawwuf, dar s͟harḥ-i ḥāl-i mas͟hāyik͟h wa akṭāb*, 320-1).

(H. ALGAR)

AL-**NUʿMĀN** B. ABĪ ʿABD ALLĀH MUḤAMMAD b. Manṣūr b. Ḥayyūn, famous *ḳāḍī* of the Fāṭimid caliph al-Muʿizz li-dīn Allāh [*q.v.*], of whose origins and early life little is known. This small amount of information is insufficient to explain the exceptional rise and fortune of this obscure jurist of Ifrīḳiya after he had entered the service of the new masters of this province, the Fāṭimids. As a connection of the Banū Tamīm, to which the line of Ag͟hlabid *amīrs* were attached, al-Nuʿmān rose rapidly in the hierarchy of the S͟hīʿī state to the high position of judge-in-chief (*ḳāḍī 'l-ḳuḍāt*) of the community.

Hence the date of his birth is unknown, as is likewise his social position and the calibre of his intellectual training at Ḳayrawān at the moment when, towards the end of the 3rd/9th century, the S͟hīʿī Berber rebellion broke out, first of all in Little Kabylia, which was to sweep away the orthodox dynasty of the Ag͟hlabids [*q.v.*] and end in the foundation, in Ifrīḳiya, of the Fāṭimid anti-caliphate. However, our sources agree on placing in 313/925 his nomination to the service (*k͟hidma*) of the first Fāṭimid caliph, al-Mahdī bi 'llāh [*q.v.*] in an office whose exact nature is unknown. The speed of his adhesion to the doctrine of the *Ahl al-Bayt* and also his *kunya* of Abū Ḥanīfa make one think that he belonged to the Ḥanafī law school, solidly represented at Ḳayrawān and less hostile to S͟hīʿism than that of Mālik. It is more plausible that he joined the Ismāʿīlī *daʿwa* before the foundation of the Fāṭimid caliphate, as I.K. Poonawala has shown; referring, in particular, to an old Sunnī source, the *Ṭabaḳāt ʿulamāʾ Ifrīḳiya* of al-K͟hus͟hanī, one of Nuʿmān's contemporaries, he has had the pertinent idea of identifying a certain Muḥammad b. Ḥayyān, mentioned as being among the jurists of Ḳayrawān professing the doctrine of *tas͟hrīḳ*, sc. that of the *mas͟hāriḳa*, the eastern Ismāʿīlīs, as being undoubtedly the father of al-Nuʿmān and of consequently correcting Muḥammad b. Ḥayyān into Muḥammad b. Ḥayyūn.

Thus al-Muʿizz's famous judge seems to have been raised and educated in the doctrine of the *Ahl al-Bayt* by a father who had already long been won over to S͟hīʿism, before the proclamation of the Fāṭimid caliphate in 297/310. This would, moreover, explain his rapid rise from being the modest *ḳāḍī* of a province, Tripoli, to the highest office of supreme *ḳāḍī* in 336/948. It was in fact from that town that the Fāṭimid caliph Ismāʿīl al-Manṣūr [*q.v.*] summoned him to his new capital, al-Manṣūriyya, just after his triumph over the K͟hārid͟jite rebel Abū Yazīd [*q.v.*], the famous "man on the donkey", in order to appoint him to this high office, in conditions which al-Nuʿmān himself describes in his *Kitāb al-Mad͟jālis wa 'l-musāyarāt*: "Al-Nuʿmān, as soon as he had arrived in al-Manṣūriyya, was solemnly invested one Friday by the caliph, who awarded him robes of honour woven in the royal workshops and ordered him to proceed immediately to Ḳayrawān, since al-Manṣūriyya had not yet got a mosque which could allow him to lead the Friday worship in a *masd͟jid d͟jāmiʿ* and to give the *k͟huṭba* there. Al-Manṣūr had him escorted by the officers of the guard, who accompanied him, with drawn swords, all the way along both the outward and the return journey. Some days later, the caliph sent a written mandate (*tawḳīʿ*) to the chancery where a nomination patent (*ʿahd*) was made out appointing him *ḳāḍī* of al-Manṣūriyya, al-Ḳayrawān, al-Mahdiyya and other towns and provinces of Ifrīḳiya."

Al-Nuʿmān's elevation to the most coveted position amongst the body of *faḳīhs* thus coincided with the consolidation of the state and of Fāṭimid power, after the crushing of K͟hārid͟jism, as also with the enfeeblement of the Sunnī party and the deterioration of relations between the central organisation of the Ismaʿīlī *daʿwa* at al-Manṣūriyya with the Ḳarmaṭīs of Baḥrayn. The reform of Fāṭimid doctrine undertaken by al-Mahdī immediately on proclamation of the

caliphate, with the obvious aim of adapting Ismāʿīlism to the realities of Ḳayrawānī orthodoxy in order the better to create a state *madhhab*, became more pronounced during the last years of al-Manṣūr's reign and became stronger all through the twenty years' reign in Ifrīḳiya of al-Muʿizz. Al-Nuʿmān's designation thus came at a specific moment when the supreme *ḳāḍī* was to have a prime role in the elaboration of the state doctrine. Whilst holding his office and giving to the position of *ḳāḍī* an exemplary image both by his own competence and by his high moral qualities, al-Nuʿmān was also to distinguish himself by his role as a fertile author who was to have the merit of constructing a juridical and doctrinal system accessible to the masses of Ifrīḳiya. From now onwards, he was to owe his fame to the elaboration and the teaching of a simplified and moderate doctrine (*samāʿ al-ḥikma*), at the same time giving to the office of *ḳāḍī 'l-ḳuḍāt* amongst the Shīʿīs the weightiness and effulgence which a Saḥnūn [*q.v.*] had given to the Mālikī *ḳaḍāʾ* a century earlier.

The exercise of his judicial function was to entail, for al-Nuʿmān, a didactic task. Since his high office meant that he was to fulfil, at the side of the Imām, the role of theoretician of Ismāʿīlism, he now began to devote himself to compose treatises of *fiḳh* according to the doctrine of the Imāms and to render their contents more widely known by public courses of instruction (*durūs al-ḥikma*). These courses were held after the *ʿaṣr* worship, and then sessions devoted to discussion and controversy were held in a special chamber. This *madjlis al-ḥikma* soon became a genuine institution in the shape of a centre of studies and propaganda which the Sunnīs called *dār al-Ismāʿīliyya*.

Since the Imām was the depository of all learning, according to the doctrine of the *Ahl al-Bayt*, it was in close collaboration with him that the supreme *ḳāḍī*, in his function of official *faḳīh* of the dynasty, wrote treatises on *fiḳh* and doctrine meant for teaching and for the use of regional judges, for governors and for students. Thus al-Nuʿmān consulted al-Muʿizz regularly whilst composing his main theological works, comprising the *K. Daʿāʾim al-Islām*, the *K. al-Himma* and the *K. Asrār al-taʾwīl*, and also, having entitled an abridgement of the doctrine of the *Ahl al-Bayt* the *K. al-Dīnār*, he modified this title, on the advice of the Imām, to *K. al-Ikhtiṣār li-ṣaḥīḥ al-āthār ʿan al-aʾimma al-aṭhār*. Al-Nuʿmān's merit thus consists in the construction of a juridical and legal system for the use of the state, one oriented in the direction of a reconciliation of the concepts of Ismāʿīlism with those of the orthodoxy of Ḳayrawān. Thus the points of doctrinal opposition between Sunnism and Shīʿism are not so flagrant, in al-Nuʿmān's works, as the geographical collections of biographies of orthodox scholars of Ḳayrawān would lead one to believe. If there remains a total divergence on the questions of the definition of faith or that of *walāya* (adhesion to the Imāms), the contradiction in fact concerns only minor questions concerning ritual and practice of the cult. Reading the *K. Daʿāʾim al-Islām* allows one to estimate the importance of al-Nuʿmān's endeavour to bring about a rapprochment between Ismāʿīlī doctrine and the theses of Sunnism. Endeavouring as much as he could to codify Fāṭimid *fiḳh* in a simple and clear manner and to popularise it in order to encourage obedience to a politics of moderation and realism, the supreme judge completed his task as official *faḳīh* with the intention, above all, of making out of a juridical and doctrinal system an instrument of politics adapted to the imperialist intentions of the Fāṭimid state. This explains al-Muʿizz's interest in the works which al-Nuʿmān wrote under his ultimate direction. For the caliph, observes Madelung, doctrine was in effect an instrument of politics. Hence he impelled his supreme *ḳāḍī* to elaborate a juridical system accessible and conformable to the universalist concept of the imāmate. Thus if the Ismāʿīlī supreme *ḳāḍī* offered the same image of simplicity and modesty, with the additional technical and moral qualities inherent in his office, as did the Sunnī *ḳāḍī 'l-ḳuḍāt*, he nevertheless lived and worked within a total dependence of power. He ceased to be the mouthpiece of the *ʿāmma*, the censor of the palace, listened to by the sovereign and feared by the aristocracy. In this way, various special traits contribute to the image of the figure of the supreme judge, who became in the Fāṭimid state an official personage, a man of law caught up in the service of a cause, that of the *Ahl al-Bayt*. Yet as a consummate theologian, a highly literate author and an official with recognised moral and technical qualities, al-Nuʿmān has the merit of being known as one of the most famous representatives of the Mālikīs and of preserving for the high office of *ḳāḍī* its dignity and lustre.

(F. DACHRAOUI)

AL-NUʿMĀN B. BASHĪR AL-ANṢĀRĪ, Companion of the Prophet and governor of al-Kūfa and Ḥimṣ.

According to some Muslim authorities, al-Nuʿmān was the first Anṣārī to be born after the Hidjra. His father Bashīr b. Saʿd [*q.v.*] was one of the most distinguished of the Companions, and his mother, ʿAmra bint Rawāḥa, was the sister of the much-respected ʿAbd Allāh b. Rawāḥa [*q.v.*]. After the assassination of ʿUthmān, al-Nuʿmān, who was devoted to him, refused to pay homage to ʿAlī. According to some stories which seem rather apocryphal, he brought the bloodstained shirt of the caliph, according to others, the fingers cut from the hand of his wife Nāʾila, to Damascus and these relics were exhibited by Muʿāwiya in the mosque. In the battle of Ṣiffīn [*q.v.*] he faithfully stood by Muʿāwiya and he was always a favourite with him while the other Anṣār were kept at a suitable distance from the Umayyad court. In the year 39/659-60 al-Nuʿmān, by order of Muʿāwiya, undertook an expedition against Mālik b. Kaʿb al-Arḥabī, who had occupied in ʿAlī's name ʿAyn al-Tamr on the frontier between Syria and Mesopotamia and began to besiege it, but had to retire without accomplishing anything. Twenty years later he was given the governorship of al-Kūfa. He was not really fitted for this post, because his pronounced antipathy to ʿAlī and his followers did not suit the Shīʿī population of the town. In addition, he did not conceal his sympathy with the Anṣār, who were attacked by

Yazīd b. Muʿāwiya's favourite al-Akhṭal [q.v.], but freely expressed his opinion on the insult offered to his fellow-tribesmen.

After Yazīd had come to the throne in 60 Radjab/April 680, he nevertheless left al-Nuʿmān in office; but the latter did not long remain there. Al-Nuʿmān is described as an ascetic, and he knew the teachings of the Ḳurʾān thoroughly. But his asceticism was not of the strictest type, and his interest in musical entertainments was regarded as evidence of lack of dignity. In policy he proved very tolerant so long as it did not come to an open rising. When Muslim b. ʿAḳīl [q.v.], al-Ḥusayn's partisan, appeared in al-Kūfa to ascertain the feelings of the people and he found a number who were ready to pay homage to al-Ḥusayn, al-Nuʿmān adopted a neutral attitude and took no steps to check the vigorous propaganda. As a result, the followers of the Umayyads in al-Kūfa wrote to the caliph and called his attention to the fact that the threatening situation demanded a man of vigour who would be able to carry out the government's orders, while al-Nuʿmān, out of real or feigned weakness, was letting things take their course and only urging people to keep calm. When Yazīd was discussing this with his councillors, notably the influential Ibn Sardjūn, the latter showed him a document signed by Muʿāwiya shortly before his death, containing the appointment of the then governor of al-Baṣra ʿUbayd Allāh b. Ziyād [q.v.] to the same office in al-Kūfa. In spite of his antipathy to the proposal, Yazīd carried out his father's wish and made ʿUbayd Allāh governor of al-Kūfa without removing him from his post in al-Baṣra, whereupon al-Nuʿmān hastened back to Syria. When the people of Medina rebelled at the beginning of the year 63/682 and drove all the Umayyads out of the town, Yazīd wished to see what tact would do before resorting to arms and sent a mission to Medina under al-Nuʿmān to show the people the futility of armed resistance and to bring them to their senses. The mission was also instructed to go on to Mecca to induce the stubborn ʿAbd Allāh b. al-Zubayr to pay homage. Al-Nuʿmān's warnings and threats had no effect on his countrymen, however, and there was nothing left for the caliph but to subdue the rebels in the two holy cities by force of arms [see YAZĪD B. MUʿĀWIYA]. After the death of Yazīd in Rabīʿ I 64/Nov. 683, al-Nuʿmān, who had in the meanwhile become governor of Ḥimṣ, declared openly for ʿAbd Allāh b. al-Zubayr. In Dhu 'l-Ḥidjdja of the same year/July-Aug. 684 and Muḥarram 65/Aug.-Sept. 684, however, the latter's leading follower al-Ḍaḥḥāk b. Ḳays al-Fihrī [q.v.] was defeated at Mardj Rāhiṭ [q.v.], and thus the fate of al-Nuʿmān was also decided. He attempted to save himself by flight but was overtaken and killed. According to the Arab historians, the town of Maʿarrat al-Nuʿmān [q.v.] takes its name from al-Nuʿmān b. Bashīr.

(K.V. ZETTERSTÉEN)

AL-**NUʿMĀN** (III) B. AL-**MUNDHIR**, the last Lakhmid king of Ḥīra [q.v.] and vassal of Sāsānid Persia. He was the son of al-Mundhir IV [q.v.] and Salmā, the daughter of a Jewish goldsmith from Fadak. In the annals of the Lakhmids [q.v.], his reign (*ca.* A.D. 580-602) was the most memorable after that of his grandfather, al-Mundhir III (d. 554). His accession to the throne of Ḥīra he owed to ʿAdī b. Zayd [q.v.], the famous Christian poet and statesman of Ḥīra, and the Sāsānid Hormuzd celebrated that accession with an especially splendid crown.

Al-Nuʿmān was an assertive and strong ruler, and his reign witnessed tensions within Ḥīra and wars with the Arab tribes. The Ḥīra clan of the Banū Marīna had opposed his accession, and finally, the very friendly clan of the Banū Ayyūb was ranged against him. In addition to friction with the Taghlib tribe, he tried to withdraw the privilege of *ridāfa* (divisional leadership in battle) accorded to Yarbūʿ, a subdivision of the tribe of Tamīm, from them and transfer it to another subdivision, namely Dārim. Yarbūʿ contested this, and in a bloody encounter at Ṭikhfa, the Yarbūʿ were victorious. Al-Nuʿmān's brother Ḥassān and his son Ḳābūs led the Lakhmid troops but both were defeated and captured, and al-Nuʿmān had to ransom them for 1,000 camels.

The fall of the Ghassānids [q.v.] from grace *ca.* 580 brought about disarray in Ghassānid-Byzantine relations and with it a diminution of the Ghassānid military role in Byzantium's war with Persia in the 580s. Hence Lakhmid-Ghassānid encounters receive no mention in the sources, and these record only an echo of an expedition by al-Nuʿmān against Byzantine Circesium (Ḳarḳīsiyā [q.v.]). The conclusion of the Persian-Byzantine peace which lasted till the death of the emperor Maurice in 602 ruled out any serious Lakhmid military designs against Ghassānid or Byzantine territory. But before that peace was concluded, al-Nuʿmān had fought with Parwīz [q.v.], Hormuzd's son and successor, at the battle of al-Nahrawān against the rebel Bahrām Čūbīn.

During the reign of al-Nuʿmān, Ḥīra continued to develop as the greatest centre of Arab culture before the rise of Islam. In addition to the poetry of its most famous poet, the Christian ʿAdī b. Zayd, the splendid panegyrics of al-Nābigha al-Dhubyānī [q.v.], one of the poets of the *Muʿallaḳāt* [q.v.], were composed on this al-Nuʿmān. The earliest collection of Arabic poems are associated with his name, sc. panegyrics of various poets on members of the Lakhmid dynasty. The king converted to Christianity after most of his ancestors had resisted the temptation. But the Nestorianism to which he was converted was acceptable to Sāsānid Persia, and Parwīz himself had become well disposed towards Christianity after his marriage to the Christian Shīrīn and the peace with Byzantium in 591, which thus becomes the *terminus post quem* for al-Nuʿmān's conversion. Ḥīra became, even more than before, the centre of Arab Christianity in Sāsānid Persia, whence the Nestorian Church propagated Christianity among the Arabs of the Persian Gulf and Eastern Arabia.

The reign that started so auspiciously with the crown from Hormuzd ended disastrously for al-Nuʿmān, who, after harbouring suspicions towards ʿAdī b. Zayd to whom he owed his accession, had him incarcerated and put to death. ʿAdī's son, influential at the court of Parwīz, plotted against al-Nuʿmān in revenge for the murder of his father; al-Nuʿmān fled

from Ḥīra after sensing that Parwīz was in pursuit of him and took refuge with the tribe of Bakr. He nevertheless finally surrendered to Parwīz, who had him trampled to death by elephants.

Al-Nuᶜmān's death represented the virtual end of the Lak̲h̲mid dynasty which had lasted for some three hundred years, the shield of Persia against the Arabs of the Peninsula. A few years later, the tribe of Bakr won the historic encounter of D̲h̲ū Ḳār [*q.v.*] against the Persians and their Arab condederates. It was the precursor of al-Ḳādisiyya [*q.v.*] fought in 637, the battle that was to remove Sāsānid Persia from the stage of Near Eastern history.

NUMAYR B. ᶜĀMIR B. ṢAᶜṢAᶜA, an Arab tribe (Wüstenfeld, *Geneal. Tabellen*, F 15) inhabiting the western heights of al-Yamāma and those between this region and the Ḥimā Ḍariyya: a bare and difficult country, the nature of which explains the rude and savage character of the Numayr. Their name like that of Namir and Anmār borne by other ethnic groups (there are also in the list of Arab tribes a number of other clans with the name Numayr: among the Asad, the Tamīm, the D̲j̲uᶜfī, the Hamdān, etc.) is no doubt connected with *nimr*, *namir* [*q.v.*], the Arabian panther; we know the deductions made by Robertson Smith from this fact and from other similar cases, to prove the existence of a system of totemism among the early Arabs (*Kinship and marriage in early Arabia*², 234). His theory is now abandoned.

The geographical dictionaries of al-Bakrī and Yāḳūt mention a large number of places in the land of the Numayr, especially their wells, and often even record a change of ownership from one tribe to another (e.g. Yāḳūt, *Muᶜd̲j̲am*, iii, 802: the well of G̲h̲isl, which formerly belonged to the Tamīmī clans of the Kulayb b. Yarbūᶜ, later passed to Numayr); this wealth of references does not, however, mean that the Numayr played an important part in the history of Arabia. It is only due to the fact that the country of the Numayr is typically Bedouin in its scenery and lends itself to description by poets. The Numayr, besides, were much intermixed with the neighbouring tribes (especially the Tamīm, Bāhila and Ḳus̲h̲ayr) and the boundaries of their territory were rather vague.

The Numayr, a poor tribe without natural wealth, have always been brigands. The part they took in the pre-Islamic wars was a very modest one and they appear very rarely alongside of the other groups of the great tribe of ᶜĀmir b. Ṣaᶜṣaᶜa (they hardly played any part in the battle of Fayf-Rīḥ against the Banu 'l-Ḥārit̲h̲ b. Kaᶜb and their allies, *Naḳāʾiḍ*, ed. Bevan, 469-72). It is to this isolation that they owe the privilege of being known as one of the *D̲j̲amarāt al-ᶜArab*, i.e. a tribe which never allied itself with others (al-Mubarrad, *Kāmil*, ed. Wright, 372; *Naḳāʾiḍ*, 946; *Mufaḍḍaliyyāt*, ed. Lyall, 841; on the different tribes to which this title is given, cf. *Tād̲j̲ al-arūs*, iii, 107); the other designation of the Numayr "the *Aḥmās* of the Banū ᶜĀmir", also gives them a special place within the great tribe from which they sprang; it indicates that they were thought not to have the same mother as the other clans of the Banū ᶜĀmir (*Mufaḍḍaliyyāt*, 259, 12-15 = 771, 2-4; the source is the *D̲j̲amhara* of Ibn al-Kalbī, Brit. Mus. mss., fols. 120b-121a, now edited). Neither during the life of the Prophet, nor at the beginning of the caliphate, did the Numayr make any stir; they appear neither as partisans nor as enemies of Islam. It is only from the Umayyad period that the name begins to appear in histories, but only to record their insubordination to the central power or their exploits as brigands; in the caliphate of ᶜAbd al-Malik, their refusal to pay tribute brought a punitive expedition against them (al-Balād̲h̲urī, *Futūḥ*, 139; cf. *Ag̲h̲ānī*, xvii, 112-13, xix, 120-1). Another expedition of the same kind but on a larger scale was that sent against them under the famous general of the caliph al-Mutawakkil, Bug̲h̲ā al-Kabīr [*q.v.*], in 232/846, to put an end to their systematic plundering; it ended in the complete dispersal of the tribe (al-Ṭabarī, iii, 1357-63, a most interesting account of Bedouin customs including on p. 1361 a detailed list of the Numayr clans, only one of which, the Banū ᶜĀmir b. Numayr, devoted itself to agriculture and grazing, while the others lived only by brigandage). It appears, however, that the Numayr soon resumed their old habits and another expedition was sent against them with the same object as the earlier ones in the 4th/10th century by the Ḥamdānid Sayf al-Dawla (Yāḳūt, iv, 378).

An event of little importance in itself has given the Numayr considerable fame in literary history, although little flattering to them: this is the satire directed against them by the poet D̲j̲arīr [*q.v.*] which is one of the most famous examples of the invective of the *hid̲j̲āʾ* (especially the hemistich: "Cast down thine eyes: thou belongest to the Numayr"). The occasion of it was the unfortunate intervention of the Numayrī poet al-Rāᶜī in favour of al-Farazdaḳ in the celebrated feud between him and D̲j̲arīr (*Naḳāʾiḍ*, 427-51, no. 53; *Ag̲h̲ānī*, vii, 49-50, xx, 169-71, etc.). The memory of this quarrel survived for a very long time. It was probably no accident that the man who urged the *amīr* Bug̲h̲ā to the expedition against the Numayr was the great-grandson of D̲j̲arīr, the poet ᶜUmāra b. ᶜAḳīl b. Bilāl b. D̲j̲arīr; the Numayr moreover had slain four of his uncles (Ibn Ḳutayba, *S̲h̲iᶜr*, ed. de Goeje, 284, where we must read Banū Ḍinna [b. ᶜAbd Allāh b. Numayr] in place of Banū Ḍabba). The enmity between the family of D̲j̲arīr and the Numayr was probably revived by the proximity of the latter to the tribe of the poet, the Banū Kulayb b. Yarbūᶜ.

To the Numayr belonged notable poets—in addition to al-Rāᶜī and his son D̲j̲andal—like Abū Ḥayya (in the early ᶜAbbāsid period) and D̲j̲irān al-ᶜAwd whose *Dīwān* has been published (Cairo 1350/1931, publications of the Egyptian Library), cf. Sezgin, *GAS*, ii, 217.

See also Sezgin, *GAS*, ii, 464-5, ix, 288].

NŪN, the 25th letter of the Arabic alphabet, transcribed /n/, with the numerical value 50, according to the oriental order [see ABD̲J̲AD]. Nūn is also a name of the 68th *sūra* [see ḲURʾĀN, SŪRA].

1. In Arabic

Definition: an occlusive, dental, voiced nasal (Cantineau, *Études*, 38-40; Fleisch, *Traité*, i, 58, 84-5).

Sībawayh distinguishes two kinds of *nūn*: (a) the one whose point of articulation is the tip of the tongue and the region a little above the incisors; this is a clear (*madjhūr*) and hard (*shadīd*) "letter", but it is accompanied by a resonance (*ghunna*) of the nose (*anf*). (b) the light (*khafīfa*) *nūn*, whose point of articulation is situated in the nasal cavities (*khayāshīm*) (*Kitāb*, ii, 452-4; Roman, *Étude*, i, 52, 56, 60).

For al-Khalīl, *nūn* is an apical (*dhalkī*) letter, articulated with the tip of the tongue (*dhalk*) (*K. al-ʿAyn*, 65; Roman, *Étude*, i, 216-17).

As for Ibn Sīnā, he considers that *nūn* is realised by the tip of the tongue which touches the alveolar arch and holds in the air, then emits it through the nasal cavities (*khayāshīm*); the air becomes a resonance (*ghunna*) of the nose (*minkhar*) and a humming sound (*dawī*) (Roman, *Étude*, i, 263-4).

Phonologically, the phoneme /n/ is defined by the oppositions /n/-/m/, /n/-/r/ and /n/-/l/ (Cantineau, *Études*, 172).

Alterations: the realisation (*iẓhār*) of *nūn* can only take place before the four laryngeals /ʾ/, /h/, /ḥ/ and /ʿ/ and the two velars /kh/ and /gh/; before the bilabial /b/, there is conversion (*ḳalb*) to /m/; before the three pre-palatals /l/, /r/ and /y/ and the two bilabials /m/ and /w/, there is assimilation (*idghām*); before the other consonants, there is concealment (*ikhfāʾ*), i.e. reduction to the nasal resonance (Sībawayh, *Kitāb*, ii, 464-5; Roman, *Étude*, i, 306-7). See also TANWĪN.

Roman, *Étude de la phonologie et de la morphologie de la koinè arabe*, Aix-Marseilles 1983; al-Khalīl, *K. al-ʿAyn*, ed. Darwīsh, Baghdād 1967; Sībawayh, *Kitāb*, ed. Dérenbourg, Paris 1889. (G. TROUPEAU)

2. In Turkish

The earliest form of Turkish known to us, that of the Orkhon inscriptions (8th century A.D.), distinguished in the so-called "Runic" script two separate forms for use in back- and front-vowelled syllables, for the dental nasal /n/, plus further forms for the velar nasal /ŋ/ and the palatal nasal /ń/ (Talat Tekin, *A grammar of Orkhon Turkic*, Bloomington-The Hague 1968, 23-4, 82-3, 92-3). A century or so later, the Uyghur script distinguished /n/, and /ŋ/, and the Brahmi script a further sign /ṃ/ for the nasalisation of vowels arising out of /n/ (A. von Gabain, *Alttürkische Grammatik*[2], Leipzig 1950, §§ 9, 25, 30-1).

In the Arabic script used for Ottoman Turkish, the dental nasal /n/ was conveyed by the letter *nūn*, whilst the gutterally pronounced /ñ/, largely disappeared in standard Ottoman pronunciation, was written with the so-called *ṣāghīr nūn*, the Persian *gāf* (ڭ, ݣ ; in Central Asian Turkish, ݧ). It should be noted that /n/ is very rare in word-initial position in true Ottoman Turkish words and /ñ/ never occurs thus (J. Deny, *Grammaire de la langue turque (dialecte osmanli)*, Paris 1921, 19, 71-2, 76).

Bibliography: Given in the article. (ED.)

3. Indian sub-continent

Arabic, Persian and Turkish words with *nūn* occur frequently in Indian languages, and occasion no difficulties or differences in their orthography; the signs for nunation (*tanwīn*) remain unchanged, and the *tashdīd* is used for the geminated *-nn-* whenever Arabic orthography requires it (although it may be neglected in early inscriptions). The sound-systems of the Indo-Aryan languages, however, have resulted in certain modifications to the Perso-Arabic script, as follows.

In most Indian phonologies there are nasalised vowels; these are normally indicated by the usual *nūn* following the nasalised vowel, although when a nasalised long vowel stands finally in a word, or even morpheme, the final form of *nūn* is written without its *nuḳta*, and is then called *nūn ghunna*. This is derived from the purely calligraphic forms of the Persian *nastaʿlīḳ* script, but the Indian significance is different. Also, geminated consonants can arise morphophonemically; e.g. in the Urdū verb *bannā* "to be made", root *ban* + infinitive suffix *-nā*, the *-nn-* must be written with two *nūns* and not with the *tashdīd*.

Most Indian sound-systems have a retroflex nasal (derived generally from a single intervocalic nasal in Middle Indo-Aryan) as well as the dental, but these have fallen together in standard Hindī and Urdū, and even where they are still differentiated in various rustic forms of speech they are never distinguished in the Urdū script. (They occur in Gudjarātī and Marāthī, but here there is no question of the Perso-Arabic script being used.) A retroflex nasal is required, however, in Sindhī and in Pashto, where new writing devices have been invented. In Pashto the *nūn*, medial or final, is written with its usual single *nuḳta* with the addition of a small subscript circle (or "bean") to either form. The Sindhī retroflex nasal substitutes a small *ṭāʾ* for the usual *nuḳta*. (Sindhī also distinguishes the velar and palatal nasals in speech, but the velar ṅ is represented by a *gāf* with two additional superscript *nuḳtas*, the palatal ñ by a *ḥāʾ* with two horizontal subscript *nuḳtas*.) The retroflex nasal also occurs in Pandjābī, but no standard writing system has yet been introduced.

Bibliography: Specimens of written (and printed) Pandjābī, Pashto and Sindhī are given in the appropriate volumes of G.A. Grierson, *Linguistic survey of India*. (J. BURTON-PAGE)

NŪR (A.), light, synonym *ḍawʾ*, also *ḍūʾ* and *ḍiyāʾ* (the latter sometimes used in the plural).

1. Scientific aspects

According to some authors, *ḍawʾ* (*ḍiyāʾ*) has a more intensive meaning than *nūr* (cf. Lane, *Arabic-English dictionary*, s.v. *ḍawʾ*); this idea has its foundation in Ḳurʾān, X, 5, where the sun is called *ḍiyāʾ* and the moon *nūr*. The further deduction from this passsage that *ḍiyāʾ* is used for the light of light-producing bodies (sun) and *nūr* on the other hand for the reflected light in bodies which do not emit light (moon), is not correct, if we remember the primitive knowledge of natural science possessed by the Arabs in the time of Muḥammad, nor is there any proof of it in later literature. The works on natural science and cosmology of the Arabs in the best period of the Middle Ages (Ibn al-Haytham, al-Ḳazwīnī [*q.vv.*] and later writers) in the great majority of cases use the term *ḍawʾ* and it therefore seems justified to claim this word as a technical term in mathematics and physics.

Besides dealing with the subject in his *Optics* (*Kitāb al-Manāẓir*), Ibn al-Haytham devoted a special treatise to it entitled *Ḳawl al-Ḥasan b. al-Ḥusayn b. al-Haytham fī 'l-ḍawʾ* which has been published with a German translation by J. Baarmann in *ZDMG*, xxxvi (1882), 195-237, from which we take the following details:

As regards light, two kinds of bodies are distinguished, luminous (including the stars and fire) and non-luminous (dark); the non-luminous are again divided into opaque and transparent, the latter again into such as are transparent in all parts, like air, water, glass, crystal etc., and such as only admit the light partly but the material of which is really opaque, such as thin cloth.

The light of luminous bodies is an essential quality

of the body, the reflected light of a body in itself dark being, on the other hand, an accidental quality of the body.

In the opinion of the mathematicians, all the phenomena of light are of one and the same character; they consist of a heat from fire which is in the luminous bodies themselves. This is evident from the fact that one can concentrate rays of light from the brightest luminous body, the sun, by means of a burning-glass on one point and thus set all inflammable bodies alight and by the fact that the air and other bodies affected by the light of the sun become warm. Light and heat are thus identified with each other or regarded as equivalent. The intensity of light, like that of heat, diminishes as the distance from the source increases.

Every luminous body, whether its light is one of its essential qualities (direct) or accidental (reflected), illuminates any body placed opposite it, i.e. it sends its light out in all directions. All bodies, whether transparent or opaque, possess the power of absorbing light, the former having further the power of transmitting it again; that a transparent body (air, water, etc.) also has the power of absorbing light is evident from the fact that the light becomes visible in it if it is cut with an opaque body: the light must therefore have already been in it.

The penetration of light into a transparent body takes place along straight lines (proof: the sun's rays in the dust-filled air of a dark room). This transmission of light in straight lines is an essential feature of light itself, not of the transparent body, for otherwise there must be in the latter specially marked lines along which the light travels; such a hypothesis is however disproved by admitting two or more rays of light at the same time into a dark room and watching them.

The ray is defined as light travelling along a straight line. The early mathematicians were of the opinion that the process of seeing consisted in the transmission of a ray from the eye of the observer to the object seen and the reflection from it back to the eye. Opposed to this is Ibn al-Hay<u>th</u>am's view that the body seen—luminous or opaque—sends out rays in all directions from all points of which those going towards the eye of the observer collect in it and are perceived as the image of the body (cf. *Optics*, book i, 23: "Visio non fit radiis a visu emissis" and also book ii, 23).

There is no absolutely transparent body; on the contrary, every body, even the transparent one, reflects a part of the light which strikes it (explanation of the phenomena of twilight). According to Aristotle, the heavens possess the highest and most perfect degree of transparency. Ibn al-Hay<u>th</u>am challenges this statement and shows from a use of the theory of the mathematician Abū Saʿd al-ʿAlāʾ b. Sahl (2nd half of the 4th/10th century, see Sezgin, *GAS*, vi, 232-3), which is based on the well-known rules of the refraction of light in passing through media of different densities, that the transparency has no limits and that for every transparent body an even more transparent one can be found.

An explanation of the origin of the halo around the moon, of the rainbow, its shape and its colours, and of the rainbow to be seen at night in the steam-laden atmosphere of the bath, is given by al-Ḳazwīnī in his *Cosmography*, i (*ʿA<u>dj</u>āʾib al-ma<u>kh</u>lūḳāt*, ed. Wüstenfeld, Göttingen 1849, 100-1; tr. Ethé, Leipzig 1868, 205 ff.). Al-Ḳazwīnī in his discussion replaces the raindrops by small looking-glasses; Ibn al-Hay<u>th</u>am, on the other hand, deals with the problem in a much more conclusive fashion by assuming a single or double reflection of light in spheres (cf. E. Wiedemann, in *Wied. Ann.*, xxxix [1890], 575).

2. Philosophical aspects

The doctrine that God is light and reveals Himself as such in the world and to man is very old and widely disseminated in Oriental religions as well as in Hellenistic gnosis and philosophy. We cannot here go into the early history; it will be sufficient to refer to some parallels in the Old and New Testaments, e.g. Gen., i. 3; Isaiah, lx. 1, 19; Zech., iv.; John, i. 4-9; iii. 19; v. 35; viii. 12; xii. 35; and Rev., xxi. 23-4.

How Muḥammad became acquainted with this teaching we do not know, but the Ḳurʾān has its "light" verses, notably XXIV, 35, the "light verse" proper; cf. XXXIII, 45 (Muḥammad as lamp); LXI, 8-9 (God's light); LXIV, 8 (the light sent down = revelation). The light verse runs (as rendered by Goldziher, in *Die Richtungen der Koranauslegung*, 183-5): "God is the light of the heavens and of the earth; His light is like a niche in which there is a lamp; the lamp is in a glass and the glass is like a shining star; it is lit from a blessed tree, an olive-tree, neither an eastern nor a western one; its oil almost shines alone even if no fire touches it; light upon light. God leads to his light whom He will, and God creates allegories for man, and God knows all things."

From the context it is clear that we have to think of the light of religious knowledge, of the truth which God communicates through his Prophet to his creatures especially the believers (cf. also XXIII, 40). It is pure light, light upon light, which has nothing to do with fire (*nār*), which is lit from an olive tree, perhaps not of this world (cf. however A.J. Wensinck, *Tree and bird as cosmological symbols in Western Asia*, in *Verh. Ak. Amst.* [1921], 27-8). Lastly, it is God as the All-Knowing who instructs men and leads them to the light of His revelation (cf. LXIV, 8). It is clear that we have here traces of gnostic imagery but those rationalist theologians, who—whether to avoid any comparison of the creature with God or to oppose the fantastic mystics—interpreted the light of God as a symbol of His good guidance, probably diverged less from the sense of the Ḳurʾān than most of the metaphysicians of light. Passages in which God appears as the Knowing (*ʿalīm*) and the Guiding (*hādī*) are very frequent in the Ḳurʾān. One did not need to look far for an exegesis on these lines. As al-A<u>sh</u>ʿarī observes (*Maḳālāt*, ed. Ritter, ii, 534), the Muʿtazilī al-Ḥusayn al-Na<u>dj</u><u>dj</u>ār interpreted the light verse to mean that God guides the inhabitants of heaven and earth. The Zaydīs also interpreted the light as God's good guidance [see <u>SH</u>Īʿa and zaydiyya].

From *ca.* 100 A.H., we find references to a prophetic doctrine of *nūr*, and gradually to a more general metaphysics of light, i.e. the doctrine that God is essentially light, the prime light and as such the source of all being, all life and all knowledge. Especially among the mystics in whose emotional thinking being, name and image coalesced, this speculation developed. Meditation on the Ḳurʾān, Persian stimuli, gnostic-Hermetic writings, and lastly and most tenaciously, Hellenistic philosophy provided the material for new ideas. Al-Kumayt (d. 126/743 [*q.v.*])

had already sung of the light emanating through Adam via Muḥammad into the family of ʿAlī [see SHĪʿA]. The doctrine of light was dialectically expounded by Sahl al-Tustarī (d. 283/896) (see also Massignon, *Textes inédites*, 39, and SAHL AL-TUSTARĪ).

The first representatives of a metaphysics of light in Islam readily fell under the suspicion of Manichaeism, i.e. of the dualism of *nūr* and *ẓulma* (darkness) as the eternal principles. The tradition of al-Tirmidhī that God created in darkness [see KHALḲ] must have aroused misgivings. The physician al-Rāzī (d. 311/923), although a Hellenistic philosopher, adopted ideas from Persia and was for this refuted or cursed by various theologians and philosophers. Many mystics also (e.g. al-Ḥallādj; according to Massignon, *Passion*, 150-1, wrongly) were accused of this dualism.

But the speculations about *nūr* found powerful support from the 3rd/9th century in the monistic doctrine of light of the Neo-Platonists (we do not know of any Persian monism of light) which was compatible with the monism of Islam. The father of this doctrine is Plato, who in his *Politeia*, 506 D ff., compares the idea of the good in the supersensual world with Helios as the light of the physical world. The contrast is not therefore between light and darkness but between the world of ideas or mind and its copy, the physical world of bodies, in the upper world pure light, in the lower world light more or less mixed with darkness. Among the Neo-Platonists, the idea of the good = the highest God = pure light. This identification was also facilitated by the fact that, according to Aristotle's conception, light is nothing corporeal (*De anima*, ii, 7, 418b: [φῶς]... οὔτε πῦρ οὔθ' ὅλως σῶμα οὐδ' ἀπορροὴ σώματος). From the context, which is however not all clear, it appears that Aristotle regarded light as an effective force (ἐνέργεια). This is however of no importance here. Many Aristotelian forces and Platonic ideas are described by Neo-Pythagoreans and Neo-Platonists sometimes as forces and sometimes as substances (spiritual). With Aristotle, σκότος (darkness) was conceived not as something positive but as στέρησις (*privatio*, the absence of light).

From this developed the doctrine which we find in the Arabic *Theology of Aristotle*. Not far from the beginning (ed. Dieterici, 3) it is said: the power of light (*ḳuwwa nūriyya*) is communicated by the prime cause, the creator, to the *ʿaḳl* and by the *ʿaḳl* to the world soul, then from the *ʿaḳl* through the world soul to nature and from the world soul through nature to the things which originate and decay. The whole process of this creative development proceeds without movement and timelessly. But God who causes the force of light to pour forth is also light (*nūr*; occasional synonyms: *ḥusn, bahāʾ*), the "prime light" (51) or (44) the "light of lights". Light (51) is essentially in God, not a quality (*ṣifa*), for God has no qualities but works through His being (*huwiyya*) alone. The light flows through the whole world, particularly the world of men. From the supersensual original (150), the first man (*insān ʿaḳlī*), it flows over the second man (*insān nafsānī*) and from him to the third (*insān djismānī*). These are the originals of the so-called real men. Light is, of course, found in its purest form in the souls of the wise and the good (51). It should be noted also that *nūr* as a spiritual force (*rūḥānī, ʿaḳlī*) is distinguished from fire (*nār*) which is said to be only a force in matter with definite quality (85). Fire, of course, like everything else, has its supersensual original. But this is more connected with life than with light.

The elevation of the soul to the divine world of light corresponds to the creative descent of light (8). When the soul has passed on its return beyond the world of the *ʿaḳl*, it sees there the pure light and the beauty of God, the goal of all mystics.

Although the author of the *Liber de causis* is of the opinion that nothing can be predicated regarding God, yet he has to call Him the prime cause and more exactly pure light (§ 5, ed. Bardenhewer, 69) and as such the origin of all being and all knowledge (in God is *wudjūd* = *maʿrifa*; see § 23, p. 103).

The light emanated by God may, if it is regarded as an independent entity, be placed at various parts of the system. Most philosophers and theologians connect it with the *rūḥ* or *ʿaḳl* or identify it with them, sometimes also with life (*ḥayāt*), but this must be more closely investigated.

The great philosophers in Islam, al-Fārābī and Ibn Sīnā, connected the doctrine of light with the *ʿaḳl* in metaphysics as well as in psychology. Al-Fārābī is fond of using many synonyms for the light of God and the *ʿaḳl* (*bahāʾ*, etc.; see e.g. *Der Musterstaat*, ed. Dieterici, 13 ff.). In the biography of al-Fārābī in Ibn Abī Uṣaybiʿa (*ʿUyūn*, ed. Müller, ii, 134-40), a prayer is attributed to him in which God is invoked as the "prime cause of things and light of the earth and of heaven". Like al-Fārābī, Ibn Sīnā takes up the doctrine of light in theology and further develops it. In his psychological writings he regards the light as a link of the soul and body (cf. Sahl al-Tustarī, who places *nūr* between *rūḥ* and *ṭīn* in the four elements of man). In the *Kitāb al-Ishārāt* (ed. Forget, Leiden 1892, 126-7) he even reads the whole metaphysical doctrine of the *ʿaḳl* of the Aristotelians into the light verse of the Ḳurʾān. Light is the *ʿaḳl bi 'l-fiʿl*, fire the *ʿaḳl faʿʿāl* and so on. God's *nūr* is therefore like the *nous* of Aristotle! This discovery of Ibn Sīnā's was incorporated in the pious reflections of al-Ghazālī (in *Maʿāridj al-Ḳuds fī madāridj maʿrifat al-nafs*, Cairo 1927, 58-9).

On the idea of light amongst the Ṣūfīs, see TAṢAWWUF.

NŪR ALLĀH AL-SAYYID B. AL-SAYYID SHARĪF AL-MARʿASHĪ AL-ḤUSAYNĪ AL-SHUSHTARĪ, commonly called Ḳāḍī Nūr Allāh, was born in 956/1549. He was descended from an illustrious family of the Marʿashī Sayyids [*q.v.*] and settled in Shushtar. He left his native place for India and settled in Lahore where he attracted the notice of Ḥakīm Abu 'l-Fatḥ (d. 997/1588) and through his presentation to Emperor Akbar (963-1014/1556-1605), he was appointed *ḳāḍī* of Lahore in lieu of al-Shaykh Muʿīn (d. 995/1586). ʿAbd al-Ḳādir Badāʾūnī, iii, 137, says that he was, "although a Shīʿī, a just, pious and learned man." He was flogged to death in 1019/1610, on account of his religious opinions, by the order of the Emperor Djahāngīr (1014-37/1605-28). He is regarded as *al-Shahīd al-Thālith*, "the third martyr", by the Shīʿīs and his tomb in Akbarābād is visited by numerous Shīʿīs from all parts of India.

He is the author of innumerable works, of which the following may be quoted: 1. *Ḥāshiya ʿalā 'l-Bayḍāwī*, a supercommentary to al-Bayḍāwī's commentary on the Ḳurʾān entitled *Anwār al-tanzīl*: see Asiatic Society of Bengal mss., List of the Government Collection, 16; 2. *Ḥāshiya Sharḥ djadīd ʿalā 'l-Tadjrīd*, glosses to Ḳūshdjī's commentary on Naṣīr al-Dīn al-Ṭūsī's compendium of metaphysics and

theology, entitled *Tadjrīd al-kalām*: see Loth, Ind. Off., no. 471, xv; 3. *Iḥkāḳ al-ḥaḳḳ wa-izhāḳ al-bāṭil*, a polemical work against Sunnism written in reply to Faḍl b. Rūzbahān's work entitled *Ibṭāl al-bāṭil*, a treatise in refutation of the *Kashf al-ḥaḳḳ wa-nahdj al-ṣidḳ* by Ḥasan b. Yūsuf b. ʿAlī al-Ḥillī; see Bankipore Library, Khudā Bakhsh cat., xiv, 172; Farangī Maḥall Library, Lucknow, fol. 108; Rāmpūr Library, 281; Asiatic Society of Bengal (List of Arabic mss., 23); 4. *Madjālis al-muʾminīn*, biographies of famous Shīʿīs from the beginning of Islām to the rise of the Ṣafawī dynasty in Persian: see Bankipore Library cat., 766; Asiatic Society of Bengal cat., 59; Ethé, Ind. Off., no. 704, and Rieu, *Cat. of Persian mss. in the Brit. Mus.*, 337a. Printed at Tehran 1268.

(M. Hidayet Hosain)

NŪR BĀNŪ Wālide Sulṭān (*ca.* 932-91/*ca.* 1525-83), Khaṣṣekī (principal consort) of the Ottoman sultan Selīm II [*q.v.*] and mother of the sultan Murād III [*q.v.*]. She was born on Paros [see para] as Cecilia, illegitimate daughter of Nicolo Venier (d. 1520), the penultimate sovereign ruler of the island and of Violante Baffo. The identity of this "Venetian Sultana" is often confused with that of her successor, the *Wālide Sulṭān* Ṣāfiye [*q.v.*]. Some Turkish historians persist in ascribing a Jewish origin to her. At the time of the conquest of the island in 1537, she was selected for deportation to the harem of the Sultan's palace and presented to Prince Selīm (II). Henceforward she is known as Nūr Bānū. In 953/1546 she gave birth to her eldest son, Murād. While at Maghnisa [*q.v.*] her daughters Shāh Sulṭān (951-88/1544-80), Djewher(-i Mülūk) Khān (? 951-86/1544-78), Ismikhān (Esmākhān) Sulṭān (952-93/1545-85) and Fāṭima Sulṭān (d. 988/1580) were born. Whether she was the mother of Selīm II's other six sons is not evident.

At the death of Selīm II (28 Shaʿbān 982/13 December 1574), it was she who ordered the corpse of the monarch to be put on ice to postpone burial till the time when her son arrived to succeed to the throne ten days later.

During the reign of Selīm II, her influence mainly affected official appointments by introducing the sale of offices. The imperial harem gradually extended its influence in this way to affairs outside the palace. During the reign of her son, Nūr Bānū was able to establish what is called the "Women's Sultanate" (*ḳadînlar salṭanatî*). Apart from her daughters, the leading members of her clique were the princess Mihr-i Māh (d. 985/1578 [*q.v.*]), the *kedbānū* ("Mistress of the Female Household") from 991 till 1003/1595, Djānfedā *Khātūn* and Rāḍiye *Khātūn* (*Ḳalfa*) (d. 1005/26 June 1597), a lady companion since Maghnisa days. (cf. Selānikī, *Taʾrīkh*, ed. İpşirli, 695). The Jewish *Kira* Esther Ḥandali (d. *ca.* 1590) also played a role in external contacts, e.g. with the financier Joseph Nasi, duke of Naxos (1514-69) [see naḳshe]. The *bābüsseʿādet aghasî* Ghazanfer Agha (d. 1603) and the leading *müṣāḥib* Shemsī Aḥmed Pasha (d. 988/1580-1) belonged to Nūr Bānū's faction.

During her son's reign, one of her main preoccupations was the rivalry with Ṣāfiye, first *khaṣṣekī* of Murād III whom Nūr Bānū was able to relegate to the Old Saray at the time of his accession.

In her day already, Nūr Bānū was compared to the queen (mother) of France, Catherine de Médicis (1519-89). The two exchanged letters in 1581 and 1582. The presents from the French "*Wālide Sulṭān*" to her Ottoman opposite number arrived too late in April 1584 and were redirected to Ṣāfiye Sulṭān by Esther *Kira* instead! Some letters of Nūr Bānū and her *Kira* to the Doge and Senate as well as to the *bailo*, Giovanni Correr (in Istanbul 1578-80), apart from the many presents and tokens of respect received, are evidence of the sultana's lasting favourable interest in the affairs of Venice.

Her regular income came from the so called *bashmaḳlîḳ* ('slipper money') and *waḳf* endowments [see wālide sulṭān].

Nūr Bānū possessed her own palace near Edirne Ḳapî, where in 1580 her son retired during a serious attack of epilepsy (Charrière, iii, 922 and n. 1). The *ʿAtīḳ Wālide* (*Eski Valide*) mosque complex at Üsküdar-Toptashî was built on her orders. Construction lasted from 978/1570 to 991/1583 (designed by Sinān [*q.v.*]). Two small mosques were built in her name elsewhere in Istanbul.

After an illness, she died in her garden palace near Edirne Ḳapî (according to Selānikī, *Taʾrīkh*, ed. İpşirli, 141: Yeñi Ḳapî) on Wednesday, 22 Dhu 'l-Ḳaʿda 991/7 December 1583. Her son put on mourning dress (the first time ever reported of an Ottoman sultan on such an occasion). He carried her out of the palace gate and accompanied the coffin as far as the mosque of Fātiḥ, where the funeral *ṣalāt* was performed. Nūr Bānū is buried in the mausoleum of Selīm II at the Aya Sofya.

NŪR DJAHĀN, name given to Mihr al-Nisāʾ, the famous queen of Djahāngīr, the Mughal Emperor. She was born at Ḳandahār in 985/1577 when her father, Ghiyāth Beg, was migrating from Persia to Hindustān (*Maʾāthir al-umarāʾ*, i, 129). In the reign of Akbar she was married to ʿAlī Ḳulī Beg, a Persian who had rendered distinguished military service to the Emperor and who, because of his bravery, was known as Shīr Afgan. The assassination of her first husband will always remain a matter of con-

troversy, some regarding it as a repetition of the story of David and Uriah, others holding the view that he had been suspected of disloyalty. It was not, however, until four years later, in 1020/1611, that she became, at the age of thirty-four, the wife of Djahāngīr [*q.v.*]. In the eleventh year of that monarch's reign her name was changed from Nūr Maḥall to Nūr Djahān (*Tūzuk-i Djahāngīrī*, ed. Rogers and Beveridge, i, 319).

An extraordinarily beautiful woman, well-versed in Persian literature in an age when few women were cultured, ambitious and masterful, she entirely dominated her husband, until eventually Djahāngīr was king in name only. The chroniclers record that she sometimes sat in the *jharokā*, that coins were struck in her name, and that she even dared to issue *farmāns* (*Iḳbāl-nāma*, 54-7). She became the leader of fashion and is said to have invented the *ʿaṭr-i Djahāngīrī*, a special kind of rose-water. Her style in gowns, veils, brocade, lace, and her *farsh-i čandanī* (carpets of sandalwood colour) were known throughout the length and breadth of Hindūstān.

Ably assisted in political affairs by her father, now known as Iʿtimād al-Dawla, and her brother, Āsaf Khān, she dispensed all patronage, thus falling foul of the older nobility led by Mahābat Khān [*q.v.*]. The history of the last years of Djahāngīr's reign is the history of Nūr Djahān's efforts at paving the way for the succession of her son-in-law, Prince Shahriyār. But the death of her father, combined with the fact that Āṣaf Khān was supporting the claim of his own son-in-law, Prince Khurram, considerably weakened her power. On the death of Djahāngīr, in 1037/1627, she was completely outwitted by Āṣaf Khān, her candidate was defeated, and Prince Khurram ascended the throne as Shāh Djahān. The historians of Mughal India record little of the last eighteen years of this remarkable woman's life during the reign of Shāh Djahān.

(C.C. Davies)

NŪR ḲUṬB al-ʿĀLAM, Sayyid, Ṣūfī saint of Pānduʾā [*q.v.*] in Bengal and pioneer writer in the Bengali vernacular, d. 819/1416. An adherent of the Čishtī order, he and his descendants did much to popularise it in Bengal and Bihār and to create an atmosphere favourable to the rise of the Bhakti movement there. In the literary field, he introduced the use of *rīkhta*, half-Persian, half-Bengali poetry. On the political plane, he secured the patronage of the Sharḳīs of Djawnpūr [*q.vv.*], and seems to have urged Sultan Ibrāhīm Sharḳī [*q.v.*] to attack the Islamised Hindu line of Rādjā Ganeśa [see rādjā ganesh] who were ruling in Bengal.

Bibliography: See bengali. ii, and čishtiyya.

A. (Ed.)

NŪR MUḤAMMADĪ (a.), the Muḥammadan light. It is one of the most prominent names given to Muḥammad's pre-existent entity which preceded the creation of Ādam [*q.v.*]. The concept has its parallels in Jewish, Gnostic and neo-Platonic ideas (see I. Goldziher, *Neuplatonische und Gnostische Elemente im Ḥadīṯ*, in *ZA*, xxii [1909], 317 ff.; T. Andrae, *Die Person Muhammeds*, Upsala 1917, *passim*. See also, L. Massignon, *Al-Ḥallāj*, Paris 1922, *passim*; idem, *Recueil...*, 1929, *passim*).

Not all Muslim scholars and theologians agreed on the nature of Muḥammad's pre-existence. Al-Ghazālī (d. 505/1111 [*q.v.*]) and Ibn Taymiyya (d. 728/1328 [*q.v.*]) claimed that the primordial creation (*khalḳ*) of Muḥammad did not signify pre-existence at all, only predestination (*taḳdīr*). They were opposed by Taḳī al-Dīn al-Subkī (d. 756/1355 [*q.v.*]), who supported the dogma of Muḥammad's pre-existence. There was also disagreement on whether Muḥammad was pre-existent in body or in soul. The controversy brought about the adoption of a somewhat neutral name for the primordial entity of Muḥammad: *al-ḥaḳīḳa al-Muḥammadiyya* (see a survey of the various opinions in Muḥammad b. Yūsuf al-Shāmī, *Subul al-hudā wa 'l-rashād fī sīrat khayr al-ʿibād*, Cairo 1990, i, 91, 99-100). The latter term, meaning "the Muḥammadan reality", emerges also in the discussions about *al-Insān al-Kāmil* [*q.v.*], i.e., the Perfect Man, the archetype of the universe and humanity, which is identified with Muḥammad. In these discussions allusion is most often made to the Ḳurʾānic verse of light (XXIV, 35). Specific elaborations on the concept are current in the Ismāʿīliyya [*q.v.*] and among other Shīʿī extremist sects (U. Rubin, *Pre-existence and light; aspects of the concept of Nūr Muḥammad*, in *IOS*, v [1975], 107-9).

The idea of Muḥammad's pre-existence is implied in early *ḥadīth* material, where it is stated that Muḥammad was the first of all prophets to be created (e.g. Ibn Saʿd, *Ṭabaḳāt*, Beirut 1960, i, 148-9). The idea is also implied in the commentaries on Kurʾān XXXIII, 7 (al-Ṭabarī, etc.) which mentions the covenant (*mīthāḳ* [*q.v.*]) of the prophets (Rubin, *art. cit.*, 69). Relevant are also the interpretations of Ḳurʾān VII, 172, which deals with the *dhurriyya* (offspring) of the children of Ādam (Rubin, *art. cit.*, 67-8).

In the early *ḥadīth* material, the Muḥammadan light is referred to as *nūr Muḥammad*, and is given a special function. It is identified with the spermatic substance of Muḥammad's ancestors. The light is said to have reached the corporeal Muḥammad from his progenitors through the process of procreation (see especially Abū Saʿd al-Khargūshī, *Sharaf al-Muṣṭafā*, ms. B.L., Or. 3014, fols. 7 ff.). This concept (traducianism) corresponds to the Arabian, pre-Islamic, belief that virtues, as well as vices, were passed on from the ancestors (Goldziher, *Muh. St.*, i, 41-2). Bearing (in their loins) the divine Muḥammadan substance, Muḥammad's Arab ancestors are presented as true Muslims, and sometimes even as "prophets" (Rubin, *art. cit.*, 71-83. See also the commentaries of al-Ḳummī, al-Ṭūsī, al-Ṭabarsī, al-Rāzī, al-Ḳurṭubī, etc. on Ḳurʾān, XXVI, 219: *wa-taḳallubaka fī 'l-sādjidīn*). The early *Sīra* of Ibn Isḥāḳ (d. 150/767 [*q.v.*]) already contains a detailed description of the emergence of a prophetic blaze (*ghurra*) on the forehead of ʿAbd Allāh, Muḥammad's father. It rested in his body till it was passed on to Āmina, when she became pregnant with Muḥammad (Ibn Hishām, 100 ff.). Shīʿī traditions hold that not only Muḥammad, but also ʿAlī [*q.v.*] and his family, including the Imāms, shared the same light. It is claimed that while being passed on through the ancestors, the light was split in two, so that both Muḥammad and ʿAlī received equal shares of it (Rubin, *art. cit.*, 83-98). There are also Sunnī counter-versions in which the first four caliphs are given a share in the Muḥammadan light (Rubin, *art. cit.*, 112 ff.).

There is also another kind of divine pre-existent light which is referred to as *Nūr Allāh*. It is said to have reached Muḥammad and the Shīʿī Imāms through the previous prophets (not the ancestors). It is being passed on at the end of each person's life, as part of his hereditary authority (*waṣiyya*) (see Rubin, *Prophets and progenitors in the early Shīʿa tradition*, in *JSAI*, i [1979], 41 ff.).

Bibliography: Given in the article.

(U. Rubin)

NŪR SATGUR (meaning "true teacher"), a per-

son whose name is generally associated with the beginnings of the Nizārī [see NIZĀRIYYA] or Satpanth (i.e. the true path) Ismāʿīlism in India but who remains more as an enigmatic and a symbolic figure around whom the Nizārī tradition has woven a colourful tapestry of legends representing the emergence of its *daʿwa* in the Indian subcontinent. As far as the historical sources are concerned, we are on very tenuous ground because of scanty material. Most of our information is therefore derived from the Nizārī sources which tend to be hagiographic. The major source of his biography is the community's indigenous religious literature known as *ginān*s (derived from Sanskrit *jñāna*, meaning "contemplative or meditative knowledge"). The *ginān*s are poetical compositions in Indian vernaculars, such as Sindhī, Pandjābī, Multānī, Gudjarātī and Hindī, are polyglot in nature, and are ascribed to various *pīr*s [*q.v.*] who were active in preaching and propagating the *daʿwa*. They resemble didactic and mystical poetry and are often anachronistic and legendary in nature. Moreover, as this literature was preserved orally in the beginning before it was committed to writing in Khōdjkī (or Khʷādja Sindhī) script, and printed during the second half of the 19th century in Gudjarātī without any critical apparatus, it poses a different set of problems concerning its antiquity, authenticity, transmission, and interpolation. Based on some *ginān*s ascribed to Nūr Satgur, he probably came from Persia to Pātaṇ (in Gudjarāt), where he allegedly succeeded in converting the then reigning Rādjput king Siddharādja Djayasiṁha (1094-1143), the same king who is also reported to have been converted by the Mustaʿlī-Ṭayyibī [*q.v.*] *daʿwa*. The second narrative in those *ginān*s traces Nūr Satgur's activities in another region, Dharanāgarī, after his exploits in Pātaṇ, where he allegedly succeeded not only in converting the king but also in marrying the latter's daughter. (For details, see Azim Nanji, *The Nizārī Ismāʿīlī tradition in the Indo-Pakistan subcontinent*, Delmar, N.Y. 1978, 50-3, where the Nizārī tradition about the commencement of the Nizārī *daʿwa* is analysed.) The existence of a shrine located in Navsārī, near Sūrat, ascribed to him, and the chronogram on his tombstone giving the date of his death as 487/1094, are of very little help in locating him historically, as the shrine was actually constructed towards the end of the 18th century (Nanji, *op. cit.*, 60).

Bibliography: For a full description of older sources and works ascribed to him, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 298; F. Daftary, *The Ismāʿīlīs: their history and doctrines*, Cambridge 1990, 415, 478.

(I. POONAWALA)

NŪR AL-DĪN, ʿABD AL-ĶĀDIR, Algerian scholar and teacher, born at Biskra *ca.* 1892 and died in Algiers on 12 April 1987.

Of modest origins, he attended the primary school in his home town and at 15 entered the Algiers medersa. Under the guidance of eminent teachers, in particular, ʿAbd al-Ķādir al-Madjdjāwī, ʿAbd al-Ḥalīm Ben Smāya, Muḥammad al-Saʿīd Ibn Zakrī and Muḥammad Ben Cheneb, he followed classical studies in Arabic and French and obtained the Diploma of Higher Studies. He completed his education by helping with the courses of well-known *ʿulamāʾ* such as ʿAlī Aḥmad b. al-Ḥādjdj Mūsā, Muḥammad b. Muṣṭafā b. al-Khūdja and Abu 'l-Ķāsim al-Ḥafnāwī which they gave in the mosques of the capital. For several years, he functioned as adel (*ʿadl*, professional witness in the law courts) at Cherchell, but soon left this in order to devote himself in the future to teaching. He was appointed *mudarris* at Blida, then at Tlemcen and then, in 1945, at Algiers, in the al-Thaʿālibiyya *madrasa*, which became a Franco-Muslim lycée in 1951. Meanwhile, Nūr al-Dīn acted as *répétiteur* in Arabic at the Faculty of Letters in the University and *chargé de cours* at the Institute of Higher Islamic Studies. He had connections with the French Arabists, amongst others H. Pérès, M. Canard, J. Cantineau and H. Jahier of the Faculty of Medicine, and in collaboration with this last published five works concerned with medicine and the physicians of the Muslim West (see below).

In the course of his long teaching career, Nūr al-Dīn endeavoured above all to inculcate in his pupils the constitutive elements of the Arabic language and to bring to life the Arab-Islamic cultural heritage. This double task inspired his preferences and guided the choices which he made. On one hand, he put together a dozen manuals for lycée and medersa classes: précis of Arabic grammar, collections of classical and modern texts, with a lexicographical and grammatical commentary, followed by exercises, in which he strove to set forth the subject-matter in an easily comprehensible form. Having realised that certain ideas did not come easily to young minds, he tried to express them by concrete examples. Moreover, he thought that his pupils would more quickly grasp the syntactic relationships of words and would understand their functions better if he presented to them schematically certain examples, so that the arrangement of the different elements of the phrase might become clearer and more eloquent. All his educational works show great pedagogic care.

On the other hand, Nūr al-Dīn edited, translated into French and commented upon, in collaboration with Jahier, famous works of Ibn Rushd and Ibn Abī Uṣaybiʿa, wishing thereby to throw into relief that place which scientific texts, at the side of philosophical, religious and hagiographic ones, occupied in the Arabic literature of the Muslim West.

Of his historical works, one should mention his critical edition of *Ghazawāt ʿUrūdj wa-Khayr al-Dīn*, of a history of the town of Constantine by Ḥādjdj Aḥmad Ibn al-Mubārak and, above all, his *Ṣafaḥāt fī taʾrīkh madīnat al-Djazāʾir*, which is characterised by the solidity of its documentation, the clarity of its exposition and its easy style.

The essential quality of his publications shows that Nūr al-Dīn was a significant example of an Algerian *ʿālim*, with an Arabic and French education, who took up modern pedagogical methods and research techniques based on bibliography, the study of sources and manuscripts. With an absence of dogmatism and in a spirit of liberal-minded curiosity, he led a studious life devoted to learning. However, his published work is less important than the real value of the effects produced by his teaching, and it was in effect by his practical example that his influence was deepest. As a good teacher, well-informed, devoted and with a rare modesty, he brought much and inspired much not merely to his numerous pupils but also to his colleagues.

The chronological list of his writings is as follows:

A. Full-size works (all publ. Algiers unless otherwise stated)

1. *Muntakhab al-ḥikāyāt al-mithliyya*, 1346/1927. 2. *K. Ghazawāt ʿUrūdj wa-Khayr al-Dīn, chronique arabe du XVIe s.*, 1934. 3. *al-Ķirāʾāt al-ifrīķiyya al-mashrūḥa*, 1366/1937; 4. *Lāmiyyat al-afʿāl*, 1358/1940; 5. *al-Ķawl al-maʾthūr min kalām al-Shaykh ʿAbd al-Raḥmān al-Madjdhūb*, n.d. 6. *al-Ādjurrūmiyya ʿalā ṭarīķ al-suʾāl wa*

'l-djawāb, grammatical analysis with exercises. 1365/1946. 7. *al-Muṭālaʿa al-ʿarabiyya al-ʿaṣriyya*, 1366/1947. 8. *al-Risāla al-ṣarfiyya bi 'l-shakl al-tāmm*, n.d. 9. *Taʾrīkh madīnat Ḳusanṭīna li 'l-Ḥādjdj Aḥmad Ibn al-Mubārak*, 1952. 10. *ʿArīb b. Saʿīd al-Kātib al-Ḳurṭubī, Le livre de la génération du foetus et le traitément des femmes enceintes et des nouveaux-nés, tr. et annoté par H. Jahier et A. Noureddine*, 1956. 11. *Avicenne, Poème de la Médecine, texte arabe publié, traduit et annoté, accompagné d'une traduction latine du XIIIe siècle, par H.J. et A.N.*, Paris 1956. 12. Ibn Abī Uṣaybiʿa, *K. ʿUyūn al-anbāʾ bi-ṭabaḳāt al-aṭibbāʾ (chap. XIII: médecins de l'Occident musulman), publié, traduit et annoté par H.J. et A.N.*, 1377/1958. 13. *Ibid., chap. IV, V, et VI: Hippocrate et les hippocratiques, Galien et ses successeurs, les médecins alexandrins, publié, traduit et annoté par H.J. et A.N.*, 1958. 14. *K. Iʿrāb al-djumal*, 1377/1958. 15. Ibn ʿAbd al-Djabbār al-Fadjīdjī, *Rawḍat al-sulwān (Le Jardin de Consolation), publié, traduit et annoté par H.J. et A.N.*, 1378/1959. 16. *Anthologie de textes poétiques attribués à Avicenne, publié avec traduction française et notes par H.J. et A.N.*, 1960. 17. *al-Inshāʾ al-ʿarabī*, 1960. 18. *Asās al-ʿarabiyya li-taʿlīm al-ḥurūf al-hidjāʾiyya*, 1960. 19. *al-Muntakhab min ashʿār al-ʿArab*, 1961. 20. *K. al-Wasīla li-ʿilm al-ʿarabiyya*, n.d. 21. *Pages de la médecine arabe, avec préface et commentaire; gérontologie arabe au Moyen Âge*, n.d. 22. *Ṣafaḥāt fī taʾrīkh madīnat al-Djazāʾir*, Constantine 1385/1965. 23. *Mukhtaṣar fī 'l-ʿibādāt, trad. française*, n.d. 24. *Dictionnaire français-arabe de Ben Sedira, revu et augmenté par N.A.*, n.d.

NŪR AL-DĪN ARSLĀN SHĀH ABU 'L-ḤĀRITH B. MASʿŪD B. MAWDŪD B. ZANGĪ, called al-Malik al-ʿĀdil, sixth ruler in Mawṣil of the Zangid line of Atabegs, reigned 589-607/1193-1211.

On the death of his father ʿIzz al-Dīn Masʿūd [*q.v.*], Nūr al-Dīn succeeded him, but for many years was under the tutelage of the commander of the citadel of Mawṣil, the eunuch Mudjāhid al-Dīn Ḳaymaz al-Zaynī, till the latter's death in 595/1198-9. Nūr al-Dīn's early external policy aimed at securing control of Niṣībīn [*q.v.*] from his kinsman, the Zangī lord of Sindjār ʿImād al-Dīn Zangī and the latter's son Ḳuṭb al-Dīn Muḥammad (594/1109), but was frustrated by the intervention in Diyār Bakr, leading to a siege of Mārdīn [*q.v.*], by the Ayyūbids al-Malik al-ʿĀdil and al-Malik al-Kāmil [*q.vv.*]. Nūr al-Dīn was victorious there in 595/1199 and drove al-Malik al-Kāmil back to Damascus, but had himself to return to Mawṣil through illness. Ḳuṭb al-Dīn Muḥammad retained his formal allegiance to al-Malik al-ʿĀdil (600/1203-4), and Nūr al-Dīn's capture of and attempt to hold Tell Aʿfar failed in the next year.

The pattern of alliances then changed, with a marriage union between Nūr al-Dīn's daughter and al-Malik al-ʿĀdil's son, when the Zangids of Mawṣil and the Ayyūbids for a while united Ḳuṭb al-Dīn, but this alignment changed with the intervention of the lord of Irbil, Muẓaffar al-Dīn Gökbüri, and the formation of an alliance against al-Malik al-ʿĀdil which now included the Saldjūḳ sultan of Rūm Kay Khusraw I [*q.v.*]. Nevertheless, in the end Ḳuṭb al-Dīn retained possession of Sindjār until 616/1219, but Nūr al-Dīn himself died in Radjab 607/January 1211, to be succeeded in Mawṣil by his son ʿIzz al-Dīn Masʿūd al-Malik al-Ḳāhir.

Nūr al-Dīn left behind a reputation in Mawṣil as a benefactor to the town, building *inter alia* a *madrasa* there for the Shāfiʿīs when he himself passed from the Ḥanafī *madhhab* to that of the Shāfiʿīs.

(C.E. BOSWORTH)

NŪR AL-DĪN MAḤMŪD B. **ZANKĪ**, Zankid or Zangid sultan and successor to Zankī (d. 565/1174), who was murdered during the siege of Ḳalʿat Djaʿbar [*q.v.*] in Rabīʿ I 541/September 1146. The succession posed a series of problems since there were four heirs: Sayf al-Dīn Ghāzī, the eldest, represented his father at Mawṣil [*q.v.*], the second son, Nūr al-Dīn Maḥmūd, had accompanied his father in the majority of his military operations, the third, Nuṣrat al-Dīn Amīr-Amīrān, was to be governor of Ḥarrān [*q.v.*], the fourth son, Ḳuṭb al-Dīn Mawdūd [*q.v.*] was to succeed his eldest brother at Mawṣil. There was also a daughter who was to marry the *amīr* Nāṣir al-Dīn al-Ṣūrī.

After the death of his father, Nūr al-Dīn made his way to Aleppo [see ḤALAB], following the advice of Shīrkūh, a Kurdish *amīr* and friend of the former sultan. Sawār, the governor of the town, recognised Zankid sovereignty. Ḥamāt [*q.v.*], of which the titular *amīr* was Ṣalāḥ al-Dīn al-Yāghīsiyānī, also rallied to his cause. At Mawṣil, the situation was more complicated, but the pro-Zankid *amīrs* succeeded in bringing Sayf al-Dīn Ghāzī from Kurdistān and obtained from the sultan his appointment as ruler of Mawṣil.

Raymond of Poitiers, prince of Antioch, did not hear the news of the assassination of Zankī until seven days after the establishment of Nūr al-Dīn at Aleppo. He dispatched two forces, one against Aleppo and the other against Ḥamāt, whereupon the Muslims compelled their opponents to withdraw to Antioch [see ANṬĀKIYA]. Edessa, eastern bastion of Frankish expansion for the previous half-century (1098-1144 [see AL-RUHĀ]), came again under Muslim control, but Armenian elements who constituted the majority of the population there succeeded in neutralising the effectiveness of the local Muslim garrison and called upon the aid of Joscelin, who was the son of an Armenian mother. After six days of forced marches from Aleppo, Nūr al-Dīn was the first to arrive with siege machinery. The vigour of his operations induced the Armenians to evacuate the town. Joscelin found refuge at Sumaysāṭ on the right bank of the Euphrates. Edessa was then incorporated into the domain of Nūr al-Dīn. Relations between the latter and Sayf al-Dīn Ghāzī became strained until, on the occasion of his brother's investiture, Nūr al-Dīn addressed

to him, from Aleppo, an official act of homage, recognising the primacy of his elder brother. He obtained guarantees for his eastern frontier where Ḥarrān took the place of Edessa and was charged with the responsibility of conducting the *d̲j̲ihād* [*q.v.*] against the enemy from the West.

Reviving the policy of his father, Nūr al-Dīn decided to take possession of Damascus [see DIMAS̲H̲Ḳ] and to incorporate it into a Syrian federation, for political reasons in view of the presence of the Frankish kingdom of Jerusalem to the south, and for economic reasons since, being deprived of the D̲j̲azīra [*q.v.*], Syria needed the Biḳāʿ and also the Ḥawrān [*q.vv.*] to gain adequate supplies of cereals. In spring of 541/May 1147, Nūr al-Dīn and Muʿīn al-Dīn Unur together confronted the Franks in the Ḥawrān, where Altīntās̲h̲, governor of Ṣalk̲h̲ad and of Boṣrā [*q.vv.*] was seeking to make himself independent of Damascus with the aid of the Franks of Jerusalem, but the latter were forced to withdraw.

For the Latin states, the objective was to remove Nūr al-Dīn, but the absence of political direction among the Crusaders spared the latter a campaign which could have caused him serious problems. On 24 July 1148, following a series of debates in the Assizes of Jerusalem, the decision was taken to attack Damascus. In July, the Franks mustered at Tiberias and arrived before Damascus on the 24th. Muʿīn al-Dīn sent urgent appeals for help to Mawṣil and Aleppo and exploited the Zankid threat to repel the Franks, who raised the siege on 28 July.

The year 1149 was a time of considerable activity. Nūr al-Dīn was determined to counter the attacks of Raymond of Antioch. He decided, after receiving reinforcements from Damascus, to attack the region of Afāmiya [*q.v.*], then occupied by the Franks. He also laid siege to Inab which commanded the valley of the G̲h̲āb [*q.v.*]. On 20 Ṣafar 544/29 June 1149, having defeated the Latins at a place known as ʿArḍ al-Ḥātim, Nūr al-Dīn occupied the land between the Rud̲j̲ and the Orontes [see AL-ʿĀṢĪ]. He took Afāmiya and Ḳalʿat al-Muḍīḳ, and then Ḥārim [*q.v.*], where he installed a Muslim garrison and then resumed the siege of Antioch, where the antagonists concluded a truce.

On 23 Rabīʿ II 544/28 August 1149, on the death of Muʿīn al-Dīn Unur, there was tension in Damascus, where Mud̲j̲īr al-Dīn Aybak took control of the government. Seeking to intervene, Nūr al-Dīn found a pretext in the campaign currently being conducted by the Franks in the Ḥawrān. He appealed for the participation of a Damascene contingent in his support but, on the basis of previous agreements the Damascenes called upon the Franks of Jerusalem for help in resisting Nūr al-Dīn. Advancing with undiminished speed, the latter crossed the Biḳāʿ, traversed the Anti-Lebanon and deployed his army some ten km to the south-west of Damascus at a place known as Manāzil al-ʿAsākir, on 26 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 544/25 April 1150. From his encampment, Nūr al-Dīn sent a declaration to the Damascenes, informing them that he had come to protect them from their supposed allies, the Franks. Since his supporters were still too few in number to control the city, Nūr al-Dīn decided to return to Aleppo, where his presence was necessary following the capture of Joscelin of Edessa by Turcomans in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 544/April 1150 and his incarceration in the citadel of Aleppo. This event gave rise to various repercussions: in the month of Muḥarram 545, the Sald̲j̲ūḳ ruler of Rūm, Masʿūd b. Muḥammad, set out to blockade Tell Bās̲h̲ir and invited Nūr al-Dīn to join him. The latter accepted, not wishing to allow his rival to be the sole beneficiary of the situation. While Masʿūd succceeded in taking all the places situated in the valleys to the west of the Euphrates, Nūr al-Dīn attacked the region of upper ʿAfrīn [*q.v.*] in order to take control of the communications routes linking Antioch with the north. In autumn 545/1150 he occupied the region downstream of al-Bīrā [*q.v.*] on the right bank of the Euphrates. The frontier of the *Dār al-Islām* was thus transferred from the Euphrates to the Orontes.

At the end of 545/spring 1151 the problem arose of the renewal of the treaty concluded between Damascus and Jerusalem. It was then that Nūr al-Dīn established his base to the south of Damascus and issued an appeal to the population but, failing to prevent contacts between the Damascenes and the troops of Baldwin III, he withdrew to the valley of the Baradā [*q.v.*]. The Franks entered the city and, before returning to Jerusalem, claimed a portion of the indemnity promised in July 1151. After their departure, Nūr al-Dīn renewed the siege of Damascus and engaged in negotiations: Damascus agreed to recognise his sovereignty, to mention him in the *k̲h̲uṭba* [*q.v.*] and to strike coinage in his name, but in fact the city retained its independence.

In April-May 1152 the Zankid prince sent troops to the coast, taking Ṭarṭūs, a port situated between al-Lād̲h̲iḳiyya [*q.v.*] and Ṭarābulus al-S̲h̲ām, thus severing communications between the County of Tripoli and the principality of Antioch.

Mud̲j̲īr al-Dīn preferred the Frankish protectorate to the Zankid ascendancy. To win over the population of Damascus to the cause of Nūr al-Dīn, his agents engaged in subtle propaganda, while he himself resorted to more persuasive tactics: he intercepted the food supplies arriving from the south. Prices rose and famine threatened. While the city starved, Nūr al-Dīn had dealings with the heads of the *aḥdāt̲h̲* [*q.v.*] and with the *zuʿʿār* who were recruited among the porters and lower echelons of the souks. Mud̲j̲īr al-Dīn appealed to the Franks, but before they had time to intervene, Nūr al-Dīn launched his operation. When his troops entered the town, the middle classes barricaded their homes against them and the mob went on the rampage, but within a few hours Nūr al-Dīn restored order, distributed provisions and undertook to respect private property. The population was reassured. Mud̲j̲īr al-Dīn, isolated in the citadel, accepted Ḥimṣ [*q.v.*] in return for his capitulation. On the day of his departure, Nūr al-Dīn called a meeting, the participants including the *raʾīs* Raḍī al-Dīn al-Tamīmī and Nad̲j̲m al-Dīn Ayyūb, the *ḳāḍīs* and the *fuḳahāʾ*, as well as leading citizens and merchants. He repeated his conciliatory assurances and announced the abolition of taxes levied on the markets. The arrival of Nūr al-Dīn in Damascus marked the beginning of a new era for all the victims of previous régimes; thus the *amīr* Usāma b. Munḳid̲h̲, who had left the city ten years earlier, returned at the start of Rabīʿ II 549/June 1154.

In eight years, Nūr al-Dīn was to achieve, by gradual stages, his objective of a united Syria. He began by consolidating his position at Aleppo; as a means of suppressing the S̲h̲īʿīs, he revived with increased vigour the measures which Zankī had inaugurated: the imposition of Sunnī Islam was to be one of the major objectives of his policy. Having relocated his eastern frontier on the Balīk̲h̲, he was assured of the neutrality of his elder brother. He also participated in the dismemberment of the County of Edessa, as a result of which he had, in the north, a common frontier with his father-in-law Masʿūd,

Saldjūḳ sultan of Rūm. Whereas the power of Zankī had extended, from east to west, from Mawṣil to Aleppo, that of Nūr al-Dīn extended, in 549/1154, on a north-south axis from ʿAzāz [*q.v.*] and al-Ruhā to Boṣrā and Ṣalkhad, guaranteeing the food-supplies of the Muslim towns.

The following year, Nūr al-Dīn demanded the submission of the *amīr* Ḍaḥḥāk al-Biḳāʿī, since the region of Baʿlabakk [*q.v.*] was dependent on the province of Damascus. When his demand was refused, he did not hesitate to send a detachment to rid himself of the rebel, who capitulated on 7 Rabīʿ II/9 June 1155. This problem being settled, the treaty with Jerusalem renewed and another concluded with Antioch, Nūr al-Dīn was free to intervene in the struggle which had broken out between Saldjūḳs and Dānishmendids [*q.v.*] regarding the inheritance of his father-in-law who had recently died. He responded to the appeal of his brother-in-law Yaghī-basan, *amīr* of Sīwās, and took possession of the Saldjūḳ localities on the right bank of the Euphrates, including al-Bīra.

In the spring of 551/1156, weary of the skirmishes provoked by Renaud de Châtillon, the *amīr* Madjd al-Dīn, representative of Nūr al-Dīn in northern Syria, launched an attack in the direction of Ḥārim. Informed of the depredations committed by the Franks, Nūr al-Dīn left Damascus with a strong contingent to support the army of the north. Learning of his arrival, Renaud de Châtillon offered peace negotiations. An agreement was reached by which the treaty with Antioch was restored: Ḥārim remained in the hands of the Franks but produce and revenues were shared between the two states. Nūr al-Dīn returned to Damascus in Ramaḍān 551/November 1156 and renewed the treaty with Jerusalem, but at the end of Dhu 'l-Ḥidjdja 551/early February 1157 the Franks violated it. Baldwin III, pre-occupied by heavy debts and anticipating easy booty, launched an attack against the fertile region of the Djawlān [*q.v.*] where, under the terms of the treaty, Turcomans pastured a considerable number of horses and cattle; the Frankish cavalry seized these herds and took the herdsmen prisoner. This raid gave Nūr al-Dīn, who was eager to take possession of Baniyās [*q.v.*], an excellent pretext for intervention. In Ṣafar 552/early April 1157 he succeeded in persuading the Damascenes and the peasants of the Ghūṭa [*q.v.*] to contribute towards the cost of equipping his army with siege engines. Having reinforced the garrison of Baʿlabakk to guard against possible intervention from the north, Nūr al-Dīn sent an army commanded by his brother Nuṣrat al-Dīn in the direction of Baniyās, where Frankish reinforcements were reported to have arrived. On 13 Rabīʿ I/26 April 1157 the troops of Damascus inflicted a heavy defeat on the Franks and, although he succeeded in breaching the walls of Baniyās, Nūr al-Dīn learned of the advance of Baldwin, marching to the rescue of the besieged town, and taken by surprise, he gave the order to withdraw. Baldwin, believing that the troops of Damascus would not return, entrusted the task of restoring the town's defences to his infantry, and set out with his cavalry towards Galilee. Nūr al-Dīn set up an ambush near Djisr Banāt Yaʿḳūb [*q.v.*] on the Jordan, and when the Franks halted on the shore of Lake Tiberias he surrounded them and took them prisoner. This success had the effect of uniting all the Frankish factions against him.

Learning that the Crusaders had established their head-quarters in the Buḳayʿa [*q.v.*], not far from Ḥiṣn al-Akrād [*q.v.*], with the intention of attacking in the direction of the Middle Orontes, Nūr al-Dīn left Damascus in Radjab 552/August 1157 in order to repair the defences of fortresses damaged by the earthquakes of the previous month. Arriving at Sarmīn, he spent some time there. Shortly after the beginning of Ramaḍān 552/October 1157, he fell ill there and summoned Nuṣrat al-Dīn, Shīrkūh and his senior officers. Aware of the gravity of his condition, he gave instructions to be followed in the event of his death: he nominated Nuṣrat al-Dīn as his successor, to be resident at Aleppo; Nadjm al-Dīn Ayyūb was to remain military governor of Damascus and Shīrkūh was to be his representative there. In spite of intensive treatment, his condition worsened. The prince was transferred to Aleppo where he was lodged in the citadel. His health improving, he resumed the control of affairs and sent troops to occupy Shayzar. Henceforward the entire course of the Orontes was under the control of the Zankid power. Finally restored to health, Nūr al-Dīn returned to Damascus on 6 Rabīʿ I 533/7 April 1158 and immediately set about mustering an army with the object of taking revenge for recent French raids against the Ḥawrān and Dārayyā in the Ghūṭa. The army left Damascus on 9 Rabīʿ II 533/11 May 1158 with heavy equipment for laying siege to Ḥabīs Djaldaḳ, a cave fortified by the Crusaders which controlled Djawlān to the east and Lake Tiberias to the north-east. Learning that reinforcements were advancing, Nūr al-Dīn raised the siege and the two armies met near the Jordan on 14 Djumādā II/13 July. When some of the Muslim contingents were forced to give ground, Nūr al-Dīn ordered a strategic withdrawal; the Franks, fearing a trick on the part of the Damascenes, declined to pursue them.

In Dhu 'l-Ḥidjdja 553/December 1158-January 1159, Nūr al-Dīn once again fell ill in Damascus. Learning that Manuel was approaching from Cilicia, he urged the governors of the Syrian border regions to be vigilant. As his condition deteriorated, the prince summoned his senior *amīrs* to Damascus and warned his entourage against any sinister intentions towards him on the part of his brother Nuṣrat al-Dīn. To avoid any misunderstanding, he appointed as his successor his brother Ḳuṭb al-Dīn Mawdūd, ruler of Mawṣil.

At the beginning of 554/1159 Nūr al-Dīn was threatened by a proposed Franco-Byzantine coalition. He issued to his *amīrs* a summons to the Holy War, had an advanced bastion constructed at Aleppo and ordered the abandonment of certain sites which would be difficult to defend such as Kūrus. Learning that the Franks and the Basileus were intending to march against Aleppo, the prince set out to meet them. The latter had reached the ford of Balaneus on the ʿAfrīn, whilst other elements were advancing from ʿImm to the west of Aleppo. There then began a long series of negotiations which concluded, in Ṣafar 554/end of May 1159, with an agreement between Manuel and Nūr al-Dīn. An important element of this agreement was the latter's promise of support against Ḳilīdj Arslān II, the enemy of Byzantium. Manuel sought to conduct in northern Syria a policy of checks and balances, and it was fear of a Byzantine intervention which for many years prevented Nūr al-Dīn exploiting to the full his successes against the Franks. He entrusted Ḥarrān [*q.v.*] to the *isfahsālār amīr* Zayn al-Dīn ʿAlī Küčük, ruler of Irbil [*q.v.*]. From Ḥarrān he descended towards the Euphrates and set about wresting control of al-Raḳḳa from the sons of the *amīr djāndār*, who had recently died. Worried by the ambitions of Ḳilīdj Arslān II, Nūr al-Dīn launched a campaign to coincide with a Byzantine expedition conducted against Eskishehir [*q.v.*]. Taking advantage of

the troubles of Ḳilīdj Arslān II, he occupied the former dependencies of the County of Edessa of which the Saldjūḳs had taken possession, and set out from Aleppo towards the north by way of Tell Bās̲h̲ir [*q.v.*]. He reached ʿAyntāb [*q.v.*] then took successively Raʿbān and Kaysūn, occupied Bahasnā then Marʿas̲h̲ [*q.v.*].

In 1160, Ḳilīdj Arslān II succeeded in obtaining from his brother-in-law Nūr al-Dīn a cessation of hostilities since, as the Byzantine menace grew more serious, he needed all his troops. Ultimately, the Saldjūḳ sultan signed a peace agreement with Manuel.

After two years of respite, Baldwin III, knowing Nūr al-Dīn to be occupied in campaigning in the north, attacked territory dependent on Damascus, sending his troops towards the Ḥawrān. Nadjm al-Dīn Ayyūb negotiated the withdrawal of the Franks and obtained a truce of three months. As Nūr al-Dīn had not returned by the expiry of this respite, the Franks once again invaded the province of Damascus. Nūr al-Dīn returned to Damascus and, in the autumn of 555/1161, opened negotiations which concluded with a two-year treaty with Jerusalem. He was able to return to Aleppo, and from there he followed the course of events unfolding around the succession to the Saldjūḳ sultan in Hamad̲h̲ān [*q.v.*], a crisis which was keeping the troops of Ḳuṭb al-Dīn Mawdūd far from Syria.

The situation of Antioch having been settled in the interests of Manuel, the treaty with Baldwin being still valid and the army of Mawṣil at his disposal, Nūr al-Dīn had no fear of imminent interference with his domains, and he seized the opportunity to perform the *ḥadjdj* [*q.v.*] in 556/1161. He set out from Aleppo with S̲h̲īrkūh, passed through Damascus and took the *darb al-ḥadjdj* in order to reach the Holy Cities of the Ḥidjāz where he showed considerable generosity to the local inhabitants, particularly in the improvement of wells. At Medina he restored the defences of the town and arranged for the construction of a second perimeter wall complete with towers, to guarantee the protection of the population against raids by Bedouin marauders. On his return from the Pilgrimage in Ṣafar 557/February 1162, informed of Frankish plans to intervene in Egypt, Nūr al-Dīn decided to engage in diversionary operations in the north in the hope of restraining the campaign of the king of Jerusalem against Fāṭimid Egypt. At the end of 557/1162, Baldwin III fell seriously ill in Tripoli, and Nūr al-Dīn took advantage of the situation to muster an army at Aleppo and once again lay siege to Ḥārim. When the Franks arrived to within a short distance of this site, Nūr al-Dīn challenged them to a pitched battle, but the heavy rains of November cut the engagement short. Nūr al-Dīn decided to raise the siege, and Ḥarīm remained in the hands of the Crusaders.

In Rabīʿ I 558/February 1163, a new phase in the reign of Nūr al-Dīn began with the accession of Amaury. Henceforward, the Franks turned their attention towards Egypt, and Nūr al-Dīn could not afford to be absent from this new theatre of operations, as each of the local powers sought to establish sovereignty in Cairo. Aware of the progressive disintegration of Fāṭimid authority, the king of Jerusalem began to take an interest in Egypt, where the *amīrs* were in revolt against Ṭalāʾiʿ, a vizier of Armenian origin, converted to Twelver S̲h̲īʿī Islam. He had tried, on numerous occasions, to establish relations with Nūr al-Dīn, but he was the victim of two assassination attempts in 556/1161, the second, 18 Ramaḍān/10 September, proving successful. Egypt then collapsed into chaos, at a time when the Latin states of the Orient seemed to have regained their equilibrium in opposition to Nūr al-Dīn.

In the spring of 558/1163, intending to attack the County of Tripoli, Nūr al-Dīn set out with his army and encamped on the plain of al-Buḳayʿa at the foot of Ḥiṣn al-Akrād. Failing to take account of the fact that the Franks had recently gained reinforcements by sea, he was taken by surprise one day in May during the time of siesta. The Muslims were routed by the Frankish cavalry and Nūr al-Dīn, obliged to take flight for the sake of his own safety, did not halt until he reached the Lake of Qadesh (*Buḥayrat Ḳadis̲h̲*). A Romanesque fresco, dating from 1170, commemorates this battle in the Templars' chapel at Cressac in Charente. This defeat had a profound effect on the personality and the policies of Nūr al-Dīn since, after two successive defeats, he needed to restore confidence to the army and to the population. Henceforward, he was to embrace a life-style imbued with piety and religious observance, a development which earned him the respect of the religious classes and of the public but which was accepted only with some reservations by the *amīrs*. It was then that he decided to allocate *iḳṭāʿ*s to the orphans of combatants. Members of the religious classes, *ʿulamāʾ*, Ṣūfīs and Ḳurʾān readers received subsidies levied on the public treasury (*bayt al-māl* [*q.v.*]) but not on the spoils of war (*fayʾ* [*q.v.*]). Numerous inscriptions subsequent to 560/1165 feature two new composite titles in their protocol: *Nāṣir al-ḥaḳḳ bi 'l-barāhīn*, "Defender of the Truth by means of proofs" and *Munṣif al-maẓlūmīn min al-ẓālimīn*, "the Protector of the Oppressed against the Oppressors", titles expressing a part of the political programme of Nūr al-Dīn, that by which he sought to rally public support, presenting himself as the champion of the disadvantaged.

The course of events in Egypt was to pose an awkward problem for Nūr al-Dīn. In Rabīʿ I 559/January-February 1164, the vizier S̲h̲āwar, driven from Cairo by the revolt unleashed by the *amīr* Ḍirg̲h̲ām [*q.v.*] in Ramaḍān 558/August 1163, arrived at his court, imploring his aid. He reminded him that the deployment of Syrian units in Egypt would allow the creation of two fronts and the encirclement of the Latin kingdom of Jerusalem. S̲h̲āwar offered Nūr al-Dīn a third of the revenues of Egypt in exchange for his aid and the financing of the costs of the expedition. Furthermore, he promised to cede him part of the north-eastern province of the Delta and undertook to recognise his sovereignty. In Djumādā I 559/April 1164, impelled by public opinion, Nūr al-Dīn dispatched an army commanded by S̲h̲īrkūh with the objective of restoring S̲h̲āwar to power in Cairo. To protect the advance of this army, he conducted a diversionary manoeuvre in the direction of Baniyās, which enabled the troops accompanying S̲h̲āwar to reach the Delta of the Nile. Ḍirg̲h̲ām then issued a very urgent appeal to the Franks, offering Amaury a treaty of allegiance which, in the event of success on the part of the Franks, would have made Egypt a vassal of the Frankish kingdom of Jerusalem rather than a Syrian colony. Amaury accepted the offer but, harassed by the attacks of Nūr al-Dīn and not having sufficient troops to fight on two fronts, he was unable to send an army to Egypt in time to prevent S̲h̲īrkūh's arrival in the Delta. Having regained his authority in Cairo, S̲h̲āwar reneged on the promises made in Damascus, ultimately agreeing to accept the costs of the campaign but refusing to pay the promised tribute.

Nūr al-Dīn set out to invest Ḥārim, and the Franks

based in the northern Latin states reacted. The confrontation took place in the first ten days of Ramaḍān 559/end of July 1154. Nūr al-Dīn had deployed a significant quantity of heavy equipment but as the Franks advanced accompanied by Byzantine reinforcements, he raised the siege and, to avoid being encircled, he withdrew towards Artāḥ, not far from the ford of Balaneus to the east-south-east of the Lake of Antioch. Exploiting the tactic of withdrawal and counter-attack, *al-karr wa 'l-farr*, on 20 Ramaḍān 559/11 August 1164 he lured the Franks into a ferocious battle, in the course of which he inflicted heavy losses on them, a success which he immediately exploited, returning to Ḥārim, which capitulated the following day. This problem being settled, Nūr al-Dīn turned against the kingdom of Jerusalem, a large proportion of whose troops were then deployed in Egypt. He invaded Galilee and set about besieging Baniyās, which capitulated in Dhu 'l-Ḥidjdja 559/October 1164. Nūr al-Dīn installed a garrison there, agreed to a treaty with the Franks and insisted on sharing the revenues of the district of Tiberias. His policy had secured its objective, sc. to prevent the defeat of Shīrkūh.

In the spring of 561/1165, fearing an intervention by Manuel and not wanting to see Amaury prolong his stay in Antioch, Nūr al-Dīn agreed to free Bohemond III for a ransom of 100,000 gold pieces. In order to maintain the balance of forces in northern Syria to the advantage of Islam, he sought to avoid any action liable to provoke the anger of the Basileus. The same year, taking advantage of the capture of Raymond III of Tripoli, he crossed the Biḳāᶜ and regained from the Franks the fortress of Munayṭira.

While the second Egyptian campaign unfolded, Nūr al-Dīn, who had received reinforcements from Mawṣil, occupied the fortress of Ḥūnīn, not far from Bāniyās, in the Djabal ᶜĀmila.

Although disappointed by his campaign in Egypt, Shīrkūh brought back a considerable sum of money from Cairo when he returned to Damascus on 18 Dhu 'l-Ḳaᶜda 562/5 September 1167. To alleviate his disappointment, Nūr al-Dīn awarded him the fiefdom of Ḥimṣ, the wall and defences of which he had recently restored, then set out towards the coastal plain, where he laid siege to ᶜArḳā. Having taken possession of Ḥalbā, the army of Nūr al-Dīn took the fortress of al-ᶜUrayma, thus securing the lines of communication between Ṭarṭūs and Sāfīthā, but being unable to defend it he demolished it and returned to Ḥimṣ for the month of Ramaḍān 562/June-July 1167. After this success he fixed on the objective of Bayrūt [*q.v.*], in order to have a "window" on the Mediterranean and avoid the necessity of paying export dues to the Franks, but dissensions within the army prevented the realisation of this project.

In Radjab 563/April-May 1168 Bedouins of the tribe of the Banū Kalb [*q.v.*] captured Shihāb al-Dīn Mālik b. ᶜAlī b. Mālik, ruler of Ḳalᶜat Djaᶜbar, while he was hunting to the north of the Euphrates. They took their prisoner to Nūr al-Dīn, who purchased him and held him in Aleppo. In exchange for Ḳalᶜat Djaᶜbar, he offered him money and a fief, but the offer was refused. Finally, it was Madjd al-Dīn Abū Bakr Ibn al-Dāya who succeeded, on 20 Muḥarram 564/26 October 1168, in persuading Shihāb al-Dīn to exchange the place for the important commercial centre of Sarūdj to the south-west of Edessa as well as the salt-flats of al-Djabbūl and Buzāᶜā [*q.vv.*] in the district of Aleppo. Henceforward, he controlled this section of the Euphrates and was assured of freedom of communication with Mawṣil.

In the middle of the month of Muḥarram 564/20 October 1168, the Franks launched an attack in the direction of Cairo. While the population resolved to resist, Shāwar warned the caliph al-ᶜĀḍid [*q.v.*] that the only chance of salvation was to appeal to Nūr al-Dīn, since the presence of Sunnīs was preferable to a Christian protectorate. The Fāṭimid caliph and Shāwar promised him a third of the revenues of Egypt as well as fiefs for the maintenance of the troops. Nūr al-Dīn decided to send a third expedition against the Delta, ordered Shīrkūh to Cairo and entrusted him with full powers. When the latter died on 22 Djumādā II/23 March 1169, his nephew, Ṣalāḥ al-Dīn, was appointed vizier by al-ᶜĀḍid and commander of the Syrian forces in Egypt by Nūr al-Dīn. Amaury, concerned at the latter's seizure of Egypt, issued appeals for help to the whole of Christendom. The Franks responded and decided on Damietta (Dimyāṭ [*q.v.*]) as an objective, but the lack of co-ordination between Byzantines and Franks led to the abandonment of the siege of this locality. After this retreat, al-ᶜĀḍid wrote to Nūr al-Dīn inviting him to recall to Syria the units sent as reinforcements to Egypt, keeping in Egypt only the original force commanded by Ṣalāḥ al-Dīn. The Syrian prince seems to have been worried by the attitude and the ambitions of the latter. He instructed Nadjm al-Dīn Ayyūb to remind his son that the struggle against the infidels was the first duty of the believers and that the ᶜAbbāsid *khuṭba* must be adopted in Cairo. Nadjm al-Dīn left Damascus on 27 Radjab 565/16 April 1170. To create a diversion, Nūr al-Dīn laid siege to al-Karak.

Following the great earthquake of 565/1170, Nūr al-Dīn left his headquarters at Tell ᶜAshtārā to attend to the repairs needed for the defences of Ḥimṣ, Ḥamāt, Bārīn and Aleppo.

On 1 Muharram 566/14 September 1170, the head of the Zankid family crossed the Euphrates opposite Ḳalᶜat Djaᶜbar and took possession of al-Raḳḳa [*q.v.*], its governor ceding the place to him in exchange for substantial compensation. Having taken control of the region of the Khābūr [*q.v.*], hitherto a dependency of Mawṣil, Nūr al-Dīn laid siege to Sindjār. At the approach of the Syrian troops, Fakhr al-Dīn placed himself under the protection of Shams al-Dīn Ildeñiz [*q.v.*]. The latter sent a deputation to Nūr al-Dīn forbidding to take any action against Mawṣil, but the Zankid, confident of the support of the caliph of Baghdād and that of the people of Mawṣil, made his entrance into the town on 13 Djumādā I 566/22 January 1171 and took up residence in the citadel. He suppressed all the *mukūs* and other abuses, and applied to the Djazīra the régime in force in Syria and in Egypt. He confirmed the authority of his nephew Sayf al-Dīn Ghāzī over Mawṣil and gave him the district of Djazīrat Ibn ᶜUmar [*q.v.*], while his nephew ᶜImād al-Dīn, son of Mawdūd, received Sindjār. Before leaving Mawṣil to return to Aleppo, he laid the foundations of the Great Mosque. Then, after returning to Damascus to observe the fast of Ramaḍān (May-June 1171), Nūr al-Dīn regained possession of Tell al-ᶜAshtārā, from which point he was able to observe the movements of the Franks of Jerusalem and eventually to support the operations of Ṣalāḥ al-Dīn.

Until the year 567/September 1171-August 1172, the relations between Nūr al-Dīn and Ṣalāḥ al-Dīn remained those between a chief and his subordinate. Thereafter, they soon found themselves in conflict over the manner in which the war against the Franks was to be waged; this was a conflict between two generations and two temperaments, one Turkish, the other Kurdish. Nūr al-Dīn, as Sir Hamilton Gibb (in

Setton and Baldwin, *A History of the Crusades*, i, 565) has underlined, operated within a political framework defined by the system of his times. For him, Syria was the principal field of battle against the Crusaders and Egypt represented nothing more than a source of additional revenue to cover the costs of the *d̲j̲ihād*. In that year, before attacking the County of Tripoli, he had ordered Ṣalāḥ al-Dīn to gather all available forces in Egypt and lead them towards Frankish Palestine, thus trapping the Franks in a pincer-movement. The first objective was the castle of al-Karak; after ten days of siege the garrison offered to surrender to Ṣalāḥ al-Dīn. For him, the elimination of all obstacles between Egypt and Syria was not desirable, since henceforward he would be at the mercy of Nūr al-Dīn. He decided to return to Cairo and sent a letter to his sovereign, claiming the pretext of unrest in Cairo fomented by the S̲h̲īʿīs. Nūr al-Dīn did not accept this excuse, and announced his intention of going to Egypt in person in order to depose Ṣalāḥ al-Dīn. The latter, on the advice of his father, re-affirmed his loyalty to Nūr al-Dīn, who relented, and tension abated.

In Rabīʿ I 568/October-November 1172, when Nūr al-Dīn had been resident in Damascus for more than three months, the Franks launched an attack against the Ḥawrān and advanced as far as S̲h̲ayk̲h̲ Miskīn. The prince of Damascus set out with his troops and encamped at Kiswa in the Mard̲j̲ al-Ṣuffar [*q.v.*]; the Franks withdrew towards S̲h̲allāla, where the Damascene army confronted them. Nūr al-Dīn established his camp at Tell al-ʿAs̲h̲tārā and dispatched cavalry units to raid the district of Tiberias.

Having repelled the Franks, Nūr al-Dīn turned his attention to northern Syria, where he was able to assist the Armenian Mleh to expel the garrisons of Maṣṣīṣa, Adana and Ṭarsūs [*q.vv.*]. He would have been glad to obtain the support of the Sald̲j̲ūḳ prince of Konya for operations against Antioch but, following a stern warning from Manuel, Ḳilid̲j̲ Arslān II rejected the overtures of Nūr al-Dīn and turned against his neighbour, the Dānis̲h̲mendid D̲h̲u 'l-Nūn. The latter sought refuge with Nūr al-Dīn, who was also joined by the ruler of Malaṭya [*q.v.*] and the *amīr* of al-Mad̲j̲dal. Nūr al-Dīn promised him his support and insisted that Ḳilid̲j̲ Arslān restore the property taken from the *amīr* of al-Mad̲j̲dal. When this ultimatum was refused, he felt justified in declaring war with a Muslim state; it was necessary for the interests of Islam since this prince was serving the cause of the infidels. While Mleh attacked Cilicia [*q.v.*] Nūr al-Dīn took Raʿbān, Marzubān, Ḳaysūn and Bahasnā, places held by the Sald̲j̲ūḳs on the right bank of the Euphrates. On 20 D̲h̲u 'l-Ḳaʿda 568/3 July 1173 he occupied Marʿas̲h̲. Shortly after this, Ḳilid̲j̲ Arslān II appealed to him for a truce. Nūr al-Dīn required him to free the prisoners taken in the region of Malaṭya and to participate in the Holy War, either sending a contingent to join the struggle with the Franks, or operating independently against Byzantium.

To mark his independence vis-à-vis the major atabegs, Nūr al-Dīn sent as an envoy to Bag̲h̲dād his trusted adviser Kamāl al-Dīn Abu 'l-Faḍl Muḥammad al-S̲h̲ahrazūrī to ask the caliph for a document conferring upon him all the territories and towns in which his authority was recognised. In granting this solemn deed of investiture to Nūr al-Dīn, the caliph deprived the successors of the Great Sald̲j̲ūḳs of any authority over the lands situated to the west of the Tigris.

Taking advantage of the absence of Amaury, who had returned to Antioch, Nūr al-Dīn put into operation a plan of attack against the land of Trans-Jordania. His objective remained the same: to take possession of al-Karak and S̲h̲awbak, where the Frankish garrisons cut the route between Egypt and Syria, interrupting caravan traffic and hindering the Pilgrimage. He also needed to gain the support of the nomads, many of whom did not hesitate to serve the Franks as auxiliaries or guides. Once again putting the good will of Ṣalāḥ al-Dīn to the test, he instructed him to attack al-Karak. The latter obeyed in mid-S̲h̲awwal 568/May 1173. The siege had been in effect for some time when Nūr al-Dīn crossed the southern border of Syria in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 568/end of July 1173. When Ṣalāḥ al-Dīn learned that the Zankid army had reached al-Raḳīm, two days' march from al-Karak, he ordered his troops to return to Egypt, claiming, in a message to Nūr al-Dīn, that his father, Nad̲j̲m al-Dīn Ayyūb, was gravely ill in Cairo and that he feared lest, in the event of his father's death during his own absence, Egypt would slip away from the authority of Nūr al-Dīn and would be removed from the authority of the Sunna. Nūr al-Dīn, not deceived, pretended to understand the reasons for the departure of the Ayyūbid prince. Through this gesture on the part of Ṣalāḥ al-Dīn, the kingdom of Jerusalem gained a reprieve of forty years and Nūr al-Dīn was not to see in the al-Aḳṣā Mosque [*q.v.*] the wooden *minbar* [*q.v.*] which he had had made in advance in Aleppo as an *ex-voto* offering for the return of al-Ḳuds [*q.v.*] to Islam.

Returning from Aleppo in Muḥarram 569/September 1173 Nūr al-Dīn heard at Salāmiyya, to the south-east of Ḥamāt, the news of a Frankish attack against the Ḥawrān; while preparing to counter this, he was informed of the adversary's withdrawal. Returning to Damascus, he engaged in preparations for an expedition towards Egypt, the aim of which was to induce Ṣalāḥ al-Dīn to intervene against the Franks. According to his plan, he left in Syria, confronting the Franks, troops from Mawṣil, under the command of Sayf al-Dīn G̲h̲āzī, and he himself was to set out for Egypt with his squadrons after Ramaḍān 569/early May 1174. A few days after the *ʿĪd al-Fiṭr* [*q.v.*], Nūr al-Dīn fell ill with an inflammation of the throat. Confined to his bed in the palace which he had had constructed in the citadel of Damascus, he summoned, according to Ibn al-At̲h̲īr (*Kāmil*, ix, 124), two doctors including D̲j̲amāl al-Dīn Yūsuf b. Ḥaydar al-Raḥbī al-Dimas̲h̲ḳī, his personal physician. Despite their efforts, al-Malik al-ʿĀdil Nūr al-Dīn Maḥmūd b. Zankī died on Wednesday 11 S̲h̲awwāl 569/15 May 1174. At first interred in the citadel, his remains were transferred, when it was ready, to the funeral *madrasa* which he was having constructed to the south-west of the Great Mosque of the Umayyads. At the present time, his tomb is still the object of popular veneration.

Bibliography: For pre-1965 bibliography, see the very detailed one given by N. Elisséeff in *Nūr al-Dīn, un grand prince musulman de Syrie au temps des Croisades 511-569 H./1118-1174*, 3 vols., Damascus 1967, i, Bibliography, pp. XXI-LXXVII, and also Survey of sources, 1-85. (N. Elisséeff)

NŪR AL-DĪN MUḤAMMAD, the fifth ruler of the Turkmen Artuḳid dynasty [*q.v.*] in Ḥiṣn Kayfā and most of Diyār Bakr, d. in Rabīʿ I 581/June 1185.

He succeeded on his father Ḳara Arslan's death, in 562/1166-7 according to the chronicles (although numismatic evidence suggests that the latter may have lived till 570/1174-5), having promised his father to continue support for the Zangid ruler Nūr al-Dīn Maḥmūd's [*q.v.*] *dj̲ihād* against the Franks, a commitment which he in fact honoured by bringing troops to Niṣibīn in 566/1170-1. But after the Zangid's death in 569/1174, Nūr al-Dīn Muḥammad transferred his allegiance to Ṣalāḥ al-Dīn [*q.v.*], and henceforth, he achieves prominence in the sources almost exclusively in the context of the Ayyūbid's career. Ṣalāḥ al-Dīn valued an alliance with the Artuḳids in Diyār Bakr as a check on the Saldj̲ūḳ sultan of Rūm, Ḳilidj̲ Arslan II [*q.v.*]. Hence Muḥammad frequently sent troops to Ṣalāḥ al-Dīn on the latter's request. He was awarded possession of Āmid, long coveted by the Artuḳids of Ḥiṣn Kayfā, in 579/1183, as a reward for aid at the siege of Mawṣil in the previous year; henceforth, Āmid became the seat of power for Nūr al-Dīn Muḥammad's descendants. The Ayyūbid sultan bound his ally even more closely by an oath requiring the despatch of troops against the Franks whenever needed, and the Artuḳid was accordingly present at the siege of Karak in Dj̲umādā I 580/August-September 1184. However, when Ṣalāḥ al-Dīn called for troops for his second attempt against Mawṣil, Nūr al-Dīn Muḥammad was too ill to go personally but sent a force to Dunaysir under his brother ʿImād al-Dīn. Muḥammad died within days, and his young son Ḳuṭb al-Dīn Sukmān II immediately established himself in Ḥiṣn Kayfā as his father's successor, with continued allegiance to Ṣalāḥ al-Dīn, whilst ʿImād al-Dīn had to be content with taking K̲h̲artpert, where he established a minor Artuḳid line.

Little is known of internal affairs in Ḥiṣn Kayfā and Āmid under Nūr al-Dīn Muḥammad, but it may be assumed that he continued the courtly traditions of his father which had been sophisticated enough to attract Usāma b. Munḳid̲h̲ [see MUNḲID̲H̲, BANŪ] to spend some of his declining years at Ḥiṣn Kayfā. The extant copper coins minted there in Muḥammad's name follow the numismatic traditions of the Turkmen dynasties of Mesopotamia for this century. As well as conventional Arabic inscriptions on one side, they bear figures copied from classical models; one coin depicts Nūr al-Dīn Muḥammad in the guise of Seleucus II (Lane Poole, *The coins of the Urtukí Turkumáns*, 125-7). The Aleppo Gate at Āmid has a celebratory inscription dated 579 AH announcing Muḥammad's occupation of the city. Van Berchem suggested that he may have taken the title of *sulṭān*, used by his successors, after his acquisition of Āmid; and he also quotes at length an anonymous, contemporary account describing in fulsome terms Muḥammad's just administration of the city (*Amida*, 71-2, 75-81).

(Carole Hillenbrand)

NŪR AL-DĪN MUḤAMMAD II, Nizārī Ismāʿīlī *Imām* and the fifth lord of Alamūt (561-607/1166-1210). Born in S̲h̲awwāl 542/March 1148, he succeeded to the leadership of the Nizārī community and state on the death of his father, Ḥasan II, on 6 Rabīʿ I 561/9 January 1166. He devoted his long and peaceful reign of some forty-four years to managing the affairs of the Nizārī *daʿwa* and community, especially in Persia, from the central headquarters of the sect at Alamūt. A thinker and a prolific writer, he also contributed actively to the Nizārī teachings of his time.

Nūr al-Dīn Muḥammad II affirmed the Nizārid Fāṭimid genealogy of his father and, therefore, of himself; and, henceforth, the lords of Alamūt were acknowledged as *imāms*, descendants of Nizār b. al-Mustanṣir, by the Nizārī Ismāʿīlī community. In the doctrinal field, he systematically expounded and elaborated the important doctrine of the *ḳiyāma*, announced by his father in 559/1164, and placed the current Nizārī *imām* and his autonomous teaching authority at the very centre of that doctrine (see *Haft bāb-i Bābā Sayyidnā*, ed. W. Ivanow, in *Two early Ismaili treatises*, Bombay 1933, 4-42).

Aside from petty warfare, the history of the Nizārī state in Persia was politically uneventful under Nūr al-Dīn Muḥammad. However, the Syrian Nizārīs were more involved at this time in their own local alliances and conflicts. There are also indications that a widening rift had developed between this Nizārī

imām and Rās͟hid al-Dīn Sinān [q.v.], the contemporary leader of the Syrian Nizārīs, although a complete break was avoided. Ras͟hīd al-Dīn and other Persian historians also report a detailed story about how the Nizārīs of his time persuaded, initially through the intimidating dagger of one of their *fidā'īs*, the famous Sunnī theologian Fak͟hr al-Dīn al-Rāzī (d. 606/1209 [q.v.]) to refrain from denouncing them in public. Having ruled longer than any other lord of Alamūt, Nūr al-Dīn Muḥammad II died, possibly of poison, on 10 Rabīʿ I 607/1 September 1210.

NŪR AL-ḤAḲḲ AL-DIHLAWĪ, or Nūr al-Dīn Muḥammad al-S͟hāhd͟jahānābādī, a traditionist and historiographer of Mug͟hal India who flourished in the 11th/17th century. The nickname "al-Turk al-Buk͟hārī" points to his origin from Central Asia. As a poet he adopted the pen name "Mas͟hriḳī". He was the son of the scholar ʿAbd al-Ḥaḳḳ [q.v.] al-Dihlawī, a well-known *s͟hayk͟h* of the Ḳādiriyya order. Nūr al-Ḥaḳḳ succeeded his father as a religious teacher and was appointed a judge at Agra under S͟hāh Ḏj̲ahān. His death at Dihlī occurred in 1073/1662.

In *Zubdat al-tawārīk͟h*, Nūr al-Ḥaḳḳ enlarged the *Tārīk͟h-i Ḥaḳḳī*, a chronicle of Indian history written by his father, bringing it up to 1014/1605, the beginning of the reign of Ḏj̲ahāngīr. He wrote two Persian commentaries on canonical collections of *ḥadīt͟h*: *Taysīr al-ḳārī fī s͟harḥ Ṣaḥīḥ al-Buk͟hārī* and *Manbaʿ al-ʿilm fī s͟harḥ Ṣaḥīḥ Muslim*; the latter work was later revised and enlarged by his son Fak͟hr al-Dīn Muḥibb Allāh. *Nūr al-ʿayn*, an early work dedicated to his father, is a commentary on Amīr K͟husraw Dihlawī's [q.v.] historical *mat͟hnawī Ḳirān al-saʿdayn*; it is dated 1014 A.H. by a chronographical riddle (cf. Rieu, ii, 617b).

(J.T.P. de Bruijn)

NŪRBAK͟HS͟HIYYA, a S͟hīʿī offshoot of the Kubrawī Ṣūfī order [q.v.], which functioned for part of its existence as a distinct sect because of the intermittent claims to the status of *mahdī* [q.v.] of its eponym, Sayyid Muḥammad b. Muḥammad b. ʿAbd Allāh Nūrbak͟hs͟h. Its importance lies primarily in exemplifying the messianic-tinged Ṣūfī-S͟hīʿī ferment that preceded and, in some measure, prepared the way for the establishment of the Ṣafawid state.

Nūrbak͟hs͟h was born at Ḳā'in in Ḳuhistān in 795/1392. His father, supposedly a descendant of the Imām Mūsā al-Kāẓim, had come from Ḳaṭīf, a S͟hīʿī region of eastern Arabia, on pilgrimage to Mas͟hhad before settling in Ḳā'in; he may therefore be presumed to have been a S͟hīʿī. Nūrbak͟hs͟h's grandfather was from al-Aḥsā [q.v.], likewise an area of S͟hīʿī settlement; this accounts for Nūrbak͟hs͟h's occasional use of the *tak͟hallus* Laḥsawī. While studying in Harāt in his early youth, Nūrbak͟hs͟h was recruited into one branch of the Kubrawī order by a follower of Isḥāḳ K͟huttalānī, the principal successor to Sayyid ʿAlī Hamadānī (d. 786/1384). Moving to the *k͟hānaḳāh* at K͟huttalān, he soon became the most prominent disciple of K͟huttalānī, who bestowed on him the title Nūrbak͟hs͟h ("Bestower of Light") in accordance with an indication contained in a dream. The account given by Nūr Allāh S͟hus͟htarī (d. 1019/1610) in his *Mad͟jālis al-mu'minīn* (ed. Tehran, 1375-6/1955-6, ii, 143-7)—followed almost unanimously by later writers—relates that on the basis of the same dream K͟huttalānī also declared Nūrbak͟hs͟h to be the Mahdī and incited him to style himself Imām and caliph and to lay claim to rule. He swore allegiance to him himself and ordered his disciples to do the same; all obeyed, with the exception of Sayyid ʿAbd Allāh Barzis͟hābādī (d. *ca.* 856/1452). Nūrbak͟hs͟h asked for a delay in starting his insurrection, but K͟huttalānī refused, saying that the divinely-appointed time for rebellion (*k͟hurūd͟j*) had arrived.

The beginnings of the episode are recounted somewhat differently by Ḥāfiẓ Ḥusayn Karbalā'ī, a spiritual descendant of the dissident Barzis͟hābādī. He attributes a far more active role to Nūrbak͟hs͟h, claiming that he originated the claim to the status of *mahdī* himself and then had it endorsed by K͟huttalānī, who was too senile and decrepit to stand in his way. Barzis͟hābādī allegedly succeeded in having the endorsement temporarily withdrawn, but his influence over K͟huttalānī was no match for that of Nūrbak͟hs͟h, and preparations for the uprising proceeded (Karbalā'ī, *Rawḍat al-d͟jinān wa-d͟jannāt al-d͟janān*, ed. Ḏj̲aʿfar Sulṭān al-Ḳurrā'ī, Tehran 1349 *Sh*./1970, ii, 249-50). This version of the affair seems at least as credible as that offered by S͟hus͟htarī. Nūrbak͟hs͟h certainly had a high estimate of his own worth; he claimed to possess superiority to Plato and Avicenna and absolute mastery of all the sciences. Moreover, he continued to advance claims to the status of *mahdī*, however sporadically, after the death of K͟huttalānī and wrote a treatise, *Risālat al-Hudā*, attempting to vindicate these claims.

In 826/1423, K͟huttalānī and Nūrbak͟hs͟h left the *k͟hānaḳāh* in K͟huttalān and ensconced themselves with their followers in the nearby castle of Kūh-tīrī. Before they could complete their military preparations, they were attacked and taken prisoner by Bāyazīd, the Tīmūrid governor of the area. K͟huttalānī, together with his brother, was put to death almost immediately, despite his advanced age. Nūrbak͟hs͟h himself was spared and sent in chains to the presence of S͟hāhruk͟h in Harāt. The contrasting fates of the two men might be taken to confirm S͟hus͟htarī's depiction of K͟huttalānī as the instigator of the whole affair; it is also possible, however, that K͟huttalānī was singled out for death because of his long-standing ties to local rulers in Badak͟hs͟hān who had sought to block the expansion of Tīmūrid power in the region (Devin DeWeese, *The eclipse of the Kubraviyah in Central Asia*, 60).

After interrogation, Nūrbak͟hs͟h was sent on from Harāt to S͟hīrāz; Ibrāhīm Sulṭān, S͟hāhruk͟h's governor of Fārs, subjected him to a further spell of imprisonment in Bihbahān before releasing him.

Nūrbakhsh then made his way in turn to Shushtar, Baṣra, Ḥilla (where he is said to have met the celebrated Shīʿī scholar Ibn Fahd al-Ḥillī) and Baghdad. Next he proceeded to Kurdistān and the Bakhtiyārī country where he revived with some success his claim to worldly sovereignty; loyalty was sworn to him and coins were struck, and the *khuṭba* was read in his name. It happened that Shāhrukh was campaigning in Ādharbāydjān at the time, and he had Nūrbakhsh seized and brought to his camp. Nūrbakhsh escaped and attempted to flee via Khalkhāl back to Kurdistān, but he was soon recaptured and after fifty-three days spent at the bottom of a pit he was sent to Harāt with instructions to mount the *minbar* at the Masdjid-i Djāmiʿ and publicly disavow his claims. This he did, with obvious reluctance, in the following ambiguous words: "They relate certain things from this wretch. Whether I said them or not, 'O Lord, we have wronged ourselves; if You do not forgive us and have mercy upon us, we will certainly be among the losers' (Ḳurʾān, VII, 23)." He was then released anew, on condition that he restrict himself to teaching the conventional religious sciences (*ʿulūm-i rasmī*), a condition he appears to have broken, for in 848/1444 he was re-arrested with orders for him to be ejected from the Tīmūrid realm into Anatolia. Instead he was confined in turn in Tabrīz, Shīrwān and Gīlān, being definitively released on the death of Shāhrukh in 850/1447. Thereupon he made his way to the village of Sulfān near Rayy, remaining there until his death in Rabīʿ I 869/November 1464. These last years of Nūrbakhsh's life appear to have been relatively tranquil. It is probable that he reduced his public claims to spiritual eminence to those customary for a Ṣūfī *shaykh*, although he continued to designate himself by such suggestive terms as *maẓhar-i mawʿūd* ("the promised manifestation") and *maẓhar-i djāmiʿ* ("the comprehensive manifestation").

Nūrbakhsh wrote a number of treatises, only one of which has ever been published (M. Molé, *Professions de foi de deux Kubrawis*: *ʿAlī-i Hamadanī et Muḥammad Nūrbaḫš*, in *BEO*, xvii [1961-2], 182-204: Arabic text and French translation of *al-Risālat al-Iʿtiḳādiyya*), as well as a considerable quantity of verse (for samples see Mawlawī Muḥammad Shafīʿ, *Firḳa-yi Nūrbakhshī*, in *Maḳālāt*, ed. Aḥmad Rabbānī, Lahore 1972, ii, 45-74). The most interesting of his writings is perhaps the *Risālat al-Hudā* in which he clarifies his concept of the status of *mahdī*, one that deviates considerably from that of his ancestral Twelver Shīʿism. Nūrbakhsh utterly rejects the occultation (*ghayba*) of the Twelfth Imām, asserting that his body has decomposed and that his functions and attributes are now manifest (*bāriz*) in him, Nūrbakhsh. He defines "absolute imāmate" as reposing on four pillars: perfection of prophetic descent, perfection of knowledge, perfection of sanctity and the possession of temporal power. All the preceding Imāms, with the exception of ʿAlī b. Abī Ṭālib, lack the fourth pillar; Nūrbakhsh, destined as Mahdī to gain supreme political power, is therefore superior to them. The proofs cited by Nūrbakhsh for the status of *mahdī* consist largely of celestial signs and dreams and predictions by figures as varied as the Kubrawī saint Saʿd al-Dīn Ḥamūya (d. 650/1252) and the scholar Naṣīr al-Dīn Ṭūsī (d. 672/1274). Some of the dreams related here foretell setbacks as well as ultimate triumph in the form of a universal rule lasting seven or eight years; this suggests that the treatise may have been written after Nūrbakhsh's coerced renunciation of the status of *mahdī* in Harāt (see Molé's synopsis of *Risālat al-Hudā* in *Les Kubrawiya entre sunnisme et shiʿisme*, in *REI*, xxix [1961], 131-6).

The most accomplished disciple of Nūrbakhsh was Shaykh Muḥammad Lāhīdjī (d. 921/1515), author of the *Mafātīḥ al-iʿdjāz fī sharḥ-i Gulshān-i rāz*, one of the most widely-read later Ṣūfī texts in Persian. He established a Nūrbakhshī *khānaḳāh* in Shīrāz, known as the Nūriyya, which was visited by Shāh Ismāʿīl. The direction of this *khānaḳāh* was inherited by an apparently unworthy and dissolute son, Shaykh-zāda Aḥmad Lāhīdjī, after whom there is no trace of this line of Nūrbakhshī transmission.

Nūrbakhsh had two sons: Sayyīd Djaʿfar, who went to the court of Ḥusayn Mīrzā Bāyḳarā in Harāt but, dissatisfied with the stipend offered him there, left for Khūzistān, where he spent the rest of his life; and Shāh Ḳāsim Fayḍbakhsh, his principal heir. Fayḍbakhsh also spent a period in Harāt, where he is said to have acquired Bāyḳarā as a disciple and to have worsted Sunnī *ʿulamāʾ*, such as ʿAbd al-Raḥmān Djāmī, in public debate (Shushtarī, *Madjālis al-muʾminīn*, ii, 149). One of Fayḍbakhsh's sons, Shāh Bahāʾ al-Dīn, was likewise close to Bāyḳarā, and under his protection established a Nūrbakhshī *khānaḳāh* in Harāt. In general, however, the Nūrbakhshiyya appears to have been unable to strike root in Khurāsān, and first Fayḍbakhsh and then Bahāʾ al-Dīn left Harāt for more westerly regions. Fayḍbakhsh took up residence on his father's holdings near Rayy, which were considerably enlarged by a grant of land from Shāh Ismāʿīl. He died in 917/1511. Bahāʾ al-Dīn also initially enjoyed the favour of the Ṣafawid ruler, but after a few years he fell under suspicion and, as Khwāndamīr delicately phrases it, "in accordance with the requirements of fate he was interrogated and passed away" (*Ḥabīb al-siyar*, ed. Dj. Humāʾī, Tehran 1333 *Sh*./1954, iv, 611-12).

Relations between the descendants of Nūrbakhsh and the Ṣafawids were definitively ruptured in the time of Fayḍbakhsh's grandson, Shāh Ḳawām al-Dīn b. Shāh Shams al-Dīn. Already in his grandfather's lifetime, Ḳawām al-Dīn attempted to establish himself as the dominant force in Rayy and its environs, silencing opponents and rivals by force. He also attempted to enlarge the family lands still farther, and when the poet Umīdī refused to surrender to him a large and desirable orchard, he had him assassinated, in either 925/1519 or 930/1524 (Sām Mīrzā Ṣafawī, *Tuḥfa-yi Sāmī*, *ṣaḥīfa-yi pandjum*, ed. Iḳbāl Ḥusayn, Aligarh 1973, 32-3). Several years later, in the reign of Shāh Ṭahmāsp, Ḳawām al-Dīn was imprudent enough to begin building castles and fortifications on the family lands, and using the unavenged blood of Umīdī as pretext, the monarch had him arrested and brought to Ḳazwīn, where he was tortured to death.

It appears that towards the end of the life of Nūrbakhsh, and still more after his death, attempts were made to normalise Nūrbakhshī beliefs by aligning them with those of conventional Twelver Shīʿism. This is suggested by Shushtarī's assertion that Khuttalānī had never really believed in the status of *mahdī* of Nūrbakhsh, viewing it simply as a device to incite an uprising against Shāhrukh and to provide a transition to true Shīʿism (*Madjālis al-muʾminīn*, ii, 147). The messianic claim could, however, always be revived, and it was no doubt to eliminate the possibility of such a danger that the Ṣafawids—mindful of the circumstances under which they had risen to power—did away with the Nūrbakhshīs of Rayy.

After the death of Ḳawām al-Dīn, there are traces of Nūrbakhshī presence in Kāshān, Naṭanz, Nāʾīn and Ḳum, but it is plain that the organised activity of the order was at an end. It is true that a Nūrbakhshī lineage has been reported for such luminaries of the

Ṣafawid period as Bahā᾿ al-Dīn ʿĀmilī (d. 1030/1621 [*q.v.*]) and Mullā Muḥsin Fayḍ Kās͟hānī (d. 1091/1680 [see FAYḌ-I KĀS͟HĀNĪ, in Suppl.]), not to mention Ṣūfīs of the 12th/18th and even 13th/19th centuries. If such *silsila*s have any validity at all, they should be taken as indicating an intellectual filiation, not membership in an organised and functioning Ṣūfī order. It is curious that the anti-Ṣūfī polemicist Mullā Muḥammad Ṭāhir Ḳummī (d. 1098/1686) should nonetheless assert that "most Persians follow the Nūrbak͟hs͟hī *silsila*" (*Tuḥfat al-ak͟hyār*, Tehran 1336 *S͟h*./1957, 202; see too Section Nine of the same author's *Hidāyat al-ʿawāmm wa-fāḍiḥat al-li᾿ām*, ms. 1775, Āyatallāh Marʿas͟hī Nad͟jafī Library, Ḳum). It may be that he wished to fix on all contemporary Persian Ṣūfīs the opprobrium of following Nūrbak͟hs͟h, who had falsely claimed the status of *mahdī* for himself. One indication that that claim had not been forgotten, despite subsequent adjustments in Nūrbak͟hs͟hī doctrine, is provided by Mullā Muḥammad Bāḳir Mad͟jlisī (d. 1110/1699) in his *ʿAyn al-ḥayāt* (Tehran 1341 *S͟h*./1963, 238), where he denounces Nurbak͟hs͟h for his gross and heretical error.

A prolongation of the original Nūrbak͟hs͟hī movement took place in Kas͟hmīr and Baltistān ("Little Tibet"), where it was introduced by Mīr S͟hams al-Dīn ʿIrāḳī, a disciple of S͟hāh Ḳāsim Fayḍbak͟hs͟h; for this, see ʿIRĀḲĪ, S͟HAMS AL-DĪN, in Suppl.

The supremacy of Sunnī Islam in Kas͟hmīr after the period of Nūrbak͟hs͟hī influence there was restored by Mīrzā Muḥammad Dug͟hlāt when he invaded Kas͟hmīr from Kās͟hg͟har in 940/1533. He sent the *Fiḳh-i aḥwaṭ*, a summation of Nūrbak͟hs͟hī doctrine written by S͟hams al-Dīn (although sometimes erroneously attributed to Nūrbak͟hs͟h) to the *ʿulamā᾿* of India for their estimate, and invoking their condemnatory *fatwā* attempted to extirpate the Nūrbak͟hs͟hiyya throughout Kas͟hmīr (Dug͟hlāt, *Tārīk͟h-i Ras͟hīdī*, tr. N. Elias and E. Denison Ross, London 1898, 434-5). He also summoned Dāniyāl, one of the sons of S͟hams al-Dīn, from Iskardo, and had him beheaded in 957/1550. A recrudescence of Čak [*q.v.* in Suppl.] dominance and Nūrbak͟hs͟hī influence took place after Dug͟hlāt's death the following year, and it was not until the full establishment of Mug͟hal power in Kas͟hmīr in the second decade of the 11th/17th century that the Nūrbak͟hs͟hīs of Kas͟hmīr were fully uprooted, despite occasional intervention on their behalf by the Baltistānī branch of the sect (Pardu, *A history of Muslim rule in Kashmir*, 303-4). The remaining Nūrbak͟hs͟hīs merged into the Twelver S͟hīʿī population, to such a degree that the tomb of S͟hams al-Dīn ʿIrāḳī was favoured by the Sunnīs as a target of desecration during the communal riots that were frequent in Srinagar. It was ultimately relocated to a safer site at Chadur (G.M.D. Sufi, *Kashir*, i, 111-12).

The Nūrbak͟hs͟hiyya survived much longer in Baltistān, which was after all an extremely remote region. Adherents of the sect (called "Keluncheh" by Vigne, *Travels in Kashmir, Ladak, and Iskardo*, ii, 254) captured power in the 12th/18th century. As late as the second half of the following century, travellers reported that fully one-third of the population of Baltistān was Nūrbak͟hs͟hī; that the *Fiḳh-i aḥwaṭ* was still in circulation; and that the tombs of Mīr Muk͟htār and Mīr Yaḥyā, two other sons of S͟hams al-Dīn ʿIrāḳī, in Kiris and S͟higar, were still places of pilgrimage (J. Biddulph, *Tribes of the Hindoo Koosh*, Calcutta 1880, 118-25). A curious detail related by Biddulph is that the Nūrbak͟hs͟hīs would pray with their hands folded like the Sunnīs in the winter and with their hands hanging loose like the S͟hīʿīs in the summer.

It remains finally to be noticed that Amīr Sulṭān (d. 833/1429), the Buk͟hāran saint who migrated to Bursa and married a daughter of Bāyezīd I, has also been described as a Nūrbak͟hs͟hī. Although he is said, as a *sayyid*, to have had certain S͟hīʿī inclinations, it is chronologically impossible that he should have been a Nūrbak͟hs͟hī. The origin of the error lies, no doubt, in the fact that Amīr Sulṭān's father, ʿAlī al-Ḥusaynī al-Buk͟hārī, was a disciple of Isḥāḳ K͟huttalānī, together with Sayyid Muḥammad Nūrbak͟hs͟h (Med͟jdī Efendi, *Terd͟jüme-yi S͟haḳā᾿iḳ-i Nuʿmāniyye*, Istanbul 1269/1852, 77). That the Nūrbak͟hs͟hiyya was unknown in Turkey is indicated by its frequent misidentification as a branch of the K͟halwatiyya (see, for example, Şinasi Çoruh, *Emir Sultan*, Istanbul n.d., 29).

(H. ALGAR)

NURCULUK (T.), the name given by the modern Turkish press and authorities to the entire body of the teachings of Saʿīd Nursī [*q.v.*], while Nurcular ("Nurists") refers to his followers. The names seem to indicate that *nurculuk* is a sort of Muslim

brotherhood (*ṭarīḳat*) not different from a variety of other Ṣūfī orders; but this is a misnomer. Nursī consistently rejected the view that he was a *s͟hey̲k͟h* or *pīr*, bent on establishing his own *ṭarīḳat* and that his followers formed an organised body. He referred to his followers as *Risāle-yi Nūr ṭalebesi* (or *Ṭalebe-yi Risāle-yi Nūr*), that is, "students of the Book or Epistle of Light", but the word "disciples" is probably the best translation of *ṭalebe*. The negative image of the Nurists held in the West and by the secularists of Turkey was a direct consequence of politics; Nursī was repeatedly jailed for allegedly violating the secularist principles (article 163, now abolished) of the Penal Code. In the era of multi-party democracy, the Nurists have supported the Democratic Party and its successors, leading İsmet İnönü and his successors of the People's Republican Party leadership to accuse them of reactionary collusion.

The central concept of Nursī's philosophy is *nūr* conceived of as spiritual light (for the ordinary ray of light, he used the term *ṣua*). For Nursī's followers *nūr* is synonymous with *īmān* "faith", and their study is directed toward the achieving of divine illumination—the true faith through the study of the Ḳurʾān. The view that the Nurists are hierarchically organised into groups denominated as "student", "brother", *dost* "friend", and "beloved" according to their mastery of the teachings, veneration for the teacher, and devotion to the cause, is not supported by any definitive proof. The term *kardeş* "brother", commonly used by the *Risāle* students, is a general public form of address in Turkey and has no sectarian significance. Nonetheless, there is something of a natural selection among the Nurists; those who knew Saʿīd Nursī personally and who worked and lived with him for a long time, are held in higher esteem and respect than the latecomers to his philosophy. There are, of course, discussion groups and even periodic meetings usually held every three years for the consideration of his teachings. Originally, these meetings were regarded as religious seminars rather than devotional gatherings.

Nursī began to write the *Risāle*, which consists of his commentaries on the Ḳurʾān, in 1926, after he was forced to settle in Barla, in the province of Isparta, and after 1934 he wrote the last third part of his commentary in Kastamonu, but added supplementary sections right up until 1950. The *Risāle* was written originally in Arabic script and copied by hand. It was distributed first in Central Anatolia from a cluster of villages (Bedre, Islamköy, etc.) in Isparta province and then from Kastamonu. His first writings were called *Sözler* ("words"), but the name subsequently was changed to its present one due to what the author called a sort of divine inspiration. Sections of the *Risāle* have appeared in Latin script and been openly sold—despite occasional restrictions—mainly since 1958, under a variety of titles, e.g. *Ṣualar* (1960) and *Lem'alar* (Istanbul 1976). Increasingly, such titles are preceded by the general title *Risale-i Nur külliyatından*.

Various portions of the *Risāle* have been translated into English and published by the Risalat-i Nur Institute of America in California. After Nursī's death, a number of periodicals and newspapers, such as *Yeni Nesil* ("New Generation") and printing houses have become dedicated to publishing them and also commentaries on them. Some formal efforts at Nurist indoctrination were made, e.g. the brochure *Istikamet* ("Direction"), published in Istanbul in 1983. The periodical *Nur* is at present published in Turkish, Arabic, English and German and is widely distributed.

Contemporary *Risāle* students and discussion groups are concerned primarily with the meaning of Nursī's writings. His writings are at times quite ambiguous, sometimes rather cumbersome in style but interspersed with precise, clear and beautifully-written passages. The basic purpose of the Nurcular has been not to launch a religious movement or challenge the existing socio-political order. The Nurist publishing houses have been instrumental in popularising many scientific books, some being regarded as superior to the official textbooks; but Nursī opposed materialism and any other doctrine likely to undermine the spiritual essence of the human being. The Nurists, if they are a sufficiently well-defined group so as to be named, thus espouse an uncompromising religious orthodoxy, attaching the utmost importance to the faith reached through the study and understanding of the Ḳurʾān. However, on social, economic, and educational questions they adopt a middle-of-the-road ideology advocating humanitarianism, pluralism, fellowship, and national unity. (Nursī repeatedly stated that although he was a Kurd, he considered himself a member of the Turkish nation because of the Turks' lack of a sense of race, and for their faithful service to Islam.) The Nurists condemn both communism and capitalism for their excessive materialism and seem to favour a mild form of state intervention in the economy, provided it does not inhibit private initiative. This is a view that largely coincides with the economic policy of the recent Turkish governments. In social and political matters, the Nurists favour a pluralist approach, despite the danger that the advocacy of state-imposed social justice could provide justification for authoritarianism.

If the *Risāle* is considered in its entirety with regard to its theological message and preoccupation with human society, and taking into account the aspiration of those who follow its teachings and who come from every walk of life, then the Nurculuk must be regarded as one of the most democratic and advanced Islamic *iḥyāʾ* (rejuvenation) movements, and Nursī as among the foremost ranks of those Muslims who have attempted to reconcile the faith with their human and social environment. He was probably the first to advocate, in a doctrine openly based on the Ḳurʾān and Sunna, a total dedication to the faith along with acceptance of the philosophical, intellectual, and technological aspects of the modern age, whence Nurist groups have sprung up in a number of Muslim (Pakistan, Malaysia) and European (Germany) countries, making it in effect one of the strongest international Islamic revivalist movements. However, there is a latent danger of obscurantism as the movement spreads to the countryside and among the lower urban classes that tend to stress exclusively the devotional aspects of Nursī's teachings and ignore their modernist, change-oriented dimension. There has been lately a not unnatural tendency on the part of the dedicated Nurists to organise and regard themselves as forming a special group of illuminated, righteous ones and to develop an *esprit de corps* that gives the movement the appearances of a *ṭarīḳat*.

Nursī died without leaving a known disciple to continue his work and elaborate on his ideas. After his death, several newspapers and journals were published by the Nurists, one of them, *Yeni Asya*, taking a more activist stand. Differences and disagreements arose over the question of participation in the political process. The majority of Nurists seem to have supported Necmeddin Erbakan's Islamist parties, but felt betrayed when Erbakan in the late 1970s entered into

a political coalition with the Republican People's Party, former persecutors of Saʿīd Nursī. After the restoration of political freedom in 1982-3, one group of Nurists continued to support Süleyman Demirel's Straight Path Party, while others backed the Motherland Party of Turgut Özal, who had proclaimed himself an adherent of the Nak̲s̲h̲bandiyya. Thus in general, the Nurists have supported right and centre parties, but the shifting course of Turkish political life has caused a certain reticence regarding politics amongst many Nurists. At the present time (1992), there are five major Nurist groups in Turkey, as well as that of Mehmet Kaplan in Germany.

Bibliography: On the organisational aspects of Nurculuk, see Ali Mermer, *Aspects of religious identity: the Nurcu movement in Turkey today*, diss., Univ. of Durham 1985, unpublished (this includes the most complete list of Nursī's published writings until 1985); Ursula Spuler, *Nurculuk. Die Bewegung des Bediuzzaman Said Nursi in der Modernen Turkei*, in *Bonner Orientalistische Studien*, xxvii (1973), 100-83. NŪRĪ, a common name in the Near East for a member of certain Gipsy tribes. A more correct vocalisation would perhaps be *Nawarī* (so Hava, Steingass, etc.), with plural *Nawar*. Minorsky [see lūlī, at V, 817a] gives *Nawara*. By displacement of accent we also find the plural form as *Nawār* (e.g. in Jaussen, *Coutumes des Arabes*, 90, and British Admiralty, *Handbook*, *Syria*, London 1919, 196, *Arabia*, London 1916, 92, 94). In Persia, the current name for Gipsy is *Lōrī*, *Lūrī* or *Lūlī* [*q.v.*]. It is not unlikely that by a natural phonetic transformation the form *nūrī* derives from *lūrī*, which, it has been suggested, originally denoted an inhabitant of the town of al-Rūr (or Arūr) in Sind. Quatremère advanced the theory (*Hist. des Sultans Mamlouks*, i/2, n. 5) that the name *nūrī* arose from the Arabic *nūr* (fire); he gives the form *n.ww.r.* because these vagrants were usually seen carrying a brazier or a lantern. Even today many of the *Nawar* earn their living as itinerant smiths. But it is more probable that the correct etymology is to be found in some Sanskritic dialect of northwestern India, the original home of the Gipsy tribes.

In the various countries of the Orient in which Gipsy families are located, we find several designations for them used. The older name, now much restricted in use, was Zuṭṭ [see zuṭṭ] or Jatts. The Turkish name Čingana passed into European languages under such forms as Σιχάνος, Tzigane, Zingaro, Czigany, Zigeuner, etc. Dozy (*Supplément aux dictionnaires arabes*, i, 605), quoting Caussin de Perceval, records the occasional use of the name *Zand̲j̲iyya*, but this is inexact [see zand̲j̲]. The commonest names, apart from those already mentioned, seem to be *Nawar* and *Kurbat* or *G̲h̲urbat* (particularly in northern Syria and Persia), *G̲h̲agar* and *Ḥalab* (especially in Egypt and North Africa) and *Dūman* (in ʿIrāḳ). For other sub-divisions, reference may be made to the bibliography, and particularly to E. Littmann's *Zigeuner-Arabisch*, which is an excellent summary of the whole subject, particularly on the linguistic side.

The collecting of data regarding the Gipsy tribes of the Orient is by no means easy. Even experienced orientalists and travellers have reached different conclusions regarding them. For example, Lane (in his *Modern Egyptians*, London 1836, ii, 108) in spite of his profound knowledge of Egypt, asserted that there were few Gipsies in the land, while numbers of well-educated local peoples today are still unaware of the presence of these tribes in their midst. The statistics of Massignon's *Annuaire musulman* (Paris ²1954, 271), however, gave the number of Gipsies in Egypt as 2% of the population, consisting, namely, of two tribes of G̲h̲agar and Nawar respectively, and four tribes of Ḥalab.

The Gipsies as a rule seem, chameleon-like, to take their creed, such as it is, from their surroundings. In Muslim countries these tribes usually profess Islam, in so far as they may be said to profess any religious views, many of them, indeed, being very superstitious and reported to be scoundrels and vagabonds. The same applies to the Muslim Gipsies of what was formerly European Turkey (Admiralty, *Handbook of Turkey in Europe*, London 1917, 62). In the Balkans, many of them are Greek Orthodox.

Persian and Arabic writers preserve for us the tradition that tribes of Jats (or *Zuṭṭ*) from the Pand̲j̲āb were conveyed westwards by command of the Sāsānid monarch Bahrām Gūr (420-38 a.d.) and their descendants proved a troublesome problem some centuries later for the caliphs of Bag̲h̲dād. Once more, numbers of them were dispersed to the borders of Syria, where many of them were captured by the Byzantines, and thus found their way into the Eastern Roman Empire, thence to continue their migrations to other ends of the East and West. Many of them are even said to have risen to high rank, e.g. al-Sarī b. al-Ḥakam b. Yūsuf al-Zuṭṭī, governor of Egypt (200-5/816-21). The name *Barāmika* is actually the designation in Egypt of a class of public dancers (*G̲h̲awāzī*) of low moral character and conduct who have been regarded as of Gipsy blood, but it is more likely that the name arose from a parallel with the sad state of the fallen line of viziers. See L. Bouvat, *Les Barmécides d'après les historiens arabes et persans*, Paris 1912, 110, 125.

The German traveller Ulrich Seetzen and the American missionary Eli Smith gathered valuable material in the Near East regarding those nomadic peoples which proved useful to later scholars. They were followed by Capt. Newbold (1856) on the Gypsies of Egypt, Syria and Persia; von Kremer, Austrian Consul at Cairo, on the Egyptian Gypsies (1863); Sykes (1902) dealt with the Persian Gypsies, while an excellent treatise appeared in 1914 from R.A.S. Macalister on the language of the Nawar or Zuṭṭ, the nomad smiths of Palestine. Macalister in this work had the rather difficult task of reducing to writing a language almost completely unknown, and interpreting and analysing the Nūrī stories and folk-elements recounted to him by members of the Nūrī settlement north of the Damascus Gate in Jerusalem. He employed several of these Nawar in the course of his excavations there. A small Syrian Gypsy vocabulary received by Miss G.G. Everest of Beirut from a friend at Damascus was also published in the *Journal of the Gipsy Lore Soc.* (Jan. 1890), in an article by F.H. Groome. The philological aspect of the question has received, in recent years, the attention of scholars such as E. Galtier and E. Littmann (see *Bibl.*).

In Egypt, the Ḥalab (sing. Ḥalabī) are to be found mostly in Lower Egypt carrying on their special occupations at the various markets and *mawālīd* [see mawlid], and as traders in camels, horses and cattle. Their womenfolk are noted seeresses and medicine-women, practicing all the arts of sorcery (*siḥr*): sand-divination (*ḍarb al-raml*), shell-divination (*ḍarb al-sadʿa*), bibliomancy (*fatḥ al-Kitāb*), etc. Their tribal subdivisions are variously given by Galtier (7) and

Newbold (291). Their name suggests some connection with Aleppo (Ḥalab), but they themselves proudly claim a South Arabian ancestry, their tribal chronicle being the popular broadsheet production, *Taʾrīkh Zīr Sālim*.

The Ghagar Gipsy tribe, however, have a rather unsavoury reputation, a fact that is reflected in the modern Egyptian colloquial Arabic verb *ghaggar* "to be abusive" (see M. Hinds and El-Said Badawi, *A dictionary of Egyptian Arabic*, Beirut 1986, 617). Their speech has fewer foreign ingredients, and Galtier is of the opinion that they are more recent arrivals in the Nile Valley, probably wanderers from Constantinople. The argot of the Egyptian Gipsies is called *al-Sīm*, and in modern colloquial Arabic in Egypt "to speak in enigmas" is *yatakallim bi 'l-Sīm* (see Hinds and Badawi, *op. cit.*, 446).

The word Nūrī in Egypt is almost synonymous with thief, and their thieving propensities are libellously associated in a popular proverb with the inhabitants of Damanhūr [*q.v.*] (*alf Nūrī wa-lā Damanhūrī*). According to the age-old policy of setting a thief to catch a thief, the Nawar are often recruited as estate watchmen (*ghuffār*).

Their pursuits and proclivities are varied in the extreme. Besides the myriad occupations of enchanters, amulet-sellers, quack-doctors, snake-eaters and astrologers, many of them travel about as hawkers, metal-workers, animal-trainers, professional tumblers, rope-dancers, acrobats, monkey-leaders, musicians and ballad-singers, while some are employed to circumcise Muslim girls, to tattoo lips and chins, and to bore ears and nostrils.

AL-**NŪRĪ**, ABU 'L-ḤUSAYN (or ABU 'L-ḤASAN) AḤMAD b. Muḥammad al-Baghawī, Ṣūfī mystic, of Khurāsānī background, was born (probably *ca.* 226/840, as he had met Dhu 'l-Nūn) in Baghdād, where he spent most of his life. He died in 295/907. The most extensive information about him is given by al-Sarrādj and al-Kalābādhī; the brief biographies of al-Sulamī and Abū Nuʿaym agree almost verbatim, as do the Persian notes in Anṣārī and Jāmī. ʿAṭṭār's biography elaborates on otherwise little-known details; Baḳlī devotes five chapters (§§ 95-9) of his *Sharḥ-i shaṭḥiyyāt* to al-Nūrī.

It is said that he acquired his surname because "he radiated light when talking"; he claimed "I looked into the light until I became that light myself." A disciple of al-Sarī as-Saḳaṭī, he underwent extreme self-mortification: "Ṣūfism is leaving all pleasures of the *nafs*", and emphasised the true *faḳīr*'s reliance upon God alone. His best-known quality is *īthār*, i.e. that "it is a religious duty to prefer one's companions to oneself"; for "Ṣūfism consists not of forms and sciences but of *akhlāḳ*, good qualities." That is illustrated by his attitude during the trial of the Ṣūfīs by Ghulām Khalīl in 264/877, where he offered up his life for his friends, whereupon the caliph acquitted the Ṣūfīs. Al-Nūrī was quite emotional, and considered intellect to be "incapable"; contrary to the sober and prudent Djunayd he enjoyed participating in the *samāʿ*: "The Ṣūfī is one who hears the *samāʿ*", and Baḳlī asks in his threnody (*Sharḥ*, § 377) "Where is the singing, *tarannum*, of Nūrī?" That his death was caused by his running, in full ecstasy, into a freshly-cut reedbed and dying from wounds, fits into this picture, as does Anṣārī's remark that "he was more worshipping, *aʿbad*, than Djunayd." Al-Nūrī, who, according to ʿAṭṭār, was seen weeping along with the sad Iblīs, claimed to be a lover, *ʿāshiḳ*, which led the Ḥanbalīs to declare him a heretic; but for him, *maḥabba* (mentioned in Ḳurʾān, V, 59) was a higher stage than *ʿishḳ*, and "Love is to tear the veils and unveil the secrets." More dangerous seemed his remark "Deadly poison!", when hearing the *muʾadhdhin*'s call, but answering a dog's barking with *labbayka*; he intended to blame the one who performed religious duties for money, but understood every creature's praise of God, even from the dog's mouth.

Al-Kalābādhī mentions that al-Nūrī wrote about mystical sciences with *ishārāt*, symbolic expressions, but only recently did P. Nwyia discover his *Maḳāmāt al-ḳulūb*, which contains descriptions of the heart, that house of God, which is inhabited by the King Certitude, who is aided by two viziers, Fear and Hope. Such an allegorical interpretation of Ḳurʾānic data appears also in the comparison of the heart to a castle with seven ramparts (reminiscent of St. Theresa's imagery). The language of al-Nūrī, called by ʿAṭṭār *laṭīf ẓarīf*, "fine and elegant", is highly poetical, and a number of brief poems is attributed to him; the imagery of the heart as a garden which is fertilised, or else destroyed, by rain and in which laud and gratitude are the odoriferous herbs, prefigures Persian garden imagery. Al-Nūrī is called "the faithful one, *ṣāḥib al-wafāʾ*, and "prince of hearts", *amīr al-ḳulūb*, and, as a true love mystic, was one of the most remarkable companions of Djunayd, who said at his death, "half of Ṣūfism is gone".

(ANNEMARIE SCHIMMEL)

NŪRĪ, SHAYKH FAḌL ALLĀH, the most notable of the anti-constitutionalist *ʿulamāʾ* in the Persian Revolution of 1906.

Ḥādjdjī Shaykh Faḍl Allāh Nūrī was born in Tehran in 1259/1843-4 and went at an early age to study in the ʿAtabāt [*q.v.* in Suppl.] under his uncle Mīrzā Muḥammad Ḥusayn Nūrī, and under Mīrzā Ḥasan Shīrāzī (M. Turkamān, *Shaykh-i shahīd Faḍl Allāh Nūrī*, Tehran 1362 *Sh*/1983, i, 9). In about 1300/1883 he returned to Tehran, where he gradually emerged as the leading scholar and jurist. He was active in the movement against the Tobacco Concession in 1308-9/1890-1, but otherwise not particularly prominent politically until 1321/1903, when ʿAyn al-Dawla was appointed Ṣadr-i Aʿẓam and passed on to Shaykh Faḍl Allāh the responsibility for government business in the *sharīʿa* courts, which had previously come under the *mudjtahid* Sayyid ʿAbd Allāh Bihbihānī (Mīrzā Muḥammad Nāẓim al-Islām Kirmānī, *Tārīkh-i bīdārī-yi Īrāniyān*, Tehran 1361 *Sh*/1982, i, 210). Shaykh Faḍl Allāh supported ʿAyn al-Dawla's reforms of the finances in an attempt to preserve the traditional system of government and authority, but when the Ṣadr-i Aʿẓam's régime collapsed in Djumādā II 1324/July 1906, Shaykh Faḍl Allāh was forced to join what became the constitutional movement, although he had previously expressed doubts about constitutionalism (Nāẓim al-Islām, *Bīdārī*, i, 321-4).

He found himself in eclipse, however, until the accession of Muḥammad ʿAlī Shāh [*q.v.*] in Dhu 'l-Ḳaʿda 1324/January 1907 gave him a powerful new ally. Having failed in discussion to modify the radical measures of the proposed Supplementary Fundamental Law he took *bast* [*q.v.*] or sanctuary in the Shrine of Shāh ʿAbd al-ʿAẓīm from 9 Djumādā II to 8 Shaʿbān 1325/20 June to 16 September 1907, almost certainly financed by the Shah (Spring Rice to Grey, no. 143, 10 July 1907, FO 416/34 no. 136; Y. Dawlatābādī, *Tārīkh-i muʿāṣir yā ḥayāt-i Yaḥyā*, ii, Tehran 1337 *Sh*/1958, 129). From there he published a series of propaganda leaflets in which he argued for *mashrūṭa-yi mashrūʿa*, or more specifically *niẓām-nāma-yi islāmī*, an Islamic constitution (for the leaflets, see Turkamān, *Shahīd*, i, 231-368; H. Riḍwānī, *Lawāyiḥ-i Āḳā Shaykh Faḍl Allāh Nūrī*, Tehran 1362sh/1983). He also maintained that constitutionalism was contrary to the *sharīʿa*, most notably on the point of equality before the law (Turkamān, *Shahīd*, 287-8, 291-2). Following the fear and disarray induced in the court at the assassination of the then prime minister Amīn al-Sulṭān, the Shah appears to have withdrawn his support and Shaykh Faḍl Allāh emerged from *bast*. He participated in the royalist demonstrations of Dhu 'l-Ḳaʿda 1325/December 1907 but did not return to prominence until after the coup of Djumādā I 1326/June 1908. Then in a *fatwā* (M. Malikzāda, *Tārīkh-i inḳilāb-i mashrūṭiyyat-i Īrān*, Tehran 1351 *Sh*/1972, iv, 211-21) and in a work entitled *Tadhkirat al-ghāfil wa-irshād al-djāhil* (Turkamān, *Shahīd*, i, 56-75), he provided the Shah with a legitimising ideology for his refusal to restore the *madjlis*, arguing most notably that the Shah was one of the two pillars of Islam together with the *ʿulamāʾ*, his role being to maintain order and stability (Malikzāda, *Mashrūṭiyyat*, iv, 217). He further contended that constitutionalism was pernicious, since it contradicted the five Muslim precepts (*al-aḥkām al-khamsa*), implying that it interfered with the soteriological purpose of Islam (V.A. Martin, *Islam and modernism: the Iranian Revolution of 1906*, London 1989, 178-9). In addition, he attacked the constitutionalists' source of legitimacy in representation of the will of the people, arguing that it had no basis for any claim to authority in Imāmī Shīʿī law (Malikzāda, *Mashrūṭiyyat*, IV, 211; Turkamān, *Shahīd*, i, 67, 89-90; Martin, *op. cit.*, 181-3).

After the abdication of Muḥammad ʿAlī Shāh in Radjab 1327/July 1909, Shaykh Faḍl Allāh declined the chance of refuge in the Russian Legation along with the Shah and his other prominent supporters (Malikzāda, *Mashrūṭiyyat*, v, 265, vi, 117). He was arrested, tried on 13 Radjab 1327/31 July 1909 and publicly executed immediately afterwards. On the scaffold he is said to have recited the verse, "If we were a heavy burden, we are gone; if we were unkind, we are gone" (E.G. Browne, *The Persian revolution 1905-9*, Cambridge 1910, 444; see also Nāẓim al-Islām, *Bīdārī*, ii, 535).

(VANESSA MARTIN)

NURI KILLIĞIL [see ENWER PASHA].

NŪRĪ AL-SAʿĪD, fourteen times Prime Minister of ʿIrāḳ under the monarchy (1921-58) and one of the most robust Arab politicians of his generation, was born in Baghdād in 1888, the son of a minor administrative official, and was killed at the hands of a hostile crowd in Baghdād on the day after the ʿIrāḳī Revolution of 14 July 1958. Nūrī attended military schools in Baghdād and Istanbul, receiving his commission in 1906; after four years soldiering in ʿIrāḳ, he returned to the Staff College in Istanbul, participating in campaigns in Macedonia (1911) and in the Balkan Wars (1912-13). In common with many of his fellow Arab officers, he was attracted to the liberal aims of the Committee of Union and Progress [see ITTIḤĀD WE TERAḲḲĪ DJEMʿIYYETI], only to be disappointed by the increasingly centralising and pro-Turkish policies which it pursued when in power. Along with several other ʿIrāḳīs, Nūrī joined *al-ʿAhd*, a secret society of Arab officers in the Ottoman Army, founded by ʿAzīz ʿAlī al-Miṣrī.

At the outbreak of the First World War, Nūrī was in Baṣra where he surrendered to the British occupying forces. He was sent briefly to India and eventually made contact with ʿAzīz ʿAlī al-Miṣrī, whom he joined in Cairo at the end of 1915. Shortly afterwards he was asked to take part in the British-sponsored Arab

Revolt, which the Sharīf Ḥusayn of Mecca [*q.v.*] proclaimed against the Ottomans (or more specifically against the government of the Committee of Union and Progress), on 5 June 1916. Al-Miṣrī was the first commander of the Sharīfian forces, but he soon fell out with the Sharīf and returned to Egypt. His place was taken by Djaʿfar al-ʿAskarī, captured by the British in the Western Desert a few months earlier, who was doubly Nūrī's brother-in-law—the two men were married to each other's sisters. Nūrī himself became "coordinator and adviser-in-chief to the Sharīfian forces" and then "Chief of Staff" (Lord Birdwood, *Nuri as-Said: a study in Arab leadership*, London 1959, 45, 59). During his time in the Ḥidjāz and Syria, Nūrī developed close personal relationships with a number of British officers, and also with Ḥusayn's second son, Fayṣal (1885-1933 [*q.v.*]), remaining at the latter's side from August 1917 until, and well beyond, the capture of Damascus in October 1918. In the course of the War Nūrī received two British decorations for gallantry, the C.M.G. and the D.S.O.

In common with those with whom he was most intimately concerned, Nūrī would have had no clear idea of Britain's plans for the Arab provinces of the Ottoman Empire in event of the defeat of the Central Powers in the First World War. However, since Britain had given its backing to Sharīf Ḥusayn and his sons, it was reasonable to assume that they would be involved in whatever future settlement of the area might be reached. Early in November 1918, Fayṣal invited Nūrī to accompany him on his journey from Syria to London (via France) and then to the peace conference in Paris, where he was to represent the Ḥidjāz. The French made it clear to Fayṣal that they had no intention of recognising the "Arab kingdom" which he had established in Syria in October 1918.

Encouraged, perhaps, by the fact that almost a year passed before sufficient French troops arrived in Syria to enforce French policy, Fayṣal's supporters there were determined not to give up their state. The First Arab Congress, held in Damascus on 7-8 March 1920, proclaimed Fayṣal King of Syria and his brother ʿAbd Allāh King of ʿIrāḳ. A few weeks later, under the terms of the Treaty of San Remo, France was given the mandate for Syria and Lebanon, and Britain the mandate for ʿIrāḳ and Palestine-Transjordan. By this time there was a substantial French military presence in Syria; on 14 July 1920 the French delivered an ultimatum to Fayṣal to accept the terms of the mandate, and when this was not accepted, defeated his army at Khān Maysalūn [see MAYSALŪN] a few miles outside Damascus, ten days later. Fayṣal, with Nūrī at his side, left for Egypt, and eventually for discussions in London in the late autumn of 1920.

In the immediate aftermath of the First World War, British plans for the territory which was to become ʿIrāḳ were by no means clear. Most of the British administrators there had served in India, where they were used to a system of direct rule by British officials, and had little understanding of any expression of "national" or "Arab nationalist" aspirations. In the late summer of 1920 there was an uprising in ʿIrāḳ against the British occupation, which elicited a fundamental change in British policy. A provisional Arab government was formed at the end of October, and at the Cairo Conference in March 1921 it was decided to offer Fayṣal the throne of ʿIrāḳ, thus giving substance to the negotiations which had taken place in the course of his own and Nūrī's visit to London the previous October. Fayṣal arrived in Baṣra at the end of June, and was duly enthroned in Baghdād on 23 August.

Meanwhile, Nūrī had returned to Baghdād in January 1921, where he was made Chief of Staff of the ʿIrāḳī Army under his brother-in-law Djaʿfar, Minister of Defence in the provisional government. For most of the 1920s Nūrī concentrated on building up the ʿIrāḳī Army, in his capacity either as Chief of Staff (1921-2) or as Minister of Defence, an office he held in seven of the nine cabinets formed between November 1922 and March 1930. Between March 1930 and October 1932 he served as Prime Minister, and was intimately involved in the negotiations for the Anglo-ʿIrāḳī Treaty of 1930 which provided for the official withdrawal of British control over ʿIrāḳ and for ʿIrāḳ's entry into the League of Nations in 1932.

King Fayṣal's premature death in August 1933 left a power vacuum at the centre of ʿIrāḳī politics. His son Ghāzī, then aged 21, was both inexperienced and lacking in political acumen, with the result that control of the country passed increasingly to former or serving military officers. In October 1936, General Bakr Ṣidḳī led a coup against the government of (former Major-General) Yāsīn al-Hāshimī, in which Nūrī was serving as Minister of Foreign Affairs and Djaʿfar as Minister of Defence. Djaʿfar was shot at Ṣidḳī's instigation while trying to negotiate with the coup leaders; Yāsīn died in exile a few months later, and Nūrī was smuggled out of the country via the British Embassy. He returned to ʿIrāḳ in the autumn of 1937, a few months after the overthrow of Bakr Ṣidḳī, and proceeded to wage a relentless vendetta against the perpetrators of the coup of October 1936 in general, and in particular against those involved in his brother-in-law Djaʿfar's murder. Eventually, Nūrī formed his third cabinet, and, apart from a crucial few months out of office between January and October 1941, served as Prime Minister for much of the period between December 1938 and June 1944, often holding the Defence and/or Foreign Affairs portfolios at the same time.

Two incidents during these years were to have lasting effects upon Nūrī's subsequent career, and generally to alienate him from public esteem. The first of these was the persistent allegation that he was in some way involved in Ghāzī's death in a motor accident in April 1939. Nūrī was openly contemptuous of Ghāzī (whose evident character defects were redeemed in the eyes of many ʿIrāḳī "nationalists" by his anti-British posturings), and his death and replacement by his more malleable cousin ʿAbd al-Ilāh as Regent for Ghāzī's son Fayṣal II (who was four years old in 1939), certainly simplified matters for Nūrī and his British patrons. In any case, whether or not this allegation had any foundation was less important than the fact that it was widely believed (see Hanna Batatu, *The old social classes and the revolutionary movements of Iraq; a study of Iraq's old landed classes and its Communists, Ba'thists and Free Officers*, Princeton 1978, 342).

The second incident was the complex of events surrounding ʿIrāḳ's participation in the Second World War. There is little doubt that the anti-British movement initiated in 1940-1 by the so-called Golden Square (four Arab nationalist Army colonels, all some ten years younger than Nūrī) and their political mouthpiece Rashīd ʿAlī al-Gaylānī [*q.v.*], had immense popular appeal. Especially after the fall of France in 1940, the notion that ʿIrāḳ should either remain neutral—in defiance of the provisions of the Treaty of 1930—or even, in the minds of some, call upon Germany to force Britain out of ʿIrāḳ, began to gain ground. In April 1941 the Golden Square staged a coup which brought Rashīd ʿAlī to power. Nūrī and ʿAbd al-Ilāh fled to Jordan with British assistance,

while the ᶜIrāḳī Army fought a somewhat quixotic one-month campaign against a British force. The defeat of the ᶜIrāḳī Army was followed by a "second British occupation"; as for the Regent and Nūrī, "their return from abroad only after the country had been subdued by British power made them so odious among the people that, regardless of what they did afterwards, they were never able to command public confidence" (Batatu, *op. cit.*, 345).

By this time certain guiding principles of Nūrī's conduct may be discerned. As the First World War ended, he seems to have realised that some form of foreign control over the Arab provinces of the former Ottoman Empire was inevitable, and that his own career would be best served by a pragmatic acceptance of this situation. Nūrī saw the future of the Arab world in terms of a loose confederation of regions (and eventually of individual states) under the general aegis of Britain, and, if more reluctantly, of France. His patron Fayṣal's translation to ᶜIrāḳ in 1921 gave Nūrī the opportunity to assist in building up a state which was independent at least to the extent that it was no longer part of the Ottoman Empire, and which might eventually emerge as a leading regional force, largely through the agency of the Army, whose construction and organisation was one of his principal concerns throughout the 1920s and 1930s.

The major flaw in this design was that because Fayṣal and the Hās͟himite house on the one hand, and Nūrī and his circle on the other, were regarded by members of the "Old Social Classes" first as foreigners and outsiders and secondly (because of their lower class origins) as upstarts, both were forced to rely on Britain in ways which became more and more intolerable to the politically conscious sections of the ᶜIrāḳī population. Fayṣal died before these tensions had developed beyond the point of no return, although he earned considerable opprobrium towards the end of his life because of his acceptance of the restrictions on ᶜIrāḳ's independence in the Anglo-ᶜIrāḳī Treaty of 1930.

Realising the extent of his own isolation within ᶜIrāḳ, Nūrī tried to secure his base by placing trusted friends and colleagues in key positions in the army, so that in 1936, all of the Army's 3 major-generals, 3 of its 4 brigadiers and 6 of its 11 colonels were former S͟harīfian officers. In addition, as he gradually gained greater control of the state machinery, he was able to win over the tribal *s͟hayk͟h*s and urban notables by co-opting them both politically and economically (see Batatu, *op. cit.*, *passim*), a process greatly facilitated during and after the Second World War by this group's hostility to and fear of a burgeoning spectrum of "opposition" parties and groups.

On his return to power after the Anglo-ᶜIrāḳī "War" of 1941, Nūrī began to root out the Pan-Arab supporters of the Golden Square from within the Army, while putting forward his own modest version of Arab nationalism, the "Fertile Crescent" scheme, in 1943. This involved the creation of a "Greater Syria" out of Syria, Jordan, Lebanon and Palestine, with which ᶜIrāḳ would be associated, possibly leading to a wider federation which might embrace Egypt and Saudi Arabia. Needless to say, this arrangement (whose details were extremely vague) was to come into being under the benevolent auspices of Britain. The Egyptians, Syrians and Saudis were intensely suspicious of anything that might smack of Hās͟himite domination, and in its place the Arab League, a loose arrangement which maintained the structures of the existing states and was designed to foster cooperation rather than Arab unity, came into being in May 1945.

British relations with ᶜIrāḳ, or more accurately with Nūrī and the Regent, remained close until the Revolution of July 1958, although British officials were often bothered by the extent to which "our eggs are concentrated in Nūrī's somewhat unstable basket" (quoted in Batatu, *op. cit.*, 347). Throughout the 1940s, and especially after the ill-fated attempt to extend the Anglo-ᶜIrāḳī Treaty of 1930 at Portsmouth in January 1948, the political situation in ᶜIrāḳ was characterised by mounting repression and increasingly dictatorial régimes, presided over either by Nūrī himself or by his acolytes and supporters. Britain tolerated this state of affairs for a number of reasons, not least among which were its concern to maintain the free flow of oil from ᶜIrāḳ, and to preserve the British air bases there, but also because no amount of prodding seemed sufficient to persuade Nūrī to change his ways, or to train up a less compromised successor. At the same time, Nūrī's relative lack of concern over Palestine, and his imperturbable championing of unpopular causes (notably ᶜIrāḳī membership of the Bag͟hdād Pact in 1955) made it easier for Britain to overlook his shortcomings.

In time, popular resentment against Nūrī and his circle reached a crescendo, although, given the nature of the political system, it was impossible for the régime to be ousted other than by force. In the course of the 1950s, a conspiratorial movement of Free Officers emerged in the Army, which eventually took advantage of military manoeuvres in July 1958 to direct units commanded by its sympathisers to take control of key locations in Bag͟hdād. On the morning of 14 July the Royal Palace was surrounded, and the King (Fayṣal II had attained his majority in 1953) and his uncle (the former Regent, now Crown Prince), were killed. Nūrī went into hiding, but was discovered on the afternoon of the next day; his body, and that of the Crown Prince, both of whom were the objects of particular hatred, were dragged through the streets and eventually torn to pieces by the mob.

Possibly as a result of their reluctance to face harsh realities, few British diplomats concerned with ᶜIrāḳ in the 1950s thought that a major change in the status quo was imminent (see here W.R. Louis, *The British and the origins of the Iraqi Revolution*, in R.A. Fernea and W.R. Louis, *The Iraqi Revolution of 1958: the Old Social Classes revisited,* London and New York 1991, 31-61). It is clear now that the perpetuation of the immense social inequalities over which Nūrī presided (which increased with the rapid rise in oil revenues and the inauguration of the Development Board in the early 1950s), together with his dictatorial style and his constant manipulation of the electoral and parliamentary systems, were major causes of the chaos and violence which erupted when the dam finally broke in July 1958. It is not clear either that this was "inevitable", or that Nūrī had "no choice" in acting as he did. While Nūrī was clearly Britain's most faithful servant in ᶜIrāḳ, the nature of his contribution to the history of his own country remains rather more difficult to assess.

NURSĪ, SHEYKH BADĪʿ AL-ZAMĀN SAʿĪD (Modern Tkish. Bediuzzaman Said Riza-Nursi) (*ca.* 1876-1960), religious leader, of Kurdish origin, in late Ottoman and Republican Turkey.

Saʿīd Nursī, the author of the *Risāle-yi Nūr* "Epistle of Light" (or "Wisdom") from which the intellectual-religious movement known as Nurculuk [*q.v.*] sprang, was born in the village of Nurs in the province of Bitlis [see BIDLĪS] in eastern Turkey. His father apparently belonged to a local family of notables, as indicated by his surname Mīrzā. Nursī started his education in the *medrese* of Seyyid Nūr (the names of many places and people with whom he was associated, including that of his mother, Nūriyye, derived from *nūr* "light"), but he soon changed to an intensive, three-month-long study under Sheykh Meḥmed Djelālī in Beyazit; he received the title of Mollā [*q.v.*], and from then on he continued his education on his own. During his travels around the province he developed an interest in the life of the common people and a deep feeling for nature that stayed with him all his life. His growing erudition, communal involvement and occasional confrontation with Ottoman officials earned him first the title of *Meshhūr* ("famous") and later, around 1894, that of *Badīʿ al-zamān* or "beauty of the age". In 1909 he started to call himself *gharīb* ("stranger" or "dissident") in order to show that his way of thinking and behaving differed from that of his contemporaries, a strangeness displayed outwardly by his native garb and the gun and knife in his belt, resembling more his fellow-Kurdish tribesmen than a refined city *ʿālim*.

After spending two years in Bitlis as the guest of ʿÖmer Pasha, Nursī moved to Van in 1894, where he lived in the house of the provincial *wālī* or governor Ishkodralî Ṭāhir Pasha. There he acquainted himself with the physical and natural sciences and began to apply their methodology both to the teaching of Islam and to demonstrate the truth of the faith. At about this same time he began to move closer to the Ottoman establishment, away from the Nakshbandiyya Khālidiyya Ṣūfīs with whom he first studied and closer to the Ḳādiriyya. After making the acquaintance of modern science, Nursī adopted the view that progress and salvation lay not in the faith alone but also in the sciences and in government action. (The preoccupation with "philosophy", as he called it, engaged him until about 1920, when he rediscovered the superiority of faith.) During his stay in Van, according to his biographer, Nursī read a declaration attributed to Gladstone, the British Liberal statesman known for his anti-Turkish views, that "we [the British] cannot dominate the Muslims as long as we do not take the Koran away from them" (Şahiner, 1988, 73); he now swore to prove to the world that "the Ḳurʾān was a spiritual sun and indestructible" (*ibid.*). His religious dedication, coupled with his association with Ottoman officials, eventually secured for Nursī in 1907 an introduction to Sultan ʿAbd ül-Ḥamīd II. However, his coarse appearance, his petition for the establishment of modern schools in Bitlis province and his assertion that "Islam does not sanction tyranny" landed him first in the Yîldîz military court and then in a mental hospital (in order to avoid the possible imposition of severe punishment). This incident shows clearly the difference between the two forms of Islamism or Pan-Islamism [*q.v.*] that dominated Ottoman society in the period 1870-1908. On the one hand, there was the caliph's Pan-Islamism that relied on the government, its bureaucracy and the traditional religious establishment for its survival; on the other hand, there was the populist, grass-roots form of religion that relied on community support. Nursī's advocacy of this latter, populist Islamism before the foremost proponents of the traditional view did not sit well with the bureaucrats.

He was, in fact, the product of socio-political changes occurring in Anatolia, which had passed from the rule of local feudal lords, thanks to the centralising policy of the government, but now came under the spiritual domination and the social guidance of the *ṭarīḳat sheykhs*, since, although theoretically under the rule of the new bureaucracy, the hinterlands were not in fact brought completely under the influence of the centre, allowing the *sheykhs* more power as leaders of local society. However, Nursī's communal, Nakshbandī Islam was also increasingly confronted not only by ʿAbd ül-Ḥamīd's state-sponsored Pan-Islamism but also by the positivist and the liberal ideology of the growing modernist intelligentsia. Nursī accepted in varying degrees some of the tenets of all these ideologies, in the end opting fully for religious orthodoxy while evolving an Islamic-modernist-national philosophy of his own. His aims were not only to rejuvenate the faith but also to revitalise the society in which the faith found its expression. This preoccupation with the living society had the effect of elevating the local culture and the vernacular (Nursī only learned Turkish around the age of 14) to respectability and gave love of country (*waṭan*) and the natural aspects of human existence the sanction of religion. Yet the same forces that conditioned modernist and nationalist views also created disunity in society and a penchant for materialism, and these ills became Nursī's ultimate target.

From roughly 1895 to 1921, Nursī lived the life of an up-and-coming Ottoman rural intellectual. He came to share the patriotic and nationalist-religious views of this group of people as well as their search for social status and position which socio-economic and political change offered the opportunity to achieve. Thus he at first joined the Young Turk Revolutionaries, delivering in Salonica in 1908 a fiery speech glorifying the virtues of political liberalism; but later, in reaction to the positivist secularism of the Young Turks, he helped found the *Ittiḥād-i Muḥammedī* (Muslim Union), which staged the abortive counter-revolution of 1909. Arrested and tried, but acquitted, he went back to his native region where he taught for a while. Then he participated in the Turkish war effort and helped prepare the call to *djihād* against the Allies. In 1915, he went by submarine to Libya, in order to work with the Sanūsiyya [*q.v.*] against the Italians. Returning home, he took part in the defence of Bitlis, was captured by the Russians, but escaped in 1917 and returned home via Warsaw and Vienna. He held a teaching job in Istanbul for about three years, after which the ascetic, spiritual "new" Saʿīd replaced the activist, worldly "old" Saʿīd.

The change was caused as much by Nursī's increasing age as by the establishment of the Republic, the abolition of the caliphate (which he apparently accepted), and the passing of the old Ottoman order. Probably the "old" Saʿīd would have long been forgotten if the "new" one had not emerged. Nursī described his life until the early 1920s as a time of preparation and training necessary for the creation of the man who subsequently made himself into the

voice of the community and the faith. He criticised not the new régime, or even its reforms, but the spiritual and ethical void which it had created in society in the name of science and progress, which it saw as synonymous with "secularism". From 1925 almost until his death in 1960, Nursī was viewed as the enemy of the new régime, although the truth of this view was never proved. In 1925 he was arrested for alleged involvement in the Kurdish revolt of S̲h̲eyk̲h̲ Saʿīd, and although he was once more acquitted, he was forced to settle in the town of Barla in the Isparta province, where he wrote two-thirds of his *Risāle-yi Nūr* (originally called *Sözler*). He began to attract an increasingly large group of followers who copied by hand his writings in the Arabic script and distributed them all over Anatolia; eventually he permitted the printing of the *Risāle* in Latin script. Nursī repeatedly stated that all the persecutions and hardships inflicted on him were God's blessings, serving to define more clearly his path and his mission to save the faith. He held that the secularist régime in Ankara, having destroyed the formal religious establishment, had unwittingly left popular Islam as the only authentic faith of the Turks, allowing Saʿīd Nursī to become its spokesman, symbol and martyr.

Alarmed by the growing popularity of Nursī's teachings, which had spread even among the intellectuals and the military officers, the government arrested him again in 1934 and sent him, first, to Eskişehir and, later, to seven years' enforced exile in Kastamonu. He was subsequently arrested again in 1943, 1948 and 1952 for allegedly violating laws mandating secularism, but was finally acquitted in 1956. This was the result, among other things, of the official opinion issued by the *Diyanet* (Religious) Affairs Directorate which finally stated that Nursī's teachings were spiritual and Islamic. He had returned meanwhile to Isparta, which he considered his home, and there openly cast his vote for the Democratic Party, which had restored some religious freedom. He died in Urfa on 23 March 1960 and was buried there, but the military government that came to power on 27 May 1960 exhumed the remains (supposedly in response to his brother's request) and buried him in secret in an unknown place in the mountains of Isparta.

The broad range of Saʿīd Nursī's teachings rested on the fact that he considered himself not a *s̲h̲eyk̲h̲* but an *imām*, similar to al-G̲h̲azālī and Aḥmad Sirhindī [*q.vv.*], and followed the orthodoxy of ʿAbd al-Ḳādir al-D̲j̲īlānī [*q.v.*]. Absolute faith (*īmān*) in God was the foundation of his belief. In this respect he departed from the Ṣūfī personalised love and search for unity with God as well as from the Naḳs̲h̲bandī concept of the *ṭarīḳat* or brotherhood as the vehicle of the faith. He adopted the notion of *millet* (the nation) as the collectivity of the Muslims, with *Islāmiyyet* (the faith), the whole of this superseding ethnic, linguistic and local differences. The *millet* was, in fact, a new type of political-social entity, in which nature and humanity existed in harmony and balance, both being viewed as God's creations and the proof of His existence.

Religion, according to Nursī, operated in a social and human environment and had to take into consideration the changing nature of society and the needs of the human being. He regarded modern society—notably that of the West—and that espoused under the positivist-materialist policy of the Turkish government in the name of "secularism" as the source of materialism and spiritual impoverishment. He considered that the level of development of the faith was conditioned by the intellectual, moral, and economic level of development in society, and upheld the virtue of labour (*say-etmek, çalışkanlık* "exertion" or "activity"), mutual help, self-awareness and property rights, moderate acquisitiveness being a natural, God-given instinct. He criticised the *ulema* for turning their back on the physical sciences; in fact, he advised them to study these sciences. For him, ignorance (*cehalet*), poverty (*fakirlik*), and dissension were the worst enemies of society. Nursī's teachings lacked the dogmatism and rigidity that infected many other fundamentalist movements and appeared at times to say many things at once. This vagueness appealed to a variety of groups, ranging from modernists to moderate conservatives and dedicated Islamists. Above all, however, it was the example of the man and his life that has won him a wide following: a simple Kurdish villager with limited formal education, who eventually opted for membership in the newly-formed Turkish nation (he dropped the name Saʿīd-i Kurdī) as having the potential best to represent the brotherhood of Muslims.

Bibliography: The best and most comprehensive biography is that of Necmeddin Şahiner, *Bilinmeyen taraflariyle Bediuzzaman*, 7th ed. Istanbul 1988. Others include Cemal Kutay, *Tarih sohbetleri*, vols. i-vi, Istanbul 1966-7; *Nurculuk*, Ankara 1968; Şerif Mardin, *Religion and social change in modern Turkey*, Albany, N.Y. 1989; Sefa Mürsel, *Bediüzzaman Said Nursi ve devlet felsefesi*, Istanbul 1976; Hamid Algar, *Said Nursi and the Risale-i Nur*, in *Islamic perspectives. Studies in honour of Sayyid Abul Ala Mawdudi*, Leicester, 1979, 313-33. (Kemal Karpat)

NUṢAYB al-Aṣg̲h̲ar, Abu 'l-Ḥad̲j̲nāʾ (not to be confused with Nuṣayb b. Rabāḥ [*q.v.*], who is sometimes given the *kunya* of Abu 'l-Had̲j̲nāʾ), a negro poet of the Arabic language originally from Yamāma.

He is described as *mawlā 'l-Mahdī* to distinguish him from his homonym, because the future ʿAbbāsid caliph had bought him and freed him during the reign of al-Manṣūr (136-58/754-75). It was he who gave him his *kunya* and married him to a female slave named D̲j̲aʿfara. Once established on the throne (158/775), al-Mahdī, whose companion he had become, offered him property in the Sawād and entrusted him with various missions, one of which is given considerable prominence by the biographers: having been sent to the Yemen to buy *mahriyya* camels [see MAHRA, at VI, 83 a-b) for a sum of 20,000 dīnārs which the governor was ordered to deliver to him, he spent this money on his personal needs and pleasures; imprisoned in the Yemen, then taken to Bag̲h̲dād in chains, he gained the caliph's pardon as a result of the intervention of a certain T̲h̲umāma b. al-Walīd al-ʿAbsī to whom he expressed his gratitude; he was furthermore a friend of the latter's brother, S̲h̲ayba, over whose death he wept. He also expressed his appreciation of al-Mahdī in a long *ḳaṣīda* (-*ʿu* rhyme, metre *ṭawīl*) and some other pieces (notably a poem in -*ʾuhā*, metre *ṭawīl*). His daughter Ḥad̲j̲nāʾ, also a talented versifier, addressed adulatory poems to the caliph and to his daughter ʿAbbāsa [*q.v.*]. After the death of al-Mahdī (169/785), Nuṣayb is encountered in the entourage of al-Ras̲h̲īd (170-93/786-809), who even appointed him head of a province of Syria, where he exploited his authority for his own enrichment. Naturally enough, he composed, in a long *ḳaṣīda* (-*lū* rhyme, metre *ṭawīl*), the eulogy of this caliph, whose wife Zubayda [*q.v.*] was also the object of his praises, on the occasion of her pilgrimage to Mecca (-*mī* rhyme, metre *ṭawīl*).

During this period, he also maintained amicable

relations with the Barmakids, in particular with al-Faḍl b. Yaḥyā (d. 193/808 [*q.v.*]), who offered him both a house and property. There is a general impression that at least some of his work is inspired by the exchanges of gifts with other, lesser-known individuals, by gratitude for the presents solicited or by anger when his expectations were disappointed. Although he is described by the *Aghānī* as *hadjdjāʾ malʿūn*, there are barely any traces of *hidjāʾ* in what has survived of his work, other than a satirical poem addressed to the governor of Ṣanʿāʾ, who had accepted his adulation but had not rewarded him (*-rī* rhyme, metre *ṭawīl*).

The *Fihrist* (163, Cairo edition, 231-2) estimates his corpus as comprising 70 compositions, but of this only a few verses have survived. The critics have been unstinting in their praises for his talent. They place him at the same level as his homonym, declare that al-Rashīd preferred him to other poets and speak highly of his qualities in the domains of amorous poetry, panegyric, satire and description, but it is difficult to corroborate their judgment.

Bibliography: The principal biography is that of the *Aghānī*, xx, 25-34 = ed. Beirut, xxiii, 400-37. See also Abū Tammām, *Ḥamāsa*, i, 273; Djāḥiẓ, *Burṣān*, 107, 108, 314; Ibn al-Muʿtazz, *Ṭabaḳāt*, ed. Eghbal, 68-9; Yāḳūt, *Irshād*, vii, 216-18 = *Udabāʾ*, xix, 234-7; Ziriklī, *Aʿlām*, viii, 356; Sezgin, *GAS*, ii, 539. (CH. PELLAT)

NUṢAYB al-Akbar B. **RABĀḤ**, Abū Miḥdjan, a negro poet of the Arabic language who is said to have belonged, originally, to a Kinānī of Waddān, a small village close to Medina (see al-Masʿūdī, *Murūdj*, Arabic index, s.v.); it could, however, be supposed that the locality in question is rather the main settlement of the oasis of Djufra [*q.v.*] which bears the same name, since the available information regarding the biography of Nuṣayb indicates that he was a native of Africa. In any case, attempting to establish his origin would be futile, since this has been the object of so many speculations that it is impossible to draw any firm conclusions (Abu 'l-Faradj reproduces these speculations conscientiously, without deluding himself as to their reliability). To explain the colour of his skin, he is supposed to have had Nubian parents, but according to the most trustworthy version, he was the son of a slave who was made pregnant by her master, who died before the birth of the child; his paternal uncle having offered him for sale, he was bought by a Kinānī of Waddān, but it is quite certain that accounts relating to this period of his life have no historical validity. The circumstances of his attainment of freedom are also variously explained. According to the most often repeated story, when he began to compose poetry the dignitaries of the tribe intervened on his behalf with his master, who sent him to Egypt where, after a long period of waiting, he succeeded in delivering a eulogy, at Ḥulwān, to ʿAbd al-ʿAzīz b. Marwān [*q.v.*], governor of Egypt. The Umayyad prince having bought and then freed him, he became for posterity the *mawlā ʿAbd al-ʿAzīz*, as Nuṣayb al-Aṣghar [*q.v.*] was to become the *mawlā 'l-Mahdī*. He took on the role of accredited panegyrist of his benefactor, whom he mourned when he fell victim to an epidemic of plague in 85/704. He had already sung the praises of Bishr b. Marwān (d. 74/693-4 [*q.v.*]), and he went on to address eulogies to the caliphs ʿAbd al-Malik b. Marwān (d. 86/705), Sulaymān b. ʿAbd al-Malik (d. 99/717) and ʿUmar b. ʿAbd al-ʿAzīz (d. 101/720), and to other aristocrats of Medina; he lived in fact in the Holy City, but also resided in Damascus. He died between 108 and 113/726-31.

In the course of his career as a panegyrist, he had occasion to exchange verses with al-Farazdaḳ, Djarīr and ʿUmar b. Abī Rabīʿa, and he was also sometimes at odds with al-Kumayt or Dhu 'l-Rumma, but he always refrained from the practice of *hidjāʾ* [*q.v.*]. Ibn Sallām places him in the sixth rank of poets of the Islamic period, and critics are particularly appreciative of his *nasīb*, always pure, and his *madīḥ*, which was in some respects his speciality and for which he possessed an acknowledged talent, although his panegyrics lack originality. In part, he owes his renown to the fact that some of his verses were set to music by Isḥāḳ al-Mawṣilī, who also devoted a monograph to him, *Akhbār Nuṣayb*, preceding al-Zubayr b. Bakkār, writer of another work with the same title.

Nuṣayb had married a white woman, whom he celebrated in the lyrical section of his work in such terms that he has been reckoned among the poetic lovers according to the ʿUdhrī tradition. (It is remarkable that the passage of the *Aghānī* relating to his wife was suppressed in the Cairo edition.) However, an original theme of his poetry was inspired by the colour of his skin on account of which he suffered considerable and intolerable racist abuse. He consoled himself, however, by insisting on his integrity and his greatness of soul. In this context, B. Lewis (*Race and color in Islam*, New York 1971, 12 ff. and *passim*; French tr., *Race et couleur en pays d'Islam*, Paris 1982, 29 ff. and *passim*) has raised the question of the extent to which awareness of his birth and his race affected this talented poet, of whom he recalls that he was one of the *aghribat al-ʿArab*, the "ravens of the Arabs". It is furthermore astonishing that the great champion of the Negroes, al-Djāḥiẓ (d. 255/869 [*q.v.*]) only quotes a few of his verses (*Bukhalāʾ*, ed. Ḥādjirī, 188; *Bayān*, i, 219; *Ḥayawān*, i, 30 (anonymous verse), iii, 206) and, in particular, does not include him among the number of his racial brothers whom he celebrates in his *Fakhr al-Sūdān ʿalā 'l-bīḍān*, where his name is not even mentioned.

Bibliography: To the references quoted above, the first source to be added is the *Aghānī*, which contains the most thorough biography (i, 129-50 = Beirut edition, i, 302-51). Another useful source is Yāḳūt, *Irshād*, vii, 212-16 = *Udabāʾ*, xix, 228-34. Fragments of his work (which amounted to 50 pieces, *Fihrist*, 163) have been assembled by U. Rizzitano, *Alcuni frammenti poetici di ... Nuṣayb*, in *RSO*, xxii (1945), 23-35, and by D. Sallūm, *Shiʿr Nuṣayb b. Rabāḥ*, Baghdād 1967. The most complete modern articles are those of Rizzitano, *Abū Miḥǵan Nuṣayb b. Rabāḥ*, in *RSO*, xx (1943), 421-71; of R. Blachère, *HLA*, 603-6 (with valuable bibliography), and of Sezgin, *GAS*, ii, 410-11 and index. For the rest, see Ibn Sallām, *Ṭabaḳāt*, 348, 529, 544-50; Abū Tammām, *Ḥamāsa*, index; Ibn Ḳutayba, *Shiʿr*, 242-4 = Cairo ed., 371-4; Washshāʾ, *Muwashshā*, 84; Zadjdjādjī, *Amālī*, 31-5; Marzubānī, *Muwashshah*, *passim*; Yāḳūt, *Muʿdjam*, index; Ibn Taghrībirdī, *Nudjūm*, i, 262-3; Anṭākī, *Tazyīn al-aswāḳ*, Cairo 1291, i, 98-100; Brockelmann S I, 99; Nallino, *La letterature arabica*, French tr., 238, 248-9; Rescher, *Abriss*, i, 194-6; Gabrieli, *Storia*, 120-1; Ziriklī, *Aʿlām*, viii, 355. (CH. PELLAT)

NUṢAYRIYYA, a Shīʿī sect widely dispersed in western Syria and in the south-east of present day Turkey; the only branch of extreme (*ghuluww*) Kūfan Shīʿism which has survived into the contemporary period.

1. Etymology

Pliny (*Hist. nat.*, v, 81) mentions a *Nazerinorum tetrarchia* in Coelesyria, situated opposite Apameia,

beyond the river Marsyas (not identified; probably the right-hand tributary of the Orontes passing to the east of the town), but this name is evidently not related to that of the sect. The Nuṣayriyya themselves derive the name from that of their eponym Ibn Nuṣayr, which would appear to be correct. In Arab-Islamic texts, the name is not attested in Syria before the establishment of the sect at al-Lā<u>dh</u>iḳiyya in the 5th/11th century.

2. Current distribution

In Syria, the heartland of the Nuṣayriyya is the <u>D</u>jebel Anṣāriyye (known today as *<u>D</u>jabal al-ʿAlawiyyīn*) between al-Ḥaffa to the north and Tall Kala<u>kh</u> to the south. From this nucleus, the Nuṣayriyya have spread out to occupy parts of the surrounding plains: the coastal plain to the west, the <u>Gh</u>āb to the east and the plain of ʿAkkār to the south-west. Nevertheless, the towns which surround the <u>D</u>jebel have always maintained a non-Nuṣayrī majority (al-Lā<u>dh</u>iḳiyya, <u>D</u>jabala, Bāniyās, Ṭarṭūs, Ṣāfīṭā, Tall Kala<u>kh</u>, Ḥimṣ, Maṣyāf, Ḥamāt). Nuṣayrī minorities are distributed to the south of Ḥimṣ, on the plateau between Maṣyāf and the Orontes, to the north-east of Ḥamāt and in the regions of Maʿarrat al-Nuʿmān, Idlib and Aleppo, as well as in Damascus. In 1964, the number of Nuṣayriyya in Syria was estimated at 600,000, or 11% of the population (more recent assessments do not exist). In Lebanon there is a Nuṣayrī minority immediately to the south of the Syrian frontier. Within the current boundaries of Turkey, sizeable minorities are to be found on the plateau of al-Ḳuṣayr, at Antakya (Antioch), on the plain of the Lower Orontes between Antakya and the estuary of the river, and on the coastal plain to the south-west of Iskenderun. Since the 19th century, Nuṣayrī colonies have become established in Cilicia, especially at Tarsus and Adana as well as in the surroundings of these two towns (approximately 80,000 in 1921; the current figures are not known. Cf. the maps in Weulersse, i, 58 f.).

3. Origins

The sect was formed in Irak in the mid-3rd/9th century. According to al-Nawba<u>kh</u>tī, 78 (cf. al-Ḳummī, 100-1; al-Ka<u>sh</u><u>sh</u>ī, 520-1; Halm, *Gnosis*, 282-3), Muḥammad b. Nuṣayr al-Namīrī was a supporter of the tenth <u>Sh</u>īʿī *imām* ʿAlī al-Hādī (d. 254/868). He proclaimed the divine nature of the *imām* (who cursed him for this reason; al-Ka<u>sh</u><u>sh</u>ī, 520, 999) and claimed for himself the status of a prophet; he professed metempsychosis (*tanāsu<u>kh</u>*) and antinomianism (*ibāḥa*). At the court of Ba<u>gh</u>dād, he was supported by the *kātib* Muḥammad b. Mūsā b. al-Ḥasan b. al-Furāt al-<u>D</u>juʿfī (al-Ka<u>sh</u><u>sh</u>ī, 302, 554). According to Nuṣayrī tradition, Ibn Nuṣayr was the favourite disciple of the eleventh *imām* al-Ḥasan al-ʿAskarī (d. 260/874), who entrusted to him a new revelation which was to constitute the nucleus of the Nuṣayrī doctrine. In the most ancient sources (al-Nawba<u>kh</u>tī, al-Ḳummī; even al-Ba<u>gh</u>dādī, 255-6), the sect is called *al-Namīriyya* (from the *nisba* of Ibn Nuṣayr); from the 5th/11th century onwards, the name *al-Nuṣayriyya* becomes current (Ibn al-<u>Gh</u>adāʾirī, d. 411/1020-1, quoted by al-Astarābādī, *Manha<u>d</u>j al-maḳāl*, 314; Ibn Ḥazm, *Milal*, quoted by Friedlander in *JAOS*, xxix [1908], 126 ff.; al-Samʿānī, fol. 562 b [ed. Hyderabad xiii, 121 ff.]; al-<u>Sh</u>ahrastānī, 143-5).

The literature of the Nuṣayrīs has revealed to us the lineage of the disciples of the founder, who wield authority in the tradition of the secret doctrine. Of Ibn Nuṣayr's successor, Muḥammad b. <u>D</u>jundab, nothing is known other than his name. His disciple Abū Muḥammad ʿAbd Allāh al-<u>D</u>junbulānī al-<u>D</u>jannān ("the gardener"), d. 287/900, seems to have been a Persian immigrant from the region of Fārs in ʿIrāḳ (<u>D</u>junbulāʾ is situated between Kūfa and Wāsiṭ). It is probably he who was responsible for certain quasi-Iranian features of the Nuṣayrian doctrine, for example the adoption of the Iranian festivals of the equinoxes, *nawrūz* and *mihrgān* [*q.vv.*], which are celebrated by the Nuṣayrīs as the days when the divinity of ʿAlī is manifested in the sun. Al-<u>D</u>junbulānī is the hero of a book intitled *Kitāb al-Akwār wa 'l-adwār al-nūrāniyya* ("The aeons and the cycles of the light"), from which numerous quotations have been preserved in the Calendar of festivals of the Nuṣayrīs and of which the author was possibly the disciple and successor of Ibn <u>D</u>jundab, al-<u>Kh</u>aṣībī.

Abū ʿAbd Allāh al-Ḥusayn b. Ḥamdān al-<u>Kh</u>aṣībī (d. 346/957) was the head of the Nuṣayrī community of the suburb of al-Kar<u>kh</u> to the south of Ba<u>gh</u>dād, but he seems to have led a peripatetic existence. He was a poet of considerable talent (his *Dīwān* has been preserved) and seems to have earned his living as such at the courts of the Būyids in ʿIrāḳ and in western Persia, later at the courts of the Ḥamdānids of Mawṣil and Aleppo. It was evidently he who conveyed the doctrines of the sect to northern Syria; he dedicated his *Kitāb al-Hidāya al-kubrā* to Sayf al-Dawla, the Ḥamdānid *amīr* of Aleppo (*Taʾrī<u>kh</u> al-ʿAlawiyyīn* [= *TA*], 260, 318). Al-<u>Kh</u>aṣībī died at Aleppo in 346/957 (*TA*, 257-9) or 358/969 (al-Astarābādī, *Manha<u>d</u>j al-maḳāl*, 112-23), and left behind numerous works. His tomb to the north of Aleppo, known by the name of <u>Sh</u>ay<u>kh</u> Yābrāḳ, is still venerated by Nuṣayrīs today (*TA*, 259).

The successor of al-<u>Kh</u>aṣībī at Aleppo was Muḥammad b. ʿAlī al-<u>D</u>jillī (from al-<u>D</u>jilliyya on the estuary of the Orontes). He survived the reconquest of Cilicia and of Antioch by the Byzantine emperor Nicephorus Phocas (358/969) and of the Syrian coast by John Tzimisces (363/975) and was for a period of time a prisoner of the Christians. He died, probably in Aleppo, after 384/994 (*TA*, 260).

Surūr b. al-Ḳāsim al-Ṭabarānī, successor of al-<u>D</u>jillī at Aleppo, left the town in 423/1032 on account of the incessant warfare in the region and settled at al-Lā<u>dh</u>iḳiyya (Laodicea), which at this time was still under Byzantine domination. Here, he was the true founder of the Syrian Nuṣayrī community; according to *TA*, 327, the local dynasty of al-Lā<u>dh</u>iḳiyya, the Tanū<u>kh</u>, adopted Nuṣayrī doctrines. Unhindered by any Muslim authority, al-Ṭabarānī seems to have converted the peasants (possibly still pagan) of the mountainous hinterland of the town. Al-Ṭabarānī, whose works form the major part of the written tradition of the Nuṣayrīs, died at al-Lā<u>dh</u>iḳiyya in 426/1034-5; his tomb, still venerated, is located inside the mosque of al-<u>Sh</u>aʿrānī not far from the port (*TA*, 262-5).

4. History

The history of the Nuṣayri community in mediaeval times is obscure; the accounts contained in the *TA*, compiled at the beginning of the 20th century, are of dubious value; a study of this period has yet to be undertaken. In the early years of the 12th century, the western part of the territory of the Nuṣayrīs was conquered by the Crusaders; in 496/1103 al-Lā<u>dh</u>iḳiyya was captured by the Norman Tancred after a long siege. From this time onward, the northern area of what is now the <u>D</u>jabal Anṣāriyya formed a part of the Norman principality of Antioch, but Christian penetration of the mountain region seems to have been ineffectual; in the <u>D</u>jabal itself, fortresses and other relics of the Crusaders are quite

rare (cf. *TAVO*, maps B viii 8, 10 and 12). In Latin sources, the Nuṣayrīs (*Nossorite*) are seldom mentioned (cf. Dussaud, 21-7, 30).

In 527/1132-3 the fortress of al-Ḳadmūs was sold by the *amīr* of al-Kahf to the Nizārī Ismāʿīlīs of Alamūt, who subsequently took possession of numerous fortresses in the southern Djabal: al-Kahf, al-Kharība (531/1136-7) and Maṣyāf (535/1140-1), then al-Khawābī, al-Ruṣāfa, al-ʿUllayka and Manīḳa. The establishment of Ismāʿīlīs (the *assassini* of the Latin sources) in the region provoked conflicts with the Nuṣayrīs; this is probably the context in which belongs the Nuṣayrī tradition of a "council" at ʿĀna (on the middle Euphrates) where representatives of the Nuṣayrī communities—two each from Baghdād, from ʿĀna, from Aleppo, from al-Lādhiḳiyya and from the Djabal—tried in vain to find a formula of conciliation (*tawḥīd*) with the Ismāʿīlīs (*TA*, 258, 365). The council (*al-madjlis al-dīnī*) of ʿĀna is undated; a second is recorded as having taken place in 690/1291 at Ṣāfītā, with equal lack of success (*TA*, 365).

Following the capture of Djabala, al-Lādhiḳiyya and the Frankish fortresses of Ṣahyūn and Balāṭunus by Ṣalāḥ al-Dīn in 584/1188, the Djabal became part of the Ayyūbid sultanate. It is at the end of the Ayyūbid period that Nuṣayrī tradition places an event of extraordinary importance: the settlement in the Djabal of Bedouin tribes from the Djabal Sindjār, led by the *amīr* Ḥasan al-Makzūn al-Sindjārī. Answering an appeal from the Nuṣayrīs for help in repelling the attacks of the Ismāʿīlīs, the *amīr* invaded the Djabal for the first time in 617/1220. After being defeated, he withdrew to the Djabal Sindjār, returning in 622/1223 and establishing himself definitively in the region of Abū Ḳubays and of Siyānū; from his troops were to emerge the Nuṣayrī tribes of the Ḥaddādiyya, Matāwira, Mahāliba, Darāwisa, Numaylātiyya and Banū ʿAlī (*TA*, 358-64; for the expansion of the various tribes, cf. Weulersse, i, 330-1, and figs. 136 and 137).

In the Mamlūk period, Baybars, having taken the fortresses of the Ismāʿīlīs to the south of the Djabal, made numerous attempts to convert the Nuṣayrīs to Sunnism; he forbade initiations into the sect and ordered the construction of mosques throughout the country. After an uprising by the Nuṣayrīs, sultan Ḳalāwūn re-imposed the ban on all proselytism and repeated the order to construct in every township a mosque, for the maintenance of which the local population was to be responsible. But Ibn Baṭṭūṭa, touring the region in the mid-8th/14th century, relates that these mosques had been abandoned or even transformed into cattle-sheds or stables (Ibn Baṭṭūṭa, i, 177). The well-known *fatwā* of Ibn Taymiyya (d. 728/1328 [*q.v.*]) condemned the Nuṣayrīs as more heretical even than idolators and authorised *djihād* against them (S. Guyard, *Fetwa*; Dussaud, 28-31). Ibn Ḳāḍī Shuhba, *Taʾrīkh*, tells of an expedition in 745/1344 in the course of which "books containing the dogmas of the Nuṣayrīs" were confiscated.

But the sect survived these persecutions and remained active until the Ottoman period, during which oppression seems to have eased. According to C. Niebuhr, who crossed the Djabal in 1766, the Nuṣayrīs were governed by four *muḳaddams* (at Bahlūliyya near al-Lādhiḳiyya, at Sumrīn, at the Bilād al-Shawābī and at Ṣāfītā), who were subsidiary to the Pasha of Tripoli (*Reisebeschreibung*, ii, 439). Such was still the situation in 1832 when the Egyptian general Ibrāhīm Pasha b. Muḥammad ʿAlī [*q.v.*] crushed the resistance of the *muḳaddam* of Ṣāfītā. After 1854, the Turkish government was content to control the Djabal indirectly through the appointment of a local chieftain, the *mushīr al-djabal* Ismāʿīl Beg, governor of the district of Ṣāfītā; installing himself at Dreykīsh (close to Ṣāfītā), he put an end to the constant wrangling of the different rival families and subjected them to his authority. In exchange for a fixed tribute, the government allowed him unlimited power in the Djabal. But in 1858 this potentate was reckoned to have become too powerful, and he was deposed by Ṭāhir Pasha. On numerous occasions, in particular in 1870 and 1877, Ottoman troops ravaged the territory of the Nuṣayrīs and succeeded finally in breaking the power of the tribes and establishing a direct administration there (levying of taxes; recruitment of soldiers); mosques were constructed but they remained empty (Dussaud, 32-8).

During the last years of the Ottoman empire, a Nuṣayrī of Adana, Muḥammad Amīn Ghālib al-Ṭawīl, the chief of police in several *wilāyets*, composed his "History of the Alawites" (*Taʾrīkh al-ʿAlawiyyīn*), which was published in 1924 in Arabic. In this book, the term *Nuṣayrī*, in usage since the Middle Ages, was replaced for the first time by *ʿAlawī*, which was henceforward to be the norm. The *Taʾrīkh* had the object of ridding the Nuṣayrīs of their reputation for being heretics or even pagans and showing that in fact they were true Twelver Shīʿīs. It is for this reason that, from 1920 onward, "Djaʿfarī" (i.e. Twelver) judges were appointed in the towns of the south of the country (*EI*[1], s.v. *Nuṣairī*).

Following the disintegration of the Ottoman empire and the establishment of the French mandate in Syria, the territory of the Nuṣayriyya was divided into three parts: Cilicia was ceded to the Republic of Turkey, while the *sandjāḳ* of Alexandretta (Iskenderun) was separated from the remainder of Syria and placed under special administration. On 31 August 1920 the French established the "Autonomous Territory of the Alawites", which consisted of the former *sandjāḳ* of al-Lādhiḳiyya, the northern sector of the *sandjāḳ* of Tripoli and part of the *ḳaḍāʾ* of Maṣyāf (*sandjāḳ* of Ḥamāt). On 12 July 1922, the Territory was proclaimed a State which, with the States of Damascus and Aleppo, formed the "Federation of States of Syria". At the beginning of 1924, the Federation was dissolved and the State of the Alawites became the "Independent State of the Alawites" headed by a French governor (Cayla; after 1925 Schoeffler) and a Council composed of nine representatives of the various minorities (9 ʿAlawīs, 3 Sunnīs, 3 Orthodox Christians, 1 Ismāʿīlī and 1 representative of the other Christian minorities). In 1930, the State of the Alawites was renamed "Government of Lattakia", and on 10 January 1937 it was transformed into a province (*muḥāfaẓa*) of the new Syrian State; the flag of the Alawites (a sun on a white background) was replaced by the Syrian tricolour. In 1939 the French ceded the *sandjāḳ* of Alexandretta to Turkey.

5. Doctrines

As *ghulāt*, the Nuṣayriyya venerate ʿAlī b. Abī Ṭālib as supreme and eternal God (*al-ilāh al-aʿẓam, al-ḳadīm al-azal*). The basis of Nuṣayrī doctrine is a cosmogony of gnostic nature (Sulaymān, *Bākūra*, 59-61; Halm, *Gnosis*, 298 ff.). In the beginning of time, the souls of the Nuṣayrīs were lights, surrounding and praising God; then they rebelled against Him, disputing His divinity. From then onwards, they have been hurled down from the celestial heights and exiled on the earth, where they are enclosed in material bodies and condemned to metempsychosis (temporal *nāsūkhiyya* for the elect, eternal *nāsūkhiyya* for the damned). During their fall, the supreme God appears to them

seven times, calling for their obedience, but they refuse. In each manifestation, God, who is called "the Essence" (*maʿnā*), is accompanied by two subordinate hypostases, "the Name" (*ism*) which is also called "the Veil" (*ḥidjāb*) and the "Gate" (*bāb*). In earthly life, this trio is revealed in numerous instances: the *maʿnā* is incarnated successively in Abel, Seth, Joseph, Joshua, ʿĀṣaf, St. Peter and ʿAlī b. Abī Ṭālib, then in the *imāms* as far as the eleventh one, al-Ḥasan al-ʿAskarī; all of these are therefore manifestations of divinity. However, their true character is veiled by the presence of the *ḥidjāb* or *ism* (Adam, Noah, Jacob, Moses, Solomon, Jesus and Muḥammad), each of them is accompanied by a *bāb*. The central trio of the Islamic period is ʿAlī (*maʿnā*), Muḥammad (*ism, ḥidjāb*) and Salmān al-Fārisī (*bāb*). The *abwāb* of the eleven *imāms* are the intermediaries between the concealed divinity and initiated believers; for example, the eponym of the Nuṣayriyya, Muḥammad b. Nuṣayr, was the *bāb* of the eleventh *imām* al-Ḥaṣan al-ʿAskarī, whose secret revelations he confided exclusively to the Nuṣayriyya. He who recognises the identity of the *maʿnā* is saved and may escape from metempsychosis; his soul, released from the body and transformed into a star, resumes its journey back across the seven heavens to arrive at the ultimate objective (*ghāya*), sc. contemplation (*muʿāyana*) of the divine light. Women are excluded from this because they are born of the sins of devils; for this reason, they are not entitled to participate in the rites of men (Sulaymān, *Bākūra*, 61). The popular religion of the Nuṣayriyya, especially that of women, retains traces of paganism (veneration of high places, of springs, of green trees). For the cult of saints (*ziyārāt*), cf. Weulersse, i, 255-62; for rites of initiation and festivals, cf. Dussaud, 104 ff., 136 ff., Weulersse, i, 259-61; Halm, *Gnosis*, 303 ff.

AL-**NŪSHĀDIR**, also *nushādir*, *nawshādir*, Sanskrit *navasadara*, Chin. *nao-sha*, sal-ammoniac. The etymology of the word is uncertain; perhaps it comes from the Pahlavi *anōsh-ādar* "immortal fire" as we find the form *anūshādhur* in Syriac.

The oldest references to the occurrence of sal-ammoniac in a natural state are in the reports of Chinese embassies of the 6th-7th centuries, which were the subject of very full investigation in connection with a geological problem, the question of volcanoes in Central Asia, by H.J. von Klaproth, A. von Humboldt and C. Ritter. The reference was to mountains of fire, Pe-Shan, on the northern slopes of the Tien-Shan south of Ḳuldja [*q.v.*], Ho-Chou on the south side of the Tien-Shan near Turfan and the sulphur pits of Ürümči/Ürümqi. The mountain Pe-Shan was said to pour forth fire and smoke continually; on one side of it all the stones burn, and are melted and then after flowing some miles solidify again. *Nao-sha* and sulphur were obtained there for medicinal purposes but the stones could only be collected in winter when the cold had cooled the ground. Humboldt and Ritter do not accept a reference to the burning of coal by which sal-ammoniac and sulphur are obtained. The statement that the volcanoes of Central Asia produce sal-ammoniac in immense quantities is found in G. Bischof, and even G. von Richthofen still held the volcano theory. The botanist and geographer Regel, who travelled in these regions about 1879, was the first to dispute the existence of volcanoes. After Nansen, Le Coq and others had been unable to confirm the existence of volcanoes but established the fact that there were large deposits of coal on the surface, the old sources in Central Asia are now generally attributed to the burning of coal.

Almost all the Arab geographers who refer to Central Asia, from al-Masʿūdī, al-Iṣṭakhrī, Ibn Ḥawḳal, to Yāḳūt and al-Ḳazwīnī, give fantastic stories about the method by which sal-ammoniac is procured in the Buttam hills east of Samarḳand. Here again the details suggest the burning of the earth rather than volcanic exhalations. The Persian traveller Nāṣir-i Khusraw [*q.v.*], however, mentions deposits of sal-ammoniac and sulphur at Demāwend, and Ibn Ḥawḳal is acquainted with the volcanic sal-ammoniac of Etna; the latter was still exported to Spain in the 12th century. At an earlier date, they had begun to procure sal-ammoniac from the soot of camel dung. This product remained into modern times an important import by the Venetian traders and was only driven from the market by the modern cheap methods of production from gas liquor, etc.

The use of sal-ammoniac as a remedy in cases of inflammation of the throat, etc., is already mentioned by ʿAlī b. Rabbān al-Ṭabarī. Ibn al-Bayṭār also quotes from other authors all kinds of remarkable uses of it, on which no stress need be laid. Djābir b. Ḥayyān reckons sal-ammoniac among the poisons, which is true of large doses.

The part played by sal-ammoniac in alchemy is much more important. Djābir adds it as a fourth to the three πνεύματα of the Greeks, quicksilver, sulphur and sulphide of arsenic (AsS or As_2S_3), and it is used by all Persian-Arab alchemists in countless recipes. The preparation of carbonate of ammonia through distillation of hair, blood and other materials is already fully described in the "Seventy Books" and other works of Djābir. These methods seem to have given the stimulus to the discovery of the Egyptian method of obtaining sal-ammoniac. All these things came with alchemy to Spain and thence into western alchemy.

In the earliest Latin translations, sal-ammoniac is still called *nesciador*, *mizadir*, etc., i.e. transliterations of the Arabic name. The general term *al-ʿuḳāb* is also found in the forms *aliocab*, *alocaph* or translated by *aquila*. The identification of this salt with the salt of the oasis of Ammon already mentioned by Herodotus is first found in Syriac authors and lexicographers.

Saʿīd, Karachi 1973, 364-65.

(J. Ruska)

AL-NŪSHARĪ or AL-NAWSHARI, Abū Mūsā ʿĪsā b. Muḥammad, general (said to be Turkish, but perhaps an Iranian from Khurāsān, since al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 201-2, derives the *nisba* al-Nūshārī (*sic*) from Nūshār, a village in the district of Balkh) from the guard of the ʿAbbāsid caliphs at Sāmarrā and governor of Damascus on various occasions during the caliphates of al-Muntaṣir, al-Mustaʿīn and al-Muʿtazz [*q.vv.*] from 247/861 onwards. At the accession of al-Muʿtazz in 252/866, he expanded southwards into Palestine, displacing the Arab governor of Ramla [*q.v.*], ʿĪsā b. al-Shaykh [*q.v.*], and subsequently defended his territories against rivals; but thereafter he fades from historical mention.

Bibliography: Scattered references in Yaʿḳūbī, Ṭabarī, Ibn al-Athīr and Ṣafadī, cited by M. Forstner, *Al-Muʿtazz billāh (252/866-255/869). Die Krise des abbasidischen Kalifats im 3./9. Jahrhundert*, Germersheim 1976, 86, 98-9, 106.

NŪSHIRWĀN [see ANŪSHIRWĀN].

NUSKHA (A.). 1. In the central Islamic lands. *Nuskha* is the common Arabic word for "transcript", "copy", and in the manuscript era used in the meaning of "manuscript". Semantically directly related derived forms of the stem *n.s.kh* are *nassākh* are *nāsikh*, "copyist", and forms I, VIII and X of the verb *nasakha*, all meaning "to transcribe, to copy". In the following, *nuskha* will be more specifically used in order to denote the medium of the transmission of Islamic texts with exclusive reference to manuscripts. Other words for "manuscripts" which are commonly used are the Arabic *makhṭūṭāt*, the Persian *nuskha-hā-yi khaṭṭī*, and the Turkish *yazmalar*. Where in the following the examples are mostly taken from Arabic literature, one must realise that, especially for the earlier period, no significantly different circumstances are applicable to the transmission of Persian texts, or Turkish or other Islamic texts for that matter. It must in this connection be borne in mind that the process of transmitting handwritten texts in an Islamic cultural environment persisted till well into the 20th century, in contradistinction to the transmission of European texts, which were almost exclusively distributed in printed form ever since the art of printing became practiced, from the second half of the 15th century A.D. onward. The following aspects of *nuskha* in this sense will be distinguished here.

(a) *The rôle of the book in Islam.* The importance of the written word in Islam can hardly be underestimated. Muslims have always insisted that the Ḳurʾān, the divine revelation to the Prophet Muḥammad and God's own word, was Islam's own miracle, the *muʿdjiza* [*q.v.*], that was on equal footing with the miracles by which the earlier prophets had proved the truth of their mission. Also, the non-Muslims are divided in the *Ahl al-Kitāb*, the People of the Book who did have a divine revelation, corrupted as it had become in the course of time, and those unbelievers who had no book at all. The concept of the Celestial Book was not alien to other, pre-Islamic, cultures in the Middle East, of course, and this culture of the written word did, of course, not originate in 7th-century Arabia. The Nabataean, Syriac, Hebrew, Aramaic, Coptic, Greek, Latin, Persian, Indian and Ethiopic literatures were there already, before Islam, with a considerable production of texts. According to a report by Ibn al-Kalbī [*q.v.*], Arabic books seem even to have existed in pre-Islamic al-Ḥīra [*q.v.*]. Islam's innovation seems to have been that the Book was given divine status, or rather that this divine status was so rigorously enforced. It is probably this new accent on the importance of the Holy Book that gave the book in Islam its central rôle. In the course of time, this pivotal importance of the book in Islamic culture has only increased and the result is, today, that there are many millions of Islamic manuscripts ranging in age from the earliest period till the beginning of the 20th century. When expressed in mere numbers of texts, the Islamic literature of the manuscript era can claim to be the largest literature on earth.

The Islamic book had become in less than two centuries after the death of the founder of Islam the repository of all knowledge of an increasingly internationally orientated culture, just as the Arabic language had developed into a main vehicle of that culture. Whereas in the earlier period the language of the manuscripts was Arabic, with the emergence of the local languages and the spread of Islam, manuscripts in the other Islamic languages, most notably Persian and Turkish, were made with the use of Arabic script. The number of languages for which Arabic script is used is only surpassed by those for which the Latin script is employed. In later time, Islamic manuscripts were also written in other alphabets than the Arabic. This mostly happened on the periphery of the Middle East, in countries such as China, Thailand, Sri Lanka and Indonesia. Within the Near Middle East, Albanian Islamic manuscripts may be mentioned in this respect.

(b) *Material aspects of the manuscript.* The study of the material, physical, aspects of the handwritten book is called codicology. This technical term for the study of the codex [see DAFTAR] is, by extension, also employed for the study of the non-codex forms of manuscripts. The earliest writing materials in the Islamic era were papyrus, *bardī* in Arabic, and parchment [see DJILD, RAKK]. There are reports on a great variety of materials on which the earliest fragments of the Ḳurʾān were recorded (see the survey in Nöldeke and Schwally, *Geschichte des Qurāns*, ii, Leipzig 1919, 13-14), but, with the possible exception of leather or parchment and palm leaves, none of those can have been in regular use for the recording of texts in the Ḥidjāz during and shortly after the Prophet Muḥammad's lifetime. It is probably because of Islam's main orientation to the Hellenistic and Mediterranean civilisations that it chose papyrus and parchment as its prime writing materials, rather than palm leaf and tree bark, which were the common writing materials of South Asia at the time. When the Chinese techniques of manufacturing of paper [see KĀGHAD] were introduced from Central Asia into the Middle East in the course of the 8th century A.D., the production of manuscripts must have received an extra impulse. The advantages of paper over papyrus and parchment are obvious. Paper is a stronger material than papyrus and cheaper, though less durable, than parchment.

The bulk of Islamic manuscripts have been written on paper, although parchment has remained in use for special purposes, such as copies of the Ḳur'ān or special letters or documents, for a long time, and more in the Islamic West than elsewhere. Manuscripts made of a mixture of materials, paper and parchment, are known as well. The Leiden Latin-Arabic glossary (Or. 231), which recently was dated (by P.S. van Koningsveld, *The Latin-Arabic glossary of the Leiden University Library*, Leiden 1976, 38-9) to Toledo 1193 A.D., consists of quires of which the outer and inner leaves are of parchment and the remainder of paper. Even if this particular manuscript was a codicological anachronism or exception, its mixed composition conveys an impression of the gradual westbound introduction of paper as *the* material of which manuscripts are made. Locally used writing materials, dating from early, possibly even pre-Islamic times, have remained in use in many areas. An example of this is apparently the use of wooden chips for notarial documents in North Africa. Another example is the use in Indonesia (see 2. below) of a great variety of natural products for the production of manuscripts, both Islamic and non-Islamic ones. For comparative codicology, the results of Beit-Arié's research in the field of Hebrew manuscripts are significant, since Hebrew copyists in the Middle East, and elsewhere, tended to use local materials and to adopt local bookmaking techniques.

The common shape of the book was, from the earliest period of Islam onwards, that of the codex as it had developed in Europe in the post-classical period (quires consisting of folded sheets, sewn through their hearts and then sewn together as to constitute a book). This shape had, well before the advent of Islam, superseded the scroll, which was the common shape of the book in classical antiquity. It would appear that Gregory's law (see Beit-Arié) concerning the positioning of parchment leaves was not observed in Islamic manuscripts. The most common composition of quires in the entire Middle East is that of five sheets, folded into ten leaves containing twenty pages.

In the entire manuscript period, however, scrolls have remained in use in the Islamic realm as vehicles for special texts, e.g. genealogies, amulets and prayers, and for special features such as micrography. The common proportions of the Islamic manuscript are vertically orientated, meaning that its height is larger than its width. Only during a relatively short period of time, Kūfic Ḳur'ānic manuscripts are known to have been made exclusively in an oblong format. A tendency in Western Islam seems to have been to produce manuscripts in an almost square format, or at least with less difference between height and width than was commonly done in the East. Yet another shape, which was in use for notebooks, is the *safīna*. Its architecture is that of an oblong-shaped book, but it is used in a vertical position, the sewing of the leaves being in the top edge, very much as present-day noteblocks.

Whereas there developed an extensive indigenous paper production in the Islamic East and West, this only seems to have lasted till the end of the 9th/15th century. Islamic papers had no watermarks, but different types of chain lines in the paper can be distinguished. Sometimes the paper mould of Middle Eastern paper makers must have had such a fine sieve that no marks at all are visible in the structure of the indigenous paper. Natural, vegetal, components are often visible in this type of paper. Especially the older "medieval" papers have a certain thickness, sometimes verging on cardboard quality (which is particularly the case with one of the very oldest dated Arabic manuscripts on paper, the Leiden manuscript Or. 298, *G̲h̲arīb al-ḥadīt̲h̲* by Abū ʿUbayd al-Qāsim b. Sallām, which dates from 252/866). Papers are often coloured, usually shades of brown or cream, whereas paper of different colours (bluish, pink) was often used to liven up a quire. By the end of the 9th/15th century, paper production had developed a firm footing in the countries across the Mediterranean, most notably in Italy. It was from there that increasingly paper was exported to the Middle East, and to such an extent that the indigenous industry became almost extinct. Only paper of very coarse quality continued to be made locally, and this was seldom used for the manufacture of the handwritten book. The Italian papers were often provided with downright Islamic watermarks, such as the *trelune*, the three crescents, or with watermarks that were not offensive to Muslims. Crosses, crowns or coats of arms of unbelieving kings in watermarks were apparently avoided in papers destined for export to Islamic countries. These imported papers were often given an extra touch, such as an extra coating, a slight colouring and a thorough polishing, so that they would have the same appearance as the earlier indigenously produced papers, which would make them more attractive to Muslims.

As a necessary by-product of the codex, the Islamic art of bookbinding (A., *tasfīr*) developed. The typical Islamic binding of the "classical" period consists of a full leather binding with a flap covering the fore-edge. The boards and flap often have a blind or gold stamped ornament in geometric shape. It might be rewarding if ornaments on Islamic bookbindings could be studied in comparison with those on Oriental carpets. Sometimes the title of the book is stamped on the outer side of the flap, but usually it is written with ink on the lower edge of the paper. Books were stored in a flat position on book shelves, and that is how their titles could be read. In a later period and more to the East (Persia and beyond, from around the 18th century onwards) also lacquer bindings were used. For Ḳur'ān manuscripts, especially those divided into a number of *ad̲j̲zā'*, special types of furniture, cases, boxes and the like developed. About the production of ink we are reasonably well informed [see MIDĀD], but there is hardly any information on the practical use of different types of ink in Islamic manuscripts. There exists in Islam an extensive technical literature on the making of handwritten books, the manufacture of bookbindings and the production of inks.

(c) *Palaeographical aspects of the manuscript.* In the course of time, important and significant developments in the styles of writing of the Arabic script can be distinguished [see K̲H̲AṬṬ. ii, iii]. These can roughly be divided into a number of periods, and, in the later period, into geographically defined styles. The script employed in a handwritten book can, therefore, be used as a tool for the determination of the age and origin of a manuscript. From the methodological point of view, however, it must be added that the style of script is but one of a number of determining factors, and that it can, at best, be used as a corroborating argument, only in combination with other codicological and philological evidence. A holistic approach in this respect is the only safe way of looking at the handwritten book.

The discussion on the Arabic script must begin with the mention of the pre-Islamic development of the Nabataean script in and around the Arabian peninsula, which is only known from epigraphic evidence. There are no Islamic manuscripts written in this script. It is the direct forebear of the Arabic script

which was used in Mecca and Medina in the first half of the 7th century A.D. to note down the divine revelation. Its basic set of graphemes had probably come into use in the Ḥidjāz around the middle of the 6th century A.D. There are reports by early Islamic historians pointing to another, ʿIrāḳī, origin of the Arabic script, but concrete evidence for this is entirely lacking. In the early Islamic period, the geometrically stylised and highly monumentalised calligraphic script of the Ḳurʾān manuscripts developed into several sub-styles. The original manuscript of the ʿUthmanic recension of the Ḳurʾān—the first book in Islam—and its direct copies do not appear to have been preserved, nor any other of the manuscripts of early texts, notebooks and registers, for that matter. Only Arabic papyri give contemporary evidence for this stage in the development of the Arabic script.

The best distinguished types of these so-called Kufic styles of writing are *māʾil* (used in the Ḥidjāz in the 2nd/8th century, with its characteristically right-leaning shafts), *mashk* (used in the Ḥidjāz and Syria, with its typically horizontal extensions, mainly for Ḳurʾān manuscripts and always in oblong format), western Kūfī (with round shapes) and eastern Kūfī (also called *ḳarmāṭī*, with its typically edgy forms). Later direct developments of these Kūfī script styles are *maghribī* (used in al-Andalus and till the present day in the Maghrib [*q.v.*]) and *sūdānī* (used in sub-Saharan West Africa). The Kūfī and Ḥidjāzī styles, in turn, developed in the central lands of Islam into several types of bookhands. These can be seen in the (not too numerous) dated manuscripts which have survived from the 3rd/9th and 4th/10th centuries. Comparative evidence for these, now obsolete and somewhat archaic-looking bookhands is adduced in the older Christian Arabic manuscripts of that period, although the dated ones in this group appear to be even more scarce than the Islamic ones. There is no survey of this corpus of manuscripts. Only quite recently, François Déroche has succeeded in producing a more detailed typology of the script in early Ḳurʾān manuscripts on the basis of the collection in the Bibliothèque Nationale in Paris. Application of this typology to other collections, most notably the *Şam Evrakı* in Istanbul and the fragments found in the Great Mosque of Ṣanʿāʾ, seems promising.

At the same time there developed from the earliest period of Islam onwards, for daily life purposes, mainly in Arabic papyri of administrative and occasionally also literary contents, cursive styles of scripts, in which the protoforms of the later classical styles of script can already be distinguished. The canonisation of these cursives into well-regulated and respectable calligraphic forms is in the Arabic tradition usually connected with the names of famous calligraphers such as the ʿAbbāsid *wazīr* Ibn Muḳla (died 328/939 [*q.v.*]) and Ibn al-Bawwāb (died 423/1032 [*q.v.*]), who are said to have invented these styles of writing and to have laid down their rules of orientation and proportion. There is a problem of authenticity of evidence, however. The description of the different calligraphic styles is, in most cases, not based on authentic models originating from the great calligraphers themselves or even from their lifetime, but rather on reports by historians such as Ibn al-Nadīm or al-Ḳalḳashandī [*q.vv.*]. The models that are available are often reconstructions and interpretations by later calligraphers.

The classical six styles of calligraphy, called *al-aḳlām al-sitta*, which developed near the end of the 4th/10th century, are *naskh* (the most often used style of writing, the common indication for "bookhand", in which many styles can be distinguished, and—after a long development—the forebear of present-day printing type fonts of Arabic), *thuluth* (a monumental and decorative script which is used for titles, inscriptions, calligraphic panels and the like, but hardly ever to copy entire texts), *muḥaḳḳaḳ* (till the 8th/15th century in use for calligraphic Ḳurʾān copies), *rayḥānī* (a smaller and more slender version of *muḥaḳḳaḳ*), *tawḳīʿ* (used in the ʿAbbāsid chanceries, a script with round and flowing shapes with many interconnections) and *riḳāʿ* (a smaller version of *tawḳīʿ*, mostly used in titles, *sūra* headings, colophons and diplomas (*idjāza* [*q.v.*]). About the first of these six classical styles, *naskh*, the bookhand, it must be added that this is, in fact, an unworkable category. In the 4th-5th/10th-11th centuries *naskh* was a clearly distinguished style of writing, but in the course of time numerous styles of writing, which are very much different from one another, have been designated as *naskh*, thereby making the term itself useless.

The most important later, regionally distinguished styles are *taʿlīḳ* (a development of *tawḳīʿ* and used in important documents and diplomas; there are two variants, Persian *taʿlīḳ* and Ottoman *taʿlīḳ*), *nastaʿlīḳ* (originated in the 8th-9th/14th-15th centuries as a mixture of *naskh* and *taʿlīḳ* and is now very much in use in Iran and the Indian subcontinent), *shikasta* (a highly cursive style developed from *taʿlīḳ* and *nastaʿlīḳ*, and now mostly in use in Iran, where it has become a means of expression of the new Islamic Iranian identity), *dīwānī* (developed in the Ottoman chanceries, of uncertain origin and in the Arab world still in use for decorative epigraphy), *dīwānī djalī* (a decorative variant of Ottoman *taʿlīḳ*), *ruḳʿa* (an edgy cursive style with remarkable contrast between thick and thin which developed in the end of the 12th/18th century in the Ottoman Empire and which has reached calligraphic peaks. A more common variant of this script has now become the cursive for daily use throughout the Middle East) and *siyāḳa* (a curious stenographic-like Arabic script in which diacritics are not used; it is of uncertain origin and was in use in the lower administrative echelons of the Ottoman Empire for cash registers [see DAFTAR] and the like). See for a more extensive description of the characteristics of these styles of writing, KHAṬṬ. ii, iii.

(d) *The manuscript as the medium of transmission of texts.* It should be borne in mind that, throughout the history of Islamic literatures, manuscripts have been abundantly available. They were never a rare commodity, though not all texts were available at all places at all times. The numbers given for the contents of royal libraries, exaggerated as they may seem and often are, are nevertheless a sign that numerous manuscripts were found there. Private collections of manuscripts, often with large and important holdings, were, and still are, a common feature in the Islamic world. Their existence was often guaranteed by converting them into a *waḳf* [*q.v.*]. The fact that a literary or theological education has always been an honorable pursuit and rewarding occupation for a Muslim has added to this. One can maintain that the combination of scholarly activities with texts and the respect for the book has resulted in this stupendous accumulation in Islam of handwritten books. They are in fact so numerous that their number in millions cannot precisely be estimated. The first effort ever to make a complete bibliographical survey of all Islamic manuscripts in the world is being undertaken by the London-based Al-Furqan Islamic Heritage Foundation, which was founded by Sheikh Ahmad Zaki Yamani. The publication by this Foundation of a

World survey of Islamic manuscripts has been in progress since 1992. It is an inventorisation of all known and as yet unknown collections containing Islamic manuscript materials, not only in Arabic, Persian and Turkish, but in a great number of other languages as well, including numerous materials in scripts other than Arabic.

The progress of bibliography can be illustrated by an example taken from Arabic literature. The Ottoman Turkish bibliographer Ḥādjdjī Khalīfa (died 1067/1657 [see KĀTIB ČELEBI]) mentioned around 15,000 titles in his great bibliography, *Kashf al-ẓunūn*. Almost three centuries later, Carl Brockelmann mentions around 25,000 different titles in the index of his *Geschichte der arabischen Litteratur*. Brockelmann's figures concern titled works that have been preserved. Now, almost fifty years after Brockelmann, these figures must probably be multiplied by several times, due to the enormous growth of cataloguing activities in the past years.

The view by Pedersen, *The Arabic book*, 20, that scholarly activities were mainly centred on the mosque [see also MASDJID] is too narrow, even if it is exclusively applied to the pursuit of the theological sciences. Writing, reading, discussing, commenting upon books (and buying and selling them as well!) were mostly private activities which were widespread in all periods of time and in many strata of Islamic civilisation, but not primarily in a purely religious connection. With a Book as its distinguishing miracle, Islam was—one may say—bound to devote special attention and a central position to the book as a source of learning, and, thereby, give learning itself a special emphasis. It may be surmised that literacy was relatively high among Muslims and producing texts must have been a common occupation in an Islamic environment. The ensuing interrelatedness of different texts on the same subject is a problem with which philologists must try to cope.

These scholarly activities involved the copying of manuscripts and the transmission of texts. This could happen in many ways. Many manuscripts carry on their title-pages, in their margins or near their colophons information on their readership (*samāʿāt, ḳirāʾāt*), on the authorisation to use a certain text (*idjāza*), or on its chain of transmission (*riwāya*). Manuscripts often reveal traces of their collation (*muḳābala*) with the exemplar (*aṣl*), and sometimes with other copies as well. All these marks provide an insight in the use and manufacture of a handwritten book. They are hardly less important for our knowledge of the status of a text than the text of the manuscript itself.

The production of the handwritten book was, in most cases, a private affair between author or teacher and reader or student. Anyone who wished to own a manuscript either had to buy it, or to borrow and copy it if it was not for sale. If he wished to read it with the author or a respected authority in the field, he often had to travel around (*ṭalab al-ʿilm*). In Islamic higher education it was not uncommon that students noted down (*istimlāʾ* [see MUSTAMLĪ]) what their teacher dictated (*imlāʾ*) from his own work to them, with the casual remarks of the author often written in the margin (sometimes provided with the note *min fam al-muṣannif*, "from the mouth of the author"). From this it is clear that scriptoria of the mediaeval European type were not a common source of book production in the Islamic realm. It is known, however, that for a quick and multiple publication of a text in the manuscript era mass dictation was used. The exact circumstances of this type of mass production of manuscripts are unknown.

Royal or noble patronage made it possible that lavishly illustrated or illuminated manuscripts were produced, often in magnificent bindings, and from the Ottoman and Mughal sultans it is known that they instituted palace workshops for the production of royal copies of important texts.

(e) *The end of the manuscript era.* The art of printing became widespread in the Middle East only in the course of the 19th century, although it had been practiced by Muslims in Istanbul since 1729 [see MAṬBAʿA. B.2]. In the end, printing superseded copying by hand. The age of transition is in this respect the 19th century. It can be observed that the manufacture and distribution of texts took place, for a while, in the shape of printed and handwritten books simultaneously. This could even mean that manuscripts were copied from printed exemplars. Those authors who had, for whatever reason, no access to the new medium of printing were more or less obliged to revert to the traditional, time-proven way of copying by hand, for the distribution of their texts. In course of time this decreased. The outward appearance of the manuscript had its direct influence on the typographical design of the early printed book. This is particularly evident from the lithograph editions, of which many have been made in the Islamic world. Lithography involves a minimum of technical requirements and therefore became immensely popular, notably in India, Persia and Morocco, to name but the best-known areas. But also the Egyptian editions from Būlāḳ, made with movable type, betray in their lay-out their handwritten models.

the Library of the University of Leiden ... A General Introduction to the Catalogue, Leiden 1982; and idem, *Establishing the stemma. Fact or fiction?*, in *MME*, iii (1988), 88-100. The scholarly journals *Islamic Art, Manuscripts of the Middle East* and *Muqarnas* contain articles on many aspects of the Islamic handwritten book. Electronic databases on codicological aspects of Middle Eastern manuscripts are maintained by M. Beit-Arié (Hebrew manuscripts) and François Déroche (early Islamic manuscripts).

(J.J. WITKAM)

2. In Indonesia

Naskah designates here old manuscripts, Islamic or otherwise, alongside indigenous-language terms which designate the literary form and the basic text (*ḥikayat, carita, kidung, babad, serat tarikh sejarah, wawacan, pus(t)aka, pustaha*) and also the original text before being printed. Islam brought the Arabic script of the Ḳurʾān and the Arabic words necessary for its teaching. On the model of the extra characters added to the Arabic alphabet for Persian, Turkish and Urdu, Arabic characters were adapted for the vernaculars, and were called *pegon, jawi* or *melayu*, for these, see INDONESIA. iii. Languages, and for the *pegon* script of West Java, see H. Sukanda, *Agama Islam ngabudayakeun Basa jeung Sastra Sunda*, in *Kongres Bahasa Sunda*, Bogor 1988. The ways of writing have not been codified, but one can distinguish two sorts of scribes: the graduates of a *pesantren* [*q.v.*] and those of a *paguron* (Sukanda-Tessier, *Centres d'enseignements traditionnels de l'Islam...* , in *Séminaire Kiyai Haji Wasyid*, Banten 1988). (The term "Nusantarian", from Nusantara, is now used for all cultural matters relating to pre-Independen (17 August 1945) Indonesia, the term "Indonesian" being used only for post-1945 matters.)

The manuscripts in indigenous scripts correspond to three socio-cultural strata, distinguished as follows: (1) The pre-Islamic mss. have as their bases olla, *lontar*, palm leaves, *nipah*, tree bark prepared for writing, *daluwang*, thin sheets of bamboo, gold leaf or sheets of red copper. The characters used, of Indian origin, are called *aksara* (Balinese, Bugi/Makasar/Bima, Javanese/Kawi, Sumatranese (Batak, Karo, Lampung, Mandailing, Rejang, Toba), Sasak, Old Javanese, Old Malay and Old Sundanese, corresponding to the respective languages. The oldest texts, in Old Javanese, come from the 12th-14th centuries, and in Old Sundanese from the middle of the 15th century (see J. Noorduyn, *Bujangga Manik*, in *BKI* [1982]). There are numerous catalogues and critical editions of Malay and Javanese mss., but the Old Sundanese ones present difficulties of decipherment not yet completely resolved, neither for those in the Manuscript Collection of the National Library at Jakarta and in foreign collections nor for those in numerous special collections in Indonesia and the *kabuyutan* (Sukanda-Tessier, *Le triomphe de Sri en pays soundanais*, in *PEFEO*, ci [Paris 1977]).

(2) The Islamic mss. have the same materials, with the following chronology: olla, 15th-18th centuries; tree bark, 16th-19th centuries; filigrained European papers, 17th-20th centuries; Dutch registers, local folio papers and note books, 19th-20th centuries. The Ḳurʾān, *ḥadīth*, the combined precepts of the *rukun (al)-Islam* and *rukun (al)-Iman (share'at), fiḳh (safīnat ul-nadjā, farāʾiḍ* and *duʿā)* are written in Arabic characters. Works on Ṣūfism, *tarekat Satariyah* and *Kodiriyah, duʿā, sulūk, ʿilmu (l)-ladunī, adab*, Arabic hagiography and epics of the Islamisation of Java/Malay, Javanese and Sundanese chronicles, not to mention an important corpus of works on the *ʿilmu falak*, cosmogony, medicinal plants, customs, rites and ancestral prayers linked to the agricultural round, calendars and propitiatory formulae of Hindo-Buddhist origin, are all written in *pegon*. The Islamic mss. are numbered in thousands, whether Malay from the various sultanates of Sumatra, Malaysia, Kalimantan, Maluku, Sulawesi and Lombok/Sumba/Sumbawa, or Sundanese from the sultanal courts of Banten and Cirebon or the princely ones of Banten, Galuh/Banyumas and Sumedang regions, or Javanese from the sultanates of Pajang, Demak, Mataram, Surakarta and Yogyakarta, or Balinese. The oldest of them, mostly from Shāfiʿī milieux, come from the beginning of the 16th century, including those of Sumatra and Banten. A large number of them are concerned with *taṣawwuf* [*q.v.*] and *ʿilm al-uṣūl*, whilst the *fiḳh* texts are comparatively few, contrary to the tendency visible from the second quarter of the 20th century and assimilated to a "fourth" wave of Islamisation. The Old Javanese mss. only stem from West Java from the middle of the 17th century onwards, legitimated by the sultanate of Mataram. Some of them, recopied in the course of Islamisation—a process which lasted for several centuries—contain a few Arabic words, such as *mashhūr, sarwāl, wafāt, Nabī Muḥammad*, and are written in *aksara*.

(3) The first epics about Islamisation stem from pre-Islamic epics, oral and manuscript, salvaged by Islam from the 15th century onwards. Written in *aksara* on *lontar*, such as *Carita Nabī Yūsuf*, they represent a type of *daʿwa* through the didactic aspect of their message, which is no longer delivered in the form of a harangue or sermon. The heroes are of Arab origin, such as Amir Hamdjah, Umarmaya, Lukmanul Hakim, Sama'un, Ahmad Muhammad, ('ab) Durrahman-('ab)Durrahim, Abu(n) Nawas, or Malay, such as Hang Tuah, Ken Tambuhan, Indraputra and Muhammad Hanafiah, or Sundanese like Silihwangi, Kean Santang, Ogin Amarsakti, Munding Sari Wiramantri, Hasanuddin and Walangsungsang, or Javanese like Damarwulan, Candrakirana, Rara Mendut, Sekartaji, Sunan Rahmat, Raden Patah and Senapati. The historical texts recount either the first contacts with Islam (?12th-15th centuries), which met with strong resistance in West Java, or else the second Islamisation (16th century), which only affected the northern coastlands of Java and the merchant sultanates outside Java, or else the third wave of Islamisation (17th to the beginning of the 20th century).

These epics belong to a living tradition of the preservation of writings. For the scribes who copy them, the readers, reciters and listeners, they are a *amal* and a *ganjaran (baraka)* which will earn merit in the Next Life, just like good acts which are non-obligatory, *sunna*, which can entail the pardoning of sins, or the equivalent of *ʿibāda*. These much-revered epic texts are read and chanted in West Java from sunset to sunrise according to *belūk*, a vocal art which is in course of disappearing, marking religious, family and agrarian rites, and they are hedged by a narrow surveillance when, if they are very ancient ones, they were considered as sacred and preserved in the *kabuyutan* where they could only be seen at every twelfth *Mulud* (12 Rabīʿ I), together with ancient Arabic mss.

The indigenous Indonesian mss., which are of an unusual richness and number, have contributed extensively to unifying an entire nation in respect of the vast spread of differing religions and cultures. They have, moreover, given to Indonesian Islam its exceptional image of tolerance and examplariness.

NUṢRATĀBĀD, the more recent name for the town of eastern Persia known in mediaeval Islamic times as Isfīdh, Sipih, Safīdj (written in al-Iṣṭakhrī and Ibn Ḥawḳal as Sanīdj, for *Sabīdj/Safīdj). It lay on what was the highway from Kirmān to Sīstān [*q.vv.*], and some of the classical Islamic geographers attributed it administratively to Sīstān and others to Kirmān, reflecting its position on the frontier between these two provinces. Muḳaddasī and others describe it as a flourishing and populous town with its water from *ḳanāt*s, the only town in the Great Desert. The ruins of the old town were still called by the local Balūč nomads, according to Sykes (1895), Ispi. Its modern successor Nuṣratābād (lat. 29°54′ N., long. 59°59′ E.), on the Kirmān-Bam-Zāhidān road, is the chef-lieu of a *bakhsh* or subdistrict of the same name in the *shahrastān* of Zāhidān; in *ca.* 1960 it had a population of 700 Balūč.

This Nuṣratābād is to be distinguished from the town of the same name in Sīstān proper, in the 19th century the administrative centre of the region and the modern Shahr-i Zābul; for this, see SĪSTĀN.

NUṢRATĪ, MUḤAMMAD NUṢRAT, Deccani Urdu poet of the 11th/17th century, whose work marks a stage in the history of Urdu language and literature. Born in the Carnatic as a relative of the ruling family there, he at first lived as a dervish but then moved to Bīdjāpūr [*q.v.*], where he became an official and the poet-laureate of the ʿĀdil-Shāhī ʿAlī II b. Muḥammad (1066-83/1656-72 [see ʿĀDIL-SHĀHS]. He wrote many poems, including *ḳaṣīda*s and *ghazal*s, but more especially a number of *mathnawī*s of substantial length. The most important of these was his *ʿAlī-nāma*, a eulogy of his patron and the history of his wars with the Mughals and Marāthās [*q.vv.*], and this he claimed to be a new form, an amalgam of Hindu and Persian epics; Sadiq, 48, states that this was no idle claim. His romantic *mathnawī*s include the *Gulshan-i ʿishk*, *Guldasta-yi ʿishk* and *Taʾrīkh-i Iskandarī*.

The language of this poetry is archaic and difficult compared with modern Urdu, and characterised by hyperbole and conceits, but according to Saksena, 40, sweet, flowing and melodious.

Bibliography: Ram Babu Saksena, *A history of Urdu literature*, Allah-abad 1927, 12, 39-40; Muhammad Sadiq, *A history of Urdu literature*, Oxford 1964, 46-9. (J.A. HAYWOOD)

NUṢUB (A.), pl. *anṣāb*, Hebrew *maṣṣebōt*. The plural, more often used, denotes the blocks of stone on which the blood of the victims sacrificed for idols (*awthān*, *aṣnām*) was poured, as well as sepulchral stones and those marking out the sacred enclosure (*ḥimā*) of the sanctuary (cf. J. Wellhausen, *Reste*², 101-2; W. Robertson Smith, *Religion of the Semites*, 201 ff.). In nomadic circles, the *nuṣub* has been regarded in a few rare instances as the symbol of the divinity (cf. Ibn Saʿd, *Ṭabaḳāt*, iv/1, 159-60; R. Dozy, *Essai sur l'histoire de l'Islamisme*, translated from the Dutch by V. Chauvin, Paris-Leiden 1879, 9, quoting, after Ibn Ḳutayba, a contemporary of the Prophet, Abū Radjāʾ al-ʿUṭāridī. For the two examples, see T. Fahd, *Panthéon*, 26). Among sedentary populations, the *nuṣub*, a rough stone, has become the *ṣanam*, "a stone carved with the image of the idols of the Kaʿba" (Yāḳūt, *Buldān*, iv, 622: *fa-naḥata-hu ʿalā ṣūrat aṣnām al-Bayt*). "In every house", writes Ibn Hishām, "the occupants took an idol (*ṣanam*) which they worshipped. Whenever one of them set out on a journey, the last thing which he did before leaving, and the first on his return, was to touch it" (*Sīra*, 54 = al-Azraḳī, *Akhbār*, 78: *tamassaḥa bihi*; cf. Gen. xxxi, 14), as a token of benediction for a successful enterprise and as an act of thanksgiving (on the *masḥ* and its magical and therapeutic power, see Ibn Saʿd, ii/2, 14, 47; Goldziher, in *Or. Stud. Th. Nöldeke gewidmet*, i, 327, where numerous references to *ḥadīth* are to be found). To explain the proliferation of *anṣāb*, Ibn Hishām (51-2) makes them symbols of the Kaʿba, brought with them by the sons of Ishmael when they finally left Mecca, while Yāḳūt (iv, 622) asserts that "the cult of stones among the Arabs in their encampments has its origin in their deep attachment to the idols (*aṣnām*) of the *ḥaram*." These texts reflect a state of affairs prior to the reform of Ḳuṣayy

[*q.v.*]. Comparing them with certain Biblical texts, one should in fact, regard them as an echo of very ancient Semitic traditions (in particular, Gen. xxxi, 13, 19, 34-46). The *teraphīm* of the Canaanites, the *elōhīm* of the Hebrews and the *ilānī* of the Assyrians long outlasted monotheism in the shrines fashioned in stone, in sand mixed with milk (*Panthéon*, 91) and in wood (Ibn Hishām, 335) of pagan Arabia (on the equivalence between *elōhīm*, *teraphīm* and *ilānī*, cf. C. Gordon, *Parallèles Nouzéens aux lois et coutumes de l'Ancient Testament*, in *RB*, xliv [1935], 35-6; idem, in *JBL*, liv [1935], 139-44; cf. *Divination*, 132-50). Among the commonest finds in archaeological excavations are figurines representing "new divinities" worshipped in Egypt, Palestine, Syria and Babylonia (cf. among others, Petrie, *Memphis*, i, pls. 8-13 and p. 7; E. Pilz, in *ZDPV*, xlvii, 165 ff.; J.B. Pritchard, *Palestine figurines in relation to certain goddesses*, 5-31; Parrot, *Sumer*, 238 and *passim*; idem, *Assur*, 250 and *passim*; J.B. Connelly, *Votive offerings from hellenistic Failaka: evidence for Herakles cult*, in *L'Arabie préislamique et son environnement historique et culturel*, Leiden 1989, 145-58).

The cult of stones, deeply rooted among the Arabs of the Ḥidjāz, was not transformed as quickly as elsewhere into a cult of statues. It was in the mid-3rd century A.D. that Nabataean and Syro-Palestinian influences had the effect of promoting, in urban centres, the representational phase of the Arab pantheon; it was only then that the sacred stone became an idol. Wellhausen rightly asserts that "Die Bilder sind nicht echt arabischen; *wathan* und *ṣanam* sind importierte Worte und importierte Dinge" (*Reste*², 102). Henceforward, the *ṣanam*, made of wood (Ibn Hishām, 303) gradually took the place of the *nuṣub* made of stone. ʿIkrima, the son of Abū Djahl, Muḥammad's greatest enemy, was a maker of idols; merchants offered these to the Bedouin who purchased them and set them up in their tents. In Mecca, there was not a single house which did not have its own idol (al-Azraḳī, *Akhbār Makka*, 77-8).

After the triumph of Christianity in the Orient, the Ḥidjāz remained the sole bastion of paganism; carvers of idols could still make a living there. It comes as no surprise to find that at the time of Muḥammad's arrival in Mecca there were three hundred and sixty idols in the Kaʿba (al-Azraḳī, 77; Ibn al-Athīr, ii, 192), a number which probably has a symbolic significance but which confirms an abundance well corroborated by other sources.

The process of expansion of the cult of idols is described by Ibn al-Kalbī in the following terms: "The Arabs devoted themselves to the cult of idols: some constructed a sanctuary (*bayt*; regarding this term see *Divination*, 132 ff.), others acquired an idol (*ṣanam*); anyone who could neither possess an idol nor have a sanctuary constructed would set up a stone of his choice, facing the *ḥaram* or some other place, and then he would perform processions around it, as in the sanctuary (of Mecca). These stones were called *anṣāb* (as opposed to) *aṣnām* and *awthān*, which were statues (*tamāthīl*), and the procession made around them was called *dawār*" (*K. al-Aṣnām*, ed. Aḥmad Zakī Pasha, Cairo 1914, 21, quoted in *Panthéon*, 59). On this evolution and the various names given to the idols, see the summary of a *Kitāb al-Aṣnām* by al-Djāḥiẓ, no longer available, in his *K. al-Ḥayawān*, i, 5; this information is also presented in *Divination*, 249-50.

Thus the *anṣāb* are represented as replicas of the Black Stone of the Kaʿba. They take on the form of sacred stones in nomadic and semi-nomadic societies. The contribution of sedentary civilisations reinforces and enriches the cults and the rites of the nomads, but at the same time introduces confusion and adds to the difficulties facing the historian of religions, who is inclined to seek out connections and influences and to establish comparisons and similarities (*Panthéon*, 182).

Nevertheless, whatever were the forms given to the divinities of the Arab pantheon, the Arab religions retained their quite primitive internal structure. The development of the "artistic" representation of gods had no effect on the conceptual evolution of the cult. The present writer's study, in *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, illustrates the static nature of the Arab religions, rooted in a desert environment.

Bibliography: The material contained in this article is borrowed for the most part from T. Fahd, *Panthéon*, Paris 1968, and from the same author's *La divination arabe. Études religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam*, Leiden 1966, ²Paris 1987. Abundant references and quotations relating to the subject are to be found in these two works. Other sources include W.W. Baudissin, *Über die Entwicklung des Gottesbegriffs in den Religionen der semitischen Völker, mit Nachträgen*, Giessen 1929; C. Brockelmann, *Allah und die Götzen. (T. FAHD)

AL-NUWAYRĪ, MUḤAMMAD B. AL-ḲĀSIM al-Iskandarānī, local historian of his home Alexandria, who lived in the 8th/14th century but whose precise dates are unknown.

Between 767/1365-6 and 775/1373-4 he wrote a three-volume history of the city, the *K. al-Ilmām fīmā djarat bihi 'l-aḥkām al-maḳḍiyya fī waḳiʿat al-Iskandariyya* purporting to describe the calamity of Muḥarram 767/October 1365 when the Frankish Crusaders, led by Pierre de Lusignan, king of Cyprus, descended on Alexandria, occupied it for a week and sacked it (see S. Runciman, *A history of the Crusades*, London 1952-4, iii, 444-9; A.S. Atiya, in H.W. Hazard (ed.), *A history of the Crusades*, iii, Madison, Wisc. 1975, 16-18). Ibn Ḥadjar al-ʿAsḳalānī [*q.v.*], however, cited by al-Sakhāwī [*q.v.*], states that al-Nuwayrī spent so much time on the earlier history of the city that he barely had space to deal with the events of 767/1365. The work has now been edited by Atiya, 6 vols. Ḥaydarābād 1388-93/ 1968-73.

(C.E. BOSWORTH)

AL-NUWAYRĪ, SHIHĀB AL-DĪN AḤMAD B. ʿABD AL-WAHHĀB al-Bakrī al-Tamīmī al-Ḳurashī al-Shāfiʿī, Egyptian encyclopaedist and historian.

Born at Akhmīm [*q.v.*] on 21 Dhu 'l-Ḳaʿda 677/5 April 1279, died in Cairo on 21 Ramaḍān 733/5 June 1333, he is the author of one of the four best-known encyclopaedias of the Mamlūk period. His family may have originated from a small township of the Egyptian Ṣaʿīd, al-Nuwayra, but he had no direct links with this locality. He claims only, and on numerous occasions in the course of his work, to be descended from the caliph Abū Bakr.

His father, Tādj al-Dīn Abū Muḥammad ʿAbd al-Wahhāb (618-99/1221-99), who was possibly an official in the sultan's administration (Kratschowsky, *Taʾrīkh al-adab al-djughrāfī al-ʿarabī*, 408, and *EI*[1], s.v.), lived for most of his life in Cairo. According to an obituary notice written by his son, it is also known that he was born in the capital, at Miṣr, in an Ayyūbid *madrasa* known by the name of *Manāzil al-ʿIzz*. Speaking of him, his son stresses in particular his remarkable piety, his life and his death both demonstrating his close affinity with matters of faith. He died on 21 Dhu 'l-Ḥidjdja 699/7 September 1299 in *al-madrasa al-Ṣāliḥiyya al-Nadjmiyya*, in a room reserved for Mālikī teaching. Birth in a *madrasa* could be proof that his father belonged to the world of the *ʿulamāʾ*. He probably had another son, older than the author, named Muḥammad. A final point worth mentioning in connection with his father is that he was buried in the *turba* [*q.v.*] of the Mālikī supreme *ḳāḍī* Ibn Makhlūf al-Nuwayrī al-Djazūlī (d. 718/1318), an important figure in the world of the *ʿulamāʾ* who was supreme *ḳāḍī* for thirty-four years, during crucial periods in the history of Egypt and of Syria in the Mamlūk period, and who was probably the patron of the al-Nuwayrī who is the subject of this article. He had the same *nisba* as the latter, and according to al-Ṣafadī, he was a native of Nuwayra, but there is no indication that they were related.

Snippets of information gleaned from his vast encyclopaedia give the impression that before 698/1298, al-Nuwayrī must have lived for at least some of the time in Upper Egypt and in general in Egypt. Thus in the sections devoted to agriculture (M. Chapoutot-Remadi, *L'agriculture de l'Empire mamluk au Moyen Âge d'après al-Nuwayrī*, in *CT*, xxii [1974], 23-45) it seems that he is speaking from personal experience of regions visited and observation of practices. Similarly, in dealing with animals, he mentions the teeth of elephants which he saw at Ḳūṣ in 697/1298. Although not definitely established, it is probable that he stayed in Upper Egypt at least until this date.

It is difficult to compile an accurate list of his masters. It is known, however, that he attended courses given by some of the leading masters of his time such as ʿAbd al-Muʾmin al-Dimyaṭī (d. 705/1305 [*q.v.*]), from one of whose books, entitled *Kitāb Faḍl al-khayl* (Aleppo 1930), he frequently quotes. His second master, Ibn Daḳīḳ al-ʿĪd (d. 702/1302 [*q.v.*]), was a specialist in *ḥadīth*. The third is the grand *ḳāḍī* Ibn Djamāʿa (d. 733/1332 [*q.v.*]), who was *shaykh* of the *khānḳāh* [*q.v.*] *al-Nāṣiriyya*. His biographers also mention among his *shuyūkh* the *shaykha* Zaynab bint Yaḥyā b. ʿAbd al-Salām (d. 735/1334). He continued throughout his life to take an interest in the teaching of *ḥadīth*, and in particular he attended seminars of transmission of the *Ṣaḥīḥ* of al-Bukhārī held by the *shaykha* Wazīra bint Munadjdjā (d. 716/1316) in 715/1315, as well as those held by the *shaykh* al-Ṣāliḥī al-Ḥadjdjār (d. 730/1329) at *al-madrasa al-Manṣūriyya*. He heard the *shaykh* Ibn al-Ṣābūnī (d. 720/1320) transmit the *Sunan* of Abū Dāwūd, Zayn al-Dīn ʿAbd al-Ḥaḳḳ b. Fityān b. ʿAbd al-Madjīd al-Ḳurashī, the *Kitāb al-Shifā bi-taʿrīf ḥuḳūḳ al-Muṣṭafā* in 708/1308 at *al-madrasa al-Nāṣiriyya*, and the Sharīf ʿIzz al-Dīn al-Dimashḳī (d. 715/1315), the *Muwaṭṭaʾ* of Mālik and the *Ṣaḥīḥ* of Muslim. He also received an *idjāza* [*q.v.*] from the *shaykh* ʿIzz al-Dīn al-Fārūthī al-Wāsiṭī al-Rifāʿī.

For the first time, following his recording of his birth (xxx, 386-7), al-Nuwayrī mentions, in his account of the events of the year 698/1298, his recruitment to the *dīwān al-khāṣṣ* in Cairo and his residence at *al-madrasa al-Nāṣiriyya*, inaugurated by al-Malik al-ʿĀdil Kitbughā (694-96/1295-7) and acquired by Muḥammad b. Ḳalāwūn on his return to power in 698/1298. He speaks at length of this institution and reproduces the text of its *waḳf*. He openly criticises the administration of Ṭawāshī Shudjāʿ al-Dīn ʿAnbar al-Lālā (d. 724/1324), the tutor of the sultan who was entrusted with administration of the *waḳf*, accusing him of embezzlement and even demanding that he return some of the money owed to the staff of the *madrasa*.

Al-Nuwayrī travelled to Syria in the month of Djumādā II 701/January 1301, at the request of the sultan, to manage the property of the state, the *dīwān al-khāṣṣ*. Syria had then been in a state of turmoil since 699/1299 following the large-scale invasion of Ghāzān Khān [*q.v.*]. He participated in a battle against the Mongols on 29 Shaʿbān 702/18 April 1303 alongside Mughulṭāy [*q.v.*], and could thus describe the war against the Mongols and the victory of Shaḳḥab as an eye-witness. In 702/1303, the sultan appointed the *amīr* Sayf al-Dīn Balabān al-Djukāndār al-Manṣūrī to be *shādd* of crown property, and the two men became friends. Al-Nuwayrī seems to have travelled round the country; he mentions for example a journey in the Ghawr, and he describes the Ghūṭa of Damascus with the same attention to detail which he demonstrated in his description of Upper Egypt. He seems to have amassed a small fortune; in 703/1303, he possessed no fewer than ten horses, but an equine epidemic destroyed this resource, leaving him without even a horse for his own use. He stayed in Damascus for two years and four months.

Recalled to Cairo in Ramaḍān 703/April 1303, he resumed his administrative activities and, in his capacity as *mubāshir amlāk al-khāṣṣ al-sharīf*, he administered the *dīwān al-khāṣṣ*, the *bīmāristān* [*q.v.*] *al-manṣūrī* and the whole range of *manṣūrī waḳfs*. Control was exercised, apparently, by the supreme *ḳāḍī* Ibn Makhlūf. He took up residence again in the *madrasa*, and was thus a witness to the early stages of the dispute between Ibn Taymiyya [*q.v.*] and the *ʿulamāʾ* of Egypt and Ibn Makhlūf in particular. It was in the *madrasa al-Nāṣiriyya* that this affair began, lasting from 705/1305 to 709/1309. Al-Nuwayrī was induced to play a minor mediating role between his patron, implacable enemy of Ibn Taymiyya, and the governor of Damascus, Djamāl al-Dīn Aḳḳūsh al-Afram, ardent defender of the eminent *shaykh*. Numerous details indicate that al-Nuwayrī remained in Cairo during this period. In 705/1305, Ibn Ṣaṣrā [*q.v.*] was appointed supreme *ḳāḍī* of Cairo, and al-Nuwayrī was instrumental witness in some of the matters submitted to his judgment. At the time of the death of the *amīr* al-Turkumānī, al-Nuwayrī, who was then in the service of the sultan, was entrusted with the task of sequestering and liquidising his assets. The sultan subsequently instructed him to erect a *turba* for the *amīr* and to establish a maintenance *waḳf* with what

remained of his property. Muḥammad b. Ḳalāwūn made his way in person to al-Ḳarāfa to draw the plan of this *turba* on the ground.

The sultan Muḥammad b. Ḳalāwūn, wearying of the tutelage exercised by the senior *amīrs*, abdicated and went to establish himself in the governorate of al-Karak [*q.v.*] in 708/1308. Baybars II took power in Cairo. Five months later, in Rabīʿ II 709/September 1309, al-Nuwayrī, a loyalist, joined Muḥammad b. Ḳalāwūn at al-Karak and only returned to Cairo with the sultan, who regained his throne at the end of Ramaḍān/early March of the same year. After this triumphant return, one of al-Nuwayrī's patrons, the steward of the sovereign, *wakīl al-khāṣṣ*, Ibn ʿAbbāda (d. 710/1310), allowed him to work quite closely with the sovereign. This Ibn ʿAbbāda was himself the appointee of the supreme *ḳāḍī* Ibn Makhlūf, who had given him the task of administering the property left behind by Ḳalāwūn. This individual rose very quickly in the favour of the sultan. In his turn, he seems to have noticed the talents of al-Nuwayrī, entrusting to him the administration of the great complex constructed by Ḳalāwūn and of *al-madrasa al-Nāṣiriyya*. Through his good offices, al-Nuwayrī had regular access to Muḥammad b. Ḳalāwūn, and in numerous instances had occasion to work directly on his behalf. This excessively rapid promotion seems to have turned his head (*al-Ṭāliʿ*, 46; *Sulūk*, ii, 91; *Durar*) and he spoke disparagingly of his patron, for whom he had little regard. This conduct displeased the sultan, who denounced him to Ibn ʿAbbāda and gave the latter permission to punish him as he saw fit. Ibn ʿAbbāda did not hesitate to have him flogged and to confiscate his property; shortly afterwards he was sent away to Syria, but he does not even hint at this misfortune in his work and mentions only his transfer to Tripoli. In the course of the same year, Ibn Abbāda died; al-Nuwayrī devoted to him a dry and brief obituary in which he has considerably more to say about his successor than about the deceased.

He arrived at Tripoli in Ṣafar 710/July 1310 as *ṣāḥib dīwān al-inshāʾ*, head of the office of correspondence. He replaced a senior functionary who had made a name for himself in this occupation, Tādj al-Dīn al-Ṭawīl (d. 711/1311), *mustawfī 'l-dawla*. A few months later, in the same year, he was appointed *nāẓir al-djaysh*, replacing another functionary of Tripoli who had recently died, a certain Nadjm al-Dīn al-Ḳaṣīr, and he travelled extensively during his time in Tripoli, as he had done previously in Upper Egypt and in Damascus. He stayed in Tripoli until 712/1312 and witnessed the defection to the Mongols of the *nāʾib* of Damascus Djamāl al-Dīn Aḳḳūsh al-Afram. This *amīr-nāʾib*, before 708/1308, had been among the opponents of the restoration of Muḥammad b. Ḳalāwūn; following his return to the throne the sultan, stung by his experience of two depositions, attempted to eliminate all the senior *amīrs* who could eventually pose a threat to his rule. Thus the governor of Aleppo, Shams al-Dīn Ḳarāsunḳur, realising that his only hope of survival lay in flight, sought to win over to his side certain *amīrs* including the *nāʾib* of Tripoli, possibly with the intention of provoking an insurrection in Syria. Al-Nuwayrī, claiming amicable relations with the governor, sought to dissuade him from following Ḳarāsunḳur. He recounts his conversation with him and the arguments which he posed to convince him. In spite of everything, the *amīr* took flight and attempted to induce him to join him as well as the *amīrs* of Tripoli. He relates how he succeeded in persuading the latter not to follow him, with only one exception, and how he induced them to renew their oath of allegiance to the sultan. Al-Nuwayrī, who, with the exception of his father, never speaks of his immediate family—it is not known whether he was married or had children—mentions the *ḳāḍī* ʿImād al-Dīn al-Nuwayrī (d. 717/1317), his father's cousin in the maternal line, who died in Tripoli where he was *ṣāḥib al-dīwān*; he had previously been *nāẓir* in numerous places in Syria. Al-Nuwayrī left Tripoli in Djumādā I 712/September 1312 and arrived in Cairo on 20 Radjab/20 November of the same year, after a brief stay in Damascus during the return journey. The circumstances of his departure from Tripoli are obscure; the formula that he uses is ambiguous. His sojourn in Tripoli perhaps explains the place which it occupies in his chronicle. He describes the conquest of Tripoli by Ḳalāwūn, then retraces its history from the Arab conquest to 688/1289 and finishes by providing a list of its *nuwwāb*, governors, up to the year 725/1325. This passage is furthermore a synthesis of data compiled by his predecessors and contemporaries, and of information which he gathered himself. His interest in Tripoli persists throughout his work, and thus he does not omit to note, every year, the changes taking place, the appointments of *amīrs* and of functionaries, the cadastral revision, information concerning the Nuṣayriyya and climatic phenomena.

According to his biographers, on returning to Cairo he was appointed *nāẓir al-dīwān* of two provinces of the Nile Delta, al-Dakhaliyya and al-Murtāḥiyya (*Ṭāliʿ*, 46). He speaks of them indirectly in a biographical article concerning a major figure in the administration, a *ṣāḥib dīwān al-djaysh*, the *ḳāḍī* Ibn Ḥashīsh (d. 729/1328; *Aʿyān al-ʿaṣr*, iii, 312; *Sulūk*, ii, 315). It may be assumed that at least until 716/1316, al-Nuwayrī was engaged in administering the revenues of these provinces, while residing in Cairo, probably until the end of his life. It seems that he continued to reside in *al-madrasa al-Nāṣiriyya*, since he mentions a dream which he had at that time which took place in one of the *īwāns* of the *madrasa*, called *al-Īwān al-Baḥrī*, on the eve of Friday 13 Dhu 'l-Ḳaʿda 729/8 September 1329. It is not known at exactly what date al-Nuwayrī abandoned administration to devote himself exclusively to the composition of his monumental work, but before turning to the latter, it would be useful to summarise the main points of his life and career.

The reconstructed biography of al-Nuwayrī shows a man often involved in the important events of his time such as the war against Ghāzān Khān and the victory of Shakḥab, in which he was a participant. Even in *al-madrasa al-Nāṣiriyya*, which played such an important role in his life, he dared to challenge the administrator of the foundation, Ṭawāshī Shudjāʿ al-Dīn ʿAnbar al-Lālā, the sultan's tutor, insisting that he pay to the staff the salary owed to them; from the same vantage-point, he witnessed the controversies surrounding Ibn Taymiyya. During the reign of Baybars II, al-Nuwayrī sided with Muḥammad b. Ḳalāwūn, whom he regarded as the only legitimate sultan, joining him in exile at al-Karak. While resident in Tripoli, decidedly at the centre of important events, al-Nuwayrī tried to dissuade the governor Djamāl al-Dīn Aḳḳūsh al-Afram from defecting to the Mongols with Ḳarāsunḳur; failing in this, he nevertheless succeeded in limiting the damage. Through his contacts, he was well informed concerning affairs of state, and he took advantage of his duties to travel widely in Egypt and Syria. His career was in itself quite distinguished; he played a major role in the administration of the three most important *dīwāns*, those of *al-khāṣṣ*, *al-inshāʾ* and *al-djaysh*.

During the course of his career, he forged numerous amicable relationships with highly-placed members of the Mamlūk régime. In Damascus, his friends included three *amīrs*, Sayf al-Dīn Balabān al-Djukāndār al-Manṣūrī (d. 706/1306), Ẓāhir al-Dīn Mukhtār al-Manṣūrī (d. 716/1316) and ʿAlāʾ al-Dīn Mughulṭāy (d. 707/1307) whom he had previously known in Cairo, and among the *ʿulamāʾ*, members of the most distinguished Damascus families, Ibn Ṣaṣrā (d. 717/1317), Ibn al-Ḳalānisī (d. 715/1315) and his son Muḥibb al-Dīn Maḥmūd (d. 730/1330). In Tripoli, he showed the same propensity for making friends, among members of the Mamlūk élite as well as among his colleagues in the *dīwān al-inshāʾ* and the *dīwān al-djaysh*. He was also acquainted with some of the senior *kuttāb* of the Mamlūk administration, letters from whom he reproduces in numerous instances in his encyclopaedia. Each time, the terms which underline his privileged relations with one or the other are *rāfaḳtuhu* or *ṣāḥabtuhu*. As a man of his time, al-Nuwayrī was also acquainted with Ṣūfī *shaykhs*.

After a career of at least eighteen years, approximately from 698/1299 to 716/1316, he retired from public life and devoted himself to *adab* and to the writing of his encyclopaedia. From his administrative life, he would have learned *kitāba*, the establishment of roles, exercised *ḥisba*, land-surveying (*al-muḳāyasāt*), the management of accounts and revenues, *al-muḥāsaba wa 'l-taḥṣīlāt*, *naẓar*, inspection of crops and of presses (*al-ghallāt wa 'l-iʿtiṣār*), forage, sales (*al-mubāyaʿāt*). He read and contemplated a great deal over the years and conceived the idea of writing a book, or rather a work large enough to provide a compendium of the fruits of his reading and of his administrative experience. He expresses it in his introduction in these terms: "I mounted the war-horse of reading and investigation and spurred him on. I then galloped in the region of consultation. When I succeeded in taming the horse and the source of knowledge became clear to me, I then undertook to compose a work which would keep me company and in which I would find my bearings, having recourse to my own administrative experience. I called upon God the Great and Merciful and I have produced five great Books (*funūn*) harmoniously composed and divided into sections and sub-sections."

Al-Nuwayrī died on 21 Ramaḍān 733/5 June 1333, at the age of fifty-six years, having composed a monumental work of 9,000 pages in thirty-one volumes which he intitled *Nihāyat al-arab fī funūn al-adab*. He thus bequeathed to posterity his experience and his culture in the form of a *summa*. His capacity for work was extraordinary since, while working on his encyclopaedia, he made copies of it which he sold before composition of the whole was complete. The first volume (p. 16) bears the date 714/1314. A single autograph manuscript survives from the first version of his encyclopaedia, volume 19 (corresponding to xxi in the printed edition, p. 540); it is dated 9 Djumādā II 718/8 August 1318. Volumes 29 and 30 are dated 725/1325, but it is certain that he made additions to volume 30, after 728/1328. It seems that he began making a second copy, the first volume of which was completed on 20 Dhu 'l-Ḳaʿda 721/11 December 1321, the fifth on 22 Djumādā I 722/8 June 1322, the seventeenth on 7 Ramaḍān 722/19 September 1322 and the eighteenth on 26 Ramaḍān/8 October, just 19 days later. He must thus have copied eighteen volumes in less than ten months. His biographers have noted his ability to fill three manuscript notebooks in a day, and this performance seems unequivocally confirmed, with the addition to what he copied and sold of eight copies of the *Ṣaḥīḥ* of al-Bukhārī. He was deemed an excellent calligrapher and bookbinder. He must then have written the totality of his work between 714/1314 and 731/1330, over a period of seventeen years, since his chronicle finishes in 731/1331, two years before his death.

The work is divided into five *funūn*; each *fann* comprises five parts which, in turn, consist of a certain number of chapters or *abwāb* (from two to fourteen). The first is a description of the Universe. Al-Nuwayrī begins with a cosmographic vision and then proceeds to the Earth and the elements of which it is composed. Earth and Heaven were conceived by God for Man's benefit. The *fann* concludes with a description of Egypt, its inhabitants and archaeological remains. The three succeeding volumes are devoted to living beings: Man is the principal theme of the second, while the third and fourth are concerned with fauna and flora. History is the subject of the fifth and last, and this is by far the most important; it represents more than two-thirds of the work. This section is conceived as a universal history, covering the period from Creation to 731/1331. Crucial episodes in this history are the story of the Prophet and of Arab expansion, then the ʿAbbāsid period and finally, the history of Egypt since the Fāṭimids. The major preoccupation of al-Nuwayrī seems to lie in providing the reader with succinct summaries of the principal historical events. The work is conceived primarily as a work of reference, and the manner of compilation displays a concern to inform the reader in a qualitative manner; only works bearing authority are summarised here. The final volume of this important historiographer differs somewhat from the remainder. These are annals, or rather notes taken from day to day; the text is condensed and even displays a certain dryness. It contrasts strongly with the rest of the work, in which the style is in general mannered, sometimes even lapsing into rhymed prose. This abridged account of events personally experienced may have been written with a view to later revision, but he died without making any amendments.

In all, with a work gigantic in terms of the variety of subjects studied, the breadth of the information contained, al-Nuwayrī not only achieved his avowed object but even went further, since not only did he succeed in providing the sum of practical knowledge necessary for a good secretary and for the administrative world in general but he also reached a much broader public. The literary form of the work and the spectrum of subjects exposed, summarised and classified in the most accessible manner possible, clearly show that al-Nuwayrī wanted, beyond his readership of administrators, to contribute to the formation of a kind of "well-informed man". He states this himself occasionally.

Al-Nuwayrī was greatly inspired by the geographical encyclopaedia of his predecessor, al-Waṭwāṭ (d. 718/1318 [*q.v.*]) entitled *Mabāhidj al-fikar wa-manāhidj al-ʿibar* (partial edition, Kuwait 1981), for the subdivision into *fann*s and even for the content. The four *fann*s of al-Waṭwāṭ recur in the work of al-Nuwayrī, who added history to form a fifth section. Furthermore, he mentions him by name, as he does with the majority of his sources. In the books devoted to natural history, fauna and flora, he makes a synthesis between three types of pre-occupation, naturalist, medical and literary. He thus describes the animal or the plant, mentions its medical and other attributes, the legends concerning his subject and the poems of which it has been the object. Science and *adab* are thus united. Amīna Muḥammad Djamāl al-

Dīn (see Bibl.) has listed seventy-five poets quoted in the book on fauna (148). The work reflects the author's education with his constant references to *ḥadīth*; the impact of traditions is also evident in his very approach of *khabar*, since he always adds to a work compiled by an authoritative person details gleaned either from his direct observation or from the testimony of a trustworthy person. He sometimes exhibits scepticism when he relates a story which he regards as fantasy, "this saying derives, in my belief, from the fables of the Arabs (*khurāfāt al-ʿArab*)" (ix, 276, or x, 209), but he has no qualms about relating marvels for the entertainment of the reader. Throughout his work he is guided by three principles: to adhere to the stated plan, not to go to excess over details and to avoid repetition. In the introduction to Book III, which concerns animals, he writes, "Were it not for the risk of saying too much, we could have composed an epistle for each animal, but we prefer to confine ourselves to the writing of others rather than to our own accounts" (ix, 225). He engages in a constant dialogue with the reader and explains his approach. To avoid repetitions, he often has recourse to postponements; he even has a system of double postponement which demonstrates simultaneously his attention to minute detail in his conception of the work as a whole and his unwillingness to weary the reader with repetitions (ix, 333, xii, 2). There remains a final important remark which is valid for the work as a whole; al-Nuwayrī's professional travels across parts of Syria and Egypt led him to take a constant interest in the countries and regions visited, and it is from this source that he draws all the concrete examples which are scattered throughout his work. Such personal notes occur on numerous occasions and in all parts of his encyclopaedia, on Tripoli, on Damascus, Upper Egypt, the Delta and Cairo, and in the historical section he borrows constantly from Syrian authors such as al-Djazarī or al-Birzālī, in a manner which enables him to sketch in, for each year, information concerning at least the places in which he has lived and worked at one time or another. Similarly, in the sections devoted to administration, his personal experience enables him to convey important information regarding the machinery of the financial administration of Mamlūk Egypt, with precise and meticulous descriptions. Furthermore, under the heading of administrative and financial information, al-Nuwayrī reveals indirectly, and without departing from his primary intention, certain aspects of the rural economy in the 8th/14th century. Thus his surveys of fiscal policy convey information on types of soil, crops, certain problems inherent in climatic or hydrographic conditions. In the same Book II, taking advantage of his access to important state documents and under the pretext of supplying models for the benefit of the *kātib*, he reproduces a series of letters emanating from, in particular, great sovereigns such as Baybars, Ḳalāwūn and his son Muḥammad. Other documents reproduced include certificates of investiture and records of *waḳf*s.

The first four *funūn* cover only ten volumes, while the section reserved for history accounts in itself for twenty-one. The importance of Book V accounts for the fact that his biographers consider al-Nuwayrī a historian before all else. He reveals his methodology in the introduction to his historical section: "When I saw that all those who wrote the history of the Muslims had adopted the annalistic form rather than that of dynastic history, I realised that by this method the reader was being deprived of the pleasure of an event which held his preference and of an affair which he might discover. The chronicles of the year draw to a close in a way which denies awareness of all the phases of an event. The historian changes the year and passes from east to west, from peace to war, by the very fact of passing from one year to another... The account of events is displaced and becomes remote. The reader can only follow an episode which interests him with great difficulty... I have chosen to present history by dynasties and I shall not leave one of them until I have recounted its history from beginning to end, giving the sum of its battles and its achievements, the history of its kings, of its kingdom and of its highways" (xiii, 2). Little (*Introduction to Muslim historiography*, 31; idem, *The historical and historiographical significance of the detention of Ibn Taymiyya*, in *IJMES*, iv [1973], 315) has already drawn attention to the originality of the method adopted by al-Nuwayrī in his willingness to break with chronology in order to give more coherence to his narrative. When he does this he alerts the reader and explains himself, then, when he has finished with his exposure of a topic, he writes as a general rule *wa-l-nardjiʿ li-siyāḳat al-akhbār* (or *al-taʾrīkh*) (Or 2n, fol. 15b) or *wa-l-nardjiʿ ilā baḳiyyat ḥawādīth al-sana* (Or 2n, fol. 29a). Following the stated pattern, proposing for example to deal with the history of the Mongols, he writes: "We shall give a brief account of (Čingiz Khān's) story and the circumstances of his appearance, his development and his reign. We shall explain this by means of what we have gained from our reading and by means of oral testimony which we have gathered... This kingdom was remote and vast, historians have not learned a great deal about it, we have not been able to verify... We have taken as our basis al-Nasawī and his Djalālī history (*Sīrat Djalāl al-Dīn Mangubirtī*) and Ibn al-Athīr and his *Kāmil*... If there are other historians who have studied this question, their work is not available to us" (xxvii, 300). These pre-occupations are very modern and they illustrate the author's constant concern to instruct his reader in the best way possible, providing him with the most reliable written and oral sources. But even in its historical section, al-Nuwayrī stresses the literary nature of his work, "Our book is not based on history only; it is a book of *adab*" (xiii, 5).

In the last part of his work which is devoted to the Mamlūk empire, Egypt, Syria and the Ḥidjāz, al-Nuwayrī departs from the stated plan and, for each sultan, after a biographical presentation, he gives an account of his battles, then of the events which took place under his reign, according to chronological order, giving obituary notices of distinguished persons at the end of each year. In spite of his wish to avoid repetitions, this pattern induces him to make them in numerous instances. Born some thirty years after the beginning of this dynasty, he begins by borrowing from his elders, Ibn ʿAbd al-Ẓāhir, Abū Shāma and Ibn Shaddād, then his contemporaries, al-Djazarī, al-Yūnīnī, al-Birzālī and Baybars al-Manṣūrī. As in other parts of his work, he usually mentions them by name but sometimes he is content to indicate his borrowings with *ḳāla* (or *ḥakā*) *al-muʾarrikh*; he sometimes adds the title of the work. He quotes the majority of his contemporaries, without saying whether he has known them personally. He adds to their material that which he has obtained from his friends and his professional contacts. He explains the choice of the plan which he has adopted at every opportunity (Or 2n, fols. 3a, 5b, 15b, 16a ...) even though, he says, he has not always conformed to the rules of history (*al-khurūdj ʿan al-ḳāʿida al-taʾrīkhiyya*).

Several authors have borrowed from the *Nihāya*;

reference should be made to the comparison of sources made by Little (*Introduction*...), with the aid of numerous passages, in order to attempt a clarification of the circulation of borrowings between the different authors of the Mamlūk period, while the severity of Ashtor's judgment of this work (*Studies*, 15) needs some attenuation, since its dimensions and its characteristics render impossible such an unequivocal judgment of the merits of this encyclopaedia.

The edition of the *Nihāya*, begun in Egypt by Aḥmad Zakī Pasha in 1923, came to a halt with volume xviii in 1955, was then resumed in the 1970s and, after further interruptions, volume xxx appeared in 1991; however the two preceding ones, xxviii and xxix, are not yet available. The edition will comprise more volumes than the manuscript work, since the thirtieth which has just appeared deals with the beginnings of the Mamlūk period, while the years 678-731 have yet to be edited. Manuscripts of the *Nihāya* are to be found almost everywhere in Europe, in particular in Paris, Rome and Leiden, but also in Egypt. The work has been known and exploited for a long time [see *EI*[1], s.v.], but much remains to be drawn from it.

NUZHA [see MIʿZAF].

O

OB, one of the major rivers of Siberia, which flows from sources in the Altai Mountains to the Gulf of Ob and the Kara Sea of the Arctic Ocean. Its course is 3,680 km/2,287 miles long and 5,410 km/3,362 miles long if its main left-bank affluent, the Irtysh [see IRTISH in Suppl.] is included. Its whole basin covers a huge area of western Siberia.

In early historic times, the lands along the lower and middle Ob were thinly peopled with such groups as the Samoyeds and the Ugrian Voguls and Ostiaks (in fact, the indigenous population of these regions today, only the upper reaches of the river in the Altai region being ethnically Turkish territory; see M.G. Levin and L.P. Potapov (eds.), *Narodï Sibiri*, Eng. tr. *The peoples of Siberia*, Chicago and London 1964, 305-41, 511-70). These Ugrian peoples are the ones whom the early Muslim geographers and travellers in Inner Asia knew as the Yūra (mediaeval Russ. *Yugra*) who lived beyond the Bulghārs [*q.v.*] towards the *Baḥr al-Ẓulumāt* "Sea of Darkness", i.e. the Arctic, and supplied furs to the more southerly peoples by dumb barter (see J. Marquart, *Ein arabischer Bericht über die arktischen* (*uralischen*) *Länder aus dem 10. Jahrhundert*, in *Ungarische Jahrbücher*, iv [1924], 289 ff., 303 ff., 321 ff.; V. Minorsky, *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, London 1942, tr. 34, comm. 112-15; K. Donner, *La Sibérie*, Paris 1946, 124 ff.; P.B. Golden, in *The Cambridge history of early Inner Asia*, Cambridge 1990, 253-4).

It is probable that the Ob is to be identified with the river beyond the Ili, the Irtysh and a nameless one, and which Maḥmūd Kāshgharī calls the Yamār, locating along its shores the tribe of the Yabaḳu, who had their own language (? or dialect) but also spoke Turkish (*Dīwān lughāt al-turk*, tr. Atalay, i, 29, 30, 79, iii, 28, etc. = tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, i, 83, 117, ii, 161, etc.; Brockelmann, *Mitteltürkischer Wortschatz*, 244, identifies the Yamār "probably" with the Ishim, a left-bank tributary of the Irtysh, hence further west than the Ob, but this seems too far west, in the light of the relative positions of the Turkish tribes in its vicinity, see below). The map accompanying Kāshgharī's text (reproduced by Dankoff and Kelly at i, 82; according to A. Herrmann, *Die älteste türkische Weltkarte*, in *Imago Mundi*, i [1935], 27, this is possibly by the author himself or was drawn according to his specifications) places the Yamār river beyond the lands of the Ḳay and Čömül tribes on the nameless river, again described as being beyond the Yabaḳu, but the Ḳay and Čömül territories may well have extended from the Irtysh to the

Ob, as apparently did those of the Basmil also (see Minorsky, *Ḥudūd al-ʿālam*, comm. 285, 305; idem, *Marvazī*, comm. 96). There is also the precious information in Kās̲h̲g̲h̲arī about an expedition northwards led by one Arslan-tigin (presumably a Ḳarak̲h̲ānid [see ILEK K̲H̲ĀNS]) against infidels who were led by a certain Budrač and who were routed, and the Turkish verses which Kās̲h̲g̲h̲arī quotes mention the crossing of the Ili and the Yamār; also hostile to the Muslims were the Basmil (*Dīwān*, tr. Atalay, i, 144, 452, iii, 356 = tr. Dankoff and Kelly, i, 163, 340, ii, 330-1). Kās̲h̲g̲h̲arī derived information directly from one of the participants in this *g̲h̲azw*, hence it must have taken place in the early or mid-5th/11th century, although the episode very soon became enshrouded in legendary accretions (Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 95-6, Fr. tr. *Histoire des Turcs d'Asie Centrale*, Paris 1945, 76-7).

Islam never penetrated to the Ugrian peoples of the lower and middle Ob, and the Turkic peoples of the upper reaches remained shamanists also. In the later 16th century, Kučum K̲h̲ān, ruler of the Turco-Mongol k̲h̲ānate of Sibir [*q.v.*] centred on Isker on the middle Irtysh, was finally defeated by Russian forces in August 1598 on the Ob; the Russians had already penetrated to the Ob basin in their thrust eastwards through Siberia. A Russian army had reached the shores of the Ob in 1584; a fort was founded at Tomsk in 1604, and this place was later to be the seat of the first university in Siberia, inaugurated in 1888; Surgut was founded in 1595 and Barnaul erected into a town in 1771 (see Donner, *La Sibérie*, 144-6; J. Forsyth, *A history of the peoples of Siberia, Russia's north Asian colony 1581-1990*, Cambridge 1992, 28 ff.). The river itself, navigable on its upper course for some 190 days a year, became an important means of communication. Novosibirsk, where the Trans-Siberian railway crosses the Ob, was founded in 1893 and soon eclipsed Tomsk, later becoming the largest city of Soviet Asia. At present, the Ob basin falls within the Russian Republic, with only the river's headwaters in the Gorno-Altai Autonomous Oblast'.

OCHIALY [see ʿULŪDJ ʿALĪ].

OCHRIDA [see OKHRI].

OCSONOBA [see UKS̲H̲UNŪBA].

OD̲J̲AḲ (T.), "fireplace, hearth, chimney", a word which survives with a rather wide range of meanings in all Turkish languages and dialects. Originally *otčoḳ* < *otčaḳ* with the elements *ōt* "fire" and *-čaḳ* (perhaps to be connected with a rare suffix denoting a place, cf. S. Tezcan, *Eski Uygurca Hsüan Tsang biyografyası X. bölüm*, Ankara 1975, n. 1074; idem, *Das uigurische Insadi-Sutra*, Berlin 1974, n. 275). The connotation "iron ring (for a prisoner or criminal)" appears only in *Sanglāk̲h̲* and in S̲h̲eyk̲h̲ Süleymān Buk̲h̲ārī (G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, Wiesbaden 1965 ii, 10-2, no. 421; G. Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 22). The term passed into Arabic (*wud̲j̲āḳ*), Persian and most Balkan languages (A. Škaljić, *Turcizmi u srpskohrvatskom-hrvatskosrpskom jeziku*, Sarajevo ³1973, s.v. *odžak*, etc.). There are place names derived from it, like Odžaci (district of Sombor, Bačka) and Odžak (a town in Bosnia, district Doboj and a locality near Livno).

Synonymously used with *yurt* [*q.v.*] in the sense of "family, inherited possession", *od̲j̲ak* or *od̲j̲aklïḳ* means a special sort of *timar* (K. Röhrborn, *Untersuchungen zur osmanischen Verwaltungsgeschichte*, Wiesbaden 1973, 46 ff.) or a semi-independent *sand̲j̲aḳ* (N. Göyünç, *Yurtluk-ocaklık deyimleri hakkında*, in *Prof. Dr. Bekir Kütükoğlu'na armağan*, Istanbul 1991, 269-77).

The *od̲j̲aḳ* was equally a unit of recruitment in the Ottoman military administration [see ʿAD̲J̲AMĪ OG̲H̲LĀN, BOSTĀND̲J̲Ï, D̲J̲EBED̲J̲I]. The Janissaries in their totality were *the od̲j̲aḳ* par excellence [see YEÑI ČERI]. Their cognomen *Od̲j̲ag̲h̲-ï Bektās̲h̲iyān* was coined for their close relation to the fraternity [see BEKTĀS̲H̲IYYA]. The Turkish soldiery in the Mag̲h̲rib and Egypt was also referred to as the *od̲j̲aḳ* (M. Colombe, *Contribution à l'étude du recrutement de l'Odjaq d'Alger*, in *RAfr.*, lxxxvii [1943], 166-83; A. Raymond, *Artisans et commerçants au Caire au XVIIIᵉ siècle*, Damascus 1973-4, *passim*).

In the civil sphere we find groups of workmen formed into *od̲j̲aḳs* (e.g. L. Fekete, *Die Siyāqat-Schrift in der türkischen Finanzverwaltung*, i, Budapest 1955, 761; C. Orhonlu, *Osmanlı imparatorluğunda şehircilik ve ulaşım*, Istanbul 1984, 33: *ocağ-ı ahenger*).

The technical vocabulary of fraternities like the Bektās̲h̲iyya and the Mawlawiyya [*q.v.*] assigns to the *od̲j̲aḳ* a special place in their *tekkes*. Bektās̲h̲ī *tekkes* used to have an *od̲j̲aḳ* in front of the *ḳibla* between the *post* of Seyyid ʿAlī and the *K̲h̲orāsān postu*. In Mewlewī-k̲h̲ānes, *od̲j̲aḳ* was another word for the *maḳām* of the cook (*as̲h̲d̲j̲ï dede*). Amongst the Alevis of Anatolia, *ocak-zâdes* are spiritual guides who belonged to one of the lineages stemming from the twelve imams (K. Kehl-Bodrogi, *Die Kızılbaş-Aleviten*, Berlin 1988, 167-79).

At the beginning of the 20th century, *od̲j̲aḳ* became an emotive word with nationalist overtones for the Turkist movement (seen in the *Türk Od̲j̲ag̲h̲ï* founded in 1911-12). The youth organisations of the more recent Milliyetçi Hareket Partisi were called *Ülkü Ocakları Dernekleri* (1968-78).

The traditional name for the month of January was replaced in 1945 by a literal translation (*calque sémantique*) from *Ḳānūn-i t̲h̲ānī* to *Ocak* (law no. 4696).

OD̲J̲AḲLÏ [see OD̲J̲AḲ].

OFEN, first the German name of Pest [see PES̲H̲TE] (this meaning "cave or lime-kiln"), later and until recent times that of Buda [see BUDÏN], both today parts of the capital of Hungary.

OGĀDĒN, a vast arid expanse in the south-eastern part of Ethiopia approximately delimited by the Wadi Shebille to the south-west, the frontier of the former Somaliland to the north-east, the line Ferfer-Werder (the administrative capital) - Doomo to the south-east and the line Degeh Bur - Degeh Medo to the north-west. It is ranged over by Somali nomads belonging to the Dārōd group, the Ogādēn (from whom the region gets its name), and formed part of the province of Harargé (Harar) until 1991, when a new administrative set of arrangements on ethnic and cultural bases placed it within the "Somali province". It is claimed by the Republic of Somalia, and the fact that it actually belongs at present to Ethiopia explains the chevron-like shape of the Somalia territory. Certain fringe regions of Ogādēn (those of Jigjiga and the valley of the Shebelle) are cultivated by Somalis or by peasants who have come from other parts of Ethiopia. Explorations have revealed the presence there of natural gas.

It was after the conquest of the Muslim amirate of Harar [*q.v.*] in 1887 that the King of Shoa Menelik, the future Emperor of Ethiopia (b. 1844, regn. 1889-1913), ordered the conquest of Ogādēn, which was

completed in 1890. Carried out in the context of colonial expansion within the Horn of Africa (Britons, Italians and French installed themselves there in the years 1880-1890), this annexation was confirmed internationally by agreements concluded with Britian, which renounced part of the Haud pastures in favour of Ethiopia (1897), and with the Italians (1908), without however the frontiers being clearly delimited. Despite a certain amount of tension with the two European powers (the frontier incident of Wal-Wal in December 1934 was the pretext for the Italian agression against Ethiopia of 1935-6), the situation remained thus until 1960.

During the rebellion of 1900-20 of the *sayyid* Muḥammad ʿAbdille Ḥassān, the so-called "Mad Mullah" (who was of Ogādēn ancestry [see MUḤAMMAD B. ʿABD ALLAH B. ḤASSĀN]) against the British, some of the military operations took place in the territory of the Ogādēn, and these last made appeals to the Ethiopians for help on various occasions.

In 1960 the two former Italian and British colonies, Somalia and Somaliland, became independent and united to form the Republic of Somalia [*q.v.*]. Impelled by a militant pan-Somalia feeling, the new state proclaimed its rights over Ogādēn, claiming the provinces of Harargé (Harar), Bale, Sidamo and Arssi, hence much more than those territories actually inhabited by Somalis. It also claimed the French Coastal Region of the Somalis (which later became the French Territory of the Afars and Issas and then, after its achievement of independence in 1977, the Republic of Djibouti) and part of northern Kenya. From this time onwards, Ogādēn became one of the five territorial entities populated by Somalis and symbolised by the five points of the star in the national flag, to whose unity Somalian nationalism aspires.

The first war between Somalia and Ethiopia was begun by the former in 1964, and only international pressure prevented the Ethiopian military advance. The Khartoum Agreements in the spring of that year confirmed the status quo. After the fall of Emperor Haile Selassie in 1974, the Somalis took advantage of the disorder within Ethiopia to make another attempted invasion (1977). The Ethiopians only retrieved their position thanks to the Soviet Russian volte-face when the Soviets abandoned Somalia, their ally until 1970, for the Marxist Ethiopian régime and replaced American aid by their own. Thus the quite local problem of Ogādēn took on an international dimension.

The grave difficulties into which Somalia has fallen since 1991 have removed the imminent acuteness of the Ogādēn problem.

Bibliography: Material may be found in the general works dealing with Ethiopia, Somalia and the geopolitics of the Horn of Africa and the Red Sea regions. The following first two titles reflect the Ethiopian case in the Ogādēn dispute: Wolde-Mariam Mesfin, *The background of the Ethio-Somalia boundary dispute*, Addis Ababa 1964; S.P. Petrides, *The boundary question between Ethiopia and Somalia*, New Delhi 1983; I.M. Lewis, *A modern history of Somalia*³, London and Boulder, Colo. 1988. It may also be recalled that A. Rimbaud put together a *Rapport sur l'Ogadine* from the notes of the Greek merchant Sottiro (*Comptes-Rendus des Séances de la Société de Géographie, Paris* [1884]). (A. ROUAUD)

ÖGEDEY or ÖGÖDEY, the second Great Khān of the Mongol Empire. Born probably in 1186, he was the third son of Činggis Khan (Čingiz Khān [*q.v.*]) by his principal wife Börte. He was the first of the Mongol rulers to adopt the title Ḳaʾan: Djuwaynī always refers to him thus, almost as though it was regarded as a personal name. Čінggis had during his lifetime indicated that Ögedey should succeed him, in preference to his other surviving sons Čaghatay and Toluy. It is often suggested that Ögedey was a generally acceptable conciliatory figure, and the empire seems to have been administered by Ögedey on the basis of family consultation rather than imperial autocracy. Ögedey does appear to have been, by Mongol standards, an unusually benevolent ruler, if the numerous anecdotes illustrating his tolerance and generosity which are preserved by Djuwaynī and Rashīd al-Dīn are to be believed.

Činggis's death in 1227 was, however, followed by a two-year interregnum before Ögedey was confirmed as Great Khān at a *ḳuriltay* in 1229 convened by his younger brother Toluy. Thereafter, the Mongol Empire continued to expand in both east and west. The conquest of the Chin Empire in north China was completed in 1234, and Mongol armies under the generals Čormaghun and Baydju campaigned in northern Persia from 1229. The most spectacular campaign undertaken during Ögedey's reign was that in Russia and eastern Europe. In 1235 a *ḳuriltay* decided to launch this expedition, which was to be headed by Batu [*q.v.*], son of Činggis's (deceased) eldest son Djoči, to whom the lands to the west had been allotted as his *ulus*. The campaigns, conducted triumphantly between 1237 and 1241, culminated in an invasion of eastern and central Europe, from Poland to Hungary and Austria, which was abruptly terminated in early 1242, probably at least in part because the news had reached Batu of the death of Ögedey on 7 December 1241 (possibly as a result of over-indulgence in drink: a not uncommon end among the Mongol notables). The enduring result of the expedition was the establishment of Batu's and his descendants' rule over what Westerners called the Golden Horde (known in the Islamic world as the Khanate of Ḳîpčaḳ).

The achievements of Ögedey's reign were not solely warlike. It was at this time that the Mongol Empire acquired a capital: Ḳaraḳorum, in the Orkhon [*q.v.*] valley of central Mongolia. Činggis seems previously to have used the site, but it was Ögedey who in 1235 had the city walled and who built the substantial though (according to the Franciscan traveller William of Rubruck, who was there in the 1250s) not enormously impressive buildings. Another significant achievement was the establishment in 1234 of the imperial communications system, the *Yām* [see MONGOLS, section 5]. This network of post stations was initially set up by Ögedey in the territories subject to his own direct rule, and it was then extended to include the lands subject to Čaghatay, Toluy and Batu. The reign saw the height of the (by no means unchallenged) influence of the Sino-Khitan minister Yeh-lü Ch'u-ts'ai, who managed to exercise some restraint on the Mongol leaders' more rapacious instincts; it is he who is credited with foiling the suggestion that the population of north China should be exterminated, and the land turned over to pasture for the Mongols' flocks and herds.

2. Secondary sources: All general studies of the Mongol Empire contain some account of Ögedey and his reign. More detail is to be found in Barthold, *Turkestan*[4], London 1977, ch. 5, and L. de Hartog, *Genghis Khan: Conqueror of the World*, London 1989, chs. 13-15. On Yeh-lü Ch'u-ts'ai (conspicuous by his absence from the Islamic sources), see de Rachewiltz, *Yeh-lü Ch'u-ts'ai (1189-1243): Buddhist idealist and Confucian statesman*, in A.F. Wright and D. Twitchett (eds.), *Confucian personalities*, Stanford 1962, 189-216.

(D.O. Morgan)

OG̲H̲UL (t.), a word common to all Turkic languages (cf. W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, St. Petersburg 1888-1911, i/2, cols. 1015-16), found as early as Ork̲h̲on Turkic and meaning "offspring, child", with a strong implication of "male child", as opposed to *ḳiz* "girl" [*q.v.*] (Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 83-4), original plural *og̲h̲lan*, still thus in Kās̲h̲g̲h̲arī (*Dīwān lug̲h̲āt al-turk*, facs. ed. Atalay, iv, *Dizini*, 425-6; C. Brockelmann, *Mitteltürkischer Wortschatz*, Budapest 1928, 126).

In connection with the sense of "offspring, descendant", attention may be called to certain formations, such as *od̲j̲aḳ og̲h̲lu*, "son of a good house", *ḳul og̲h̲lu*, which used to be applied to the sons of the Janissaries. *Og̲h̲ul* is very frequently found in family names where it takes the place of the Persian *zāde* or the Arabic *ibn*, e.g. Ḥekīm-og̲h̲lu or Ḥekīm-zāde for Ibn al-Ḥekīm, or Ramaḍān-og̲h̲lu for Ramaḍān-zāde or Ibn Ramaḍān (where it should be remembered that the Arabic *ibn* does not mean exclusively "son" but "descendant"). An incomplete survey of such formations in an early period is to be found in *Sid̲j̲ill-i ʿot̲h̲mānī*, iv, 778-812. Atatürk's law on family names has led in Republican Turkey to many names incorporating the element *oğlu* after the name of famous persons, families or tribes (e.g. Osmanoğlu, Şahsevenoğlu) or after the names of practitioners of trades and crafts (e.g. Saraçoğlu, Ekmekçioğlu, Tarakçıoğlu, Fırıncıoğlu, Dülgeroğlu).

From being an original plural, *og̲h̲lan* evolved into an independent singular, meaning "youth, servant, page, bodyguard", also found in certain compounds, e.g. *ič og̲h̲lan*, "sultan's page", *dil og̲h̲lan*, "language-boy", "interpreter". From *og̲h̲lan* we also get German Uhlan, the name for light cavalry.

Bibliography: Given in the article; see also *İA* art. *Oğul* (F. Rahmeti Arat).

OG̲H̲UZ [see g̲h̲uzz].

OG̲H̲UZ-NĀMA, a term which designates the epic tradition of the Og̲h̲uz [see g̲h̲uzz], Turkish tribes mentioned for the first time in the Ork̲h̲on [*q.v.*] inscriptions.

After the fall of the empire of the Kök or Celestial Turks (7th-8th centuries), the Og̲h̲uz tribes migrated westwards. From the 8th and 9th centuries onwards, they are found installed in the basin of the middle and upper Syr Darya, between Lakes Aral and Balkas̲h̲ in the modern Kazak̲h̲stan Republic, where they formed tribal confederations. The Sald̲j̲ūḳs, who invaded the Persian world and Asia Minor from the 11th century onwards, were part of these. The epic tradition of the Og̲h̲uz rests on earlier legends and epic tales dating from before their adoption of Islam. The geographical setting reflects the regions of the Syr Darya. Like popular poetry and ethnic origin legends, this epic tradition was at first transmitted orally.

The title *Og̲h̲uz-nāma* denotes the legend going back to the eponymous hero Og̲h̲uz. The tales were transmitted by the *ozans* [*q.v.*] who recited and sang them to the accompaniment of the *kopuz*. Written *Og̲h̲uz-nāmas* are signalled from the 13th century onwards, during the Sald̲j̲ūḳ period, but none has come down to us. The oldest text is that given by the Persian historian Ras̲h̲īd al-Dīn (646-718/1248-1318 [*q.v.*]) in his *D̲j̲āmiʿ al-tawārīk̲h̲* begun in the time of the Il-K̲h̲ānid G̲h̲azan (694-703/1294-1304 [*q.v.*]) and presented to his successor Öld̲j̲eytü (703-16/1304-16 [*q.v.*]). The author based himself on oral information in which legend and reality are mixed together, which is why his history of the Og̲h̲uz belongs more to the realm of folklore than history. Ras̲h̲īd al-Dīn's *Og̲h̲uz-nāma* relates happenings from before the Og̲h̲uz's conversion to Islam, but it also contains historical facts concerning the Sald̲j̲ūḳ conquests. The author must have used in the first place a text written in Turkish and then translated into Persian, since his narrative contains vocabulary elements from Mongolian and Eastern Turkish. He has added to this Ḳurʾānic verses and poetic quotations from the *S̲h̲āh-nāma*, as well as certain phrases aimed at making the subject more vivid, such as "in the towns of Talas and Sayram, Muslim Turks are living today".

In the Bibliothèque Nationale of Paris there is preserved an *Og̲h̲uz-nāma* in Uyg̲h̲ur script (Suppl. turc 1001, fonds Schefer). According to P. Pelliot, it must have been written *ca.* 700/1300 in the region of Turfān, but the manuscript itself must have been copied in K̲h̲ʷārazm at the beginning of the 9th/15th century. The story contains no Islamic traces, but Iranian influences and some Mongolian words have been detected in it. The story rests on the epic tradition of the ancient Turks. Cosmogonic myths and the confused memory of great exploits are linked with the eponymous hero Og̲h̲uz. There is a totemistic substratum, such as the appearance of the "grey wolf". The heroes in it are the legendary Og̲h̲uz K̲h̲ān, of heavenly origin, and his Begs, who represent symbolically the Og̲h̲uz tribes and confederations of tribes. The epic tradition was written between the 7th/13th and 9th/15th centuries. The copyists made no change at all to the basic text, apart from a certain Islamic gloss. They added details stemming from various periods and from various places inhabited by the Turks. An *Og̲h̲uz-nāma* of 65 lines was inserted into the *Taʾrīk̲h̲-i Āl-i Sald̲j̲ūḳ* of Yazīd̲j̲ī-og̲h̲lu ʿAlī, who lived in the time of sultan Murād II (824-48, 850-5/1421-44, 1446-51 [*q.v.*]). Except for the latest part dealing with events contemporary with the author, the work is a translation of Ras̲h̲īd al-Dīn's *D̲j̲āmiʿ al-tawārīk̲h̲* for the Og̲h̲uz and of Ibn Bībī for the Sald̲j̲ūḳids.

The *Og̲h̲uz-nāma* gave birth to two works of fundamental importance. The first is the *Book of Dede Ḳorḳut*, preserved in two manuscripts dating from the end of the 10th/16th century, one in the Vatican Library and the other at Dresden. Its subject is the epic-chevaleresque cycle of the Og̲h̲uz and their fights with the evil Christian believers. Added to Central Asian motifs is material stemming from the 8th-9th/14th-15th centuries, when the Aḳ Ḳoyunlu occupied the lands of Persian Ād̲h̲arbayd̲j̲ān and eastern Anatolia. The hero of the story, Bayīndīr, bears the name of an ancestor of the Aḳ Ḳoyunlu. Dede Ḳorḳut, to whom the story is attributed, represents the *ozan*, preserver of the oral epic tradi-

tion, who recites and sings the noble deeds of the old heroes. The second work drawn from the origins of the ancient *Oghuz-nāmas* is that of Abu 'l-Ghāzī Bahādur (1012-74/1603-63 [*q.v.*]), a khān of Khwārazm who led an adventurous life, who belonged to the family of the Uzbek or Özbeg [*q.v.*] Shībānī and who was a descendant of Čingiz Khān. He wrote two works, one on the ethnic origins of the Turkmens, the *Shadjara-yi Tarākima*, and another, the *Shadjara-yi Turk*, written at Khīwa in the year of his death and forming a genealogical history of the Turks. The author used Rashīd al-Dīn's history, but he states that he used seventeen historical chronicles. The tradition of the legendary Oghuz lived on in Central Asia, where numerous *Oghuz-nāmas* written between the 9th/15th and 13th/19th centuries are to be found. On some occasions, Oghuz appears in them as a Muslim hero summoning his people to adopt the Islamic faith.

OHRID [see OKHRI].

OKČU-ZĀDE, MEHMED SHĀH BEG (970-1039/1562-1630), Ottoman *nishāndjī* and prose stylist.

Okču-zāde Mehmed Shāh (or Shāhī) Beg was born in 970/1562, the son of a long-serving Ottoman chancery official, later *beglerbegi* [*q.v.*] Okču-zāde Mehmed Pasha (d. *ca.* 995/1587). His own chancery career spanned 44 years. Appointed *kātib* of the *dīwān-i hümāyūn* [*q.v.*] (988/1580), he held office as *re'īs ül-küttāb* (1005/1596), *defter emīni* (1006/1597), and *nishāndjī* [*q.vv.*] (1007-10/1599-1601). He then served as *defterdār* [*q.v.*] of Egypt with the rank of *sālyāne begi* (1013-16/1605-8). After several years without official employment, he was reappointed *defter emīni* (*ca.* 1029/1620), then *nishāndjī* briefly at the start of ʿOthmān II's Polish campaign (1030/1621), and again for a short final period (*ca.* 1031-3/1622-3) coinciding approximately with the second sultanate of Muṣṭafā I and the tenure of the office of *shaykh ül-Islām* by his friend and patron Yaḥyā Efendi. Okču-zāde died in 1039/1630 (Newʿī-zāde ʿAṭāʾī, *Dheyl-i Shekāʾik-i nuʿmāniyye*, Istanbul 1268/1852, ii, 730-1).

Considered by ʿAṭāʾī as second only to Tādjī-zāde Djaʿfer Čelebi for his skill as *nishāndjī*, Okču-zāde's *inshāʾ* style is comparable with that of ʿAzmī-zāde, Nergisī and Weysī [*q.vv.*]. His principal works are: (i) *Münsheʾāt al-inshāʾ*, a collection of about 80 letters, first compiled *ca.* 1038/1629, with a valuable autobiographical introduction; various manuscript versions exist. (ii) *Aḥsen al-ḥadīth* (published Istanbul 1313/1895-6), an elegant versification, with prose commentary, of *ḳirḳ ḥadīth* (cf. A. Karahan, *İslam-Türk edebiyatında Kırk Hadis toplama, tercüme ve şerhleri*, Istanbul 1954, 218-22). (iii) A prose translation of Kāshifī's [*q.v.*] *Tuḥfet al-ṣalāt* (completed 1021/1612). Samples of his verse are also found in *tedhkires* under the *makhlaṣ* Shāhī.

Bibliography: ʿAṭāʾī, ii, 730-1, and Okču-zāde's *Münsheʾāt*, Istanbul University Library TY 3105, fols. 1b-8b; derived from ʿAṭāʾī are Kātib Čelebi, *Fedhleke*, Istanbul 1267/1851, 127-8; Aḥmed Resmī, *Khalīfet er-rüʾesā* [*Sefīnet er-rüʾesā*], Istanbul 1269/1853, 23-5; *Sidjill-i ʿOthmānī*, iv, 153; *ʿOthmānlī müʾellifleri*, ii, 78-9. For other references, see C. Woodhead, *Ottoman inşa and the art of letter-writing: influences upon the career of the nişancı and prose stylist Okçuzade (d. 1630)*, in *Osmanlı araştırmaları*, vii-viii (1988), 143-59.

(CHRISTINE WOODHEAD)

OKHRĪ, OHRID, a former Ottoman *sandjaḳ* capital and centre of an extensive *ḳaḍāʾ*, today a town of *ca.* 20,000 inhabitants situated in the south-westernmost part of the former Yugoslav republic of Macedonia. The Ottoman name of Okhrī derives from the Slav Ohrid, which in turn goes back to the antique name Likhnidos. Throughout recorded history it was a major centre of Slav Christianity, the seat of an autocephalous patriarchate (976-1767 A.D.) and from 971 to 1018 capital of the West Bulgarian or Slav-Macedonian empire of Tsar Samuel. During the greater part of the Ottoman period (1385 or 1395-1912), it was the centre of a *sandjaḳ* which comprised the south-western corner of modern Slav Macedonia and large stretches of central Albania. During the reorganisations of the *Tanẓīmāt* [*q.v.*], it was degraded to a *ḳaḍāʾ* in the *sandjaḳ* of Manastīr [*q.v.*], which was also the centre of the *wilāyet* of Manastīr. Okhrī was further an Islamic centre of regional importance, possessing a number of mosques, *medreses* and dervish lodges, of which that of the Ḥayātiyye was the central *tekke* of this Khalwetiyye branch of supra-regional importance, having a large number of *tekkes*, especially in southern Albania.

Okhrī is situated at an altitude of 806 m/2,643 feet above sea level on the shores of Lake Ohrid, and is picturesquely built on the slopes of a promontory, which is on three sides surrounded by the lake and still carries the well-preserved castle and city walls of Tsar Samuel's time, repaired in the Middle Ages and maintained by the Ottomans till the 19th century. Its easily defensible position, on a lake full of fish and at the head of a fertile plain, ensured that the town was inhabited throughout recorded history as well as in pre-historic times. Moreover, Okhrī commands the Via Egnatia on the eastern approaches of Albania.

The old Ottoman chroniclers (ʿĀshīḳ-pasha-zāde, Orudj, Neshrī, Anonymus Giese) do not mention the conquest of Ohrid and present an inaccurate picture of the conquest of the adjacent districts (Manastīr, Pirlepe/Prilep to the east and Ḳarlī-Ili = Central Albania to the west), which are supposed to have been conquered in 787/1385. This date in fact represents a raid into Albania, ending with the Battle of the Vijoshe, after which a number of Albanian lords accepted Ottoman overlordship. It is possible that at that time the Albanian ruler of Ohrid, the Grand Župan Andrew Gropa, who in 1378 is mentioned as such on the foundation inscription of the church of Old St. Clement, was removed and direct Ottoman rule installed. It is nevertheless difficult to imagine

direct rule over the Ohrid area as long as Constantin Dejanović and Marko Kraljevič were still ruling over almost all of Slav Macedonia (till their deaths in 1395) as Ottoman vassals. The town of Ohrid seems to have surrendered to the Ottomans without a fight and the annexation of the district went through without great disturbance. On one side, this is reflected in the fact that the Ohrid Christians continued to live inside the old walled town and kept almost all their old churches. Moreover, the flourishing Slav Christian arts of the 14th century, architecture, icon painting and wall painting, continued to flourish after the Ottoman administration was installed. This is shown by a long list of newly-built or painted churches in the villages around Ohrid and in the town itself (Radožda, 1400; Višni, 1400-5, Elšani, 1407-8; Njivica (Psarades), 1409-10; Velestovo, 1444, Godivlje, *ca.* 1450; Lešani Monastery 1451-2, Stefan Pancir-Gorica, 1450-60; Sts. Constantin and Helena in Ohrid, 1460; Leskoec, 1461-2; St. Nicolas Bolnica in Ohrid, 1467 and 1480-1; Kosel, 1490, mostly built by local Ohrid noblemen). Interesting is the gap between the 1410s and 1430s, an indication of the unsettled conditions during the civil war between the sons of Sultan Bāyezīd I and its aftermath under Murād II. The artists of this 15th-century "School of Ohrid" also left their works in present-day Greek territory (Banitsa, now Vevi, near Vodena-Edessa, 1460): in Bulgaria, Monastery of Dragalevtsi near Sofia, 1475-6; the Monastery of St. Demetrius of Boboševo near Dupnica, 1487-8, and the Monastery of Matka near Skopje, painted in 1496-7 at the expense of Lady Milica, also a member of the old nobility. Some churches have a list of their property in land and orchards, others mention the bishop in whose time the building was erected or painted, or they mention the ruling Ottoman Sultan, styled as "Tsar". As a whole, these preserved monuments of Christian art mirror the situation in the Ohrid *ḳaḍā*ʾ in a manner not recorded in any chronicle.

After the conquest, the Ottomans confiscated two of the major churches of Ohrid and turned them into mosques for the Muslim settlers who came to form the nucleus of the Muslim Turkish population of the town. The first church was the cathedral of St. Sofia, built in 1056 by the Byzantine archbishop Leo on the site of an older church, perhaps going back to Khān or Tsar Boris or Michael after the Bulgarians/Macedonians had converted to Christianity (865 A.D.) and enlarged by a monumental exo-narthex by Archbishop Gregory in 1317. An Ottoman account of sizeable repairs of this building, dated 955/1548 (Maliyeden Müdevver no. 55, p. 522), gives us the name of the ruler responsible for the transformation of the church into a mosque: "the father of Sultan Murād Khān, Sulṭān Meḥemmed Khān", which is Meḥemmed I (1413-21). This sultanic mosque did not get a *waḳf* of its own. The expenditure for its maintenance and for the large staff of its servants (according to an account of 1047/1636-7, sixteen persons) was paid by the income of the Okhrī *muḳāṭaʿa* (BBA, Maliyeden Müdevver no. 5625, p. 26). The second church, the then episcopal church of St. Clement, a tri-conchos, built in the late 9th century by St. Clement himself, must have been seized by Sultan Meḥemmed II when visiting the town during his Albanian campaign of 1466. In that year, there had been disturbances, of a further unspecified nature, in Ohrid, in which the Archbishop Dorothej and a part of the Ohrid clergy and nobility had been involved. This group was deported to Istanbul and to the town of Elbasan, newly-founded by Meḥemmed in that same year. The confiscation of the church is seen as an act of punishment.

This action would explain why the mosque is locally known as the "Mosque of Sultan Meḥemmed". In the last decade of the 15th century, the by then 600 year-old church was demolished, and on its foundations the large, single-domed mosque which we see today was erected in the pure Ottoman style of the time of Bāyezīd II. Before the confiscation, the Ohrid Christians were allowed to dig up the relics of St. Clement and to take all the icons and church books to the large monastery church of Panayia Perivleptos, built in 1295 by the Albanian lord Progon Sguros, son-in-law of the Byzantine emperor Andronicus II. In this way, the Perivleptos church, thereafter called "St. Clement"', became the richest repository of mediaeval icons and manuscripts. It became the seat of the Patriarchate of Ohrid, and it remained there till the end of this institution, able to function legally within the framework of Ottoman law.

The walled town of Ohrid encloses a space of nearly 32 ha. Using the well-known formula of 130 to 150 inhabitants per hectare for a mediaeval walled settlement, this would indicate a population of about 4,000 inhabitants, which is a lot for its time and place. As, however, the western half of the enclosure was almost certainly empty (steep slopes, and no traces of mediaeval buildings whatsoever), we might suggest a pre-Ottoman population of 2,500-3,000. In the 15th century the number of the original inhabitants of Ohrid must have diminished. Almost immediately after the conquest of Constantinople, the Jews of Ohrid were deported to the new Ottoman capital. In 947/1540 the Jews from Ohrid living in Istanbul numbered only 16 families (Tapu Defter no. 210, pp. 45-72). In 1466 Sultan Meḥemmed II deported an unknown number of Ohrid Christians to his newly-founded town of Elbasan, an event only recorded in an marginal note in a Slavic church book. The Ottoman census register T.D. 367 from 1528-9, p. 432, describing Elbasan, gives an impression of the extent of this deportation. Out of the 174 households of Christians, 73 households are mentioned as deportees (*djemʿat-i sürgünān-i gebrān-i nefs-i Ilbaṣan*), paying until then considerably lower taxes. The first preserved detailed survey of the urban population of Ohrid is apparently the census of 1583, contained in the *mufaṣṣal defter* of the Ohrid *sandjaḳ* preserved in the Cadaster Office in Ankara (Kuyudu Kadime, no. 25). It gives the names of 25 Christian *maḥalla*s in Ohrid, mostly called after their churches, having altogether 263 households. The Muslims are mentioned as one group with a total of 270 households. The names of the heads of households show us that a considerable part of them were converts to Islam in the first generation (ibn-i ʿAbd Allāh), 21% of the total. As a whole, the town might have numbered 2,600-2,800 inhabitants, including the military and the administration, or just about as many as in the 14th century. The 1583 register explicitly states that the Christians as well as the Muslim citizens were freed from paying the *ʿawāriḍ* and *tekālif* taxes [see ʿAWĀRIḌ] because they had long been entrusted with the maintenance of the town walls.

For the villages of the *ḳaḍā*ʾ of Ohrid, we have population numbers from 1519 and 1583 for the Muslims and the Christians, and for 1634 for the Christians only. The best available numbers for the late Ottoman population, from Vasil Kănčev, shortly before 1900, show us the end of the development. Especially in the 16th and 17th centuries, this shows a totally atypical demographic trend. For the two

towns of the *ḳaḍā*ʾ (Ohrid and Ustruga/Struga) and 55 of its villages, constituting almost two-thirds of the whole, we have comparable numbers. In 1519 these settlements contained 2,745 households, of which 7% were Muslim, all living in the two towns. Instead of showing a massive population growth, as known from most of the Balkans and Anatolia (and all over Europe), the Ohrid area stagnated. In 1583 the Christians numbered 2,490 households, only 35 more than in 1519. The Muslims, on the other hand, had increased from 200 to 523, or to 17% of the total surveyable population. The numbers of 1634 (Nat. Libr. Sofia, Oh. 6-7) show that the Islamisation of a part of the population of the villages and the towns must have continued, but as a whole the total population suffered only a slight decline, and not the drastic losses known to have taken place elsewhere, in the Balkans, especially in the Greek lands and in Central Anatolia. The poll tax register of 1634 shows that the Christian population of the town of Ohrid had decreased to 210 households. A codex entry of the year 1664 mentions that the town had 142 Christian houses but no less than 37 churches. In 1670 Ewliyā Čelebi visited the town, which he describes as counting 160 well-built Christian houses, all situated within the castle walls, and over 300 Muslim houses, also well constructed and palace-like. These numbers look quite reliable. The mid-17th century seems to reflect the lowest point for the Ohrid Christians. In the subsequent period, they recovered, when the town again was witnessing expansion. The same is true for the village population. Some villages, which in the late 16th century seemed to be on the road toward total Islamisation (Delogožda, Livada, Mislešević, Moroišta, Novo Selo, Orovnik, Trebeništa, Vapila and Volino), had by 1900 no Muslims at all. Some later prominent Muslim villages, as Radolišta, Vešta or Zagračani, on the other hand, were in 1583 already one-third Muslim, showing that this process is much earlier than the 17th century, with its grave economic difficulties, than is usually assumed.

After the Ottoman conquest, the town of Ohrid began to spread outside the city walls. A *ḥammām* on the Struga road, to the north-east of the castle, with pronounced 15th-century features, still stands as an illustration of this process. The most important genuine Ottoman building in the town is the so-called "ʿImāret Djāmiʿi", or "Emperor's Mosque" (Careva Džamija). Local legend connects it with Meḥemmed the Conqueror. In fact, it was built immediately before 897/1490-1, when its *waḳf-nāme* was written. In this important source, the founder was Sinān al-Dīn Yūsuf Čelebi, son of Ḳāḍī Maḥmūd. This Sinān Čelebi is mentioned in 1479 as inspector of the sultanic *khāṣṣeler* in Bosnia. He died in Radjab 898/April 1493 and was buried in the graveyard next to his mosque, where his *türbe* and tombstone are still preserved. According to local legend, Sinān was a Pasha and a descendant of a local Ohrid noble family. The *waḳf-nāme* provides for a *zāwiye*, a school and an *ʿimāret* where the poor of all creeds were fed daily. Very probably, Sinān Čelebi dedicated the mosque to Sultan Bāyezīd II, when the latter on his Albanian campaign of 1492 visited Ohrid. To the *waḳf* property belonged the large villages of Vraništa and Ležani near Ohrid, which he had received from Sultan Bāyezīd as a present, as well as a *khān* in Karaferya/Verria and some shops and water mills in and around Ohrid. The *ʿimāret* mosque fell into ruins in the late 19th century, but its four walls remain standing, the whole showing pronounced features of the architectural fashion of Bāyezīd II's time. All other Islamic buildings of any importance are situated outside the old town, to the east and the south of it, along the flat lake-side and on the plain along the roads to Manastir/Bitola and Struga. Besides the above-mentioned buildings, the *waḳf* section of the 1583 census (BBA, TD 717, a *suret* from 1613, pp. 741-53) gives the names of a number of mostly small Islamic institutions and their buildings: the school (*muʿallim-khāne*) of Süleymān Bey, the *mesdjid* of Iskender Bey, the *mesdjid* and school of Maḥmūd Čelebi, son of Ḥādjdjī Ṭurghut, the mosque of Sheykh Shudjāʿ b. Barak, the school of ʿAlī Čelebi b. Ḥamza, the school and *mesdjid* of Yūnus Voyvode and the *mesdjid* of Ḥamza the Bazargān. Okhrī-zāde Muṣṭafā Čelebi, who founded a school in Struga, was the builder of a *ḥammām* in Ohrid, most probably the one on the Struga road. The fact that Islam was slowly spreading in the Ohrid villages is illustrated by the fact that a Meḥmed Bey b. Isḥāḳ had constructed a *mesdjid* and a school in the village of Delogožda, where in 1583 14 Muslim households were living, besides 73 Christian households (in 1900 Delogožda was entirely Muslim). The register also mentions the mosque of Ḥādjdjī Ḳāsim in Ohrid but gives no details on its *waḳf*. The Aya Sofya mosque/church is not mentioned because it had no *waḳf* of its own, but was maintained from other sources.

In 1081/1670-1, Ewliyā Čelebi visited Ohrid, and he mentions that the town had 17 mosques and *mesdjids*, of which the mosque of Ḥādjdjī Ḳāsim, the Ḳuloghlu mosque, the mosque of Ḥaydar Pasha and that of Ḥādjdjī Ḥamza were the most important, besides of course the Aya Sofya mosque/church and that of Sinān Čelebi, who in the 1583 lists and by Ewliyā is styled Okhrī-zāde or Okhrī-zāde Sinān Čelebi. Of *medreses*, Ewliyā mentions the "*tekke-medrese*" of Sultan Süleymān and the *medrese* of Siyāwush Pasha, both unknown from the extant sources, including the comprehensive work of Cahid Baltacı. The official Ottoman list of *medreses* of Rūmeli from *ca.* 1660 (Özergin 1974), however, mentions the only *medrese* then active in Ohrid as being that of Ḥamza Bey, a person certainly identical with the founder of the mosque of "Ḥādjdjī Ḥamza" as mentioned by Ewliyā and the "Ḥamza Bazargān" of the 1583 *defter*. Besides these buildings, there were three *khāns* in Ohrid and two *ḥammāms*. Illustrative is Ewliyā's remark that the Aya Sofya mosque was only used on Fridays, when its guards and servants came to pray there, but that on other days, against a small payment, Christians were admitted to perform their own ceremonies. Taken in all, the Ohrid of the 17th century was still a small town, in spite of its being the centre of an important *sandjaḳ*.

In 1767 the Ottomans, advised by the Greek Patriarchate of Constantinople, dissolved the autocephalous archbishopric of Ohrid, which until that time still had the metropolitans of Kastoria, Prilep/Bitola, Strumica, Korça/Elbasan, Berat, Drač/Durazzo, Vodena/Edessa, Grevena and Sisanion under its jurisdiction, as well as the bishoprics of Debar/Kičevo, Veles, Prespa, Moglena, Gora-Mokra and Drimkol. In 1557 Ohrid had already lost its northern districts (Kalkandelen/Tetevo, Üsküp/Skopje, Istip/Štip, Gorna Džumaya-Nevrokop and Razlog), which came under jurisdiction of Serbian Patriarchate of Ipek/Pač, then restored by the Ottoman administration.

In the second half of the 18th century, the Khalwetiyye Sheykh Meḥmed Ḥayātī lived and worked in Ohrid and founded the Āsitāne-yi Ḥayātiyye, the mother *tekke* of a large number of others in

Macedonia and especially in Albania, as well as in the Greek Macedonian town of Kesriye/Kastoria. Meḥmed Ḥayātī is said to have studied in Edirne under the famous Ḥasan Sezāʾī (died in 1151/1738) and took the *khilāfet* from Shaykh Hüseyin of Siroz/Serres, after which he settled in Ohrid and transformed an old *medrese* into the first *tekke* of his new Khalwetī sub-order, which he and his followers propagated successfully.

From the end of the 18th century till 1830, Ohrid and its district was ruled by the Albanian *derebey* Djemāl al-Dīn Bey, son of the Wezīr Aḥmed Pasha, who is remembered locally for the restoration of the Ohrid town walls, done with harsh forced labour from the local Christian population. He also brought good drinking water to the town, a feat commemorated in a long Ottoman inscription on the Iḥtisāb Çeshme in the old town square "Čınar", a work of the poet Süleymān Fehim (1203-62/1789-1846), dated 1237/1821-2. In 1830, the reformed Ottoman army, on its way to suppress the Būshātlī Wezīrs of Iskenderiyye/Shkodër, drove him away and reinstalled a regular Ottoman administration. In 1262/1846 the Ottoman *Ḳāʾim-maḳām* Sherīf Bey constructed a large new *medrese* in Ohrid, of which a long inscription still remains. In the course of the 19th century, a number of mosques were repaired or rebuilt in the style of the period. The most important is the domed ʿAlī Pasha mosque in the market-place.

In the course of the 18th century, the population of the town of Ohrid and its *ḳaḍāʾ* began to grow. This growth gained momentum in the 19th century and is in accordance with the general trend in Europe and in the Ottoman dominions. One of the characteristics was that the Christians grew considerably faster than the Muslims, having bigger families. The result was that by 1900, when Kănčev did his research, which is generally held to be the most reliable, the town's population, in 1583 fifty-fifty Muslim-Christian and in the mid-17th century two-thirds Muslim, became two-thirds Christian. Kănčev gives for Ohrid 8,000 Bulgarian-Macedonian Christians, 300 Albanian and 460 Vlach Christians, 5,000 Turks and 500 Albanian Muslims. In the three *nāḥiyes* of the *ḳaḍāʾ* of Ohrid, great changes had occurred. The mountainous *nāḥiye* of Debrica in the north-east had entirely kept its Christian character but in the *nāḥiyes* of Ohrid, and especially that of Ustruga/Struga, Islam had gained considerably, partly through conversion of the local Slav-Macedonian population, partly through the settlement of Muslim Albanians coming from the west. The large villages of Boroec, Labunište, Oktisi and Podgorci had become half-Muslim but had remained Slav-speaking; the villages of Bogovica, Delogožda, Frangovo, Kalište, Mislodežda, Novo Selo, Poum, Radolišta, Velešta and Zagračani had become entirely Albanian Muslim. Turkish-speaking Muslims were only living in the towns of Ohrid and Struga. As a whole, the population of the *ḳaḍāʾ* had risen to 60,305 inhabitants, of whom 16,837, or 28%, were Muslim. The Ottoman *Nüfūs Defter* of 1889 gives 36,621 Christians and 16,230 Muslims (= 31%), the difference being caused by the fast-growing Christian community. The *Sālnāme* of the Manastīr *wilāyet* of 1305/1887-8, intended for public use, gives falsified numbers (17,345 Christians and 29,360, 63%, Muslims!)

Nineteenth-century Ohrid was a prosperous place. The Christian population particularly flourished and lived in large and well-built houses, the fur industry being their principal occupation. J.G. von Hahn, travelling in the early 1860s, especially noted that there were very few poor people in Ohrid. In his time, the *ʿimāret* of "Sinān Pasha" was still functioning, but it had lost most of its income. Like Ewliyā Čelebi 200 years before him, Hahn praises this institution, distributing food to the needy regardless of their religion.

During the Balkan Wars, on 29 November 1912, the Serbian-Montenegrin army took Ohrid, which was then incorporated in the Serbian state. Late Ottoman Ohrid counted, according to the *Sālnāme* of the Manastīr *wilāyet* of 1308/1890-1, 13 *khāns*, two *ḥammāms*, nine mosques, two *tekkes* and one *medrese*. In 1934 Fehim Bajraktarević noted 12 mosques in Ohrid. Most of his names are the same as those encounted by Ewliyā Čelebi. After 1912 the St. Sofia church/mosque was reconverted to a church. The Ottoman additions, except for the fine marble *minbar*, were removed. In the years after World War II, the many surviving mediaeval churches and their paintings were restored and studied. To a lesser extent the same was done with the Ottoman monuments. In 1955-6 an important part of the Turkish-speaking Muslims of Ohrid and Struga emigrated to Turkey. Their place was taken by Albanian Muslims, who in the 20th century witnessed an expansive growth, turning Ohrid from a Turkish-Muslim into an Albanian-Muslim town, especially as the Christians hardly grew any more. The Asitāne of the Ḥayātī order under the leadership of Sheykh Ḳadrī (born 1932), a direct descendant of Meḥmed Ḥayātī, is functioning unbrokenly, its buildings in perfect shape (December 1992). This *tekke*, which is one of the most important of Macedonian Islam, shared in the general renaissance of Islam after the downfall of old Yugoslavia.

The various censuses of the 20th century, only available for the western half of the old *ḳaḍāʾ* of Ohrid, show that the Albanian Muslims and the Pomaks [*q.v.*] survived the turbulences of the Balkan Wars and the two World Wars. In 1900 the 39 settlements later constituting the Yugoslav district of Struga, basically the plain of Ohrid and the mountains facing Albania, contained 24,640 inhabitants, of which 38% was Muslim. In 1914 it stood at 25,970 inhabitants, 39% Muslim; in 1944; 31,341 inhabitants, of which 42% Muslim; in 1953; 33,319, 46% Muslim; and 1969; 40,172, 52% Muslim. Thus the 19th century pattern has been completely reversed, the Muslims having the larger families, and the Slav Christian population, especially since the 1970s, being almost static. In the early 1990s, the Muslim population, Albanian, Slav Macedonian and Turkish-speaking, must have reached two-thirds of the total population of the same area.

Since World War II, the entire old town of Ohrid has been declared a Monument of National Culture, to be preserved for the coming generations. The town, with its many monuments and oriental flavour, and the lake side, has developed into a centre of international tourism, the most important one of Slav Macedonia.

OKTAY [see ögedey].

OKTAY RİFAT (Horozcu), Turkish author and poet, born in Trabzon in 1914. He was the son of Samih Rifat, author and poet and Governor of Trabzon. He finished at the Faculty of Law in 1936 and was sent to Paris on a government grant to further his studies. After three years he had to come back to Turkey without completing his doctorate because of the start of World War II (1940). He worked at the Directorate of Press and Information and later practiced law. He died in Istanbul on 18 April 1988.

His friendship with Orhan Veli, whom he met at secondary school, continued until his death. He wrote only poetry until 1960, drama after 1960 and novels after 1970. In all his works, his literary style and themes show great variation because he liked trying his hand at different forms of expression, always renewing himself. Expression of his feelings and his thoughts, and the symbols which he created, all stemmed from his keen observation of real life.

Bibliography: 1. His works. (a) Poetry. *Garip*, 1941 (with Orhan Veli Kanık and Melih Cevdet Anday); *Güzelleme, Yaşayıp ölmek, Aşk ve avarelik üstüne şiirler*, 1945; *Aşağı yukarı*, 1952; *Karga ile tilki*, 1954; *Perçemli sokak*, 1956; *Aşık merdiveni*, 1958; *Elleri var özgürlüğün*, 1966; *Şiirler*, 1969; *Yeni şiirler*, 1973; *Çobanıl şiirler*, 1976; *Bir cıgara içimi*, 1979; *Elifli*, 1980; *Denize doğru konuşma*, 1982; *Dilsiz ve çıplak*, 1984; *Koca bir yaz*, 1987. OKYAR, ʿAlī Fethī (1880-1943), Turkish statesman and diplomat, was born and brought up in Macedonia, then under Ottoman rule. He entered the War College and Staff College in Istanbul, graduating as a Staff Captain in 1904. At the War College, he formed a lifelong friendship with Muṣṭafā Kemāl [Atatürk]. During service with the 3rd Army, he joined the Committee of Union and Progress [see ittiḥād we teraḳḳī djemʿiyyeti], which brought about the revolution of 1908. He was then posted as Military Attaché in Paris (1908-11) before returning to serve in what is now Libya (1911) and in the first Balkan war (1912). He was briefly elected to the Ottoman Chamber of Deputies in 1912, and in 1913 he resigned from the army to become Ambassador in Sofia (1913-17). After re-election to parliament in December 1917, he joined the cabinet formed by ʿIzzet Pasha at the very end of the Great War. In March 1919 he was imprisoned by the succeeding government of Dāmād Ferīd Pasha [*q.v.*], and then transferred by the British to internment in Malta until 1921. After his release, Fethī joined the nationalist government led by Muṣṭafā Kemāl, becoming Minister of the Interior in October 1921, and twice Prime Minister (August to November 1923, and November 1924 to March 1925). He then left parliament, to become Turkish Ambassador in Paris. In August 1930 he returned to Turkey to establish the Free Republican Party (*Serbest Cumhuriyet Fırkası*). This was set up with Atatürk's encouragement as a Liberal opposition to the ruling Republican People's Party. Unfortunately the experiment proved premature since, against Fethi's intentions, the party attracted the support of those opposed to the secular institutions of the republic. Accordingly, it was wound up in October 1930. Fethi was appointed Ambassador to London in 1934, staying there until 1939, when he re-entered the Turkish parliament. He served a term as Minister of Justice, but retired in 1942, and died after an illness in 1943.

ÖLDJEYTÜ, Ghiyāth al-Dīn Muḥammad Khar-(later Khudā-)Banda Öldjeytü Sulṭān, eighth Mongol Īlkhān of Persia and the penultimate direct descendant of Hülegü to rule (704-16/1304-16). Born in 680/1282, he was like his predecessor Ghazan a son of Arghun, the fourth Īlkhān. He succeeded his brother without serious difficulty, and began a reign which was unusually peaceful by Mongol standards. Öldjeytü does not appear to have been a notable soldier, and his reign saw only three major military expeditions. In 706/1307 he attempted, at considerable cost, forcibly to incorporate the Caspian province of Gīlān, which had remained independent, into the Īlkhānate. In 712/1312-13 he mounted the last Īlkhānid invasion of Mamlūk territory, unsuccessfully besieging Raḥbat al-Shām [see raḥba] on the Euphrates; and in 713/1314 he was obliged to march east to ward off an invasion of Khurāsān by forces

Okhrī, ruin of Imaret Mosque, late 15th century. (Photo: M. Kiel, 1990)

Okhrī, Hayati Tekke, early 19th century. (Photo: M. Kiel, 1990)

from the Čaghatay Khānate. The early years of the reign had in fact seen an attempt, successful for a time, to re-establish peace and harmony between the various Khānates of the Mongol Empire. Öldjeytü refers to this in a Mongolian letter of 1305 to King Philip the Fair of France (A. Mostaert and F.W. Cleaves, *Les Lettres de 1289 et 1305 des ilkhan Arγun et Öljeitü à Philippe le Bel*, Cambridge, Mass. 1962).

Domestically there seems to have been considerable continuity with the previous reign; the reform programme associated with Ghazan continued in force, though it may perhaps have been pursued with reduced enthusiasm. The great *wazīr* and historian Rashīd al-Dīn continued to hold office throughout the reign, though his tenure was not untroubled. His colleague Saʿd al-Dīn Sāwadjī fell from power and was executed in 711/1312, to be succeeded by Tādj al-Dīn ʿAlī-Shāh. Relations between Rashīd al-Dīn and Tādj al-Dīn eventually became so bad that the empire had to be divided into two administrative spheres so that the *wazīrs*' responsibilities should as far as possible not overlap: Rashīd al-Dīn took the centre and south of the empire while Tādj al-Dīn was made responsible for the north-west, Mesopotamia and Anatolia. Early in the next reign, that of Öldjeytü's son Abū Saʿīd, Tādj al-Dīn was able to engineer Rashīd al-Dīn's fall and execution (718/1318) before himself achieving the unparalleled feat, for an Īlkhānid *wazīr*, of dying of natural causes.

Rashīd al-Dīn presented to Öldjeytü his history of the Mongols which Ghazan had commissioned, and which was to form the first part of the *Djāmiʿ al-tawārīkh*. Öldjeytü asked him to continue the work as a memorial to Ghazan. This continuation was to contain accounts of all the peoples with whom the Mongols had come into contact: the unique "world-history" sections of Rashīd al-Dīn's great history.

Öldjeytü's personal religious pilgrimage was complex even by the standards of the day, encompassing at one time or another almost every currently available faith. No doubt a residual shamanist, he had in infancy been baptised a Christian, with the name of Nicholas in honour of Pope Nicholas IV, with whom his father had negotiated. Subsequently he became a Buddhist, but after Ghazan's decisive conversion to Islam, he became a Sunnī Muslim, dallying in turn with the Ḥanafī and Shāfiʿī *madhhabs*. Thereafter he became a Shīʿī.

For much of the reign work continued on a new capital, Sulṭāniyya [*q.v.*], on the plain to the south-east of modern Zandjān. The city had been founded by Arghun; it was completed in 713/1313-14. Since Öldjeytü maintained the nomadic habits of his ancestors, migrating seasonally from summer to winter quarters, Sulṭāniyya should perhaps be called his "chief seasonal residence" rather than his capital (C.P. Melville, *The itineraries of Sultan Öljeitü, 1304-16*, in *Iran*, xxviii [1990], 55-70). It is said that Öldjeytü wished to transfer the mortal remains of the Shīʿī imāms ʿAlī and Ḥusayn to a new shrine in Sulṭāniyya. This remarkable mausoleum eventually became, instead, Öldjeytü's own. It still stands, the only important building of the new capital to survive and the most striking positive memorial of the Mongol period in Persian history.

(D.O. Morgan)

OLENDIREK, Ottoman form of the Greek Lidoriki, a small borough in the central Greek Eparchy of Doridos, Nomos Efthiotis, 46 km west of Amphissa/Salona (16 km as the crow flies) and only urban centre of a large and particularly mountainous rural area. In Ottoman times it was the centre of a *ḳāḍīlīḳ*, first of the *sandjaḳ* of Tirhala, after 1530 of Inebakhtī-Lepanto, which after that date was organised as a separate *sandjaḳ*. It would remain within Inebakhtī until the end of the Ottoman period (here 1827). In the 17th and 18th centuries it was an Islamic centre of local importance.

Olendirek is situated in a small plain, 630 m above sea level, at the foot of the Giona Mountains (2510 m), at the crossing of the pass roads from Athens and Thebes (Istife) to Inebakhtī and from the Morea, via the small port of Vitrinitsa-Vodrunce, over the mountains to the Spercheios valley at Badračīḳ-Ypate in the north, and further to Thessaly and Macedonia, a route in modern times rarely used.

The place is mentioned as a seat of an Greek Orthodox bishopric from the late 9th century onward. After 1204 it belonged to the Despotate of Epirus and in 1327 it was included in the Catalan Duchy of Athens, as property of the Fadrique family. Sultan Yīldīrīm Bāyezīd reportedly occupied it in 1394 but lost it to the Despot of the Morea, Theodore Paleologus, three years later. Mediaeval Lidoriki must have had a castle, but nothing remains of it and nothing is known about it among the local population. S. Bommeljé and P. Doorn suggested that the castle of Velouchovo (now Kallion), 3 km outside the town, where antique and mediaeval ruins are preserved, is identical with the *Lodorich castrum* of the sources.

The exact date of the definitive Ottoman conquest of Olendirek is not known. Most probably it was taken during the reign of Murād II (1421-51) because the adjacent area immediately to the west, the likewise very mountainous district of Kravari, which also belonged to the *sandjaḳ* of Tirhala, was firmly in Ottoman hands in 1454. This can be seen in the *Taḥrīr defter*, Mal. Müd. 10, which contains frequent references to an earlier Ottoman census of the same district. The section on Olendirek is not preserved in this incomplete register.

At the very beginning of Ottoman rule, a small Muslim Turkish colony was settled in the town, which became the nucleus of the much larger Muslim population of later times. According to the Ottoman census of 1466 (Mal. Müd. 66), the town was the centre of a district with 10 villages and 34 *katuns* (semi-permanent settlements of Albanian or Vlach cattle breeders) and had 24 Muslim households and 146 Christian ones. According to the 1569-70 census, (Ankara KuK 50) the Muslims had stagnated at 19 households, whereas the Christians had gone up to 243 households. The town had a privileged status as a *derbend* settlement, guarding the road from Morea, Ḳarlī-ili and Inebakhtī to the inland of Greece in exchange for exemption from the *ʿawāriḍ* [*q.v.*] and *tekālīf* taxes and giving sons to the Janissary corps.

The sources for the 11th/17th century show partly a general decline of the population, and partly the effects of Islamisation of a large part of the local

population. In 1642 there were 85 Christian households liable to pay the *djizye* (BBA. Mal. Müd. 1000, 252), in 1646 69 households (Mal. Müd. 1000, p. 5), but in 1688-9 only 27 households (Sofia, Nat. Libr. F. 195/2), on top of which an unknown number of families must be counted who were too poor to pay, or otherwise exempted. An official Ottoman list of *ḳāḍīlīḳs* of the European provinces of the empire, dating from 1670, mentions Olendirek in the eleventh of the 12 ranks of *ḳāḍīlīḳs*, a pointer to the relative unimportance of the place (M. Kemal Özergin, *Rumeli kadılıklarından 1078 düzenlemesi*, in *Ord. Prof. Ismail Uzunçarşılı'ya armağan*, Ankara 1976, 276). Ewliyā Čelebi, who in 1081/1669-70, on his way from Salona to Karpenisi (Krenbesh), must have passed through Olendirek, does not mention it, as his travel notes of this section were apparently in disorder.

In 1805 the French traveller François Pouqueville describes Olendirek as a *bourg* of 180 families, Greeks and Turks all speaking the same language because the Muslims were "des apostats indigènes" (*Voyage de la Grèce*, iv, Paris 1826, 56-7). It was still the centre of a *ḳāḍīlīḳ*, having 42 villages. The Greek bishop and the Christian notables were residing in the nearby village of Klima.

In 1825, during the Greek War of Independence, the town was the centre of an Ottoman military district under ʿAbbās Pasha Dibra. In 1827 the Ottomans, the military and the civilians were driven out of town and district forever. Information on the modest Islamic spiritual life, or on Muslim building activity, seems to be non-existent, but the *Cevdet Evkaf Tasnifi* in the BBA may yield some names of mosques, schools or *tekkes*.

Throughout its history Lidoriki-Olendirek has remained very small. Bommeljé and Doorn thought that 1500-1600 inhabitants were the maximum in all times. In 1928, a peak of 1537 inhabitants was reached. During the Second World War, the town and the villages around it were destroyed by the Wehrmacht. In 1961 the town again had 1338 inhabitants, or just as many as in the Süleymānic age.

Doorn, *Aetolia and the Aetolians, towards the interdisciplinary study of a Greek region*, Utrecht 1987, with exhaustive bibliography. The Ottoman sources mentioned in the text are unpublished.

(M. Kiel)

OLGHUN, MEḤMED ṬĀHIR (Tahir Olgun, Tâhir-ül Mevlevî), Turkish writer and literary critic, born in Istanbul on 13 September 1877, died in 1951. He graduated from the Gülkhāne Rüshdiyye-i ʿAskeriyyesi (military high school) and Menshe'-i küttāb-i ʿaskeriyye. While working as a secretary at the War Ministry, he attended the Fātiḥ Mosque *medrese* and received his *idjāzet-nāme* from Methnewīkhʷān Selānikli Meḥmed Esʿad Dede Efendi, whence his name Tâhir-ül Mevlevî. After 1903 he taught Persian, the history of Islam, history and literature in many schools, including the Dār üsh-shafaḳa high school and the Kuleli military high school. During his later years he worked in the cataloguing committees of the Istanbul libraries. He is known for his work on the leading figures of Islamic religion and on the history of Turkish literature.

(Çiğdem Balım)

ʿOMAR KHAYYĀM [see ʿumar-i khayyām].

OMDURMAN (Umm Durmān), a town on the west bank of the Nile at the confluence of the Blue and White Niles (lat. 15°38′ N., long. 32°30′ E.), now linked with Khartoum (al-khurṭūm [*q.v.*]) and Khartoum North as the principal conurbation of the Republic of the Sudan. The etymology of the name is unknown, although several fanciful explanations have been given.

Omdurman is first mentioned as the village of a holy man, Ḥamad b. Muḥammad al-Mashyakhī, known as Wad (i.e. Walad) Umm Maryūm (1055-1142/1645-6 to 1729-30) (see Ibn Ḍayf Allāh, *Kitāb al-Ṭabaḳāt*, ed. Yūsuf Faḍl Ḥasan, ²Khartoum 1974, 174-82; cf. H.A. MacMichael, *History of the Arabs in the Sudan*, Cambridge 1922, ii, 242, no. 124). A Nile-crossing from Omdurman to the Djazīra, i.e. the peninsula between the Blue and White Niles, was used by the invading Turco-Egyptian army under Ismāʿīl Pasha in 1821. A fort, constructed to guard the western approaches to the capital, Khartoum, was surrendered to the forces of the Mahdī Muḥammad Aḥmad b. ʿAbd Allāh [see al-mahdiyya] on 5 January 1885, and Khartoum itself fell three weeks later.

The Mahdī, now the victorious head of a Sudanese Muslim state, transferred the capital to Omdurman, where he died on 22 June 1885 and was buried. Under his successor, the Khalīfa ʿAbd Allāh b. Muḥammad al-Taʿā'ishī [*q.v.*], the early settlement grew into a town. Like the Mahdī's earlier seats during the revolutionary war, it was officially styled *Buḳʿat al-Mahdī*, and the Mahdī's tomb (*ḳubbat al-Mahdī*) was a place of pilgrimage in lieu of the *ḥadjdj* to Mecca. Beside the tomb (now restored) are the Khalīfa's house (now a museum) containing a labyrinth of rooms, and to the west the great walled space which formed the mosque. Other official buildings were the arsenal-storehouse (*bayt al-amāna*, now a football stadium), the treasury (*bayt al-māl*), and the prison (*al-sāyir*, from the name of the gaoler). A great wall protected the inner city. From this central area ran three main roads: one southwards to the former Fort Omdurman (*al-kāra*), garrisoned by the Khalīfa's black troops (*djihādiyya*); one westwards to the parade-ground at the desert-fringe; and the ominously-named *darb al-shuhadā'* (the martyrs' road) northwards to the assembly-point for expeditions to Egypt. Around these roads, the greater part of Omdurman consisted of an unplanned huddle of dwellings, ranging from brick houses to straw huts, sprawling along the Nile bank for about 9 km/6 miles. Its depth of about 1½ km/a mile was limited by the distance to which river-water could conveniently be carried. For a detailed plan of Mahdist Omdurman, see R.C. Slatin, *Fire and sword in the Sudan*, London 1896 and later edns. The population of the town was greatly increased in 1888-9, when the Khalīfa more or less forcibly brought his tribesmen, the Taʿā'isha, and other Baḳḳāra [*q.v.*] from Dār Fūr [*q.v.*] to Omdurman, where they formed a privileged élite, oppressive to, and highly unpopular with, the more sophisticated riverain sedentaries (*awlād al-balad*). Like other migrations to the presence of the living or dead Mahdī, this movement was designated *hidjra*. Accounts of life in

Omdurman by three former European prisoners, Slatin (as above), Father Joseph Ohrwalder (in F.R. Wingate, *Ten years' captivity in the Mahdi's camp*, London 1892), and Charles Neufeld, *A prisoner of the Khaleefa*, London 1899, have found a wide readership. It should be borne in mind that the first two were produced under the auspices of Wingate as Director of (Egyptian) Military Intelligence, while the third is an apologia by an adventurer, whose exploits aroused European disapproval. Sudanese accounts are provided by S.M. Nur (ed.), *A critical edition of the memoirs of Yūsuf Mīkhāʾīl*, unpubl. Ph.D. thesis, London 1962; Bābikr Badrī, *Taʾrīkh ḥayātī*, ?Khartoum 1959, tr. Y. Bedri and G. Scott, *The memoirs of Babikr Bedri*, i, London 1969.

During the Anglo-Egyptian Condominium (1899-1955), with the restoration of Khartoum as the capital, Omdurman lost its unique status, but acquired a new significance as the centre of Sudanese politics and culture. For example, in consequence of the settlement there of migrants from all parts of the country, the speech of Omdurman became the standard Sudanese colloquial Arabic (cf. J.S. Trimingham, *Sudan colloquial Arabic*, ²London 1946, Preface; V.A. Yagi, *Contes d'Omdurman*, Antibes 1981). An Islamic religious college, *al-Maʿhad al-ʿilmī*, was established with government assistance in 1912, and developed after independence into the Islamic University of Omdurman. The Graduates' General Congress, founded in 1938 but the successor to an older grouping, with its headquarters in Omdurman, became the leading nationalist organisation and the seedbed of future political developments.

Bibliography: In addition to works cited in the text, there are frequent references to Omdurman in standard works on the Mahdiyya and Condominium; e.g. P.M. Holt, *The Mahdist state in the Sudan 1881-1898*, ²Oxford 1970; M.W. Daly, *Empire on the Nile*, Cambridge 1986; idem, *Imperial Sudan*, Cambridge 1991. (P.M. Holt)

ʿÖMER ʿĀSHİḲ famous Ottoman Turkish *saz* poet of the 11th/17th century, d. 1119/1707.

Apart from one or two sources, information on him stems mainly from what he says in his own *dīwān*. Basing themselves on such statements, some scholars (Bursalî Meḥmed Ṭāhir, Fuad Köprülü and Cahit Öztelli) have regarded him as coming from Gözleve (Gezlevi) in Konya province, whilst others (S. Nüzhet Ergun and, especially, Şükrü Elçin) place his home at Gözleve in the Crimea. Information in the *Menāḳıb-nāme* of Ketkhudāzāde ʿĀrif (94), in a poem discovered by Üsküdārlî Ṭalʿat (Ergun, 6), in the *Medjmūʿa-yi tewārīkh* and in Şükrü Elçin's work, all strengthen the hypothesis that he came from the Crimea but settled in Aydîn. After what was believed to have been a long life, he died in 1119/1707, according to Üsküdārlî Ḥasīb's line *ola ʿāshiḳ ʿÖmeriñ djilwegehi ʿadnî djelīl* ("may ʿÖmer's promenade be the exalted heaven!").

From his poems, ʿÖmer is known to have had a certain level of education, including a knowledge of Persian and Arabic. He gives his personal name as ʿÖmer and his pen-name as ʿAdlī, although he most frequently used ʿÖmer, ʿĀshıḳ ʿÖmer, the pen-name Derwīsh Nihānī, and rarely, ʿAdlī. It is very probable that he was an adherent of the Mewlewī order [see MAWLAWIYYA]. In addition to the *saz*, he played other stringed instruments like the *ṭanbūr* and is known to have been a *ḥāfiẓ*, i.e. one who knew the Ḳurʾān by heart. In his *Shāʿir-nāme* he speaks of one Sherīfī, possibly his teacher, of whom he counted himself a follower. Whilst a Sherīfī, allegedly from the Crimea, appears in several of the *tedhkires* of Ottoman poets, such as those of Riḍā, Sālim and Ṣafāyī, this is not the same person as the Sherīfī named by ʿÖmer. He is also known from his poems to have been a Janissary and to have travelled widely in the course of participation in warfare (Varna, Sakız, Bursa, Sinop, Istanbul, Edirne, etc.).

The oldest manuscript copy of his *Dīwān* is the 517-page one, formerly in the Yaḥyā Efendi Dergāhî, now housed in the Süleymaniye Library (Haci Mahmud 5097), copied in 1141/1728-9. Another important copy is Mevlana Museum, Konya 99, compiled 50 years later by Ḥüseyin Aywansarāyī in 1191/1782. There is also a lithograph edition from 1306/1888. Since he was widely read, his poems figure in almost every *djönk* or manuscript collection of folk poetry. The verse forms of both *dīwān* and folk literatures, such as the *destān, ḳoshma, ghazel, murabbaʿ, takhmīs, müseddes* and *semāʿī*, are encountered in his *dīwān*; the examples of the folk literature ones are the more successful of the two. Among his well-known poems is the *Shāʿir-nāme*, consisting of 34 quatrains giving the names of the important poets, the *Istanbul destānî* describing various places in the capital, and the Bursa and Pire *destāns*. Influenced by such poets as Nesīmī, Fuḍūlī, Aḥmed Pasha and Khaṭāyī, ʿÖmer in turn had an impact on poets who were his contemporaries as well as on those following him. Although post-*Tanẓīmāt* poets like Ḍiyā Pasha and Muʿallim Nādjī disparaged him, they themselves could not deny having been influenced by him in their formative years. Many of his poems have been set to music; the miniaturist Lewnī made a miniature of him. Sünbülzāde Wehbī, Müstaḳīm-zāde and Üsküdārlî Mewlewī Ḥasīb mention him, and ʿIzzet Mollā wrote a poem in emulation of one of his hemistichs employing the same metre and rhyme scheme (*taḍmīn*).

ʿÖMER EFENDI, an Ottoman historian, according to popular tradition originally called Elkazović or Čaušević, who belonged to Bosna-Novi (Bosanski-Novi). Of his career we only know that he was acting as *ḳāḍī* in his native town when fierce fighting broke out on Bosnian soil between the Imperial troops and those of Ḥekīm-Oghlu ʿAlī Pasha (1150/1737). ʿÖmer Efendi at this time wrote a vivid account of the happenings in Bosnia from the beginning of Muḥarram 1149/May 1736 to the end of Djumādā I 1152/end of March 1739; written in a smooth, easy style, this work is of considerable importance for social history. It seems to have been called *Ghazawāt-i Ḥekīm-Oghlu ʿAlī Pasha*, but is usually quoted as *Ghazawāt-i diyār-i Bosna*, and sometimes as *Ghazawāt-nāme-yi Bānālūḳā* (i.e. Banjaluka in Bosnia).

As a reward for this literary effort, ʿÖmer Efendi was promoted to be one of the six judges (*rütbe-i welāy-i sitte*). Of his further life and death, nothing more is known. It is certain that he ended his days in Bosna-Novi and was buried there. The site of his grave is still pointed out but the tombstone has disappeared.

ʿÖmer Efendi's little book is fairly common in mss. (usually copies of the first printed text); cf. F. Babinger, *GOW*, 277, to which should now be added: Zagreb, South Slav Acad. of Sciences, coll. Babinger, no. 390, 391, as well as no. 631, iv (here called *Ghazawāt-nāme-yi Bānālūḳā*). The printer Ibrāhīm Müteferriḳa [*q.v.*] revised and corrected ʿÖmer Efendi's narrative (cf. Ḥanīf-zāde, in Ḥādjdjī Khalīfa, no. 14533: *Ghazawāt-i diyār-i Bosna*) and published it under the title *Aḥwāl-i ghazawāt der Diyār-i Bosna* (8 + 62 pp., Istanbul 1154; cf. Babinger, *Stambuler Buchwesen im 18. Jahrh.*, Leipzig 1919, 17). On later editions cf. Babinger, *GOW*, 277. The book is also accessible in a rather bad German translation and a not very successful English one, cf. *GOW*, 277.

Cevat Eren). (F. Babinger)

ʿÖMER SEYF ül-**DĪN** (Ömer Seyfeddin), late Ottoman and early modern Turkish writer (1884-1920).

A major figure of Turkish fiction, ʿÖmer Seyf ül-Dīn (modern rendering Seyfeddin or Seyfettin) was a pioneer of realism and the use of the common idiom. A 1903 graduate of the Istanbul War College, he served as an officer, saw action, fell captive, and retired upon his release in 1913. Having published poems, short stories and essays since 1900, he joined his nationalist colleagues ʿAlī Djānib and Ḍiyā (Ziyā) Gökalp in Salonica (1911) where they published the influential magazine *Genč Ḳalemler* ("Young Pens"). From 1914 until his death on 6 March 1920 he lived in Istanbul, where he served as a teacher of literature, editor-in-chief of the journal *Türk Sözü* ("Turkish Speech"), and a member of the Istanbul University Linguistic Research Board.

His 16-volume complete works comprise poetry, essays, children's stories, etc., in addition to fiction. He was not an accomplished poet. His articles and essays, which exerted considerable influence in launching the ideals of nationalism in literature for the benefit of a wider reading public, are concise, lucid and deft. Among his published translations are those of parts of the *Iliad* and *Kalevala*.

His fame rests essentially on his 138 short stories, mostly derived from childhood recollections, military life including combat, and everyday events. Many of them make use of traditional folk tales and legends, often recounting heroic deeds. In some, ʿÖmer Seyf ül-Dīn criticised entrenched institutions and superstitions. With a progressive spirit, he articulated the prospects offered by the awakening of Turkish nationalism for a better future. He took a stand against Ottomanism, cosmopolitan culture, and imitation of European models. He expressed faith in traditional Turkish culture blended with modernisation. He was one of the earliest among literary pioneers who brought the Anatolian countryside into urban literature. Reacting against the ornate élite poetry and prose of his predecessors, who were influenced by the Arabs and Persians, he wrote for and often about the common man in an attempt to make literature accessible "to the people."

His major novel, *Efrūz Bey* (1919), is an acerbic satire of the life and times of an opportunistic, quixotic pseudo-intellectual and is the author's most mature and most compelling work of realistic fiction. With several dozen of his well-made short stories, two or three novellas, and *Efruz Bey*, he brought new dimensions to, and earned an enduring place in, the history of Turkish fiction.

ON IKI ADA, Turkish rendering of the Dodecanese (Dodekanesos, "Twelve Islands"), the greater part of the Southern Sporades archipelago; they are grouped in a north-west to south-east direction in the south-eastern segment of the Aegean along the Turkish coast. The concept and even the number is somewhat artificial and underwent different interpretations and political expressions in the course of history, hence the relativity of the definition as to how many and which islands constitute this archipelago. The earliest mention seems to occur under the Byzantine emperor Leo III the Isaurian (717-40), when the "Dodecanese or Aigion Pelagos" formed one of his three naval commands. In the later Middle Ages Italian maritime control asserted itself over much of the Aegean, and some of the Dodecanese became a Venetian possession, but others passed under the sway of the Knights of St. John of Jerusalem after their establishment in Rhodes (1310). It was from the latter two powers that Ottoman Turkey seized control of the Dodecanese: those pertaining to the Knights as a result of the conquest of Rhodes in 1522, and those belonging to Venice during the *ḳaptan pasha* Khayr al-Dīn Pasha [*q.v.*] Barbarossa's two campaigns in 1537 and 1538. It was then that twelve islands within this archipelago acquired a special status of "privileged islands" that gave the inhabitants a sense of cohesive identity and firmly established their group as a geopolitical unit; the islands were: Ikaria, Patmos, Leros, Kalimnos, Astipalea, Nisiros, Tilos, Simi, Chalki, Karpathos, Kasos and Meis; this was the result of their voluntary submission and consequent treaty sanctioned by Süleymān I, to be confirmed by a number of later *firmāns*; the mostly Greek and Orthodox islanders had self-rule, against payment of a fixed annual sum (*maḳṭūʿ*). An illustration of the administrative rather than geographical nature of this Ottoman Dodecanese is the fact that the group included Meis (also known as Kastellorizon, Italian Castelrosso), an islet by the southern Anatolian coast near Kas to the east of Rhodes, but not Rhodes itself; like Rhodes, Kos too was excluded, although geographically situated in the midst of the group. The islands of Simi, and later Patmos, appear to have constituted the centre of political gravity and representation of the islanders in their dealings with the Porte and eventually also with other powers.

The inhabitants extracted some livelihood from their deforested islands (fruit, olives, wheat, tobacco), but for the most part they depended on the sea: local shipping, fishing, and especially sponge-diving, were their traditional occupations. Their smooth relations with the Porte began to suffer with the appearance of Greek as well as Turkish nationalism in the 19th and early 20th century. Istanbul first tried to cancel the islands' privileged status and, following the constitu-

tional movement of 1909 and against the islanders' expectations, attempted to impose measures that amounted to incipient Turkicisation. The upheavals caused by the Italo-Turkish War of 1911-12, the Balkan War of 1912-13, and World War I brought about the final separation of the Dodecanese from Turkey and its establishment, enlarged by Rhodes as the administrative centre, as an Italian possession (Possedimenti Italiani dell'Egeo). Only in 1948 did the entire archipelago pass to Greece.

The Muslim Turkish population of the islands, numbering some 10,000, did not face any great changes during the period of Italian rule, and the community's newspaper, *Selām*, continued to appear in Arabic characters. But during World War II, from 1941 to 1944, the islands were occupied by the Germans (and the Jewish minority largely deported for extermination at Auschwitz), and then the Treaty of Paris of 1947 awarded the Dodecanese to Greece. From then on, under the pressure of Hellenisation, emigration to the Turkish mainland, especially to Izmir, accelerated; most of those who remained became Greek subjects, though retaining their Turkish language, with only a few of them retaining the Turkish citizenship which they had been able to keep since the time of Italian rule. In 1974 there were *ca.* 4,000 Muslims in their two main centres, Rhodes and Kos, those of Rhodes mainly in the town of Rhodes but those of Kos in a village popularly known as Türk Köyü. The communities are at present ageing ones since, under Greek aegis, young people find career prospects on the islands very confined, and the communities seem destined for gradual disappearance.

ORĀMĀR, URMAR, modern Turkish Oramar, a district (*nahiye*) of the extreme south-east of Turkey, just to the north of the frontier with ʿIrāḳ, and in the modern *ilçe* or district of Gawar (Yüksekova) in the *il* or province of Hakkari, with its chef-lieu of the same name (lat. 37°23′ N., long. 44°04′ E., altitude 1,450 m/4,756 ft.). In 1955 the settlement of Oramar itself had a population of 943, whilst the nine villages comprising the *nahiye* had a total population of 3,632.

The boundaries of Orāmār are on the north Ishtāzin and Gawar; on the south Rēkān; on the west Djilū, Bāz and Tkhūma and Artush; in the east Sāt [see SHAMDĪNĀN]. Orāmār is a group of hamlets scattered on the two sides of a rocky mountain spur above the Rūdbār-i Sin. On the spur itself, which is called Gaparāni Zhēr, at the place named Gīre Būti, is the capital of the group and the residence of the *aghas*, the Nāw Gund or "the middle of the town". A large cemetery occupies the promontory at the end of the spur. The name Gīre Būti, explicable as the "hill of the idol", seems to indicate the antiquity of the settlement. The fact that the slopes separated by the Gaparān are very carefully cultivated and present a complicated system of little terraces, each of which is a field or tiny kitchen garden, leads one to believe that man chose this site for habitation a long time ago, perhaps simply on account of its extreme isolation in the centre of a wild country.

Orography. Orāmār is at the east end of the curve traced by the system of the Djilū Dāgh. According to Dickson, the chains and valleys of Turkish Kurdistān run roughly along the parallels of latitude and take a south-eastern direction as they approach the Persian frontier and at the point where they change their axis form a complicated system of heights and valleys. The most complicated part near the centre of the change of axis in question may be called Harki-Orāmār.

Road system. Although they are really nothing but tracks used for intertribal communications, these routes must have played a more prominent part in ancient times. Orāmār is connected with Gawar via Shamsiki, the pass of Bashtazin, ʿAlī Kānī, Bāžirgā and Dizza. It is a road which shows traces of works undertaken at the more dangerous places. To the south, the road going through a very narrow defile leads first to Nerwa (cf. below) where it forks to the west and to the east. A third road goes from Nerwa to Nehri, the centre of Shamdīnān, via Razga, the heights of Peramizi (frontier of the three tribes—Rekāni, Harki, Duskāni), Deri, defile of Harki (Shīwa Harki), Begor, Mazra, Nehri.

Ethnography. The following Kurdish tribes may be mentioned in Orāmār itself and in the vicinity, with ramifications inevitable as a result of the Kurd migrations. After the name of each tribe that of the district and the number of households in *ca.* 1930 is given: Duskānī Zhūri (Orāmār, 2,000); Nirwei (Nerwa, *ḳaḍāʾ* of Amādiya, 800); Dīri (Gawar and Gelia Dīri, 1,000): Peniānish (between Gawar and Djulāmerk, and the part of the Pirhulki, near Bashkalʿa 4,000); Duskāni Zhēri (*ḳaḍāʾ* of Dehuk, 2,000); Mizūri Zhēri (*ibid.*, 5,000); Berwāri (*ibid.*, 4,000); Guwei, nomads (wintering at Dehuk; summering at Gawar and Orāmār, 1,400); Čeli (Djulāmerk, 6,000); Artūshi (summering at Firashin; wintering at Beriei Zhengār, 6,000); Artūshi (sedentary: Albāk, 1,000; Nurdīz, 1,000); parts of Artūshi: Gewdan, Mām Khōran, Zhirki (around Djulāmerk, 6,000).

History. Orāmār has a rich history full of associations with the Nestorian Christianity of south-eastern Turkey and adjoining areas. (V. Cuinet, *La Turquie d'Asie*, Paris 1892, ii, 757, says that "the 40 Nestorian rayas domiciled in Orāmār are entrusted with the care of the two Nestorian churches in the Kurdish town (*sic*)"; one of these churches, that of Mār Dāniyāl at Nāw Gund was turned into a mosque towards the end of the 19th century or in the early 20th century.

A local tradition even suggests that the ancestor of the modern *aghas* came long ago into this Christian district and by stratagems and intrigues succeeded in driving out its inhabitants. The toponymy of Orāmār seems to confirm this. The name Orāmār is probably ancient, and the district was probably inhabited at a very early date. There are similar place-names elsewhere in the region: Ora Bishu, one of the slopes of Kiria Tawka; Orishu, a village beyond Gelia Nu; Uri, a Nestorian clan; finally Urmiya itself.

ORAN [see WAHRĀN].

ORBAY, ḤÜSEYIN RAʾŪF (1881-1964), Turkish naval commander, statesman and diplomat, was educated as a naval officer. He served in the Turco-Italian war of 1911, before winning national fame in the Balkan wars of 1912-13 as the commander of the cruiser *Ḥamīdiyye* which carried out daring raids on enemy ports and warships. During the Great War he served as Chief of Naval Staff, becoming Minister of Marine in October 1918. In the same month, he headed the Ottoman delegation which signed the armistice of Mudros [see MONDROS]. He resigned from the navy in May 1919, and joined Muṣṭafā Kemāl (later Atatürk) and Fetḥī Okyar [*q.vv.*] in organising the national resistance movement in Anatolia. As a leading nationalist and a member of the last Ottoman Chamber of Deputies, Raʾūf was arrested by the British in March 1920 and deported to Malta. He returned to Turkey in March 1921 and was appointed Prime Minister in August 1922, but had serious disagreements with ʿIṣmet [İnönü], the chief Turkish delegate at the Lausanne Peace Conference. In August 1923 he resigned from the premiership, and became part of the opposition to Muṣṭafā Kemāl. Like other opposition leaders, Raʾūf feared Atatürk's dictatorial tendencies, and wished to clip his wings, but not to overthrow him entirely. In November 1924 he played a leading role in establishing the Progressive Republican Party (*Teraḳḳīperwer Djümhuriyyet Firḳasī*). After the forcible closure of the party in June 1925, Raʾūf went abroad for medical treatment. In August 1926, following the unsuccessful attempt on Atatürk's life in Izmir, Raʾūf and other leading members of the nationalist movement were placed on trial. Although the court could not show that he had played any part in the murder plot, he was sentenced to ten years imprisonment *in absentia*. He benefited from an amnesty proclaimed in 1933 and returned to Turkey in 1935, but did not fully clear his name until 1939. Following his political rehabilitation, he served as Turkish Ambassador in London between 1942 and 1944.

ORDU (T.), thence in Mongolian, *orda*, "the royal tent or residence, the royal encampment", a term which became widespread in the mediaeval Turco-Mongol and then in the Persian worlds, acquiring from the second meaning that of "army camp".

1. In early Turkish and then Islamic usage

The word *ordu* appears in some of the earliest known texts of Turkish, sc. in the Kül-tigin inscription (Talât Tekin, *A grammar of Orkhon Turkish*, Bloomington 1968, 237), and may have passed from such an Inner Asian people as the Hsiung-nu into Chinese as *wo-lu-to* (**oludu = ordu*) (G. Doerfer, *Türkische und mongolische Elemente im Neupersischen. ii. Türkische Elemente im Neupersischen*, Wiesbaden 1965, 35). Already in the Sāmānid period (4th/10th century), the geographer al-Muḳaddasī, 263, 275, mentions **Urduwā* as "the residence of the ruler of the Turkmen", and in the ensuing Ḳarakhānid period *Urdū* is recorded as a mint in Transoxania, possibly to be equated with their capital at Balāsāghūn (E. von Zambaur, *Die Münzprägungen des Islam*, i, Wiesbaden 1968, 42).

The cross-continental movements of the Turco-Mongol peoples in the 13th and 14th centuries ensured for the word a wide diffusion into Eastern Europe, including the East Slavonic, Magyar, Balkan and New Greek linguistic areas, finally entering such Western European languages as English and French *horde*, German *Horde*, etc. (Doerfer, *op. cit.*, 38).

Under the Ottoman Turks, *ordu-yu hümāyūn* was a general term for the imperial army, and appears also as an element in the names of various functionaries connected with the army, e.g. the *ordudju bas̲h̲ī/ag̲h̲asī*, who was the chief of a staff of tradesmen and technicians (*ehl-i ḥiref, arbāb-i ḥiref*) who accompanied the Janissaries [see YEÑI ČERILER] on their campaigns away from the capital (see İ.H. Uzunçarşılı, *Osmanlı devleti teskilâtından kapıkulu ocakları*, Ankara 1943-4, i, 368-73; M.Z. Pakalın, *Tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946-54, ii, 728-9).

In South Asia, through usage amongst the Mug̲h̲als [*q.v.*] of India, with the royal residence at Dihlī styled the *urdu-yi muʿallā* "exalted camp", the term *zabān-i urdu* was used for the mixed Hindustani-Persian-Turkish language of the court and the army, now the Urdu language of a large proportion of the Muslims in the subcontinent (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*,[2] 639-40; HIND. iii. Languages; and URDU). The term was still used in Ṣafawid Persia (cf. the *Tadhkirat al-mulūk*, tr. Minorsky, London 1943, tr. 51, 62), but must by the time when the latter work was written (early 18th century) have been archaic and obsolete.

Bibliography: Given in the article. (C.E. BOSWORTH)

2. In Mongol historical usage

In sources dealing with the period of the Mongol Empire, *ordu* is normally used in the sense of the camp or household of a Mongol prince, which would be under the supervision of one of his wives. He might therefore have several *ordus*. During the Īlkhānate, "to go to the *ordu*" meant to travel to the ruler's presence, whether that was to be found at one of the fixed capitals such as Tabrīz, or wherever the royal encampment happened to be. This kind of usage was no doubt the origin of the Western term "Golden Horde" for what in the Islamic world was usually known as the k̲h̲ānate of Ḳīpčaḳ. Quatremère (*Raschid-Eldin, Histoire des Mongols de la Perse*, Paris 1836, 98, n. 25) suggested that the word *ug̲h̲ruḳ* was sometimes used to indicate, to some extent by contrast, the military camp in a more general sense. During his journey to Mongolia in the 1250s, William of Rubruck, whose Latin word for *ordu* is generally *curia*, picked up a confusion between *ordu* and *orta* ("middle"): "The court is called in their language *orda*, meaning 'the middle', since it is always situated in the midst of the men" (*The mission of Friar William of Rubruck: his journey to the court of the Great Khan Möngke 1253-1255*, tr. P. Jackson and ed. Jackson and D.O. Morgan, London 1990, 131 and n. 4). The transformation in English of the meaning of "horde" from the camp to the nomadic warrior people who (in large numbers) inhabited it was already established by the time of the OED's first cited reference (1555).

Bibliography: G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965, 32-9. (D.O. MORGAN)

ORDŪBĀD, a town in eastern Transcaucasia on the left bank of the middle course of the Araxes or Aras River, lying in lat. 38°54′ N. and long. 46° 01′ E. and at an altitude of 948 m/2,930 ft.

The Turco-Persian name "army town" implies a probable foundation during the period of the Mongol

invasions or of the ensuing Il-Khānids, especially as the latter made Ādharbāydjān the centre of their power. Certainly, Ḥamd Allāh Mustawfī (mid-8th/14th century) describes it as a provincial town, one of the five making up the *tūmān* of Nakhčiwān [*q.v.*], watered by a stream coming down from Mount Ḳubān (= the modern Gora Kapydzik, 4,200 m/12,800 ft.) to the north (*Nuzha*, 89, tr. 90; cf. Le Strange, *Lands*, 167). In subsequent centuries, the khānates of both Eriwān [see REWĀN] and Nakhčiwān were dependencies of Persia, with Ordūbād forming the main town of the district of Āzā-Djirān in the eastern part of the khānate of Nakhčiwān; but after the Russo-Persian War of 1827 and the resultant Treaty of Turkmančay of 1828, these were ceded to Imperial Russia, so that henceforth, Ordūbād fell within Russian territory. Since the breakup of the Soviet Union, it is now within the Nakhčiwān region of the Azerbaijan Republic, forming an enclave of territory between the Armenian Republic and Iran.

ÖRIK, NAHĪD ṢIRRĪ (Nahit Sırrı Örik), Turkish author, journalist and literary researcher, born on 22 May 1894 in Istanbul, died in 1960. He was the grandson of Aḥmed Nāfidh Pasha of Olti, who was also a poet and the son of Örik Aghasî-zāde Ḥasan Ṣirrī, who was a government official and translator. Nahit Sırrı attended Galatasaray lycée, graduating in 1913. He lived in Europe until 1928, and after his return to Turkey, worked as a correspondent for the newspaper *Cumhuriyet* and as a translator for the Ministry of Education. He travelled in Anatolia and wrote articles, mostly concerning the archaeological and historical antiquities of the places he visited. He continued to work as a journalist until his death on 18 January 1960, never having married.

Nahit Sırrı admired and loved Istanbul deeply, and this is reflected in his works. The style he adopts for his historical novels is the objective, calm and good-humoured reporting of events with life in the Istanbul of the past a dominant subject for his works and his language remaining faithful to refined Ottoman style.

ORISSA [see URISA].

ORKHAN, the son of the founder of the Ottoman dynasty, ʿOthmān I [*q.v.*], and of the daughter of *sheykh* Edebali, who seems to have exercised considerable influence upon his son-in-law through his connections with the fraternity of the *Akhīs* [*q.v.*] and with the group of dervishes known as the *Abdālān-i Rūm*. According to the Ottoman tradition, Orkhan had a brother, ʿAlāʾ al-Dīn [*q.v.*], who resigned from their father's possessions and accepted the office of the vizierate. Little is known about Orkhan's early life as most of the Turkish sources reporting about him were written more than one century after his death and are of a legendary character. Yakhshî Faḳīh, the son of his *imām*, wrote a chronicle about the house of ʿOthmān, which unfortunately has not been preserved in its original form but incorporated within a later chronicle, that of ʿĀshîk-Pasha-zāde (see V.L. Ménage, *The* Menāqib *of Yakhshi Faqīh*, in *BSOAS*, xxvi [1963], 50-4). One can find precise information about him in a few Ottoman documents, some of them preserved in the original, the oldest of which is of the year 1324; also in the Byzantine sources, especially the works of Gregoras and Cantacuzenus.

According to the Turkish sources, Orkhan was married to Nilüfer, the daughter of the Byzantine lord of Yār-Ḥiṣār, who, together with her father, was taken prisoner when this fortress was captured by ʿOthmān's soldiers, presumably in 1299. From this union were born Süleymān Pasha, the conqueror of Rūm-ili, and Murād, who succeeded his father [see MURĀD I]. Names of several members of Orkhan's family are known through Ottoman documents and also through the history of Cantacuzenus, who, among other things, describes a banquet in which Orkhan participated, accompanied by his four sons.

Orkhan took part in many military operations organised by his father, who resided in the region of Sögüt and Yeñi-Shehir. When he ascended the throne, in 1326, his father's troops had with their frequent raids reached the littoral opposite Constantinople, while the Byzantine towns of Bithynia had been blockaded for many years. Bursa [*q.v.*] surrendered in the same year and became the Ottoman capital. Orkhan continued his father's military activity directed against the Byzantines by raiding their territories. He was surrounded by several military chieftains bearing the title of *ghāzī* or *alp* [*q.vv.*]. A campaign organised by the Byzantine emperor Andronicus III Palaeologus in 1329 in order to expel the Turks from Bithynia ended with the defeat of his army, first in Pelekanon, and immediately afterwards in Philokrene. Nicaea/Iznik surrendered in 1331 and soon became a centre of Muslim intellectual life through its *medreses*. The Byzantine emperor was forced to conclude a treaty with Orkhan in 1333, undertaking to pay 12,000 *hyperpera* a year, while Orkhan promised to leave in peace the fortresses situated on the coast of Mesothynia. Nevertheless, in 1337 the port of Nikomedeia/Iznikmīd (later Izmīd) surrendered also to Orkhan, who in this same year, perhaps encouraged by the Genoese of Pera, performed his first important raid on Thrace reaching the suburbs of Constantinople.

According to the Egyptian author al-ʿUmarī and to the Moroccan traveller Ibn Baṭṭūṭa, who visited the Ottoman lands, the amirate of Orkhan was one of the strongest in Asia Minor in the early 1330s and he himself had much prestige resulting from the holy war that he continuously carried out against the "infidel" Christians. However, his power increased impressively during the last years of the Byzantine civil war (1341-7) between the legitimate heir to the throne, John V Palaeologus, and the pretender John VI Cantacuzenus. When the war began the latter obtained military support from the *amīr* of Aydîn, Umur; but in 1344, he appealed to Orkhan, who promptly responded, sending troops to Thrace to fight on Cantacuzenus' side. The alliance was corroborated by the marriage of Orkhan with the daughter of Cantacuzenus, Theodora. Under these circumstances, the

Ottoman troops learned the topography of Thrace and Macedonia, while they became rich by pillaging the property of Cantacuzenus' opponents and by taking them into captivity together with the peasants, who had remained faithful to the legitimate heir, in order to sell them as slaves. Cantacuzenus himself confesses that he could not control his Turkish allies. During the same period, around 1346, the Ottomans annexed the adjacent amirate of Ḳarasi [*q.v.*] thus gaining access to the Aegean Sea. Orkhan, who had a fleet of at least 36 vessels as early as the 1330s, acquired thus the important fleet of the Ḳarasi Turks who, experienced in naval warfare, began to collaborate successfully with the Ottomans by organising raids on the Greek littoral. The alliance between Cantacuzenus and Orkhan continued after the end of the civil war in 1347, because the former, insecure and suspecting that some of the Thracian towns were ready to revolt against him, frequently appealed to his son-in-law for military support. Orkhan's son, Süleymān Pasha, often resided in Thrace at the head of troops sent to assist Cantacuzenus.

The war between Genoa and Venice, which broke out in 1351 and in which the Byzantines were eventually involved, gave Orkhan the opportunity to emerge on the international scene. He supported the Genoese by supplying them first with victuals and later with soldiers, and he placed a little fleet consisting of 9 vessels at their disposal. In 1351-2 the first Genoese-Ottoman treaty was concluded. Around the same time, the powerful *kral* of Serbia Stefan Dušan, whose territories were harassed by the Ottoman raids, tried also to conclude an alliance with Orkhan and proposed to give his own daughter in matrimony to one of his sons. It is not certain that the marriage ever took place.

In 1352 Süleymān Pasha accomplished the first Ottoman conquest in Europe by occupying the fortress of Tzymbe. In 1354 an earthquake destroyed the walls of several towns in Thrace, including the strategically important fortress of Kallipolis/Gelibolu [*q.v.*]. The Turks who were encamped in the countryside proceeded immediately to occupy them, while their inhabitants fled before them to escape captivity. Süleymān Pasha immediately took care of Kallipolis by restoring its walls and by inviting some prominent Turks to settle in it. In this same year the Ottomans occupied two important towns in Asia Minor, Ankara and Krateia Gerede.

The Ottoman expansion was temporarily halted in 1357, when Orkhan's son Khalīl was captured by Genoese pirates and taken to Phocaea, a town nominally under Byzantine rule. Orkhan was obliged to ask for the help of the Byzantine emperor, who put forward as a condition the end of the Ottoman raids. A treaty was concluded and the Byzantines had a period of peace. Nevertheless, the Ottomans resumed their raids on Thrace, perhaps as a result of the activity of the papal legate Pierre Thomas, who visited Constantinople with his fleet and then proceeded to an attack on Lampsakos in the autumn of 1359. It was probably in 1361 that the Ottomans conquered Didymoteichon/Dimetoḳa [*q.v.*].

Orkhan died in March 1362 (P. Schreiner, *Die Byzantinischen Kleinchroniken*, ii, Vienna 1977, 290-1). He left a state extending over Asia Minor and Europe. He had consolidated his rule by organising the administration of his territory, which was divided into domains governed by his sons and by some military chiefs. According to the Ottoman chronicles, in his years, besides the irregular force of the *aḳindjis* [*q.v.*], a cavalry was created consisting of *müsellems* [*q.v.*] and an infantry of *yayas*. The information given by Idrīs Bidlīsī [*q.v.*] that the corps of the Janissaries was founded in Orkhan's days seems to be inaccurate (see V.L. Ménage, *Some notes on the Devshirme*, in *BSOAS*, xxix [1966], 64-78). Regulations regarding dress produced a clear distinction between the Ottoman army and that of the other amirates, and ʿAlāʾ al-Dīn induced his brother to adopt the white cap (*börk*) for his soldiers.

Orkhan founded several mosques, establishments for dervishes, charitable institutions and schools. Religious life was vigorous in his days and *akhī* fraternities were active in the towns, as well as orders of dervishes, who remained popular religious leaders often inspired by heterodox doctrines. However, orthodox Islamic traditions became gradually predominant through the growing influence of theologians indicated in the sources as *dānishmend*. On the other hand, there existed close relations with the local Christian population, and the early Ottoman chronicles mention many a Byzantine lord, or even groups of Christians, who collaborated with the Ottomans. In 1354 Gregory Palamas, Metropolitan of Thessalonica and distinguished theologian, was taken a prisoner to the Ottoman territories, where he had the opportunity to meet the Christian communities and also to participate in a public theological debate organised by Orkhan in Nicaea.

The economic situation of the state which Orkhan left behind, was apparently prosperous. The currency was the silver *aḳče* [*q.v.*] struck in his name. Apart from agriculture and cattle-raising, the revenues of his state derived from booty, which was important as it included war captives sold as slaves or liberated after paying ransom; from the annual tribute paid by the Byzantines and the other Christian states and from the money paid by Christian states in order to be allowed to recruit soldiers within his amirate; and finally, from customs duties since trade was carried out, as suggested by the commercial treaty concluded with the Genoese.

ORKHAN KEMĀL, Meḥmed Rāshid (Orhan Kemâl Öğütçü), Turkish short story writer and novelist, born in Adana, Ceyhan, on 15 September 1914, died in 1970. His father ʿAbd ül-Ḳādir Kemālī was a lawyer who became a first-term MP (1920-3) and Minister of Justice for a while and founded the Ehālī Djümhūriyyet party in Adana but was forced to flee to Syria upon the closure of his party. Orhan Kemâl left secondary school and went with his father, and for a year they lived in Syria and Lebanon, where he worked at a printing house (reflected in his later novel *Baba evi*). In 1932 his father died and Orhan came back to Adana, working as a labourer, weaver, secretary and stock-taker in the cotton mills (1932-8). During his spare time he read extensively and began to write adventure novels and plays. While doing his military service, he wrote poetry under the pseudonym Raşit Kemali (later he also used that of Orhan Raşit). He was arrested on the allegation that he had engaged in political propaganda and was imprisoned for 5 years (1938-43). He published his first story *Balık*, in 1940, and between 1941-3, his stories were published in *Yeni edebiyat, Yürüyüş, İkdam, Yurt ve dünya*, and *Adımlar*. In Bursa prison he met Nâzım Hikmet [*q.v.*] and wrote prose under his influence, and in 1945, the literary journal *Varlık* declared him to be the most popular story writer. In 1943 he had come back to Adana, and when he could no longer find employment, moved to Istanbul with his family and tried to make a living as a writer. In 1949 *Ekmek kavgası* and his first novel *Baba evi* were published, and he then became famous; in 1958 *Kardeş payı* and in 1969 *Önce ekmek* won literary prizes. He still had to write for his living, and produced novels, short stories, interviews, scripts for cinema and theatre. In 1970 he was invited to Bulgaria, where he died on 2 June.

In his works Orhan Kemâl told of the small people who struggled to earn their daily bread—labourers who worked in the fields and factories of the Çukurova, people who lived in the slums of the big city. His characters therefore are workers, small government officials, beggars, garbage collectors, inmates, villagers, drivers, whores and the like. He played a great role in introducing "life in the prison" as a theme to Turkish short story. He was keen to reflect the social state of women and children in his works. His women have the traditional positive attributes, and his child heroes begin to work before they can enjoy their childhood. Some of his works reflect the conditions after the war years: effects of industrialisation, capitalism, changing traditions of the lower classes, especially in the Adana region. He reflected on his childhood, and the stories he heard from his inmates during his imprisonment. His works after 1946 are about the class war, and the bitter indifference of the big cities to poor people became a dominant theme. He does not describe the psychological dispositions of his characters, but this is reflected instead in the dialogues of the characters themselves. His language and style are plain, without metaphors and similes. Most of his works have been made into films, with the scripts by the author himself.

Bibliography: 1. First editions. (a) Novels: *Baba evi*, 1949; *Avare yıllar*, 1950; *Murtaza*, 1952; *Cemile*, 1952; *Bereketli topraklar üzerinde*, 1954 (in French: *Sur les terres fertiles*, Paris, Gallimard, 1971); *Suçlu*, 1957; *Devlet kuşu*, 1958; *Vukuat var*, 1959; *Gâvurun kızı*, 1959; *Dünya evi*, 1960; *El kızı*, 1960; *Hanımın çiftliği*, 1961; *Gurbet kuşları*, 1962; *Eskici ve oğulları*, 1962; *Sokakların çocuğu*, 1963; *Kanlı topraklar*, 1963; *Bir Filiz vardı*, 1965; *Müfettişler müfettişi*, 1966; *Yalancı dünya*, 1966; *Evlerden biri*, 1966; *Arkadaş ıslıkları*, 1968; *Sokaklardan bir kız*, 1968; *Üç kağıtçı*, 1969; *Kötü yol*, 1969; *Kaçak*, 1970. (b) Stories: *Ekmek kavgası*, 1949; *Sarhoşlar*, 1951; *Çamaşırcının kızı*, 1952; *72. koğuş*, 1954; *Grev*, 1954; *Arka sokak*, 1956; *Kardeş payı*, 1957; *Babil kulesi*, 1957; *Serseri milyoner*, 1957; *Küçücük*, 1960; *Mahalle kavgası*, 1963; *Dünyada harp vardı*, 1963; *İşsiz*, 1966; *Önce ekmek*, 1968; *Küçükler ve büyükler*, 1971.

ORKHAN SEYFĪ (Orhan Seyfi Orhon), Turkish poet and journalist, born in 1890 in Istanbul, died in 1972. He was the son of Colonel Emīn and Niʿmet. After finishing Mekteb-i Ḥuḳūḳ (Istanbul Darülfünūn Ḥuḳūk Fakültesi, i.e. Faculty of Law) in 1914, the same year he became a secretary at the Othmānlī Medjlis-i Mebʿūthānī until its suspension. In 1913 he published a small book of poems *Fïrṭïna ve ḳār* in *ʿarūḍ* metre. His second book, *Peri ḳïzï ile čoban ḥikāyesi*, a poetic tale with a Turkic theme written in syllabic metre, was published in 1919. He taught literature at several schools in Istanbul, and then in 1922 he began to publish *Aḳ baba*, the famous satirical magazine, with Yūsuf Ziyā. In 1924 he launched *Resimli dünyā*, a children's magazine, followed by *Günesh, Papaghan* and *Yeñi ḳalem* magazines in 1927. In 1932 he published *Edebiyat gazetesi*, in 1935 *Ayda bir*, and in 1942 *Çınaraltı*. In 1946 he became an MP for the Halk partisi (Republican People's Party) from Zonguldak. In 1960 he returned to journalism. In 1965 he joined the Adalet partisi (Justice Party) as an MP from Istanbul. From 1969 until his death on 22 August 1972, he worked as a journalist.

Throughout his life, he wrote for many newspapers and magazines, including *Taṣwīr-i efkār, Cumhuriyet, Ulus, Zafer* and *Son Havadis*. As a poet, his first poems are in *ʿarūḍ/aruz*, but later he became one of the famous promoters of syllabic metre of the National literary movement between 1908-12. In fact, he is known as one of the group of young poets called the "Five poets of the syllabic metre" (Faruk Nafiz Çamlıbel, Enis Behiç Koryürek, Halit Fahri Ozansoy and Yusuf Ziya Ortaç being the others). His popular poems have been set to music.

Bibliography: 1. Selected works. (a) Poetry: *Fïrṭïna we ḳār*, 1919; *Peri ḳïzï ile čoban ḥikāyesi*, 1919; *Gönülden sesler*, 1922; *O beyaz bir kuştu*, 1941; *Kervan*, 1964; *İşte sevdiğim dünya*, 1965; *Şiirler*, 1970. (b) Novel: *Çocuk adam*, 1964. (c) Satire: *Asrî Kerem*, 1942. (d) Collected articles: *Dün, bugün, yarın*, 1943; *Kulaktan kulağa*, 1943; *Hicivler*, 1951. (e) Short story: *Düğün gecesi*, 1957.

ORKHON, a river of the northern part of what is now the Mongolian People's Republic; it joins the Selenga to flow northwards eventually into Lake Baikal.

For Turcologists, the banks of this river are of supreme importance as the locus for the Old Turkish inscriptions, carved in the middle decades of the 8th century in a so-called "runic" script, in fact derived ultimately from the Aramaic one [see TURKS. Languages]. These inscriptions are the royal annals of the Köktürk empire, centred on this region till its fall in 744 and supersession by a Uyghur [*q.v.*] grouping based on Ḳara Balghasun on the Orkhon; these Uyghurs were in turn dispossessed by the Ḳîrghîz [*q.v.*] in 840 and forced to migrate southwards to Kansu and Turfan [*q.vv.*]. No Islamic geographers mention the Orkhon, but we know something of Ḳara Balghasun (whose ruins are still visible) from the visit to it by a Muslim traveller Tamīm b. Baḥr al-Muṭṭawwiʿ, which probably took place, in Minorsky's view, in 821 A.D.; this is the only first-hand Muslim account of the Uyghur kingdom in Mongolia.

Bibliography: See V. Minorsky, *Tamīm ibn Baḥr's journey to the Uyghurs*, in *BSOAS*, xii (1948), 275-305. (C.E. BOSWORTH)

OROMO, a people of eastern Africa, partly Islamised, present in Ethiopia but also, although in small numbers only, in Kenya, Somalia and even in the Sudan. Among its constituent groups are the Arssi (Arusi), Boran, Guji, Karayu, Leqa, Macha, Raya (Azebo), Tulama, Wello, etc. The Amharas, amongst whom they have become installed, have for a long time given them the name of "Galla", whose etymology is uncertain.

Numerically, the Oromo form one of the leading ethnic groups of Africa. In Ethiopia they represent 40% of the total population, i.e. between some ten and fourteen millions. Linguistically, they are the majority, ahead of the Amhara speakers. Their language is called by themselves *afaan oromo* and by the Amharas *oromeñña* or *galleñña*, and belongs to the Cushitic group [see KŪSH] at the side of Afar, Agaw, Bedja, Saho and Somali. The writing of Oromo in Latin characters seems now to be becoming generalised, even though the Ethiopian or Arabic alphabets have sometimes been used for it also.

Religious differences (they include Christians faithful to the national church, Catholics and Lutherans, also Muslims, and also followers of their traditional religions), as well as the cultural diversity of their groups and the denial of their existence as a people before 1975, have not prevented the gradual formation of a common identity among the Oromo. This is based on a substantial degree of linguistic intercommunication and on common values (such as the *gada* system). For some people it shows itself in a nationalism which the setting-up of a new, decentralised Ethiopian administrative system (1992), which endeavours to regroup the Oromo lands into an entity called "Oromia", would probably not satisfy completely.

The cradle of the Oromo, originally nomads, is believed to have been the region which stretches from Lake Abaya to the upper course of the Webi Shebele. The most important warrior raids and migrations which pushed them northwards began in the middle of the 16th century. They were favoured, if not provoked, by the disorder brought about by the wars which had set the Christian empire against the Muslims in the first half of that century, and especially against the sultanate of Harar [*q.v.*]. These migrations brought them to the Blue Nile, to Tigré and, in the northeast, to Harar, in the midst of peoples whose customs and beliefs, and even language, they often adopted. In this way, some of them early became Muslim.

From the 18th century onwards, Muslim political entities took shape, often engaged in trading. In the north, the Tajju and Wello were capable of having an influence on the political evolution of the Christian states until 1853. In the south, petty kingdoms (Ennarya, Jimma, Gera, Gomma and Guma), originating from the middle of the 18th century, became Muslim under the influence of merchants, mainly Harari ones. Divided by internal rivalries, they were integrated into the empire by Menelik between 1881 and 1897, together with the Arssi region which had become Muslim in the second half of the century and the sultanate of Harar itself.

Oromo Islam is far from "orthodox", and its devotees are sometimes Muslim only in name. The famous pilgrimage to the *ḳubba* of Shaykh Nūr Husen takes place in the Arssi territory, and the rites practised there strongly resemble those of the traditional pilgrimages at Abba Mudda. The influential *ṭarīḳas* have come from the Sudan (Tīdjāniyya, Sammāniyya) or from Arabia (Aḥmadiyya, Ḳādiriyya).

Bibliography: Information on Oromo Islam is very scattered. In addition to the bibls. published on Ethiopia, Kenya and Somalia, one may consult J.S. Trimingham, *Islam in Ethiopia*, London 1952; A. Trudnos, *Oromo documentation. Bibliography and maps*, Warsaw 1984; P.T.W. Baxter, *The present state of Oromo studies: a resumé*, in *Bull. des Études Africaines de l'Inalco*, vi, no. 11 (1986), 53-82. (A. ROUAUD)

ORONTE(s) [see AL-ʿAṢĪ].

ORTA (T.), literally "centre", in Ottoman Turkish military terminology, the equivalent of a company of fighting men in the three divisions (the *Segmen*, the *Djemāʿat* and the *Bölük*) of which the Janissary corps was eventually composed [see ODJAḲ and YEÑI ČERILER).

The number of *orta*s within the corps varied through the ages, but eventually approached 200; d'Ohsson reckoned the total at 229. The strength of each *orta* likewise varied; in the time of Meḥemmed II Fātiḥ [*q.v.*], they are said to have been composed of 50 men, but in the low hundreds at subsequent periods. The commander of an *orta* was called the *Čorbadjî* (literally, "soup purveyor" [*q.v.*]), and amongst the officers below him were, *inter alios*, the *Āshdjî* ("cook") and the *Bash Ḳara Ḳullukdju* ("head scullion"), reflecting the origin of much Janissary nomenclature in culinary terms. The several officers in an *orta* seem to have reflected a variety of military functions rather than a hierarchy of ranks, as in modern armies. Also, each *orta* had its own clerk, *oda yazîdjî*, who kept the rolls of the soldiers on the company's strength.

Bibliography: İ.H. Uzunçarşılı, *Osmanlı devleti teşkilâtından kapukulu ocakları*, Ankara 1943-4, index; M.Z. Pakalın, *Tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946-54, ii, 730-1; H.A.R. Gibb and H. Bowen, *Islamic society in the West*, i/1, London 1950, index and esp. 60-3, 314-20. (ED.)

ORTA OYUNU (T.), "entertainment staged in the middle place", a form of popular Turkish entertainment so-called because it takes place in the open air, *palanka*, around which the spectators form a circle. One side is reserved for the men, the other for the women. Behind the spectators is found the place where the actors get ready to enter the stage by means of a passage which is left free. The décor consists solely of a chair—or a table—called *dükkān* "shop, booth" and a folding screen, *yeñi dünyā* "new world". An orchestra made up of a *zurna*, oboe, a *čifte naḳḳāre* "double drum" and a *dawul* "big drum" plays a tune for dancing, and the dancers (*köček*) enter the stage, followed by the *djurdjunadjîs* "comic dancers". After this

preliminary demonstration, the actors proper appear. The two main characters, Ḳawuḳlu and Pīshekār, have, respectively, the same characteristics of those of Karagöz and Hacivad in the shadow theatre [see KARAGÖZ], likewise the character of Zenne "lady" (here a male actor in woman's dress) and the various other types representing the minority groups of the Ottoman empire: Jew, Armenian, Frank (here the Frenchman, or European, resident in Turkey) and the Anatolian peasant, here called Türk. The role of Bebe Ruhi of the shadow plays is here played by an actor genuinely a dwarf and hump-backed.

There are a large number of themes in common with the shadow theatre, and several of these are drawn from the repertoire of popular romances like those of Ferhād and Shīrīn, Leylā and Medjnūn, etc. As in the Karagöz plays, these are stripped of their serious nature, enriched by comic elements and provided with a happy ending. What distinguishes the Orta Oyunu from Karagöz is, so it would appear, its mode of presentation: the coming together of living persons who are entirely free to draw comic effects from the mimes. A burlesque dialogue between Ḳawuḳlu and Pīshekār is called *čene yarīshī* "chin competition", a term signifying in Turkish "contest in gossiping, talking at length"; the two actors, drawing upon the term's ambiguity, reinforce their repartee with a miming contest which consists of twisting and deforming the chin to produce the most comic effects of the face.

Certain types of *taḳlīd* "comic imitation" of the Turkish tradition attested from the 12th century onwards have some common features with the Orta Oyunu, but only the imitative element can be traced back to there. The same applies to the spectacle known as *ḳol oyunu* "entertainment with troupes" about which Ewliyā Čelebi speaks. One could also compare the Orta Oyunu with the improvised street displays of rural areas. Nevertheless, with the full array of its characteristics, the Orta Oyunu is only attested in written sources after the beginning of the 18th century.

Some Orta Oyunu texts, transcribed rather late, have been published in the works of Martinovitch (one text in translation) and of Cevdet Kudret (nine texts). In the work of Selim Nüzhet Gerçek appears a list of 46 titles.

(P.N. BORATAV)

ORTAČ, YŪSUF ḌIYĀ (Yusuf Ziyâ Ortaç), Turkish poet and journalist, born on 23 April 1895 in Istanbul, the son of engineer Süleymān Sāmī and Ḥurriyye, died in 1968. He finished *Wefā Iʿdādīsī* in 1915. By then he had already showed an interest in writing poetry and had won a prize for one of his poems, which was published in *Türk yurdu*. He taught literature first in İzmit, then at Galatasaray lycée. His poetry followed the tradition of the nationalist poets of the time. His first book of poems, *Aḳīndan aḳīna* was published in 1916, followed by *Djenk ufuḳlarī* in 1917, a work which aimed to give moral support to the army and the nation during the war. In 1918 he began to write satirical poems. He launched a journal called *Shāʿir* and wrote in the journal *Diken* using the pseudonym of Čimdik. In 1919 he published his satirical poems in *Shen kitāb*, comprising twenty poems which criticise the social and administrative life of Istanbul. In 1922, he published *Aḳ baba*, a satirical magazine, with Orkhan Seyfī [*q.v.*], which became the forerunner of the journals of satire during the first years of the Republic. Yusuf Ziyâ wrote for the newspapers *İkdam* and *Cumhuriyet* between the years 1927 and 1933. In 1935, he published *Ayda bir* with Orhan Seyfi Orhon as well as *Her ay*, a journal devoted to arts, economy and politics, and also the journal *Çınaraltı*. He left journalism to work as a literature teacher and later became an MP between the years 1946-54. In 1962 he published his last book *Bir rüzgâr esti* and until 1967 he worked for the magazine *Akbaba*. He died on 11 March 1968.

Bibliography: 1. Selected works. (a) Collections of poetry: *Aḳīndan aḳīna*, 1916; *Djenk ufuḳlarī*, 1917; *ʿAshiḳlar yolu*, 1919; *Shāʿiriñ duʿāsī*, 1919; *Shen kitāb*, 1919; *Yanardağ*, 1928; *Bir servi gölgesi*, 1938; *Bir rüzgâr esti*, 1962. (b) Plays: *Biñ nāz*, 1917; *Kördüğüm*, 1919; *Nikāḥta kerāmet*, 1923; *Nâme veya eski mektup*, 1938. (c) Novels: *Üç katlı ev*, 1953; *Göç*, 1961. (d) Travel books: *Göz ucuyla Avrupa*, 1958. (e) Collection of articles: *Ocak*, 1943; *Sarı çizmeli Mehmet Ağa*, 1956; *Gün doğmadan*, 1960. (f) Memoirs: *Bir varmış bir yokmuş: portreler*, 1960; *Bizim yokuş*, 1966.

OSMAN DIGNA [see ʿUTHMĀN ABŪ BAKR DIGNA].

OSMAN NŪRĪ [see ERGIN, OSMAN NŪRĪ].

OSRUSHANA [see USRUSHANA].

OSSETIANS, an Iranic-speaking people who live in the central part of the North Caucasus, primarily in the North Ossetian ASSR and neighbouring areas on the southern slopes of these mountains in Georgia. According to the 1989 census, of the approximately 598,000 Ossetians in the former Soviet Union, 335,000 live in North Ossetia and 164,000 in Georgia. Sixty-five thousand of the Ossetians living in Georgia live in what was the South Ossetian AO.

The Ossetians are divided into two major religious groups, the Orthodox Christian Ossetians (*Iron* and *Tuallag*) and those professing Sunnī Islam, the *Digor* Ossetians. The Iron, or Eastern Ossetians, live primarily in eastern North Ossetia, and the Tuallag in Georgia. The Digors live primarily in the mountains and valleys of the northwestern part of Northern Ossetia, in a small portion of eastern Kabarda, and in the major Ossetian urban centre of Vladikavkaz.

The Muslim Ossetians are a relatively small minority, constituting between 20 to 30% of the Ossetian population. The ancestors of the Digors accepted Islam under the influence of the neighbouring Kabardinians between the 16th to 19th centuries. Although both Christianity and Sunnī Islam are represented in Ossetia, both of these faiths form only a thin veneer over a strong residual influence of the ancient polytheist and animist beliefs of the north Caucasian tribes. Pagan rituals, deities and folkways of Caucasian culture have survived throughout Ossetia, mixing with traditional Christian and Islamic beliefs and

practices. For example, polygamy was practiced well into the Soviet period among both Christian and Muslim Ossetians, and both groups appear to have been relatively casual in practicing their respective faiths. This syncretic blend has resulted in a curiously unique and distinct Ossetian culture. In addition to adopting many beliefs of the local Caucasic peoples among whom they lived, including the Balkars, Ingush, Kabardinians, and Georgians, the Digors and other Ossetians also maintain fragments of the ancient cultural practices of their nomadic ancestors, the Alans.

The Ossetians are considered to be descendants of the ancient Scythian and Sarmatian tribes who inhabited the steppe region north of the Black Sea. In the fourth century A.D., the Alans, descendants of these tribes, were forced southward from their steppe homelands by more powerful nomadic tribes, including the Huns and the Mongols. Although they generally maintained their nomadic way of life, the Alans formed a loosely structured state called Alania in the foothills and mountain valleys between the upper Kuban River and the Darial Gorge of the Caucasus. Strong ties were established between Alania and the Byzantine Empire, and, in the 10th century, Christianity became the offical religion of Alania [see further, ALĀN].

Following the Mongol invasions of the 13th century, the Alans scattered. One group migrated to what is now Hungary and parts of western Europe; another followed the Huns to China. The Alans who remained in the Caucasus region moved deeper into the mountain valleys and on to the southern slopes of the mountain range, abandoning their nomadic way of life for the more sedentary Caucasian life style of stock raising and agriculture. After intermarrying and culturally mixing with the local Caucasian peoples, the Alans re-emerged three centuries later as a distinct ethnic group now known as the Ossetians.

The Ossetic language is the only survivor of the northeastern branch of Iranian languages, also known as Scythian. Ossetic is divided into two main dialects: "eastern" or Iron and "western" or Digor. Among the Digor Ossetians, a form of Ossetic developed incorporating linguistic elements from Kabardinian (Circassian), a Caucasic language. Many archaic linguistic terms and structures that no longer exist in Iron or Tuallag Ossetic were preserved in Digor. Iron and Tuallag are more heavily influenced by the Russian and Georgian languages, respectively. In the late 19th century a distinct Digor literary language was created, which used Arabic characters. At the same time, the Iron dialect was written in the Cyrillic alphabet and Tuallag in the Georgian alphabet. In 1923, all dialects of Ossetic were changed to the Latin alphabet, and in 1939, the Digor literary language was abolished and replaced by standard literary Iron, which again used the Cyrillic alphabet.

In 1944 the Digor were deported to Central Asia along with other Muslim peoples of the North Caucasus. In the late 1950s, the survivors of the deportations were permitted to return to homelands in the North Caucasus, and the Digor were resettled more or less in their traditional territories in the Digor Valley and the foothills of western North Ossetia, along the border of Kabarda. Today, the Digors live primarily by animal husbandry, settled agriculture, and many work in the nickel mining industry of North Ossetia. There are no major cities in the Digor region of North Ossetia and the Digor remain less urbanised than their Christian Iron neighbours and kinsmen.

(NANCY E. LEEPER)

OSTĀDSĪS [see USTĀDHSĪS].

ʿOTHMĀN, ĀL-I ʿOTHMĀN [see ʿOTHMĀNLĪ].

ʿOTHMĀN I, eponymous founder of the Ottoman dynasty. It is impossible to establish the dates of his birth or of his accession to sovereignty. He was active during the first quarter of the 8th/14th century, and Ottoman tradition asserts that he died shortly after his son Orkhan's [*q.v.*] conquest of Bursa (on 6 April 1326. For this date, see P. Schreiner, *Die Byzantinischen Kleinchroniken*, ii, Vienna 1977, 231). However, this story which makes a son assume leadership already during his father's lifetime, may have originated in the early 9th/15th century simply as an ideal model of succession to contrast with the contemporary practice of succession by fratricide. A *wakfiyya* of ʿOthmān's son Orkhan, dated Rabīʿ I 724/March 1324 (İ.H. Uzunçarşılı, *Gazi Orhan Bey vakfiyesi*, in *Belleten*, v/19 [1941], 277-88) already bears Orkhan's *tughra* [*q.v.*], suggesting—but by no means proving—that he had succeeded to full sovereignty by this date. In which case, ʿOthmān's death should perhaps be placed before March 1324. (For an argument in favour of 724/1324 as the date of Orkhan's succession, see İ.H. Uzunçarşılı, *Gazi Orhan Beğin hükümdar olduğu tarih*, in *Belleten*, ix/33 [1945], 207-11.)

ʿOthmān's origins are unknown. However, Turkish sources beginning with the *Iskender-name* (*ca.* 1400) of Aḥmedī [*q.v.*] (ed. İsmail Ünver, Ankara 1983, 65b) are unanimous in naming his father as Ertoghrul [*q.v.*], and a silver coin stamped on the obverse and reverse "Struck (by) ʿOthmān son of Ertoghrul" supports this claim (İ. Artuk, *Osmanlı beyliğinin kurucusu Osman Gaziye ait sikke*, in *1st International Congress on the Social and Economic History of Turkey. Papers*, Ankara [1983], 27-33). The names of ʿOthmān's children, apart from Orkhan, are also known, as they appear as witnesses to Orkhan's *wakfiyya* of 724/1324. They are Čoban, Ḥamīd, Melik, Pazarlu and Faṭma Khātūn. The Malkhatun daughter of ʿÖmer Beg, whose name also appears as a witness to the same document, may have been ʿOthmān's wife. Ottoman tradition from ʿĀshïḳ-pasha-zāde [*q.v.*] onwards name his wife as Malkhun, daughter of the legendary dervish Edebali. Neshrī [*q.v.*], however, while taking over ʿĀshïḳ-pasha-zāde's tale of ʿOthmān's marriage, adds a separate anecdote about ʿOthmān's love-affair with a lady called Malkhatun (ed. F. Taeschner, *Ğihānnümā. Die altosmanische Chronik des Mevlānā Mehemmed Neschrī*, i. Text of Codex Menzel, Leipzig 1951, 24. The copyist of the Manisa ms. renders this name as Malkhun Khātūn. See Taeschner, *Ğihānnümā*, ii. Text of Codex Manisa 1373, Leipzig 1955, 29). These tales may conceivably represent folk-memories of a real Malkhatun, a wife of the historical ʿOthmān.

The *Anonymous chronicles* (ed. F. Giese, *Die Altosmanischen Anonymen Chroniken*, Breslau 1922, 7) and Oruč (Oruč b. ʿĀdil, ed. F. Babinger, *Tevārīkh-i Āl-i ʿOthmān*, Hanover 1925, 12, 15-16) attribute only

two sons to ʿOthmān: Orkhan and ʿAlī Pasha. ʿĀshıḳ-pasha-zāde (ed. ʿAlī, *Tevārīkh-i Āl-i ʿOthmān*, Istanbul 1332/1913-14, 39-40) adopts this scheme, but re-names ʿAlī Pasha as ʿAlāʾ al-Dīn Pasha [*q.v.*, ʿAlāʾ al-Dīn Bey]. Most later historians follow ʿĀshıḳ-pasha-zāde. However, the figure of ʿAlī Pasha/ʿAlāʾ al-Dīn Pasha is wholly fictitious, despite inclusion in the *Encyclopaedia of Islam*. (For the origin and development of this legend, see C. Imber, *Canon and apocrypha in early Ottoman history*, in C. Finkel and C.J. Heywood (eds.), *Festschrift for V.L. Ménage*, Istanbul.)

The survival of a coin stamped with ʿOthmān's name confirms the Ottoman tradition that he declared himself an independent ruler, since the issue of coinage served as a declaration of sovereignty. There are no other Ottoman texts or artefacts from his reign. The only contemporary source to mention ʿOthmān is the Byzantine chronicle of George Pachymeres (1242-*ca*. 1310) (ed. I. Bekker, *De Michaele et Andronico Palaeologo*, Bonn 1835, ii).

Pachymeres' references to ʿOthmān are confused. His chronicle records a victory which ʿOthmān won over the Byzantine *hetaireiarches* Mouzalon at Bapheus, identified as the district around Nikomedia/Izmit (Pachymeres, *op. cit.*, 333). The battle, Pachymeres claims, "was the beginning of great trouble for the whole region." In a second attempt to defeat ʿOthmān, the Byzantine Emperor Andronicus II sent another force against him under the *stratopedarch* Siouros. ʿOthmān defeated this army in a night attack near a fortress called Katoikia, which he had also occupied (Pachymeres, *op. cit.*, 414). Pachymeres follows his account of this victory with a statement that ʿOthmān next occupied Belokome/Biledjik [*q.v.*], thereby "gaining great wealth and living in prosperity, and using the fortresses as places of safekeeping for treasures" (Pachymeres, *op. cit.*, 414-15). The exact sequence of events is, however, unclear. In a slightly earlier passage, Pachymeres already refers to the loss of Belokome, together with Angelokome (İnegöl?), Melangeia (İnönü?), Anagourdia and Platanea (unidentified), without, however, attributing these conquests to ʿOthmān (Pachymeres, *op. cit.*, 413). It would perhaps be reasonable to assume that it was ʿOthmān who captured all these places, at about the time of his victory at Katoikia. Pachymeres reports that he also laid siege to Prousa/Bursa [*q.v.*] and to Pegai on the coast, where the besieged population suffered famine and plague (Pachymeres, *op. cit.*, 414), and finally that he made a determined but unsuccessful assault on Nikaia/Iznik [*q.v.*] (Pachymeres, *op. cit.*, 637). His final reference to ʿOthmān reads: "So in this way ʿOthmān was greatly inspired to ambitious plans. There was nothing in the regions around Nikaia, Pythia and everywhere right down to the coast which he did not control" (Pachymeres, *op. cit.*, 642). The disjointed sequence of events that Pachymeres describes must have occurred before 707-8/1308, the closing date of his chronicle. One can infer from this source that by this date the occupation of Belokome/Biledjik and other fortresses had given ʿOthmān a secure base in the Sakarya valley and that he controlled the countryside westwards as far as the Sea of Marmara.

The earliest Ottoman lists of ʿOthmān's conquests also indicate that his secure base was the Sakarya valley. The *Iskender-nāme* of Aḥmedī (*loc. cit.*) credits him with the capture of Biledjik, Inegöl and Köprüḥiṣār, at least the first two of which correspond with Pachymeres' narrative. A *Chronological list* of 824/1421 lists Biledjik, Yarḥiṣār, Inegöl and Yeñishehir (Ç.N. Atsız, *Osmanlı tarihine ait takvimler*, Istanbul 1961, 25), and the subsequent chronicles by Shükrullāh (*ca*. 1460) (ed. Th. Seif, *Der Abschnitt über die Osmanen in Šükrullah's persischer Universalgeschichte*, in *MOG*, ii [1923-6], 81) and Enwerī (*ca*. 1465) (ed. M.H. Yınanç, *Düstūr-nāme-yi Enwerī*, Istanbul 1928, 82-3) offer permutations of these earlier lists. The *Anonymous chronicles* (ed. Giese, 6), Oruč (ed. Babinger, 12) and ʿĀshıḳ-pasha-zāde (ed. ʿAlī, 18), all deriving their information from a common source of *ca*. 825/1422, also refer to ʿOthmān's conquest of a fortress called Ḳara[dja]ḥiṣār ("Black Fortress"). This toponym may correspond to the Melangeia of Pachymeres, since alternative forms of this name are Melagina/Melaina, which resemble the Greek word *melaina* (f. sing. "black") and suggest that the Turkish name is a calque of the Greek. The correspondence of these places with the general locations of ʿOthmān's conquests to be inferred from Pachymeres suggests that in these few particulars the Ottoman tradition is historically accurate.

In general, however, Turkish traditions about ʿOthmān are clearly unhistorical and should be understood as belonging to the literary genres of folk-epic (*dāstān* [*q.v.*]) and *manāḳib* [*q.v.*]. These traditions appear in their most primitive and disjointed form in the *Anonymous chronicles* and Oruč, which derive the core of their material from the "common source" of *ca*. 825/1422. The *History* of ʿĀshıḳ-pasha-zāde presents a fuller and more coherent narrative, adding a great deal to the stories which it shares with these two chronicles. For this reason, it is ʿĀshıḳ-pasha-zāde whose narrative has come to form the basis of the modern historiography of ʿOthmān's reign. However, ʿĀshıḳ-pasha-zāde's additional material is similar in type to what he took from the "common source". For example, he also derives the names of ʿOthmān's followers and companions from toponyms, and creates battle stories both from folk-etymologies of place-names and from the sites of shrines. An example of this last type is ʿOthmān's supposed victory over the Byzantines at Ḳoyunḥiṣār, which modern historians have over-optimistically identified with the Bapheus in Pachymeres. The original story comes from the "common source", and locates the battle at the site of a shrine, which popular tradition came to associate with the tomb of a fictitious relative of ʿOthmān who supposedly fell in a battle at that spot (Oruč b. ʿĀdil, *op. cit.*, 13). ʿĀshıḳ-pasha-zāde (ed. ʿAlī, 21) adopts the same tale, but removes the battle-site to nearby Dinboz. This clearly reflects the influence of a tale preserved in the *Ottoman history* of Theodore Spandugino (for the recension of 1513, see *La cronaca italiana di Teodoro Spandugino*, in C. Villain-Gandossi, *La Méditerranée aux XII-XVIe siècles*, London 1983, 158-60; for the recension of 1538, see C. Sathas, *Documents inédits relatifs à l'histoire de la Grèce au moyen-âge*, ix, Paris 1890, 138-9) of an Ottoman victory over the infidels at Dinboz. The starting point of Spandugino's story is the name Dinboz itself, which he understands as deriving from Turkish *dīn boz-* ("to destroy religion") and as being so named in commemoration of an Ottoman victory over the Greeks. ʿĀshıḳ-pasha-zāde has simply conflated the two stories to create a new account of a battle, and this procedure is typical of his entire narrative.

In the 20th century, a number of historians have adapted Ottoman traditions relating to ʿOthmān and his forbears in order to construct new theories of the origins of the Ottoman Empire. M. Fuad Köprülü (*Les origines de l'Empire Ottoman*, Istanbul 1935) accepted that the Ottoman tradition making ʿOthmān a leader of the Ḳayı [*q.v.*] tribe is, at least in essence,

true. R.P. Lindner (*Nomads and Ottomans in mediaeval Anatolia*, Bloomington 1983) also postulated a tribal origin for ʿOthmān and his followers, but greatly modified the traditional stories to accord with modern anthropological theory. P. Wittek (*The rise of the Ottoman Empire*, London 1938) rejected the traditions of ʿOthmān as leader of a tribe, in favour of the view that he was leader of a *ghāzī* corporation and that these *ghāzī* origins pre-determined the future trajectory of the Ottoman Empire. (On the intellectual roots of Wittek's famous theory, see C.J. Heywood, *Wittek and the Austrian tradition*, in *JRAS* [1988], 7-25; idem, "*Boundless dreams of the Levant*": *Paul Wittek, the George-Kreis, and the writing of Ottoman history*, in *ibid.* [1989], 30-50. See also R.C. Jennings, *Some thoughts on the gazi-thesis*, in *WZKM*, lxxvi [1986], 151-61.) Another thesis harmonises the "nomad" and "*ghāzī*" theories (Halil İnalcık, *The question of the emergence of the Ottoman state*, in *International Journal of Turkish Studies*, ii/2 [1981-2], 71-80). Another view is that the Ottoman traditions concerning ʿOthmān's origins and forbears are myths, most of which developed during the course of the 9th/15th century and had the function of legitimising Ottoman dynastic rule (C. Imber, *The Ottoman dynastic myth*, in *Turcica*, xix [1987], 7-27; on the legitimising functions of the Ottoman genealogy, see Wittek, *op. cit.*, 1-15; Barbara Flemming, *Political genealogies in the sixteenth century*, in *Osmanlı Araştırmaları*, vii-viii [1988], 123-37).

Bibliography: Given in the article.

(C. IMBER)

ʿOTHMĀN II, sixteenth sultan of the Ottoman empire (regn. 1027-31/1618-22), was born on 19 Djumādā II 1012/15 November 1603; cf. *Sidjill-i ʿothmānī*, i, 56), the son of Sultan Aḥmed I. After the death of his father in November 1617, the brother of the latter had been proclaimed sultan as Muṣṭafā I [*q.v.*] but ʿOthmān, taking advantage of the weak character of his uncle and supported by the *Muftī* Esʿad Efendi and the *Ḳîzlar Aghasî* Muṣṭafā, seized the throne on 26 February 1618 by a coup d'état.

The youth of the new sultan at first assured the promoters of the coup d'état of considerable influence. To them was due the replacement of Khalīl Pasha [*q.v.*] as grand vizier by Öküz Meḥmed Pasha [*q.v.*] in January 1619. Khalīl had just concluded a treaty of peace with Shāh ʿAbbās I of Persia, after a campaign which had been indecisive. The relations with the other powers, Austria and Venice, with which the capitulations were renewed, were also peaceful. But in January 1620, after Meḥmed Pasha had been replaced by the very influential favourite Güzeldje ʿAlī Pasha [*q.v.*], who removed from the court all possible rivals, the chances of war increased. This time it was a war with Poland, which broke out through the intrigues of the voivode of Moldavia. In the battle of Jassy on 20 September 1620, the Polish army was annihilated by the *ser-ʿasker* Iskender Pasha. The grand vizier, who held office mainly by satisfying the avarice of the young sultan, never lost an occasion to irritate and provoke the enmity of Austria and Venice. He died on 9 March 1621 and under his successor Ḥüseyn Pasha of Okhri, ʿOthmān II took part in person in the campaign of 1621 against Poland. This campaign ended in a check for the Turks and the Tartars, who, with great losses, had in vain tried to storm the fortified Polish camp on the Dniester near Choczim. A preliminary peace was signed under the same conditions as before under Süleymān I, and the sultan appointed a new grand vizier, Dilāwer-zāde Ḥüseyn Pasha.

Since the time when ʿOthmān, still considerably under the influence of the Ḳîzlar Aghasî Süleymān and his Khodja, Mollā ʿÖmer, had begun to act independently, he had not been able to gain the sympathy of the army on account of his brutal treatment of the Janissaries, nor of the people chiefly as a result of his avarice, nor of the *ʿulemāʾ*. The latter were particularly horrified at the sultan's wish to take four legitimate wives from the free classes of his entourage; he actually married the daughter of the *Muftī* Esʿad. His unpopularity increased still further when he wished to put himself at the head of an army to fight Fakhr al-Dīn Maʿn [*q.v.*], the Druze *Amīr*, and to go on and make the pilgrimage to Mecca. Preparations had already been made for this expedition when on 18 May 1622, a mutiny broke out among the Janissaries and Sipāhīs, who plundered the house of Mollā ʿÖmer. Next day, the rebels secured the cooperation of the chief *ʿulemāʾ* and demanded the heads of the Ḳîzlar Aghasî, the Khodja, the grand vizier and three other high officials. ʿOthmān at first refused, but after the rebels had forced the third wall of the palace he had to sacrifice the grand vizier and the Ḳîzlar Aghasî. But in the meantime, his uncle Muṣṭafā had been brought out from his seclusion in the harem to be proclaimed sultan. ʿOthmān tried during the night to secure his throne through the influence of the Agha of the Janissaries, but the latter was killed on the following morning and he became the prisoner of the Janissaries, who took him to their barracks. The rebels had no intentions against his life, but meanwhile the direction of affairs had passed to Dāwūd Pasha, the favourite and son-in-law of Māh-Peyker, the mother of Sultan Muṣṭafā. Dāwūd Pasha, being appointed grand vizier, had ʿOthmān taken to the castle of Yedi Kule, where he was put to death in the evening of 20 May 1622. He was buried in the *türbe* of his father Aḥmed I. ʿOthmān is praised for his skill as a horseman and for his intelligence. He was also a poet with the *makhlaṣ* of Fārisī. He was the first of three sultans to lose his life in a rising, the others being Ibrāhīm and Selīm III.

Bibliography: The Turkish sources are the works of Naʿīmā, Pečewī, Ḥasan Bey-zāde, the *Rawḍat al-abrār* of Ḳara Čelebi-zāde, and the *Fedhleke* of Ḥādjdjī Khalīfa. The *Waḳʿa-yi Sulṭān ʿOthmān Khān* of Ṭūghī is specially devoted to the deposition of ʿOthmān (tr. by A. Galland; cf. *GOW*, 157), while his whole reign is described in a *Shah-nāme* by Nādirī (*GOW*, 169). Among contemporary western accounts, see the *Relazione* quoted by von Hammer, in the note on p. 806 of *GOR*², ii, and that of Sir Thomas Roe. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, index; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 246; R. Mantran (ed.), *Histoire de l'empire ottoman*, Paris 1989, index; *İA*, art. *Osman II* (Şinâsî Altındağ).

(J.H. KRAMERS)

ʿOTHMĀN III, twenty-fifth sultan of the Ottoman empire (regn. 1168-71/1754-7) and son of Muṣṭafā II, succeeded his brother Maḥmūd I on 14 December 1754. He was born on 2 January 1699 (*Sidjill-i ʿothmānī*, i, 56) and had therefore reached an advanced age when he was called to the throne. No events of political importance took place in his reign. The period of peace which had begun with the peace of Belgrade in 1739 continued; at home only a series of seditious outbreaks in the frontier provinces indicated the weakness of the empire. In the absence of any outstanding personality, the sultan was able to

rule as he pleased, but his activities were practically confined to changing his grand vizier frequently (six times). His favourite, Silihdār ᶜAlī Pasha, grand vizier from 24 August to 22 October 1755, had his career terminated by execution. The appointment on 13 December 1756 of Rāghib Pasha [*q.v.*] was an important one, as for five years this great statesman showed himself an excellent administrator of the empire under the following sultan Muṣṭafā III. ᶜOthmān III's other activities were the suppression of cafés, of the liberty of women to show themselves in public and the regulation of the dress of his non-Muslim subjects. His name is associated with the great mosque of Nūr-i ᶜOthmānī (Nuruosmaniye), which had been begun by Maḥmūd I and was solemnly opened in December 1755. The reign of this sultan is remembered for the great fires in the capital in 1755 and 1756. He died on 30 October 1757 and was buried, like Maḥmūd I, in the tomb of the Yeñi Djāmiᶜ.

Bibliography: The *Taʾrīkh* of Wāṣif is the principal source. The reign is described in the great histories of von Hammer, Zinkeisen and Jorga. See also A. Danon, *Contributions à l'histoire des sultans Osman II et Mouçtafâ I*, in *JA*, 11th ser., xiv (1919), 69-139, 243-310; İ.H. Uzunçarşılı, *Osmanlı tarihi*, iii/1, 132 ff., iii/2, 385 ff.; A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, index; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 191-3; R. Mantran (ed.), *Histoire de l'empire Ottoman*, Paris 1989, index; *İA*, art. *Osman II* (Şinâsî Altındağ).

(J.H. Kramers)

ᶜOTHMĀN ḤAMDĪ (b. Istanbul, 1842; d. Kuruçeşme, 1910; buried in Eskihisar), Ottoman painter and archaeologist.

He was the eldest son of Ibrāhīm Edhem Pasha [*q.v.*], grand vizier under ᶜAbd al-Ḥamīd II, and brother of Ismāᶜīl Ghālib [*q.v.*] and Khalīl Edhem (Eldem [*q.v.*]). Sent to Paris *ca.* 1857 in order to study law, ᶜOthmān Ḥamdī gravitated toward the École des Beaux-Arts, where he studied painting under the leading proponents of Academic painting, in particular G. Boulanger and J.-L. Gérôme; he also attended courses in archaeology. From his teachers he absorbed a knowledge of classical antiquity, a precise descriptive technique and a taste for "Oriental" themes. In 1867 he functioned as representative for the Ottoman section of the Exposition Universelle in Paris visited by Sultan ᶜAbd al-ᶜAzīz. On his return to the Ottoman Empire in 1869, ᶜOthmān Ḥamdī spent two years in Baghdād in the service of Midḥat Pasha, then governor of ᶜIrāḳ. For the 1873 International Exposition in Vienna he served as Head of the Turkish section and compiled a book, *Les costumes populaires de la Turquie*. During the 1870s, he served in various administrative posts, pursued his artistic interests and became associated with the newly established Müze-yi Hümāyūn (Imperial Museum; continues as Arkeoloji Müzeleri). In 1881 he was appointed director of this museum and shortly thereafter participated in founding the Ṣanāyiᶜ-i Nefīse Mektebi (School of Fine Arts, continues as Güzel Sanatlar Akademisi). During his years as museum director (1881-1910), ᶜOthmān Ḥamdī was also responsible for overseeing archaeological activities in Ottoman territory and was instrumental in drafting the 1884 *Āthār-i ᶜAtīḳa Niẓām-nāmesi*, a law which declared all antiquities to be the property of the State, forbidding to archaeologists a share of their finds and making clandestine excavation and antiquities smuggling criminal offences; the basic provisions of this law remain in force today. His father's position as Minister of the Interior (1883-5) facilitated the speedy enforcement of this law, which was soon to give the Müze-yi Hümāyūn an outstanding collection of antiquities as well as an archive of tablets excavated in ᶜIrāḳ and Anatolia. ᶜOthmān Ḥamdī's zeal for preserving the relics of the past led him to undertake excavations where finds of antiquities were reported. Most notable was his 1887 excavation of a necropolis in Sidon which yielded a sarcophagus portraying battles of Greeks and Persians initially thought to have been made for Alexander of Macedon. The finds from Sidon were published by ᶜOthmān Ḥamdī in collaboration with Théodore Reinach (*Une nécropole royale à Sidon. Fouilles de Hamdy Bey*, Paris 1892). Antiquities from Sidon and other sites soon made it necessary to build a proper museum near the Çinili Köşk of Topkapı Palace which had been used since 1876 to house objects collected from pre-Islamic and Islamic sites in the Ottoman Empire. ᶜOthmān Ḥamdī gained international recognition as archaeologist and museum director; among other awards for him were the title of Grand Officier of the Légion d'Honneur (1906) and the degree of Doctor Honoris Causa from Oxford University (1909).

Throughout his career as administrator and archaeologist ᶜOthmān Ḥamdī continued to paint, and his works were exhibited in both Turkey and Europe. Most of his compositions were close variants of types used by his teacher, J.-L. Gérôme, and are characterised by a painstaking attention to detail in the rendering of setting, figures and ancillary objects. Because of this, it is possible to discern that many paintings are self-portraits or contain likenesses of his immediate family. Most of the settings are also recognisable, and include buildings in Bursa, Karaman and Istanbul. Several have as a background the Çinili Köşk and some of the objects he portrayed are known to have been part of the museum's collection. As a painter, administrator and scholar, ᶜOthmān Ḥamdī devoted his life to the study and preservation of the artistic and cultural heritage of the Ottoman Empire, laying the foundations for institutions which continue to function in the Turkish Republic.

(P. and S. Soucek)

ᶜOTHMĀN PASHA, Özdemir-Oghlï, Ottoman grand vizier and celebrated commander in the Ottoman-Ṣafawid war of 1578-90.

Born in Egypt in 933/1526-7, his father was Özdemir Pasha [*q.v.*], a *mamlūk* who became Ottoman governor (*beylerbeyi*) of Yemen and conqueror of Abyssinia (Ḥabesh [*q.v.*]). The earliest documentary evidence of ᶜOthmān's holding office in Egypt dates from Dhu 'l-Ḥidjdja 957/December 1550; yet it is claimed that by the age of twenty he was a *sandjaḳbeyi*, the rank he held in Rabīᶜ I 968/December 1560 when appointed Egyptian *amīr al-ḥadjdj*.

ᶜOthmān followed his deceased father as *beylerbeyi* of Ḥabesh, probably in late 968/mid-1561. It has been suggested (Orhonlu, *Habeş eyaleti*, 49), though without supporting evidence, that he was chosen because he had earlier served there under his father and was familiar with the province's lands and peoples.

During his six years in this office, ʿOthmān Pasha apparently operated mainly in the coastal region south from Maṣawwaʿ [*q.v.*], seeking to forestall Abyssinian contacts with the Portuguese. He may also have taken measures aimed at linking Ḥabesh with Upper Egypt to counter the Fundj [*q.v.*] tribes, who in 971-2/1564 besieged Sawākin, the province's administrative centre.

Released from Ḥabesh in Ṣafar 975/August 1567, ʿOthmān returned to his native Cairo. There he shortly learned that, from 14 Djumādā II 975/16 December 1567, he had been appointed governor of Ṣanʿāʾ, then one of two *beylerbeyiliks* in Yemen [see MAḤMŪD PASHA] where a Zaydī rebellion was out of control. Although ordered to depart for Yemen immediately with a modest force in advance of a larger one under the *serdār* (commander-in-chief) Muṣṭafā Pasha Lala [*q.v.*], ʿOthmān lingered in Cairo and became drawn to Muṣṭafā Pasha in his bitter rivalry with Ḳodja Sinān Pasha [*q.v.*], the governor of Egypt. When finally he left Suez early in 976/mid-1568 with 3,000 troops, ʿOthmān's status had been elevated to *beylerbeyi* of the reunited single province of Yemen. His troops rescued the beleaguered Ottoman garrison at Zabīd in Djumādā II 976/November-December 1568 and quickly recovered Taʿizz in the interior. But ʿOthmān shortly came under close Zaydī siege until relieved in Dhu 'l-Ḳaʿda 976/April 1569 by Ḳodja Sinān Pasha, then *serdār* in place of Muṣṭafā Pasha. Subsequent cooperation between the *beylerbeyi* and *serdār* proved elusive, owing to their dislike of each other. Thus the *serdār* exercised his discretionary authority to dismiss and expel ʿOthmān from Yemen.

The next several years of ʿOthmān Pasha's career remain somewhat obscure. Proceeding to Istanbul during 977-8/1570, he was initially refused domicile in the city by the grand vizier Ṣoḳollu Meḥmed Pasha [*q.v.*], to whom Ḳodja Sinān Pasha had reported on him adversely. Nevertheless, his friend Muṣṭafā Pasha Lala [*q.v.*], now the popular conqueror of Cyprus, commended him to Sultan Selīm II and secured for him the governorship of al-Ḥasā in eastern Arabia. After a year there, he was transferred to al-Baṣra, where, as instructed, he organised for an assault on Hurmuz, before being named *beylerbeyi* of Diyār Bakr (980/1572-3). ʿOthmān held this office for four years, and, when replaced by a relative of Ṣoḳollu Meḥmed, he sought to escape the latter's machinations by remaining in Diyār Bakr.

When it was decided in 985/1578 to make war on Ṣafawid Persia, Muṣṭafā Pasha Lala, who was chosen *serdār*, invited ʿOthmān Pasha to participate. ʿOthmān accepted and was commissioned for the campaign on 20 Muḥarram 986/29 March 1578. Advancing with the main army east from Erzurum in the summer of 1578, ʿOthmān commanded forces which scored two decisive victories over the Ṣafawids, the first on 5 Djumādā II 986/9 August 1578 at Čildir, and the second a month later near the Alazan River. These successes both gained ʿOthmān renown and made possible the Ottoman occupation of, respectively, Georgia and Shirwān, including the key centres of Shamākhī and Derbend. Muṣṭafā Pasha subsequently withdrew the army to winter near Erzurum, having persuaded ʿOthmān to stay and defend the conquests with a modest army, the rank of vizier, and the status of governor-general of Shirwān and Dāghistān.

Predictably, the Ṣafawids reappeared once the main Ottoman army had departed. Despite the arrival of a support contingent of Crimean Tatars, ʿOthmān was compelled, after two sieges during Ramaḍān 986/November 1578, to abandon Shamākhī and retreat to Derbend on the Caspian. He maintained this Ottoman foothold in the Caucasus until Shaʿbān 987/October 1579, when, at Sultan Murād III's bidding, Meḥmed Girāy, the Crimean *khān*, arrived with a substantial force. Although shortly afterwards ʿOthmān Pasha and the Tatars recovered Shamākhī and swept the Ṣafawids from Shirwān, Meḥmed Girāy returned home, leaving only a token Tatar contingent under his brother, Ghāzī Girāy (II [*q.v.*]).

Thereafter, ʿOthmān withdrew to Derbend, his base until 991/1583. His communicating with the sultan directly to report his desperate circumstances resulted in the arrival at Derbend via the Crimea, towards the end of 990/1582, of an army of Rumelian reinforcements. With these, ʿOthmān Pasha the following spring won his greatest victory when he defeated a formidable Ṣafawid army between the Samur River and Shābirān. This engagement, known as the "Battle of the Torches (*Meshʿale Sawashī*)" because of the use of torches to fight by night, raged during 14-18 Rabīʿ II 991/7-11 May 1583 and resulted in the expulsion of the Ṣafawids from Shirwān and Dāghistān for some time hence.

ʿOthmān Pasha left the Caucasus in Shawwāl 991/October 1583, with more than five years' continuous service there and a reputation as a brilliant commander. He returned through the Crimea, under orders to execute Meḥmed Girāy Khān for not supporting the war in the Caucasus after 987/1579, and to instal as *khān* a brother being sent from Istanbul. Meḥmed Girāy was eventually assassinated, but only after the arrival of the Ottoman fleet in the spring of 1584 forced him to lift his 37-day siege of ʿOthmān in Kaffa and flee. The celebrated warrior reached Istanbul in early summer and received a hero's welcome by all but the envious viziers of the dome [see ḲUBBE WEZĪRĪ] and suspicious palace factions. Following an audience with Murād III, to whom he related his experiences, ʿOthmān was appointed grand vizier (*ṣadr-ī aʿẓam*) on 20 Radjab 992/28 July 1584.

When in Ramaḍān 992/September 1584 it was learned that there was renewed conflict in the Crimea, the grand vizier himself volunteered to resolve it. But while in winter quarters in Anatolia, the ailing ʿOthmān learned that matters in Bāghče Sarāy had been settled satisfactorily. He shortly also learned that he was to succeed Ferhād Pasha [*q.v.*] as *serdār* of the eastern front. With a vast army, ʿOthmān departed from Erzurum for Tabrīz; and, although too ill to mount up, on 28 Ramaḍān 993/23 September 1585 he oversaw the Ottoman occupation of Tabrīz that would endure nearly twenty years.

Özdemir-oghlī ʿOthmān Pasha died in Dhu 'l-Ḳaʿda 993/October 1585 while returning from Tabrīz, and was buried in the city of Diyār Bakr, as he wished. Surviving him was his wife, a Dāghistān princess said to have been a woman of remarkable beauty. Although a tireless warrior like his father, he was not without his critics, including Koči Bey [*q.v.*], who accused him of being the first both to meddle with the system of awarding military fiefs and to admit non-*ḳuls* into *ḳapuḳulu* regiments.

ʿOTHMĀN PASHA, YEGEN, leader of *lewends* [*q.v.*], bandit, vizier, and *serʿasker* of the Ottoman army in Hungary. In 1096/1685 he was *bölük-bashî* [*q.v.*] of the *lewends* of *serdār* Sheyṭān/Melek Ibrāhīm Pasha in Hungary. After fleeing from the theatre of war, he sacked villages and towns between Sivas and Bolu (in Anatolia). Afterwards, he became the chief *bölük-bashî* of Khalīl Pasha, who was responsible for the pursuit of the bandits (*teftīshdji*). When the latter was dismissed (Djumādā II 1089/April 1689), ʿOthmān Pasha obtained the *sandjak* of Ḳaraḥiṣār-i Ṣāḥib [see AFYŪN ḲARA ḤIṢĀR] with two horsetails (*tugh*) and was ordered to go on campaign with five hundred *segbāns* [*q.v.*] (Silāḥdār, *Taʾrīkh*, ii, Istanbul 1928, 266; M. Cezar, *Osmanlı tarihinde levendler*, Istanbul 1965, Fotokopi no. 6). In the capital he also enforced his nomination as *serčeshme*, i.e. leader of all *lewends*, and, being considered powerful, he was honoured several times by the sultan. After the Ottoman army had been defeated near Mohács [*q.v.*] on 3 Shawwāl 1098/12 August 1687 and the Grand Vizier Ṣarî Süleymān Pasha had fled, ʿOthmān Pasha took part in the meeting of the army commanders in which Siyāwush Pasha was made *serdār* and an account drawn up for the sultan. He did not, however, join the rebellious army in its advance against the capital, but stayed back at Edirne. He then proceeded to Istanbul, but pitched his tents before the city and carefully remained distant. After Meḥemmed IV had been deposed and Süleymān II had ascended the throne (2 Muḥarram 1099/8 November 1687), Siyāwush Pasha appointed him *beglerbegi* of Rumelia, but before ʿOthmān Pasha could march off, the Grand Vizier was killed by the rebels. His successor Ismāʿīl Pasha did not want to take command of the campaign personally, and had ʿOthmān Pasha appointed vizier, *beglerbegi* of Aleppo and *serdār*. The new vizier reinforced his *lewend* troops, extorted money on their behalf and had relatives and followers appointed as *sandjakbegs* and *beglerbegis*. When it became known that he had his eyes on the grand vizierate, he was removed from the supreme command, officially because he was going to be appointed *beglerbegi* of Bosnia. In fact, however, a legal prosecution was introduced against him (*firmān* at the end of April 1688, in A. Mumcu, *Osmanlı devletinde siyaseten katl*, Ankara 1963, 215 ff.), and the units of the *ṣarîdjas* and *segbāns*, the bases of his power, were disbanded. But the new Grand Vizier Bekrī Muṣṭafā Pasha confirmed him in his function because the Imperial troops were about to attack Belgrade and a new army command could not be organised in due time. At the advance of the enemy, ʿOthmān Pasha abandoned the camp before Belgrade and retreated to Niš, his *lewends* having looted the *bezistān* [see ḲAYṢARIYYA] and the *khāns* [*q.v.*] (Silāḥdār, *Taʾrīkh*, ii, 373). Although now entrusted with the defence of the frontier, ʿOthmān Pasha, while looting villages, retreated further to Sofia, allegedly to spend the winter there. At consultative meetings held in the capital during the winter of 1688-9, it was again decided to disband the *ṣarîdjas* and the *segbāns*, and to put an end to the function of *serčeshme*. It was also decided to raise a general troop levy (*nefīr-i ʿamm*) against ʿOthmān Pasha (Silāḥdār, *Taʾrīkh*, ii, 409-11; the *firmāns* of *ewāʾil Rebīʿ ül-ewwel* 1100/end of December 1688 are in the Başbakanlık Arşivi, *Mühimme defterleri* 98, 132-5). With a dwindling number of followers, ʿOthmān Pasha fled westwards, but at İpek (Peć [*q.v.*]) they were outmanoeuvred and killed by Maḥmūd Beg-zāde Maḥmūd (Djumādā II 1100/March-April 1689, Silāḥdār, *Taʾrīkh*, ii, 423-4; Defterdār, *Zübde-yi weḳāyiʿāt*, ii, 170-1). Such a rise of Anatolian-Turkish *lewends* to leading positions in the Ottoman empire was symptomatic of the times, but remained only an episode.

(H.G. Majer)

ʿOTHMĀN PAZAR (in modern Turkish orthography, Osman Pazar; in Bulgaria since 1934, Omurtag), the name of a minor town (population in 1981, 10,339) in central Bulgaria, situated at an altitude of 540 m/1,771 feet above sea level on an infertile wooded plateau to the north of the Balkan Mountains. In late Ottoman times (till 1878) the town was the centre of a *ḳaḍāʾ* of the same name, which besides ʿOthmān Pazar contained three small towns: Ḳazghan/Kotel, Virbiče/Vărbitsa and Čitaḳ (after 1934: Tiča), and 82 villages with a total population of

44,220 Muslims and 9,660 Christians, the latter concentrated in the above four townlets and in two mixed villages (Konak and Kabdağ-i Zir/ Dolnja Kabda). The 19th century ḳaḍāʾ of Othmān Pazar, an area of some 50 km in length and 25 km wide, was composed of two historical landscapes with different geographic features, a different settlement history and a different administrative history. The south-eastern half of the ḳaḍāʾ is a hilly basin 300 m above sea level, which is surrounded on all sides by mountains. At least since the early 14th century, it was known by the Old Bulgarian name of Gerlovo, which became the Ottoman "Gerīlova" or "Gerīlābād" (first mentioned so in the *Taḥrīr* fragment OAK 45/29 (Sofia), from 1479). The north-western half of the ḳaḍāʾ, in popular parlance known as Tozluk/Tuzluk (officially, Slannik), constituted since at least the late 15th century the *nāḥiye* of Ala Kilise/Kenisa. This name is apparently first mentioned in the *Taḥrīr* no. 77 of 925, 1519 (BBA), which notes that a group of Yürüks of the Rhodopes (Tanrı Dağ) in southern Bulgaria had "forty years ago migrated to a place called Aladja Kilise in Gerilova, in the direction of Dobrudja." Ala, or Aladja, Kilise refers to the ruins of a conspicuous church, built of alternating courses of white stone (from the nearby Preslav Balkan) and red bricks in the style of the Bulgaro-Byzantine Middle Ages. Tozluk, or the district of Ala Kilise is an infertile plateau of about 600 m above sea level, largely covered with woods or shrubs. The population of this district, living in more than 50 small villages and hamlets (*maḥalles*), was in the past exclusively Turkish-speaking Muslim, disregarding the two mixed villages of Konak and Kabdağ on the northern edge of the area.

Very little is known about the pre-Ottoman Gerlovo. Its centre appears to have been Gerilgrad, the forerunner of Văbitsa, which is situated on the banks of the Gerila brook, a tributary of the Golema Kamčija. The ruins of a Byzantine castle are still to be seen on the hill of Grădište, where hundreds of Byzantine coins from the 12th century have been found. In the 15th and 16th centuries, Vărbitsa was by far the largest settlement of Gerlovo and almost wholly Christian. In Gerlovo are at least twenty deserted sites called Kiliselik, pointing to disappeared pre-Ottoman settlements. Bulgarian historiography has suggested that these sites were destroyed during the Ottoman conquest. Yet the only site which has been excavated in a proper manner, that near the village of Kara Demir (after 1934, Vinica), showed that this settlement, around a church, existed from the 9th till the 12th centuries. It seems that the great European economic and demographic crisis of the 14th century caused Gerlovo to become deserted, the inhabitants moving to the much more fertile lowlands, where after the depopulations there was enough room to settle. Vărbitsa, Čitaḳ (pointing to a pre-Ottoman Christian Turkic population) and Kotel remaining the corner stones of the Christian settlements in the area. Yürük settlers from Asia Minor arrived in Gerlovo as early as the second half of the 15th century. The oldest preserved *Tahrir* of the area, the incompletely preserved *Icmal* of 1479 (*Turski Izvori*, ii, 1966) mentions six *mezraʿas* in "Gerilova" which were worked by Yürüks (*Yürükler ekerler*): Ak Dere Yakası, Bolu'lu Süleyman, Dobroka (later known as Sağırcık), Gagrašentsi, Hisar Bey and Veysel. Together they paid 2900 *aḳčes*, which might indicate a population of 40-50 Yürük families. Ak Dere, Dobroka/Sağırcık and Veysel later developed into villages which still exist today (as Bjala Reka, Rătlina and Orlovo). According to the *Tahrir* of 1516, contained in the *Tapu Defter* 370 (BBA), pp. 549-55, which was compiled around 1530, the Christian population of Gerlovo still dominated. The Muslims lived in more than 20 very small villages, mostly bearing the name of their founders or the occupations of the first settlers. In the 16th century they witnessed a rapid expansion, partly through high birthrates but largely through the arrival of new settlers. The place names suggest a largely heterodox adherence (Aşıklar, Abdallar, Şah Veli, etc.). In 1936 Vasil Marinov found that the villages of Alvanlar, Küçükler, Topuzlar and Veledler were almost exclusively inhabited by Ḳïzïlbash. Most likely the bulk of the Gerlovo Turks arrived after the suppression of the Ḳïzïlbash in the reign of Selīm I and after the Ḳalenderoghlu rebellion, causing great unrest in Anatolia. The settlement of these Turkish nomads must have caused unrest in the area. To keep the Christian population in its place, the Ottoman government gave the three above-mentioned Christian settlements *derbend* status, so that they could defend themselves, and in the course of the 16th century formed Kabdağ and Konak as other gathering points for Christians, who moved from some small settlements, which became deserted afterwards (Dočina, Gerlova, Polane and Selište, in 1516 together 30 households), whereas "Dobrofča" became "Dobrudja" and Islamised completely after the end of the 16th century. So the ethno-religious composition remained thus till the 19th century, the only fluctuation being the number of households, which for both groups went up in the 16th century, down in the 17th and early 18th and steeply up again since the second half of the 18th century. Throughout that time, Ḳazghan/Kotel was the largest settlement of the area, with an almost entirely Christian Bulgarian population. Čitaḳ was partly Islamised; Vărbitsa came to house an important group of Crimean Tatars, who around 1780 followed the deposed Ḳalghay Mesʿūd Giray. Their descendants still live in Vărbitsa, Meedalı Giray serving a number of decades as deputy in the Bulgarian Parliament (beginning of the 20th century). Their monumental late 18th century *saray* was destroyed by Bulgarian nationalists during the aftermath of the assimilation campaign of 1985. Vărbitsa is apparently the only place of the ḳaḍāʾ of ʿOthmān Pazar which is mentioned in the early Ottoman chroniclers, where Neshrī in the Codex Manisa has it as "Virpič" (in other manuscripts and in the printed edition, very much mutilated and misidentified).

Of the district of Ala Kilise in pre-Ottoman times even less is known. It is much less fertile than Gerlovo and considerably cooler, little suited to agriculture. Disregarding the later Turkified village of Dobrofča/Dobrudja (1516, 25 Christian households; 1580, 43 of them), it must have been almost uninhabited when the first Turkish settlers arrived. Only extensive archaeological research might modify this picture. The village of Ala Kilise, 10 km to the west of ʿOthmān Pazar, was also known as Ḥasan Faḳīh. It is first mentioned in the 1752 *Mufassal Avariz Tahrīr*, but might have existed before. The Ottoman registers (1516, 1525, 1550, 1580, 1642 and 1752) give a picture of a unstable settlement pattern, with many very small tribal villages, continuously splitting into new *maḥalles*, often changing names and with many settlements being given up after a certain time. According to the ethnographic and linguistic research of Gadžanov at the beginning of the 20th century, the original settlers must have come from the region of Kastamonu in northern Anatolia. The Anatolian origin of the Muslim population of the district of

ʿOthmān Pazar is also not denied by modern Bulgarian historiography (cf. art. "Omurtag", in *Encikl. na Bălg.*, 1984), but usually the colonisation is thought to have taken place in the 17th and 18th centuries, whereas in reality the bulk of the settlers arrived shortly after 1500. Especially for the case of Gerlovo, the majority of the Muslims are held to be Turkified, former Bulgarian Christians (especially held by V. Marinov), whereby the case of a few isolated villages (Huyvan/Ivanovo, Trnovitsa, Jamna and Čerkovna, all situated inside Gerlovo but outside the *kaḍāʾ* borders of the past) are taken to have been the general pattern.

In the 15th and 16th centuries, both the districts of Gerlovo and Ala Kilise were *nāḥiyes* of the *kaḍāʾ* of Shumnu/Šumen. In the 1530s the northern part of this large *kaḍāʾ* was cut off and added to the newly-formed *kaḍāʾ*s of Djumʿa-yi ʿAtīk/Eski Djumʿa (now Tărgovište) and Hezārgrad/Razgrad. In the 1630s the *nāḥiye* of Ala Kilise was upgraded to the status of *kaḍāʾ*, and ʿOthmān Pazar, then just founded, was made its seat.

The town of ʿOthmān Pazar itself came into being in the first half of the 17th century as a centrally-located market place for the entire village network. At the locality of Irincik near the town are the ruins of a Late Antique castle, which in the early 9th century was restored by the Turco-Bulgarian Khan Omurtag; the modern name of the town refers to that fact. According to local legends, written down by Felix Kanitz *ca.* 1870, the town was founded by the Turkish cartwright ʿOthmān, who "about 300 years ago" built an inn on the lonely plateau, which became the nucleus of the new settlement. The *Avariz Defter* MM 7086 from 1052/1642 (BBA) is apparently the first source which explicitly states that Ala Kilise was an independent *kaḍāʾ* and that ʿOthmān Pazar, then counting 22 Muslim households, was its centre. This place was to develop relatively rapidly. The *Mufassal Cizye Defter* of the *kaḍāʾ* of Ala Kilise from 1102/1690-1 (MM 3801, BBA) mentions that no less than seventy adult male Christians were found in the *kaṣaba* of ʿOthmān Pazar doing their jobs but were not permanent residents from there. The *Mufassal Avariz Defter* of 1165/1752 (BBA) calls the district: "*Kaḍāʾ* of Ala Kilise, also known as [*kaḍāʾ* of] ʿOthmān Pazar." The village to which the district owes its name "Ala Kilise, also known as Ḥasan Faḳīh", than contained 25 Muslim households, all mentioned person by person. According to the same source, a complete new *Tahrir* of a number of *kaḍāʾ*s in north-eastern Bulgaria, the town had 103 households, of which two were of convert origin. There were only two permanently settled Christian households. It is remarked that, "according to the old register", the town had but one *maḥalle*. Now there were two, the Maḥalle of the Mosque of Meḥmed Pasha and Orta Maḥalle. After this date, the town saw a rapid development into the leading centre of crafts, especially textiles (abas, goat-hair blankets) and metalwork.

In the mid-19th century, the old *kaḍāʾ* of ʿOthmān Pazar was considerably enlarged. It came to include the entire basin of Gerlovo (formerly only the western parts), which until that time had been a part of the *kaḍāʾ* of Shumnu/Šumen, and the important Christian villages of Konak and Kapdağ-i Zir, which were detached from Hezārgrad. On the other hand, the whole chain of old Bulgarian villages to the south of the Pre-Slav Balkan, which for long had belonged to Gerlovo (Smolvçe/Čāʾūshköy, Jamla, Tirnovitsa, Čerkovna and Vardun) were now attached to the *kaḍāʾ* of Eski Djumʿa. According to the *Sālnāme* of the Tuna *wilāyet* of 1290/1873-4, which contains the results of a census of six years earlier, the district had 86 settlements, of which only two had non-Turkish place names. The town of ʿOthmān Pazar then contained *ca.* 5,000 inhabitants, of which one-fifth was Christian (Aubaret, Kanitz). According to the *Sālnāme* of 1291/1874-5, the town had 958 houses, eight mosques, 310 shops, one *ḥammām* and one church.

During the Russo-Turkish War of 1877-8, which led to the independence of Bulgaria, the town was burned down and suffered an eclipse because of the flight of an important section of its Turkish population. According to the Bulgarian census of 1887, ʿOthmān Pazar counted 3,755 inhabitants, of which 1,371 were Bulgarians and 2,382 Muslims, besides a few Gypsies, all Turkish-speaking. The town stagnated till after World War II, in 1934 its population being almost the same as in 1887, the religious-ethnic composition also remaining as it was. The same can be said for the villages of the former *kaḍāʾ* of ʿOthmān Pazar. In Gerlovo, groups of old Turkish inhabitants emigrated to Turkey, and their place was taken by Bulgarians from elsewhere (details by V. Marinov). The north-western part of the old *kaḍāʾ*, Tozluk/Tuzluk, remained overwhelmingly Turkish.

Throughout the late Ottoman period the three other urban centres of the *kaḍāʾ*, Čitaḳ, Kotel and Vărbitsa, enjoyed a lively trade and developed crafts, especially the fabrication of abas and carpet (*kilim*) weaving, tailoring and wood turning. Kotel and Čitak, in particular, were the native towns of a disproportionally large number of writers, politicians and university professors, who played an important role in the intellectual development of Bulgaria after 1878. All three suffered a collapse after the country became independent, the merchants and craftsmen moving to the lowland cities, from which the Turkish inhabitants had largely fled or emigrated after 1878. Between 1878 and 1926 the three mountain towns lost more than one-third of their population. Kotel and Vărbitsa recovered more or less in the decades after World War II, Čitak/Tiča sank back to a village, being in 1972 still much smaller than in 1873.

In 1934 the entire historical toponomy of the old *kaḍāʾ* of ʿOthmān Pazar was Bulgarised by decree of the new nationalist government. Only Kotel, Konak, Kabdağ and Vărbitsa kept their names. During the forced Bulgarisation campaign of 1985, the Gerlovo villages offered stubborn resistance, focussing on the Ḳïzïlbash village of Alvanlar (since 1934, Jablanovo; population in 1972, 2,989).

In 1972 there were still three mosques in ʿOthmān Pazar: the Muftī, or Yuḳarï Djāmiʿ, with an inscription on the minaret referring to a repair in 1219/1804-5, the Fïndïḳ Djāmiʿi (serving as workshop), with a number of 18th and 19th century gravestones in its cemetery, and the Tekke Djāmiʿ on the southern edge of the town, once part of the Tekke of Meḥmed Baba.

Its cemetery contained some 19th century tombstones, the oldest from 1250/1834-5. The church of St. Dimitri, rebuilt in 1860 in a grandiose style and testifying to the wealth of the small Christian community of ʿOthmān Pazar, is now a recognised historical monument. The Müftī Djāmiʿi survived the upheavals of 1985 and still serves the Muslim community, which, since 1990 is reconstituting itself.

In 19th century ʿOthmān Pazar, there lived and worked the Ottoman scholar Niyāzī Sheykh Ismāʿīl Efendi, who was born in the Gerlovo village of Kara Ehadlar (since 1934, Vrani Kon) and died in ʿOthmān Pazar in 1312/1894-5.

ʿOTHMĀN-ZĀDE Aḥmed Tāʾib, a notable Ottoman poet, scholar and historian of the end of the 17th and first third of the 18th century. The son of the *rūz-nāmedji* (*māliyye tezkeredji*) of the pious foundations, ʿOthmān Efendi, he took up a theological career. The year of his birth is not recorded. From 1099/1687 he held the post of *müderris* in various *medreses* in Istanbul. At intervals he also worked in other places. For example, in 1107/1695 he went to Damascus with Kemānkesh Meḥmed Pasha when the latter was appointed governor there. In 1124/1712 he was appointed *müderris* at the Süleymāniyye, a post he had aimed at from the very beginning. He then went as chief judge (*Ḥaleb mollāsī*) to Aleppo in 1126/1716, and lastly as *Miṣr mollāsī* (chief justice of Cairo) to Cairo, where he died at the end of his year of office on 2 Ramaḍān 1136/25 May 1724. According to Bursalī Meḥmed Ṭāhir, there is in existence a biography of ʿOthmān-zāde composed by Ibn al-Emīn Maḥmūd Kemāl Bey.

ʿOthmān-zāde was regarded by his contemporaries as the most important poet of his period. He was particularly celebrated for his chronograms (*taʾrīkh*) and *ḳiṭʿa*. A chronogram on the birth of prince Ibrāhīm (1133/1720-1) made such an impression on Sultan Aḥmed III (1115-43/1703-30) that he gave ʿOthmān-zāde first, the title "chief poet" (*reʾīs-i shāʿirān*, and then that of "king of poets" (*malik [sulṭān] al-shuʿarāʾ*) and granted him a special *khaṭṭ*. ʿOthmān-zāde left behind him a *dīwān* of the usual type (*müretteb dīwān*) which consists of 12 *ḳaṣīdas*, 32 chronograms and 77 *ghazels*. Along with these are isolated poems, e.g. a satire (*hadjw*) on Thāḳib Efendi composed in 1124/1712. He also wrote in verse a commentary on the 40 *ḥadīths* entitled *Sharḥ-i Ḥadīth-i arbaʿīn*, which is also known as *Ṣiḥḥat-ābād*; it was written in 1128/1715.

It is, however, to his prose works that he owes his fame with posterity, especially his historical works, some of which are still popular and valuable at the present day. The most important is his biographical collection *Ḥadīḳat al-wüzerāʾ*, a most estimable and still important collection of lives of the first 92 grand viziers of the Ottoman empire, from ʿAlāʾ al-Dīn ʿAlī Pasha to Rāmī Meḥmed Pasha, who was dismissed in 1115/1703. The work was composed six years before his death. It was printed at Istanbul in 1271/1854. ʿOthmān-zāde's idea was later taken up by others. His biographical collection was continued by: Dilāwer Agha-zāde ʿÖmer Efendi (ʿÖmer Waḥīd), a friend of Rāghib Pasha's who wrote a *Dheyl-i Ḥadīḳat al-wüzerāʾ*, also called *Idjmāl-i menāḳib-i wüzerāʾ-i ʿiẓām* or *Gül-i zībā*, which covers the period from the grand vizier Ḳowanos Aḥmed Pasha to Saʿīd Meḥmed Pasha; also by Aḥmed Djāwīd Bey, who compiled a continuation entitled *Wird al-muṭarrā* which covers the period 1172-1217/1758-1802, from Rāghib Pasha to Yūsuf Ḍiyā Pasha, the conqueror of Egypt; finally, by ʿAbd al-Fettāḥ Shefḳat-i Baghdādī, entitled *Berk-i sebz*, covering the period 1217-71/1802-54 from Ḍiyā al-Dīn Yūsuf Pasha to ʿĀlemdār Muṣṭafā Pasha.

All three continuations are printed as an appendix to the *Ḥadīḳat* of ʿOthmān-zāde, while the later continuation by Rifʿat Efendi, *Wird al-ḥaḳāʾiḳ*, appeared in a lithograph separately and the continuation by Meḥmed Saʿīd Shehrī-zāde entitled *Dheyl-i Ḥadīḳat al-wüzerāʾ* or *Gül-i zībā* or *Gülshen-i mulūk*, which deals with 31 grand viziers from Nishāndjī Aḥmed or Siliḥdār Meḥmed Pasha to Saʿīd Meḥmed Pasha, is still only available in mss.

The two sketches of Turkish history by ʿOthmān-zāde also attained great popularity. The longer one, *Idjmāl-i menāḳib* (or *tewārīkh*)-*i Salāṭīn-i Āl-i ʿOthmān*, deals with the first 24 Ottoman sulṭāns, from the founder of the dynasty to Aḥmed III. The shorter version, *Fihrist-i Shāhān* or *Fihrist-i Shāhān-i Āl-i ʿOthmān* or *Mukhtaṣar-i Taʾrīkh-i Selāṭīn* or *Tuḥfet al-mülūk* or *Ḥadīḳat al-mülūk* covers the period from ʿOthmān to Muṣṭafā II. The number of varying titles shows the popularity of the work. The book, sometimes quoted as *Faḍāʾil-i Āl-i ʿOthmān*, dedicated to Dāmād Ibrāhīm Pasha [see AL-DĀMĀD], seems to be only a variant title of one of these books.

In the year of his death (1136/1724), ʿOthmān-zāde wrote a history of Fāḍil Aḥmed Pasha entitled *Taʾrīkh-i Fāḍil Aḥmed Pasha*, which like most of his works is only accessible in mss. The *Munāẓare-yi dewletayn* ("struggle between the two kingdoms") in the form of questions and answers is also dedicated to Ibrāhīm Pasha (ms. in Vienna) and is an interesting contribu-

tion to the very highly developed *munāẓara* literature.

As further independent works may be mentioned *Īdjāz naṣāʾiḥ al-ḥukemāʾ* and *Tuḥfet al-nuʿmān*. Here we may mention his anthology *Djāmiʿ al-leṭāʾif* (a collection of anecdotes, jests etc.). His stylistic collection *Münsheʾāt-i Tāʾib Efendi* was intended for practical purposes; it is a collection of letters in three *faṣls* and a concluding chapter.

His extracts from and editions and translations of other works are very numerous. The greater part of his work is collected in his *Külliyyāt* with an introduction by Aḥmed Ḥanīf-zāde. Some titles, cited by von Hammer and Bursalî Meḥmed Ṭāhir, which apparently go back to Ḥanīf-zāde, the continuator of the *Kashf al-ẓunūn* of Ḥādjdjī Khalīfa, are probably not correct and refer to double or subsidiary titles.—Translations by him are: *Meshārik al-anwār* and *Meshārik sherīf*, the latter entitled: *Ṭawāliʿ al-maṭāliʿ* on *ḥadīth*.—Extracts from or versions of other works are: *Akhlāk-i Muḥsinī* (or *Mukhtaṣar-i Akhlāk-i Muḥsinī* or *Khulāṣat al-Akhlāk*) from the *Ethics* of Ḥusayn b. ʿAlī Kāshifī, who is known as Wāʿiẓ al-Harawī (d. 910/1504 [*q.v.*]). The original work, which was written in Persian for Mīrzā Muḥsin b. Ḥusayn Baykara, was translated by Pīr Meḥmed known as Gharamī, with the title *Anīs al-ʿārifīn* in 974/1566; *Akhlāk-i ʿAlāʾī*, an extract from the work of ʿAlī b. Amr Allāh, known as Ibn Ḥinnāʾī (Ḳînalî-zāde [*q.v.*]) which was written for the Amīr al-Umarāʾ of Syria, ʿAlī Pasha, and therefore called after him; the *Menākib-i Imām-i aʿẓam*, i.e. of Abū Ḥanīfa. We also have from his pen a synopsis of the *Hümāyūn-nāme*. The *Anwār-i Suhaylī*, the Persian version of Ibn al-Mukaffaʿ's Arabic version from the original Indian (Pahlawī) of Bidpāī, was the work of Ḥusayn Wāʿiẓ Kāshifī, court-preacher to Ḥusayn Baykara of Harāt. This *Anwār-i Suhaylī* was translated into Ottoman Turkish by ʿAbd al-Wāsiʿ ʿAlīsī Mollā ʿAlī Čelebi b. Ṣāliḥ, known as ʿAlī Wāsiʿ or Ṣāliḥ-zāde al-Rūmī, with the title *Humāyūn-nāme* and dedicated to Sultan Süleymān. ʿOthmān-zāde abbreviated the *Hümāyūn-nāme* to about a third of its length. This version was printed in Istanbul in 1256/1840 under the title *Thimār al-asmār*. In the *Külliyyāt* this extract is entitled *Zübdet al-naṣāʾiḥ*.

The version of the *Naṣāʾiḥ* (*Naṣīḥat*) *al-mulūk* of Reʾīs Efendi Sarî ʿAbd Allāh entitled *Talkhīṣ al-ḥikam* is also described as a synopsis of the *Humāyūn-nāme*. A synopsis of the *Medjālis al-akhbār* of ʿĀlī is also attributed to ʿOthmān-zāde.

(Th. Menzel)

ʿOTHMĀNDJÎK, modern Turkish Osmancık, the administrative centre of an *ilçe* or district of the same name in the *il* or province of Çorum [see čorum] in northern Anatolia, in the southern part of classical Paphlagonia. It lies on the Halys or Ḳîzîl Irmak [*q.v.*] at an important crossing-point of that river by the Tosya-Merzifun road (lat. 40°58′ N., long. 34°50′ E., altitude 430 m/1,310 ft.).

The town is situated in a picturesque position at the foot of a volcanic hill which rises straight out of the plain and is crowned by a castle which formerly commanded the celebrated bridge said to have been built by Bāyezīd I. The settlement is probably very old, as is evident from the numerous rock chambers cut out of the cliffs; it is probably on the site of classical Pimolisa (see *PW*, xx/2, cols. 1386-7 [W. Ruge]). The importance for us of the place, however, lies entirely in the part it has played in Islamic history. The name ʿOthmāndjîk is connected with that of ʿOthmān I [*q.v.*], the founder of the Ottoman dynasty, and it is said that ʿOthmān I took his name from this place which had been granted him as a fief. This suggestion, which is found as early as the 15th century (probably for the first time in the *Geschicht von der Turckey* of Meister Jörg v. Nürnberg, Memmingen n.d. but about 1496, and again in Spandugino, van Busbeek, etc.), has little claim to credibility although it has been revived in modern times, e.g. by Cl. Huart, in *JA*, ser. 11, vol. ix (1917), 345 ff., and by J.H. Kramers, in *AO*, vi (1927), 242 ff.; cf. thereon, W.L. Langer and R.P. Blake, in *American Historical Review*, xxxvii (1932), 496, note with other references. It is probable that ʿOthmān is the arabicised form of a Turkish name which may have sounded something like Atman, Azman, and we must not forget Ibn Baṭṭūṭa's assertion that the founder of the dynasty called himself ʿOthmāndjîk, i.e. "Little ʿOthmān" to distinguish himself from the third caliph. The Turkish sources are contradictory: Ḥādjdjī Khalīfa says that the town of ʿOthmāndjîk took its name from the fact that in the 10th(!) century a leader named ʿOthmān conquered it. Ewliyā Čelebi (1647-8) says (ii, 180 ff.) that many see in ʿOthmāndjîk the birth-place of the *amīr* ʿOthmān. This opinion had become the current one about the middle of the 17th century, as may be seen from a passage in *Les voyages et observations* of François le Gouz (Paris 1653, 65). The place does not appear in the clearer light of history till 794/1392 when it was taken by Bāyezīd I from the lord of Kastamuni, Bāyezīd Kötürüm, and definitely incorporated in the Ottoman empire. The fact is worth mentioning that there was evidently a considerable Bektashī settlement here at an early date, and the tomb of the famous Bektashī saint Ḳoyun Baba [*q.v.*] in ʿOthmāndjîk has always been much visited. The inhabitants, according to Ḥādjdjī Khalīfa, belonged almost entirely to the order of the Bektashīs. See on this point, in reference to events in 1546, *Le voyage de Monsieur d'Aramon*, ed. Ch. Schefer, Paris 1887, 66 (where Cochiny-Baba should be read Ḳoyun Baba). Makarius of Antioch mentions a place called ʿOthmāndjîk near Marʿash. He visited the site where there was said to have been formerly a large town of this name also called Osman Dada (= ʿOthmān Dede?) (*Travels*, ii, 453 ff.).

The plain around modern Osmancık is a fertile agricultural region for cereals, fruit and vegetables. In 1953 the town had a population of 5,559.

I. POLITICAL AND DYNASTIC HISTORY

1. General survey and chronology of the dynasty

The Ottoman empire was the territorially most extensive and most enduring Islamic state since the break-up of the ʿAbbāsid caliphate and the greatest one to be founded by Turkish-speaking peoples. It arose in the Islamic world after the devastations over much of the eastern and central lands of the *Dār al-Islām* by the Mongols and survived the further onslaught at the opening of the 15th century of Tīmūr. Also, it originated on the periphery of the Islamic world, in Anatolia, into which Muslim Turks had been infiltrating by the time of the establishment of the Saldjūḳ sultanate of Rūm [see SALDJŪḲS] and was to play a dominant role in the processes of Turkicisation and Islamisation—even though this was not to be completed till the very end of the Ottoman dynasty, in 1922—of the formerly Greek and Armenian land of Anatolia [see ANADOLU]. A further consequence of the rise of the Ottomans was the overrunning of most of mainland Greece and many of the Aegean islands, Albania, the Slav lands of the Balkans and much of Hungary, by the 10th/16th century, and although this tide of conquest subsequently receded, Turkish occupation has left permanent traces in the Balkans in the forms of pockets of Muslim Turks and of the indigenous peoples who adopted Islam [see MUSLIMŪN. 1. The old-established Muslim communities of Eastern Europe] (and even of Turks who adopted Christianity [see DOBRUDJA]).

Operating in Bithynia in northwestern Anatolia, the Ottomans gradually encircled the Byzantine empire, weakened as it latterly was from the Latin occupation of Constantinople in the 13th century, and eventually, in 1453, conquered Constaninople, the age-old goal of Muslim arms [see AL-ḲUSṬANṬĪNIYYA. 1], at a time when ancient Balkan kingdoms such as Bulgaria and Serbia had already been overrun. Other states such as Wallachia and Bosnia were made tributary, and after 1526 [see MOHÁCZ], two-thirds of Hungary fell under Ottoman domination. In the east, the sultans took over the Arab provinces of Syria (1516) and Egypt (1517) from the Mamlūks [*q.v.*], and constituted themselves as the defenders of the orthodox Sunnī world against the Shīʿī Ṣafawids [*q.v.*], even carrying the war for a short time into the Persian province of Adharbāydjān. The sultans had at this time a far-reaching political and diplomatic policy, which included links with the Crimean Tatars to the north of the Black Sea [see ḲÏRÏM] and with the South Indian and Malaysian sultanates threatened by Portuguese and other colonial powers' expansion along the Indian Ocean shores; in the Muslim West, the sultans supported the corsair states of North Africa [see ḲURṢĀN. 1].

The achievements of Ottoman culture, an amalgam of native Turkish traditions with Persian and Arabic literary and artistic currents, were quantitatively great and often of the highest aesthetic standard (see sections V-VIII below). The alliance of the sultans with the Sunnī *ʿulamāʾ* and with such Ṣūfī orders as the Mewlewīs [see MAWLAWIYYA], later strengthened by the fact that they tacitly assumed for themselves the caliphate after the demise of the ʿAbbāsid puppet caliphs of Cairo in 1517 [see KHALĪFA. (i)], led to the dominance of the Ḥanafī *madhhab* of Islamic law over the central Turkish lands and over much of the Arab lands also, an influence not quite extinguished today [see MAḤKAMA, 1, 2, 4, and MEDJELLE].

But after the high point in the 17th century of the occupation of Crete (1645-69) and the siege of Vienna (1683), a period of slow decline set in for the empire. In the early centuries, the Ottomans had been vigorous and expansionist and the scourge of Christian Europe. Now, however, the stimuli to intellectual enquiry from the Renaissance and Reformation and the dying-down of religious passions in Europe after 1648, enabled the West to forge ahead scientifically and technologically, with the application of new ideas to the art of war and to economic and commercial activities, so that the Ottoman empire fell more and more on to the defensive, its frontiers vulnerable to superior military and naval techniques and its craft industries and commerce vulnerable to industrial mass production and new financial mechanisms evolved in the West. In the 19th century, the new forces of ethnic and linguistic nationalism released by the French Revolution meant that the subject peoples of the Balkans, for centuries peoples without history, were no longer content to accept a clearly-defined but subordinate place in the Ottoman empire, especially as, by reaction, it began in the later 19th century to grow more specifically Turkish [see PAN-TURKISM]. Hence the frontiers of the empire receded in the Balkans, until by 1913 only Eastern Thrace remained of the European territories. Nor were the Arab lands of the empire unaffected by the new ethnic and cultural nationalisms, and already by 1914 the increasingly shadowy Ottoman authority in the North African countries and Egypt had been thrown off. Turkey's decision in November 1914 to enter the First World War on the side of the Central Powers proved the crowning disaster for the empire, and in the wake of the new Turkish nationalism aroused by the post-War dismemberment of the Ottoman empire, there was no place by 1924 for the Ottoman ruling family and the old Islamic religion-based culture which it epitomised.

Chronology of the Ottoman sultans

	Ertoghrul, d. *ca.* 679/1280
680/1281	ʿOthmān I Ghāzī
724/1324	Orkhan
761/1360	Murād I
791/1389	Bāyezīd I Yïldïrïm
(804/1402	Tīmūrid invasion)
805/1403	Meḥemmed I Čelebi (at first in Anatolia only, after 816/1413 in Rumeli also)
806/1403	Süleymān I (in Rumeli only until 814/1411)
814/1411	Mūsā Čelebi (counter-sultan in Rumeli until 816/1411)
824/1421	Murād II, first reign

824/1421 Muṣṭafā Čelebi, Düzme (counter-sultan in Rumeli until 825/1422)
848/1444 Meḥemmed II Fātiḥ ("the Conqueror"), first reign
850/1446 Murād II, second reign
855/1451 Meḥemmed II, second reign
886/1481 Bāyezīd II
918/1512 Selīm I Yavuz
926/1520 Süleymān II Ḳānūnī ("the Magnificent")
974/1566 Selīm II
982/1574 Murād III
1003/1595 Meḥemmed III
1012/1603 Aḥmed I
1026/1617 Muṣṭafā I, first reign
1027/1618 ʿOth̲mān II
1031/1622 Muṣṭafā I, second reign
1032/1623 Murād II
1049/1640 Ibrāhīm
1058/1648 Meḥemmed IV
1099/1687 Süleymān III
1102/1691 Aḥmed II
1106/1695 Muṣṭafā II
1115/1703 Aḥmed III
1143/1730 Maḥmūd I
1168/1754 ʿOth̲mān III

2. The foundation and expansion of the Ottoman Empire

Recent research on the subject of the founding of the Ottoman state, especially epigraphic, numismatic and archival discoveries, have made clear many things that formerly had been seen mainly through the medium of Ottoman historical tradition as reflected in the sources belonging to the second half of the 9th/15th century and later, namely, the different versions of the chronicles of *Āl-i ʿOth̲mān* and half-legendary sources of mystic orders known as *menāḳib-nāmes* and *wilāyet-names*.

The nucleus of the state of the Ottomans was a far advanced outpost (*udj̲*) in the region of the Sakarya [*q.v.*] river, which for many centuries constituted the frontier zone between the old Sald̲j̲ūḳ state of Rūm and that of the Byzantines. The former had gradually relapsed into anarchy after its defeat by the Mongol army at the battle of Kösedağ [see KÖSE DAGH] in 1243. Asia Minor at that time had already been turcicised to a large degree; the greater part of the Anatolian Turks belonged to the Og̲h̲uz tribes [see GHUZZ] who invaded the country during the second half of the 5th/11th century, especially after the battle of Malāzgird [*q.v.*] (1071). Moreover, in the first half of the 13th century, the Mongol advance in Asia caused a new migration of Turkish tribes and of fugitives into the country; many of these fugitives came from the former K̲h̲ʷārazmian state and were Persians. Part of the Anatolian Christian population, not abandoning its old religion, continued to live in the Sald̲j̲ūḳ state in which there was no sharp social division between Muslims and Christians. On the contrary, there was a conflict between the townspeople and the nomads or Turkomans, who were roving all through Asia Minor, as they did also in the adjacent territories of Syria, Mesopotamia and Persia. These Turkomans had still preserved many pre-Islamic religious traditions within the particular form of Islam to which they adhered. This form of Islam was the result of the preaching of wandering dervishes, known under the name of Ḳalenderiyye and Ḥayderiyye, who spread from the 5th/11th century all over northern Persia and Transoxania; their preaching was imbued with mystical doctrines containing a large amount of heterodox elements. After their immigration into Asia Minor, the Turkomans had remained under the same influences and those who exercised religious authority amongst them, called *babas*, had still much resemblance to the pre-Islamic *s̲h̲amans*. Under these religious leaders in 1239, the fearful revolt of the Bābāʾīs [*q.v.*] had taken place (cf. A.Y. Ocak, *La révolte de Baba Resul ou la formation de l'hétérodoxie musulmane en Anatolie au XIIIe siècle*, Ankara 1989). The government at that time had been able at last to suppress the revolt, but the heterodox opposition among the lower classes in Asia Minor still deeply influenced the history of the first centuries of the Ottoman Empire. These Turkomans were indeed far more numerous that the governing classes and the townspeople, as is shown by the present geographical nomenclature of Asia Minor; numerous villages, rivers and mountains have pure Turkish names of tribes such as Ḳayï, Salur, Bayat and Čepni (cf. Köprülü-zāde Fuat, *Oguz etnolodj̲isine tārīk̲h̲ī notlar*, in *Türkiyyāt Medj̲muʿasï*, i, 185 ff.). Insofar as the Turkoman tribes were still militant, the best use that could be made of them was as frontier guards and as conquerors of new territory. After settling down, they may have mixed with a good deal of the original rural population and this mixture explains the curious half-Christian views and customs that are reported in later times as existing among the lower classes in Anatolia.

The Sald̲j̲ūḳ government and the higher classes of society had followed the orthodox Sunnī Islamic tradition, which is to be traced back to the times of the Sāmānid empire in K̲h̲urāsān and Transoxania. These were also the regions with which the Anatolian Turks had always been in constant contact. The higher culture was mainly Persian in character. These contacts explain also how the Ḥanafī *mad̲h̲hab* became officially predominant in Anatolia and afterwards in the Ottoman empire. The upper classes of society were not free themselves from a strong mystical influence of a higher order. It had likewise its source in K̲h̲urāsān, whence had come the theologian and mystic D̲j̲alāl al-Dīn Rūmī [*q.v.*], who lived in the Sald̲j̲ūḳ capital Konya and who influenced for centuries Ottoman Turkish culture through the Mewlewī order [see MAWLAWIYYA]. So the townspeople were likewise familiar with the formation of fraternities on mystical lines, entering within the category of the *futuwwa* [*q.v.*]. One of the fraternities which played an important rôle was that of the *Ak̲h̲īs* (*q.v.*, and cf. F. Taeschner, in *Islamica*, iv/1 [1929]); a similar fraternity was formed by the *G̲h̲āziyān*. On this basis of religious and social controversy is to be understood the development of events since the end of the 7th/13th century. In the many small principalities that appeared during the break-up of the Sald̲j̲ūḳ state we

see sometimes the influence of the orthodox element and at other times that of the heterodox Turkoman element as predominant.

When the Ottoman state was founded in Bithynia, presumably around 1299, it was one among several other small Turkish states, such as that of the Ḳarasî-oghlu [*q.v.*], the Ṣarukhān-oghlu [*q.v.*], the Aydîn-oghlu [*q.v.*], the Menteshe-oghlu [*q.v.*], the Djandar-oghlu or Isfendiyār-oghlu [*q.v.*], the Ḳaramān-oghlu [*q.v.*], the Germiyān-oghlu [*q.v.*], the Ḥamīd-oghlu, etc. All these states had this in common with the Ottoman one, that they were established between the former Saldjūḳ state and the Byzantine empire, on the frontier zone, that is, in the most remote regions from the Islamic cultural centre of Anatolia; their lords, bearing the Turkish title *beg* [*q.v.*] or the equivalent Arabic title *amīr* [*q.v.*], were descendants of the Turkoman chieftains who were frontier guards (*udj begleri*). Furthermore, they had the possibility to expand by attacking the coastal regions ruled by the Byzantines and the islands ruled by the Italian colonists. It was this opportunity of westward expansion, which proved most favourable for the ʿOthmān-oghlu and secured them in the end the superiority over the other principalities.

The historical tradition of the Ottomans has preserved reminiscences of the Turkoman nomadic origin of the founders of the state. The father of ʿOthmān, Ertoghrul [*q.v.*], is said to have established himself with his little tribe in the neighbourhood of Söğüt [*q.v.*] and the pedigree given for Ertoghrul and his father Süleymān Shāh shows them as belonging to the Ḳayî [*q.v.*] division of the Oghuz Turks. As the various reports about Ertoghrul have a good deal of a legendary character, his very existence was put under doubt until a coin of ʿOthmān also bearing his father's name, was found (İ. Artuk, *Osmanlı beyliğin kurucusu Osman gazi'ye ait sikke*, in *Papers presented to the First International Congress on the Social and Economic History of Turkey, Hacettepe University 1977*, Ankara 1980, 27-33). When Ertoghrul died, ʿOthmān took over the leadership. It is not certain that his name was ʿOthmān, that is, a prestigious Arabic name; his contemporary the Byzantine historian George Pachymeres wrote the name down as Atman, which is a simple Turkic name (cf. L. Bazin, *Antiquité méconnue du titre d'Ataman?*, in *Harvard Ukrainian Studies, Essays presented to O. Pritsak*, iii-iv [1979-80], 61-70). He was, at any rate, one of the *ghāziyān-i Rūm* and surrounded by other *ghāzīs* (Turkish *alp*) as well as by people belonging to the fraternity of the *Akhīs*. His father-in-law, the *sheykh* Edebali, was deeply involved with the group of dervishes known as the *Abdālān-i Rūm*, which was connected with the mystic order of the Bektāshīs (*q.v.*, and cf. Irène Mélikoff, *Un ordre de derviches colonisateurs: les Bektachis*, in *Memorial Ömer Lûtfi Barkan*, Paris 1980, 149-57). As a result of collaboration of these various elements, a small amirate was established. Its centre was the fortress of Ḳaradja Ḥiṣār, the exact location of which remains unknown; its identification with the Byzantine Melagina proposed by von Hammer is not valid anymore (V. Laurent, *La Vita retractata et les miracles posthumes de Saint Pierre d'Atroa*, Brussels 1958, 10, 66, 74). During ʿOthmān's reign, the history of the amirate was not different from that of the contemporary Anatolian principalities. By organising raids against the Byzantine territories, but also by stratagems and personal relations, he succeeded in extending his rule. In 1302 he inflicted a serious defeat on the Byzantines at Bapheus and his troops reached the littoral opposite Constantinople. At his death, in 1326, the Sakarya was practically the eastern boundary of the state, while the Byzantine towns of Bithynia had been blockaded for several years. During the early years of his son and successor Orkhan [*q.v.*], important towns, unable to resist any more, surrendered: Bursa, which became the capital, in 1326, Iznik (Nicaea) in 1331 and Iznikmid/Izmid (Nicomedeia) in 1337. In this year Orkhan also performed his first important raid on Thrace. On the other hand, he added the adjacent amirate of Ḳarasî to his dominions, around 1346, and by this acquisition his state became one of the prominent maritime amirates since the Ḳarasî Turks possessed fleets of light vessels and were experienced in naval warfare.

In Orkhan's years, the more orthodox Islamic traditions gradually became predominant, though the dervishes remained in high esteem as popular religious leaders. It is a noteworthy fact, however, in the history of ʿOthmān and Orkhan that there apparently existed close relations with local Christian chiefs and commanders; the most representative of them was Köse Mīkhāl, lord of the fortress of Kharmankaya, who collaborated with ʿOthmān, eventually embraced Islam and was the ancestor of a notable military family in the Ottoman Empire [see MĪKHĀL-OGHLU]. This early collaboration with Christian Greek elements makes it probable that, in this way, Byzantine traditions and customs early entered the Ottoman state, in the same way as was the case in some other contemporary maritime amirates. Both the Christian and the Muslim heterodox element were gradually assimilated by the growing influence of the orthodox *mollās*, often indicated in the older sources as *dānishmend*; some of these belonged to the *Akhī* circles, as is said of the Ḳāḍī Djandarlî Ḳara Khalīl, later vizier to Murād I under the name of Khayr al-Dīn Pasha; many of them had also come from the more eastern parts of Asia Minor. During Orkhan's reign these fairly different elements contributed to the foundation of a typical form of administration and civilisation, from which the later development of the Ottoman state must be explained. The administration, similar to that of the other contemporary amirates, was basically a military one, following Saldjūḳ tradition. The state belonged to the family and it was ruled by the father considered as the senior lord, or in Turkish, *ulu beg*. It was he who concluded treaties, struck coins and was apparently commemorated in the Friday public prayer. The territory of the amirate was divided into domains governed by his sons. Military chiefs were also granted territory by the *ulu beg* and this institution may have reposed on earlier Byzantine or Saldjūk ones [see IḲṬĀʿ]. Apparently under Orkhan there was created a cavalry force of *müsellems* [*q.v.*] and an infantry of *yayas*, as the irregular force of the *akîndjîs* [*q.v.*], originally composed of Turkoman tribesmen, was no longer adequate. In this time also the title *pasha* [*q.v.*], originally peculiar to military dervishes, began to be given to statesmen (e.g. Sinān Pasha under Orkhan) and military commanders.

The natural extension of the young state was towards the west, in keeping with the naval raids of the Ṣarukhān-oghlu and mainly of the Aydîn-oghlu on the isles and on the Greek coast. Orkhan's military expeditions on the Thracian littoral became more frequent since the annexation of the Ḳarasî amirate, but the rise of his power is notably connected with his alliance with the emperor John VI Cantacuzenus during the Byzantine civil war which erupted in 1341. In 1352, however, began the conquest of towns on the European side when Orkhan's son Süleymān occupied the fortress of Tzymbe. In 1354 the Ottomans, profiting from an earthquake, occupied the

strategically-important town of Kallipolis or Gallipoli [see GELIBOLU]. In the meantime they established diplomatic relations with the Republic of Genoa and a commercial treaty was concluded in 1352. After Or-khan's death, in 1362, military operations were launched by Murad I, who conquered all the Byzantine territory to the west of Constantinople; Adrianople (Edirne [*q.v.*]), captured in 1369, became soon afterwards the European Ottoman capital. Then followed the wars against the Bulgarians and the Serbians, and the latter were crushed in the battle of Maritsa in 1371 [see MERIČ]. This victory assured to the Ottomans the greater part of the present state of Bulgaria while the Serbians and Byzantines were reduced to the status of tribute-paying vassals of the Ottoman sultan (cf. G. Ostrogorsky, *Byzance état tributaire turc*, in *Zbornik Radova*, v [1958], 49-58). The Serbians were crushed for a second time in the battle of Ḳoṣowa [*q.v.*] in 1389, where Murād was killed.

Bāyezīd I's military expeditions extended over a still wider range, including Hungary, Bosnia and southern Greece, but in these regions the Ottoman conquests were not yet permanent, notwithstanding the victory won at Nicopolis in 1396 over the allied Hungarian, French and German armies [see NĪKBŪLĪ]. Bāyezīd began a siege of Constantinople and the end of the Byzantine state seemed to have come. On the other hand, the Ottomans began to extend their rule in Asia Minor. Murād I acquired a large part of the Germiyān-oghlu territory, which included important mines of alum, as a wedding present to his son, and also the amirate of Ḥamīd-oghlu by sale. Bāyezīd I continued the conquest of the Anatolian amirates but in a brutal manner and with the assistance of his Christian vassals. Ṣarukhān, Aydîn and Menteshe were annexed in 1390 and the amirate of the Isfendiyār-oghlu in 1391. His policy provoked the intervention of the Turco-Mongol *khān* Tīmūr [*q.v.*] who invaded Anatolia with his army, crushed Bāyezīd's army in the battle of Ankara (1402) and captured him. Bāyezīd committed suicide in captivity in 1403.

While the sultans conducted the military operations, the organisation was in the hands of their statesmen, among whom Djandarlî Ḳara Khalīl is the most notable (see DJANDARLÎ and cf. F. Taeschner-P. Wittek, *Die Vezierfamilie der Ǵandarlyzade und ihre Denkmäler*, in *Isl.*, xviii [1929], 61-115). To him is attributed the institution of the Janissaries [see YEÑI-ČERI] in connection with the reservation of a fifth part of the war booty for the sultan. The Janissaries were usually taken from the captured Christians, but a Greek source indicates that the *devshirme* [*q.v.*] was already applied in Bāyezīd's days. Their organisation on the lines of a fraternity after the model of the *Akhīs* and the *ghāzīs*, and their connection in this respect with the dervish order of the Bektāshīs [see BEKTĀSHIYYA], shows again the influence of the peculiar religious tradition of the state.

The first *begs* of the Ottoman dynasty, in the older sources generally bearing the titles of *khān* and of *khūnkār*, had originally taken over some of the Saldjūḳ customs and traditions, such as the bearing of *laḳabs* [*q.v.*] composed with *dīn* and *dunyā*, but from the time of Murād I this custom was abandoned. Murād I is also the first to take the title *sulṭān* [*q.v.*] in inscriptions, although the Moroccan traveller Ibn Baṭṭūṭa [*q.v.*], who visited the Ottoman lands, mentions Or-khan with the title of sultan. These rulers followed also the traditions of other Anatolian rulers by marrying high-born Christian ladies: Orkhan was the first to take a Byzantine princess for his wife. To the same early time is to be traced back the investiture of the sultan by the girding on of a sword, which perhaps symbolised originally his admission to the order of the *ghāzīs* (*ḳilîdj alay* [see TAḲLĪD AL-SAYF]). An important fact of the first century of Ottoman history was the enforced migration of populations (*sürgün*), which ancient oriental custom was particularly applied by Bāyezīd I, mostly from the east to the west.

When Tīmūr left Asia Minor again, the country was as divided as it had been a hundred years before; from the river Euphrates up to the Aegean coast the amirates had been restored to their former lords. The Ottoman state passed through a period of political instability combined with dynastic war and social strife, and it remained divided until 1413. This period is known as the interregnum (*fetret dewri*), during which four sons of Bāyezīd staked a claim to leadership over the Ottomans, while the Christian states tried to take the maximum advantage from the division of the Ottomans by supporting one prince against the others. Although the European possessions, where a son of Bāyezīd, Süleymān, resided, had been left untouched by the Mongols, the restoration of the Ottoman state had again its centre in Anatolia, where another son, Meḥemmed, established himself as a master of a considerable territory having Amasya [*q.v.*] as its capital. Süleymān first concluded a treaty with the Christian powers of Romania (1403), making territorial concessions to them, abolishing taxes paid by them and confirming old commercial privileges. Then he crossed to Anatolia to fight against his rival brothers, ʿĪsā and Meḥemmed; another brother, Mūsā Čelebi [*q.v.*], appeared in the European territories and obliged him to return there.

It was Meḥemmed I who finally emerged victorious from the fratricide strife and restored the unity of the Ottoman state in 1413. Three years later, in 1416, this state was shaken by a revolt with deep social roots, apparently under the spiritual leadership of *sheykh* Bedr al-Dīn [*q.v.*], the ex-*ḳāḍīʿasker* of Mūsā. Meḥemmed suppressed the revolt by a huge massacre.

After a short period of peace, the chief military activity of the Ottomans was given to the expansion of their power in Europe. The sultans themselves resided most of the time there and led many campaigns in person. The campaigns became more frequent after Meḥemmed I's death (1421) under his son and successor Murād II. Since the second half of the 14th century, the chief opponent of the Ottomans in the Balkans had been Hungary. The conflict was exacerbated in the late 1430s and in the 1440s, and desire to control the silver-producing mines of Novobrdo in Serbia was one of the reasons. After some military operations, Murād II defeated the Hungarians and their allies first at Varna in 1444 and then at Ḳoṣowa in 1448. Despite warfare, most of the European territory was left under the administration of the old lords, who now were the sultan's vassals responsible for paying an annual tribute and offering military aid to him. Also, Constantinople and the rest of the Byzantine possessions kept for a long time their semi-independence in this way and succeeded even several times in defying a siege.

During the reigns of Meḥemmed I and of Murād II there began a second incorporation of the various Anatolian amirates into the Ottoman state, but this time this was effected gradually and without much bloodshed, with the exception of the Ḳaramān-oghlu state, the old rivals of the ʿOthmān-oghlu. But even there the Ottomans began by following a remarkably conciliatory policy. The descendants of these

dynasties were generally granted high military posts in Europe. During Murād's reign trade began to thrive. Venetian, Genoese, Ragusan and other merchants developed important activity in several Ottoman cities, which expanded considerably, such as Bursa with its silk market.

Murād II died in 1451 and was succeeded by his son Meḥemmed II [*q.v.*], who immediately began preparations to put an end to the Byzantine empire, which was then limited to the city of Constantinople, a few islands and some towns on the western Black Sea coast. Constantinople fell on 29 May 1453, and the Ottoman empire succeeded the Byzantine one. The capture of Constantinople, which made such a profound impression among the Turks as well as in the Occident, was only the realisation of a part of a political scheme of Meḥemmed II, that of bringing the whole Balkan peninsula under the direct government of the Ottoman state. After continuous military campaigns this scheme had nearly become a reality. There were still Venetian enclaves in the Morea and Albania, and in the north Belgrade was still held by the Hungarians; but even Bosnia had now passed under Ottoman rule. The large Aegean islands, except Rhodes, were incorporated in the same manner. Only the Danube principalities, Wallachia and Moldavia, and, since 1475, the Crimean Khānate, had remained vassals. Meḥemmed II also finished the conquest of Anatolia proper by the conquest of the empire of Trebizond in 1461 and when at last the Ḳaramānid dynasty was extinguished, in 1475, the Ottoman empire stood face to face with the Aḳ Ḳoyunlu [*q.v.*] dynasty in the east and the Mamlūk state in the south-east. The dangerous policy of the Aḳ Ḳoyunlu lord Uzun Ḥasan [*q.v.*] came to an end in 1473 when Meḥemmed II defeated him at Otluk Beli. Under Bāyezīd II, this neighbour was succeeded by the young Ṣafawid dynasty of Persia; still, until the reign of this sultan, the Ottoman territory was not enlarged on the Asiatic front, though there were several inglorious frontier wars with the Mamlūk forces in Syria.

During all this time, the Christian powers were scheming and planning crusades to expel the Turks from Europe, while trying also to contract alliances with their Asiatic opponents. But no really great enterprise was ever undertaken; only temporary damage was done by the Hungarian Hunyádi, the Wallachian Wlad Dracul, the Albanian Skander Beg [see ISKENDER BEG] and by some Venetian naval expeditions. All these Ottoman military successes in Europe would not have been possible without the strong base in Turkish Anatolia. Still more astonishing is, perhaps, the permanence of the Ottoman occupation. The reason may be sought mainly in the lack of any sufficiently great political Christian power in the much-divided Balkan peninsula, and also in the deep hatred between the Greek Orthodox and the Roman Catholic Church.

During Meḥemmed II's reign the Ottoman political system developed, but the beginnings of this inner evolution are to be sought in the reign of Murād II, parallel with the consolidation of the Ottoman type of religious orthodoxy. The overwhelming importance of the person of the sultan for the existence of the state is still more accentuated during this period. This is shown by the menace of military revolts after the death of nearly every sultan and the artifices by which his death was kept secret until the arrival of his successor, also by the grave disturbances caused by pretenders and the tradition of fratricide, probably inaugurated by Bāyezīd I but officially decreed by Meḥemmed II. The supporting of Ottoman pretenders was justly considered as one of the most effective means available to Christian enemies of the empire.

The new leading men in the state and in the army were now for the greater part of Christian origin, Albanians, Slavs, Greeks or, even more, westerners. They derived from war prisoners, the *dewshirme* levies, or they were simple renegades. The older families that had come from Asia Minor, such as the Mīkhāl-oghlu or the Ewrenos-oghlu [*q.v.*], receded into second place as owners of large land properties on the Danube and in Macedonia; the high position of the Djandarlī family as viziers ended with the execution of Khalīl Pasha shortly after the fall of Constantinople. The newly-converted Christians served the state to their best, but the all-dominating authority of the sultan and perhaps also the democratic tradition of Islam prevented the formation of a hereditary nobility; statesmen and military commanders (as *beglerbegis* and *sandjakbegis*) were the slaves (*kullar*) of the sovereign and much less independent than they had been in the 8th/14th century. Less dependent was the class of the scholars and jurists who provided the religious hierarchy with the *Sheykh al-Islām* at the head; among them there are signs of an upper class of theologians. So there was formed an Ottoman ruling class composed for the greater part of non-Turkish elements recruited from the ranks of the Christians. Under these circumstances, it was inevitable that the administrative institutions should show the influence of Byzantine ideas, as was also the case with the court organisation. By *Ḳānūn-nāmes* [*q.v.*], of which those of Meḥemmed II and later of Süleymān the Magnificent are the best known, the hierarchy of officials was minutely regulated.

Besides the older troops of irregular *aḳïndjïs* and *ʿazabs* [*q.v.*] the army consisted chiefly (a) of the cavalry of the *sipāhīs*, whose organisation was intimately connected with the military administration of the territory [see TĪMĀR], and (b) of the Janissaries, apparently levied in the time of Murād II by the *dewshirme*. Agriculture, constituting the financial support of the cavalry, was closely connected to the *tīmār* system. Firearms may also have been used for the first time during Murād II's reign [see BĀRŪD. iv]. The fleet [see GELIBOLU and DARYĀ-BEGI] was mainly manned with Christian renegades, *ʿazabs* and Christian prisoners as galley slaves. It began to be well-organised under Meḥemmed II.

The revenues of the state or rather of the sultan consisted for the most part of the constantly-increasing *djizye* [*q.v.*] and *kharādj* [*q.v.*], both of them levied on non-Muslim subjects, and of the annual tributes paid by the vassal states. The different kinds of custom-duties were also considerable. Trade remained largely in the hands of the *dhimmīs*, the merchant class having increased in number by the massive arrival of Jews from Spain and Central Europe. Exports and imports were also largely in the hands of foreigners, especially Italians, who had their communities in Constantinople [see GHALAṬA in Suppl.] and some other towns. These communities were treated in the same way as the indigenous non-Turkish communities; they were allowed considerable autonomy under their consuls, including consular jurisdiction. These privileges were granted by the sultans in the well-known form of "capitulations", in which were prescribed also the commercial duties to be paid by the foreigners, who, in accordance with the principles of Muslim law, were considered as *müsteʾminūn* [see IMTIYĀZĀT].

The civilisation of the Ottoman Empire of the later Middle Ages was not yet separated from central and western Europe by the wide gap that became characteristic for later centuries. It has been pointed out that the friendly relations between Meḥemmed II and Italian princes and artists and his liking for pictorial art entitles him, in a way, to a place among the Renaissance rulers of the time. In the days of his successor Bāyezīd II, however, the Muslim attitude to life began to be again more predominant.

3. The empire at its zenith

After the relatively peaceful reign of Bāyezīd II, there is no more question about Asia Minor or the Balkan Peninsula. The struggle continued in Albania and Morea, but had on the whole a local character. The empire was now strong enough to face its new Asiatic neighbours. The war waged against Persia by Selīm I was in a way a continuation on an international scale of the former internal struggle against the Shīʿī opposition in Asia Minor itself. This war secured Turkey the temporary possession of Ādharbāydjān and the lasting domination over Kurdistān and northern Mesopotamia. Very soon afterwards the Egyptian state of the Mamlūks, with whom the Ottoman empire had clashed under Bāyezīd II in a rather inglorious way, was incorporated by Selīm in one single campaign. The consequence was the extension of Turkish overlordship to the holy cities of Islam and soon to Yaman. Finally, under Süleymān I the Magnificent, the empire obtained its greatest extension by the conquest of the greater part of Hungary, one of the two great mediaeval opponents in Europe; in the same campaign the Turks went even so far as to besiege Vienna. Only the other old rival, Venice, was not broken by the victorious empire. After Meḥemmed II's death, official wars with Venice had become rather an exception. The Ottoman empire never had acquired an absolute maritime superiority, and this weakness appeared almost immediately after the great period of conquest was over, in the battle of Lepanto. Rhodes was conquered, but Malta has never been Turkish and the maritime exploits of Kemāl Reʾīs [*q.v.*] under Bāyezīd and those of Barbarossa Khayr al-Dīn [*q.v.*] and others, which assured Turkey's political authority in the age of Süleymān on the north coast of Africa and in the Indian Ocean, never wholly lost the character of piracy. On the Asiatic front, the continuation of the conflict with Persia led for the time to the conquest of Baghdād and ʿIrāḳ, so that the sultan was now in reality *sulṭān al-barrayn wa 'l-baḥrayn*.

At the end of the reign of Süleymān I, the Ottoman empire found itself between two powerful continental neighbours: the Austrian monarchy in Europe and the Ṣafawid empire in Asia. In Europe, the Turkish provinces of Bosnia and Hungary were the bulwarks against Austria, while farther to the east the half-independent principalities of Transylvania, Wallachia and Moldavia, and the Tatar Crimea were allowed to exist; from the Turkish point of view also, Poland with its Cossacks, and even Muscovy, held similar intermediate positions between the two empires; during this period Turkey raised more than once claims to the suzerainty of the last-mentioned countries. In Asia, the geographical situation did not allow for the existence of this intermediary kind of state, with the exception of Georgia [see al-kurdj] which was invaded and brought under Turkish authority in 1578. In Asia, however, the Turkish feudal system left places for a number of petty local rulers who were given the title of Pasha. They were found on the Persian frontier in Kurdistān (the princes of Bitlis), but also in Syria (the Druse amīrs). The *sharīf* of Mecca occupied likewise a vassal position, while Yaman, after its reconquest in 1568-70, was again partly a more direct Ottoman possession. After 1550 the Turks had even obtained a footing in Maṣawwaʿ [*q.v.*] on the African coast and had begun to interfere with Abyssinian affairs; the opportunities here came to an end after the unlucky war of 1578. Egypt was at this time still somewhat under the control of the Turkish Pasha [see miṣr. D. 6]; the Barbary states were nearly independent; the *sharīf* of Morocco recognised in 1580 the authority of the Turkish sultan.

This general political system of the empire was maintained throughout the third period, a kind of equilibrium being established between the Ottoman empire and the great continental powers.

Under Selīm II, or rather under the administration

of Meḥmed Soḳollu Pas̲h̲a, Cyprus was conquered (1570-1), but this conquest occasioned immediately the naval defeat in the battle of Lepanto [*q.v.*] in 1571, considered to be the first great military blow inflicted on the Turks. The impossibility of further military expansion brought about an inner weakening of the Empire that was marked on the whole by unsuccessful campaigns against Austria (defeat of Mezőkeresztes [*q.v.*] in 1596) and against Persia (loss of Tabrīz and Eriwān in 1603 and 1604) and found its expression in the unfavourable peace treaty of Zsitvatorok with Austria in 1606 and the peace of 1612 with Persia, then under the strong rule of S̲h̲āh ʿAbbās the Great. In the last decade of the 16th century, Transylvania [see ERDEL] and the Rumanian principalities even made themselves for some time independent; from 1572 Poland also played often an active role in the complicated political and military course of events on these northern frontiers of the Turkish empire. The raids of the Cossacks in the Crimea had not yet the dangerous aspect of a century later, when the Muscovite power began to appear on the horizon. A favourable circumstance for Turkey was the weakening of Central Europe by the Thirty Years' War; among the west European countries the already existing friendly relations with France, followed in 1580 by England and in 1603 by Holland, were on the whole profitable for the empire, while Spain had ceased since the end of the century to be a serious maritime danger. In view of the never very strong maritime position of Turkey, the relations with Venice remained subject to surprises on both sides, such as the annexation of Cyprus; during the 17th century this was followed by the conquest of Crete (1645-69) and about 1655 by the important Venetian conquests in Morea and in the archipelago, so that for a moment even Istanbul was threatened. Still, the relations with Venice were on the whole friendly, Turkey being the stronger power on account of its continental position. On the Asiatic frontier, Turkey's weakness led temporarily to the loss of Bag̲h̲dād in 1623 and a renewed Persian danger. But here the old position of the empire was restored by the revival of its military strength under Murād IV; under his reign and after S̲h̲āh ʿAbbās's death, Persia was invaded by Ottoman troops, and Eriwān and Tabrīz, and finally Bag̲h̲dād reconquered (1638); in 1639 there began a long period of peace with Persia. After 1640 the stronger position of the empire was used, as well as for the conquest of Crete, for strengthening the authority of the Porte in Transylvania and the Danube principalities, and for a fortification of the frontier to the north of the Black Sea, where Azov was taken from the Cossacks, now under Muscovite authority, and fortified in 1660. In this same year the hostilities with the now-recovered Austria began again and took on at first a crusading character; even France was this time an ally of Austria (Turkish defeat of St. Gotthard 1664). But this was only a prelude to the final struggle with Austria that began in 1683 with the unsuccessful siege of Vienna, and finished in 1688 with the loss of the Ottoman province of Hungary and the invasion of the Balkan peninsula by Austrian armies, followed at last by the peace of Carlowitz (1699 [see ḲARLOFČA]) in which Turkey, considerably weakened again, had to give up nearly the whole of Hungary and its claim on Transylvania, while it had to recognise the authority of Venice in Morea.

The weakening of the Ottoman empire at the beginning of this period was mainly due to domestic reasons. During the 16th century it had already been observed that the empire in this form could only subsist by continuous warfare; it had to be adapted now to peaceful conditions, and this went beyond the possibilities of the personal rule of the sultan, which was based essentially on military conquest. The successors of Süleymān the Great were not equal to the task of meeting these new conditions; it is true that Meḥemmed III, ʿOt̲h̲mān II and Meḥemmed IV occasionally accompanied their armies, but Murād IV was the last sultan to revive the military traditions of his dynasty, the last real *g̲h̲āzī*. So the sultans, whatever their personal qualities were, became less directly concerned in the administration of the state, though their personality remained surrounded with the traditional veneration. This did not prevent, however, the deposition and murder of ʿOt̲h̲mān II in 1628, nor the deposition of Ibrāhīm in 1648 and of Meḥemmed IV in 1688. Instead of the sultans, the statesmen and generals became now more prominent, first in time and in importance Meḥmed Soḳollu Pas̲h̲a [see SOḲOLLU] under Selīm II, Sinān Pas̲h̲a [*q.v.*], the great enemy of the Austrians, under Meḥemmed III, Murād Pas̲h̲a [*q.v.*] and K̲h̲alīl Pas̲h̲a [*q.v.*] under Aḥmed I and ʿOt̲h̲mān II; and in the second half of the century the great members of the Köprülü family [*q.v.*]: Meḥmed Pas̲h̲a, his son Aḥmed Pas̲h̲a and their cousin Muṣṭafā Pas̲h̲a; to the same period belonged also Ḳara Muṣṭafā Pas̲h̲a [*q.v.*], the besieger of Vienna in 1683. These military statesmen belonged to the numerically feeble renegade class and were supporters of the typical Ottoman government system as it had been perfected under Süleymān I, but they did not represent any considerable group of the strongly diverging population of the empire. There was not yet an Ottoman Turkish nation. Several other groups were competing with them in the direction of the state affairs; the most formidable being the military corps of the Janissaries and the Sipāhīs, who several times, especially after serious military defeats as at the time of the enthronement of Murād IV in 1632 and of Meḥemmed IV's deposition in 1688, were masters of the political situation. The Janissaries were now even less recruited in the ancient way from the Christian populations, while many abuses had ruined the former discipline of their corps. Several Grand Viziers fell victims to their fury. Another powerful group, that made occasional use of these military elements, was the court circle, led several times by a powerful *Wālide Sulṭān* or by a *Ḳĭzlar Ag̲h̲asĭ*. Finally, the *ʿulemāʾ* with the *S̲h̲eyk̲h̲ al-Islām* succeeded repeatedly in playing a decisive part in the direction of the state affairs (e.g. the *muftī* Saʿd al-Dīn under Meḥemmed III); the deposition of sultan Ibrāhīm was sanctioned by *fetwā* of the *S̲h̲eyk̲h̲ al-Islām*. These symptoms of decay were truly analysed in Ḳoči Bey's [*q.v.*] famous *Risāla*. Only Murād IV was able to suppress, often by violent means, the influence of these different groups; he succeeded even in raising a new military force (the Segbāns) alongside of the Janissaries. In the capital there were several times outbursts of religious fanaticism directed against the Christians, as happened under Ibrāhīm I, but it cannot be said that political events were influenced by them; the great statesmen showed on the contrary a remarkable tolerance.

The non-Muslim element, though excluded from all direct influence on the government, had adapted itself to the circumstances. A new Greek aristocracy had arisen in Istanbul, which by wealth and intrigue had powerful relations in Turkish circles, as well as in the leading circles of the Christian principalities on the Danube; they likewise were able to control the nomination of the Greek patriarchs. To this time

belongs also the definite turn of the Ottoman Greeks towards Greek Orthodoxy under the influence of the patriarch Cyrillus Lucaris (executed in 1638); the consequence was a decisive rupture with the Roman Christian world and indirectly a strengthening of the Ottoman empire. The Ottoman Turks had still many religious traditions in common with the Greeks, and Christian saints were also venerated in Turkish circles. Next to the Greeks, the Jewish element, considerably strengthened since the arrival of the Spanish and Portuguese Jews under Bāyezīd I, played a great social role, chiefly as bankers; the best known representative of this group was Joseph Nasī [see NAḲSHE and NASĪʾ], the favourite of Selīm II.

The lower classes in Asia Minor participated as little in the direction of the state as those of European Turkey. Some dangerous revolts proved, however, that the old religious traditions of the 13th and 14th centuries had not wholly disappeared. In 1599 began the movement of Ḳara Yazîdjî [*q.v.*] in Urfa; much more dangerous for the unity of the empire was the revolt of Ḳalender-oghlu in Ṣarukhān (1606), who ruled for some years independently over a great part of western Anatolia, until he was crushed by Murād Pasha. Soon afterwards, in 1623-8 took place the insurrection of Abāẓa Meḥmed Pasha [*q.v.*], the relentless persecutor of the Janissaries. Farther to the east, the movement for independence under the Kurd Djānbulāṭ [*q.v.*] in northern Syria like that of the Druse Fakhr al-Dīn Maʿn [*q.v.*] in the Lebanon had to be tolerated to some extent. The inclination to mysticism and veneration for mystic *sheykhs* (such as Maḥmūd of Scutari, where several grand viziers found asylum under ʿOthmān II) continued its hold on all classes of the population; several new mystical orders were founded during this period. The foreign trade remained as before in the hands of foreigners, Venetians and other Italians; of Italian origin were also many of the leading personalities of the Turkish navy that was rebuilt after the battle of Lepanto, such as Čighale-zāde Sinān Pasha [*q.v.*].

4. The period of decline

During the 18th century the inevitable action of the elements of decay began to be felt more and more in the empire and brought about a situation that has been, too superficially, described as decadence. The causes of the decline were to be sought mainly within the body politic; they were still the consequences of the transition from a conquering state to a peaceful administration, but they were now ever more exploited by foreign powers. Among these Austria was in the beginning still a formidable opponent; after the war of 1716-18 the peace of Passarowitz [see PASAROFČA] meant the loss of what had been left to Turkey of Hungary and Transylvania, and even of Belgrade, but the peace of Belgrade in 1739, in which this town itself was restored, proved that from the Austrian side the real danger had ceased. Moreover, in 1715, Morea had been reconquered from the Venetians by the grand vizier Djinn ʿAlī Pasha [see MORA], which success had shown that Venice also was no more to be feared. A new and formidable enemy had risen, however, in the form of the now much enlarged Russia, which, to the Orthodox Christians of Rumania and Serbia, seemed a more welcome liberator than even Austria had ever been. The war of 1711 with Peter I, intimately connected with the coming of Charles XII of Sweden to Turkey, ended with a Turkish victory at Poltava and brought back Azov to the empire in 1712, and the war of 1732, equally successfully closed by the already-mentioned Treaty of Belgrade in 1739, was not yet disastrous for Turkey; Russian navigation in the Black Sea was even formally prohibited. After 1739 there followed a period of peace for the empire in Europe. The military and peaceful relations with Persia during this time were mainly influenced by the political events in that empire, by which the Turks sought to profit. The successes of Nādir Shāh [*q.v.*] of Persia in 1730 were for a moment threatening; they even occasioned the deposition of Aḥmed III, but at last the peace of 1736 restored the frontiers of the time of Murād IV. The real military weakness of the Ottoman empire was finally revealed in the conflict with Russia that had begun in 1768 with a Turkish declaration of war; this war brought the Russian armies deep into Bulgaria and was ended by the memorable treaty of Küčük Ḳaynardja [*q.v.*] in 1774, by which the Crimea became wholly independent (to be annexed in 1783 by Russia), while Turkey had to recognise the Russian protectorate in the Danube principalities. The right of religious protection accorded to the sultan with regard to the Muslims in the Crimea, was the beginning of the religious claims of Turkey that were to acquire such importance in its international relations in the 19th century. After an equally unhappy war with Karīm Khān Zand [*q.v.*] in Persia (1776), in which Baṣra was temporarily lost, the Ottoman empire again suffered serious losses to the Russians by the war of 1784-92, closed by the peace of Jassy; this time the Dniepr became the frontier between the two empires. Austria also had tried to profit by this war and had occupied Bucharest, but in the separate peace of Zistowa (1791) Austria did not gain the expected profits.

During all this time, the friendly relations with the western countries, France, Britain and Holland, to which Sweden was added in 1737, Denmark in 1756 and Prussia in 1763, had often been of great value to Turkey by the services rendered by them as intermediaries in the peace negotiations; especially France, which obtained in 1740 its well-known final capitulations, had considerable influence by its right to protect the Roman Catholics. At the end of the century, however, the Ottoman empire began to be a factor in the new expansionist schemes of the western powers, in connection with their colonial acquisitions and political influence in South and East Asia. These interests did not show at that time any wish to possess Ottoman territory, but the rising colonial powers needed between themselves and their possessions a state over which they could exert control, since they saw the necessity of communicating with the Persian Gulf and India by a more direct way than the southern sea-route. The more immediate cause of the occupation of Egypt by the French in 1798 was the rivalry between France and Britain; this made for the moment Britain and even Russia allies of Turkey. But in 1802 peace with France was restored, to be followed some years later by a new war with Russia and hostilities with Britain (the British fleet before the capital in 1807). By the peace of Bucharest (1812), the Ottoman Empire again lost territory (Bessarabia [see BUDJĀḲ]) to Russia, while Britain, after the elimination of France's colonial power in India and the weakening of the Ottoman authority in Egypt, was for the moment satisfied. The empire was again severely affected by the ups and downs of the Greek insurrection that began in 1820 and ended in 1830 with the recognition of the independence of Greece, not, however, before a disastrous war with Russia—that had played from the beginning an important part in the Greek troubles—had obliged Turkey to conclude the peace of Adrianople (1829). Still, the action of the other European powers had prevented Russia from

realising its territorial aims; it had to be contented with a strong political ascendancy over Turkey, as was proved in 1833 by the Treaty of Khünkār Iskelesi, which, in a secret article, forced Turkey to become Russia's ally in the matter of the navigation in the Black Sea. This unnatural alliance with Russia was occasioned by the action of Muḥammad ʿAlī [*q.v.*] of Egypt (begun in 1831), who threatened for a moment to deprive the empire of Egypt, Syria and Cilicia, but led at the end only to the recognition of Egypt as a privileged part of the Empire under a hereditary dynasty (1840). This time again the intervention of the European powers had been decisive for the territorial status of the empire. The existence of the Ottoman empire was justly considered as a political necessity; already in 1789 there had been a treaty between Prussia and Austria to guarantee the northern frontiers of the Empire. About the year 1830, moreover, Turkey concluded several new treaties, on the lines of the capitulations, with the United States of America, Belgium, Portugal and Spain. The conquest of Algiers by France (1827-57) [see AL-DJAZĀʾIR] could hardly be called a loss to the empire.

The administrative system of the empire remained much the same during this period; in every direction the central authority was, however, losing its influence. At the beginning of the 18th century this was not yet very perceptible. Istanbul was still the brilliant capital of a powerful empire, where the court of Aḥmed III set the example of a luxurious life; to this time falls the curious passion for the cultivation of tulips, that makes the epoch known as *lāle dewri* [*q.v.*]. To this period also belongs the expansion of higher literary, specifically Ottoman, culture beyond the class of the *ʿulemāʾ*; a new class of literati came into existence, who were the precursors of the intellectual Turkish middle class that originated in the beginning of the 19th century. The abortive beginning of Muslim Turkish printing in 1727 [see IBRĀHĪM MÜTEFERRIḲA and MAṬBAʿA. 2] is likewise intimately connected with the new cultural orientation of the higher classes. Most of them served the government in higher or lower functions, and from this class came forth Grand Viziers, such as Dāmād Ibrāhīm and Rāghib Pasha [*q.vv.*]. This changed considerably the ancient military character of the government system; the home and foreign affairs of the empire were now treated in a more statesmanlike way by the Sublime Porte (Bāb-i ʿĀlī), and the modest office of the Reʾīs al-Küttāb [*q.v.*] now became more and more important, since the holders began to act as competent Ministers of Foreign Affairs; one of them, Aḥmed Rasmī [*q.v.*], is well known as one of the first Ottoman ambassadors. Still, this new class of functionaries was, according to tradition, the sultan's slaves; only under Maḥmūd II was their position regulated in a more liberal way. The new upper classes had manifold relations with the cultivated Greek Phanariots of their time [see FENER], many of whom occupied high offices in the government service, especially as dragomans (as e.g. Nikusios and Mavrocordato); there were no ties with the lower Muslim classes. Under these governing functionaries, the Janissaries and Sipāhīs, now that their discipline was loosened, more than once interfered in a dangerous way. The Janissary rebellion under Patrona Khalīl [*q.v.*] in 1730, which cost Aḥmed III his throne, seems to have been directed mainly against this new aristocracy. After Aḥmed III, court life became much more sober. The ruling classes and most of the sultans with them had begun to realise the weakness of the empire and sought now a remedy in the introduction of military reforms, in which they were aided by several foreigners, of whom the Frenchman Bonneval (d. 1747 [see AḤMAD PASHA BONNEVAL]) is the best known. Another French officer, De Tott, worked in the same direction under Muṣṭafā III, but the Russian war that broke out under this sultan showed how little effective the measures had been.

Selīm III undertook army reforms with much more energy, but even in his time very few leading people had real understanding for these things; the institution of the new troops (*niẓām-i djedīd* [*q.v.*]) provoked another formidable rebellion of the Janissaries, seconded by a large proportion of the *ʿulemāʾ*. Maḥmūd II, finally, took up the question of reforms with more deliberateness; this sultan finally concluded there was no other way of imposing the reforms than by the famous massacre of the Janissaries in Istanbul on 16 June 1826; at the same time, the Bektāshī dervish order [see BEKTĀSHIYYA] was persecuted. The events showed, however, that so far, more destructive than constructive work had been done; still, this sultan succeeded at least in subjecting a number of powerful semi-independent local dynasts [see DEREBEY]. The weakening of the central authority had indeed been characteristic of the Ottoman empire of the 18th century. Algiers, Tunis and Tripoli were ruled by hereditary Beys; only Tripoli was brought by Maḥmūd again under the direct authority of the Porte. Egypt had seen in 1767 the usurpation of ʿAlī Bey. In Rūm-ili some powerful vassals had come forth from the ranks of the great *tīmār* [*q.v.*] holders or timariots; they were called *aʿyān* [*q.v.*]. Under Selīm III and Maḥmūd II the most noteworthy were ʿAlī Pasha Tepedelenli [*q.v.*] of Yanina and Paswān-oghlu [*q.v.*] at Vidin. In Anatolia there had been in 1739 the dangerous insurrection of Ṣarī Beg-oghlu, after which the so-called *derebeys* were as good as independent, as was also the case in Kurdistān. In Mesopotamia and ʿIrāḳ the same conditions were prevalent; in 1706 was formed in ʿIrāḳ the powerful Bedouin confederation of the Muntafiḳ [*q.v.*], and under Selīm III Baghdād was ruled autocratically by Süleymān Pasha (d. 1810). In Syria, the Druses of the Lebanon had their own *amīrs* [see DURŪZ. ii], and on the coast ruled, in Selīm III's time, Djazzār Pasha [*q.v.*] of ʿAkkā. In Arabia, the Wahhābīs [see WAHHĀBIYYA] had taken Mecca in 1803, and Yaman and ʿAsīr could hardly be called parts of the Turkish empire. On the islands of the Aegean archipelago, hardly any Turks were to be found; here, as in Syria, there was strong European influence. Still, although the Ottoman real power had sunk everywhere, the Ottoman type of administration had put its seal on the cultural life of all these different regions; the great Ottoman tradition held them together and enabled Maḥmūd II and the statesmen who, after him, continued the centralisation of the Empire, to keep together their political unity for a century more to come.

5. The beginnings of reform and westernisation, and the end of the dynasty

In this period, the transition of the Ottoman empire to a national Turkish state was completed, but in a way not intended by the Christian powers, nor expected by the Turkish ruling classes themselves. The new course followed in the administration by the gradual application of the *Tanẓīmāt* measures [*q.v.*] had meant to establish, mainly after the French model, a modern state where all citizens, whatever their religion, had equal political and civil rights, under the direct authority of the Ottoman government; only Egypt, the Danube principalities and Serbia (since 1815) and in Asia the Ḥidjāz were allowed a privileged position. The ideal of the new Ottoman

state was, however, far from the democratic ideals that worked in Europe and which by now began to show their effect, especially among the Christian populations. The democratic revolutionary movement of 1849 in Moldavia and Wallachia [see BOGHDĀN and EFLĀḲ] was equally opposed by Turkey and by Russia, but had as result the convention of Balta Liman, by which the Turkish authority in these principalities was reduced to a negligible point. When Russia, as a result of a conflict over the Holy Places in Jerusalem, invaded again the principalities, in 1853, the Ottoman empire found Britain and France at its side; this was the beginning of the Crimean War. By the peace treaty of Paris (1856) the integrity of the empire seemed secured. In reality, the intervention of Britain and France and soon again of Russia was now more firmly established than ever. This was not only the case in political questions, as for instance the armed intervention in the Lebanese and Syrian troubles of 1845 and 1860, after the troubles of Djidda in 1858, and in the international regulation of the position of Crete in 1866. For the influence of the foreign powers was likewise extended to many points of internal administration, which kind of intervention was made possible by the capitulations. These originally unilateral privileges were looked upon now as bilateral treaties, but their contents had become incompatible with the new state conception that the *Tanẓīmāt* tried to realise. From 1856, indeed, the Porte had tried in vain to get rid of this international servitude, which, at the end of the 19th century, had taken on the character of a collective tutelage of all countries possessing capitulations. Not till 1914 did the conflict between the European powers enable the Turkish government to put the capitulations aside [see IMTIYĀZĀT].

In 1862 the Ottoman government was able to restore its authority in Montenegro [see ḲARA DAGH] and Herzegovina, while, on the other hand, Serbia, and the two Danube principalities, since 1861 united in one state, recovered a nearly complete independence in 1865. Twelve years later the Bulgarian troubles again brought about an armed conflict with Russia, which country, in 1870, had already broken the conventions of 1856 about the Black Sea. The preliminaries of San Stefano (1878), mitigated by the Treaty of Berlin (1879), brought the definite loss of Serbia, Montenegro and Rumania, while Bulgaria was constituted a semi-dependent principality; on the Caucasian frontier, Turkey lost Ḳars and Batum [*q.vv.*], and Britain obtained the administration of the isle of Cyprus [see ḲUBRUS]. This abandonment of Britain's policy hitherto followed of respecting the integrity of Ottoman territory was followed in 1882 by the occupation of Egypt [see KHEDĪW and MIṢR. D. 7]. The remaining dates in the dismemberment of Turkey in Europe are the Greco-Turkish war (1897), by which the Greek territory was enlarged towards the north, the autonomy of Crete (1898) and, after the deposition of ʿAbd ül-Ḥamīd II, in 1909, the declaration of independence of Bulgaria and the annexation of Bosnia and Herzegovina by Austria. Then, after Tripoli had been lost in the war with Italy (1912, Peace of Lausanne), the Balkan War of 1912-13 reduced the territory of Turkey in Europe to Eastern Thrace, including Edirne, which town had even been occupied for some time by the Bulgarians.

During the 19th century, the relations with Persia had been on the whole peaceful; conflicts were only occasioned by frontier questions, such as the dispute about authority over the Kurdish territory of Sulaymāniyya [*q.v.*], which was settled in 1847 in favour of Turkey. The territory round the Persian Gulf had come more and more under the control of the British, but the territorial status in Asia remained for a long time unchanged. In the meantime, Turkey had been drawn gradually into the economic expansion schemes of the German empire as manifested by the project of the Baghdād railway; this diminished Britain's interest in the territorial integrity of the Ottoman state. So, when in the first year of the First World War, Turkey joined the Central Powers, Russia and Britian co-operated for the first time to take away Turkish territory. The attempts of the Allies to enter the Dardanelles by sea and by land failed, however, during the war; but the combined action of the French and British troops in Palestine and Syria, and the different British campaigns in ʿIrāḳ and Mesopotamia, succeeded at last in conquering these provinces from the Ottoman armies. In Syria, they were aided by forces of the Sharīf of Mecca, who had made himself independent in 1917 as king of the Ḥidjāz. The Russians, in the meantime, had made considerable progress in north-eastern Anatolia, but from this side the danger came abruptly to an end with the Russian Revolution, and the peace of Brest-Litowsk (3 March 1918) gave back to Turkey the lost territory, besides Ḳars, Ardahān and Batum. Soon afterwards, the war with the other powers came to an end by the armistice of Mudros [see MONDROS] (30 October 1918). Subsequently, Istanbul was occupied by Allied troops; France occupied the whole of northern Syria and Cilicia, Britian occupied the so far unconquered parts of northern Mesopotamia, including Mawṣil, and Italian troops landed in Antalya. Greece was allowed to occupy eastern Thrace and Izmīr in May 1919. All this the Istanbul government had to witness passively. The Turkish parliament, convoked in January 1920, took for a moment a firmer attitude by adopting the so-called National Pact (*mīthāḳ-i millī* [*q.v.*]); but when in March the Allied occupation of Istanbul was rendered more severe, the parliament was dissolved. Finally, in August, the Ottoman government was compelled to sign the Treaty of Sèvres, by which large parts of the remaining Ottoman territory, including Istanbul and Izmīr, were brought under the control of one or more foreign powers. In the meantime, another, interior, enemy had risen against the Ottoman government as a result of the organised national opposition against the foreign occupations, especially the Greeks' landing in Izmīr. In the course of 1920, the Istanbul government lost gradually all control over Anatolia, and the measures undertaken with Allied help to restore its authority failed. Under the growing successes of the nationalists, the authority of the sultan's government increasingly dwindled, and the Great National Assembly of Ankara, under the leadership of Muṣṭafā Kemāl Atatürk [*q.v.*], was able at last to pronounce on 1 November 1922 the abolition of the Istanbul government and the deposition of sultan Meḥemmed VI Waḥīd al-Dīn. This meant nothing less than the extinction of the Ottoman empire and its dynasty. Istanbul and eastern Thrace were occupied by nationalist troops and the last sultan left his capital, which now ceased to be the capital of Turkey. The only remnant of the dynastic tradition was that ʿAbd ül-Medjīd II, son of sultan ʿAbd ül-ʿAzīz, continued to reside in Istanbul as *Khalīfa*. This dignity was abolished by decree of the Great National Assembly of 2 March 1924; ʿAbd ül-Medjīd, as well as all other members of the dynasty of ʿOthmān, were at the same time banished from Turkey; it was to be some fifty years before they were allowed back into Turkey.

Such was the outcome of a long series of events, in which the inner development of the empire played no less a part than the outward political circumstances. The *Tanẓīmāt* period, in fact, was a no less powerful factor in the dissolution than the political interest of foreign powers. The *Tanẓīmāt* [*q.v.*] were a more deliberate continuation of the reforming measures under Selīm III and Maḥmūd II, and they were by no means the execution of a programme supported by a large group of the population. Re<u>sh</u>īd Pa<u>sh</u>a, ʿĀlī Pa<u>sh</u>a and their helpers wanted to turn Turkey into a modern state ruled by a council of ministers, whose president kept the title of *ṣadr-i aʿẓam*, but their methods were those of an absolute government in the name of the sultans, who did not in the beginning interfere. When, however, the first real constitution was elaborated by Midḥat Pa<u>sh</u>a [*q.v.*], it happened that the new sultan ʿAbd ül-Ḥamīd II preferred to govern himself, and with the same absolutist methods as his predecessors; only his aim became ever less the copying of a western European state, but rather the strengthening and the securing of the position of the sovereign, to which end there was finally developed the notorious system of censorship and espionage which has made known this period in Turkish history as *dewr-i istibdād* "the period of despotism". This period cannot be called reactionary in that it abolished the institutions of the *Tanẓīmāt*; it opposed only some consequences of the reforms. The reforms had brought into existence a middle class of intellectuals of Turkish speech and Islamic religious tradition, mostly divided between the army and the state functionaries and, in a less degree, the *ʿulemāʾ*. These intellectuals, of very different extraction, had developed a new ideal of patriotism, as reflected most eloquently in Nāmıḳ Kemāl's [*q.v.*] *Waṭan*, and they had begun to form a public opinion that claimed a certain influence in the government of the state. About this time was also born the Turkish daily press [see <u>DJ</u>ARĪDA. iii]. Gradually, as this social group took more definite forms, it became ever more separated from the different groups of the Christian and Jewish population, and also from the non-Turkish speaking Muslims in the Asiatic provinces. At the same time, however, relations between Christianity and Islam had worsened since the beginning of the 19th century as a result of the subjection of many Islamic countries to the rule of Christian powers.

By this process was generated Pan-Islamic feeling [see PAN-ISLAMISM] and Istanbul, as the capital of the relatively most powerful independent Islamic state, became the political capital of Islam. With a great many of the Turkish intellectuals, and among them chiefly the *ʿulemāʾ*, Pan-Islamic feeling surpassed the still somewhat vague patriotism. Moreover, Islamic sentiment found sympathy with the lower classes of the Turkish population, still strongly imbued with mystical traditions, and with the non-Turkish Muslims of the empire. ʿAbd ül-Ḥamīd, while emphasising his dignity as *<u>Kh</u>alīfa*, relied mainly on Islamic sentiment, though, in course of time, the persons who surrounded the ever more suspicious monarch came to be of the worst kind. Utterances of patriotism were opposed in the most drastic way and many intellectuals had to take refuge abroad. The growing opposition against the *istibdād* found at last a means of organising itself in the province of Macedonia, since 1906 governed by a Turkish governor under European control. Salonica became the centre of the new patriotic, more conscious, Young Turkish movement, led by the Committee of Unity and Progress [see ITTIḤĀD WE TERAḲḲĪ <u>DJ</u>EMʿIYYETI] and supported to a great extent by the army. Its influence obliged the sultan to promulgate again the constitution of Midḥat Pa<u>sh</u>a on 24 June 1908 and to abolish at once the onerous system of censorship and espionage. In November, the first Ottoman parliament came together [see MA<u>DJ</u>LIS. 4. A. ii], but in the troubled years that followed this parliament never had the opportunity to exert a real influence on the government. On 13 April 1909 followed an attempt to re-establish the sultan's former authority; this time the Young Turkish cause could only be saved by the occupation of the capital by the Macedonian army and the deposition of the sultan (27 April).

Then, for a time, Ottomanism became the political ideal, meaning the equality of all Islamic and non-Islamic elements in the state. But it soon appeared that these elements were already too much estranged from each other, so that the foundation of a strong state on these principles became impossible. The Young Turks, under the influence of the ideas of Pan-Turkism [*q.v.*], began now a policy with the final object of making the Ottoman empire a state where the Turkish element should be predominant; they turned to the lower Turkish-speaking classes, especially in Anatolia, to form a real Turkish nation. Pan-Islamism, too, was propagated again by several persons as a way of attaining this aim, but this course was gradually abandoned, although used occasionally for outward political manifestations. The very unfavourable international development after the revolution, however, brought the Young Turkish rulers to measures that certainly were not originally on the programme, such as the Armenian massacres during the war and the severe government in Syria. And as a consequence of the final loss of nearly all non-Turkish territory in the war, Turkish nationalism was born at last, the simplest and at the same time the most effective form of Turkish patriotism, not hampered by any ideas of religion or original racial connections.

The statesmen who had carried out the *Tanẓīmāt* programme had been careful not to offend the religious scruples of the leaders of orthodox Islam. In spite of the remonstrances of foreign representatives, no measures were taken that were in direct conflict with the *<u>sh</u>arīʿa*, though the application in practice might have been changed. The *<u>sh</u>arīʿa* was also the basis of the new Civil Code or *Me<u>dj</u>elle* [*q.v.*]. In Midḥat's constitution, Islam was declared the state religion and the *<u>Sh</u>eyk<u>h</u> al-Islām* was given a rank as high as the grand vizier. This wise religious policy could not prevent, however, occasional religious outbursts of which Christians were the victims, as in 1858 at <u>Dj</u>idda and in 1860 at Damascus, both places situated outside the purely Turkish provinces. Under ʿAbd ül-Ḥamīd, religious activity was mainly under the influence of Pan-Islamism, shown in the various attempts to enter into relations with Muslims in all parts of the world. Even the Young Turkish government did not refrain from proclaiming the Holy War on its entering the First World War. In their internal administration, the Young Turks clearly opposed the influence of the religious authorities, as was proved by their attempt in 1917 to bring the *medreses* under the administration of the Ministry of Public Instruction. Another break with the Islamic tradition was the reform of the calendar. In 1789 the Greek Julian calendar had already been introduced officially for the financial administration, but by a curious compromise the era of the Hi<u>dj</u>ra was preserved (*sene-yi māliyye*); and in 1917 the Gregorian calendar was adopted. The Christian era came gradually into use after the war.

It was also through the *Tanẓīmāt* measures that

domestic administration was separated from the military by the laws concerning the *wilāyets*. The chief occupation of the Department of the Interior was still for a long time tax-gathering. The Europeanisation and centralisation of the financial system proved to be one of the chief difficulties, as a reliable corps of functionaries had to be created at the same time. After the Crimean War, Turkey was able to conclude a number of foreign loans, but the money was not well administered nor well-used. In 1876, a state bankruptcy had to be declared, with foreign intervention as a consequence and the establishment of the service of the Public Debt, which was very much resented in all Turkish circles. A serious hindrance for the recovery of the finances was also the antiquated custom rules of the capitulations, although the original dues of 3% were several times raised. After the Young Turk Revolution, however, the greatest difficulties seemed to have been overcome.

The new Turkish army created gradually by conscription, after the suppression of the Janissaries, had during this period many occasions to show its valour. It contributed considerably to the strengthening of the patriotic Turkish spirit and played an important role in the Revolution. After 1856 it was theoretically admitted that Christians and Jews also could be enrolled, but in practice they always liberated themselves by paying an exemption tax, the *bedel-i ʿaskerī* [see BADAL]. It was only after the Young Turk Revolution that these non-Turkish elements also became Turkish soldiers.

Bibliography: Among the sources of Ottoman political history the historiographical literature of the Ottoman Turks themselves takes the first place. For this literature it is sufficient to refer to F. Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1927. The study of documentary sources is still in its beginnings; historical documents have been published in various places, as in the *TOEM* (*TTEM*) and in the works of the Turkish historian Aḥmed Refīḳ. Some of the *Ḳānūn-nāmes* have been published in *TOEM* and other Turkish publications. For the treaties of the Ottoman empire, a most valuable collection is to be found in Gabriel Effendi Noradounghian, *Recueil d'actes internationaux de l'Empire Ottoman*, 4 vols., Paris 1897-1903. On the epigraphical sources there are important monographs, such as those of Khalīl Edhem and the less ancient publications of Mubārek Ghālib. The chief work on Ottoman numismatics is still Ismāʿīl Ghālib, *Taḳwīm-i meskūkāt-i ʿOthmāniyye*, Istanbul 1307, besides other publications (such as Aḥmed Refīḳ, *ʿOthmānlî imperator lughunda meskūkāt*, in *TTEM*, nos. 6, 7, 8, 10; *British Museum catal. oriental coins*, viii); but see further on this, below, IX. Numismatics.

Of non-Turkish literary sources, the Oriental ones have been partly treated by Babinger in his bibliographical work. Among the Western sources, the Byzantine historians are of extraordinary importance for the first centuries of the Ottoman empire (Phrantzes, Ducas, Chalcocondyles, Critobulos). Since the 15th century a very important place is also taken by the *Relazioni* of the Venetian bailos, to be consulted in the great publications of Albéri (Florence 1839-63) and Barozzi and Berchet (Venice 1856-77). To them were added in course of time the reports of the representatives of other governments that entered into relations with the Porte. To the same category may be reckoned the numerous descriptions of travels in the Ottoman empire by European travellers, beginning in the 16th century. Not sharply separated from the travel literature are the many descriptions of the Turks and of the Ottoman empire, of which the best known is d'Ohsson, *Tableau général de l'Empire Ottoman*, 3 vols., Paris 1787-1820. This kind of literature continued all through the 19th century (the important works of Ubicini) and the beginning of the 20th century.

The first great "general" work on Ottoman Turkish history was Josef von Hammer's *Geschichte des osmanischen Reiches*, 10 vols., Pest 1827-35; zweite verbesserte Ausgabe, 4 vols., Pest 1834-6 (French translation by J.J. Hellert, *Histoire de l'Empire Ottoman*, 9 vols., Paris 1835-43). This work is for the greater part based on Turkish literary sources and ends with the peace of Küčük Ḳaynardja in 1774; vol. x contains an extensive list of works concerning Ottoman history which had appeared in Europe until 1774. A work of the same scope is J.W. Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, 7 vols. (until 1812), Hamburg 1840 and Gotha 1854-63; Zinkeisen used Western sources much more than von Hammer, but did not draw directly from original Turkish sources. The same is the case with N. Jorga, *Geschichte des Osmanischen Reiches*, 5 vols. (until 1912), Gotha 1908-13. The *Histoire de l'Empire Ottoman* of de la Jonquière, 2 vols., Paris 1914, is important for its historical treatment of the end of the 19th and the beginning of the 20th century. Among the several works that treat only a certain period of Ottoman history may be mentioned G. Rosen, *Geschichte der Türkei* (*1826-56*), Leipzig 1866.

As a result of the greater interest in Turkish history after the First World War, there began to be published in 1922 the *Mitteilungen zur Osmanischen Geschichte*, by F. von Kraelitz and P. Wittek, the first journal published in the West, before the advent of *Archivum Ottomanicum*, specifically devoted to Ottoman studies; it unfortunately ran for only two years, but more recently, various specialised journals and series have appeared in Turkey itself, such as *Belleten, Tarih Dergisi*, etc. carrying on the tradition of the Ottoman period and after *TOEM* (see above).

Of more recent works on Ottoman history, there is first of all a good bibliography by H.-J. Kornrumpf, *Osmanische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa*, Leiden-Köln 1973. Of general works covering the post-1500 period, see R.H. Davison, *Turkey, a short history*, Englewood Cliffs, N.J. 1968, repr. Beverley, Yorks. 1981; İ.H. Danişmend, *İzahlı Osmanlı tarihi kronolojisi*, 2nd ed. 5 vols., Istanbul 1971-2; S.J. and Ezel Kural Shaw, *History of the Ottoman empire and modern Turkey*, 2 vols., Cambridge 1976-7 (extensive bibls.); R. Mantran (ed.), *Histoire de l'empire ottoman*, Paris 1989 (authoritative chapters by various specialists).

For the earlier part of this post-1500 period, see İ.H. Uzunçarşılı, *Osmanlı tarihi*, ii-iv, Ankara 1949-59; Halil Inalcik, *The Ottoman empire, the classical age 1300-1600*, London 1973; M.A. Cook (ed.), *A history of the Ottoman empire*, Cambridge 1976 (= chs. from the *Camb. hist. of Islam* and the *New Camb. modern history*).

For the later part of this same period, there is the unsatisfactory work of H.A.R. Gibb and H. Bowen, *Islamic society and the West*, 2 vols., London 1950-7, and the classic by B. Lewis, *The emergence of modern Turkey*, London 1961, revised ed. London 1968; see also the chs. by H.J. Kissling, H. Scheel

and G. Jäschke in *The Muslim world, a historical survey* (= Hdb. der Orientalistik), iii. *The last great Muslim empires*, Leiden 1969, iv. *Modern times*, Leiden 1981.

For the Dhimmī communities, see the papers collected in B. Braude and B. Lewis (eds.), *Christians and Jews in the Ottoman empire, the functioning of a plural society*, 2 vols., New York 1982.

(J.H. Kramers*)

II. Social and Economic History

The periodisation current in Ottoman political history (see I. above) is only to a limited extent usable by social and economic historians. An alternative periodisation uses the manner of taxing the population as a starting point: a formative period down to the middle of the 9th/15th century, a "classical" age dominated by the *tīmār*, lasting to the end of the 10th/16th century, a "tax farming" period down to the middle of the 13th/19th century, followed by an age in which direct taxation gained ground, and which lasted to the end of the empire.

An alternative periodisation is based upon the development of commerce: again, a formative period lasts till the middle of the 9th/15th century, characterised by limited regional and local trade and concentration of international commerce in a few centres, principally Bursa. The second period continues to the end of the 10th/16th century, and its salient feature is the development of Istanbul into a giant city, by far the largest in both Europe and the Mediterranean region, providing a proportional stimulus to internal trade. A third period begins with the political and economic crisis of the 990s/1580s, when northern European merchants enter the Mediterranean in force. Their demands change patterns in the spice and silk trades and have an impact on production in certain regions, such as Syria or the Aegean seaboard. After the crisis of the late 10th/16th and early 11th/17th centuries, there is some recovery, which, however, is soon interrupted by the Habsburg-Ottoman war of 1095/1683 to 1110-11/1699. In the early 12th/18th century, most regions enter upon a prolonged expansion in commerce and manufacturing, whose end in the 1170s and 1180s/1760s-1770s coincides with a period of prolonged warfare. This decade should be regarded as the end of the third period. Economic dislocation and penetration by European powers characterise the fourth period, which can be subdivided by a date marking the time at which the transition of the most developed European countries to the factory system began to affect the empire's economy. Traditionally, the Anglo-Ottoman trade convention of 1254/1838 has been favoured; but since recent research has cast doubt on the significance of this date, the end of the Napoleonic Wars in 1815 constitutes an alternative "turning point". This second division of the fourth period continued until the end of the Ottoman empire. Scholars working within dependency and world systems paradigms stress the late 10/16th century as the period when the Ottoman economy was first affected by European penetration, and the years around 1215/1800 when final incorporation ensued.

Thus periodisations according to different socio-economic criteria have resulted in "turning points" at about the same dates, and there is some similarity to the periodisation used in political history. This may be due to the strong impact of the Ottoman state upon the economic life of its subjects, but also to the habituation of present-day historians to these particular "turning points".

The governing class and its subjects

Ottoman society before the *Tanẓīmāt* [*q.v.*] was divided into *ᶜaskerīs* who served the Sultan as soldiers or officials, owing allegiance to him alone (many of them slaves, *ḳul*), and the tax-paying subjects or *reᶜāyā* [see raᶜiyya. 2]. *ᶜAskerīs* were exempt from most taxes, and society's wealth was concentrated in their hands. Ottoman authors of the 10th/16th and 11th/17th centuries, particularly the historian Muṣṭafā ᶜĀlī, emphasised the rigidity of the *reᶜāyā-ᶜaskerī* boundary. In their view, *ᶜaskerīs* were to be recruited from among the sons of *ᶜaskerīs*, except in the case of officials with religious-juridical training (*ᶜulemā*), the study of the *sherīᶜat* being open to all. In reality, other *ᶜaskerīs* were also recruited from among the *reᶜāyā*. Soldiers distinguishing themselves on the frontier were awarded a *tīmār* and thus joined the ranks of the *sipāhīs*. Christian peasant boys recruited through the *dewshirme* [*q.v.*] might rise to the rank of vizier, and the financial bureaucracy, which as a separate career evolved in the 10th/16th century, was entered by men from diverse social backgrounds. However, the status of many officials from non-*ᶜaskerī* families and who were not recruited through the *dewshirme* was often precarious, with some of them experiencing denunciation and demotion.

As a *ḳul*, an Ottoman official was beholden for his entire career to the sultan, who could promote, demote and even execute him at will. His children did not inherit the right to any specific official post, even though by the 10th/16th century, the sons of *sipāhīs* by virtue of their birth could apply for a *tīmār* when they had reached the appropriate age. Other officials introduced their sons to potential patrons who might further their career in the military, scribal or financial services. Special rules of promotion applied to *ᶜulemā*, who after completing their studies taught in a sequence of progressively higher-ranking *medreses* before they became eligible for the office of *ḳāḍī* [see ᶜilmiyye]. Alone among the *ᶜaskerīs*, *ᶜulemāʾ* officials' estates reverted to their heirs, while the estates of *ḳuls* were in principle confiscated. The extreme dependence of *ḳul* officials upon the ruler reminded contemporaries of slavery: an Egyptian *shaykh* of the 10th/16th century challenged Ottoman officials as unworthy of ruling over free Muslims, unless they could present formal proof of manumission.

The ascendancy of the *ḳuls* within the Ottoman ruling group dates to the reign of Meḥemmed II the Conqueror (848-50/1444-6 and 855-86/1451-81 [*q.v.*]). He severely curtailed the role of the Anatolian Turkish aristocracy, from which his first Grand Vizier Čandarlīzāde Khalīl Pasha (killed 857/1453 [see djandarlı̊]) had come. Khalīl Pasha was executed, and many magnates were forcibly separated from their adherents by resettlement in Rūmeli. Numerous large landholdings and pious foundations were confiscated and converted into *tīmārs*. This measure increased the number of warriors at the disposal of the central state. But after Meḥemmed II's death, his son Bāyezīd II (886-918/1481-1512 [*q.v.*]) returned many properties and pious foundations to their previous holders.

The 10th/16th century saw the *dewshirme*-recruited *ḳuls* at the height of their power. Their number included Grand Viziers such as Ḳānūnī Süleymān's one-time favourite Ibrāhīm Pasha (killed 942/1536) and his successors Rüstem Pasha (died 968/1561) and Sinān Pasha (died 1004/1596). While recruitment through the *dewshirme* remained a privilege of the sultan, high-ranking officials sometimes trained young *ḳuls* in their own households; these might be taken over into the sultan's service. Prominent administrators often had their relatives and countrymen recruited through the *dewshirme*; this gave rise to the

formation of patronage networks and regional groupings. A particularly successful example was the Soḳollu [*q.v.*] clan, founded by Soḳollu Meḥmed Pas̲h̲a (killed 987/1579), who acted as Grand Vizier to Ḳānūnī Süleymān (926-74/1520-66 [*q.v.*]), Selīm II (974-82/1566-74 [*q.v.*]) and Murād III (982-1003/1574-94 [*q.v.*]). In the later 10th/16th century, the "easterners", who came from the Caucasus and often had seen service in the Persian administration, opposed the "westerners", a group which included Serbs, Croats and Albanians.

In the 11th/17th century, the *dews̲h̲irme* became less important as a mode of recruitment into the Ottoman ruling group. High-level officials now took promising young men into their households and launched them on to their careers, thereby securing their own positions. Loyalty to one's patron constituted one of the principal virtues of an Ottoman gentleman. Rivalries between members of different households were commonplace. The household of the *S̲h̲eyk̲h̲ ül-Islām* Fayḍ Allāh Efendi (killed 1115/1703), well-documented through the *S̲h̲eyk̲h̲ ül-Islām*'s autobiography, demonstrates the manner in which the system operated; yet Fayḍ Allāh in part fell from power because of excessive nepotism. Patronage relations continued to be important well through the *Tanẓīmāt* period, even though the differences in legal status between *ʿaskerīs* and *reʿāyā*, as well as the sultan's right to execute his servitors at will, were abolished by the guarantees of life, liberty and property promulgated by the *Tanẓīmāt fermānī*.

The coherence of the political structure was ensured by the sultan, in whose name the *ʿaskerīs* ruled and collected taxes. As the victor over heretics and infidels, the sultan legitimised the entire state. Spectacular failure in war was a reason for deposing a ruler, thus Meḥemmed IV (1058-99/1648-87 [*q.v.*]) and Muṣṭafā II (1106-15/1695-1703 [*q.v.*]) lost their thrones due to the outcome of the Ottoman-Habsburg war of 1095-1111/1683-99. Down to the late 10th/16th century, the ruler was expected to take the field in person, and the historian Muṣṭafā ʿĀlī censured Murād III for failing to do so. Well into the reign of Ḳānūnī Süleymān, the ruler dined regularly in front of his soldiers even in peacetime, thereby documenting his good health and preparedness for war. However, in his later years, Ḳānūnī Süleymān developed a different style of palace life; now the remoteness of the ruler and the fact that he rarely spoke in public were regarded as proof of his dignity. From the later 10th/16th century onwards, the sultan was no longer required to take an active role in government, and administration lay in the hands of Palace dignitaries and the Grand Vizier; the Grand Vizier's power was particularly great during the Köprülü vizierates (1066-1122/1656-1710 [see KÖPRÜLÜ]).

Tension between *ʿaskerīs* and *reʿāyā* focused on the status of men serving as soldiers without possessing the rights of *ʿaskerīs*. In the 11th/17th and 12th/18th centuries, provincial governors recruited and paid their own forces; the latter possessed no official status and lost their jobs when the employing *pas̲h̲a* lost his, a frequent occurrence. In the 11th/17th century, these men often rose in rebellion to safeguard their positions, or else forced the employing *pas̲h̲a* to do so. Unemployed mercenaries turned to highway robbery, against which Anatolian villagers at the end of the 10th/16th and 11th/17th centuries defended themselves by organising their own militias. Conflicts between mercenaries in the service of a *pas̲h̲a*, unemployed soldiers and village militias constituted the civil wars known as the D̲j̲elālī rebellions [*q.v.* in Suppl.]. In Rumeli mercenaries of *reʿāyā* background fighting on the frontier were thrown out of employment when the Ottoman empire lost territory in the peace of Ḳarlofča (1110-/1699 [*q.v.*]) and later peace treaties; this was the background of the *hayduk* rebellions.

Peasant status and power in the countryside

Down to the end of the 10th/16th century, the Ottoman élite's principal means of controlling the *reʿāyā* was the *tīmār*. *Timār* holders (*sipāhīs*) at this time constituted the backbone of the army, but also were in charge of local administration. Peasants were not permitted to leave their farmsteads without the permission of the *sipāhī*. If they did, the *timār* holder could have them returned by applying to the *ḳāḍī*'s court within a delay varying between ten and twenty years according to the locality. However, the responsibility of proof was on the *sipāhī*, and many migrants were able to provide witnesses testifying to their residence for the requisite period. Ottoman regulations accepted the existence of *reʿāyā* not included in the official tax registers (*taḥrīr*) (*k̲h̲āric̲j̲ ez defter*). The latter migrated, and only if they continued to reside in the same place for a prolonged period of time, were they entered in the *taḥrīr* register.

Farmland and pasture normally belonged to the state, and the peasant owned only his house, gardens and vineyards. Peasant tenures passed from father to son, other relatives inherited against payment of an entry fine (*resm-i ṭapu*). Daughters were originally excluded; with the increasing impact of *s̲h̲erīʿat* inheritance rules from the end of the 10th/16th century onwards, they were admitted in the absence of sons. Peasants in the 10th/16th century were forbidden to sell their tenures without the consent of the relevant *timār* holder, foundation administrator or grantee of crown lands. However, such permission was often granted, and by the end of the century in some regions we encounter a lively land market. In the Kayseri area, fields formally owned as private property became widespread in the course of the 12th/17th century. The Ottoman land law of 1274-75/1858 [see MARʿĀ. 3. In Turkey] sanctioned the transition to private property, which in the Ottoman core lands had been going on for several centuries. But in those areas where land had been tribally owned this law furthered the formation of large-scale private property, as tribal leaders registered communal lands as their own.

Taxation rates varied from region to region; the determining factor was often historical circumstance, rather than the productivity of a given area. The tithe (*ʿös̲h̲ür*) was higher than one-tenth, as a share for the tax collector (*salāriyye*) was usually included. In parts of eastern and central Anatolia, where taxes were shared between the state and private landowners, the peasants paid a double tithe (*mālikāne-dīwānī*). In Syria and Palestine, tithes might amount to a quarter or a third of the crop. Tithes were demanded in kind; in addition, the peasants paid money taxes both to the *timār* holder and to the central administration. The proportion of total dues payable in money varied according to time and place.

In the early Ottoman period, peasants provided labour services for their *sipāhī* (*yedi ḳulluḳ*, "seven services"). When the regulations preceding Ottoman tax registers, the so-called *ḳānūn-nāme*, codified peasant-*sipāhī* relations in the 9th/15th and 10th/16th centuries, most labour dues had been commuted to payments in money and in kind. However, even at this time, peasants were obliged to build a tithe barn for their owner, and cart the *sipāhī*'s grain to the

nearest market. The judges' protocols (*ḳāḍī sid̲j̲illeri*) of certain provinces record the tensions ensuing from these relationships, such as disputes as to what constituted the nearest market. Conversion of dues in kind into money payments caused difficulties in areas remote from the main thoroughfares, where opportunities for commercialisation were few. In the late 10th/16th and early 11th/17th centuries, *reʿāyā* attempts to shake off *sipāhī* control can also be traced through the justice rescripts (*ʿadālet fermānlari̊*). The *ʿadālet-nāme* of 1058/1648 explains that it was not sufficient if peasants paid their taxes to the *sipāhī* or other legal claimant to the village revenue; they also owed him submission and obedience. But the *sipāhī*'s frequent absence on campaign, the limited material means at his disposal and peasant access to the *ḳāḍī*'s court made it impossible for the former to exercise full control over the peasants.

Down to the mid-9th/15th century, the Ottoman state probably was a "light" state, demanding but limited prestations from the *reʿāyā*. But the campaigns of Meḥemmed the Conqueror led to an increase in peasant taxes, and the contemporary chronicle of ʿĀs̲h̲iḳ-pas̲h̲a-zāde reflects the dissatisfaction of a member of the Anatolian aristocracy with the newly-emerging, much more costly state. In the 9th/15th and 10th/16th centuries, taxes were normally collected by the holders of *timār, zeʿāmet* and *k̲h̲āṣṣ*, who owed military or administrative service and therefore did not remit much cash to the central administration. From the later 10th/16th century onward, the increasing costs of war induced the central administration to progressively substitute tax farming [see MÜLTEZIM]. Tax farmers acquired the right to collect taxes at auction. The contract in principle was awarded for three years, but could be terminated earlier if a higher bid was received. A tax farmer also acted as local administrator, but could be from the *reʿāyā*. A wealthy villager might bid for the taxes of a single settlement, while the major tax farmers were rich men and occasionally women, often close to the court.

In 1106-7/1695, a new kind of tax farm was instituted, the *mālikāne* [*q.v.*], which combined features of the *timār* and the old style tax farm. The *mālikāne* holder paid a large sum of money to the treasury upon entering possession. For the remainder of his or her life, annual payments were fixed at a moderate level. *Mālikāne* holders had to be part of the Ottoman ruling group. The *mālikāne* was instituted to ease the pressure upon the *reʿāyā*, as it was claimed that long-term holders would be concerned about the future of their tax base, while ordinary *iltizām* holders were concerned only with short-term gain. However, frequent subletting for short periods tended to nullify this advantage.

Tax farmers of different types were an important component of the *aʿyān* [*q.v.*], local power holders who from the late 11th/17th century onward dominated growing sectors of the Ottoman countryside without necessarily being landowners. A major source of *aʿyān* power was the right to apportion taxes, levied *en bloc* by the central administration, among individual settlements. This allowed *aʿyāns* holding land to spare "their" peasants at the expense of their neighbours, and thus to gather a clientèle. Prominent power holders became tax gatherers for absent provincial governors, and in coastal regions with opportunities for export, marketed the produce gathered as taxes in kind, along with the saleable surpluses belonging to villagers. The Ḳara ʿOt̲h̲mān-og̲h̲ullari̊ of Izmir and Manisa, for instance, rose to power in this fashion. Even though the sultans of the 11th/17th and 12th/18th centuries often had the heads of *aʿyān* families executed, the treasury needed the family's services, and thus the following generation was allowed to follow in their fathers' footsteps.

Only in the reign of Maḥmūd II (1233-55/1808-38 [*q.v.*]) was this policy reversed; this sultan relied on European, particularly British, support to eliminate internal opposition. Many *aʿyāns* were executed and their possessions confiscated; those who remained were often still wealthy but no longer a political threat to Ottoman central government. Even though the major *aʿyāns* of the 12th/18th and 13th/19th centuries had considerable military forces at their disposal, only a few of them seem to have aimed at political independence. Culturally speaking, they looked toward Istanbul, and in their residences imitated the mural paintings then current in the Palace and the wealthy dwellings of the capital. Some of them fostered an interesting adaptation of rococo and empire decorative styles.

Landholdings in the hands of wealthy power holders are known as *čiftliks* [*q.v.*]. Recent research downplays the importance of market-oriented large-scale production before the 13th/19th century. Such production occurred, by the end of the 11th/17th century, in the western Black Sea region with a view toward the Istanbul market. In the 12th/18th century, *čiftliks* spread to Macedonia, and part of their production was now destined for export. Many *čiftliks* used sharecroppers in addition to wage labourers and a small number of slaves. Most of them were not large, and those that were, often appropriated some of the product which, under the earlier régime, had been left in the hands of the peasants. Saleable surpluses were normally produced by peasants, and the power holders reserved for themselves the profits of commercialisation.

Peasant production

In its vast majority, the Ottoman population consisted of settled peasants producing mainly for their subsistence and controlling their family farms. Peasants grew wheat and barley, leaving a one-year fallow period between crops. Rye and millet were of secondary importance. Oil was gained from plants, such as sesame, linseed or poppy; melted butter was also widely consumed. Olives were important in northern Syria, Crete and northwestern Anatolia. But olive oil was largely used for lighting; its use as a food seems to have been secondary. Grapes were consumed as raisins and grape syrup, most towns being surrounded by a belt of gardens and vineyards. Non-Muslims also produced wine, which Ḳānūnī Süleymān forbade them to sell in public. But at least in Ottoman Hungary, the prohibition was hard to enforce, as the *timār* holders of this area had taken over the monopoly of wine sales during part of the year (*monopolya*). Honey was also produced.

Certain regional specialities were highly esteemed; thus English merchants of the 11th/17th century were granted the privilege of exporting a small quantity of Aegean raisins for the table of their king. During the same period, Malatya was already renowned for high-quality fruit, while hazel nuts were found on the Black Sea coast. Cotton cultivation, according to 10th/16th century tax registers, was significant in certain parts of Syria [see KUṬN. 2. In the Ottoman empire], in the Adana region and on the Aegean coast, while flax was grown in northwestern Anatolia. Tobacco appeared in the central Anatolian countryside by the beginning of the 12th/17th century, introduced by soldiers who had become accustomed to its use on the Hungarian frontier. Tobacco cultivation spread in spite of

repeated prohibitions. Many specialty crops have persisted in the same locations for several centuries.

In the 10th/16th century, rice [see RUZZ] was still a luxury. It was cultivated mainly in the areas of Filibe (Plovdiv) and Boyabat in northern Anatolia. Rice was rarely grown by ordinary peasants, but by specialised labourers, working under supervision and without any farms of their own. They were exempt from the taxes payable by other peasants. Possibly they had originally been war captives, although there is room for debate whether rice growers were better or worse off than ordinary peasants. Maize entered western Rumeli and northern Anatolia during the 11th/17th and 12th/18th centuries. Villagers dependent on landlords (so-called *čiftlik* villagers) sometimes cultivated wheat for their masters and maize for their own consumption.

Small-scale irrigation [see MĀʾ. 8. Irrigation in the Ottoman empire] was widespread throughout the Empire, even though 10th/16th century plans to make a "second Egypt" out of the lake districts of central Anatolia did not come to fruition. Water power was used for industrial purposes, particularly the milling of flour; 10th/16th century tax registers record the number of mills in each village, and often the number of months during which available water supplies permitted operation. In villages near 10th/16th and 11th/17th century Salonica, water power was used for the fulling of woollen cloth, while in the Bursa-Izmit area, sawing mills were also water-driven. These activities were market-oriented and therefore located in the vicinity of larger towns.

Urban merchants in certain regions intervened in village production. In the second half of the 10th/16th century, Ankara merchants had angora wool spun in steppe villages, while in the more immediate vicinity of the city, cloth was woven. Similar arrangements existed in the Bursa and Aydın cotton manufactures. This putting-out system coexisted with the direct marketing of rural products by peasants.

Most peasant marketing was probably undertaken to earn the cash needed for taxes. In many parts of 10th/16th century Anatolia, markets expanded as population increased. Only occasionally did rural dwellers demand urban goods and services, such as jewelry or repairs to a heavy plough. Itinerant artisans catered for some of this demand, repairing copper kettles or putting up mudbrick walls. These migrant artisans, sometimes enrolled in the Janissary corps, competed with urban craftsmen. Peasant-nomad exchanges were less unequal; these took place at seasonal fairs, often sited on summer pastures used by both villagers and nomads.

Nomads and other herdsmen

Nomads in Rūmeli and Anatolia often grew some wheat, barley or cotton in their winter quarters. As many villagers on the Aegean and Mediterranean coasts migrated into the mountains in summer to escape the danger of malarial infection, social differences between peasants and nomads were less pronounced here than in sub-desert areas. Yet this did not preclude disputes about fields and gardens damaged by nomad flocks, or outright robbery on the part of armed and mounted tribesmen. Nomads and semi-nomads were important to the urban transport economy, as they raised the horses, camels and mules needed by merchants and officials.

But nomads were more difficult to tax than settled peasants, and due to their possession of horses and firearms, the administration regarded them as potential robbers and rebels. The settlement of Anatolian nomads was therefore officially encouraged. Animal taxes were sometimes levied in such a manner as to endanger the reproduction of flocks. If a degree of settlement had been reached, nomad groups were reclassified as low-level districts (*nāḥiye* [*q.v.*]) settled by peasants. In the 10th/16th century, Anatolia was a land of peasants, with a nomad minority varying in size according to the region. Migration from eastern to western Anatolia probably resulted in a higher percentage of nomads in the 12th/17th century, which the earliest official attempts at forcible settlement did not change. Settlement projects continued in the 12th/18th and particularly 13th/19th centuries, after the immigration of Muslim inhabitants from the Crimea and Balkan territories lost by the Empire necessitated the creation of new opportunities for peasant settlement. Particularly in southeastern Anatolia, commercial agriculture became possible after large numbers of nomads had been forcibly settled.

In Rūmeli nomads were an important component of the population, mainly in Thrace. These *yürüks* [*q.v.*] were detribalised at an early stage, and given a military organization. The *yürüks* were organized in units called *od̲j̲aḳs* [*q.v.*], some members participating in campaigns while the others financed the campaigners' equipment. From the 10th/16th century onward, nomads were no longer employed as fully-fledged soldiers but mainly as auxiliaries. Yet their services were still needed, and therefore the central administration penalised *yürüks* who settled by increasing their taxes. Ottoman Rumeli also was inhabited by Christian migrant herdsmen, the Vlachs, who enjoyed tax exemptions. With trade between central Europe and the Balkans increasing in the 12th/18th century, many Balkan herdsmen prospered as transportation entrepreneurs.

Trade

The bulk of Ottoman trade was internal. Istanbul was supplied through interregional trade, involving the shores of the Black Sea, the Aegean and even Egypt. Down into the 13th/19th century, wheat and barley came mainly from the western coasts of the Black Sea. Fruit, both fresh and dried, was supplied mainly by western Anatolia and Thessaly, while meat on the hoof came to Istanbul from the Balkan peninsula and to a lesser extent Anatolia. The capital's needs for timber and firewood were supplied largely from northwestern Anatolia, where certain forests had been set aside for the Imperial Arsenal. Around the turn of the 12th/17th century, Istanbul Janissaries were active in both the legal and the illegal trade in wood, the latter responding to the high demand for this commodity in Cairo. Melted butter arrived at the capital from the steppes to the north of the Black Sea. Agriculture and forestry in the region surrounding Istanbul thus conformed quite well to the ring pattern analysed by Von Thünen, modified by the fact that the Bosphorus permitted easy access to both the Black Sea and the Mediterranean. Aleppo's hinterland was less vast, but still encompassed southeastern Anatolia and northern Syria. The city received grain, cotton thread and cloth, silk, soap and olive oil from the surrounding region. Cairo was supplied by the Nile valley; at its ports there arrived grain, linen, linseed and vegetables.

But as the capital of the Empire, Istanbul possessed an economic advantage: as the taxes of the entire state accumulated there, purchasing power was concentrated in the city. Provincials, with limited access to the gold and silver imported through foreign trade, delivered agricultural produce and manufactured goods to Istanbul in order to earn back the cash

previously paid out as taxes. According to the price lists (*narkh defterleri* [see NARKH]) of Istanbul, fabrics, leather, copperware and other specialties arrived from remote provinces. But due to the city's political advantage, its inhabitants did not pay for the goods and services they received by offering others in return.

In the 9th/15th century, Anatolian manufactured goods were exported, principally to the countries north of the Black Sea. In exchange, oil, honey, skins and hides reached Ottoman territory. The merchants conducting this trade were mainly Muslims; the conquest of Genoese Black Sea bases gave the Ottomans an advantage over the Italians, and in the course of the 10th/16th century, the Black Sea was closed to non-Ottoman traders. After the conquest of the Arab provinces Ottoman merchants and administrators controlled the trade routes passing through Egypt and Syria. Traders based in Cairo dealt with India, importing Indian fabrics and spices by way of the Red Sea. The importation of coffee from Yemen became economically significant in the second half of the 10th/16th century [see ḲAHWA]. This trade was profitable enough to counterbalance the loss of transit trade in spices to Venice, after the Dutch had monopolised the importation of spices to Europe at the beginning of the 11th/17th century. Aleppo was a major entrepot of the silk trade, where raw silk from Persia was sold to Ottoman, Venetian, English and French merchants [see ḤARĪR. ii. The Ottoman empire]. Damascene traders supplied the pilgrimage caravans, and also delivered manufactured goods to the Ḥidjāz. This expansion of the area in which Ottoman traders operated stimulated the economy in general.

While the Venetians had specialised in the transit trade in silks and spices, the English merchants, who entered the Mediterranean during the closing years of the 10th/16th century, paid for the silk they purchased with moderately-priced English cloth; their competition caused the woollens of Salonica to disappear from the market. French merchants from Marseilles bought and sold a wide range of goods, which in the 12th/18th century included woollen cloth from Languedoc. They also purchased olive oil and grain in Tunisia, and acted as shippers. The depredations of pirates and corsairs gave European ships a competitive advantage over Ottomans [see ḲURṢĀN. 2. In Turkish waters], as they were able to offer better security, and by the 12th/18th century, even trade between ports of the Ottoman Empire was largely effected in European ships.

During the 11th/17th century, Ottoman non-Muslims gained ground *vis-à-vis* their Muslim competitors, benefiting from the expansion of European trade. As the capitulatory rights granted European merchants also became more important during this period [see IMTIYĀZĀT], many members of the minorities were able to gain tax privileges by registering as servitors of foreign consulates. However, this did not preclude lively competition between Ottoman and foreign merchants. In the 12th/18th century Greek traders benefited from French involvement in wars to expand their merchant marine and establish a successful diaspora not only within the Ottoman, but also the Habsburg and Russian empires. Syrian Catholics traded in Egypt, Serbs were active in Vienna, while the woollen cloth weavers of Filibe (Plovdiv) marketed their goods throughout Anatolia. In many areas, the transformation of local economies away from manufactured goods and toward the provision of grain and raw materials to European buyers did not take place until the 13th/19th century. Capital resources accumulated by non-Muslim merchants were often used to bolster the resistance of local economies against foreign control.

Integration into the European-dominated world market during the 13th/19th century did, however, politicise pre-existing communal tensions. In the 1260s-1270s/1840s-1850s Damascus merchants involved in the supply trades encountered serious difficulty due to the increasing export of grain to Europe in which non-Muslims were active. This was the economic background to an attack on the Christian quarters of Damascus in 1276/1860.

The Ottoman government of the *Tanẓīmāt* period (1255-93/1839-76 [*q.v.*]) responded to the threat of economic and political disintegration by the construction of railways and telegraph lines, and permitted the modernisation of the major ports. However, these investments were expensive, particularly the kilometric guarantees demanded by foreign investors in the railways, so that the latters' benefit to the Ottoman economy is open to question. Most lines linked a port to the hinterland or, in cases where the government imposed its will, strategic rather than economic considerations determined the course of the railways. Ottoman spending on war and infrastructure having led to bankruptcy in 1296-97/1879, major sources of revenue were pledged to the settlement of debts and committed to administration by a consortium of creditors known as the *Dette Ottomane*. For the remainder of the empire's existence, Ottoman public spending was limited by the constraints imposed by this consortium.

Monetary developments

While the use of cash continually expanded throughout Ottoman history, even the *timār* system in its early shape could not operate without a money economy. Down to 882/1477-78, when the first Ottoman gold coin was minted, roughly corresponding in weight and fineness to the Venetian ducat, the Ottoman mints turned out silver coins only. The *aḳče* [*q.v.*] before the devaluation effected by Meḥemmed the Conqueror weighed 1.01 gr. and 0.83 gr after this event. Throughout most of the 10th/16th century, the *aḳče* stood at 0.73 gr; a new wave of devaluation occurred at the end of the 10th/16th century, at a time when imports of silver from the New World had also resulted in a price rise. The latter was viewed by contemporaries as a major calamity, affecting not only the conduct of trade but the legitimacy of the state. In spite of several currency reforms, in the course of the 11th/17th and 12th/18th centuries the *aḳče* was devalued to such an extent that it disappeared from the market and only survived as a money of account. Its place was taken by the *pāra* [*q.v.*], originally an Egyptian coin valued at twice or three times the rate of the *aḳče*, and by a number of European silver coins collectively known as *ghurūsh*. These were also debased, as the importation of low-quality European coins constituted a major business at the end of the 11th/17th century. Local mints virtually ceased operation. There was a brief experiment with a trimetallic system in the late 11th/17th century. Copper, which hitherto had been used only in small transactions, was now declared legal tender. Uncontrolled inflation led to a return to the bimetallic standard after three years.

Debasement as a means of raising revenue was abandoned in 1260/1844, when a new bimetallic system was established, based on the silver *ḳurush* and gold *lira* (100 *ḳurūsh* = 1 *līra*). This standard was adhered to till the very end of the Ottoman Empire, as monetary stability was now regarded as essential to the needs of trade. To cope with budget deficits, the

authorities occasionally issued paper money and then allowed it to depreciate, or contracted the loans which finally caused the bankruptcy of 1296-97/1879 (see further, below, IX. Numismatics).

Urban artisans

Many urban producers were organised in guilds, which had adopted rituals of the *Akhīs* [*q.v.*], organisations of young men which Ibn Baṭṭūṭa encountered in many early 8th/14th century Anatolian towns; however, the *Akhīs* were not organised by craft, and the exact link between guilds and *Akhīs* is little understood. Guilds were headed by a *sheykh*, whose role was in decline by the 12th/18th century. Daily business was conducted by the *ketkhüdā* and *yigitbashi*, who were elected by the guildsmen and confirmed by the administration; guild officials purchasing their offices are also on record. Guilds were composed of masters; apprentices and hired labourers (*ishčis*) were not members, and masters tried to discipline their employees through their guilds. In some places, such as 10th/16th century Jerusalem or 12th/18th century Bursa, the guilds could be entered easily. At times, it was probably sufficient to pay the requisite taxes to be considered a guild member. But in other instances, masters refused the entry of newcomers under the pretext of insufficient skills; in Bursa, where such cases are also on record, rejected masters sometimes formed new "business centres" on the outskirts of the city.

Guildsmen often procured raw materials collectively, by agreement with the farmer of a mine or else another guild. *Yigitbashis* and *ketkhüdās* were in charge of distribution among individual artisans, and often the small masters complained that their more successful colleagues obtained more than their due; or else suppliers found it advantageous to sell to merchants at higher prices, particularly if the goods in question were also in demand in the export market. If the artisans whose interests were hurt by this intrusion of the free market made their complaints heard in Istanbul, export prohibitions were promulgated. In other cases, guildsmen preferred to abandon collective purchases altogether.

In the 11th/17th to early 13th/19th centuries, guildsmen developed a form of property known as the *gedik* [see ṢINF], which encompassed the locale and tools necessary for the exercise of a given trade. This was a response to increased demands for rent from property owners, particularly *waḳifs*, which resulted from the demand for revenue placed upon the latter by the Ottoman administration. Once a given property had been recognised as forming part of a *gedik*, it could only be turned over to another guildsman, and guild officials had to approve the transaction. This arrangement protected the interests of craftsmen in contracting trades, but made overall adjustments to changing demand more difficult. The Ottoman administration, torn between the need for increased revenue from *waḳifs* and the wish to protect its urban tax base, did not prevent *ḳāḍīs* from recognising the *gedik*.

From the government's point of view, the guilds were important as a means of securing control over the urban population. In wartime, the guilds were obliged to provide artisans accompanying the army and undertaking the maintenance and repair work needed by the soldiers. Other guilds were obliged to find rowers for the navy. Assessment was not equal, and gave rise to frequent disputes.

Prices demanded by artisans were decreed by the market inspector (*muḥtesib* [see ḤISBA]) or *ḳāḍī*, after consultation with the heads of the relevant guilds. In Istanbul and other large cities, official prices were recorded in special registers or entered into the *ḳāḍī sidjilleri*; in smaller towns only the prices for basic foodstuffs were officially promulgated. The Palace often demanded goods at less than the official price. Profit margins for artisans ranged between 10 and 20 per cent, while long-distance traders were much less closely controlled. Capital formation by artisans was difficult, although there were instances of craftsmen branching out into trade without severing their links to manufacture.

Craft guilds retained their vitality throughout the 13th/19th century, particularly in Istanbul. With European investment growing, especially in the transportation sector, guilds defended the interests of dockyard workers and others whose livelihoods were threatened by technical and organisational reshaping of enterprises. The Ottoman government, both before and after the revolution of 1326/1908, saw the revendications of these guilds as a means of augmenting its own bargaining power *vis-à-vis* foreign interests, and adopted a neutral or even favourable stance. In the long run, however, the restructuring of enterprises within the framework of dependent capitalism weakened the power of the guilds.

Not all urban handicraft workers were guild members. In 10th/16th and 11th/17th century Bursa, slaves were employed by silk weavers and merchants; after manumission, some of them set up independent businesses and then joined the guilds. Women working for artisans also were not usually members. New migrants to the city, unable to enter a guild, often made a living as street sellers; this was resented by the guildsmen, as these unorganised competitors paid no taxes. During the migrations which accompanied the Djelālī rebellions (late 10th/16th-early 11th/17th centuries) many such migrants were active in towns along the principal routes to Istanbul. Some of the migrants were destitute; at the end of the 10th/16th century, a prison was built in Üsküdar to facilitate catching these people and sending them back to their places of origin.

Urban society and spatial structure

In Ottoman cities, most artisan activities took place in the *čarshi*, a district filled by *khāns*, the covered market (*bedestān*) and *waḳf*-owned shops. Only transients renting accommodation in a *khān* resided in the *čarshi*. Down to the middle of the 13th/19th century, construction in residential quarters was not planned by any central authority, which only from time to time decreed that encumbrances in public thoroughfares needed to be removed, or that non-Muslims must not reside in Muslim quarters so that existing mosques would be ensured of a congregation. Most day-to-day affairs were in the hands of the *ketkhüdās* of town quarters or communities, disputes being adjudicated by the *ḳāḍīs*. From the *Tanẓīmāt* period onwards, newly-founded town quarters were sometimes designed according to a master plan; the Ottoman administration was concerned about securing streets wide enough for wheeled traffic and the passage of fire trucks. In Istanbul and Bursa, neighbourhoods in fashionable areas were reorganised according to criteria derived from contemporary French urban planning; by the late 13th/19th century, the results of such planning were seen in Anatolian provincial towns as well. To administer these projects, special administrations were instituted; these involved the creation of representative bodies through which urban élites influenced planning.

Building styles in vernacular architecture varied according to the region but also the time period involv-

ed. The impact of Istanbul models can be discerned in 13th/19th century houses in present-day Greece, Bulgaria and Albania and also in western and central Anatolia. In the area where Istanbul influences were strong, such as in Ankara from the late 11th/17th century onwards, multi-story buildings were common; in certain places, upper floors were often reserved for summer use. Houses of this type contained numerous windows overlooking the street, with special arrangements to prevent passers-by from looking in. In Syria, houses were built around a courtyard, turning only a blind wall to the street. Normally a house was inhabited by a single family, but exceptions to this rule were numerous, such as poor families sharing a single courtyard. "Apartments" were in use in Cairo and possibly also in parts of 12th/18th century Istanbul.

Social dynamics

In the 9th/15th and 10th/16th centuries, high and medium-level officials as well as merchants possessed opportunities for capital formation, but *ʿaskerīs* were the dominant group. *ʿAskerīs* enjoyed greater revenues than *reʿāyā*, although apart from the *ʿulemāʾ* they were not usually able to transfer their fortunes to their heirs. *ʿAskerīs* also controlled the economic power of the state apparatus, which was the largest single entrepreneur in the land. Mines were mostly owned by the state, and large enterprises such as the Arsenal and major building sites were financed and run by the central administration. Ottoman authors emphasised the submission of all officials to the will of the sultan, but many *ʿaskerīs* were able to use political opportunities for private gain. Merchant-*ʿaskerī* conflicts are only documented indirectly; late 10th/16th and 11th/17th century texts wax eloquent concerning the corrupting power of money, but nowhere do we find the assumption that the handling of money is exclusively the province of the merchant. Some Ottoman officials subscribed to the view, derived from the teachings of Ibn Khaldūn, that gainful activity should be reserved for the *reʿāyā*, but this view was challenged by others. In most instances, *ʿaskerīs* viewed their economic interests as coinciding with those of the state in general. The Ottoman state should not be viewed as an abstract entity totally separate from the *ʿaskerī* class.

Down to the second half of the 12th/18th century, Ottoman power rested on the agricultural revenues of a vast territory and on the control of internal trade routes. Revenues from international commerce were of secondary importance. Commercialisation of agricultural revenues was important from at least the 9th/15th century, and increased particularly in the 10th/16th and 12th/18th centuries. In the 9th/15th and 10th/16th centuries, Muslims dominated a large share of Ottoman trade, including certain branches of international commerce. Non-Muslims rose to prominence with the expansion of trade with Europe; but down to the late 12th/18th century, Muslims continued to be very active as merchants, although they had lost control of shipping, and certain, though not all, local industries succumbed to European competition. The role of many non-Muslim merchants involved not only co-operation with Europeans but also strenuous competition. The Ottoman realm was integrated into the world economy dominated by Europe only after a protracted struggle.

III. Literature

The literature to which the name of Ottoman is now generally given arises out of the literature of the O<u>gh</u>uz Turks, who settled in Asia Minor in the Sal<u>dj</u>ūḳ period and later in the time of the Ottomans in Rūm-ili, where they founded a powerful empire. This literature, which had an uninterrupted development from the time of the Sal<u>dj</u>ūḳs up to the beginning of the 20th century, was based on the literatures of still older dialects and remained in touch with these in all periods of its evolution. Especially since the 16th century, it became the most important and richest branch of all the Turkish literatures and exercised an influence on the literature of the other dialects. Here the general evolution of this literature will be sketched, noting its main genres and principal personalities. We shall deal not only with the classical literature which was confined to the upper classes, but also—in their general features—with the literature of the masses, that of the poet musicians (*sāz <u>sh</u>āʿirleri*) and the literature of the various mystic groups.

Ottoman literature may be divided into three great periods, corresponding to the general development of the history of Turkey:

a. Muslim literature from the 13th century to the end of the 16th century.

b. After 1600 AD.

c. European-type and national literature, arising out of the development of the nationalist movement, to the end of the Ottoman dynasty.

These will be examined in chronological order, in order to avoid arbitrary distinctions.

(a) Until 1600 A.D.

1. *The beginnings*

We find the first written examples of Ottoman Turkish literature already flourishing in the 13th century, and the works of that literature can be divided into three types:

1. Classical mystical (Ṣūfī) literature;
2. Religious mystical folk literature; and
3. Classical (later called *Dīwān*) literature.

Given that the Mongol invasion of Anatolia gave an impetus to the spreading of mystical views there and to the literary activities based on them, we shall have to consider this period as the starting point. During the Mongol invasions, the migration from Persia and Turkestan to Anatolia was intensified: scholars, Ṣūfīs and dervishes of various sects (e.g. Na<u>dj</u>m al-Dīn Kubrā (d. 1226 [*q.v.*]), Ḳuṭb al-Dīn Ḥaydar), and rich merchants settled down in Anatolia. Amongst them were major poets as well, such as Fa<u>kh</u>r al-Dīn ʿIrāḳī (d. 1289 [*q.v.*]), author of the theosophical poem *Lamaʿāt*, Awḥad al-Dīn Kirmānī and <u>Sh</u>ey<u>kh</u> Na<u>dj</u>m al-Dīn Dāya (d. 1256). These Ṣūfīs settled in the cultural centres of Anatolia, such as Tokat, Kayseri and Sivas, and enjoyed the patronage and respect of the Rūm Sal<u>dj</u>ūḳ sultans, and attracted extensive popular followings. In this way, Ṣūfī concepts and ideas spread effectively amongst the folk masses over wide areas. In addition, when we consider that Ibn ʿArabī (d. 1240), and his step-son and interpreter Ṣadr al-Dīn Ḳonawī, both settled in Konya after having found peace and tolerance at the Sal<u>dj</u>ūḳ court, we can assume that already in the 13th century a cultural milieu for the future development of classical Ṣūfī literature had been prepared. Moreover, Rūmī both elaborated and popularised Ibn ʿArabī's mystical ideas within the spiritual and formal framework of classical Islamic literature. Thus he introduced the aesthetic conceptions and formal constructions of classical Islamic literature to Anatolia; he also played a most important role in the furthering of both classical (*Dīwān*) literature and the classical Ṣūfī literature of the Mewlewī order which arose after him [see mawlawiyya].

The foundations of Ṣūfī literature were laid by Ḥa<u>dj</u>dj<u>ī</u> Bekta<u>sh</u> Walī, one of the dervishes of Ḳuṭb al-Dīn Ḥaydar who also came from <u>Kh</u>urāsān and settled in Sulu<u>dj</u>a Ḳara Höyük, in the vicinity of Ḳîr<u>sh</u>ehir, spreading his Bābāʾī-Bāṭinī views. As with Mawlānā, he also laid the foundations of the so-called Bekta<u>sh</u>ī literature, the literature of the Ṣūfī order named after him, that which was greatly developed later on in Janissary circles [see bektā<u>sh</u>iyya].

Alongside this Ṣūfī folk literature there developed a religious folk literature based on the tradition of singing of poetry with musical accompaniment (*sāz*) [see also nefes]. This became widespread among the army and the city folk, the Turcoman tribes and the frontier *<u>gh</u>āzīs*, and the folk minstrels, under the influence of the religious atmosphere, and it included heroic epic cycles and also short pious tales (e.g. the *Baṭṭāl-nāme, Dāni<u>sh</u>mend-nāme*, the Tale of the Gazelle, Tale of the Dove, etc.) This religious folk literature should accordingly be added to the Turkish literature of the 13th century.

The works belonging to the classical Ṣūfī literature of this period were composed with the metres and forms of classical Islamic literature. This meant that the first poets had to face the difficult task of applying the rules of the *ʿarūḍ* metre to the phonetic system of Turkish. As a result, we witness in these early poems a lot of unnatural and forced expressions. Amongst these works we should mention the following: two religious *ma<u>th</u>nawīs*, the *Čar<u>kh</u>-nāme* and the *Ewṣāf-i mesā<u>dj</u>id-i <u>sh</u>erīfe* of Ḥa<u>dj</u>dj<u>ī</u> Aḥmed Faḳīh [*q.v.* in Suppl.] from Ḳonya, the Turkish *<u>gh</u>azel*s of Mawlānā Rūmī (d. 1273 [*q.v.*]), the Turkish poems found in Sulṭān Weled's (d. 1312 [*q.v.*]) *Rebāb-nāme* and *Ibtidāʾ-nāme*, Ṣeyyād Ḥamza's *<u>gh</u>azels* and his *ma<u>th</u>nawī* called *Dāstān-i Yūsuf*, and Ṣūlī Faḳīh's *Yūsuf u Zuley<u>kh</u>ā* which deals with the same story.

One may also include yet another version of this very popular biblical story, the *ma<u>th</u>nawī Yūsuf we Zuley<u>kh</u>a*, translated by <u>Kh</u>alīl-o<u>gh</u>lu ʿAlī from a Ḳipčaḳ original composed by a certain Maḥmūd from the Crimea into Anatolian Turkish, using the syllable metre and quatrain form typical of traditional folk poetry.

The first example of classical Turkish literature in this century came from the pen of <u>Kh</u>o<u>dj</u>a Dehhānī, poet at the court of ʿAlāʾ al-Dīn III at Ḳonya; he wrote *ḳaṣīdes* and especially *<u>gh</u>azels* with non-religious themes, and was the first Turkish classical poet to sing

of the beauty of nature, and of carnal love, wine and the other pleasures of life.

2. *The 14th and 15th centuries*

With the collapse of the Saldjūḳ central government in Ḳonya around 1300, Turkish culture and art came to flourish in the capital cities of the beyliks, such as Kütahya, Aydîn, Antalya, Kastamonu, Kayseri, Sivas and Ḳonya. The material wealth of these cities and their lords, who did not know any language other than Turkish, attracted poets and writers who started to produce their literary works in their mother tongue. When the Ottomans started getting the upper hand over the Anatolian beyliks, cultural and artistic activities were channelled into the emerging Ottoman centres situated on important trade routes such as Bursa, Edirne, Amasya and Manisa (1410-53), and finally to Istanbul, so that the scholars, poets and writers who used to be active at the courts of the Anatolian beyliks now began to produce their works under the direct patronage of the Ottoman sultans and princes and of Ottoman dignitaries.

Among those poets who formerly served Germiyān-oghlu Yaʿḳūb II (1387-1428) and who transferred themselves to the court of the Ottomans, were Aḥmedī (1334-1413), Sheykh-oghlu (1350-?), Aḥmed-i Dāʿī (d. after 1421), and Sheykhī (d. 1429); they were finally active at the courts of Bāyezīd I, his son Amīr Süleyman (d. 1412), Meḥemmed Čelebī (d. 1421) and Murād II (d. 1451). These rulers were frequently poets themselves, e.g. Murād II had the pen-name Murādī, Meḥemmed II the Conqueror used that of ʿAwnī, Prince Ḳorḳud (d. 1512) that of Harīmī and Bāyezīd II (d. 1512) that of ʿAdlī. From amongst these sultan-poets, Meḥemmed II, his son Djem (d. 1495) and Bāyezīd II wrote enough poetry to form independent *dīwāns*.

The Ottomans took special care to promote culture and the arts in order to preserve their cultural identity and not to be absorbed by the neighbouring Byzantine Christian culture. To achieve this goal, they also had to prove themselves victorious in the cultural rivalries that had been going on for some time among the Anatolian principalities. The following example will illustrate just how strong this rivalry was. When Mollā Fenārī was seriously offended by the Ottoman sultan, he transferred to Ḳonya, where the Ḳaramān-oghlu ruler offered him a salary of 1000 *aḳčes* per day, as well as 100 *aḳčes* for each of his students, unheard of until that time. The flourishing economy of the Ottoman state (see section II, above) greatly contributed to the success of these literary and cultural activities, so that the living standards in provincial cities located on the trade routes across Anatolia to southeastern Europe such as Amasya, Trabzon, Bursa, Manisa, Antalya and Edirne increased significantly. That Meḥemmed Čelebi became governor of Amasya, Prince Ḳorḳud in Manisa, Prince Selīm (II) in Trabzon, Djem Sulṭān in Ḳastamonu and Ḳaramān, was not at all accidental! They brought with them their own scholars and poets, but they also encouraged and protected local literary figures. For instance, Nedjātī Bey [*q.v.*] (d. 1509), one of the greatest poets of the 15th century, was first at the court of the crown prince ʿAbd Allāh in Ḳaramān, and after the prince died, he also served as the head of the *dīwān* of the crown prince Maḥmūd in Manisa.

The most striking characteristic of the cultural and literary activities of the Ottomans during the 15th century was the admiration which the Ottomans felt towards the art and literature of the Tīmūrids at their courts in Samarḳand and Harāt, and especially towards Čaghatay literature; it would not be unfair to say that classical Ottoman literature was under the spell of Mīr ʿAlī Shīr Nawāʾī [*q.v.*] whose influence reached its apogee at the end of the 15th and beginning of the 16th century, including also in the Persian literature of the time. Indeed, Persian literature, music, miniature painting and architecture were greatly refined under the patronage of the Tīmūrid sultans Shāhrukh (d. 1447), Ulugh Beg (d. 1449) and Ḥusayn Bayḳara (d. 1506) [*q.vv.*], and the attraction of this renaissance of Persian culture under Turkish political hegemony strongly influenced the Ottoman court, with echoes of that influence felt up to the 19th century.

The Tīmūrid court was taken as a model first in the political field. As is well known, at the cultural centres of Samarḳand and Harāt, the Uyghur alphabet was used side-by-side with the Arabic alphabet in literary texts as well as in the chancery. Wishing to compete with this Central Asian Turkish court, the Ottoman sultan Murād II (d. 1451) kept at his court in Edirne secretaries capable of composing *firmāns* in the Uyghur alphabet. The crown princes themselves were taught the Uyghur alphabet. Even at later dates, some Ottoman *firmāns* were composed in Čaghatay and written down in both the Arabic and Uyghur alphabets. Thus Meḥemmed II announced his victory over the Aḳ Ḳoyunlu Uzun Ḥasan in the form of a *feth-nāme*, in which he addressed the local rulers of Eastern Anatolia in Čaghatay written down in Uyghur letters with an interlinear text in Arabic letters. However, all the Ottoman *firmāns* addressed to the European powers in Ottoman Turkish were in the Arabic script.

The Tīmūrid court was also taken as a model in the literary and artistic fields, since Ottoman poets and intellectuals took a great interest in Čaghatay and Persian literature. Aḥmed Pasha, who was Meḥemmed II's vizier and later on Bāyezīd II's *sandjaḳ-bey* of Bursa, used to await with enthusiasm and excitement ʿAlī Shīr Nawāʾī's latest *ghazels* carried with the caravans to Bursa. At one point, Nawāʾī sent 33 *ghazels* to Bāyezīd II, and Aḥmed Pasha wrote *naẓīras* to them at the order of the sultan. To write *naẓīras* to Nawāʾī's poems remained fashionable among Ottoman poets up until the 19th century, and even the greatest and proudest Ottoman poets such as Nedīm [*q.v.*] and Sheykh Ghālib followed that fashion. In the field of science many young men went to Central Asia to get a good education, and scholars and scientists from these lands were esteemed on Ottoman soil. One of these was the famous Uzbek *sheykh* Süleymān Efendi who dedicated his Čaghatay-Ottoman dictionary to ʿAbd ül-Ḥamīd II. The influence of the courts in Samarḳand and Harāt found its echoes in the music festivals of the Manisa court of the crown prince Ḳorḳud, so that during the 17th century Ewliyā Čelebi talks about music festivals called *Ḥusayn Bayḳara faṣîllarî*.

An important characteristic of the 14th and 15th centuries was the intensive translation movement from Arabic and Persian texts. Even though the Anatolian beyliks and the early Ottomans considered themselves as Islamic political entities, they still had not completely broken away from their ancestral Central Asian traditions, nor had they fully assimilated the new civilisation of which they were now part. So in order to bring Islamic culture to a wider audience, a concerted effort was undertaken to translate works in every field of Islamic learning and practice into a simple and clear Turkish. These translations may be classified as follows:

1. Works of *ʿilm-i ḥāl*, a kind of catechism of the

basic principles of worship and of behaviour within the family and the community. Alongside these, or perhaps later, there were made interlinear translations of the Ḳurʾān and translations of *tafsīr*, of the stories of prophets (*ḳiṣaṣ al-anbiyāʾ*), legends of saints (*menāḳib al-awliyāʾ*), etc.

2. Encyclopaedic manuals on medicine and drugs, on geography, astronomy and the interpretation of dreams, music treatises and dictionaries.

3. Translations in *mathnawī* form of love stories of typical Near Eastern content, as well as mystical Ṣūfī *mathnawīs*. The first texts to be translated in this category were Niẓāmī's (d. 1140) *Khusraw wa Shīrīn*, ʿAṭṭār's (d. 1193) *Manṭiḳ al-ṭayr* and Firdawsī's (d. 1020) *Shāh-nāma*.

It must be emphasised that these so-called translations were not direct word-for-word ones, but rather adaptions made by the Turkish writers, who, besides putting in their own phrases, frequently added chapters and their own corrections or improvements, so that sometimes the translation would be three times as long as the original.

The strongest supporter of the translation effort was Murād II, who was a passionate lover of poetry and the fine arts and who attracted large numbers of artists and writers to his court.

Naturally, original creations exist side-by-side with these translations. Amongst them are to be noted the *Gharīb-nāme* of ʿĀshıḳ Pasha (d. 1332 [*q.v.*]) which resembles Rūmī's *Mathnawī*, the allegorical *mathnawī Čang-nāme* of Aḥmed-i Dāʿī (d. after 1421) which expresses man's longing for immortality, the *Khar-nāme* by Sheykhī [*q.v.*] which is one of the best satirical works in the entire Turkish literature, the *Khawāṣṣ-nāme* by Tādjī-zāde Djaʿfar Čelebi (d. 1516) which describes Istanbul, the *Mewlid* of Süleymān Čelebi [*q.v.*] which narrates the Prophet's birth, his *miʿrādj* and death, and finally, the *Muḥammediyye* of Yazīdjī-oghlu Meḥmed (d. 1449 [*q.v.*]) which also deals with the Prophet's life and his miracles. Besides all this, we have to mention the greatest mystical folk poet, Yunūs Emre [*q.v.*] who has a place of his own within Turkish literature; soon after he died, many poets imitated his style, without however attaining the universalism of his appeal.

All these literary activities raise the issue of the history of the written language: was the Old Anatolian Turkish in existence before the migrations from Central Asia? Or did it arise in Anatolia after the migration? Some scholars have argued that the Oghuz tribes had established their own written language already in central Asia before their migration into Anatolia. However, this assumption does not seem to meet the basic precondition for the creation of a written language, namely that there should be a distinct political entity under whose auspices the written language can develop. Such a political structure existed in Ḳonya after the 11th century, but was absent for the Turkomans in Transoxiana. Thus we have to assume that the Turkomans established their written language for the first time under the political patronage of the Rūm Saldjūḳs and the beys of the Anatolian principalities. There is strong material evidence for this, namely, the fact that in the very first Old Anatolian Turkish texts we witness a typically Ḳurʾānic orthography: defective writing of the vowels and excessive usage of *tanwīns* for Turkish endings and any final syllables of words. This would indicate that they did not bring with them an orthography already established in Central Asia, where the Ḳarakhānid system was based on the full (*plene*) writing of the vowels.

3. *Classical Ottoman literature during the 16th century*

At the beginning of the 16th century, the Ottomans were established as a world-empire, and the literature of this century reflects well the new political situation. Starting from the most famous poets like Bāḳī (d. 1600) and Fuḍūlī (d. 1556) [*q.vv.*] down to lesser poets, one finds a strong feeling of confidence and self-assurance. Of course, this feeling finds diverse expressions. In Fuḍūlī it becomes a sense of pride that defies the world, especially in his famous complaint, *Shikāyet-nāme*, whereas in Bāḳī and in other poets it is evident in their majestic style and their placing themselves on a equal footing with the famous Persian poets. In Uṣūlī (d. 1538), Ḥayretī (d. 1534) and Khayālī (d. 1557 [*q.v.*]) it appears as an expression of disdain for the worthless material world, but in most works one can detect a celebration of victory and denial of humility. Considering that this atmosphere, one taken for granted in the historical writings, permeates love tales and even lyric poetry, one has to acknowledge that the psychology of triumph brought about by the successes of the Ottoman expansion deeply affected the literary works of this period. For instance, the love tale *Djem-Shāh ü ʿĀlem-Shāh* of Ramaḍān Bihishtī, a less than first-rate poet, which was dedicated to Süleymān the Magnificent (d. 1566), clearly expresses this ideal image of world domination in between the lines, for all that the poet presented his poem to his audience as a symbolic work expressing his own mystical ideas.

The literature of this age is mostly preoccupied with the material and living world, despite the great number of religiously-inspired works. The simple religious atmosphere of the previous centuries had vanished, and with it the simple language, which now gives way to a flowery idiom of word-plays and refined rhetorical devices. In prose, however, Turkish entered a mature period of clarity and accuracy of expression, despite the heavy borrowings from the Arabic and Persian vocabulary. The scribes of the secretarial class, increasing in size along with the empire's expansion, especially those attached to the *reʾis ül-küttāb* and the *nishāndjī* [*q.vv.*], well-versed in poetry and chancery skills (*fünūn-i kitābet*), played a significant role in the emerging literary trends. A good number of the poets of this period came from this class of government officers, e.g. Muṣṭafā ʿĀlī Efendi (d. 1599 [*q.v.*]) the famous historian, who wrote the *Künh ül-akhbār* and first introduced critical method into Ottoman historiography. It is not surprising that these secretary-poets had to extoll the pleasures of the material world, as this was part of their duties to please and entertain their superiors, up to the sultan himself. This would explain why suddenly the *ḳaṣīde* or ode became fashionable, and every poet of significance had to compose *ḳaṣīdes* for the sultan and the high dignitaries. Thus, in this period when the *ḳaṣīde* was so widespread, the poet was in essence forced to arrange both his inner and outer worlds according to the palace hierarchy: the sun, moon and stars of the nature became the sultan in the centre, with the Grand Vizier and other dignitaries around him; the sultan is the rose and his officials the other flowers; the beloved is the sultan, those around the beloved are the dignitaries of the palace and the lover, i.e. the poet, is the sultan's slave. The sultan was the centre of the universe and of the poet's personal world. This imagery was already present in its incipient form in the earlier centuries, but now acquired precision, continuing until this literature exhausted itself.

The most important representative of the classical literature flourishing in the palace circles was Bāḳī,

the court poet of Süleymān the Magnificent who was himself also a poet writing under the pen-name Muḥibbī. Bāḳī wrote *ḳaṣīdes* for Süleymān and his successors, Murād II (d. 1595) and Meḥemmed III (d. 1603). His superb skill in composing meticulously designed, geometrical and artistic poems remained unsurpassed by contemporary or even later poets, a skill seen in the elegy which he composed while still in his forties for the dead sultan.

Bāḳī's *dīwān* is quite voluminous, revealing not only refined feelings but a brilliant intelligence and eloquence. Eschewing ugliness, he made nature and realistic love his themes, showing his skill by hiding the intended image under perfectly chosen words.

The second most important poet of this period is Fuḍūlī, who excelled because of the liveliness of his artistic skill and the sincerity of his emotions in his *ḳaṣīdes* dedicated to the prophet Muḥammad and the sultan Süleymān. What distinguished him sharply from all other Ottoman poets is that he was not a poet from the capital but from Baghdād, which he greatly praises in his Turkish poems, all written in Ādharī or Azerī Turkish. He was influenced by the Ṣūfī poet Nesīmī (d. 1418 [*q.v.*]) and especially by ʿAlī Shīr Nawāʾī; the latter's poems provided inspiration for a lot of his compositions. He may be considered the poet of suffering. All his poems express a suffering and love that directly emanate from his nature. For all that his skills are as superb as Bāḳī's, this is not immediately apparent, since it takes a careful reading to unveil the complex images (*maḍmūn*) and word relationships hidden behind a seemingly effortless pleasing verse (*sehl-i mümteniʿ*).

In the 16th century, the *mathnawī* was still a very popular genre. In fact, we see an increasing number of poets who wrote love tales as well as mystical and religious subjects in the *mathnawī* form. Among the poets who wrote *mathnawīs* in the fashion of the famous Persian poet Niẓāmī [*q.v.*], with his *Khamsa*, two well-known poets can be mentioned here. One of these was Ṭashlīdjalî Yaḥyā (d. 1582 [*q.v.*]). His *Khamsa* consists of the following five *mathnawīs*: *Gendjīne-i rāz, Uṣūl-nāme, Shāh u gedā, Yūsuf u Züleykhā* and *Gülshen-i enwār.*

The second poet, who not only wrote one but two *Khamsas*, was Lāmiʿī Čelebi (d. 1532 [*q.v.*]), very well versed in Persian culture and literature, as well as Čaghatay literature, and very much influenced by the works of Djāmī (d. 998/1492 [*q.v.*]), Mīr ʿAlī Shīr Nawāʾī and other famous Persian poets. As a result of this, he translated their works into Anatolian, namely, Ottoman Turkish. Because of his great interest in Djāmī and because of his translations of the latter's works, he was given the title of Djāmī-i Rūm ("the Djāmī of Anatolia"). Lāmiʿī was an outstanding figure in both Ottoman verse and prose. Being very productive, he introduced works of diverse forms into Turkish literature. Among them, his *mathnawīs* included: *Absāl u Salāmān, Wāmiḳ u ʿAdhrā, Wīs u Rāmīn, Ferhād u Shīrīn, Tuḥfe-yi Lāmiʿī, Shehrengīz-i Bursā, Guy u Čewgān, Maḳtel-i Ḥusayn, Shemʿ u perwāne*, and *Heft peyker* (unfinished at his sudden death).

Along with the poets writing in the elaborate classical style we should mention Tatawlalî Maḥremī (d. 1535) and Edirneli Naẓmī (d. 1548 [*q.v.*]) who represent a group of poets who tried, with reasonable success, to apply the *ʿarūḍ* metres to a Turkish relatively purified of foreign borrowings. Whether writing love or mystical poetry, there was a conscious effort to address the larger audience of the folk masses; it may be that these poets took their inspiration from the popular story-tellers and their stories recited at various meeting places.

The absence of a religious and mystical atmosphere from classical poetry is the characteristic peculiarity of this period. (This is the only period during which the above peculiarity is valid for all poetry.) This is not to say that there is no mystical thought in these poems, only that this is pushed into the background. These poets used Ṣūfī terminology, but expressed their own personal emotions, so that there emerges, for the first time, a distinction between the mystical (Ṣūfī) and the mystical-style (*mutaṣawwif*) poet. Even in the love *mathnawī Leylā we Medjnūn* of Fuḍūlī, which is permeated with a mystical atmosphere, a story of worldly but Platonic love is narrated with same intensity as the love adventures and sufferings of two living people in love. The same can be said of the *mathnawī Shāh u gedā* by the period's greatest *mathnawī* writer, Ṭashlîdjalî Yaḥyā.

This interest in the material world made the poets of this period less and less interested in the classical themes of Persian literature, and they started to turn to stories taken directly from real life, to their immediate vicinity and to contemporary human types, along with the traditional classical topics; this so-called *maḥallīleshme* movement continued well into the 17th and 18th centuries, but, with the exception of Nedīm, eventually lost its impetus without ever achieving the creativity and universality which the poets were hoping for.

The main reason for this tendency to be interested in the real and material world is perhaps connected with entertainment literature. Translation activity here had started in the 15th century, but was now intensified. In particular, Djelāl-zāde Ṭāhir Čelebi translated the tales of Fīrūz-Shāh and the extensive story collection in Persian *Djāmiʿ al-ḥikāyāt wa-lawāmiʿ al-riwāyāt* of Muḥammad ʿAwfī [*q.v.*] for the benefit of the sultans and grand viziers. However, these stories were not read only in palace circles; the people would listen to them in coffee houses and public gatherings. Story-tellers had been active narrating religious-heroic cycles, love stories and excerpts from the *Shāh-nāma* from the 13th century onwards. During the 16th century, their repertory came to include unusual events and characters taken from everyday life. The custom of employing such story-tellers in the palace had been going on since the reign of Bāyezīd I, but acquired new significance in the 16th century, when the court story-tellers started being educated persons, to the point that some of them became the sultan's personal courtiers. New themes emerged. For instance, Muṣṭafā Djinānī (d. 1585) wrote his collection of stories for Murād II, who loved the new stories. Most likely the same motivation was behind the collection *ʿIbrat-nümā* of Lāmiʿī, the very knowledgeable translator of the Persian poet Djāmī. (It is in the *ʿIbrat-nümā* that we find the first serious mention of Naṣr al-Dīn Khodja [*q.v.*] and his extremely popular anecdotes.)

Finally, we have to mention one event of lasting consequence. In the 16th century the Ottomans became in closer touch with the Western world. This was the result both of accident and necessity, and the relations with the West were not deliberate and conscious but passive. The following example will illustrate how these contacts were reflected in literature: a writer using the pen-name Esīrī ("prisoner") narrates in his *Sergüdhesht* the story of his captivity during one of the Ottoman campaigns, his escape and adventures before reaching home again.

Another significant event in this regard was the introduction of the printing press into the empire since the reign of Bāyezīd II by the non-Muslim subjects, including Christians and the Jews who had been

welcomed into the Ottoman domains after their expulsion from Spain in 1492. Books on Judaism, on Christianity and on the works of European Renaissance-period authors were published, and their influence on Ottoman Muslim society, though not direct, cannot be dismissed altogether. Moreover, the old Turkish theatrical representations, *Orta oyunu* [*q.v.*], greatly expanded in the 17th century and were certainly influenced by the Sephardic Jewish theatrical traditions and the Italian folk-comedy, given that the Ottomans had close political and commercial relations with Genoa, Venice and other Italian principalities.

Throughout the 16th century, then, Ottoman literature and culture was still considerably influenced by the Turco-Persian literature flourishing in the courts of Khurāsān and Samarḳand, while themes from everyday life inevitably crept into them as well; furthermore, Ottoman society, was beginning to be influenced by the West, without being fully aware of it.

Bibliography: See the articles on the various literary figures mentioned in the article and the general surveys of earlier Turkish literature given in the more detailed *Bibl.* at the end of this section on Literature. (GÖNÜL ALPAY TEKIN)

4. *Historical and geographical prose literature and popular poetry during the 16th century*

Prose in this century assumes a heavier and more artificial form; exaggerating Persian models, the simplest ideas are expressed by the most complicated images to the detriment of the subject. This lack of taste is found in the greatest stylists of the period: Lāmiʿī, Kemāl Pasha-zāde [*q.v.*], Djelāl-zāde Muṣṭafā Čelebi [*q.v.*], Feridūn Beg [*q.v.*], ʿAẓmī, the translator of the *Humāyūn-nāme*, ʿAlī Čelebi, Ḳinalī-zāde ʿAlī Čelebi [*q.v.*], Khwādja Saʿd al-Dīn [see KHODJA EFENDI] and others. This artificial tendency had a much more marked influence on prose than on poetry. Works written in simple language were despised by the educated classes. We find, however, that in very long works, it was only the preface that was written in this turgid and clumsy style. Many literary, historical, religious or moralising works of the period were in fact written in more simple language. The same applies to official correspondence and other state documents. In religious works intended for the people, every endeavour was made to write as simply as possible. The prose which we possess by Bāḳī and Fuḍūlī shows an elegant and comparatively simple language.

We shall begin with the historical works, a field in which great progress was made in this century, mainly on account of the interest taken by the educated classes in the military successes of the empire. Beside the rhymed chronicle, in continuation of the Saldjūḳ tradition, we find from the time of Bāyezīd II and Selīm I historical works in prose. The official Ottoman history written in Persian by Idrīs Bidlisī was translated into Turkish by his son. Other general histories were those of Ibn Kemāl, Djelāl-zāde Muṣṭafā Čelebi, entitled *Ṭabaḳāt al-mamālik*, of Muḥyī al-Dīn Djemālī, of Luṭfī Pasha [*q.v.*], of Khwādja Saʿd al-Dīn and of ʿAlī [*q.v.*]. There are also a number of special histories, dealing with particular periods or certain events (the *Fetḥ-nāmes*) and biographical works (like the *Djawāhir al-manāḳib* relating to Ṣoḳollu Meḥmed Pasha). At the same time, the office of *Sheh-nāmedji* was maintained at the court. In the time of Süleymān, it was filled by Fetḥ Allāh ʿĀrif Čelebi, whose successors included Eflāṭūn Shirwānī, Seyyid Luḳmān and Taʿlīḳī-zāde (d. 1013/1604). These were also Turkish poets, but tradition demanded that the official *Sheh-nāme* should be written in Persian in the *mütekārib* metre, until Meḥemmed III ordered it to be written in Turkish. From the time of Taʿlīḳī-zāde, prose began to appear scattered through the text. From the historical point of view, these *Sheh-nāmes* are naturally of less importance than the non-official chronicles. While works like the *Tādj al-tawārīkh* of Saʿd al-Dīn were regarded as models of style, the *Taʾrīkh* of Luṭfī Pasha, whose style more resembles that of the old chronicles, and especially his *Āṣaf-nāme*, are very important for our knowledge of the social history of this period. The *Taʾrīkh* of Selānikli Muṣṭafā Efendi shows how corrupt the administration was at the end of the century. We must regard ʿĀlī as the greatest historian of the time, and his other works reveal him as a man of almost encyclopaedic learning. Not only his *Künh al-akhbār*, but also his *Naṣīḥat al-salāṭīn*, *Ḳawāʿid al-madjālis* and *Menāḳib-i hünerwerān* show that the author was a severe critic, well informed about the conditions of life of his time. The style of his historical works is relatively simple (on his life and works, see the introduction by Ibn ül-Emīn Maḥmūd Kemāl to the edition of the *Menāḳib-i hünerwerān*, Istanbul 1926). To this century also belongs the *Shaḳāʾiḳ-i Nuʿmāniyye* written in Arabic by Ṭashköprü-zāde [*q.v.*] and translated into Turkish with additions by Medjdī [*q.v.*] of Edirne and Khākī of Belgrade; also, an extensive biographical literature among which the biographies of the Turkish Ṣūfī *sheykhs* are of considerable historical interest. A similar interest is contained in a few light works of badinage (*mizāḥ*) like the *Nafs al-amr-nāme* of Lāmiʿī and of Nīksārī-zāde (see *Millī Tetebbuʿlar Medjmūʿasi*, no. 3).

Among historical works, those which deal with literary history occupy an important place. The first Ottoman *tedhkere* is the *Hesht bihisht* written in 945/1538 by Sehī [*q.v.*], in imitation of the *Madjālis al-nafāʾis* of Nawāʾī. He was followed by Laṭīfī [*q.v.*], ʿĀshīḳ Čelebi [*q.v.*], ʿAhdī of Baghdād and Ḥasan Čelebi [*q.v.*]. ʿĀlī also gives important notices of poets in his *Künh al-akhbār*. The compilation of collections of *naẓāʾir* on poems of other poets, like the *Djāmiʿ al-naẓāʾir* written in 918/1512 by Ḥādjdjī Kemāl, containing poems by 266 poets, and others, is a custom which is also found in the 16th century and has contributed greatly to our knowledge of Turkish poets.

It is in this century that we find geographical works and travels beginning to appear. In the 15th century we have only translations and excerpts from al-Ḳazwīnī and Ibn al-Wardī as well as a translation from the Greek of Ptolemy. In the 16th century, these two works are again translated, as well as those of Abu 'l-Fidāʾ (by Sipāhī-zāde) and al-Iṣṭakhrī (by Sherīf Efendī) and ʿAlī Ḳūshdjī's work on mathematical geography, and geographical descriptions of Egypt. A *Čīn seyāḥat-nāmesi* written in Persian by the merchant ʿAlī Ekber Khīṭāyī was translated into Turkish for Murād III. The celebrated *Baḥriyye* of Pīrī Reʾīs [*q.v.*] written in 935/1529, was a result of the maritime policy of the Turkish empire. It is based in part on older cartographers like Ṣafāʾī and on Italian maps. As a result of Süleymān's campaigns by land, we have Matrāḳdjī Naṣūḥ's [*q.v.*] work, full of admirable little sketches. Seyyidī ʿAlī Reʾīs wrote his *Muḥīṭ* as a result of his unfortunate exploit in the Indian Ocean, although the book is based entirely on earlier Arab works. The *Mirʾāt al-mamālik* by the same author is much more original. After it we have the *Seyāḥat-nāme* in verse of the merchant Aḥmed b. Ibrāhīm, describing his voyage to India. The *Menāẓir al-ʿawālim* of

Meḥmed ʿĀshiḳ of Trebizond is very important; based on the old Arab geographies, it gives valuable new information about the Ottoman lands. Finally, we may mention a *Taʾrīkh-i Hind-i gharbī* on the discovery of the New World, translated in 990/1582 from a European language by Meḥmed Yūsuf al-Herewī (on this literature see F. Taeschner, in *ZDMG*, lxxvii [1923]).

Alongside classical Turkish literature, we find the literature of the people increasing, the knowledge of which was spread by the *ḳiṣṣa-khwān*, the *meddāḥ* and the *ḳaragözdji* in the popular cafés and in the barracks of the Janissaries. Many classical poets also wrote *türküs* [*q.v.*] intended for the masses. These *türküs* are in the *ʿarūḍ* metre and in the form of *mürebbaʿ*; later they were called *sharḳī* [*q.v.*]. This form of poem goes back to the earliest forms of verse among the Turks. But the works of unlettered poets, like Enwerī, Thiyābī, Rāyī, Raḥīḳī and others, written in imitation of the classical poets, were more to the taste of the people. In popular gatherings such themes as *Abū Muslim*, the *Ḥamza-nāme, Baṭṭāl Ghāzī*, etc. were enthusiastically received. This encouraged Hāshimī of Istanbul to write the *methnewī* entitled *Barḳī we-pūlād* taken from the *Ḥamza-nāme*, and inspired several authors and poets to write similar works. Sultān Süleymān had the story of *Fīrūz-shāh* translated into Turkish in 8 vols. by Ṣāliḥ Efendi, translator of the *Djāmiʿ al-ḥikāyāt* of ʿAwfī. There were *ḳiṣṣa-khwāns* even in the palaces of the sultans. Alongside of old Islamic and Persian subjects, we find also collections of stories of everyday life like the *Bursalï Khwādja ʿAbd al-Reʾūf Efendi hikāyesi* by the poet Waḥdī, also called *Ana Badjï hikāyesi*. The stories of everyday life by Muṣṭafā Djinānī of Bursa in an unaffected style give us a valuable insight into different aspects of the life of the people in these days. Another poet of this kind is Medhī [*q.v.*], whose real name was Derwīsh Ḥasan, who was the *meddāḥ* of Murād III (see Rieu, *Cat. of Turk. mss.*, 42).

In the 16th century we are a little better informed regarding the activities of the *ozan* [*q.v.*], although they are now generally known as *ʿāshïḳ* or *čögürdjü*. These wandering musicians were to be found wherever the people congregated and used to recite their poems in syllabic metres, love-songs, heroic tales, *merthiyes* and *türküs*. At the beginning of this century we have a portion of Bakhshī's epic on the Egyptian campaign of Selīm I, and at the end of the century we have the names of Ḳul Meḥmed (d. 1014/1605), Öksüz Dede, Khayālī and Köroghlu, and, in the garrisons of the Maghrib, Čïrpanlï, Armudlu, Ḳul Čulkha, Gadāmuşlu (see also Köprülüzāde M. Fuʾād, *Türk sāz shāʿirleri*, Istanbul 1930). The influence of the various classes of society on one another even had the result that syllabic metre was sometimes used among the cultured classes (but especially in the *hezl*) and the *ʿarūḍ* metre in popular poems, just as had been the case formerly for poems of a religious character. The mystic poets however, following the tradition of Yūnus Emre, wrote their *ilāhīs* in syllabic metre. We may note the names of Ummī Sinān (d. 958/1551), Aḥmed Sārbān (d. 952/1545), Idrīs Mukhtefī (d. 1024/1615) and Seyyid Seyf Allāh Khalwetī (d. 1010/1601). But the greatest successors of Yūnus and Ḳayghusuz were found among the Bektāshīs and Ḳïzïlbashs, such as Ḳul Himmet and his pupil Pīr Sulṭān Abdal, a native of Sīwās who was executed in 1008/1600 by order of Khiḍr Pasha (cf. Saʿd al-Dīn Nüzhet, *Pīr Sulṭān Abdāl*, Istanbul 1929). Other products of the popular literature of the period were *Ḥasan-oghlu türküleri*, *Ḳara-oghlan türküsü* and *Geyik destānï*.

(b) After 1600 A.D.

1. *The 17th century*

In spite of the political decline of the empire, we still find intellectual and literary life pursuing its normal course. The knowledge of the Ottoman literary language spread among the Muslim lower classes generally and also through districts with a non-Turkish population or speaking a non-Ottoman Turkish dialect like eastern Anatolia (Ādharī dialect) and the Crimea. The Crimea [see ḲÏRÏM] began to produce a number of Ottoman poets, among them actually some of the Khāns. The influence of Turkish literature and culture is found as early as the 16th century in the use of Arabic characters by the Muslim Hungarians and Croats (cf. *Ungarische Bibliothek*, Budapest 1927, no. 14). There is also a Turkish-Serbian dictionary in verse, called *Potur shāhidiyye*, composed by Hawāyī (*Bull. of the Soc. of Sciences Skoplije*, iii, 189-202), a similar Turkish-Bosniak vocabulary by Uskūfī and several rhymed Turco-Greek glossaries.

Istanbul was always the centre to which men of letters and learning flocked from all parts of the empire and from beyond its frontiers. With the exception of Murād IV, no sultan took an interest in literature, and among statesmen there were relatively few patrons of literature like Ilyās Pasha, Muṣāḥib Muṣṭafā Pasha, Rāmī Pasha and the *Sheykh al-Islāms* Yaḥyā and Behāyī. In spite of this and of the decline in the *medreses*, this century saw scholars of ability like Ṣarï ʿAbd Allāh [*q.v.*], Ismāʿīl Anḳarewī, Isḥāḳ Khwādjasï, Aḥmed Efendi, and others. The various branches of religious learning and Arabic philology have, however, no great representatives in this century, and the conflict between the *medreses* and the *tekkes* known as the "question of the Ḳāḍī-zādes" shows what a narrow point of view still prevailed in the *medreses*. The persecutions of the Ṣūfī orders, which sometimes had a political object also, did not however prevent these orders from continuing to prosper throughout the empire.

The "classical" Turkish poetry of the 17th century was in no respect below the level of the Persian models. But in place of devoting themselves to imitations and translations, the Turkish poets were now working on original subjects. It is true, on the other hand, that the influence of contemporary Persian and Indo-Persian poets is still felt. Nefʿī shows the inspiration of ʿUrfī, Nābī of Ṣāʾib and Nāʾilī-yi Ḳadīm that of Shawkat.

Nefʿī [*q.v.*] may be regarded as the greatest Turkish master of the *ḳaṣīde*, on account of the power of his imagination, the richness of his language and the harmony of his style. His *ghazels* and his *hidjw* on the other hand are less successful. The influence of Nefʿī was always great on his successors, although his period saw several eminent *ḳaṣīdedjis*, like Newʿī-zāde ʿAṭāyī, Ḳāf-zāde Fāʾiḍī, Riyāḍī, Ṣabrī and Riḍāyī. The greatest representative of the *ghazel* is the *Sheykh al-Islām* Yaḥyā [*q.v.*] who may be regarded as the successor of Bāḳī, especially on account of his great power to express feelings and emotions. His fame likewise survived into the following centuries. Other representatives of the school of Bāḳī and Yaḥyā are the *Sheykh al-Islām* Behāyī and Wedjdī. In contrast to the latter, the poets Fehīm [*q.v.*], Nāʾilī-i Ḳadīm [*q.v.*], Shehrī and even the poet Nābī [*q.v.*] were under the influence of contemporary Persian poetry. Nābī, on whom can be noticed the influence of Ṣāʾib, became renowned for his *methnewī khyriyyes* and his *ghazels*. His poems are characterised by the preponderance of intellectual conceptions, but this has not affected his popularity. In many of his poems he

describes and criticises the social life of his time. His young contemporary Thābit [*q.v.*] endeavours to show his originality by mingling proverbial expressions with his poetry. Among the masters of the *ghazel* in the 17th century we may also mention Nishāṭī Mewlewī, Djewrī and Rāmī Meḥmed Pasha.

ʿAẓmī-zāde Ḥāletī [*q.v.*] excelled in all poetical genres and is best known for his *rubāʿīs*. The *lughz* [*q.v.*] and the *muʿammā* became very popular, as did the *taʾrīkh* (chronogram). The *hidjw* and *mizāḥ*, composed in different forms, caused poets of the first rank to write very coarse things. Some products of this genre, however, can be appreciated, like the *tedhkere* in the form of a *methnewī* by Güftī in which the author depicts contemporary poets; the *hidjw* of Fehīm and of Djewrī, written in the form of *mulammaʿ*, are curious because the text is scattered with passages in non-Turkish languages.

Some *methnewīs* of the first half of the century show a remarkable perfection. The subjects of the old *khamsas* are gradually replaced by more topical subjects. The greatest representative of the style is Newʿī-zāde ʿAṭāyī [*q.v.*] who acquired his great reputation with his *Khamsa*, the subjects of which are taken from the life of his time. This poet reveals the influence of his Turkish predecessors like Yaḥyā of Tashlīdja and Djinānī (see above). After him we may note the following authors of *methnewīs*: Ḳāf-zāde Fāʾiḍī, Ghanī-zāde Nādirī and Riyāḍī. It was mainly in this century that it became fashionable to write *Sāḳī-nāmes* in imitation of the Persian poet Ẓuhūrī, although this genre is already found earlier, as is shown by the *ʿIshret-nāme* of Rewānī (16th century). Among the *Sāḳī-nāmes* we may specially note those of ʿAṭāyī, Riyāḍī and Ḥāletī; all are tinged with mysticism. The *methnewī* thus served for all sorts of subjects taken from daily life, stories, descriptions, speculative works, tales of actual events, etc.

The number of religious and mystical works, lives of Ṣūfī saints and didactic works connected with the different *ṭarīkas*, is very great in this century. Poetical forms were often used for them. Very well-known is the *Miʿrādjiyye* of Nādirī. Then there were panegyrics of the Prophet (*naʿt*), translations in verse of the *Ḥadīth-i arbaʿīn*, of *mawlids* etc. Among the Ṣūfī poets there were some who used the syllabic metre; we may note Niyāzī-i Miṣrī, founder of the Miṣriyye branch of the Khalwetiyye order, whose poems were long popular; the Bektāshīs also numbered several poets in their ranks. There are also a large number of historical works in verse, *Shāh-nāmes*, *Ghazā-nāmes*, etc., like the *Shāh-nāme* of Nādirī of the time of ʿOthmān II and others. The *Shehinshāh-nāme* written by Mülhemī by order of Murād IV has only the preface in Turkish; the rest is Persian in keeping with the old tradition. It is in this century also that the custom begins of writing brief Ottoman histories in verse; we have that of Ṭālibī, written in 1017/1608, of Nithārī (d. 1075/1664) written for Meḥemmed IV, and the *Fihrist-i Shāhān*, dedicated to Meḥemmed IV by Ṣolaḳ-zāde Hemdemī, and continued by a series of poets down to Ḍiyā (Ziyā) Pasha in the 19th century. This kind of work has neither much historical nor literary value.

Literary prose follows the same lines as in the preceding century. The great stylists (*münshī*), like Weysī, Nergisī [*q.v.*], Okdju-zāde [*q.v.*] and others, carried affection of language to a still more advanced degree. A fine specimen is given by the official documents addressed to the Persian court and written by *münshīs* like Ḥükmī; this same style was sometimes used even in private correspondence. The works which were considered to have no literary value in their day are those which are now most appreciated, like those of Ḳoči Beg, Kātib Čelebi, Ewliyā Čelebi and Naʿīmā. Histories, in this century also, take first place among prose works. There are several which have the character of semi-official chronicles like the *Shāh-nāme* written in prose by Ṭashköprüzāde [*q.v.*] for ʿOthmān II. Murād IV appointed Ḳābilī as *waḳʿa-nüwīs* for the Eriwan campaign. In 1074/1664 the *nishāndji* ʿAbd al-Raḥmān Pasha was appointed by Meḥemmed IV to chronicle events, as was Meḥmed Khalīfa [*q.v.*] of Fīndīḳlī by Muṣṭafā II. It is only later that Naʿīmā was appointed *waḳʿa-nüwīs*. The historical works of this century are translations of the general histories of Islam, original works on the same subject, general and special works and monographs on Ottoman history. From the historical point of view, the most important are the *Djāmiʿ al-duwal*, written in Arabic by Müneddjim Bashî [*q.v.*], the *Fedhleke* of Kātib Čelebi, the *Taʾrīkh* of Pečewī and the best that of Naʿīmā. The great encyclopaedist Kātib Čelebi [*q.v.*] also reveals himself in his *Mīzān al-ḥaḳḳ* and *Dastūr al-ʿamal* as a historian of penetrating insight. Pečewī [*q.v.*], who made use of Christian sources, is also very valuable for his sound judgment and impartiality. Naʿīmā [*q.v.*] who possessed descriptive powers of the first order, gives vivid psychological analyses of historical characters. Ḳoči Beg [*q.v.*] examines in his celebrated *Risāle* the causes of the decline of the empire. Ḳara Čelebi-zāde is a *münshī* rather than a historian. We must also mention chroniclers like Wedjīhī, Ḥasan Bey-zāde and Ṣolaḳ-zāde, as well as the *dheyl* to the *Shaḳāʾiḳ-i nuʿmāniyye* by Newʿī-zāde ʿAṭāyī and the continuation by ʿUshshāḳī-zāde.

The *tedhkere* is much below the level of the 16th century; the most notable is that of Riyāḍī written in 1018/1609. The *Riyāḍ al-shuʿarāʾ* of Ḳāf-zāde Fāʾiḍī composed in 1030/1621 also contains specimens of the work of the poets dealt with in it. There is also the *dheyl* to this work by Meḥmed ʿĀṣim (d. 1086/1675), the concise *tedhkere* of Riḍā and that of Güftī already mentioned. The *Maṭāliʿ al-naẓāʾir* by Khiṣālī (d. 1062/1652) is a collection of *maṭlaʿs*.

In the field of geography, the most important works are those of Kātib Čelebi and Abū Bakr Dimashḳī. They use European as well as Muslim sources. The *Seyāḥat-nāme* of Ewliyā Čelebi [*q.v.*] is important for the history of all aspects of social life. In spite of its defects it is a work without an equal in Turkish literature. In this century also the first *sefāret-nāmes* appear.

The great popularity of the *shehnāmedji*, *meddāḥ*, *karagözdji*, etc. continued in this century in all classes of society. At Bursa we have Derwīsh Kāmilī, Ḳurbānī ʿAlīsi and others, at Erzerūm Ḳaṣṣāb Ḳurd, Ḳandilli-oghlu, etc. In Istanbul there were eighty *meddāḥs*, who were organised in a gild (*eṣnāf*); the best known is Ṭiflī [*q.v.*] who was *nedīm* to Murād IV. Towards the end of this century, the *meddāḥ* Ḳīrīmī (d. 1120/1708) flourished.

The musician-poets (*sāz shāʿirleri*) became very numerous in the 17th century. We find them among the Janissaries, the *sipāhīs* [*q.v.*], the *lewends* [*q.v.*], the *Djelālīs* [see DJALĀLĪ in Suppl.], and in the religious bodies like the Ḳizîlbash and the Bektāshīs. They were always to be found in military retinues. The writer of this article succeeded in collecting and identifying the works and names of about thirty musician-poets of this century. The most notable are Gewherī and ʿÖmer ʿĀshîḳ [*q.v.*]; the latter has almost become the patron saint of the *sāz shāʿirleri* (cf. Köprülü-zāde

M. Fuʾād, *Türk saz şairlerine ait metinler we-tetkikler*, i-v, Istanbul 1929-30). The influence of this popular literature is felt even among the upper classes, as in the poems of the Khān of the Crimea, Meḥmed Girāy, who wrote under the *makhlaṣ* of Kāmil, and a *merthiye* of ʿAfīfe Sulṭān, one of the favourites of Meḥemmed IV. Several "classical" poets also wrote *sharḳīs* for the masses. The poem on the hero *Gendj ʿOthmān* by Ḳayïḳdjï Muṣṭafā has actually given rise to a folk-tale which still survives in Anatolia (Köprülü-zāde, *Kayıkcı kul Mustafa we-genc osman hikayesi*, Istanbul 1930). It is probable that several other folk-tales originated in this century, like those called *ʿĀshïḳ Kerem, ʿĀshïḳ Ghārib*, and *Shāh Ismāʿīl*. Lastly, we see from the statements of Ewliyā Čelebi that it was in this century that the *orta oyunu* [*q.v.*] began to be popular with the people.

2. *The 18th century*

Literature and culture in this century continued to follow the same lines as in the preceding centuries. There was a vast output in prose and poetry, while the intellectual links with Persia and Transoxania continued to exist. Persian poets, especially Shawkat and Ṣāʾib, exercised a great influence on Turkish poetry. But in spite of all this, the tendency to a more individual development gained in strength and was shown in the endeavours to simplify the language. It is mainly due to the great poets of the beginning of this century that classical Turkish poetry entered on a path entirely independent of contemporary Persian poetry.

The period of Dāmād Ibrāhīm Pasha [see IBRĀHĪM PASHA, DĀMĀD] is a very important one. Many works were written and translated by his orders or those of Sultan Aḥmed III. Committees were appointed to translate important works rapidly. Among the poets of this period we may mention ʿOthmān-zāde Aḥmed Tāʾib [*q.v.*], who was called the king of poets, Seyyid Wehbī, Sāmī, Rāshid, Neylī, Selīm, Kāmī of Edirne, Durrī, Thāḳib, ʿĀrif, Sālim, Čelebi-zāde ʿĀṣim, and ʿIzzet ʿAlī Pasha. Nedīm [*q.v.*] in particular acquired a great reputation in the second half of the century and later. His *ghazels* and his *sharḳīs* recall the period of Saʿdābād [see LĀLE DEWRI] and by his original subjects, rich imagination and harmonious language, he surpasses his predecessors and his contemporaries. In the *sharḳī* he reached a level which neither Nāẓim before him nor Fāḍil Enderūnī after him attained. It was also through the patronage of Dāmād Ibrāhīm Pasha that Ibrāhīm Müteferriḳa [*q.v.*] was able to inaugurate Muslim Turkish printing [see MAṬBAʿA. 2]; but for several reasons printing remained confined to a very restricted sphere throughout this century and did not exercise any particular influence on intellectual or artistic life.

Among the great poets of this century we must also make special mention of Ḳodja Rāghib Pasha [*q.v.*], the greatest representative of the school of Nābī, and Sheykh Ghālib [*q.v.*], the last great poet of the classical period. In the *ḳaṣīde* it was the influence of Nefʿī that dominated, while in the *ghazel* there was a rivalry between the disciples of Nedīm and Sāmī on the one hand and admirers of Nābī on the other. But towards the end of the century, a decline in both schools became apparent; poets like Fāḍil Enderūnī [*q.v.*] and Sünbül-zāde Wehbī [*q.v.*] are only mere imitators. The poets of this century practised all forms of poetry and special attention was devoted to genres characteristic of an epoch of decadence, like the *hidjw*, the *hezl*, the *muʿammā* (enigma) and the *taʾrīkh* (chronogram), while immorality and a general decline in good taste increased. On the other hand, true religious inspiration still continued, as may be seen from the *munādjāt* and the *naʿt* of Naẓīm [*q.v.*], the *Miʿrādjiyyes* of poets like Nāyī ʿOthmān Dede, Naḥīfī [*q.v.*] and ʿĀrif Süleymān Bey and the verse translation of the *Methnewī* of Mewlānā by Naḥīfī. The *methnewīs* of this period are numerous but of little literary value, the old subjects of the *khamsa* are entirely dropped, with the exception of the *Ḥusn-u ʿishḳ* of Sheykh Ghālib, the last masterpiece of this class. Finally, the rhymed historical works of this period and the Ṣūfī poems by initiates of the various orders are of little importance.

Literary prose tends to become gradually simpler, although we still find imitations of the style of Nergisī and Oḳčï-zāde. A well-known stylist like ʿOthmān-zāde Tāʾib openly declared against exaggerated artificiality in prose. Historical works occupy the first place. Among authors serving as *waḳʿa-nüwīs* [*q.v.*] we may mention Rāshid, Čelebi-zāde ʿĀṣīm and Wāṣīf, but none of them can be compared to their predecessors like Naʿīmā, although hundreds of people were writing biographical and historical works. The political and military decline of the empire caused a large number of *lāyiḥa* ("memoirs") to be written investigating the causes. The most remarkable of these memoirs is that of Ḳodja Segbān Bashï. From the point of view of geography, we may note a number of important *sefāret-nāmes*, of which the *Fransa sefāret-nāmesi* of Yirmi-Sekiz Čelebi Meḥmed Efendi [see MEḤMED YIRMISEKIZ] is a typical example; these works were occasionally, although rarely, written in verse. The *sūr-nāmes* written to celebrate the splendid festivals held by the sulṭāns are important sources for sociological research. Those best known are the *Sūr-nāmes* of Seyyid Wehbī and of Ḥashmet. The collections of biographies of poets are even more numerous than in the preceding century. We may mention the *tedhkeres* of Ṣafāyī and Sālim and that of Belīgh [*q.v.*]; the *tedhkere* of Esrār Dede [*q.v.* in Suppl.] is specially devoted to Mewlewī poets; to this century belong also the *Waḳāʾiʿ al-fuḍalāʾ* of Sheykhī, which is the final continuation (*dheyl*) of the *Shaḳāʾiḳ*. Lastly, the *Tuḥfe-yi khaṭṭāṭīn* of Mustaḳīm-zāde [*q.v.*]—whom we may regard as the greatest encyclopaedist of this century—is the most important source for the Muslim and Turkish calligraphers (*khaṭṭāṭ*). In the field of geography we have only translations and excerpts from European works.

The *meddāḥ*, *ḳaragözdji* and *orta oyundju* continued to enjoy the same popularity among all classes of society. The works of the musician-poets were also known everywhere; we may mention Ḳïmetī, Nūrī, Lewnī, Ḳaba Saḳal Meḥmed and Faṣīḥī, but the popularity of Gewherī and ʿĀshïḳ ʿÖmer continued; some of these poets were of Armenian origin, like Medjnūn and Warṭan who lived at the beginning of the century. This influence of Turkish musician-poets on the poems of the Armenian *ashugh* perhaps begins as early as the 16th century (see KÖPRÜLÜ-ZĀDE, in *Edebiyyāt Fakültesi Medjmūʿasï* [1922], i, 1-32). The best example of the way in which the literary taste of the people had penetrated among the upper classes is the fact that the great poet Nedīm also wrote a *türkü* in the popular metre. This tendency became more marked as the century advanced.

3. *The 19th century*

At the beginning of this century, Ottoman literature had sunk to a very low level which continued till the period of the *Tanẓīmāt*. Wāṣif Enderūnī [*q.v.*] and ʿIzzet Molla [*q.v.*] alone show some originality. Wāṣif appeals to the popular taste and shows the influence of Nedīm as well as that of Fāḍil

Enderūnī. ʿIzzet Molla, while strongly influenced by Nedīm and Sheykh Ghālib, is, however, a much greater poet than Wāṣif, especially as regards the purity of his language and his poetical technique; in addition to *ḳaṣīdes* and *ghazels*, he wrote quite good *methnewīs*; he is the last "master" of classical poetry before the *Tanẓīmāt*. It is true that even after the *Tanẓīmāt*, many poets wrote *ḳaṣīdes* and *ghazels* in the ancient style, and among them the great advocates of literary innovations like Nāmîḳ Kemāl and Ḍiyā Pasha; to this period also belong Ghālib Bey of Leskofča, ʿAwnī Bey and ʿĀrif Ḥikmet Bey [*q.v.*], all imitators of Nāʾilī and Fehīm-i Ḳadīm. They had, however, no influence on the course of literary development. It was only natural that the old literary tradition could not disappear at one stroke; Shināsī and his school had to maintain a long and hard struggle against the old school.

The prose of the period before the *Tanẓīmāt* is not of much value, although the production was not less than in preceding centuries. In history, the *Taʾrīkh* of Müterdjim ʿĀṣîm [*q.v.*] is remarkable for its style and critical ability; the author uses even simpler language in his translation of the *Burhān-i ḳāṭiʿ* and of the *Ḳāmūs*. The *waḳʿa-nüwīs* Esʿad Efendi [*q.v.*], translator of the *Mustaṭraf* of al-Ibshīhī and author of the well-known *Üss-i ẓafer* on the extermination of the Janissaries, is far below ʿĀṣim, with his insipid language and confused style. The same writer edited the *Taḳwīm-i weḳāʾiʿ*, and Sultan Maḥmūd II reproached him with the obscurity of his language in an account of a journey of the sultan which he had drawn up in this capacity. On the other hand, in his translation of the *Mustaṭraf*, he recommends the use of Turkish instead of Arabic and Persian words and the simplification of literary style, which shows to what an extent the movement to simplify the language had made progress. Lastly, we must not forget the celebrated poet and stylist Meḥmed ʿĀkîf Pasha [*q.v.*] who, in spite of several poems written in the popular metre and some works in simple prose, ought not to be regarded as the first to spread literary innovations. ʿĀkif Pasha, indeed, remained entirely unaffected by European culture and was one of the last representatives of the old literature.

Among the representatives of the popular literature we have information about the *meddāḥs* Pič Emīn, Ḳîz Aḥmed, Ḥādjdjī Müʾedhdhin, Kör Ḥāfiẓ and others, as well as of some writers of shadow-plays (*khayāldji*) like Sherbetdji Emīn, Ḥāfiẓ of Ḳāsîm Pasha, Muṣāḥib Saʿīd Efendi; it is only towards the end of the century that Kātib Ṣāliḥ in breaking with the ancient tradition began to imitate the modern theatre.

The best known musician-poets of this century are Derdli, Dhihnī of Bayburt and Emrāh of Erzerum, who acquired a great and well-merited popularity in Anatolia as well as in Istanbul among all classes (see KÖPRÜLÜ-ZĀDE, *Erzurumlu Emrah*, Istanbul 1929). Down to the end of the reign of ʿAbd al-ʿAzīz, these *ʿāshiḳs* used to assemble in a café in Ṭawuḳ Pazarî. They had an organisation of their own with a chief (*reʾīs*) at their head, recognised by the government. This organisation was broken up later on, but in the early 20th century there were still found musician-poets in Anatolia.

This classical Turkish literature and especially the poetry had lost almost all its vigour and originality by the time the *Tanẓīmāt* began. Classical poetry had lost the ability to create anything new within its narrow limitations, and the poets could only produce imitations (*naẓīre*) of the great masters of the past, or in their efforts to show a little originality, fall into artificiality and platitude. As a result of continually repeating the same conceptions by the same limited means of expression, all the vitality of Turkish poetry was destroyed. Even great artists like Nedīm and Sheykh Ghālib had not been able to escape the rigid rules of the old models. On the other hand, the attempts to draw upon the language and literature of the people and to appeal more to popular taste and language, efforts such as we observe in Fāḍil Enderūnī and Wāṣif, only resulted in vulgarity and banality. In spite of the political and economic connection with Europe which had existed for centuries, the social structure of the Ottoman people had never emerged from the frame of traditional Islamic civilisation, which had kept it imprisoned in a mediaeval system of ideas. It is true that the continual military defeats and the gradual economic decline had impressed upon thinking people the material and technical superiority of Europe and that, as early as the 18th century, they had begun to take advantage of European skills to reorganise the army and the fleet. But it was much more difficult to admit the superiority of Europe in the field of culture. The *medreses*, which were in a very backward state compared with earlier centuries, still clung tenaciously to the mentality and tastes of the Middle Ages. Modern science was beginning to be introduced only in institutions founded for the army, like the Engineering School (*mühendis-khāne*) and the Medical School (*ṭibb-khāne*). These innovations owed a great deal to a few individuals, who had studied western languages and modern sciences, like Khodja Isḥāḳ Efendi, Gelenberī and Shānī-zāde. It was the need felt by Selīm III, and especially by Maḥmūd II, to reorganise the army and navy and to establish a central administration to prevent the empire being parcelled out between feudal chiefs, that led them to consent, in spite of the opposition of the *medreses*, to the reform of the teaching of mathematics and natural sciences.

From the end of the 18th century, there were in Turkey men who knew French and recognised the cultural superiority of Europe. In bringing teachers from France and sending students to Europe, the movement of Europeanisation was encouraged in Turkey. It was natural then that, as a result of all these needs, European influence began to show itself little by little in every branch of life, including the fields of thought and art.

(c) "European-type" Turkish literature. The period of the *Tanẓīmāt* and the new literature

The great industrial and capitalist development in Europe as well as the political expansion and rivalry of the imperialist Great Powers could not long ignore so vast and rich a field of exploitation as Turkey. At the same time, the mediaeval institutions of the empire had lost their power of resistance, and the revolutionary movements in France had propagated the principle of nationality among the non-Muslim elements. All these circumstances made the urgent need felt of introducing reforms in the social and administrative institutions of the empire. These reforms were to meet with considerable resistance, not only among the lower classes but also among those members of the educated classes who had been educated in the *medreses*. It was due to Muṣṭafā Reshīd Pasha [*q.v.*] and his little group of followers that the reforms were gradually introduced into the country. In Turkish history these reforms are known as *Tanẓīmāt* [*q.v.*].

The *Tanẓīmāt* were not confined to the fields of administration, justice and finance; with the object of

securing the progress of education among the Muslim Turks, primary and secondary schools were opened and plans made to found a university. An *Endjümen-i dānish* was formed to prepare schoolbooks (1269/1853) and students were sent to Europe. The *Endjümen-i dānish* was soon replaced by the *Djemʿiyyet-i ʿilmiyye-yi ʿothmāniyye* (1277/1860), which began to publish its own organ, *Medjmūʿa-yi fünūn*. In the following year, the Girls' School was opened and in 1279/1862 University courses were begun. In 1282/1865 was formed a *Terdjeme djemʿiyyeti*, in 1284/1867 the Civil School of Medicine (*Ṭibbiyye-i mülkiyye mektebi*) began its lectures, and in the following year, the Lycée of Galata Saray was opened, the curriculum of which was adapted from western secondary schools and French was used for teaching alongside of Turkish. The University (*Dār ül-Fünūn*) was opened in 1286/1869, but the intrigues of the conservative elements forced it to be closed two years later. In 1287/1870 the School of Law (*Ḥuḳūḳ mektebi*) was opened and in 1294/1877 a School of Political Sciences (*Mekteb-i mülkiyye*). At the same time, museums and libraries were founded as well as technical schools such as the engineering, agricultural and commercial schools. Thus there was gradually created an educated class outside the *medreses*. All this activity was accompanied by a gradual development of the daily press. In 1247/1831 the official publication *Taḳwīm-i weḳāʾiʿ* began to appear, which was followed by the *Djerīde-yi ḥawādith* in 1256/1840, the *Terdjümān-i aḥwāl* in 1276/1859 and the *Taṣwīr-i efkār* in 1278/1861 [see DJARĪDA. iii. Turkey]. These two last mark an important stage in the history of modern developments for it was through them that Shināsī, founder of the new literary school, and his disciple Nāmiḳ Kemāl addressed the public. Down to the period when the absolutism of ʿAbd ül-Ḥamīd II prevented any kind of publication, the Turkish press developed very rapidly. Many scientific and literary works were translated from European languages, especially from French, and the Turkish language began to be simplified, at the same time enriching itself with a large number of scientific expressions.

The three great figures of the new literature are Shināsī [*q.v.*] who had been educated in France, his great disciple Nāmiḳ Kemāl [see KEMĀL, MEḤMED NĀMIḲ] and Ziyā (Ḍiyā) Pasha [*q.v.*], both of whom had lived in France as exiles. Through these circumstances the new school was imbued with the French literature of the 18th and 19th centuries, and the principles proclaimed during the political revolutions in France. The innovators wished to sweep away the old feudal literature and proclaim the ideas of "fatherland" (*waṭan*), "liberty" (*hurriyyet*), "democracy" (*khalḳdjilik*) and "constitutionalism (*meshrūṭiyyet*); and they aimed at creating a "bourgeois" literature. It was in this way that journalism, political and literary criticism, the theatre, the translation of western literary works, the novel and the philosophical and sociological study began. Shināsī was neither a brilliant stylist nor a great poet, but his programme was well defined; he wished to free himself from the trammels of the old unintelligible language, and although he was not able to realise all this programme, his theories exercised a great influence on those around him. Ziyā Pasha, by his translations of Rousseau and Molière and by his literary and political criticism, gave great support to this movement. He was well versed in the classical literature, yet he went so far as to allege that this literature had no relation to the Turkish character; he upheld the thesis that one ought to follow nature, i.e. borrow from the popular language and literature. In reality, Ziyā Pasha had neither the strength nor the courage to put these theories into force.

It was undoubtedly Nāmiḳ Kemāl who assured the definite success of the new school. He was a great artist, a keen fighter, a prolific author and a great patriot. For him, art was a means of provoking a revival in the land and he contributed vigorously to the cultural and political revolution in Turkey by his political articles, his dramas, his novels, his patriotic poetry, his historical works, his critical essays and even by his private letters. He exercised a profound influence. The presentation of *Waṭan* was a great political event in the country. He attacked the old literature even more bitterly than Ziyā Pasha and thought that it was impossible to write Turkish poetry in the *ʿarūḍ* metre. However, not even Kemāl could cast off the old traditions entirely, nor could his friends. It is for this reason that Saʿd Allāh Pasha was able to write in 1297/1880 in an anonymous article in the journal *Waḳt*, that pupils should only be given literal translations of western works because the "new" writers had not been able to produce in reality anything really new.

ʿAbd al-Ḥaḳḳ Ḥāmid [*q.v.*], a pupil of Nāmiḳ Kemāl, brought about a great revolution in the field of poetry, which hitherto had not been able to free itself from ancient forms. This extremely prolific poet introduced into Turkish the lyric and the drama in which his models were Dante, Racine, Corneille and Shakespeare. Even Nāmiḳ Kemāl acknowledged that the new Turkish poetry begins with Ḥāmid. Other important figures were Redjāʾī-zāde Ekrem [see EKREM] and Sāmī Pasha-zāde Sezāʾī [*q.v.*], but in proportion as the pressure of despotism increased, the second generation of the period of the *Tanẓīmāt* began to pursue purely artistic ends.

Many other thinkers or writers contributed to the cultural evolution of the country. We may mention the famous historian Aḥmed Djewdet Pasha [*q.v.*], Aḥmed Wefiḳ Pasha [*q.v.*], Süleymān Pasha, and the great writer and encyclopaedist Aḥmed Midḥat Efendi [*q.v.*], as well as the lexicographer Shāms al-Dīn Sāmī Bey [*q.v.*]. Djewdet Pasha, well versed in Islamic learning and author of a Turkish grammar in collaboration with Fuʾād Pasha, wrote beautiful prose in Turkish. Aḥmed Wefiḳ, animated by western ideas, wished to revive national culture, and proclaimed the fact that the Turks of Anatolia were a branch of the great Turkish nation. He compiled the first dictionary of Anatolian Turkish, collected proverbs and translated the *Shadjara-yi Turk* of Abu 'l-Ghāzī. By his adaptations of the comedies of Molière, he played a great part in the development of the Turkish theatre. Süleymān Pasha, who reorganised the military schools, was a great patriot. He claimed that the language and literature should be called "Turkish" and not *ʿOthmānlī*; and in his *Taʾrīkh-i ʿĀlem* he devoted a special chapter to the early Turks, taking his material from J. de Guignes and other sources.

Lastly, Aḥmed Midḥat wrote and translated hundreds of volumes of a popular nature, beginning with books of the alphabet; he thus trained the people to read and contributed to raising the level of education, which was his only aim, for his books have no scientific or literary value. Sāmī Bey showed himself a worthy successor of Wefiḳ Pasha in his *Ḳāmūs al-aʿlām* and *Ḳāmūs-i türkī*.

At the end of the 19th century appeared Muʿallim Nādjī [*q.v.*], who obtained great fame under the protection of Aḥmed Midḥat. Nādjī was well versed in

Islamic culture and wrote *ghazels* in the classical style alongside good poems in the new style. The followers of the old school expected from him almost a resurrection of classicism, although Nādjī was not at all a champion of such a reaction, as is shown by his beautiful simple prose (as in *ʿÖmerin čodjuklughu*). His quarrels with Ekrem Bey originated rather in personal reasons. At the same time Nābī-zāde Nāẓim, who died very young, came to the front; his novel *Zehrā* makes him a figure of first importance in literary history.

The most important event at the end of the 19th century is the literary movement begun by a group of youthful men of letters who had associated themselves, at the instigation of Redjāʾī-zāde Ekrem, with the periodical *Therwet-i Fünūn* [*q.v.*]; this movement marks the second and last stage of the Europeanisation of Turkish literature. It is dominated by the figures of Tewfīḳ Fikret and Khālid Ḍiyā (Ziyā) [*q.vv.*] and is very much under the influence of the literary movements in France at the end of the 19th century. Started in a period of absolute despotism and having only a short life of five or six years, this movement produced works of a neurotic and pessimistic sentimentality. Its motto was "art for art's sake". If we except Djenāb Shihāb al-Dīn, who acquired after the revolution the reputation of a great prose writer, Süleymān Naẓīf, who may be considered a pupil of Nāmīḳ Kemāl with an originality of his own, Fāʾiḳ ʿĀlī, an imitator of ʿAbd al-Ḥaḳḳ Ḥāmid, and Ismāʿīl Ṣafā, an independent figure, who found his subjects in everyday life, all the poets who wrote in the *Therwet-i Fünūn* were imitators of Tewfīḳ Fikret. Khālid Ziyā, who had a very choice style, was the true founder of the literary novel in Turkish. He takes his subjects generally from the upper middle classes, but some of his short stories describe the life of the people. The latter genre was more successfully treated by the novelists Aḥmed Ḥikmet and Ḥüseyn Djāhid, in more simple language. Meḥmed Raʾūf [*q.v.*] was a novelist who made excellent psychological analyses, but his language was imperfect. In the field of science, philosophy and criticism, the collaborators on the *Therwet-i Fünūn* did no more than translate. But the severe censorship and the short life of the group did not enable them to show greater vitality.

While the school of Tewfīḳ Fikret and Khālid Ziyā reflected only the life of the upper classes, Ḥüseyn Raḥmī [*q.v.*] depicted in his novels various aspects of the life of the people; and at the same time the notable publicist Aḥmed Rāsim [*q.v.*] was dealing in several of his works with the same subject. Among the poets of this period, we may further mention Riḍā (Rizā) Tewfīḳ [*q.v.*] who wrote the finest lyrics in the style of the *ʿāshiḳ* poets and Bektāshīs, but in syllabic metre, the poetess Nigār Khānïm and lastly Meḥmed Emīn Bey [*q.v.*], who suddenly became celebrated during the Turco-Greek war by his *Türkče shiʿrler*. Meḥmed Emīn employed a very simple language in the syllabic metre and wished to reach the people directly (*khalḳa doghru*), although the existing popular literature with its mentality, tastes and traditional forms were entirely unknown to him. As a man of letters he was entirely of the school of Fikret; he was not, however, an individualist like his contemporaries but imbued with the populist spirit (*khalḳdjïlïḳ*). This was the first occasion on which a Turkish poet had descended to the level of the people. Perhaps it is right to charge him with a lack of lyrical feeling, but this does not prevent us from regarding him as an interesting figure in literary history. At the same time, the movement to simplify the language continued and even gave rise to an exaggerated purism. By the translation of the works of European scholars, the early history and culture of the Turks became known, while the journalistic activities of the young Turks abroad began to envisage Turkish nationalism from the political point of view. These were the main elements in the cultural and literary life of Turkey before the Young Turk Revolution of 1908.

This event, having brought about the abolition of the censorship, caused an extended literary activity. The patriotic pieces of Kemāl and Ḥāmid re-appeared on the stage and a large number of works of a sociological, philosophical and historical nature were translated into Turkish. At the same time, great improvements were made in education and the relations with Europe raised the general cultural level to a height never before reached.

The most important literary movement after the Revolution was that of the *Fedjr-i ātī* [*q.v.*], although it was a literary circle which lasted only a short time; its members began by following the school of Fikret and Khālid Ziyā, but the majority of them ended up as members of the national literary movement. Aḥmed Hāshim alone continued to develop in the way he had first chosen. He never abandoned the *ʿarūḍ* metre, nor the conception of "art for art's sake" in its strictest form. Besides, he had ideas of his own on the relation between music and poetry (see H. Duda, *Aḥmed Hāschim*, in *WI*, ii [1928], 200-44). The poet Yaḥyā Kemāl (Beyatlı) [*q.v.*], who had a great influence after 1912, had literary views entirely different from those of Aḥmed Hāshim, for he sought music rather in the exterior elements of his poems, while he retained the motto "art for art's sake". Another poet, who remained outside the national literature, was Meḥmed ʿĀkif (Ersoy), the advocate of Pan-Islamism [*q.v.*] and unrivalled master of the *ʿarūḍ* metre; in simple language he described the life of the people in its most realistic aspects. ʿĀkif, whose lyrics sometimes rose to great heights, remained quite uninfluenced by western poetry; he was a democratic poet, born of the people. In the work of these three poets, very different from one another, we see Turkish poetry striving to free itself from the too limited sphere of Tewfīḳ Fikret and his school; but under the stimulus of the great development of the nationalist movement, which manifested itself in the whole domain of art, poetry also ended by entering on new paths.

(d) The national literature

After the Revolution of 1908, it was the ideal of Ottomanism (*ʿothmānlïlïḳ*) that animated the governing classes. But the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. The Turkish element, which was dominant in the empire, thus needed a new ideal; this was the national ideal, which had already revealed itself in the period of the *Tanẓīmāt* and which had existed through the Ḥamīdian period in a cultural form. After the revolution also, this movement began by assuming a cultural aspect. On 28 December 1908, the society *Türk Derneği* was founded, the object of which was to study the past and present of the Turkish peoples, to simplify the Turkish language and to make it a language of science. This society had not much power, but in November 1911 the periodical *Türk Yurdu* began to appear and on 12 March 1912, the *Türk Odjaghï* was founded. This movement was not confined to a few Turkish patriots; associated with it were a number of Turkish intellectuals from other countries who had fled from Russian expansionism, like Aghaoghlu Aḥmed, Ḥuseyn-zāde ʿAlī and Aḳ Čora-oghlu

Yūsuf. The movement was violently opposed by the followers of a badly-understood occidentalism (*gharbdjilik*) on the one side, and by the partisans of Pan-Islamism (*ittiḥād-i Islām*) on the other. At the same time, the periodical *Gendj Ḳalemler*, published at Salonika, again started, under a pretentious name, a campaign to purify the Turkish language, and Ziyā (Ḍiyā) Gök Alp [see GÖKALP, ZIYĀ] a member of the Committee of Union and Progress [see ITTIḤĀD WE TERAḲḲĪ DJEMʿIYYETI] began his activities. With the transfer of the central office to Istanbul, Ziyā Gök Alp joined the *Türk Yurdu*. Later, after the disastrous conclusion of the Balkan War, the younger generation also rallied to the national movement. The time was very opportune for the success of the national ideal; it only required a man capable of directing the national idea and laying down a programme and giving it a philosophical basis. It was Ziyā Gök Alp who did this. He exercised a great influence on the youth by his university courses, by his lectures and by his articles and poems; all his life, from the time of the Balkan War to the Armistice, when he was exiled to Malta, and later during his sojourn in Diyār Bakr and Anḳara, he displayed an uninterrupted activity: the résumé of his teaching is contained in his book *Türkdjülüğün esāslari* (Ankara 1339/1923, Istanbul 1940, Eng. tr., *Principles of Turkism*, 1968). His death, soon after, was a cause of general mourning throughout the land.

As in all branches of life, the national movement made its influence felt in literature: the syllabic metre attained the dominant position in poetry; the language was simplified; the motto "art for art's sake" was replaced by "art for life"; writers began to borrow from popular literature and its traditional forms; literature began to reflect the life and characteristics of all branches of society. Philological and historical studies were made on the works of the musician-poets, on the popular literature, the music of the people. In brief, the science of Turkology was founded, in large measure through the efforts of Meḥmed Fuʾād Köprülü (1890-1966 [*q.v.*]). All this contributed greatly to give a definite direction to the new literary movement.

Among the poets of this movement we may give first place to Fārūḳ Nāfidh, who in his last poems depicts the scenery of Anatolia, then Orkhān Seyfī [*q.v.*], Enīs Behīdj, Yūsuf Ziyā, Khālid Fakhrī and Nedjīb Fāḍil. All these show the influence of Ziyā Gök Alp and Yaḥyā Kemāl rather than of Meḥmed Emīn. In prose, progress was still more marked and the writers in it have still greater force. The greatest figure of the period is Khālide Edib Khanîm (Adıvar [*q.v.*]). After the stories of love and passion which are characteristic of her first period she wrote books in the style of *Ateshden gömlek* in which she describes the struggle of Anatolia for independence. ʿÖmer Seyfeddīn [*q.v.*], who died young, has left a number of very good little stories, some of which, like *Bombā*, are masterpieces of national literature. Refīḳ Khālid (Karay [*q.v.*]), who is perhaps the best writer of simple Turkish, describes in his *Memleket ḥikāyeleri* realistic scenes of Anatolian life, hitherto unknown to literature; his realism is however expressed in a merciless sarcasm, quite devoid of sympathy and feeling. Yaʿḳūb Ḳadrī (Karaosmanoğlu [*q.v.* in Suppl.]) even in his novels, is more a stylist and a mystic poet than a story-teller. Other well-known figures in the new prose are Fāliḥ Rîḳī (Atay [*q.v.* in Suppl.]), who describes in *Atesh we-günesh* episodes of the war in Palestine, and Rūshen Eshref. Among the novelists Reshād Nūrī (Güntekin [*q.v.*]) achieved fame by his novel *Čalî ḳushu*.

The Western-type theatre enjoyed a great spurt in popularity as a result of the Young Turk Revolution and increased political liberalisation after the restoration of the constitution. Many of the plays of this period were patriotic ephemera only; but significant for the future evolution of the drama in Turkey was the first appearance in 1919 of a Turkish Muslim woman actress on the stage [see further, MASRAḤ. 3. In Turkey].

IV. RELIGIOUS LIFE

Religious life all through the life of the Ottoman empire, and indeed until Atatürk's secularist reforms of the mid- and late 1920s, had a two-fold aspect. First, there was the official religious institution of the *ʿulamāʾ* and *fuḳahāʾ*, in varying extents connected with the ruling dynasty and headed by the *Sheykh ül-Islām* in Istanbul, whose functions included amongst others that of *muftī* or issuer of legal opinions or *fatwās*. The training of these *ʿulamāʾ* rested on an extensive structure of orthodox Sunnī *madrasas* scattered throughout the empire (whose curricula still warrant further investigation), and the finished products filled various official posts, often by a kind of *cursus honorum*, as *müderris*, *ḳāḍīs*, *nāẓirs* of pious endowments or *ewḳāf*, *khaṭībs*, etc. They were expected to use their intellectual training and polemical powers, in the earlier centuries of the empire's existence, against the threats from syncretism, within the Ottoman lands of Anatolia and Rumelia, with the previously-dominant Greek, Armenian and Balkan Christianity, and in the 9th/15th to 11th/17th centuries against Shīʿism amongst Türkmen elements of eastern Anatolia and the Ottomans' Ṣafawid enemies in Persia. In subsequent times, the religious classes, including the numerous class of theological students, *softas*, were often a politically and socially reactionary element, at critical periods involved in riots and revolts in the capital Istanbul, as in 1808, 1876 and 1909.

Hence for this official religious institution, see FATWĀ. ii; ḲĀḌĪ. Ottoman empire; ḲĀḌĪ ʿASKER; KÜLLIYYE; MADRASA; MÜLĀZAMET; MULĀZIM; SOFTA; ʿULAMĀʾ.

Second, there has always been a strong current of Ṣūfī mysticism in Turkish religious life and in popular

devotion, a current which in Anatolia went back to the time of the Saldjūḳs of Rūm, the Dānishmends [*q.vv.*] and the succeeding beyliks. Before they reached Anatolia, the Turks' Central Asian background had been strongly influenced by the Ṣūfism of such holy men of Turkistān as Aḥmad Yasawī [*q.v.*], and this was subsequently reinforced in Anatolia by the establishment in Ḳonya [*q.v.*] during the time of the Mongol invasions of the father of Djalāl al-Dīn Rūmī, Mawlānā himself and his son Sulṭān Walad [*q.vv.*], making this capital of the Saldjūḳs and then city of the Ḳaramānids [*q.v.*] a centre of spirituality whose luminaries included also a figure like Ṣadr al-Dīn Ḳōnawī [*q.v.*], the stepson of Ibn ʿArabī; the influence of Ibn ʿArabī [*q.v.*] was to be important in later Turkish mystical thought and poetry. As well as these religious elements of pre- and early Ottoman religious life stemming from Khurāsān, there seems also to have been considerable interaction at the popular level with the Christian and even pre-Christian substrata in Anatolia.

This is probably the case with a Ṣūfī order like that of the Bektāshiyya [*q.v.*], in which a distinct Shīʿī tinge is also discernible. The Bektāshīs became especially strong amongst the Turkish communities of the Balkans, and remained so up to the 20th century, latterly in a somewhat clandestine manner after the official suppression of the order's patrons, the Janissaries, in 1826. The Mewlewī [see MAWLAWIYYA] contribution to the Turkish mystical tradition—in some ways a more aristocratic one, the order being linked with the dynasty and the higher reaches of the administration—included an especial emphasis on their own particular forms of *dhikr* and *samāʿ* [*q.v.*]. But numerous other orders such as the Khalwatiyya, Shādhiliyya and Naḳshbandiyya [*q.vv.*] were to play important roles until the official suppression of the orders and their *tekkes* by Atatürk in 1926, and the Ṣūfī element in Turkish popular religious life is by no means unimportant today [see e.g. NURCULUK].

A product of this very perceptible Ṣūfī imprint is further seen in Ṣūfism's contribution to Ottoman literature, in both its Turkish and Persian embodiments, in the tradition of the simple mystical poems and hymns of Yūnus Emre (d. 721/1321 [*q.v.*]), exemplified in the Bektāshī hymns of the 9th/15th century poet Ḳayghusuz Abdāl [*q.v.*]. Also, prose hagiographical works in both Persian and Turkish became a distinct element of Ottoman literature [see MANĀḲIB].

V. ARCHITECTURE

In the 14th century, Ottoman architecture developed from the simple cubes of such small mosques as that of Ḥādjdj Özbek at Iznik (734/1333). Tiled domes were later replaced by lead. A portico was important as a meeting-place. Early Ottoman rule required dervish centres, and so the mosque-*zāwiye* plan emerged in Anatolia and Thrace, such as that of Bāyezīd Pasha at Amasya (822/1419). A portico admitted to an inner court with a pool under the largest dome lit by an oculus. From this court, steps led to the prayer hall with a fine wooden *minbar* and tiled *miḥrāb* [*q.vv.*]. The bays on each side of the court formed open rooms, while the winter rooms off them had hearths and ornamental shelving. The plan consisted therefore of two large domes flanked by pairs of smaller domes, and the interior functions of a monument could be read from outside. The apotheosis of the plan in all its permutations was the Green Mosque (Yeşil Cami) at Bursa (822/1420), with sumptuous royal apartments on an upper floor. Tiles and ornament of all kinds were rivalled by those of the mausoleum (*türbe*) of Meḥemmed I (823/1421 [*q.v.*]). Viziers' foundations developed the mosque-*medrese* [see MADRASA] plan, as at that of Isḥāḳ Pasha at Inegöl (887/1482), where the college faces the mosque portico. With arcades added and the ground paved, this form became a hallmark of the Ottoman style.

The conservative tradition flowered into the 24 domes of the Ulu Cami (Great Mosque) at Bursa (802/1400). The plain square or multi-facetted Ottoman tomb whittled away the elaboration of its Saldjūḳ roots. By the 15th century, major monuments were built of ashlar limestone, although the Byzantine system of brick mixed with stone courses survived.

In the mid-15th century, Murād II built Üç Şerefeli Cami, the mosque of the Three Balconies, with a revolutionary central dome 24 m in diameter. This was carried on six massive piers, of which two were free-standing. The lateral areas were not walled off but were still roofed with twin domes. The large courtyard was also an innovation as were the (eventually) four minarets at each corner. The name of the architect is unknown, but by this date the names of builders emerge as ideas developed beyond those of masons working within a tradition. After the conquest of Constantinople, the influence of the twin half-domes of the church of Hagia Sophia was absorbed. Yet the urge to combine domed units continued. Fatih Cami (875/1470), the mosque of Meḥemmed II [*q.v.*] in Istanbul, built by ʿĀtīḳ Sinān, failed to accommodate this influence, but the mosque of Bāyezīd II (911/1505) achieved a rigid version. Both mosques had grand courtyards and re-used Byzantine columns. At the Bāyezīdiyye, the bulky minarets [see MANĀRA] set abnormally far apart were the last before the evolution of the slender, stone style which were emblems of Ottoman supremacy.

In 1537, Sinān ʿAbd ül-Mennān [*q.v.*] was appointed chief architect. As a soldier, he was trained in organising large work forces and supplies. His strictly-disciplined subordinates could carry out his plans independently from the immaculate mosque of Selīm II, at Karapınar (971/1564) to the elaborate foundation of Murād III, at Manisa (944/1586). At Sinān's memorial complex to Meḥemmed Shehzāde in Istanbul (955/1548), four semi-domes brought the centralised plan to a logical conclusion, but the subordinate buildings of the complex lacked significant unity. This was achieved with the much larger educational and charitable complex (see KÜLLIYYE) built for Süleymān I in Istanbul (964/1557). The mosque is set on a vast esplanade raised on massive vaults. The fine quality of the decoration, including Iznik [*q.v.*] tiles, contrasts with the puritanical structure where no stone is purely ornamental. The subordinate courtyards are remarkable, and in that of the hostel, where the corner columns are the same size as the rest, a sense of flowing movement is achieved in the Italian Renaissance manner.

Sinān was skilled in the use of awkward sites. At the mosque-*medrese* of Ṣoḳollu Meḥmed Pasha [*q.v.*] in Kadırga, Istanbul (980/1572), a broad stairway admits to the courtyard under the central hall of the college. The tiled *miḥrāb* wall is unrivalled. At Edirne [*q.v.*], Sinān built his masterpiece for Selīm II. The use of eight piers inside create a sense of circular movement, and the decoration is sparingly but splendidly used. The four minarets abutting the dome are the tallest in Islam (70.89 m) and the dome is as broad as that of Hagia Sophia (31.28 m). Only the work of

Sinān's most gifted student, Dāwūd Agha, absorbed the influence of the Selīmiyye at the mosque of Nishāndjī Meḥmed Pasha in Istanbul (997/1588). The mosque of Meḥmed Agha in Istanbul (1026/1617) and the belated Yeni Valide Camii at Eminönü (1074/1663) ended the Sinān era.

The palaces of Topkapı and at Edirne expanded pavilion-by-pavilion, and the Baghdād Köshk (1048/1638), built for Murād IV at the former of these, is the noblest Ottoman room. Grander domestic architecture centred on a first floor chamber with rooms at each corner. The 18th and 19th centuries built standard wooden-frame mansions capable of infinite variation, often to create rectangular spaces where a site was misshapen.

Newshehirli Ibrāhīm Pasha and Aḥmed III [*q.vv.*] imported a modified French rococo which blossomed into elegant water kiosks [see SABĪL]. The flowering of ornament did not disguise the square form of prayer halls: thus the decoration of the Nuru Osmaniye Camii in Istanbul, is superficial except for the horseshoe shape of the court. The Ayasma Cami at Üsküdar (1174/1760) and the Laleli one in Istanbul (1177/1763), however, achieved some freedom of interior planning. Ottoman bridges and aqueducts derived from Roman or Saldjūḳ precedents, in particular, Sinān's monumental bridge at Büyükçekmece (975/1587). Bridging techniques were applied to the foundations of major monuments. Fortresses such as Rūmeli Ḥiṣār [*q.v.*] on the Bosphorus were massively built, but their architecture owed much to that of their enemies. *Köshks* (kiosks, belvederes) were, in a sense, permanent tents.

The 19th century was dominated by the buildings of the Balian family, whose palaces included those at Dolmabahçe (1270/1853) and Beylerbey (1282/1865) on the shores of the Bosphorus. They built extensively in the Beaux Arts style. Foreign architects dominated commercial building, but Kemāl ül-Dīn led a revivalist movement. His fourth Waḳīf Khan in Istanbul (1335/1916) achieved monumentality, but generally, pastiche replaced that discipline which was at the heart of Ottoman architecture.

VI. CARPETS AND TEXTILES

The Ottoman court was an important patron of textiles and carpets since the 15th century, and commerce in carpets and textiles formed an important part of the Ottoman economy. Silk-weavers and carpet-weavers were listed among the *ehl-i ḥiref* of the court from the reign of Meḥemmed II (1451-80) onward, although no carpets from this period have heretofore been identified with certainty. The popularity of Turkish rugs in the West led to their export in large quantities from early times; in the year 1503, for example, the customs registers of Braşov in Transylvania list over 500 Turkish carpets passing through this single frontier post in a eight-month period. The history and commercial diffusion of Turkish carpets are further documented by their extensive representation in European paintings, especially those of Italy, Holland, and Flanders, as well as of Germany, England, Spain, and France.

Although knotted-pile carpet-weaving as an art form may have existed in Asia Minor prior to the Saldjūḳ invasions of the late 11th century and onward, the on-going artistic traditions of rug-weaving in Anatolia, both commercial and traditional, that have survived into our own time appear to have most of their artistic roots in a Turkic and nomadic tradition that came west from Central Asia. In Ottoman times, Anatolian commercial rug-weaving consisted of two types: carpets with geometric and emblematic designs that probably originate in the nomadic past—including, among others, the so-called Lottos, Holbeins, Memlings, and Crivellis—and carpets whose designs were derived from other media, at first from architectural decoration and then later from the arts of the book—including, among others, the Uşak and other commercial carpets with medallion, star, "chintamani" and "bird" designs [see BISĀṬ in Suppl.].

The carpets termed by scholars "Ottoman" are in fact an atypical sub-group of Turkish carpets, utilising a technique technically related to that of the Mamlūk carpets of Egypt, and patterns stemming from 16th-century designs created in the *naḳḳāsh-khāne* [*q.v.*] in Istanbul. Once assumed to be a fairly homogeneous group of weavings produced in Cairo, these carpets are in fact a diverse group in both technical and artistic quality; they were probably woven in a variety of locales, including Egypt and various places in Anatolia or Thrace, from at least as early as the mid-16th century until well into the 17th. The quality of the "Ottoman" carpets varies widely; the best examples may well have been woven to the specific order of the court in Istanbul, but many large examples woven in Ottoman court designs in Cairo appear to have been made expressly for sale in Europe. The Ottoman carpets had an enormous influence on later commercial and traditional weaving in Anatolia, and by the 19th century even certain nomadic carpets in traditional formats exhibited the influence of the lotus palmettes, sinuous *saz* leaves, and vine arabesques of the earlier court designs. The court-design carpets themselves were woven until the end of the 17th century, with later examples tending to be of a much lower technical and artistic quality.

The Ottoman court practice of collecting and preserving ceremonial robes of the sultans and their families has resulted in the survival of a remarkable sequence of Ottoman silks in Istanbul, while the extensive export of Ottoman silks to western, central and eastern Europe has resulted in the preservation of early pieces in many European collections. Documents dealing with Ottoman silks and other textiles, such as woollen, cotton, and mohair fabrics, are quite numerous both in Turkey and in the lands to which these luxury textiles were exported; the remarkable commerce in high-quality silks between Istanbul and Moscow in the 16th and 17th centuries, for exam-

ple, is extensively documented in Russian archives, and the Orthodox sacerdotal garments made from Ottoman silk frequently bear embroidered Russian dates and inscriptions.

The artistic as well as the commercial history of silk in the Ottoman empire is enormously complex [see ḤARĪR]. While it has long been known that the Bursa silk market was a major source of cocoons for the Italian silk-weaving industry, it now appears that there was close collaboration between Turkey and Italy in weaving finished silks as well; many fine silk fabrics which technically appear to be within the Italian orbit exhibit impeccably Ottoman designs. Both artistic traditions emerged in the 15th century, owing much to the Mamlūk silks woven in Syria or Egypt, including the popular ogival or diapered design format. Typically Turkish floral motifs, such as the ubiquitous tulip blossom, actually appear in Italian 15th-century silks depicted by *quattrocento* painters such as Uccello, while the earliest surviving Turkish examples with the motif probably date from the early sixteenth century. Fifteenth-century Turkish sources abound with references to Ottoman silks, such as the famous *čatma* velvets of Bursa, but few examples seem to have survived.

By the mid-16th century Ottoman silks are more easily documentable, in part through their appearance in dateable European paintings, in part from their use in dateable European sacerdotal garments, but primarily through their depiction in Turkish historical manuscript illustrations and through the growing use of designs originating in the *naḳḳās̲h̲-k̲h̲āne* in the arts of textile-weaving, ceramics, carpets, bookbinding, and architectural decoration, each of which may help serve as collateral dating for the others. Large numbers of 16th- and 17th-century Ottoman silks are preserved in museums and collections worldwide.

In the 16th century and later, Bursa continued to be a major source of velvets (*čatma, kadīfe*), whose designs tended to be more traditional; the brocaded silks (*seraser, kemk̲h̲a, serenk* and *zerbāft*), on the other hand, appear to have been woven in or near Istanbul, and their designs show an astounding variety based on the full repertoire of motifs and styles in use in the *naḳḳās̲h̲-k̲h̲āne*. In addition, an important subgroup of 16th- and 17th-century Ottoman silks with figural designs and Christian—specifically Orthodox—iconography was woven for use in Orthodox churches both within the Empire and in Russia.

Some of these textiles appear to have been woven directly under court control or on court commission by members of the *ehl-i ḥiref*; new research indicates that there is a wide variety of technical quality exhibited in pieces of similar design, possibly an indication of differences between finer pieces woven for the court on commission, and somewhat coarser silks woven for export or for sale in the bazaar. Ottoman documents from the early 16th century onward indicate that maintaining standards of quality in textiles was a concern both for the *müḥtesib* [see ḤISBA] and for the law courts.

In addition to the artistically important carpets and silks, Ottoman weaving centres from Damascus to Kavalla produced simple and cheap carpets and textiles for commercial sale; many such manufactories also produced goods destined for the army. It is quite difficult to identify specific surviving examples of this kind of weaving, as they are without dateable design or ornamentation. Because of their low value very few examples have been preserved, except occasionally as military booty and trophies in European collections.

Later Ottoman woven textiles in general show a marked decline in artistic and technical quality from those of the 15th until the 17th centuries; the exception is the tradition of Ottoman domestic embroidery, which continued to produce works of very high artistic quality through the 19th century.

VII. CERAMICS, METALWORK AND MINOR ARTS

(a) *Ceramics*

The Sald̲j̲ūḳ tradition of glazed pottery and tiles of a hard, white composite ware found at Konya and at Ḳubādābād [*q.vv.*] in the 12th-13th centuries AD was superseded in Anatolia by a crude red earthenware, covered with a white slip and decorated in blue, green, purple or black under a lead glaze. This simple, utilitarian ware, misnamed "Miletus" ware after large quantities were exacavated in that town [see MILĀS], was in fact produced at Iznik. At Bursa in the early 15th century, the Yeşil Cami and Yeşil Türbe were elaborated and decorated with *cuerda seca* tiles, in Tīmūrid style; the names of the tilemakers, "the masters of Tabrīz" and "Muḥammad al-Mad̲j̲nūn", are recorded on the tilework, as well as the fact that the decoration in the Yeşil Cami was completed in 1424 AD by ʿAlī b. Ilyās ʿAlī (Naḳḳās̲h̲ ʿAlī). The Yeşil Türbe contains the elaborated tiled cenotaph of Meḥemmed I (1413-21) and a fine *miḥrāb* in similar style. In the second Ottoman capital, hexagonal tiles of off-white ware decorated in underglaze blue with a wide variety of designs are found in the mosque of Murād II, built in 1435. The *miḥrāb* is a mixture of *cuerda seca* and underglaze elements, and these, like the hexagonal tiles, betray a strong influence of imported Yüan and early Ming Chinese porcelain, arguing that such imported blue-and-white was already a current feature of Ottoman life before the conquest of Constantinople in 1453.

With the establishment of the capital in Istanbul, a new industry flourished at Iznik, to supply both vessels and tiles. Both were made of a hard, white composite ware similar in composition to the fritware produced in Ḳās̲h̲ān described in Abu 'l-Ḳāsim's treatise on ceramic manufacture of 1301 AD, suggesting an influx of new technology rather than the development of the existing Edirne-Iznik tradition. Initially decorated in cobalt blue, a supplementary turquoise was added by the first quarter of the 16th century, and later a full range of softer colours by the mid-16th century, culminating in the brilliant colours of the mature Iznik style from *ca.* 1565 onwards, with cobalt and turquoise blue, viridian, and a relief red aptly compared to sealing-wax in appearance. While the early monochrome blue designs were in a taut, manuscript style with strong Chinese influence, by the middle of the 16th century Iznik ware develops a distinctive iconography of elaborate floral and arabesque forms. Tiles in similar style were produced in great quantity for the new mosques, palaces and other buildings in the city; acknowledged as the finest is the mosque of Rüstem Pas̲h̲a [*q.v.*] (1561). Iznik ware was also appreciated outside Ottoman Turkey, and has been found as far afield as the Crimea, in Hungary, England, Germany and Nubia.

The history of the Iznik industry is further complicated by the existence of a parallel industry at

Kütahya [*q.v.*] in western Anatolia; two inscribed and dated pieces of 1510 and 1529 AD have Armenian texts and refer to Kütahya as the place of manufacture; they are in the general Iznik style. Further, texts refer to the continuing production of Kütahya ware in the 16th and 17th centuries, and the precise identification of these wares is the subject of current research.

By the mid-17th century, the Iznik industry had more or less collapsed, with the withdrawal of Ottoman court patronage, and a minor factory was established at Tekfūr Saray in Istanbul, as well as provincial manufacturies in Diyarbakir and in Syria, working in a sub-Iznik style. A major work was the restoration of the Ḥaram al-Sharīf in Jerusalem, undertaken by Sultan Süleymān from 952/1564-5 onwards. The Jerusalem tiles were made *in situ* by Persian craftsmen who had previously been employed for the decoration of a number of royal structures in Istanbul in the *cuerda seca* technique. In Jerusalem, the decoration is in tile mosaic and *cuerda seca*, and underglaze tiles developed independently of the Iznik tradition. An inscription above the north porch is signed "ʿAbd Allāh of Tabrīz" and dated 959/1551-2.

In the 18th century, the Kütahya industry came into its own, with Armenian potters producing both tiles and pottery in a new style. A major enterprise was the manufacture of a series of tiles with Biblical subjects, originally intended for the refurbishment of the Holy Sepulchre in Jerusalem in 1719 AD; the majority of these were subsequently installed in the Armenian Cathedral of St James in Jerusalem *ca.* 1727. A variety of cups, dishes, bowls and other forms were delicately decorated with underglazed floral designs, and enjoyed a wide popularity outside Turkey. In the 19th century, grotesquely decorated lead-glaze earthenware was produced at Çanakkale, on the Dardanelles; and Tokat has recently been identified as another centre for lead-glazed pottery in the 18th-19th centuries, many examples with incised and dated Turkish inscriptions and some with stamped Armenian monograms.

Armenian potters from Kütahya were brought to Jerusalem under the British mandate after World War I for the repair of the Ḥaram al-Sharīf, and subsequently settled in that city. The modern Kütahya industry has been largely concerned with the production of debased Iznik designs for the tourist industry, but in recent years there have been signs of a new aesthetic vitality.

(b) *Metalwork*

Ottoman metalwork can be divided into two categories, the utilitarian and the decorative. Predominant in the former is the huge quantity of arms and armour used by the Ottoman army [see DJAYSH. iv and ḤARB. iv], of which much was stored in the Byzantine church of Hagia Irene in the grounds of the Top Kapu Palace, and marked accordingly with a crook-like emblem in an incised ring; a large quantity is now in the Military Museum in Istanbul, whose collection also includes important examples of European arms. Turkish arms include shields, helmets, swords and daggers, and horse trappings with characteristically Ottoman *chanfrons*. Much of the finer armour is gilt-plated (*ṭombaḳ*). For everyday use, there was a large production of metal vessels in a wide variety of forms, and from the mid-17th century onwards, an increasing amount of tinned-copper vessels, many of the domestic examples being engraved with maker's and owner's names and dates.

Decorative metalwork was in great demand at the Ottoman court, and was executed both in gold and silver and often encrusted with gems. In the late 15th century there was a considerable production of silver vessels, particularly of bowls with *repoussé* and engraved decoration, of Balkan origin; a number of these are stamped with the *ṭughra* of Bāyezīd II (1481-1512), and it has been noted that their patterns of interlacing arabesques had a direct influence on the design of early Iznik monochrome blue ceramic ware of the same period. Like the other arts, decorative metalwork reached its peak during the mid-16th century, and many examples remain in the Ottoman treasury of Top Kapu Saray, amongst the most distinguished of which is undoubtedly the sword made for Süleymān the Magnificent with its *chinoiserie* panels of dragons and phoenixes in relief, its ivory hilt inlaid with gold arabesques and cloud-scrolls, and its elegant gold relief Arabic *thulth* inscription on both sides of the steel blade dedicating it to Süleymān and dated 933/1526-7; see Rogers and Ward (1988), no. 83. The spine bears Persian *nastaʿlīḳ* verses and the name of the craftsman, Aḥmed Tekkelu.

Mention should also be made of the use of gold inlay and gem settings on vessels of other materials, such as jade, zinc and even imported Chinese porcelain (Krahl, 1986).

(c) *Bookbinding*

The art of bookbinding in the Ottoman empire continued the general tradition of Islamic bookbinding, the salient features of which were the use of a triangular envelope flap to protect the fore-edge of the textblock, the linkstitch sewing of the gatherings or fascicules, the use of traditional Islamic chevron endbands, often of contrasting coloured threads, and the joining of the textblock to the covers with hinged doublures. See Bosch, Carswell and Petherbridge (1981) for a detailed description of these characteristic features, based on an analysis of mediaeval bindings, early bookbinders' manuals (cf. Bosch, 1961) and modern practice in the Islamic world.

The design of Turkish bindings follows the Tīmūrid tradition of the 14th-15th centuries as exemplified at Harāt and Tabrīz (cf. Aslanapa, 1979), often with a pointed central medallion either stamped or built up from individual *petit fer* motifs, with quarter-medallions at the corners. Titles were often incorporated on the spine (Islamic books being designed to be stored horizontally, rather than vertically as in the European tradition). A particularly Turkish feature was the use of marbled papers (*ebrū*) for the lining of the covers. For more lavish courtly bindings, instead of pasteboard, covers were made of expensive materials such as jade, tortoise-shell, and gold and silver cloth, further embellished with precious stones, jewels and pearls set in gold mounts.

The binders themselves would have been an integral part of the *naḳḳāsh-khāne* [*q.v.*] or court scriptorium, generally credited with being the inspiration and source of designs for all the Ottoman crafts, though the importance of the role of the *naḳḳāsh-khāne* in standardising Ottoman taste may be somewhat exaggerated. While the tradition of arabesque ornament continues, along with foreign elements such as the Chinese cloud-scroll, specifically Ottoman elements include spiral designs of tiny rosettes, bold assymetrical compositions in the feathery *sāz* style, and even the use of naturalistic floral motifs—all of which parallel Turkish design in other crafts, notably in ceramics and textile design.

(d) *Glass-making*

Although the Ottoman empire came to include a region of great importance for the history and evolution of glass-making, sc. the Syro-Egyptian littoral, the indigenous tradition in Syria was ended by

Tīmūr's deportation in 1400 of the Syrian craftsmen to Samarḳand. In a curious reversal of roles, the Near East then began, from the time of Bāyezīd II onwards, to be supplied by glass from Venice. In particular, there is a record from 1569 of the Venetian ambassador to the Ottomans, Marcantonio Barbaro, ordering from Venice for Istanbul 900 mosque lamps of two different types, for which he supplied two drawings.

But at least as early as the late 16th century, there was glass-making in Istanbul itself, for in 1582 a Turkish guilds procession included glassblowers on their float and with furnaces. Throughout the 17th century, imported European glass was very popular, often featuring in diplomatic exchanges of presents, and by the early 18th century Bohemian glass became a significant export of the Habsburg empire. There were Bohemian glass warehouses in Istanbul, Izmir, Beirut and Cairo. Even English and Spanish glass was imported into Turkey at this time.

From the late 18th century onwards, the local glass-making tradition was well established in Turkey, with a factory founded at Beykoz on the Anatolian shore of the Bosphorus, and workshops sprang up in nearby villages throughout the 19th century. The earliest Beykoz ware appears to have been of clear glass, often with sprigged gold decoration; the more typical opaque glass with enamel decoration dates from the mid-19th century. The most popular form was the rose-water sprinkler, with a threaded, pierced glass stopper and floral decoration in gold and enamel colours. Other shapes included ewers, cups and tulip-shaped vases, dishes and covered bowls, and also fantastic pieces in the shapes of doves and pistols. The highly-successful modern glass industry at Paşabahçe is located close to Beykoz on the Asiatic shore.

VIII. Painting

Manuscript illustration was the dominant form of pictorial art among the Ottomans, who developed a painting school with distinctive characteristics that showed continuity from the 15th to the 19th centuries. Ottoman imperial records indicate that the production of illustrated manuscripts was an institutional activity in the court where there was the *naḳḳāsh-khāne* [*q.v.*], the imperial workshop, composed of artists who illustrated manuscripts commissioned by the sultan and his officials. Its permanent staff consisted of artists of diverse provenances within the empire and were supplemented when needed by the local guilds in Istanbul. Artists collaborated on a manuscript under the supervision of the chief artist, and sometimes a single illustration was executed by more than one *naḳḳāsh*.

The earliest illustrated manuscripts date from the 15th century and are attributed to the palace workshop in Edirne, the earlier capital of the Ottoman Empire. An illustrated copy of Aḥmedī's *Iskender-nāme* (Biblioteca Marciana, cod. or XC) and Kātibī's *Külliyyāt* (Topkapı Saray Müzesi, R. 989), dating from the mid-15th century, are rather provincial works revealing traces of Shīrāz painting. When Meḥemmed II (1451-81) moved the capital to Istanbul after 1453 and built the Ṭopḳapī Palace, he established a studio which through the years absorbed the one in Edirne, producing most of the illustrated manuscripts until the 19th century. Meḥemmed II invited European painters and medallists, such as Gentile Bellini and Costanzo da Ferrara, to execute his portrait and his reign is an important era in Ottoman painting for establishing a tradition of imperial portraiture. These Italian artists inspired local painters such as Sinān Bey, who, portraying the sultan, adopted European norms of portraiture to Islamic canons of manuscript illustration (TSM, H. 2153). Although his successor Bāyezīd II (1481-1512) was less interested in European painting, manuscripts illustrated in his reign reflect certain western influences in the treatment of landscape and architecture (e.g. Amīr Khusraw Dihlawī's *Khamsa* dated 903/1498 in TSM. H. 799, and Hātifī's *Khusraw wa Shīrīn* dated 904/1498-9 in the Metropolitan Museum, New York 69.27).

With the expansion of the empire's eastern and

western frontiers during the reigns of Selīm I (1512-20) and Süleymān I (1520-66), an increasing number of artists joined the *naḳḳash-khāne* from Persia, Syria and Egypt in the east and the Balkan provinces in the west, bringing an eclectic style into Ottoman painting. The literary taste of the time called for Persian classics and for works in Čaghatay Turkish by ʿAlī Shīr Newāʾī. Illustrated copies of Newāʾī's works (*Khamsa* dated 937/1530-1 in TSM, H. 802, and *Dīwāns ca.* 1530 in TSM, R. 804, 806) combine features from the Harāt, Shīrāz and Tabrīz schools of painting as well as some western elements retained from the style of Bāyezīd II's period. It was with the illustrated historical manuscripts produced in Süleymān I's reign that a distinctive school of painting was established, to reach its classical age in the reign of Murād III (1574-95).

The outstanding feature of Ottoman painting is the genre of illustrated histories unmatched by any other Islamic painting school. Predominating in the 16th century, these histories written by the official paid annalists, the *shāh-nāmedjis*, and illustrated at the court studios, visually recreated the achievements of the sultans, their appearance and activities with documentary realism. When illustrating scenes of accession ceremonies, military campaigns, receptions or royal hunts, the Ottoman artist had to introduce a new iconography for which no prototypes existed in other schools of Islamic painting. The monumental illustrated history of the Ottoman Empire written in five volumes by ʿĀrifī, annalist at Süleymān I's court, documented historical events and served as a prototype for future artists in iconography and compositional schemes (e.g. *Süleymān-nāme*, TSM, H. 1517 dated 965/1558). A series of histories were written in the second half of the 16th century by Loḳmān, ʿĀrifī's successor, and illustrated by a group of artists headed by ʿOthmān, in which a classical Ottoman style was achieved by eliminating foreign elements and formalising rigidly observed compositions, strong colours and powerful figures. The *Tārīkh-i Sulṭān Süleymān* on the life of Süleymān I (Chester Beatty Library, T. 413, dated 987/1579), *Shāh-nāme-yi Selīm Khān* on Selīm II (TSM, A. 3595, dated 989/1581), the two-volume *Hüner-nāme* covering the history of the Ottomans (TSM, H. 1523 and 1524, dated 1584 and 1588) and the *Sur-nāme* narrating the royal circumcision festival of 1582 (TSM, H. 1344, dated *ca.* 1582) replete with illustrations, all realistically documenting the events, personages and their settings, mirror the political and social history of the empire in the 16th century.

This realistic approach was maintained in religious manuscripts as well. The Ottomans' interest in their ancestry resulted in the production of world histories where the sultans are linked genealogically with the prophets. The illustrations in Loḳmān's *Zübdet al-tewārīkh* (Türk Islam Eserleri Müzesi, 1973, TSM, H. 1321 (BL, T. 414, dated 1583-86) and the six-volume work on the life of Prophet Muḥammad, the *Siyer-i Nebī* dated 1595 (TSM, H. 1221, 22, 23, CBL, T. 419 and New York Public Library), follow the compositional schemes in the historical manuscripts.

One other distinctive genre in Ottoman painting is royal portraiture. Set by Meḥemmed II, the tradition of portraiture continued into the 16th century with works by Nigārī, who painted Süleymān I, Selīm II and Khayr al-Dīn Barbarossa [*q.v.*] (TSM, H. 2134). Later in the century, portrait albums were produced. A *Shemāʾil-nāme* describing the appearance of the first twelve sultans, written by Loḳmān in 1579 and illustrated by ʿOthmān, set a model for all later images of the sultans (TSM, H. 1563, Istanbul Üniversitesi Kitapliği T. 6088).

Interest in imperial histories resulted in one other feature of Ottoman painting, namely topographical illustration, which was foreshadowed early in the 16th century in the works of Pīrī Reʾīs [*q.v.*], captain and cartographer known for his sea charts and map of the Atlantic Ocean. The works of Nāsūḥ al-Maṭraḳī al-Silāḥī [*q.v.*], an officer and historian who wrote and illustrated Süleymān I's campaigns, are the basic examples of this genre (e.g. *Beyān-i menāzil-i sefer-i ʿIrāḳayn*, IUK, T. 5964, dated 944/1537-8, *Süleymān-nāme*, TSM, H. 1608, dated *ca.* 1543). Topographical illustrations continued throughout the 16th and 17th centuries in historical manuscripts.

With the empire entering a period of stagnation in the 17th century, there was a decline in the production of illustrated histories. The artist, no longer having to record imperial achievements, turned to single-figure studies and scenes from daily life. Along with the westernising efforts of the sultans in the 18th century, painting took a new course. During Aḥmed III's reign (1703-30) the last manuscript of a historical nature was produced by the poet Wehbī and painter Lewnī. The illustrations of the *Sur-nāme* (TSM, A. 3593) relating the circumcision festival of 1721 are full of innovative elements such as shading and perspective. Lewnī and his contemporary Bukhārī also painted single figures dressed in glorious costumes. Costume studies were produced throughout the century, the best examples being displayed in the *Khubān-nāme* and the *Zanān-nāme* of 1206/1793 (IUK, T. 5502), where figures seem to have acquired European postures and more volume. The same is true for the sultans' portraits painted in the 18th and 19th centuries. Manuscript illustration ended in the 19th century, and other forms of painting, such as painting on walls and small furniture, emerged with easel painting in the western sense taking over at the end of the century.

IX. Numismatics

When ʿOthmān b. Ertoghrul (*ca.* 699-724/1300-24) established his base in Sögüd in Bithynia there was probably very little coinage of any kind in circulation. The principal Islamic coin he would have encountered was the Rūm Saldjūḳ *dirham*. The Byzantine *basilikon*, the Venetian *grosso* and smaller *denier*-sized silver from various European mints may also have been found in trade or as booty of war. The Rūm Saldjūḳ coinage continued to be based on the classic Islamic *dirham*, weighing 2.8-2.9 gr, until the coinage reform of the Il-khān Maḥmūd Ghazan (694-703/1295-1304) in 696/1297. However, with the continued devaluation of the new coinage under Ghazan's successors, Öldjeytü (703-16/1304-16) and Abū Saʿīd (716-36/1316-35 [*q.vv.*]), the eastern Islamic world gave up the long-established currency system of *dīnārs* and *dirhams*, whose metrology was enshrined in the *Sharīʿa*, for one where the weight standard was regularly manipulated (and usually devalued) by the governing power.

Öldjeytü's early 8th/14th century coinage in Western Anatolia consisted of light silver *dirhams* weighing about one gramme, but the earliest known Ottoman coin, struck in the name of ʿOthmān b. Ertoghrul, weighs 0.62 gr. Following his capture of the city of Bursa, *ca.* 726, Orkhan b. ʿOthmān (724-61/1324-60) issued his first coin, an *akče* weighing about 1.10 gr based on a conventional Ilkhānid prototype, with the *kalima* and the names of the four Orthodox Caliphs on the obverse, and that of the ruler and mint (*Brusa*) on the reverse with the date 726 written out in Arabic in the margin. Orkhan issued several subsequent series of *akčes*, all without mint names or dates, the last of which, introduced after the Ottomans obtained their first foothold on the European shore of the Dardanelles at Gallipoli *ca.* 752, was notable because it omitted his father's name. A special five-*akče* weight, 5.80 gr, issue of this type was also struck, probably as a donative for Orkhan's victorious troops.

Orkhan's son and successor, Murād I (761-91/1360-89) issued three types of *akče*, one, *ca.* 762, with a line dividing the reverse field, a second, *ca.* 772, with two lines dividing the obverse and reverse fields, and a third, *ca.* 782, which was the first to omit the *kalima* from the coinage, with three lines dividing the reverse field. Murād also struck copper *manghirs* in his own name, one with the unusual date of Ramaḍān 790.

Bāyezīd I (791-804/1389-1402) continued his father's practice of numbering his issues. The first has a numeral 4 and the date 792 on the reverse, and the second, *ca.* 802, has a pellet on the dividing lines. These early issues simply give the names of the rulers without any titles. When Tīmūr invaded Western Anatolia and overthrew Bāyezīd at the Battle of Ankara in 804/1402, Bāyezīd's four sons competed for the former Ottoman territories. Amīr Süleymān held Rumelia and struck coins in Edirne dated 806 and 813. Meḥemmed Čelebi held Bursa and Amasya, where he issued coins first acknowledging Tīmūr as overlord, then, after Tīmūr's death, in his own right. Mūsā Čelebi struck coinage in Edirne in 813 and Muṣṭafā in Edirne and Serez in 822 and 824.

After his consolidation of power Meḥemmed I (816-24/1413-21) struck coins dated 816 on which he called himself *al-Sulṭān*, but he removed this title, probably at the urging of the Tīmūrids, on his 822 issue. Murād II (824-48 and 850-5/1421-44 and 1446-51) struck a one-year issue dated 824 and a second in 825 from various mints in Rumelia and Anatolia. On these he inscribed his name in a *ṭughra*, a practice introduced by Amīr Süleymān in 806. On Murād's third issue of 834 the obverse and reverse are divided by two interlaced lines without a *ṭughra*. After his first abdication his son Meḥemmed II (first reign 848-50/1444-6) issued *akčes* bearing the date 848, and when Murād II resumed power he copied his son's coinage, unobtrusively changing the order from Meḥemmed b. Murād to Murād b. Meḥemmed by moving the position of the word *ibn* from the left to the right of the names.

Until the 848 issue the weight of the *akče* had remained roughly constant at 1.1 gr, but during Meḥemmed II's second reign (855-86/1451-81) it was regularly reduced each time a new issue was introduced, first in 855, and then in 865, which was the first coinage to bear the mint name *Ḳusṭanṭīniyya*, conquered in 857. With his fourth issue in 875, Meḥemmed experimented by striking a ten-*akče* coin, the *akče-i buzurg*. His fifth issue was dated 880, and two years later he brought out the first Ottoman gold coin, the *sulṭānī*, which adopted the weight standard of the Venetian ducat, *ca.* 3.52 gr. A second gold issue was dated 883 and a third 885. In the last year of Meḥemmed's life his sixth and last series of *akčes* was struck with the date 886. After the death of the Tīmūrid Shah Rukh (807-50/1404-46), Meḥemmed cast aside his inhibitions over the use of titles, and introduced two royal styles that were to remain in use for centuries. The first was *Sulṭān al-barrayn wa-khāḳān al-baḥrayn al-Sulṭān ibn al-Sulṭān* and the second *Ḍārib al-naḍr wa-ṣāḥib al-ʿizz wa 'l-naṣr fī 'l-barr wa 'l-baḥr*. Like his forebears he also struck *manghirs* in his own name in several mints.

On the accession of Bāyezīd II (886-918/1481-1512) it was decided to date the coinage by the sultan's accession year rather than by issue as had been the previous practice. This was probably to avoid public anger caused by the repeated debasements of the *akče* under Meḥemmed II. The short-lived rebellion of Djem b. Meḥemmed was marked by an issue of *akčes* from Bursa following the design of his father's last coinage dated 886. Bāyezīd II also struck coins in Gelibolu (Gallipoli) and Trabzon (Trebizond). The dies for the latter may actually have been cut by his son and successor Selīm Shāh whose private craft was die-cutting. Until the end of his reign, Bāyezīd II's coinage from both Rumelia and Anatolia was uniform in style, and was, in effect, the "national" coinage of the Ottomans.

With the conquests of Selīm I (918-26/1512-20) and his son Süleymān I (926-74/1520-66) the character of the Ottoman coinage developed from a national to an imperial one. After Selīm conquered Syria and Egypt he continued the coinage of the Burdjī Mamlūks who struck gold *ashrafīs* substantially lighter than the contemporary Ottoman *sulṭānīs*, and silver *medins* based on the half-*dirham*, which by then was considerably heavier than the Ottoman *akče*. Selīm also introduced the custom of striking conquest coins to signal the submission of the important towns he had captured, including Āmid (Diyarbakır), Bitlīs, Dimashḳ (Damascus), Ḥalab (Aleppo), al-Djazīra, Ḥiṣn Kayf and al-Ruhā (Urfa/Edessa) [*q.vv.*].

Süleymān I retained a uniform *akče* coinage for Rumelia and Anatolia. After the Ottomans conquered the Maghrib the broad flan heavy weight gold coinage of the Ziyānids of Tilimsān (Tlemcen) remained in use, as did the square silver *naṣrī* of formerly Ḥafṣid Tunisia. After the conquest of ʿIrāḳ and Ādharbāydjān from the Ṣafawids, a heavier *mithḳāl*-weight silver coinage was introduced for use in these lands,

but shortly thereafter its weight was reduced by a quarter. Under Süleymān's son Selīm II (974-82/1566-74) minting activity declined, but Murād III (982-1003/1574-95) and Meḥemmed III (1003-12/1595-1603) expanded the number of mints to no fewer than fifty, the greatest in Ottoman history.

During Murād III's reign the Empire was engulfed by a tidal wave of silver from the New World. European traders imported silver in coin and bullion in order to purchase gold which they then exported and sold in Westen Europe at considerable profit. As a result the *aḳče* suffered a rapid devaluation, producing both inflation and great hardship for the peoples of the empire. This decline in prosperity was reflected by a decrease in the number of active mints and a great scarcity of gold coinage struck in the names of Aḥmed I (1012-26/1603-17), Muṣṭafā I (1026-7 and 1031-2/1617-8 and 1622-3), ᶜO̲th̲mān II (1027-31/1618-22), and Murād IV (1032-49/1623-40). The quick succession of sultans demanded frequent distributions of *d̲j̲ulūs bak̲h̲s̲h̲īs̲h̲i*, accession donations, which regularly emptied the treasury just when money was most needed to defend the state against its enemies.

ᶜO̲th̲mān II was the first to issue ten-*aḳče* coins in large numbers, because by then the one *aḳče*'s weight had fallen to 0.30 gr and a larger coin was needed for everyday use. The ten-*aḳče* was rapidly debased under Muṣṭafā I and in the economic crises of Murād IV's reign. Midway through the latter Kemankes̲h̲ Ḳara Muṣṭafā Pas̲h̲a attempted to revive and protect the coinage by closing down most of the provincial mints in Rumelia and Anatolia, and introduced the *para*, valued at five *aḳče*s, to the Constantinople currency. This reform was continued in Ibrāhīm's reign (1049-58/1640-8), when the Constantinople coinage consisted of the 10, 5, 2 and 1-*aḳče*, and Egypt's of the gold *sulṭānī*, the *medin* valued at 3 *aḳče*s and the 1-*aḳče*. Since the reign of Bāyezīd II, the striking of copper *mang̲h̲īrs* had been the prerogative of local tax farmers who forced the public to buy new issues in return for payment in silver or gold. By now, however, the purchasing power of copper had fallen so low that it had virtually disappeared from circulation.

The spiral of economic decline continued under Meḥemmed IV (1058-99/1648-87), when the striking of silver and gold virtually ceased in Constantinople, and the value of the Ottoman gold *sulṭānī* decreased markedly against the Venetian ducat, or sequin. It continued to appear sporadically in Algeria, Tunisia and Tripoli, and there are also unique examples of gold coins from Belgrade and Bag̲h̲dād. During the 11th/17th century European coinage virtually supplanted that of the Ottomans in their own territories, because the population had lost trust in the products of their local mints. In the last year of Meḥemmed's reign a European renegade called Frenk Muṣṭafā was called upon to reform the Constantinople mint. His first act was to prepare dies of very high artistic quality to return a sense of pride to the imperial mint, and a few specimens of this work have survived.

The accession of Süleymān II (1099-1102/1687-91) saw three major reforms. The first was to strike broad flan gold coins for conversion into jewellery, the second introduced a large-sized silver coinage on the European pattern made up of the *zolota*, 18.5-19.7 gr, and half-*zolota*, 8.65-9.85 gr, and, most important, a new copper coinage to compensate for the great shortage of silver *aḳče*s. The new *mang̲h̲īr* bore the sultan's *ṭug̲h̲ra* on the obverse and was originally valued at one *aḳče*. Its great popularity led to the opening of a second mint for copper in Saray Bosna (Sarajevo) in 1099, and for a time its value rose to two *aḳče*s. By the time Aḥmed II (1102-6/1691-5) acceded, however, its value had plunged to virtually nothing, and it was withdrawn soon after. Aḥmed II's coinage followed the pattern established by Süleymān II.

Fresh attempts at reform were made under Muṣṭafā II (1106-15/1695-1703). He added mints in Edirne, Izmir and Erzurum to that of Constantinople so that European and Ṣafawid coins could be restruck as they reached the frontiers of the state. A new gold coinage called the *as̲h̲rafī*, bearing the sultan's *ṭug̲h̲ra*, was introduced to replace the discredited *sulṭānī*, as was a *ḳurūs̲h̲* valued at 120 *aḳče*s compared to the 90-*aḳče zolota*, but both these reforms failed because of the economic chaos caused by the wars with Austria.

During the reign of Aḥmed III (1115-43/1703-30) the coinage was repeatedly taken in hand, and a degree of stability was established. In the early years the *as̲h̲rafī* and *zolota* with the mint name *Ḳusṭanṭīniyya* were the dominant coins. These were succeeded by a gold *funduḳ*, or *zind̲j̲irli altun*, bearing only the sultan's *ṭug̲h̲ra* on the obverse and *ḍuriba fī Islāmbol* on the reverse, accompanied by the new *ḳurūs̲h̲*, valued at 40 *para*s or 120 *aḳče*s, whose theoretical weight was approximately 24 gr, with its fractions half, quarter and eighth. In the last years of Aḥmed's reign, a three-quarters weight gold coin, 2.64 gr, was introduced, called the *zar-i maḥbūb*. Both this and the *funduḳ* had fractional and multiple denominations in the broad-flan *zīnet*, ornamented jewellery coins. This coinage pattern continued under Maḥmūd I (1143-68/1730-54) and ᶜO̲th̲mān III (1168-71/1754-7). The Barbary regencies continued to strike gold coins whose weight was comparable to the Venetian sequin and the Constantinople *funduḳ*, while the silver coinage maintained various standards based on local usage, but was struck in the name of the sultan as nominal overlord. These coins were dated by the actual year of their striking rather than by accession year only, as they were in Constantinople and Cairo.

Under Muṣṭafā III (1171-87/1757-74), the coinage of Constantinople became even more complex, consisting of the gold *funduḳ* and half-*funduḳ*, the *zar-i maḥbūb* and its half, the *zīnet* 5, 3 and 1½ *funduḳ*, the silver *ḳurūs̲h̲* series, full, 40 *para*, half, 20 *para*, quarter, 10 *para* and eighth, 5 *para*, and the double *zolota*, 60 *para*, the *zolota*, 30 *para* and the half-*zolota*, 15 *para*. There was also the *para* valued at three *aḳče*s and the *aḳče* itself. At this time the Constantinople mint modified the traditional dating system by placing the actual year of striking on the coin, abbreviated to (1171) 1-9 and (11) 80-87 as well as the accession year. With the accession of ᶜAbd ül-Ḥamīd I (1187-1203/1774-89) came the final change when coins were dated both by accession year and *d̲j̲ulūs* (regnal) year. (The actual date of striking is found by substracting one from the number of regnal years and adding the remainder to the accession year.) In 1203, the last year of ᶜAbd al-Ḥamīd's reign, the double *ḳurūs̲h̲*, 80 *para*, was introduced to meet the cost of the war with Russia. Selīm III (1203-22/1789-1807), added the silver 100 *para* (2½ *ḳurūs̲h̲*) to the series. Towards the end of his rule an imbalance in the gold and silver ratio caused an increase in the amount of gold and a decrease in that of silver placed in circulation.

The coinage of Egypt, always the Ottomans' primary source of gold, whose tribute was of the greatest importance to the imperial finances, became more prominent during this period. Its minor coinage was still based on the *medin*, now a debased and ugly little coin which people stored in their cheeks to keep it from being lost in the seams of their robes or blown away by the *K̲h̲amsīn* winds. Following ᶜAlī Pas̲h̲a's

revolt in 1183 Egypt struck its first large-size silver coins, the *ḳurūsh*, half and quarter. When the French seized Egypt during Selīm III's reign the Cairo mint issued *ḳurūsh*, halves and quarters bearing the regnal year 13, and then, when Ottoman authority was restored, another issue with the "sun" of Shemsī Pasha to the left of the *ṭughra* was struck in the year 16.

Selīm's overthrow in 1222/1807 led to the enthronement of the feeble Muṣṭafā IV (1222-3/1807-8). By this time the coinage of Algiers, Tunis and Tripoli (Ṭarābulus al-Gharb) had undergone a major revival thanks to the proceeds of piracy in the Mediterranean. The Algerian Deys issued *sulṭānīs*, halves and quarters in gold, but allied their silver coinage to the Spanish eight reales, striking double, single, half and quarter *real dirhams* with the approximate weight and fineness of the Spanish silver coinage. The Beys of Tunis were too poor to sustain a gold coinage, and issued a billon *riyāl/ḳurūsh*, half and quarter. In Ṭarābulus al-Gharb, now held by the Ḳaramānlī dynasty [*q.v.*], the *sulṭānī* remained in use, with frequent silver issues of varying quality forced into circulation largely as a means of raising taxes from their unhappy subjects.

The coinage of Maḥmūd II (1223-55/1808-39) is the most complex in Ottoman history, and the word chaos might most aptly describe it. Many points concerning it are still obscure. At the beginning of the reign it was still traditional in form, but the tremendous political and economic upheavals of the time transformed it into something new and different. A bewildering variety of gold and silver coins were in circulation whose exchange rates fluctuated constantly, whose weights and alloys were inconsistent with one another, and whose designs and legends departed from past conventions. Added to this was the usual host of foreign coins circulating in the Empire, as well as counterfeit coins which created further confusion in the public mind.

The financial situation was never easy, and often desperate, with the state living from hand to mouth, and the manipulation of coinage was seen as an unavoidable expedient to help close the wide gap between income and expenditure. By this time the government fully appreciated that debasing the coinage was self-defeating, and that a stable medium of exchange had to be created if the state was to achieve its broader goals of renewal and reform.

The Constantinople currency was altered no fewer than eight times in Maḥmūd's reign, and that of Cairo under Muḥammad ʿAlī Pasha [*q.v.*] four times. The virtually independent state of Algiers was the first whose mint installed a European coinage press in 1236/1821. The French invasion of 1245/1830 ended the Algerian Deys' coinage, but the Bey of Constantine continued to strike coins in Maḥmūd's name until 1253/1837. Tunis maintained a silver billon coinage throughout the reign, and the Ḳaramānlī Beys of Ṭarābulus al-Gharb struck a multitude of issues, sometimes several in a year, as a means of taxation. Their mint was closed after the Ottomans retook the province in 1250/1834. In the east a limited copper coinage was struck in Wan, and a more extensive one in Baghdād during the final years of the local Mamlūk dynasty.

After Egypt had reformed its coinage under Muḥammad ʿAlī in 1251/1835 the impetus for reform in Constantinople gathered speed, and by the end of Maḥmūd's reign the establishment of an Ottoman coinage on the European pattern was being considered for inclusion within the reforms of the forthcoming Imperial Rescript [see TANẒĪMĀT], issued in 1255/1839. While the Egyptian coinage reform had introduced a 100-*ḳurūsh* coin with the weight of an English guinea as its principal gold coin, and the 20-*ḳurūsh taler* weighing 28 grams patterned on the Maria Theresa thaler, as its main silver coin, the Constantinople government preferred to rectify the coinage by striking the silver 20-*ḳurūsh medjīdiyye* which weighed 24 gr of 833 parts fine silver, and the gold *lira* valued at 100 *ḳurūsh* weighing 7.20 gr of 916 parts fine gold. This coinage was to last unchanged until the end of the Empire in 1341/1923. The gold denominations were 500, 250, 100, 50 and 25 *ḳurūsh*, the silver 20, 10, 5, 2 and one *ḳurūsh*, and 20 *para*, and the copper 40, 20, 10, 5 and one *para*. The copper coinage was discontinued at the end of ʿAbd ül-Medjīd's reign because people refused to accept coins that could not be freely converted into silver and gold. Perhaps the most important part of the currency reform reduced seigniorage to the point where it merely covered the costs of running the mint. In the absence of any other means of raising revenue the government was forced to close the shortfall between tax receipts and expenditures through the expedient of contracting foreign loans. This brought about the bankruptcy of the Empire and the fall of ʿAbd ül-ʿAzīz (1277-93/1861-76). He was succeeded by Murād V, who ruled for three months in 1293/1876, ʿAbd ül-Ḥamīd II (1293-1327/1876-1909), Meḥemmed V Reshād (1327-36/1909-18) and finally Meḥemmed VI Wāḥid al-Dīn (1336-41/1918-22). The new coinage carried the reigning sultan's *ṭughra* on the obverse, with the regnal year beneath, and on the reverse the legend *ʿAzza naṣruhu ḍuriba fī Ḳusṭanṭīniyya* with the accession year. A gold *zīnet* coinage was introduced during ʿAbd ül-Ḥamīd's reign, the proceeds from which were used to help fund the state pensions scheme.

The most popular denominations in the currency series were the *lira* and the five-*ḳurūsh* (quarter-*medjīdiyye*). The small gold coins were used as presents on the occasion of circumcision celebrations or gifts for brides, while the large ones were converted into jewellery to be kept as family savings. The Imperial mint also struck special series of coins to commemorate the sultans' visits to Edirne in 1247/1831, Edirne in 1262/1846, Bursa in 1277/1861, Bursa in 1327/1909, Edirne in 1328/1910 and Selānik (Salonica), Monastīr (Bitola) and Ḳoṣowa (Prishtina) in 1329/1911. The striking of the *medjīdiyye* (20 *ḳurūsh*) was suspended in 1295 after the rapid fall in the price of silver following the development of the Comstock Lode in the United States. It was reintroduced in the last year of the First World War to pay the Turkish troops fighting in Syria and Palestine.

Egypt's coinage was hampered because the minting machinery could not keep up with the needs of the province, and foreign coins circulated more freely than did local pieces. However, the Cairo mint did strike a full range of denominations: gold 500, 100, 50, 25, 10 and 5 *ḳurūsh*; silver 20, 10, 5, 2½, 1 *ḳurūsh*, 20 and 10 *para*, and copper 40, 20, 10, 5, 4 and 1 *para*. After the British Protectorate was established the coinage was taken in hand and struck in European mints from 1302/1884 onwards. This coinage continued to bear the name, and accession and regnal year of the Ottoman Sultan until the Ottomans joined the German side in the First World War, whereupon the British deposed the Khedive ʿAbbās Ḥilmī II [*q.v.*] and made his brother Ḥusayn Kāmil [*q.v.*] sultan of Egypt. In Tunis the Ḥusaynid Beys started to place their own names on the coinage during the reign of ʿAbd ül-Medjīd. They introduced European coinage machinery in 1263, and based their unit of value on the *riyāl* [*q.v.*] weighing 3.20 gr. The gold

coinage consisted of the 100, 50, 25, 10 and 5 *riyāl*; silver of the 5, 4, 2, 1 and ½ *riyāl* (8 *kharrūb*), and copper of the 8, 4, 2, 1, ½ and ¼ *kharrūb*. These coins were struck in the names of both the Ottoman Sultan and the Bey of Tunis until the establishment of the French Protectorate in 1298/1881.

Bibliography: There is an extensive literature on Ottoman numismatics, much of it in short articles, but only the principal works are mentioned in this bibliography.

OTRANTO [see ITALIYA].

OTRĀR [see UTRARI].

ÖTÜKEN, a forested, mountain area of Inner Asia which had a special religious and moral significance for the early Turkish peoples.

It seems to have been located in the eastern part of the Khangai Mts. around the headwaters of the Orkhon and Tamir rivers (the latter river corresponding, according to R. Giraud, *L'Empire des Turcs célestes. Les règnes d'Elterich, Qapghan et Bilga (680-734)*, Paris 1960, 207, to the *ïduḳ yer sub* "sacred places and watercourses" of the old Turkish inscriptions), generally along the co-ordinates of long. 101° E. and lat. 47° N., in the western part of what is now the Mongolian People's Republic (see *ibid.*, 172-3). It was the heartland of the Ḳaghans of the Eastern Türk or T'uküeh when they constituted their empire in the later 7th century A.D. (see W. Thomsen, *Alttürkische Inschriften aus der Mongolei*, in *ZDMG*, lxxviii [1924], 123-6; R. Grousset, *L'Empire des steppes*[4], Paris 1951, 131-2, 154, Eng. tr. 106, 561 n. 2). It was a region of cosmic significance for these Turks, the navel of the world, a holy site, *ïduḳ Ötüken yïsh* "sacred, forested Ötüken", mentioned many times in the Kül Tigin and Tonyuḳuḳ inscriptions of the Eastern Türk empire and also in the Tariyat and Sine Usu ones from the 750s of the Uyghurs who succeeded in Mongolia to the Eastern Türk Ḳaghans, although it was probably not the only sacred site for the Turks. In the annals of T'ang China, it appears as Yu-tou-kin (see P. Pelliot, *Le mont Yu-tou-kin (Ütükän) des anciens Turcs*, in *T'oung-Pao*, xxvi [1929], 212-19).

The religious significance of Ötüken later passed to the Mongols who came to this region of Inner Asia, appearing in the 13th century as the Mongol earth and fertility goddess Ätügän or Itügän (John of Plano Carpini's Itoga, see W. Heissig, *The religions of Mongolia*, Berkeley and Los Angeles 1980, 101-4; the Mongols' sacred mountain region of Burkhan Galdun played for them the rôle which Ötüken had earlier played for the Turks).

Only the name, without consciousness of Ötüken's part in the life of the early Turks, persisted into the Islamic period: Maḥmūd Kāshgharī (late 5th/11th century [*q.v.*]) defines *Utūkān* as "the name of a place in the Tatār deserts near the Uyghur" (*Dīwān lughāt al-turk*, Tkish. tr. Atalay, i, 138, Eng. tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, i, 159), but on the map accompanying the manuscript of his dictionary he apparently places it somewhere near the source of the Irtish river [*q.v.* in Suppl.] and the steppe of the Yimäk [see KIMÄK] (schematic reproduction of the map in Dankoff and Kelly, *op. cit.*, i, at p. 82, and see also V. Minorsky, *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, London 1942, comm. 73-4); obviously, Kāshgharī had only the haziest idea of Ötüken's real location.

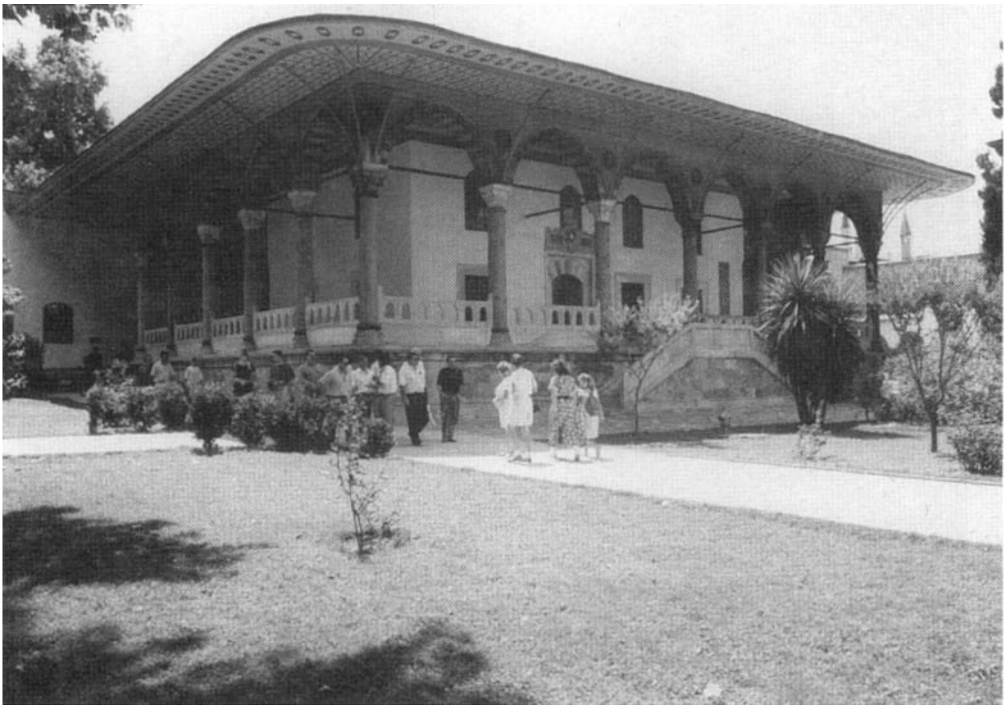
OUDH [see AWADH].

OUJDA [see WADJDA].

OXUS [see DJAYḤŪN].

ỌYỌ, a West African Yoruba empire in what is now Nigeria [*q.v.*] and rivalling Ife, where kingship existed from at least the 12th century. Ọyọ grew in importance from the 16th century with the rise of the Atlantic slave trade. The empire linked northern trade routes along the Niger with the Atlantic. Muslims from Borno, Hausa, Nupe and the former Mali and Songhay were resident in its capital and along the route to the sea, but the Alafin, the local chief, and the vast majority of the people followed their traditional religion.



Struggle between central and provincial government produced a series of serious internal crises. At the death of the Alafin Awolẹ in 1796, the governor of Ilorin, Afọnja, broke from Ọyọ. To secure his independence against a resuscitating Ọyọ, he allied himself in 1817 with Fulani Muslims [see FULBE] connected with Sokoto [*q.v.*]. Their leader, Ṣāliḥ, conducted a successful *djihād* against Ọyọ with the help of pastoral Fulani and Muslim town residents and slaves. His son ʿAbd-al-Salām turned on Afonja and was recognised by Sokoto as "Amīr of Yoruba". After a sustained campaign, by 1836 the capital, Ọyọ Ile, was destroyed and the heartland of the empire incorporated into the Ilorin amirate.

Ilorin's *djihād* to the sea met resistance from new Ọyọ, Ibadan, and later the British in Lagos, but was ultimately blunted by the disappearance of its economic target, the Atlantic slave market.

OZAN (T.), in Turkish society "troubadour poet/singer/story-teller". The term comes from the verb *oz-* "to outstrip, go ahead in the race" (see Clauson, *Etymological dictionary of pre-thirteenth century Turkish*, 279), already attested in Kās͟hg͟harī's [*q.v.*] *Dīwān lug͟hāt al-turk* (5th/11th century), as also in the living tongues of Kirgiz, Sagay and Koybol of Central Asia and in the Turkish of Anatolia. The term *ozan* was used for the singers who accompanied the army in Saldjūḳ times. An Anatolian Turkish poet of the 9th/15th century called himself Ozan. In Turkmen, the term is archaic and is replaced by *bagsı* "popular poet". In the Turkish of Turkey, from the 10th/16th century onwards it was replaced by *ʿās͟hiḳ* (*âşık*). Nevertheless, in certain contemporary dialects of Anatolia, it has survived with the meaning "poet/singer", as also as an element of the terms *ozanlama* "assonantal sayings, proverbs", *ozancı* "garrulous person", *ozanlık* "pleasantry" and *ozannama* "improvised story, song". At the present day, in modern Turkish, it has replaced the Arabic term *s͟hāʿir* (*şair*).

ÖZBEG (ŪZBAK, ŪZBĪK) (T.), a term with a variety of uses in pre-modern times.

1. Historical aspects

(a) As a generic term, it was applied to the Turko-Mongol nomadic tribal groups in Central Asia, especially Trans- and Cis-Oxiana and K͟hʷārazm, which from the mid-15th century onwards comprised the military support for Djūčid-Čingīzid lineages such as the S͟hībānids [*q.v.*] (ʿArabs͟hāhids) of K͟hʷārazm (16th and 17th centuries), the S͟hībānids (Abu 'l-K͟hayrids) of Trans- and Cis-Oxiana (16th century) and the Tuḳāy Tīmūrids (Djānids [*q.v.*]) in Trans- and Cis-Oxiana (17th century).

By the 16th century, there were two well-established traditions listing 32 or 92 distinct "Özbeg" tribes (*īl, ḳawm, ūlūs, tāʾifa*) (T.I. Sultanov, *Kočevye plemena pri-Aral'ya v XV-XVII vv.*, Moscow 1982, 7-51). Of these, the ones which figure most prominently in the history of K͟hʷārazm (K͟hīwa [*q.v.*]) and Trans- and Cis-Oxiana from the beginning of the 16th to the end of the 19th centuries, are the Mangît, Ḳungrāt, Arg͟hūn, Ḳipčāḳ, Ḳirgīz, Ḳārlūḳ, Kalmuk [*q.v.*], Alčīn, Ḳiyāt, Uyrāt (Oyrat), Nāymān, Ḳaṭag͟han, Ḳānglī (Ḳānḳulī), Utārči, Dūrman, Arlāt, Kerāyit, Mīng, Yūz, Djalāʾir, Sarāy, Onggut, Tānggut, Merkit (Makrīt), Ḳārī, Og͟hlān, Us͟hūn, Kenīkas, Tātār, Ḳirḳ, Ḳūs͟hčī, Uyg͟hūr and Bahrīn. Many of these tribal entities, or at least their names, disappeared over the centuries from written records; others, like the Mangît, Kenīkas, Ḳaṭag͟han, Ḳungrāt, Mīng and Yūz survived the eventual breakdown of Čingīzid authority in the region and formed successor amīrates (or begates) which survived to modern times.

The meaning of the term Özbeg is closely linked to the emergence of two new Djūčid lineages at the beginning of the 16th century in Central Asia, the Abu 'l-K͟hayrid and the ʿArabs͟hāhid or Yādgārid. Both traced their origins to S͟hībān b. Djūčī b. Čingīz Khan. Their supporters, apparently because of their earlier affiliations with the Djūčid Golden Horde and Uzbek Khan, are known (in Persian) as the *Ūzbakān* or *Ūzbakiyya*. When allied with the Čag͟hatāy Čingīzids, however, these same Turko-Mongol tribal groups are called *Mug͟huls* (see e.g. Ẓahīr al-Dīn Muḥammad Bābur, *Bābur-nāma*, tr. A.S. Beveridge, London 1922, 2; also Section IV of the introduction, E.D. Ross (ed.) and N. Elias (tr.), *A history of the Moghuls of Central Asia, being the Tarikh-i-Rashidi of Mirza Muhammad Haidar Dughlát*, London 1898). To contemporary observers like Bābur and later Iskandar Beg Muns͟hī [*q.v.*], the term meant both the Turko-Mongol supporters of the Central Asian Čingīzids and, by extension, and, in the Persian case, derogatorily, the Čingīzids themselves.

The Djūčid agnates held exclusive right to the titles *k͟hān* (sovereign) and *sulṭān* (prince), while their Özbeg military backers were generally distinguished by the title of *amīr*. Although a court ceremonial with apparently ancient antecedents established a traditional hierarchy of the Özbeg tribal groups, it had little to do with their actual political power. The early 17th century writer Maḥmūd b. Amīr Walī wrote a detailed description of court protocol at Balk͟h which, when compared with the biographies he also compiled of contemporary *amīrs*, shows no clear correspondence between court status and political prominence (see R.D. McChesney, *The Amirs of seventeenth century Muslim Central Asia*, in *JESHO*, xxvi, 41-2).

The leading *amīrs* were granted rights in revenue known variously as *iḳṭāʿ, suyurg͟hāl, tiyūl* [*q.vv.*] (see e.g. M.A. Abduraimov, *Očerki agrarnik͟h otnos͟henii v Buk͟harskom k͟hanstve*, Tashkent 1966-70, ii, 100-24), which gave them and their kinsmen and allies an interest in the regions from which they derived this income. Through the 16th and early 17th centuries the Čingīzid sovereigns followed a policy of periodically transferring their amīrid backers, perhaps to limit the degree of attachment they might feel to any particular locale. By the middle of the 17th century, this policy was becoming more and more difficult to enforce. Attempts by Nad͟hr Muḥammad [*q.v.*] (*r.* at Balk͟h 1015-51/1606-42 and 1055-61/1645-51), for example, to move *amīrs* like Yalangtūs͟h Bī Alčīn from what was a long-time *iḳṭāʿ* in the region south of Balk͟h contributed to his downfall after a brief reign at Buk͟hārā (1642-5). His Čingīzid successors did not make the same mistake.

Through the 18th century, the Özbeg groups consolidated their local ties and by the beginning of the 19th century some of them had established independent dynasties—at Buk͟hārā and Samarḳand (Mangit), Maymana (Mīng), K͟hoḳand (Mīng), Ḳunduz (Ḳaṭag͟han), K͟hīwa (Ḳungrāt) and S͟hahr-i Sabz (Kenīkas). The new petty dynasts tended to prefer the title *amīr* or *mīr*, perhaps in deference to the power which the idea of Čingīzid legitimacy still retained long after the last of the Čingīzids had disappeared from the scene.

(b) More specifically, the term was also used as part of a proper name, perhaps designating urbanised Turkish-speakers who did not identify themselves with any of the above tribal organisations. In the archives of the Djūybārī *s͟hayk͟hs* of Buk͟hārā (see

P.P. Ivanov (tr.), *Khozyaîstvo dzhuibarskikh sheikhov*, Moscow-Leningrad 1954) appear names of property-owners like "Āḳ Bīga, daughter of ʿĀdil Bī Özbeg" (134), "Tūlūm Beg, daughter of Bilāl Bī Özbeg" (240) and "Khʷādjā Muḥammad Mīr Özbeg" (177). However, of the several thousand names in this archive less than a dozen are so distinguished.

(c) Contemporary indigenous sources often applied the term Özbeg to uncultured and unlettered individuals, usually nomads or rural peasants (see e.g. for the mid-17th century, Maḥmūd b. Amīr Walī, *Baḥr al-asrār fī manāḳib al-akhyār*, i, ed. and Russian tr. as *More tain otnositel'no doblestei blagorodnīkh*, Tashkent 1977, 1 of the Persian text, for a contrast between the intellectuals who inhabited Andīdjān before the "Özbegs" settled in the region; Muḥammad Ṭālib Djūybārī, *Maṭlab al-ṭālibīn*, Tashkent IVAN ms. no. 3757, fol. 147b, where Imām Ḳulī Khān (*r*. 1020-51/1612-42) is described as angered at "the Özbegs, the desert-dwellers (*ṣaḥrā-nishīnān*) of that region", and fol. 214b, where a *shaykh* has an encounter with a drunken "Özbeg" in a Bukhāran street).

(d) Finally, in the late 19th and early 20th centuries the term Özbeg was used by the politically-dominant Durrānī Afghāns for long-term residents in northern Afghānistān, whether Turkish-speaking or not (see R.D. McChesney, *Waqf in Central Asia*, Princeton 1991, 303-4; N. Tapper, *Bartered brides: politics, gender and marriage in Afghan tribal society*, Cambridge 1991, 39).

(R.D. McChesney)

2. Ethnography

The Özbegs are one of the predominant ethnic groups of Turkistān [*q.v.*] or Central Asia, with their territory extending from the Caspian Sea to Sinkiang. They are found in the former Soviet republics of Türkmenistān, Özbegistān, Tādjikistān, Ḳirghizia, Ḳazākhstān, across northern Afghānistān and in Kābul, the capital of Afghānistān, and in the People's Republic of China. In the former Soviet Union, there are approximately 20 million Özbegs, indicating a rapidly increasing population. The number of Özbegs in Afghānistān [*q.v.* (ii)] has probably been underestimated as one million since the 1960s. In Sinkiang there are about 14,000 Özbegs, about whom little is known in the outside world.

Pakistan, Saudi Arabia, Turkey and now Europe and the United States have provided a home for Özbegs who have left their traditional territory because of political, economic and social disruption related either to Soviet or Chinese expansionism or the on-going Afghānistān conflict. During Russian and later Soviet control in Central Asia, the Özbegs periodically rebelled and through spontaneous uprisings expressed nationalistic feelings [see BASMAČIS]. In Afghānistān, competition and hostility has been directed most toward the Pashtūns [see AFGHĀNS], a group economically and politically dominant there. Özbegs from northern Afghānistān are currently (1992) involved in the Afghān resistance movement against the Marxist government.

The groups of Özbegs divided by national boundaries have been somewhat isolated from each other during much of the 20th century. For example, Özbeg was traditionally written in Arabic script, but since 1940 Cyrillic script has been used in the Soviet Union, hampering communication with those in other countries who retain Arabic script as in Afghānistān or those who utilise Latin script such as Turkistānī exiles in Turkey. However, recent contacts between Özbegs have been facilitated by construction of the Ḳaraḳorum highway through Pakistan and the disintegration of the Soviet Union.

The Özbeg khānates of the late 19th century [see BUKHĀRĀ, KHĪWA and KHOḲAND] had a complex socio-political organisation with dynastic rulers, standing armies, governmental and religious bureaucracy, social stratification and specialisation. Villages were traditionally led by an *aḳsaḳal*, a respected older headman who mediated disputes. The ethnographic literature and travellers' accounts indicate that Özbegs had become sedentary by the 20th century. Vestiges of a semi-nomadic past remain for some who still construct *yurts*, portable felt-covered round tents with wood frames, in the household courtyards for use during the summer. Agricultural Özbegs live in permanent villages which are either compact with surrounding agricultural lands or dispersed with homesteads in linear arrangements following irrigation canals. Some rural and urban household compounds are still built of adobe brick, most with flat roofs, but some structures exhibit a "beehive" style.

Agriculturist Özbegs grow rice, cotton, wheat, barley, sorghum, alfalfa, various vegetables and fruits, especially melons, and raise sheep, goats, cows and horses. Mulberry, which has leaves used in the raising of silkworms, is cultivated. Traditional commercial activities include black-, tin-, lock- and coppersmithing; silk, textile, saddle, sheepskin coat, leather, felt and pottery manufacture, soap making, barbering, oil pressing, butchering, baking, rice hulling and milling. Carved plaster made of gypsum and decorative wood work are important decorative crafts. Özbeg women are known for their flat-weave rugs and embroidery. A brightly dyed silk cloth made into cloaks and dresses is another specialty.

Men's and women's activities are spatially regulated. Women traditionally perform their duties of cooking, cleaning, sewing, bread making and animal care in the private space of the household courtyard while men work in the public area of the marketplace or fields. This division is adhered to most strictly in urban areas in northern Afg̲h̲ānistān, where traditional Özbeg women begin wearing the veil around the age of puberty. In the former Soviet republics, Özbeg women work outside the home in factories, offices and agriculture. However, they remain the primary homemakers.

Historically, tax-farming was the primary land tenure system, especially north of the Amū Daryā [*q.v.*]. In the k̲h̲ānate of Buk̲h̲ārā [*q.v.*], provinces were divided into tax districts administered by appointees of the *amīr* of Buk̲h̲ārā. Each *beg* retained the amount of revenue which he considered necessary to maintain his court and forwarded the rest to the *amīr*. The situation of the common people was not substantially altered after the Russian annexation of Central Asia except in Farg̲h̲ānā [*q.v.*], where the Russians instituted cotton mono-cropping and eliminated the traditional bureacracy.

In the late 1920s to 1930s, agriculture was collectivised in Turkistān. Despite Sovietisation, many Özbegs continued to market some of their own crops. Increasing cotton production in the late 19th to 20th centuries has led to integration into the world market. Depending on location, one-third to one-half of urban Özbegs in the former Soviet republics currently own their own households. In northern Afg̲h̲ānistān the most important land tenure system is currently freehold or private ownership which entails full rights and disposal through sale and inheritance. Most of the holdings are small, typically 5-10 acres.

The basic kin group is known as the *ḳawm* (other terms are also used), which in its basic sense consists of related households comprising a community. The *ḳawm* contains several groups of patrilineally-related families who regard themselves as descended from a common ancestor. However, *ḳawm* is a structural category which is adjusted by the people to suit their own social situation. The word is used to include not only agnates, but also persons who assist each other, share goods and live nearby, including affinal kinsmen and even unrelated people who marry in and become viewed as part of the group. Ideally, the nearest households in the village or urban neighbourhood who have close co-operative relationships and who may have their own mosque or other common interests form a *ḳawm*. A village may be composed of one or more *ḳawms*. An urban *ḳawm* is often associated with a craft or occupation. An important feature of kinship terminologies is the emphasis on special terms for older brother, *aḳa*, and older sister, *āpa*.

In the traditional marriage system, marriage preference is for one to whom a kin connection can be traced. There are norms against marriage with members of other ethnic groups. Although polygamy has become rare, parental arrangement and consent to marriage have been retained. A cash payment from the groom's side to the bride's is part of marriage negotiations, part of which may be used to buy household items for the bride. Divorce is governed by Islamic law or by the laws of the country, although community pressure limits its use.

The ideal is the patrilocal extended family with the senior married couple, their sons, the sons' wives and children and the unmarried daughters of the senior couple all residing in the same household compound. Nuclear families are also common, since extended families may break up as the sons mature and the senior pair ages.

Özbegs generally favour large families. In northern Afg̲h̲ānistān, the baby is strapped into a special wooden cradle on rockers beginning forty days after birth. Outside of the cradle, the baby is swaddled. Circumcision of boys, practiced by all Özbegs, is generally done at some time between the second and fourth year. A Ḳurʾānic education was traditional, but now public high school and university education are increasingly common, especially for boys.

The ruling dynasties in the Central Asian k̲h̲ānates from the end of the 18th to the 20th centuries were the tribal groups of Mangît [*q.v.*] in Buk̲h̲ārā [*q.v.*] and Ḳungrāt [*q.v.*] in K̲h̲ʷārazm [*q.v.*], which came to be called K̲h̲īwa [*q.v.*]. The leaders of the K̲h̲oḳand k̲h̲ānate were from the Mīng tribe. Some Özbegs still remember a tribal designation and may use this as part of their personal identity. Important tribes are Ḳungrāt, Mangît, Ḳîpčaḳ, Ḳanglî, Naʾimān, K̲h̲itay, Dürmen, Čag̲h̲atay, Mīng, Kenīkas and Lakai. Other "non-tribal" Özbegs use either a district or town as an identity marker. Gender, age, dialect and Islamic observance are important components of personal identity and status.

The Özbegs are Sunnī Muslims who follow the Ḥanafiyya [*q.v.*] legal tradition. Naḳs̲h̲bandiyya [*q.v.*] Ṣūfism has been a social and political force. For some, folk beliefs like the evil eye and harmful possessing spirits, *d̲j̲inn* [*q.v.*] or *parī* [*q.v.*], are part of daily life and necessitate the use of amulets or written verses of the Ḳurʾān. Diseases may be classified as "hot" or "cold," with oppositely-classified foods used in their curing. The *ʿulamāʾ*, religious scholars and teachers, traditionally were very influential, since Buk̲h̲ārā was for long a centre of Islamic learning. Shamanistic healing, especially the removal of spirits, was done by a practitioner called a *bāk̲h̲s̲h̲ī*, *parīk̲h̲ʷān* or *duʿāk̲h̲ʷān*, often a *mullā* learned in the Ḳurʾān. In the folk tradition, there is also belief in *albastī*, a witch-like *d̲j̲innī*.

In addition to the celebration of Islamic festivals and holy periods such as Ramaḍān, a non-Islamic holiday, the New Year, held at the beginning of spring, is celebrated by the distribution of a pudding-like food made of sprouted wheat, *sūmūlak*, to family and friends. Özbegs are known for their cuisine, which includes many noodle dishes such as *mantū*, a steamed dumpling. The musical tradition includes indigenous instruments such as the two-stringed *dūtār* and the *dāʾira*, a tambourine, for use in public and private entertainment. To celebrate weddings and circumcisions, men play *ūlaḳ*, a sport in which men on horseback battle to carry the carcass of a cow to a goal.

ÖZBEG B. MUḤAMMAD PAHLAWĀN, Muẓaffar al-Dīn (reigned 607-22/1210-25), the fifth and last Atabeg of the Ildegizid or Eldigüzid

family [see ILDEÑIZIDS] who ruled in Ādharbāydjān during the later Saldjūḳ and Khwārazmshāhī periods. He married Malika Khātūn, widow of the last Great Saldjūḳ sultan Ṭoghrïl III (killed in 590/1194 [*q.v.*]).

During the early part of his career, he ruled in Hamadhān as a subordinate of his brother Nuṣrat al-Dīn Abū Bakr, during the time when much of Ādharbāydjān and ʿIrāḳ ʿAdjamī was falling into anarchy in the post-Saldjūḳ period. His freedom of action was often circumscribed by powerful Turkish *amīrs*, nominally his agents and protectors, such as Ay-Aba, Gökče and Ay-Ṭoghmïsh, until in 607/1210 he succeeded Abū Bakr as Atabeg in Tabrīz and head of the family.

Under military pressure from the resurgent Georgians [see AL-KURDJ], he had to come to an arrangement with the Khwārazm-Shāh ʿAlāʾ al-Dīn Muḥammad whereby he was confirmed in Ādharbāydjān and Arrān but as the Shāh's vassal, acknowledging him in the *khuṭba* and *sikka* (614/1217). In 617/1220 the Mongols first came to Tabrīz, and on their third reappearance Özbeg abandoned the city for Nakhčiwān [*q.v.*], but was back again by the autumn of 619/1222. In 621/1224 a fresh wave of Mongol troops entered Persia, defeated the Khwārazmians at Rayy and pushed on to Tabrīz, compelling Özbeg to extradite to them the Khwārazmian refugees who had fled thither. In Radjab 622/June 1225, however, the Shāh Djalāl al-Dīn [*q.v.*] occupied the Ildegizid capital, whilst Özbeg withdrew to Gandja [*q.v.*], and the Shāh forced Özbeg to divorce his wife Malika Khātūn, whom he married himself, till intervention by the Ayyūbid al-Malik al-Ashraf rescued her and brought her to Khilāṭ. Özbeg now lost Gandja also, and died in humiliation at the fortress of Alindja (622/1225), so that his line came to an end.

Özbeg is very severely judged by the chroniclers for his indolence and love of luxurious living; but it must be said in extenuation that he faced redoubtable foes in the Georgians, the Khwārazmians and the Mongols. His court was famed as a centre for art and letters, with his vizier Rabīb al-Dawla being a noted patron of poets.

ÖZBEGISTAN [see UZBEKISTAN].

ÖZDEMIR PASHA, Ottoman *beylerbeyi* (governor) of Yemen and, subsequently, of coastal Abyssinia (Ḥabesh [*q.v.*]), and the individual most instrumental in establishing the sultan's authority in both provinces during the mid-10th/16th century.

An Egyptian *mamlūk* of Circassian origin whose master is said to have been one Kaykāwūs Shewkat Bey, Özdemir took service with the Ottomans after Selīm I conquered Egypt in 922-3/1517. He held a number of minor offices in the provincial administration until, by 945/1538, he had gained the position of *kāshif* (district prefect). In this year he enrolled for service in the sizeable naval expedition launched from Suez against the Portuguese in India under the command of Süleymān Pasha [*q.v.*].

Upon the armada's return from India to coastal Yemen, where Süleymān Pasha secured Ottoman rule at Zabīd under a *sandjaḳ beyi*, Özdemir remained there as an *amīr*. Ewliyā Čelebi's claim (*Seyāḥat-nāme*, x, 220, 939) that he next served in southern Egypt against the expansionist Fundj [*q.v.*] is without corroboration. Yet Özdemir is next noticed only in Dhu 'l-Ḥidjdja 953/February 1547 as a participant in the Ottoman capture of Taʿizz [*q.v.*]. When shortly Uways Pasha, the Ottoman governor (*beylerbeyi*), was assassinated, Özdemir, by then a *sandjaḳ beyi*, was elected locally as interim commander (*serdār*). He resolved to capture Ṣanʿāʾ, the Zaydī capital, which ambition was realised on 7 Radjab 954/23 August 1547. Although it was nearly another two years before he was confirmed as *beylerbeyi* of Yemen, he maintained pressure on the weak and divided Zaydīs. The high point of Ottoman domination was reached in 959/1552 when, after five years of unavailing warfare, the Zaydī leader al-Muṭahhar [*q.v.*] and Özdemir Pasha concluded a peace treaty whereby the former acknowledged Ottoman suzerainty in return for limited autonomy.

Özdemir was dismissed from Yemen during 961/1554, probably in Djumādā I/April. Attracted by the prosperity of the eastern Red Sea port of Sawākin, where he landed while returning from Yemen, and filled with enthusiasm to conquer the Abyssinian littoral to further Islam and check Portuguese ambitions, Özdemir subsequently persuaded Sultan Süleymān in person to appoint him commander (*serdār*) of an Egyptian force of 3,000 to achieve that goal. When an initial attempt to reach his objective via the Nile River failed, Özdemir established his base at Sawākin, the centre of the new Ottoman province of Ḥabesh, which was officially created on 15 Shaʿbān 962/5 July 1555 with Özdemir Pasha as *beylerbeyi*. From Sawākin, the Ottoman forces first seized and secured the Abyssinian coastlands, including the key port of Maṣawwaʿ [*q.v.*], before in 965/1558 commencing successful forays into the province of Tigre. An inland Ottoman base was secured in 966/1559 at Debārwā, where a fortress and mosques were constructed.

It was at Debārwā that Özdemir Pasha died during 967/1560, after which the vastly outnumbered Ottoman troops began retreating towards the coast. His body was interred at Debārwā, but later it was transferred for burial in a mausoleum erected at Maṣawwaʿ by his son ʿOthmān Pasha [*q.v.*], who succeeded him as *beylerbeyi* of Ḥabesh and who eventually became Grand Vizier (*ṣadr-i aʿẓam*). Özdemir is usually portrayed as an indefatigable warrior with frugal personal habits and an incorruptible loyalty to the Ottoman sultan.

(J.R. Blackburn)

ÖZI, Özü, the Turkish name of three related features: the river Dnepr, the coastal fortress of Očakov (both in the Ukraine), and the Ottoman *eyālet* alternately called Özi or Silistre (roughly a coastal area bracketed by the lower Özi/Dnepr on the east and the lower Danube with the nearby river port city of Silistre on the south-west; its *beylerbeyi* resided at Aḳkirmān or Silistre but not at Özi/Očakov, more often the seat of a *sanḏjaḳ beyi*).

Both the river and the fortress played an important but complex role in the history of the two Turkish Muslim powers in the Black Sea area, the Crimean Tatars and the Ottomans. The river's lower course first represented a dividing line between the Lithuanians and Poles on the west and the Tatars on the east, and later, in a similar manner, between the *eyālet* of Silistre (Özi) and the k͟hānate, although within the framework of the Ottoman empire of which the k͟hānate became a vassal. The Dnepr approaches the Black Sea from the east through a long and wide estuary which also receives the river Bug from the north; this estuary, known by its Russian term (but possibly a loanword from Ottoman Turkish) as *liman*, at the same time separates the mainland from the Crimean peninsula which ends up in a spur named Kinburnskaya kosa ("Kinburn spur", lit. "scythe", a distortion of the Ottoman name Ḳîlburun "Hair-[thin] cape") two km/1.3 miles south of Očakov. It was on the western bank of the Bug's estuary that King Vytautas of Lithuania built a fort named Das͟hiv in *ca.* 1400, which was renamed D̲jānkirmān after the Crimean K͟hān Mengli Giray [*q.v.*] acquired it in 1492. D̲jānkirmān became a direct Ottoman possession in 1538. Until its final fall to the Russian army and navy two-and-a-half centuries later, Özi—as D̲jānkirmān came to be called by the Ottomans—played an important strategic role in the long struggle between the Turks and Tatars on the one hand, and the Lithuanians, Poles, Cossacks and finally Russians, on the other, involving a contest for the control—especially naval control—of the Black Sea, the Crimea, and the Danubian provinces. Although Özi failed to deter the Cossacks (who founded their famous base of Sič further upstream on the Dnepr) from raiding it and sailing past it on their forays all over the Black Sea, it did help the Ottomans maintain their own presence on this frontier and delay the success of the eventual Russian onslaught. Nevertheless, by the 18th century the latter showed its force in two Russo-Turkish wars: that of 1736-9 and that of 1787-92. Özi was taken on both occasions (July 1736, but the Peace Treaty of Belgrade, 1739, restored it to Turkey; and, definitively, in December 1788, with the Peace Treaty of Jassy, 1792). This final stage was memorable, among other things, for the series of naval engagements between the Ottoman fleet under the able but inadequately-supported *ḳaptanpas͟ha* G͟hāzī Ḥasan Pas͟ha and the Russian one, marked by the rivalry between its two commanders, John Paul Jones (a hero of the American Revolution) and the German prince Charles of Nassau-Siegen.

A matter of some interest is Özi's earlier name, D̲jānkirmān (and another such form given by Ewliyā Čelebi, Dehkirmān), as well as that of Očakov. The specific origin of the name D̲jānkirmān is obscure, but it clearly consists of two elements, *ḏjān* (possibly the Persian term "soul, something dear") and *kirmān* (Persian "fortress"); the latter word appears in a number of place names in the Ukraine (for example Aḳkirmān, the Slavic Belgorod), but not elsewhere (except for the Persian cities of Kirmān and Kirmāns͟hāh); a Scythian (thus Iranian) origin is probable, a remarkable case of the permanence and resilience of toponyms. Although the place became known in Ottoman Turkish by the name of the river as Özi ḳalesi (but was on occasion also called Uzun ḳale), the citadel part was called Ačî-ḳale, which was then extended in Russian and Ukrainian (as Očakov and Očakiv) to the whole fortress.

(S. Soucek)

ÖZKEND, Ūzkend, sometimes written in the sources Yūzkand or Ūzḏjand, a town of mediaeval Islamic Farg͟hāna [*q.v.*] in Central Asia, lying at the eastern end of the Farg͟hāna valley and regarded as being near the frontier with the pagan Turks.

Already in the mid-3rd/9th century, Özkend had a local ruler called by the Turkish name K͟hūrtigin (?Čūr-tigin) (Ibn K͟hurradād͟hbih, 30). The geographers of the next century (i.e. that of the Sāmānids) describe it as having the tripartite pattern typical of eastern Islamic towns, with a citadel in the *madīna* or inner city and a suburb; from it led the way towards Semirečye and the Turkish lands (Ibn Ḥawḳal, ed. Kramers, 513-14, tr. Wiet, 491-2; al-Muḳaddasī, 272; *Ḥudūd al-ʿālam*, tr. 116, comm. 255; Yāḳūt, ed. Beirut, i, 280; Le Strange, *Lands*, 476).

Under the Ḳarakhānids [see ilek-k͟hans], it became the capital at the opening of the 5th/11th century of the Ilig Naṣr b. ʿAlī, and then the capital of the eastern wing of the confederation, with Yūsuf Ḳadîr K͟hān b. Hārūn Bug͟hra K͟hān minting coins there from 416/1025. Maḥmūd Kās͟hg͟harī mentions Ūzkand and defines it as the chief town of Farghāna and as meaning in Turkish *balad anfusinā* "city of our souls" = "our own, special city" (*Dīwān lughāt al-turk*, tr. Atalay, i, 343 = R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, i, 270). It remained a centre of the Ḳarak͟hānids until the invasions of Čingiz K͟hān, and Ḳarak͟hānid coins were minted there up to 610/1213 (E. von Zambaur, *Die Münzprägungen des Islam*, i, Wiesbaden 1968, 58). But after Mongol times it declined, since the Mongol *maliks* of Farghāna made Andiḏjān [*q.v.*] their centre there. In modern times, it is a mere village in the district of Andiḏjān (Barthold, *A short history of Turkestan*, in *Four studies on the history of Central Asia*, Leiden 1962, i, 23, 48).

Bibliography: See also Barthold, *Turkestan*, 156-7, 260, 285-6, 353, 363.

(C.E. Bosworth)

P

PĀʾ or *bāʾ-i fārsī* or *bāʾ-i ʿadjamī*, i.e. the *bāʾ* with three points subscript, invented for Persian as supplement to the Arabic *bāʾ* and to represent the unvoiced, as opposed to the voiced, bilabial plosive (for the voiced *b*, see BĀʾ). It is sometimes interchangeable with *bāʾ* (e.g. *asp* and *asb*, *dabīr* and *dapīr*) and, more frequently, with *fāʾ* (e.g. *sapīd* and *safīd*, *Pārs* and *Fārs*). The regular use of the letter in manuscripts is comparatively modern, but it is found in good ones of the 7th/13th century while at the same time it is often omitted in manuscripts of much later date (*GIPh*, 1/iv, 74; G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 142).

The usage of the letter *pāʾ* passed into Ottoman Turkish, for both original Turkish words (early Turkish had distinguished both voiced and unvoiced versions of the sound, and the first writing system for Turkish, that of the Yenisei and Orkhon inscriptions (7th-8th centuries A.D.), had had separate signs for *p* and *b*, see Talât Tekin, *A grammar of Orkhon Turkic*, Bloomington, Ind. 1968, 24, 27 n. 10, 75) and for Persian loanwords (see J. Deny, *Grammaire de la langue turque (dialecte osmanli)*, Paris 1921, 51-2, 77-8). *Pāʾ* is likewise used in Urdu both for Persian and Turkish loanwords and for words stemming from the Indo-Aryan basis of the language.

In loanwords into Arabic, *pāʾ* may be rendered as *bāʾ*, e.g. in *bāshā* for Turkish *pasha*; *būsta*/*būsṭa* for Italian *posta*; *batrūl* for Fr./Eng. *pétrole*/*petrol*. But it was often rendered, especially in Classical Arabic at a time when Persian cultural influences were strong, as *fāʾ* also, e.g. *furānik* < MP *parvānak*, NP *parwāna* "messenger, courier with despatches"; *fānīdh* < Skr. *phāṇita*, NP *pānīd* "sugar-cane syrup"; *firind* < NP *parand* "damascening on a sword" (see A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919, 71).

(R. Levy-[C.E. Bosworth])

PĀDHŪSPĀN [see RŪYĀN].

PĀDISHĀH (P.), the name for Muslim rulers, especially emperors. The Persian term *pād-i shāh*, i.e. (according to M. Bittner, in E. Oberhummer, *Die Türken und das Osmanische Reich*, Leipzig 1917, 105) "lord who is a royalty" in which the root *pad* is connected with Sanskrit *patis*, lord, husband, fem. *patni*, Greek πότνια and δεσ-πότης, Lat. *potens* (G. Curtius, *Griech. Etymol.*, 377), was originally a title reserved exclusively for the sovereign, which in course of time and as a result of the long intercourse of the Ottomans with the states of the West also came to be approved for certain Western rulers. In the correspondence of the Porte with the Western powers, the grand vizier Ḳuyudju Murād Pasha (d. 7 Djumādā II 1021/5 Aug. 1612) probably for the first time applied the title *pādishāh* to the Austrian emperor Rudolf II. At the conference of Nemirow (1737), Russia demanded the title for its Tsars (cf. J. von Hammer, *GOR*, vii, 488) and claimed it again at the negotiations at Bucharest (1773; cf. *ibid.*, viii, 412). When *pādishāh* came to be applied to the sultan, the *pādishāh-i āl-i ʿOthmān*, does not seem to be exactly known. In any case it is found in conjunction with all kinds of rhyming words as early as the beginning of the 10th/16th century in Ottoman documents. *Pādishāh* therefore may have come to be used towards the end of the 9th/15th century, presumably instead of *khunkʿār* (from *khudāwendkʿār*; cf. *JA*, ser. ii, vol. xv, 276/572), an obsolete word, as well as *sulṭān* (cf. *Isl.*, xi [1921], 70) already found in dervish Ṣūfism, and was regularly used till the end of the sultanate (cf. the cry of *pādishāhīmiz čoḳ* or *biñ yasha* with which the sultan was greeted by his troops and subjects).

In Persian usage, followed by that of the Indo-Muslim rulers such as the Mughal emperors, *pādishāh* became a normal designation for the ruler, though regarded as lower than that of *shāhanshāh* [see SHĀH], and in more recent times it was used by Persian monarchs in diplomatic documents addressed to European kings. Already the *Ḥudūd al-ʿālam* (end of the 4th/10th century) uses *pādshā(h)* "ruler" and *pādshāʾī*/*pādshāy* even for petty princes of the upper Oxus region and northern Afghānistān (tr. Minorsky, 108, 109, § 23.65, 75; idem, *Addenda to the Ḥudūd al-ʿālam*, in *BSOAS*, xvii [1955], glossary, 257). When ʿAlī, son of the head of the Ṣafawī order Ḥaydar b. Djunayd, adopted the title of *pādishāh* in his struggle with the Aḳ Ḳoyunlu [*q.v.*] towards the end of the 9th/15th century, it was a clear indication of the ambitions of the Ṣafawī family (see R.M. Savory, *Iran under the Safavids*, Cambridge 1980, 20). In the later half of the 19th century, A. de Biberstein Kazimirski noted that some of the officials of Nāṣir al-Dīn Shāh [*q.v.*] had taken to describing their master, not only as *shāhanshāh*, but also as *pādishāh-i kull-i mamālik-i Īrān*, apparently in imitation of the Tsar's designation "Emperor of all the Russias" (*Menoutchehri, poète persan du 11ème siècle de notre ère (du 5ième de l'hégire)*, Paris 1887, 359-60).

(F. Babinger-[C.E. Bosworth])

PADRI, the name of a major Islamic revivalist movement in Minangkabau [*q.v.*], Sumatra, 1803-38. The appellation Padri is derived from *orang Pidari* "men of Pedir (Pidië)", in reference to those who made the pilgrimage to Mecca by way of the Atjèhnese port of Pidië. The Padri built on earlier Minangkabau reform movements initiated by the two major Ṣūfī *tarekat* which had been the instrument for converting the central highlands of Sumatra, the Naksyabandiyah (Naḳshbandiyya [*q.v.*]) and the Syattariyah (Shaṭṭāriyya [*q.v.*]). Operating by the late 18th century in a society which was only very partially Islamicised, these *tarekat* flourished around *surau* or centres for religious studies which attracted hundreds of students from throughout Minangkabau.

In the 1780s the hilly regions surrounding some of the major *surau* in the valley districts of Agam, Tanah

Datar and Limapuluh Kota in the Minangkabau highlands were experiencing a major economic revival caused by European and American demand for coffee and cassia. Overcome by booming demand, the society exhibited an inability to organise a secure trading network to the coastal ports or a suitable method of settling disputes in the marketplace. It was the *surau* which was able to offer an alternative to the existing mode of regulation, especially in commercial affairs. Both the Syattariyah and Naksyabandiyah *tarekat* had instigated "back to the *syariat* (*sharīʿa* [*q.v.*])" movements in other parts of the Islamic world, and now for the first time in central Sumatra conditions became ripe for a similar movement: for Minangkabau Muslim *surau*, such as those of the Syattariyah *syekh* (*shaykh*) Tuanku Nan Tua in Agam, to challenge further accommodation with society, and to couch this challenge in terms of elevating Islamic law, including the commercial provisions of the *syariat*, to a position of pre-eminence.

It was against this background that in 1803 there returned to Minangkabau three pilgrims who had observed the Wahhābī conquest of Mecca [see WAHHĀBIYYA]. They were well aware of the difference between "back to the *syariat*" and a return to the fundamental tenets of the Prophet and his Companions. The most distinguished of these three Padri was Haji Miskin, who had worked with Tuanku Nan Tua prior to his departure for Mecca. He now settled in the coffee village of Pandai Sikat in Agam and worked to improve the state of the marketplace and to rationalise commerce. He gained the support of certain lineage heads and in fact during the Padri movement a number of religious teachers and *adat* [see ʿĀDA] leaders worked together to introduce a new commercially favourable régime where cockfighting would disappear from the market and bandit villages would be eliminated. It is certainly misleading to see the Padri movement as an uncomprising attack on the *adat* leadership.

Ultimately driven out of Pandai Sikat, Haji Miskin joined the religious teacher Tuanku Nan Rinceh in the coffee- and cassia-rich hill area in the north of Agam. Also a pupil of Tuanku Nan Tua, Tuanku Nan Rinceh had been trying to put his master's ideas into practice, but piecemeal action no longer seemed adequate when Haji Miskin was able to indicate another way. Tuanku Nan Rinceh now concluded that each village must be turned into an Islamic community as rapidly as possible, using the simplicity of the Wahhābī system as a model along the lines of which such new communities were to be organised. He proclaimed a *djihād* and announced to his own village the régime of extreme puritanism which must henceforth be followed. The outward signs of a revivalist village were to be the abandonment of cockfighting, gambling and the use of tobacco, opium, *sirih* and strong drink; white clothes symbolising purity were to be worn, with women covering their faces and men allowing their beards to grow; no part of the body was to be decorated with gold jewellery, and silk clothing was to be eschewed. Needless to say, prayer five times a day was obligatory. A system of fines was instituted for infringement of these rules.

How successful the Padri were at imposing a Wahhābī-style administration on the villages they conquered is difficult to say. It seems that the village traditional leaders in their council continued to play an important role, although each conquered or converted village was obliged to appoint a *kadi* (*ḳāḍī* [*q.v.*]) who functioned side by side with the village council. The village was also required to appoint an *imam*, to be occupied with expounding the Ḳurʾān and carrying out religious ceremonies in the newly-built mosque. Apart from this, the most characteristic mark of the Padri village was its participation in organised violence against villages which would not submit to the Padri notion of an Islamic community.

Violence was particularly marked among the Padri of Tanah Datar, the home of Tuanku Lintau, who became notorious for his slaughter, in 1815, of many members of the Minangkabau royal family at a meeting arranged for negotiations. He went on to pursue a career of raiding and burning of opposition villages. In fact, throughout the Padri period all villages were heavily fortified and their male population kept almost constantly on a war-footing.

Just as a Padri victory over the whole of Minangkabau seemed certain, the Dutch returned to the chief Minangkabau coastal port of Padang in 1819. Invited into the highlands by anti-Padri *adat* leaders and remnants of the royal family, in February 1821 they signed a treaty in which these suppliants surrendered Minangkabau to Dutch sovereignty. So began the Padri War of 1821-38, in which, despite strong Padri resistance, the colonial forces were ultimately victorious. Prominent among the Padri war leaders was Tuanku Imam Bonjol. Having established his village at Bonjol, north of Agam, in 1807, like other Padri leaders he tried to build up a trading network to the west coast, away from outside control. The Dutch after their return in 1819 were a threat to this, and Bonjol launched its first attack on Dutch forces in the interior in 1822. From this period until 1837, Dutch and Bonjol forces were periodically engaged despite Bonjol's attempt to expand away to the north into the Batak country. Bonjol finally fell to the Dutch in 1837, Tuanku Imam Bonjol was exiled and Dutch victory over the last Padri remnants took place at Daludalu in 1838.

During this period, the Padri movement itself altered in character. Mecca had been lost to the Wahhābīs since 1813, and by the 1820s Minangkabau began to pay attention to the reports of returning pilgrims and the rigours of the original Padri system began to soften. The returning *hajis* were aided by the fact that no Padri leader had ever been able to acquire unchallenged dominance over a wide area and there was no monolithic Padri political system to break down. Nevertheless, the Padri left a lasting mark on Minangkabau and their legacy was powerful enough to be revivified as occasion demanded.

PAHANG [see MALAY PENINSULA].

PAHLAWĀN (P.), from *Pahlaw*, properly "Par-

thian", acquired in pre-modern Persian and thence in Turkish, the sense of "wrestler, one who engages in hand-to-hand physical combat", becoming subsequently a general term for "hero, warrior, champion in battle". From this later, broader sense it is used as a personal name in the Persian world, e.g. for the Eldigüzid Atabeg [see ILDEÑIZIDS] Nuṣrat al-Dīn Djahān-Pahlawān (reigned in ʿĀdharbāydjān, d. 581 or 582/1186 [see PAHLAWĀN, MUḤAMMAD B. ILDEÑIZ; and see Justi, *Iranisches Namenbuch*, 237, for other bearers of this name]. The word's appearance in Arabic as *bahlawān* is clearly a secondary development, and has in more recent times acquired the meaning of "acrobat, tightrope walker in a circus, etc.", as was noted by Lane in early 19th century Cairo, where it was gypsies who by then practised these skills (*The manners and customs of the modern Egyptians*, ch. xx "Serpent-charmers, and performers of legerdemain tricks, etc."; see also Spiro, *Arabic-English dict. of the colloquial Arabic of Egypt*, repr. Beirut 1973, 61, and Barthélemy, *Dict. arabe-français des dialectes de la Syrie*, Paris 1935-54, 66). In the most recent colloquial of Cairo, it has become a pejorative term for "tricky person" (Hinds and Badawi, *A dict. of Egyptian Arabic, Arabic-English*, Beirut 1986, 110), cf. also *fahlawī* "clever" and *fahlawa* "cleverness".

The topic of wrestling, as a sport and as an expression of manliness and chivalry, thus linking up with the *futuwwa* [*q.v.*], was the subject of a classic study, primarily of its Arabic aspects, by M. Canard (*La lutte chez les Arabes*, in *Cinquentaire de la Faculté de Lettres d'Alger (1881-1931)*, Algiers 1932, 1-64, repr. in *L'expansion arabo-islamique et ses répercussions*, Variorum Reprints, London 1974, no. XI), largely utilised here. Wrestling and fighting, with the aim of bringing the opponent to the ground, was an expression of classical Greek and Roman athleticism; but the sports most probably developed in parallel ways, rather being a continued influence upon the Arabic and Persian worlds. In ancient Arabia, wrestling seems to have been one of the spectacles at the pre-Islamic fair of ʿUkāẓ [*q.v.*]; in the *Sīrat ʿAntar* as it later developed [see ʿANTAR, SĪRAT], the hero ʿAntara b. Shaddād [*q.v.*] practised this sport as did, according to some traditions, the caliph ʿUmar I. The terms most commonly used for this in Arabic were *ṣurʿa* and *ṣirāʿ*, with the basic idea of hurling one's opponent to the ground. It may have continued in mediaeval Arabic times as a popular sport; in 251/865, during the disturbances at the caliphal capital of Sāmarrā during al-Mustaʿīn's time, citizens there hired *muṣāriʿūn* to defend their houses against the violence of the Turkish soldiery (al-Ṭabarī, iii, 1540, tr. G. Saliba, *The crisis of the ʿAbbāsid caliphate*, Albany 1985, 31).

However, it was in Persia that wrestling was developed to a fine art, being associated with the heroes of legendary times. Firdawsī's *Shāh-nāma* contains several episodes of wrestling and combat, often illustrated in manuscripts of the national epic; three centuries or so later, Saʿdī often cites the *pahlawān* or wrestler in situations where a moral of some sort can be pointed. Above all, this national pastime from ancient Iran has survived in the often-described special gymnasia for wrestling, the *zūr-khānas* [*q.v.*], with ritualistic methods of fighting and a special garb of tight-fitting trousers [see SIRWĀL in *EI*[1]] and belt.

From the Persians it passed to the Turks and was a significant element of the military prowess for which the race was famed in the mediaeval Islamic world. It was practised amongst the Mamlūks of Egypt and Syria as part of their military training, *ṣirāʿ* being a skill ascribed to some of the great masters of *furūsiyya* [*q.v.*] (see D. Ayalon, *Notes on the Furūsiyya exercises and games in the Mamluk sultanate*, in *Scripta Hierosolymitana*, ix, Jerusalem 1961, 57, 61-2, repr. in *The Mamlūk military society*, Variorum Reprints, London 1979, no. II). Turkish troops took these skills as far as the Maghrib, and *bahlawānāt turkiyya* were found in the entourage of the Beys and Pashas of Tunis up to the 19th century. In the Ottoman empire, wrestlers were included in each Janissary company (*orta* [*q.v.*]), and in 11th/17th century Istanbul, wrestlers were organised into a corporation of *pelhiwāns* (*sic*, in this metathesised form), on the evidence of Ewliyā Čelebi.

PAHLAWĀN, MUḤAMMAD B. ILDEÑIZ, NUṢRAT AL-DĪN, Atābeg of Ādharbāydjān in the later 6th/12th century. His father Ildeñiz [*q.v.*] had in course of time risen to be the real ruler in the Saldjūḳ empire; the widow of Sultan Ṭoghrïl [*q.v.*] was Pahlawān's mother and Arslān b. Ṭoghrïl [*q.v.*] his step-brother. In the fighting between Ildeñiz and the lord of Marāgha, Ibn Aḳsunḳur al-Aḥmadīlī, Pahlawān played a prominent part [see MARĀGHA]. From his father he inherited in 568/1172-3 Arrān, Ādharbāydjān, al-Djibāl, Hamadhān, Iṣfahān and al-Rayy with their dependent territories and a few years later he also took Tabrīz, which he gave to his brother Ḳïzïl Arslān. Like Ildeñiz, Pahlawān also became the real ruler. Sultan Arslān b. Ṭoghïl was completely under his control, as was also his young son Ṭoghrïl [*q.v.*], whom Pahlawān put on the Saldjūḳ throne, after Arslān had been disposed of by poison. Pahlawān died in Dhu 'l-Ḥidjdja 581/February-March 1186 or the beginning of 582/1186 and his brother Ḳïzïl Arslan succeeded him.

Ibn al-Athīr (xi, 346) pays a high tribute to Pahlawān's statesmanlike qualities, and during his tenure of office peace and prosperity prevailed in his governorship. After his death, however, bloodshed and unrest broke out. In Iṣfahān the Shāfiʿīs and Ḥanafīs fought one another, and at al-Rayy the Sunnīs and Shīʿīs, until order was gradually restored.

PAHLAWĪ, PAHLAVĪ, the name of the short-lived dynasty which ruled in Persia from 1925 to 1979. Its two members were Riḍā Shāh (*r.* 1925-41) and his son Muḥammad Riḍā Shāh (*r.* 1941-79) [*q.vv.*].

PĀʾĪ (Hindi "quarter"), English form "pie", the smallest copper coin of British India = $^1/_{12}$ of an anna. Originally, in the East India Company's early experiments for a copper coinage, the pie, as its name implies, was the quarter of an anna or pice [see PAYSĀ]; after the Acts of 1835, 1844 and 1870, however, the pie was $^1/_3$ of a pice.

(J. ALLAN)

PAI YEN-HU (Muḥammad Ayyūb), a noted leader of northwestern Chinese Muslim rebellions against the Ch'ing-Manchu rule during the 1860s and 1870s.

A native of Ching-Yang in Shensi province, he was born in 1841 into a traditional *ahung* family. In 1862 he joined the Muslim rebels in Shensi province, his military skills and family background making him one of eigthteen rebel leaders. After most of these had defected to or been killed by the Imperial troops, Pai assumed overall leadership of the anti-Manchu campaigns. When some of his own "Old Teaching" followers defected in 1869, he was driven out of Shensi and joined forces with Ma Hua-Lung [*q.v.*] at Chin-chi-pao, Kansu, but deserted him again when he realised that Ma also intended to surrender. Pai and his troops next took the area around Hsi-Ning, but were evicted by the veteran pacification general, Tso Tsung-T'ang, in 1873. From here they fled to Chinese Turkestan, where they joined forces with Yaʿḳūb Beg [*q.v.*], whom they assisted in defending Dzungaria. They were again defeated by Tso. Yaʿḳūb Beg died (the cause is unknown) at Kurla in May 1877, precipitating the dissolution of his Kās͟hg͟haria amīrate. By this stage severely weakened, Pai and his followers were forced to flee to Kuča, further westwards to Aḳsu, Us͟h Turfan and eventually into the Naryn River valley in Russia, where they found asylum. In 1879 they moved to Pis͟hpek (present-day Frunze) [*q.v.*], where Pai is said to have died of illness on 22 July 1882.

The descendants of Pai and his followers form the main stock of the Dungan minority now living in the Kirghiz, Kazakh and Uzbek Republics of the former Soviet Union. Recent research suggests that they have preserved their ethnic identity and some elements of Chinese Islam. Their first mosques were built in the Chinese manner, and they still speak Shensi and Kansu dialects, using Chinese in Cyrillic characters.

PAISĀ [see PAYSĀ].

PĀK PAṬAN, a *taḥṣīl* in the Montgomery district of the Pand͟jāb in Pākistān, famous for its association with S͟hayk͟h Farīd-al-Dīn Masʿūd Gand͟j-i S͟hakar [*q.v.*]. It was founded by a prince of the Yaudhaya tribe and was named Ad͟jodhan. It appears from Greek accounts that the place existed at the time of Alexander's invasion. When S͟hayk͟h Farīd settled there, it was a deserted town, having forests full of ferocious beasts and reptiles. Gradually, it became a great centre of spiritual culture and people from far and near were attracted to the *d͟jamāʿat-k͟hāna* of S͟hayk͟h Farīd. Ajodhan stood at a strategic place on the Multān-Dihlī road. Caravans and armies passed through it and carried the S͟hayk͟h's fame to different regions (*Fawāʾid al-fuʾād*, Lucknow 1885, 99; Ibn Baṭṭūṭa, *Riḥla*, Cairo 1928, i, 13). The name Pāk Paṭan was given by the Mug͟hal emperor Akbar in homage to the memory of the saint. Situated on a high mound, it has a complex of buildings: a Friday mosque, tomb of the S͟hayk͟h and his descendants S͟hayk͟h S͟hihāb al-Dīn and S͟hayk͟h ʿAlāʾ al-Dīn, a *samaʿ-k͟hana* (hall for musical sessions), residential quarters and various graves.

(K.A. NIZAMI)

PĀKISTĀN, the Islamic Republic of Pākistān or *Islām-i D͟jumhūriyya-yi Pākistān* is bounded by Iran, Afg͟hānistān, the former Soviet Union, China, India and the Arabian Sea. It covers an area of 706,495 km² and has a population of 114,071,000 (1990 estimate which includes the population of the disputed state of D͟jammū and Kas͟hmīr as well as Afg͟hān refugees). The country is divided into four distinct physical regions. In the north, sections of the Himalayan and Karakoram ranges reach an average of more than 6,100 m/20,000 ft. and include some of the world's highest peaks. The Balūčistān plateau to the west and south-west is a broken highland region crossed by many ridges. The western portion of the Indo-Gangetic plains—the Indus valley—extends southwards from the Potwar plateau to the Arabian Sea. It is watered by five major rivers—the Indus, Chenab, Jhelum, Ravi and Satlaj—and their tributaries, and is Pākistān's most prosperous agricultural region. The Thal, Cholistan and Thar desert areas are found in the south-east of the country, bordering on India. The climate is characterised by extremes of temperature and aridity. A weak form of tropical monsoon climate occurs over much of the country with arid conditions in the north and west where the wet season is from December to March. Elsewhere, rain is mainly between July and December. Summer temperatures are high, in places exceeding 45°C., but the mountains in the north experience cold winters.

Pākistān is made up of the four provinces of the Pand͟jāb, Sind, Balūčistān [*q.vv.*] and North-West Frontier Province (NWFP), together with the Tribal Areas, Gilgit Agency [*q.v.* in Suppl.], Islāmābād Capital Territory and Āzād Kas͟hmīr, whose possession is disputed with India. The bulk of the population is concentrated in the Indus Valley plain and remains rural in occupation. Rural to urban migration, however, has resulted in rapidly growing cities such as Karachi, Lahore, Rawalpindi, Multān, Fayṣalābād and Ḥaydarābād, together with the accompanying problems of inadequate housing and transport facilities. Pākistān has a developing mixed economy,

largely based on agriculture, light industries and services. Agriculture, which is almost dependent on an extensive irrigation system, employs more than 50% of the labour force and in 1986 provided 26% of GNP and 45% of foreign exchange earnings. The main crops are wheat, cotton, maize, sugar cane and rice. The country is agriculturally self-sufficient although there are often shortages of staple products. Industry employs only about 10% of the labour force and produces nearly 20% of GDP. Textiles, especially cotton, are the main manufacture and leading export commodity. Under-employment is widespread and there has been significant emigration by professional and skilled workers, in particular to the Middle East and Gulf States. Social welfare and health facilities are limited. *Zakāt* [*q.v.*] has been used by governments to provide funds for welfare provision. Although primary education is free, less than half the number of school-aged children attend and literacy remains limited to only about one-quarter of the population and only one-sixth of women.

The national language is Urdu, but English is used in central government and business. The main regional languages are Pandjābī, Sindhī, Balūčī, Pashto, Brahui and Siraiki. No single language is common to the population as a whole. According to the 1981 census, 96.68% of the population are Muslims, with Christians (1.55%), Hindus (1.51%), Parsees and Buddhists making up very small religious minorities. Most Muslims are Sunnīs and belong to the Ḥanafī school. There is a significant Shīʿī minority which is divided into sub-sects, primarily the Ithnā ʿAsharīs and Ismāʿīlīs, both Āghā-Khānīs and Bohrās. Members of the small but influential sect of the Aḥmadiyya [*q.v.*] are also found.

Pākistān, which achieved independence on 14 August 1947, was the first modern state to be set up on the grounds of religion. Its name, meaning "land of the pure", is said to have been constructed in 1933 by Chaudhri Raḥmat ʿAlī, an Indian Muslim student at Cambridge, from letters taken from the names of its component provinces (Pandjāb, North-West Frontier or Afghāniyya, Kashmīr, Sind and Balūčistān). Its creation was seen as the logical outcome of the so-called two-nation theory which argued that Indian Muslims (only about one-fifth of the total population of India) formed a distinct nation and had the right to a separate state at independence. The origins of Pākistān, however, are generally seen as linked to the effect which British rule in India had on the relationship between the different communities making up the population of the subcontinent. The interaction of its impact with processes of religious revival and reform meant that groups belonging to these communities gradually came to see themselves as being distinct or separate in political terms. In this context, the emergence of the Indian National Congress as the leading all-Indian political organisation by the beginning of the 20th century helped to bring about a reaction among some Muslims who considered the Congress to be dominated by Hindus and therefore sought their own political representative. This occurred in 1906 with the formation of the All-India Muslim League. Suspicion of Congress was especially common in parts of northern India where Muslims, although a small minority, still enjoyed the legacy of their former status as rulers of the region during the period of Mughal rule. They feared that Congress agitation, Hindu revivalism and constitutional reform would undermine their position, and hence supported policies of protecting Muslim "rights" and culture. Aligarh College, founded by Sir Sayyid Aḥmad Khān [*q.v.*] in 1877, played an important part in generating the kind of Muslims who were attracted to this political path. The diversity of India's Muslims, however, prevented them from coming together in a single political organisation until the 1940s. Indeed, the intervening years saw periods of collaboration with Congress, such as 1919-22 when Muslims from all over India joined with Hindus in the Khilāfat-Non-Cooperation movement [*q.v.*] to agitate against British rule. In Muslim majority provinces such as the Pandjāb and Bengal, there was also significant support for provincial parties which represented class rather than communal interests. League activity remained slack for much of the 1930s, as highlighted by its poor showing in the provincial elections of 1937. But constitutional reforms which retained communal electorates meant that Muslims were increasingly encouraged to think of themselves as a separate political category, while the growth in communal feeling on the part of both Hindus and Muslims reinforced this trend.

The turning point for the League came with the outbreak of the Second World War. Efforts made at the centre by its leader, Muḥammad ʿAlī Djinaḥ [*q.v.*] (Jinnah) meant that the British recognised the League as the representative of Muslim aspirations and, in the face of Congress opposition to the way in which India had been taken into the conflict, an alternative organisation through which to legitimise the war effort. Under these circumstances, in which more people were listening to what it had to say, the League in March 1940 issued its Lahore demand for a separate Muslim state or states, the precise meaning deliberately vague in order to keep the League's options open. The party's main task was to persuade its co-religionists in the Muslim majority provinces that provincial autonomy would not protect their position if Congress held power at the centre. Gradually, it won over local landowning and religious élites and with them their considerable political influence. This success was reflected in the striking gains made in the 1946 elections in which the League won an overwhelming majority of Muslim seats. Deadlock in negotiations with Congress, together with growing communal tension, resulted in a British plan to partition India, including the Pandjāb and Bengal which the League had expected to receive in full. Jinnah, therefore, was not happy with the "truncated" and "moth-eaten" state which it was offered, but, with the alternative of conceding power completely to the Congress, the League finally accepted this option in the summer of 1947.

Pākistān faced independence with both strengths and weaknesses. On the one hand, it could be argued that, composed of an overwhelming majority of Muslims, it had the basis of a strong national identity with which to contemplate the future. On the other hand, it still had to contend with the fact that, although predominantly Muslim, its people were divided ethnically, linguistically, theologically and by caste and class. In addition, it had the added problem that its two wings—East and West Pākistān—were separated by over 1,600 km of Indian territory. In the event, these obstacles to a united Pākistān proved too great and the country, in the form that it was created, survived only 24 years before East Pākistān broke away to form Bangladesh. Pākistān's new leaders by and large had supported Jinnah's campaign, not so much because they desired an Islamic state, but because Congress rule had become synonymous with Hindu domination. Islam represented different things to them, ranging from an ethic on which to base per-

sonal behaviour within a modern democratic state to a total way of life requiring a theocracy. With the removal of the direct threat of a Hindu majority, these, together with other non-religious differences, became more apparent. As a result, Pākistān's history has been characterised by the failure of the new state to build workable political institutions which could reflect the diversity present within the country. Provincial rivalry, the intervention of the military in politics and recourse to Islam as a potential source of unity have been important features of Pākistān's political development since 1947. In particular, the country's "Islamic" identity has generated tensions within the political system, caused to a great extent by the need to reconcile Pākistān's creation as a homeland for Indian Muslims with pressure to translate it into some kind of more self-consciously Islamic state.

Pākistān's position in the years immediately following independence was fraught with difficulties. There was the immense task of resettling about eight million refugees known as *muhādjirs* [*q.v.*] who had begun to stream across the border at partition, as well as the need to establish its economy in the aftermath of a war fought with India over the disputed state of Djammū and Kashmīr. The task of framing a constitution was entrusted to a Constituent Assembly which also functioned as an interim legislature. The structure of the state was a federal one, with the Governor-General and the Constituent Assembly at the centre and governors and provincial assemblies in the provinces. Jinnah's death in September 1948 meant that power passed into the hands of Liyākat ʿAlī Khān [*q.v.*] (Liaqat Ali Khan), someone who shared his commitment to a democratic and essentially secular state but whose power base was considerably weaker. Pākistān had been created as a state for Indian Muslims, but there was a significant distinction between this and an Islamic state. Indeed, Jinnah himself had stressed that religion was to be an essentially private affair from the point of view of the state. Liaqat's position, however, meant that he needed to gain support where he could, and so in 1949 he wooed the country's religious spokesmen by issuing a resolution on the aims and objectives of the constitution which emphasised Islamic values. The debate on the relationship between religion and the state continued in the Constituent Assembly where religious groups played an active role. It was affected by the appointment of Khwaja Nizamuddin, an individual of great personal piety, as Governor-General following Liaquat's assassination in October 1951, as well as by religio-political campaigns such as that led by the Aḥrārs demanding both the purification of political life in general and, in 1953, the outlawing of the Aḥmadiyya sect in particular. This action led to rioting in some of the country's larger cities, and martial law was imposed to restore order in Lahore. When Pākistān finally achieved its first constitution in 1956, it tried to resolve the debate by accommodating as many different opinions as possible. The constitution embodied the Islamic provisions of the 1949 Objectives Resolution and declared Pākistān to be an Islamic republic. Its preamble accepted Allāh's sovereignty over man; Clause 204 envisaged the formation of an Institute of Islamic Research "to assist in the reconstruction of Muslim society on a truly Islamic basis"; and Clause 205 reiterated that "all new laws were to conform to the Ḳurʾān and Sunna" and no existing law would be repugnant to them. In reality, however, these provisions were little more than a statement of intent as no mechanisms were actually established to determine whether or not a law was un-Islamic. The constitution also confirmed the merger of the West Pākistānī provinces into One Unit carried out in 1955 to create parity between the two wings of the country. This was an attempt to reconcile East Pākistānī differences with the centre, which Bengalis saw as dominated by West Pākistānī interests and which had been reflected in the crushing defeat of the Muslim League in provincial elections in East Pākistān in 1954. Finally, the power of the military-bureaucratic élite was reflected in the far-reaching powers granted to the President in relation to the federal and provincial parliaments.

Growing factionalism and economic problems reinforced disillusionment with politicians, and meant that there was little opposition when the military under General Ayyūb Khān (Ayub Khan) intervened by instituting martial law in October 1958. In March 1962 Pākistān received its second constitution. This constructed a more centralised system of government, with the executive branch under the full control of an indirectly-elected President chosen by an electoral college of Basic Democrats. The powers of the central and provincial legislatures were severely restricted but parity between East and West Pākistān was preserved. Initially, the constitution did not envisage political parties but subsequently a restricted role was engineered for them. Modernisation was the watchword for Ayub's régime. Accordingly, his government displayed a modernising zeal in relation to the role of Islam. Unlike its predecessor, the constitution did not at least initially call Pākistān an "Islamic republic" (the adjective had been dropped in 1958 and it was not until the Amendment of 1963 that the title was restored), nor did it recognise the Ḳurʾān and the Sunna as the sole inspiration for the country's law. It did, however, reiterate that no law should be repugnant to Islam and established various councils to advise on these matters. All the same, the government was not popular with religious leaders who objected to the treatment of Islam in the 1962 constitution. It confirmed their alienation, much enhanced by the Family Laws Ordinance of 1961 which had included notable reforms such as the restricting of polygamy. Religio-political parties, such as the Djamāʿat-i Islāmī led by Mawlānā Sayyid Abu 'l-ʿAlāʾ Mawdūdī [*q.v.*], increased their support. Modernisation under Ayub, however, took place above all in the economic field, which experienced increased growth during the 1960s. But this growth was unevenly distributed, and the imbalance between East and West Pākistān increased, leading to greater disquiet among Bengalis. Despite victory over Miss Fatima Jinnah in the presidential election of January 1965, Ayub's problems mounted in the aftermath of an unsuccessful war against India also in 1965. In March 1969 the strength of opposition to his government finally forced him to hand over responsibility to General Yaḥyā Khān, who once again placed the country under martial law.

Yahya immediately set about dismantling Ayub's political system. In March 1970 he published the Legal Framework Order which defined Pākistān as a federal democratic republic with a Muslim head of state; representation was once again to be on the basis of population rather than parity between east and west; and West Pākistān was redivided into its former provinces. Elections were held in December 1970 but produced the unexpected result of a decisive victory for the East Pākistānī Awami League with 167 out of 300 seats. Faced with the loss of power at the centre and the Awami League's call for virtual autonomy for

East Pākistān, West Pākistānī politicians, notably Zulfikar Ali (Dhu 'l-Fiḳār ʿAlī) Bhutto, leader of the Pakistan People's Party (PPP), decided to boycott the National Assembly. The country's military leadership, equally dismayed by the shift in power which was taking place, cooperated by suspending the Assembly. This in turn led the Awami League's leader, Shaikh Mujibur Rahman, to call for complete secession. The Pākistānī authorities launched Operation Searchlight and arrested Mujib, but a stalemate ensued which was only broken with the entry of India into the war in December 1971 on the side of the Bengalis. With its help, the East Pākistānī *Mukti Bahini* (Bengali freedom fighters) took Dhaka (Dacca) and established the independent state of Bangladesh in January 1972.

The main victor in what remained of Pākistān was Bhutto, who established a patriotic image for himself at negotiations at the United Nations in New York and was sworn in as President following Yahya's resignation at the end of December 1971. Pākistān's third constitution adopted in April 1973 sought to reach consensus on the sharing of power between the federal government and the provinces, the divisions of responsibility between President and Prime Minister, and the role of Islam in politics. Bhutto's advocacy of Islamic socialism led to little tangible change but did provide, in the short term, a way of keeping Islamic fundamentalism at arm's length. The populism of his economic and social programme was also successful at first, but its failure to live up to popular expectations led to growing disillusionment with his government. This was reinforced by increasingly autocratic tendencies on the part of Bhutto and other PPP members. The drift to the opposition, in particular to religio-political alternatives, gathered pace and demonstrated its threat during elections in March 1977. Although the PPP won a large victory, the opposition coalition, known as the Pakistan National Alliance (PNA), claimed that massive vote rigging had taken place. Mounting protest brought chaos to Pākistān's cities and Bhutto was himself forced to proclaim martial law. Eventually, the military under the Chief of Staff of the Army, General Muḥammad Ḍiyāʾ al-Ḥaḳḳ (Zia-ul Haq), took over power in July 1977.

The new military régime, in line with its Operation Fairplay, announced that it intended to restore democracy and that fresh elections would be held within 90 days. Following Bhutto's arrest in early September on charges of attempted murder, however, these elections were postponed, supposedly to allow for Bhutto's trial to take place. In reality, it was clear that Bhutto remained the only politician with mass national appeal. Bhutto was eventually hanged in April 1979 following a Supreme Court review of the case, but elections promised for November 1979 were again postponed, political parties banned and strict censorship imposed on the press. Meanwhile, Zia had proclaimed himself President. In February 1979, he embarked on his programme of Islamisation by introducing Islamic criminal punishments. Zia's own strongly held religious views, however, did not disguise the political motives which were at the root of his policies on Islam. Zia firmly believed that Pākistān's political system had to be Islamised in order ostensibly to forge national unity, and he used Islamisation as a populist weapon to disarm the moral opposition to his régime. His determination was helped by changes in the international climate caused by the Soviet Union's intervention in Afghānistān in December 1979. Substantial support provided by the United States and Muslim countries such as Saudi military while the influx of millions of Afghān refugees produced enormous amounts of foreign economic aid. In March 1981, despite the failure of a specially-appointed committee of scholars, jurists and *ʿulamāʾ* to reach a consensus on recommendations for the structure of an Islamic system of government, Zia promulgated a Provisional Constitutional Order which allowed martial law to continue indefinitely and gave the President powers to amend the constitution. Its main provisions included the setting up of a *Madjlis-i Shūrā* or Federal Consultative Council on the grounds that parliamentary democracy was not compatible with Islam. Partisan political activity, however, was allowed to resume gradually albeit subject to official censure. An amendment to the Political Parties Act of 1962 meant that parties could be denied registration if their manifestos did not include Islamic provisions. A referendum held in December 1984 Arabia allowed him to strengthen the position of the confirmed Zia's Islamisation policy, which included economic reforms to the banking system as well as the controversial Zinā Ordinance, which limited the role and rights of women. Opposition groups strongly contested the result. The official majority of 98% was also taken as a mandate for Zia to remain in office for a further five years.

National and provincial elections, boycotted by the opposition, were held on a non-party basis the following February and Muhammad Khan Junejo was appointed Prime Minister. By then, however, Zia had moved to concentrate political power even more firmly in presidential hands by promulgating an order which introduced sweeping changes in the 1973 constitution. Martial law was eventually lifted in December 1985 and the constitution, in its amended form, restored in full. Zia remained President as well as Chief of Staff for the Army which effectively redefined the relationship between civilians and the army. In January 1986 Junejo revived the Pākistān Muslim League and later in the year Bēnaẓīr Bhutto, daughter of Zulfikar Ali Bhutto, returned from exile to lead the PPP. Anti-government agitation increased, as did levels of ethnic violence in the province of Sind and in Karachi in particular. Zia stepped in to dissolve the national and provincial assemblies in May 1988, accusing them of corruption, and once again announced elections within 90 days. As before they were postponed until November 1988, but in August Zia himself was killed in an unexplained aircrash along with other senior military officers and the United States ambassador to Pākistān. The Chairman of the Senate, Ghulam Ishaq Khan, became acting President and proclaimed a state of emergency promising that the elections would take place as scheduled later in the year.

Benazir Bhutto's PPP failed to win an overall majority but, with the help of coalition partners, came to power as the largest party in the new National Assembly, and Bhutto herself became the first woman in modern history to be elected premier of a Muslim state. Ghulam Ishaq Khan was subsequently chosen by an electoral college to serve a five-year term as President. In the context of severe economic difficulties and mounting ethnic violence in Sind, Bhutto's hold on power became increasingly tenuous. The government's failure to introduce a populist socio-economic programme increased widespread dissatisfaction, and party members were also dismayed at their leaders' attempts to win over the opposition by apparently compromising the party's position.

In August 1990, the President dismissed Bhutto

and an interim premier, Ghulam Mustafa Jatoi, was appointed. Elections were held in October in which the opposition Islāmī Djumhūrī Ittiḥād (IJI) and its allies won convincing victories on both the national and provincial level. All four provinces returned anti-PPP majorities. While the voting was generally considered to be free of rigging, the low turn-out of no more than 50% reflected continuing popular disillusionment with the political process. The IJI leader, Nawaz Sharif, a Pandjābī industrialist and former protege of Zia, was sworn in as Prime Minister. Pākistān was badly affected by the Gulf crisis 1990-91. Remittances from workers employed in the Middle East, already declining, dropped further, and the government was caught in a dilemma between honouring long-standing alliances with the West and strong pro-ʿIrāḳ sentiment at home. In the event, Pākistānī troops were sent to Saudi Arabia with the provision that they did not come under United States command. In 1991, the government succeeded in passing the Shariat Bill which confirmed Pākistān as an Islamic state but which, like previous attempts at legislating Islamic principles into the constitution, appeared to lack the necessary mechanisms to give much weight to the changes which it introduced.

PĀLĀHANG (P.), Ottoman Turkish form *pālāheng*, literally "string, rope, halter, cord", is applied to the belt worn around the waist by dervishes, especially the Bektāshīs [see BEKTĀSHIYYA], and on which is fixed a disc of stone (of jasper, found near the tomb of Ḥādjdjī Bektāsh at Ḥādjdjī Bektāsh Köy in Anatolia, of crystal or of translucent stone from Nadjaf in ʿIrāḳ) with twelve flutings at the edge; these are said by the Bektāshīs to symbolise the Twelve *Imāms*, the Twelve Disciples of Jesus or even the Twelve Tribes of Israel (see J.K. Birge, *The Bektashi order of dervishes*, London-Hartford 1937, 255-6, 268 and illustr. no. 10, object 8). Its introduction is ascribed to the *pūsh-neshīn* or master of the *tekke* at Ḥādjdjī Bektāsh Köy in the time of sultan Bāyezīd II (*ibid.*, 57).

Very similar in shape and substance is the smaller, twelve-fluted disc worn on a cord, sometimes with smaller stones strung along the cord (the *dürr-i Nedjef* "pearls of Nadjaf"), around the neck and called the *teslīm tashi* "stone of submission", given to the young dervish at the end of his novitiate (see *ibid.*, 217, 233-4, 247, 270, and illustr. no. 10, object 4).

PALAMĀW ("place of refuge"), the name of what is now a District in the Bihār State of the Indian Union. It straddles the plateau region of Čhoṭā Nāgpur. It was also the name of two fortresses which were built by the Rādjput Čero Rādjās of Palamāw, which were attacked in the middle decades of the 11th/17th century by the Mughal commander Dāwūd Khān Ḳurayshī, who made the Rādjās tributary and erected several fine Islamic buildings at Palamāw. In the early years of the 20th century, Muslims constituted 8% of the population of the District.

PĀLĀNPUR, a former, Muslim-ruled princely state of India, now in Gujarat State of the Indian Union but in British Indian times included in the Western India States Agency. The territory incorporated in this agency included the area formerly known as Kāthiāwār together with the Cutch and Pālanpūr agencies. Its creation in October 1924 marked the end of the political control of the Government of Bombay and the beginning of direct relations with the Government of India. The old Pālanpūr Agency with its headquarters at the town of Pālanpūr was a group of states in Gudjarāt [*q.v.*] lying between 23° 25′ and 24° 41′ N. and 71° 16′ and 71° 46′ E. It was bounded on the north by the Rādjput states of Udaypūr and Sirohi; on the east by the Mahī Kāntha Agency; on the south by the state of Barōda and Kāthiāwār; and on the west by the Rann of Cutch.

The state of Pālanpūr was conquered towards the end of the 10th/16th century by Lohāni Paṭhāns, subsequently known as Djāloris. A short account of its history under the Mughal emperors will be found in the *Gazetteer of Bombay*, v, 318-24, and in the *Mirʾāt-i Aḥmadī* (Ethé, no. 3599, fol. 741). British relations with this state date back to the year 1809, when, through British influence, arrangements were made for the payment of tribute to the Gaekwar of Barōda (Aitchison, vi, no. lxxxix). This engagement was further strengthened by an agreement signed on November 28, 1817 (*op. cit.*, no. xci). In 1848, the appointment of an agent from the Gaekwar was abolished and the finances of the state remained under British supervision until 1874, when the ruler of Pālanpūr was entrusted with the management of his own finances.

Pālanpūr was still ruled by its princes up to 1947 and the merging of the princely states within the Indian Union by Lohānī Paṭhāns. It had in 1933 a population of 264,179, of whom 245,000 spoke

Gudjarātī, when the distribution of population according to religion was as follows: Hindus, 222,714; Muslims, 28,690 and Jains, 12,542. Since Partition, many of the Muslims have emigrated to Pākistān.

PALEMBANG, the capital city of the province of *Sumatera Selatan* (South Sumatra) in Indonesia, situated on the shores of the Musi river. It lies in long. 104° 45′ E. and lat. 2°59′ S., and has a population of *ca.* 790,000 (1990), of whom some 85% are Muslims.

The area of Palembang, united with neighbouring Malayu (Jambi), was the centre of the (Mahayana-) Buddhist empire of Sri Vidjaya (4th-14th centuries A.D.), renowned especially in the 8th-10th centuries for its famous study centres for Buddhism and Sanskrit. After the 11th century, tantric Kāla-Čakra-Buddhism with a strong magical component became dominant. In 1377 Palembang was conquered and partly destroyed by the ruler of Madjapahit, the great Hindu-Javanese empire (14th-15th centuries). A royal prince, after his escape, founded Malacca [*q.v.*] in 1403 and became its first sultan after adopting Islam in 1413. The Javanese-Chinese *adipati* of Palembang, Arya Damar (after his conversion to Islam: Arya Dilah = ʿAbd Allāh, 859-91/1455-86), became the ancestor of the later sultans of "Palembang Darussalam". Sultan Susuhunan Arya Kusuma ʿAbd ar-Raḥīm (1069-1118/1659-1706) was the first ruler to adopt this title. After a power struggle between Sultan Mahmud Badaruddin and Sultan Ahmad Najamuddin in 1811-21, a struggle used by the British and Dutch for their conflicting interests, the Dutch finally exiled the last sultan, Najamuddin's son, in 1825, following a last abortive attempt to regain his independence. Thus the history of the sultanate came to an end.

In the second half of the 18th century especially, some Muslim scholars from Palembang achieved international fame, such as ʿAbd al-Ṣamad al-Palimbānī [*q.v.*]. At present, Palembang is the site of an influential *Institut Agama Islam Negeri* (State Islamic Institute, *IAIN*), to promote Islamic education.

PAMIRS, the name (of unknown etymology) of a mountain massif of Inner Asia. Its core is in the modern Gorno-Badakhshan Autonomous oblast of the former USSR, but it spills over into Kirghizia and Tadjikistan to the north and west, and into the Sinkiang Uighur Autonomous Region of China to the east, and Afghānistān (including the Wakhān corridor) and Pākistānī Kashmīr (Āzād Kashmīr) to the south. Comprised mainly of east-west-running ranges, its many river valleys being right-bank affluents of the upper Oxus (here called the Pandj "Five [rivers]", its mountains reach a height of 7,495 m/24,584 ft. on Communism Peak. It is extremely thinly populated: the population of the western Pamirs is in the main ethnically Tadjik and Ismāʿīlī Shīʿī in faith, whilst that of the eastern Pamirs is mainly Turkish Kirghiz and Sunnī Muslim (some of these last, from the Wakhān corridor, fled via Gilgit and eventually settled in Turkey after the 1978 Communist takeover in Afghānistān; see muhādjir. 2. In Turkey and the Ottoman lands, at vol. VII, 353b). As a typical refuge area, it is in the Pamirs region that there survive certain archaic eastern Iranian languages, such as Shughnī, Ishkāshmī, Wakhī, Yāzghulāmī, Sanglīčī, Mundjī, etc. [see īrān, iii. Languages, in Suppl.].

Being so topographically and climatically unattractive to all but a few agriculturists in the valleys and nomads on the plateaux, the only part of the region of historical significance has been the upper Oxus valley, along which an important commercial route led to passes across the Hindū Kush [*q.v.*] mountains to the Pandjhīr [*q.v.*] valley of Afghānistān and southwards into Čitrāl [*q.v.*] and Gilgit [*q.v.* in Suppl.]. It was doubtless for this reason that the region was known to the Chinese, with Shughnān [*q.v.*] appearing in Chinese sources, such as the travel account of the early 7th century Buddhist pilgrim Hsüen-Tsang, as *Shek'i-nior* "the kingdom of the five *She-ni* (gorges)", apparently referring to the Oxus's name here of Pandj. In Islamic times, al-Yaʿḳūbī, *Buldān*, 292, tr. Wiet, 109, mentions the principality in "upper Ṭukhāristān" [*q.v.*] of (?) Khumār-Beg or Khumār-Tigīn, ruler of Shiḳinān (Shughnān) and Badakhshān [*q.v.*]; the people there were still pagan, though apparently tributary to adjoining Muslim princes (see Ibn Ḥawḳal, ed. Kramers, 467, tr. Kramers and Wiet, 449-50; Barthold, *Turkestan*³, 65). The *Ḥudūd al-ʿālam* (4th/10th century) situates in the Pamirs region the "Gate to Tibet", *dar-i Tubbat*, and the seat of the *malik* of Wakhān at Ishkāmish, its chef-lieu (tr. Minorsky, 120-1, § 26.12-18, comm. 363-9; cf. Marquart, *Ērānšahr*, 224-6).

Towards the end of the 13th century, Marco Polo passed through the Pamirs region, from Badakhshān to the Wakhān valley and thence northwards to Kāshghar [*q.v.*]; he describes the sparse inhabitants there as warlike Muslims, with a chief called (?) *None* (Yule-Cordier, *The book of Ser Marco Polo*³, London 1903, i, 170-9 and Itinerary map no. III).

Subsequently, the upper Oxus region of the Pamirs was mainly under the political authority of Nizārī Ismāʿīlī hereditary *mīrs* based on Shughnān, who managed to survive pressure and attacks from the local Tīmūrid governors; this isolated Ismāʿīlī community has been significant for its rôle in preserving many theological and legal texts of the sect (see F. Daftary, *The Ismāʿīlīs: their history and doctrines*, Cambridge 1990, 436, 441, 486-7, 544). Toward the end of the 19th century, the upper Oxus/Pandj river was established, after disputes between the Amīr of Afghānistān ʿAbd al-Raḥmān Khān [*q.v.*], the Amīr of Bukhārā and the Russians, as the political boundary between Russian Central Asia and Afghānistān (the Russo-Afghan Agreement of 1895) (see L. Dupree, *Afghanistan*, Princeton 1973, 424).

PAN-ARABISM, an ideology advocating an overall union of Arabs (*waḥdat al-ʿArab, al-waḥda al-ʿArabiyya*). Ideologues of Pan-Arabism have consistently recommended such union on the basis of several elements of commonality: (a) Language and culture, considered the ultimate expression of the entire Arab nation and one of its major links with the

past (including the Islamic past; many Arabs have expressed their nationalism in Islamic terms). (b) History, preoccupation with which afforded immersion in a common past glory differing from the 20th-century situation. (c) Ethnic-origins, increasingly called "race" in the first half of the 20th century. (d) Territorial contiguity from the coasts of Morocco to those of ʿIrāḳ and Saʿūdī Arabia, which maintained a common culture and history and could naturally promote political and economic relations. The methods advocated and variously attempted generally focused on the establishment of federations and confederations as a step towards a general union, to be achieved either by persuasion or force.

The history of Pan-Arabism is largely a record of these attempts. In the early 20th century, several writers and journalists, such as Negib Azoury, discussed the Arab nation in terms of long-extant primordial sentiments. Their works were mostly read by relatively small élitist circles, however, and rarely served as guidelines for achieving an all-Arab union. Only after the end of the First World War, with the consequent breakdown of the Ottoman Empire and the establishment of mandated Arab entities [see MANDATES], were political moves made by several Arab leaders towards federating Arab-inhabited territories. The Hās͟himite rulers in ʿIrāḳ and Transjordan were prominently active in this sphere.

The long-range aim of Fayṣal I [*q.v.*] of ʿIrāḳ was to establish a confederation, embracing ʿIrāḳ, Syria, Transjordan, Palestine and the Ḥid͟jāz. He sought to bolster his own position and that of his country in a highly competitive environment, while gaining access to Mediterranean shores. French-mandated Syria was the key to Fayṣal's success or failure; he strove to persuade the Syrians, French and British of his plans' feasibility. Certain nationalist groups supported Fayṣal and his Pan-Arab plans during the 1920s and 1930s, not only in ʿIrāḳ, but in Syria as well. In the Pan-Islamic Congress that convened in Jerusalem in 1931 [see PAN-ISLAMISM], a group of activists from Damascus and Jerusalem met and drew up a Pan-Arab charter, whose first paragraph declared the indivisibility of the Arab nation and Arab lands. Pan-Arabists from ʿIrāḳ, Lebanon and Egypt proclaimed their solidarity with this charter. Plans to convene an all-Arab congress in 1932 floundered, however, because of the strife between ʿIrāḳ and Saʿūdī Arabia, as well as British opposition.

Following Fayṣal I's death in 1933, his brother ʿAbd Allāh [*q.v.*], then *Amīr* of Transjordan, intensified his own efforts at achieving a partial Arab union. Having been involved in Syria's affairs in the 1920s, in the succeeding decade ʿAbd Allāh renewed his plans to create a confederation of Transjordan with Syria (and ʿIrāḳ and Palestine, eventually), with himself as its ruler. Once the British had ousted the Vichy French forces from Syria, he again tried to promote his Greater Syria project, persisting in these efforts after the Second World War as well. His failure was due not only to Saʿūdī opposition and Egyptian reservations, but also to the activities of the ʿIrāḳī Prime Minister Nūrī al-Saʿīd [*q.v.*], who was working along the same lines on behalf of his own state, attempting to persuade the British to help in shaping up a union among ʿIrāḳ, Syria and Palestine (including Transjordan). ʿAbd Allāh, however, opposed this scheme, which would have diminished his own chances of heading such a union. Another complicating factor was a proposal in 1936-7 by ʿAbd al-ʿAzīz Āl Saʿūd [*q.v.*], King of Saʿūdī Arabia, to set up an Arab federation headed by himself.

The more factors involved in such moves, the less practicable they became. Even Egypt joined these efforts. Since the early 20th century, a significant part of the political spectrum had identified with supranational objectives and defined itself in Pan-Arab or Pan-Islamic terms, based on the commonality of the Arabic culture and language for an all-Arab nation. Egyptian Pan-Islamists, too, considered Pan-Arabism as a vital step in the struggle for their own ideals. In the 1930s, political groups advocated Pan-Arabism, emphasising Egypt's solidarity with Arabs elsewhere. At the same time, élitist groups in ʿIrāḳ and Syria expressed themselves in similar political language. Cultural cooperation among Arab governments and other organisations also increased in the 1930s and early 1940s, much of it expressed in political action; cultural and professional associations were formed and politico-literary conventions held. Pan-Arab terminology was increasingly employed by these groups and others.

Towards the end of the Second World War, chiefly after 1943, Arab wishes and British interests combined to bring about consultations for the establishment of the Arab League (*D͟jāmiʿat al-duwal al-ʿArabiyya*, literally, the League of Arab States [see AL-D͟JĀMIʿA AL-ʿARABIYYA in Suppl.]). A preparatory committee met in 1944 and the League itself was set up in Cairo in the following year by Egypt, Saʿūdī Arabia, ʿIrāḳ, Syria, Lebanon, Transjordan and Yemen (along with a representative of Palestine's Arabs). It has meanwhile grown to comprise twenty-two states, including Mauritania, Somalia and Djibuti. The League, the most important organisational instrument of Pan-Arabism, could not have been founded without the increase in the number of factors propounding Arab unity; its rather limited political success, on the other hand, reflects strong elements of divisiveness. The League's main objective has been to promote all-Arab unity through cooperation and policy coordination amongst its member states in economics, culture, health, law, communications and social affairs. Its committees have achieved results in all these areas, but much less so in politics and military matters, due to clashes of interests amongst its members and power struggles between rival groups of members states. Paragraph 7 of the League's charter, which allows for vetoing any decision, reflected this situation. Consequently, cardinal decisions in inter-state relations have been reached by direct negotiations between the states, not via the Arab League, where members agree to disagree. The League's most important service to Pan-Arabism remains its very existence as a regional organisation of sovereign Arab states, a framework for debate and consultation amongst its members and an instrument for crisis management, as in its mediation in the civil war in Lebanon during the 1980s (it failed, however, in its attempt to mediate between ʿIrāḳ and Kuwayt in 1990).

Twelve summit meetings of Arab heads-of-state or their delegates took place between 1964 and 1982 in various capitals. These were useful occasions to coordinate policies regarding the Palestine problem and to attempt to resolve conflicts of interest among Arab states. They accomplished but little, however, insofar as *rapprochement* was concerned. More meaningful were various moves for unification, starting with Egypt and Syria (in February 1958), soon joined by Yemen, and the ʿIrāḳi-Jordanian unification shortly thereafter. These, however, proved ephemeral, as did several similar moves, e.g. in North Africa. While widely proclaimed as steps towards an all-Arab union,

they were regarded by many as merely intended to serve regional self-interests. Djamāl ʿAbd al-Nāṣir [*q.v.* in Suppl.] did succeed in arousing Pan-Arab sentiment in Egypt and elsewhere, especially during the 1950s; he was seen by many as a natural leader of a future Arab union. Similarly, various groups and political parties, chiefly in Syria and Lebanon, strove to promote Pan-Arabism. Of these, the most important was the Baʿth movement. Its particular importance lies in its widespread impact (it has numerous branches in various Arab countries), due to its Pan-Arab appeal mingled with a version of neo-Marxism. Furthermore, the continuous rule of rival Baʿth factions in Syria (since 1963) and ʿIrāḳ (since 1970) implies that the movement is indeed capable of enforcing its ideology: Syria did so by becoming a near-dominant force in Lebanon since 1990 (Arab critics, however, accuse it of "Pan-Syrianism" rather than Pan-Arabism); and ʿIrāḳ by raising irredentist claims against Iran in both the Shaṭṭ al-ʿArab and Khūzistān since the early 1980s, then in Kuwayt in 1990.

Still, the failure of Pan-Arabism to achieve any meaningful results during the entire 20th century has led several Arab intellectuals to mourn "The end of Arabism" as in the title of a much-discussed essay by Fouad Ajami (*Foreign Affairs* [Winter 1978-9]). Ajami argued that the myth of Pan-Arabism had been declining, possibly since the 1967 war, supplanted by the particularist interests and national ideologies of individual Arab states. He also mentioned the minorities, such as the Christians in Lebanon, who oppose Pan-Arabism that would submerge them. Not even Libya's Muʿammar Ḳadhdhāfī could revive Pan-Arabism, according to Ajami. Other Arabs replied, asserting that Pan-Arabism was alive and well. Centres for Studies on Arab Unity (*Markaz dirāsāt al-waḥda al-ʿArabiyya*) in Cairo and Beirut strive to prove this. Whatever the issues, Pan-Arabism, while declaratively still popular, appears underrated in practice by certain new élites which are more oriented towards other universalist ideologies (such as Pan-Islamism), state nationalism, or socio-economic problems of development. Nevertheless, the outpouring of emotional support among Arab masses in several countries for Ṣaddām Ḥusayn and his ʿIrāḳī policies in 1990-2 is an indication that the latent ideal of Pan-Arab unity is maintained and chiefly observable among Sunnīs.

PAN-ISLAMISM (in Arabic *al-Waḥda al-Islāmiyya*; in Ottoman Turkish *Ittiḥād-i Islām*, in modern Turkish *İslam ittihadı*), the ideology aiming at a comprehensive union of all Muslims into one entity, thus restoring the situation prevalent in early Islam. The religious element of the unity of all Muslims had been advocated since the days of Muḥammad, but acquired an added political significance in the 19th century. The Turkish term was used politically by Turkish writers and journalists since the 1860s, while "Pan-Islam" seems to have been coined by Arminius Vambéry in early 1878 (probably on the model of "Pan-Slavism") and then was popularised by the French journalist Gabriel Charmes in his articles in the *Revue des Deux Mondes* of 1881-2, reprinted in bookform as *L'Avenir de la Turquie: le Panislamisme* (Paris 1883). Charmes's main argument was that the Sultan ʿAbd ül-Ḥamīd II [*q.v.*] was urging Muslims to unite against France's invasion of Tunisia. Charmes was not far off the mark, which is probably why his writings stirred serious concern in French and other European chancelleries. In reaction to the loss of Cyprus (1878), Tunisia (1881) and Egypt (1882), both orthodox and secular intellectuals energetically strove to formulate political ideologies and recommend pragmatic steps directed against European penetration—political, military, economic and missionary.

Hence, political Pan-Islam originated essentially as a defensive policy, mainly aimed at saving all Muslims from foreign, non-Muslim domination by uniting them. Not surprisingly, then, this movement came into being during the last third of the 19th century, when European colonialism reached its peak, and the Great Powers of the day were already ruling many foreign territories and carving out others for themselves. Not a few of these were densely inhabited by Muslim populations. The few independent Muslim states of the day—Afg͟hānistān, Persia, the Ottoman Empire and Morocco—troubled by internal economic, social and political dissension, also felt threatened externally by European expansionism. Of these, Afg͟hānistān and Morocco were rather peripheral, geographically, while Persia, overwhelmingly S͟hīʿī, was less suited than others to promote a Pan-Islamic policy among preponderantly Sunni populations. The Ottoman Empire, both centrally located and territorially the largest, was decidedly more appropriate.

ʿAbd ül-Ḥamīd II subsidised several Pan-Islamic ideologues (such as D̲j̲amāl al-Dīn al-Afg͟hānī [*q.v.*]), to write and publish in Turkish, Arabic or Persian, as well as agents to spread Pan-Islamic propaganda—both openly and covertly—within and without the Ottoman Empire. This sultan claimed to be the caliph [see K͟halīfa], therefore leader and commander of all Muslims everywhere, in the old tradition of Islam where spiritual and temporal rule were one. The propaganda which he fostered, intended to offset as far as possible the Empire's military and economic weakness, seems to have had two major policy objectives: (a) Favouring the central government over the periphery, and the Ottoman Empire's Muslims at the expense of others, in education, official and economic opportunities; special attention was given in this context to Turks and Arabs, and less to Albanians and Bosnians. (b) Launching a major effort to recruit the Empire's Muslims and many others outside it, in response to the activities of some of the Powers who were encouraging nationalist and secessionist trends among the Empire's Muslims; the sultan-caliph could threaten these Powers with incitement of the Muslims in their empires (French, British and Russian, in particular). The results of ʿAbd ül-Ḥamīd II's Pan-Islamic policies were modest in practice: expressions of support and fund-raising, particularly during times of war, as with Greece over Crete in 1897. However, his efforts were taken seriously enough by several European Powers, which refrained from attacking the Ottoman Empire while ʿAbd ül-Ḥamīd was engaged in Pan-Islamic and other activities.

Following ʿAbd ül-Ḥamīd's deposition in 1909, Italy invaded Tripolitania, and the Balkan peoples annexed some additional Ottoman territories to bolster their independence. The Young Turks, less dedicated to Pan-Islam (some of them were even lukewarm in their religious commitment), did not hesitate to exploit it in the First World War. The Ottoman declaration of war on 11 November 1914 was accompanied by a proclamation of *d̲j̲ihād* [*q.v.*], and the pronouncement of five *fatwās*, or legal opinions, by the S͟heyk͟h ül-Islām. These ordered all Muslims everywhere to unite and join the Ottoman Empire, with life and property, in the *d̲j̲ihād* against Russia, Great Britain and France. Separate circulars, sent out by the Young Turks, defined the aim of the war as "liberating the Islamic world from the domination of the infidels." Indeed, these three states (and the Netherlands) were then ruling most of the non-independent Muslim populations. Ottoman Pan-Islamic propaganda, with full German co-operation, was intensive throughout the First World War, most particularly during the first two years, until its inefficacy became evident through its inability to induce Muslims—both civilians and soldiers in the Allied Forces—to revolt. The failure of Pan-Islam in the First World War and the defeat and dismemberment of the Ottoman Empire brought about an almost total lethargy in the generation following the end of the war, both in ideological writing and organisational attempts, chiefly in convoking five Pan-Islamic congresses during the inter-war period: in Mecca, 1924; Cairo, 1926; Mecca (again), 1926; Jerusalem, 1931; and Geneva, 1935.

In Tsarist Russia, during the second half of the 19th century, the rise of political Islam and Pan-Islam was chiefly due to two main factors of the official policy, Russification and Christianisation. The Government of Tsarist Russia, aware of potential problems with the numerous groups in the huge empire, undertook a campaign of forced Russification in the schools and cultural life of the minorities. In a co-ordinated, parallel manner, missionaries worked to proselytise local Muslims. These efforts were only partly successful, as they caused considerable resistance led by the *mullās* or Muslim religious functionaries. However, another element joined the resistance to Russification and Christianisation. Since the middle of the 19th century, a commercial bourgeoisie had been growing, chiefly among the Tatars and the Azeris. These merchants were better educated than others in the Muslim population and more aware of general conditions both in the Tsarist Empire and abroad. Some members of this new class, intellectual-

ly oriented, developed nationalist aspirations from the third quarter of the 19th century onwards. While mostly centred on the specific problems of the Tatars, Azeris and some other groups, their nationalist sentiments borrowed heavily from both Pan-Islam and Pan-Turkism [*q.v.*]. The reason was self-evident; isolated from one another by huge empty spaces or by masses of other populations (non-Turkic and non-Islamic), the Tatars, Azeris and others sought the support of their brethren-in-faith, and particularly that of the largest independent Islamic state of the time, the Ottoman Empire. Three congresses of Russian Muslims, in 1905-6, served to sharpen nationalist and Pan-Turk sentiments and even create several organisational elements. In 1917, these Pan-Islamic and Pan-Turkic organisations intensified their political activities, but were soon broken down by the new Soviet régime and its Red Army. During Soviet rule, at least until recently, a persistent atheist propaganda was carried out, intensified by anti-Pan-Islamic activities. Many Soviet publications of the time reveal a basic fear of the competition of Pan-Islam with the régime's own universalist ideology, Communism.

In another part of the globe, India was one of the largest concentrations of Muslims masses. While signs of an Islamic revival were noticeable even before the First World War, it was mainly subsequent to that war that political Pan-Islam came into being there, soon becoming a significant force. Hemmed in by what they perceived as a threat by the huge Hindu majority, political leaders of India's Muslims naturally sought allies among Muslim populations abroad, with increasing emphasis being placed on the Pan-Islamic element of commonality. Moreover, India's Muslims, like the Hindus there, already had a tradition of organising politically on European lines, a feature rarely observable elsewhere. The spark which ignited Pan-Islamic political activity in India was the threat to Turkey and, most particularly, to the caliphate, immediately after the end of the First World War. The defeated Ottoman Empire was being dismembered, Constantinople had been occupied by the Allied Powers and the office of the sultan—who claimed to be the caliph—was being threatened. Two brothers, Muḥammad ʿAlī [*q.v.*] and Shawkat ʿAlī, and other Muslim political leaders in India, organised a Khilafat movement [see KHILĀFA] to save the caliph and the caliphate. This comprised hundreds of thousands of adherents, collected large sums, which were sent to Turkey, organised mass demonstrations, published manifestoes and newspapers, and despatched missions abroad to intercede with the Allied Powers. The movement grew during the early 1920s, but petered out after 1924, when the Republic of Turkey abolished the caliphate and exiled the last sultan-caliph. This act deprived the Pan-Islamic movement of its titular head and dealt it a blow from which it has not yet recovered, remaining without a common leader to look up to.

Thus in the inter-war period, particularly since the mid-1920s, political Pan-Islam receded in such important Muslim centres as Russia, India and Turkey. The Pan-Islamic congresses in that period, mentioned above, only served to emphasise this retreat. Most of its activities and publications focused in the Arab-populated countries of the Middle East and North Africa. However, in these, too, Pan-Islam had to compete with rival ideologies, such as modernisation, secularisation, nationalism, and Pan-Arabism [*q.v.*]. But the first expressions of the revival of Islam comprised an obvious element of Pan-Islam as well, for example in Egypt, where the organisation of the Muslim Brethren, set up in 1928, adopted some of the slogans of Pan-Islam, as in the speeches and writings of its founder, Ḥasan al-Bannāʾ [*q.v.*]. This could be noticed even better, at the time and subsequently, in Saudi Arabia which, after all, had been established on the foundations of classical Islam which served as the most prominent element cementing the inter-tribal union on which rested the new Kingdom of Saudi Arabia.

The situation changed radically after the Second World War. The number of independent states with Muslim populations grew visibly. Although only some of these emphasised their Islamic character, it soon became clear that Islam was again a factor to be reckoned with in local, regional and international politics. True, Islam and Pan-Islam had to compete increasingly not only with the impact of Europe, as before (to which that of the United States was added later), as well as with that of nationalism, particularism and secular modernism, but also with the influence of rival universal ideologies in Muslim lands, like Pan-Arabism, Pan-Turkism and Pan-Iranism. An answer was found by the Pan-Islamists in due course, on both the ideological and pragmatic-organisational levels.

On the ideological level, the more extreme Pan-Islamists, rooted in faith, still advocated a religio-political union of all Muslims; their model was the early history of Islam, as warmly preached by Muslim fundamentalists everywhere; for these, a religious and political Pan-Islam was a *sine qua non*. For numerous others, more moderate, some accommodation with reality was deemed necessary. Well aware of the immense power of nationalism in many of the new Muslim states, they argued for solidarity among all these, as a transitional stage to the universal state canvassed by fundamentalists and their partisans. They maintained, moreover, that complete solidarity—political, military, economic and cultural—would create a huge force, capable of achieving its own ends in any conflict or clash of interests with European and other Powers. On the pragmatic level, no less significantly, it appeared for the first time that achieving Pan-Islam, at least on the level of solidarity, was feasible. Not only were there independent Muslim states who had the political means to promote the fulfillment of Pan-Islam, such as Saudi Arabia and Pakistan, and later Egypt, Persia and Libya; but at least some of these also had the economic capacity to do so. Indeed, some—chiefly Saudi Arabia, Persia and Libya—had become gigantic oil producers since the 1973 boycott. Several, notably Pakistan and Saudi Arabia, had set up efficient structures for furthering the political and economic aims of Pan-Islam, largely in the context of promoting solidarity and co-operation. Three of the most important organisations should be mentioned specifically.

(a) The Muslim World Congress was set up in Karachi in 1949, very probably with official Pakistani encouragement; it now comprises some thirty-six member states, although branches exist in sixty countries. Among its tenets are propagating Islam, co-operating with all Muslim lands in order to promote Islamic unity, persuading Muslim governments and peoples to renounce their differences, instilling Arabic as a *lingua franca* of all Muslims, co-operating in trade policies, framing constitutions and laws based on the *sharīʿa* (or Islamic jurisprudence). (b) The Muslim World League was founded in Mecca in 1962 as an unofficial agency of the Saudis. It serves, however, as an umbrella organisation of many other Islamic

associations and groups. Richly funded by the Saudis, the League's activities in all five continents have been varied. As a non-governmental body, it is concerned not only with Islamisation and propaganda for religious education, but also with promoting Islamic solidarity (and paying for it): it promotes many publications and international seminars, preaches unified Islamisation and Islamic law and assists Muslim minorities with the aim of drawing them into a common Islamic activity, both political and economic. (c) The Organisation of the Islamic Conference, also Saudi-inspired, was established in 1969 as an association of Muslim states complementary to the Muslim World League. The Organisation of the Islamic Conference, made up of some forty-five states, combines the principles of Islam with the mechanisms of a contemporary international body. Both its charter and its activities emphasise the consolidation of Islamic solidarity, co-ordination and co-operation, with a view to strengthening the integration of all Muslim states in the future. For this purpose, the Organisation has set up the instruments for active policies—political, economic and cultural. Meetings of the Organisation's Heads-of-State and Foreign Ministers have initiated and furthered some common institutions, as an Islamic Development Bank (modelled on the World Bank), an Islamic Educational, Scientific and Cultural Organisation (patterned on UNESCO), and an Islamic Academy for Jurisprudence (to achieve the unity of the Islamic world in the legal sphere). See further, MUʾTAMAR.

(J.M. LANDAU)

PAN-TURKISM, one of the Pan-ideologies originating in the late 19th century. It expresses strong nationalist interest in the welfare of all Turks and members of Turkic groups, recognisable by kindred languages and a common origin, history and tradition. It addresses itself chiefly to those in Turkey, Cyprus, the Balkans, the former Soviet Union, Syria, ʿIrāḳ, Persia, Afg͟hānistān and East Turkistan (or Sinkiang). Pan-Turkism should be distinguished from Turanism (sometimes called Pan-Turanism), a broader concept, whose ideologues hail as fellow-Turks all those originating from Tūrān, a mythical plateau in Central Asia; this would include all the above groups as well as the Finns, Estonians, Hungarians, Yakuts, Mongols, Manchurians (even the Chinese and Japanese). Generally termed *Türkçülük* in modern Turkish, Pan-Turkism is confounded at times with *Türklük*, or Turkism, which more usually refers to the commonality of Turkish civilisation. It is not always easy to distinguish, historically, between the more moderate cultural Pan-Turkism, aiming at solidarity, and the relatively extreme political trend, seeking an irredentist union for all Turkic groups and the lands they inhabit. As in some other Pan-ideologies (such as Pan-Slavism), the cultural trend frequently precedes the political movement, with the latter generally predominating afterwards.

While Arminius Vambéry, the Hungarian-Jewish Turcologist, seems to have been the first to use the term Pan-Turkism, in the late 1860s, and to consider its political potential, it was left to intellectuals from the Tatars, Azeris, and other Turkic groups in Tsarist Russia to work out an ideology and attempt to set up organisational structures. Practically all of them were Muslims, resentful of policies of Russification and Christianisation being carried out by the ruling classes of Tsarist Russia. In defence, Muslim sentiment grew stronger and nationalist feeling began to spread. The latter, which proudly asserted the characteristics of each Turkic group, instinctively sought allies amongst its ethnic and linguistic kinsfolk, all of which led to the concept of Pan-Turkism. These nationalist intellectuals tended to be secular-minded, without being anti-religious. Their rallying slogans were Turkism and Pan-Turkism, to which Islam and Pan-Islam [*q.v.*] were occasionally added. Indeed, their call for the latter seems to have been in direct ratio to their isolation and their need for allies.

Not surprisingly, among Pan-Turkism's most prominent initiators in Tsarist Russia were the Tatars, who had endured Russian rule longest and were the chief sufferers from the effects of Pan-Slavic-minded Russification. Further, although they were surrounded by non-Tatars, they were located relatively close to the Ottoman Empire with its preponderant Turkish-minded élites. A Tatar bourgeois class had been developing, and in the late 19th century it had found itself capable of raising the twin banners of nationalism and Pan-Turkism. The Tatars were well aware that linguistic commonality was the key factor in a rapprochement and ensuing joint activity among the Turkic groups. Realising that literacy levels were low and that linguistic and dialectal variations prevented effective co-operation, they strove for improved education and language reform, and the publication of journalistic propoganda. The life's work of Ismāʿīl Gaspīralī [*q.v.*] examplifies this trend. A schoolmaster and mayor, he revised the curriculum in his town to include Turkish, along with Arabic; then he devised a *lingua franca* for schools and newspapers (he himself published a newspaper, called *Terd̲j̲ümān* "Interpreter", from 1883), emphasising the common vocabulary of the Turkic languages and attempting to minimise phonological differences. Preaching "unity in language, thought and action," Gaspīralī's brand of Pan-Turkism was chiefly cultural.

Other Tatars, like Yūsuf Akčūra, ʿAlī Ḥüseyinzāde and ʿAbd ül-Res̲h̲īd İbrāhīm, and Azeris like Aḥmed Ag̲h̲aog̲h̲lu, preached political Pan-Turkism. Akčūra, in particular, in his lengthy article *Üč ṭerz-i siyāset* ("Three systems of government"), anonymously published in Cairo in 1903, rejected Ottomanism and Pan-Islam, arguing that Pan-Turkism was the only feasible ideology for unity, which ought to be a union of all Turks, with Turkey at its centre. These and others were encouraged in their action by the revolutionary trends current in Russia of that period. In addition to publishing newspapers, they organised three

congresses of all Russia's Muslims (1905-6), presided over, again, by Tatars, in which a Pan-Turk union was discussed; Azeris and Turkestanis joined in. Such meetings were repeated in 1917 and revolts occurred in Ādharbaydjān, Turkistān, Bukhārā, Khīwa and Khōḳand. Most of these uprisings were suppressed by the Red Army in the following years. The Soviet authorities banned Pan-Turkism, along with other universal ideologies competing with Communism. A harsh campaign of propaganda for Communism, strict censorship, and personal and economic pressures drove Pan-Turkism underground until the breakdown of the Soviet Union, when it is showing signs of a revival.

In most other areas where Turks and Turkic groups have held a minority status, Pan-Turkism has been low-keyed in expression, making itself heard mainly in times of discrimination or persecution. It was only in the Ottoman Empire, chiefly in its last decade, that it flourished. Writers and journalists, émigrés from Tsarist Russia and other countries, promoted it, joined by such distinguished Turkish intellectuals as ʿÖmer Seyfeddīn and Meḥmed Emīn [Yurdakul] [*q.vv.*], or even Żiyā Gök Alp, a Kurd, and Tekīn Alp, a Jew. Their literary and political organisations inspired further activities, and their books and newspapers have remained the treasured heritage of Pan-Turkism to this day. No less important politically is the fact that from *ca.* 1910, a part of the ruling Committee for Union and Progress adopted Pan-Turkism as the official state ideology. Chiefly supported by Enwer Pasha, the Committee used the state bureaucracy (including secret agents) and finances for Pan-Turk propaganda and activity both within the Empire and abroad, among Turkish-Turkic concentrations. The very entry of Turkey into the First World War was at least partly motivated by Pan-Turk, anti-Russian ambitions. Enwer Pasha, by then Minister for War, pursued these aims unremittingly and, towards the end of the war, sent his forces into southern Russia with the aim of carving out a new Pan-Turk empire to take place of the rapidly disintegrating Ottoman one. His own death in Bukhārā, fighting the Russians, in 1922, has rendered him a hero to Pan-Turkists to this day.

Discredited in war, Pan-Turkism had little place in the Republic of Turkey. Moreover, the Republic's founding father and first President, Atatürk [*q.v.*], was very critical of such universalist ideologies as Pan-Turkism and Pan-Islam, replacing them with his own popular brand of local nationalism, focused on Turkey and its Turks. A further consideration must have been that Pan-ideologies were certain to embroil Turkey with its neighbours at a time when it badly needed peace to reconstruct itself politically, economically and culturally. So Pan-Turkism entered a latent stage in Turkey, with its few adherents keeping a low profile and initiating rare publications (only since the 1930s), which seemed to have had few readers and were severally banned. After Atatürk's death in 1938, the number of Pan-Turk periodicals increased, although there was no change in the government's anti-Pan-Turk policy. Their main ideological quarrel was with Atatürk's brand of Turkish nationalism—which the Pan-Turks termed, derogatorily, Anatolianism—as well as with Communist-inspired Soviet (and, later, Chinese) rule which they interpreted as oppressive and perilous to Pan-Turkism. The main contributors to these periodicals were from among the émigrés, referred to above. There were also some others; among the Turks, two brothers were particularly active, Hüseyin Nihal Atsız (1905-75) and Necdet Sancar (1910-75), whose writings, particularly during the Second World War, were frankly racist; their main standard for being Turk was one of race, which conformed with Nazi principles.

The Second World War seemed, indeed, to offer Pan-Turkism a unique opportunity for reasserting itself, as it might well have been able to change the international *status quo*. Apparently encouraged by Nazi propaganda and funding, Pan-Turkists attempted, unsuccessfully, to persuade the Turkish government to enter the war against the Soviet Union, first in their newspapers, then by street demonstrations, led by Atsız and Sancar. These failed, but after the end of the war, Pan-Turkism began to be somewhat more popular than before, and tried to stage a comeback into the mainstream of politics, as one of many competing ideologies since the 1950s to-date. Increasingly, hostility to Communism and its sponsors, and sympathy for the complaints of Turkish-Turkic minorities in the Soviet Union, China, ʿIrāḳ, Greece, Cyprus and, in the late 1980s, Bulgaria, brought some potential support. Nonetheless, organisationally Pan-Turkism in Turkey itself remained weak and limited to élitist circles.

This situation was partly changed by Alparslan Türkeş. Born in Nicosia in 1917, he emigrated with his family to Turkey and chose a military career, reaching the rank of colonel. His connections with the Pan-Turkists began at least as early as the mid-1940s, when he participated in their street demonstrations. A controversial figure, he entered politics in 1965, when he took over the leadership of a medium-size political party whose name he changed to the Nationalist Action party (*Milliyetçi Hareket Partisi*). This ultra-nationalist grouping, active in politics until the military intervention of 1980, which banned all parties, and subsequently re-established as the Industriousness Party (*Çalışma Partisi*), still with Türkeş as chairman, obtained—at least for a while—the support of Pan-Turkists. In recent years, though, they have abandoned it, since Türkeş did not achieve results that satisfied them, and, also, because Türkeş increasingly took a pro-Islamic stand (in order to gain more votes), which Pan-Turkists did not consider consistent with their basic ideology.

In the late 1980s and early 1990s, there seems to have occurred, again, an upsurge in Pan-Turk sentiment, in Turkey, where public feelings identified with the "Outside Turks" (*Dış Türkler*) first in Bulgaria, then in the Union of Independent States, heir to the Soviet Union, as both sides of the border increasingly wished for greater co-operation and solidarity. Nonetheless, the ideal of a Pan-Turk union has not been achieved, for several reasons. Among external factors, the general reluctance of the Powers to alter the *status quo* has co-operated with opposition by the former Soviet Union and by China, as well as their protégés, to political (and even cultural) Pan-Turkism. Among internal ones, no less crucial, have been opposition by most of Turkey's political establishment, strong competition by rival ideologies, paucity of numbers (and no grassroots support) and lack of efficient organisation.

Bibliography: Several periodicals in Turkey still carry the message of Pan-Turkism. Some of these advocate the cause of a specific area and are edited and published largely by émigrés. Such are *Azerbaycan*, *Türkistan* and *Emel* (the last caters to Tatars). Two scholarly periodicals advocate Pan-Turkism more generally, the monthly *Türk Kültürü* (Ankara) and the bi-monthly *Türk Dünyası Araştırmaları* (Istan-

bul). A detailed bibliography on Pan-Turkism, updated to 1980, is given by J.M. Landau, *Pan-Turkism in Turkey*, London 1981, Greek tr. Athens 1985, Chinese tr. Urumchi 1992. See also: Shirin Akiner, *Islamic peoples of the Soviet Union*, London 1983; J.M. Landau, *Tekinalp, Turkish patriot 1883-1961*, Istanbul and Leiden 1984; L.L. (J.M. Landau)

PANDJ PĪR, Pačpiriyā, followers of the Five Saints, Urdu *pānč pīr*, especially in northern and eastern India, whose myths and legends (there is no real historicity or hagiology about them) are attached to a primitive form of shrine worship with as many Hindū as Muslim adherents (Kipling in *Kim*, ch. 4, speaks of the "wayside shrines—sometimes Hindu, sometimes Mussulman—which the low caste of both creeds share with beautiful impartiality". For "caste" among the lower grades of Muslim society see hind. ii, Ethnography). They have no formal organisation, and belong to the general north Indian cultus of *pīr* and *shahīd*. The number *five* of course holds, affectionate associations, at least for a more formal Islam, in the *pandjtan-i pāk*: Muḥammad, ʿAlī, Fāṭima, Ḥasan and Ḥusayn; although in the sub-continent today a list of five great saints might be Bahāʾ al-Ḥaḳḳ of Multān, Rukn-i ʿĀlam of Lakhnaʾū, Shams-i Tabrīz of Mūltān, Makhdūm Djahāniyā Djahāngasht of Uččh, and Farīd al-Dīn "Shakargandj" of Pākpattan, although the list is variable. There are also, for example, the five hours of prayer, and the five duties of Islam, and the five "fingers"of the *pandja* used as one of the *ʿalams* in the Muḥarram ceremonies, or of the "hand of Fāṭima" commonly used as a talisman.

With the Pačpiriyā, however, the list is more variable: Crooke, for example, cites five different enumerations of the Pānč Pīr in Banāras alone, and refers to groupings in Bihār which include Langŕā Tār, a piece of crooked wire, and Subarnā Tīr, the bank of the Subarnā river, clearly crude fetishism; the only constant figure in the various enumerations is Ghāzī Miyān [*q.v.*], i.e. Sayyid Sālār Masʿūd, nephew of Maḥmūd of Ghaznī, killed in battle against the Hindūs of Bahrayč [*q.v.*] in 425/1034 and claimed as one of the first martyrs of Islam in India, and his tomb and shrine at Bahrayč—and cenotaphs elsewhere in north-eastern India—are visited as much by Hindūs as by Muslims. The "doubtfully Islamic fair" referred to in the art. manēr, above, is part of this cultus. For Hinduism the Panč Pāndava, the five heroes of the *Mahābhārata*, or a set of five valiant Rādjpūt warriors, may even be referred to as the Pānč Pīr.

One possible connecting link among the various enumerations of the Pānč Pīr is the idea of martyrdom, since the tomb of a *shahīd*—which may come to have its own attached *pīr*—commonly attracts a particular devotion. For example, away from north India there is a modern mosque known as Pānč Pīr at Tālikotā [*q.v.*], the site of the battle wherein the Vidjayanagara army was defeated in 972/1565 by the confederated armies of the five sultanates of the Deccan; the mosque contains five tombs said to be of Deccan soldiers killed in the battle, which are now visited and venerated by Muslims and Hindūs alike.

The worshippers were described by E.A.H. Blunt, *The caste system of northern India*, Oxford 1931, as belonging to some 53 castes, 44 of which were "wholly or partly Hindu", and he puts the number of Hindū worshippers of the Five at some thirteen and a half million. R. Greeven, *op. cit.* below, gives two theories of the origin of the worship: (i) that low-caste Hindū converts to Islam degraded its purer doctrines into a species of more intelligible idolatry; (ii) that the Hindū low castes, under the influence of terror, deified certain of the earlier Muslim conquerors, into whose worship the humbler converts, never wholly emancipated from idolatry, relapsed by an easy passage. Two facts are apparently not disputed: (i) that the worshippers belong to low castes—indeed one authority declares that they are almost entirely sweepers; (ii) that even among Hindū devotees the Muslim origin of the cult is not forgotten, villagers speaking of the Five as the "Muslim deities" (*musulmānī dewtār*), and have certain ceremonies performed by Muslim drummers (*dafālī*, strictly "tambourinist"). Crooke's lists, which enumerate the offerings (not excluding spirituous liquor) presented to the Five at different places and by different *ḳawm*, show an amazing diversity of practice between one community and another, as though the Five were Hindū household or village gods, and as though any conformity were only a matter of *ḳawm* organisation. The household worship of the Five may simply be directed to an iron bar or three-pointed spear, representing Ghāzī Miyān, or five wooden pegs in the floor of the courtyard. There may be some cohesion through the songs of the itinerant *dafālīs*, but otherwise the Pačpiriyā have no formal organisation; the cult is discouraged by orthodox Muslims, and their "priests" are nothing but opportunists operating upon an illiterate and gullible public.

Specimens of the ballad poetry of the *dafālīs* and others, given by Greeven, are largely adaptations to Muslim ideas of tales found in the Indian epics, and the glorification of Ghāzī Miyān and his family.

Greeven, *The Heroes Five, an attempt to collect some of the songs of the Pachpiriya ballad-mongers in the Benares division*, Allahabad 1898; *ERE*, ix, 600 ff.

(D. S. Margoliouth-[J. Burton-Page])

PANDJĀB (p., "land of the five rivers"), a province of the northwestern part of the Indo-Pakistan subcontinent. In pre-Partition British India it comprised all that part of the Indian Empire, with the exceptions of the North West Frontier Province and Kashmīr, north of Sindh and Rādjpūtāna and west of the river Djamna. Geographically therefore it includes more than its name implies, for, in addition to the country watered by the Djhelum, Činab, Rāwī, Beās, and Satledj, it embraces the table-land of Sirhind between the Satledj and Djamna, the Sind-Sāgar Dōāb between the Satledj and the Indus, and the district of Dēra Ghāzī Khān. Since 1947, the province has been divided between Pākistān and India, the eastern, Indian portion being now divided into the states of Pandjāb, Haryana and Himachal Pradesh (see 2. below).

Under British rule, the province of Pandjāb was administratively divided into two parts, British territory and the Pandjāb States. British territory, which had

an area of 99,265 square miles and a population in 1931 of 23,580,852, was divided into 29 districts, each administered by a deputy-commissioner. These districts were grouped into the five divisions of Ambāla, Djullundur, Lahore, Rāwalpindi, and Multān, each under a commissioner. The Pandjāb States had an area of 37,699 square miles and a population in 1931 of 4,910,005. The conduct of political relations with Dudjānā, Patawdī, Kalsia, and the 27 Simla Hill States was in the hands of the Pandjāb Government. The remaining states of Lohāru, Sirmūr, Bilaspūr, Mandi, Suket, Kapurthālā, Malēr-Kōtla, Farīdkōt [*q.v.*], Čambā, Bahāwalpūr [*q.v.*], and the Phūlkian states of Pattiālā, Djind, and Nabhā, were directly under the Government of India.

1. History until 1911

The history of this area has been profoundly influenced by the fact that the mountain passes of the north-west frontier afford access to the Pandjāb plains. For this reason, it is ethnologically more nearly allied to Central Asia than to India. The excavations conducted since 1920 at Harappa in the Montgomery district are evidence of a culture which probably flourished in the Indus valley about 3000 B.C., and which bears a general resemblance to that of Elam and Mesopotamia (Sir John Marshall, *Mohenjo-Daro and the Indus Civilization*, 3 vols., London 1931). But the first migration of which we have any evidence is that of the Aryan-speaking peoples who established themselves on the Pandjāb plains in pre-historic times. Centuries later, successive waves of invaders swept like devastating torrents through the mountain passes of the north-west. Persian, Greek, and Afghān, the forces of Alexander and the armies of Maḥmūd of Ghazna, the hosts of Tīmūr, Bābur, and Nādir Shāh, and the troops of Aḥmad Shāh Durrānī [*q.vv.*], all advanced by these routes to lay waste the fertile plains of the Pandjāb. All these migrations and invasions added to the heterogeneity of the existing population in the land of the five rivers. The history of invasions from Central Asia proves that the Pandjāb and the frontier zone from the banks of the Indus to the Afghān slopes of the Sulaymān range have never presented any real barrier to an enterprising general. The Sulaymān range itself has seldom formed a political boundary, for the Persians, Mauryas, Graeco-Bactrians, Sakas, Pahlawas, the Kushān branch of the Yüeh-či, and the Hūṇas all bestrode this mountain barrier.

The capture of Multān [*q.v.*] by Muḥammad b. Ḳāsim [*q.v.*], in 94/713, extended Arab power to upper Sind and the lower Pandjāb, but the real threat to Hindustān came from the direction of modern Afghānistān. The Ghaznawid invaders found the powerful Hindūshāhiyya dynasty of Wayhand [see HINDŪSHĀHĪS] ruling between Lamghān and the Čināb. The power of this Hindu state was completely shattered by Maḥmūd of Ghazna [*q.v.*], who annexed the Pandjāb, which became a frontier province of his extensive empire with its capital at Lahore (Lāhawr [*q.v.*]) and the sole refuge of his descendants when driven out of Ghazna by the Shansabānī sultans of Ghūr [see GHŪRIDS]. Multān and the surrounding country had remained in Muslim hands since the days of the Arab conquest, but the fact that its rulers were heretical Ḳarmaṭians (i.e. Ismāʿīlīs) was one reason for Maḥmūd's attack in 396/1006. Muḥammad Ghūrī annexed the Pandjāb in 582/1186 and on his death in 602/1206 it definitely became a province of the Sultanate of Dihlī under the rule of Ḳuṭb al-Dīn Aybak [*q.v.*]. With the exception of occasional rebellions and raids from Central Asia, it remained under the Sulṭāns of Dihlī until the defeat of Ibrāhīm Lōdī [*q.v.*] by Bābur at Pānīpat [*q.v.*] in 932/1526 paved the way for the foundation of the Mughal empire. Under Akbar [*q.v.*] the modern province of the Pandjāb was included in the *ṣūbas* of Lahore, Multān, and Dihlī, a detailed description of which will be found in the *Āʾīn-i Akbarī* (tr. Jarrett, ii, 278-341).

The more intransigent policy of Akbar's immediate successors, above all, of Awrangzīb [*q.v.*], led to the growth of Sikh political power in the Pandjāb and transformed a band of religious devotees, founded by Guru Nānak [*q.v.*] in the second half of the 15th century, into a military commonwealth or Khālṣa animated with undying hatred toward Muslims [see SIKHS]. The weakness of the central government and the unprotected condition of the frontier provinces under the later Mughals exposed Hindūstān to the invasions of Nādir Shāh [*q.v.*] and Aḥmad Shāh Durrānī [*q.v.*]. On the bloodstained field of Pānipat, in 1761, the Marāthās [*q.v.*], who were aspiring to universal sovereignty, sustained a crushing defeat at the hands of the Afghān invader. In the following year, at Barnāla near Ludhiāna, Aḥmad Shāh disastrously defeated the Sikhs who had taken advantage of his absence in Kābul to possess themselves of the country around Lahore. The Sikhs, however, soon extended their sway to the south of the Satledj and ravaged the country to the very gates of Dihlī, but their further advance was checked by the Marāthās who had rapidly recovered from their defeat at Pānipat. It was the defeat of the Marāthās by Lord Lake, in 1803, which facilitated the rise of Randjīt Singh and enabled him to found a powerful Sikh kingdom in the Pandjāb. His attempts to extend his authority over his co-religionists, the cis-Satledj Sikhs, brought him into contact with the British, and, by the treaty of 1809, he pledged himself to regard the Satledj as the north-west frontier of the British dominions in India (Aitchison, viii, no. liii). After the death of Randjīt Singh in 1839, his kingdom rapidly fell to pieces under his successors. Revolution succeeded revolution, and during the minority of Dalīp Singh the Khālṣa soldiery became virtually rulers of the country. Unprovoked aggression on British territory produced two Sikh wars which ended with the annexation of the Pandjāb in 1849.

At first the newly-conquered territories were placed under a Board of Administration. This was abolished in 1853, its powers and functions being vested in a Chief Commissioner. In 1859, after the transfer of the Dihlī territory from the North-Western (subsequently the United) Provinces, the Pandjāb and its dependencies were formed into a Lieutenant-Governorship.

The annexation of the Pandjāb by advancing the British administrative boundary across the Indus brought the Government of India into closer contact with the Pathān tribes of the north-west frontier and the Amīr of Afghānistān [*q.v.*]. Because this frontier was too long and too mountainous to admit of its being defended by the military alone, much depended upon the political management of the tribes. At first there was no special agency for dealing with the tribal tracts, and relations with the tribesmen were conducted by the deputy-commissioners of the six districts of Hazāra, Peshāwar, Kōhāt, Bannū [*q.vv.*], Dēra Ismāʿīl Khān, and Dēra Ghāzī Khān [see DĒRADJĀT]. In 1876, the three northern districts formed the commissionership of Peshāwar, the three southern ones that of the Dēradjāt. The system of political agencies was not adopted until 1878, when a special officer was appointed for the Khyber [see KHAYBAR] during the Second Afghān War. Kurram

[*q.v.*] became an agency in 1892, while the three remaining agencies of the Malakand, Tochi, and Wāna were created between 1895 and 1896. The Malakand was placed under the direct control of the Government of India from the outset, all the other agencies remaining under the Pandjāb Government. This was the arrangement until the creation of the North-West Frontier Province in 1901.

The Pandjāb attained its latest dimensions within British India in 1911 when Dihlī became a separate province. It was not, however, until 1921 that it was raised to the status of a governor's province.

2. History after 1911

The course of British policy profoundly influenced political developments in the region after 1911. The British created a system of control based on their alliance with rural powerholders. They also encouraged the growth of an "agriculturalist" political identity which cut across communal lines. This policy was largely dictated by the need to secure rural stability in a region which was the major centre for recruitment to the Indian Army. The Government of India's introduction of improved communications, the spread of western education and missionary activity, however, stimulated religious revivalism. The communities of the Pandjāb's towns thus developed a communal political ideal which challenged the British definition of society. Two systems of politics emerged, the rural politics of mediation, and the urban politics of faith.

The Government of India's political institutions largely excluded the urban communities from power. Only members of the statutory "agriculturalist" tribes could stand for election in the rural constituencies which accounted for the majority of the seats in the Provincial Assembly, newly created in 1937. Because the rural voting requirements were low and large numbers of soldiers were enfranchised, agriculturalists comprised nearly three-quarters of the restricted electorate. This greatly handicapped both the Indian National Congress and the All-India Muslim League, as their supporters were concentrated in the Pandjāb's towns.

The Unionist Party was the dominant political force. The Party was founded in 1923. It won the support both of the Muslim landholders from the West Pandjāb and the Hindu Jat peasants of the eastern Ambāla division. Its main policies concerned the elimination of rural indebtedness. Its cornerstone was the 1900 Alienation of Land Act which limited land transfers and divided Pandjābi society into the categories of "agriculturalist" and "non-agriculturalist".

Urban politicians, however, stressed communal identities. The Aḥrārs championed the rights of Kashmiri Muslims and also attacked the heterodox Aḥmadī community [see AḤMADIYYA]. The Khāksārs preached a revolutionary Islamic nationalism. The Sikh Akālīs were the first to successfully infuse communal values into rural politics. They wrested power from the landholders of the Khālsa National Party through their militant struggle in the early 1920s to secure control of the Sikh shrines and temples. Muslim politics continued to move along the same track as before. The Unionist Party triumphed in the 1937 Provincial elections, reducing the Muslim League to a single seat. Jinnah received some consolation when the new Unionist Premier, Sikandar Ḥayāt Khān, agreed to support him in All-India politics in their Pact of October 1937. But the cost was the Unionist domination of the reorganised Pandjāb branch of the Muslim League.

The Second World War dealt a series of blows to the Unionist Party. It had to agree to the unpopular measure of the forced requisition of grain. The War also undermined it by raising Jinnah's status and signalling an imminent British departure from India. Simultaneously, the Party was internally weakened by the sudden deaths of Sikandar and Chhotu Ram, its leading Jat figure. Khiḍr (Khizr) Ḥayāt Khān Tiwana succeeded Sikandar as Premier early in 1943. He remained wedded to the Party's intercommunal stance, but he lacked his predecessor's ability to unite all its Muslim factions. Jinnah seized the opportunity to reassert his authority over the Pandjāb Muslim League. After protracted negotiations, he expelled Khiḍr from the party in May 1944. Thereafter there was a steady drift of Muslim Unionists into the Muslim League, while their Hindu counterparts joined the Congress.

The Unionist Party was reduced to a rump of 21 members following the 1946 Provincial elections. Khiḍr remained as Premier of a Coalition Ministry until March 1947. His resignation sparked an outbreak of communal violence which had become endemic by the summer of 1947. The disintegration of the police and other services helps explain the chaos which afflicted the region following the British departure.

The Partition of the Pandjāb resulted from the acceptance of the 3 June Plan. The boundary commission drew a line passing between Lahore and Amritsar. The decision to award an area of about 5,000 square miles of contiguous Muslim majority areas to India to retain the "solidarity" of canal and road systems evoked great controversy. In the chaotic two-way flight of August to November 1947, 13 million people crossed the new boundaries. In 1956 the Patiālā and East Pandjāb States Union was merged with the Indian Pandjāb State. This was, however, further reorganised along linguistic lines in 1966 with the Hindi-speaking areas being carved out into the new State of Haryana. The Himalayan Hill Tracts were also taken away to form part of what became the State of Himachal Pradesh. The Sikhs were left as a majority in their homeland for the first time. By 1981 they

comprised 56% of the State's population of 16,800,000. The West Pandjāb has undergone much less territorial reorganisation. It has incorporated the former State of Bahāwalpūr [*q.v.*]. From 1955-70 it was merged into the single province of West Pākistān. When it was reconstituted, it comprised 28 districts in five divisions and a population of 37,400,000.

Both the Indian and Pākistānī Pandjāb were historically well placed to benefit from the Green Revolution of the 1960s. They possessed good existing roads and canals and agriculturally skilled populations. With the introduction of the improved seeds and technology of the Green Revolution, agricultural production was further increased, with the result that they became the wealthiest regions in their respective countries. The Pākistānī Pandjāb possessed the additional favourable inheritance of a stranglehold over military recruitment.

The colonial legacy has also shaped political developments in the Pandjāb region. The Akālī Dal's dominant position in Sikh politics dates from its capture of the resources of the Sikh shrines and temples. The genesis of the Khālistān demand is complex and is rooted mainly in the social changes brought by the Green Revolution and the Centre-State conflicts engendered by Mrs Gandhi's rule. Nevertheless, the sharpened Sikh communal identity during the colonial era, and Sikh distrust of the Congress following the failure of the Sikhistān demand in 1947, are important historical influences.

An important colonial legacy for the politics of the Pākistānī Pandjāb, and indeed for Pākistān as a whole, has been the region's establishment as a major army recruitment centre. For the virtual exclusion of non-Pandjābīs from the continued military association with power has reinforced regional imbalances and increased alienation from the centre. Military service, landholding and political power have become increasingly intermeshed. Equally important, however, has been the inheritance of an unresolved tension between a political authority based on the mediation of local leaders and Islamic ideals. This boiled over in the anti-Aḥmadī riots in Lahore of 1953 which were reminiscent of the Aḥrārs' agitations of the 1930s. The riots resulted in the introduction of martial law in Lahore and the downfall of the Premier of Pākistān. This paved the way for the military to assume a larger role in the nation's politics [see further, PĀKISTĀN].

PANDJĀBĪ is only loosely to be defined as the Indo-Aryan language of the Pandjāb [*q.v.*]. Most linguists follow the narrower definition proposed by Grierson in the *Linguistic survey of India*, according to which "Pandjābī proper" is restricted to the speech of the central and eastern districts only, in distinction from the western dialects separately classified under Lahndā [*q.v.*].

1. *Historic status and dialects*. Pandjābī is thus placed between Lahndā to the west and the Khaṛī bōlī of the Dihlī region, which forms the base of Urdū and of modern standard Hindī, to the south-east. As is so often the case in the uncertain internal taxonomies of Indo-Aryan, its relations with these two immediate neighbours are complex, being marked by a range of features shared with one or the other, and being further confused by numerous borrowings.

The intermediate status of Pandjābī was explained by Grierson in terms of his insecurely based theory of "Outer" and "Central" groups of Indo-Aryan languages, according to which Pandjābī was the product of the innovating "Central" type, exemplified by Western Hindī, having come partially to overlay the conservative "Outer" Lahndā.

A more satisfactory explanation requires to be more closely linked to the historical evidence. This is admittedly very scanty for the beginning of the new Indo-Aryan period, which is here roughly contemporary with the Ghaznawid conquests of the 11th century. Widespread acceptance has, however, been secured for the argument first advanced by Ḥ.M. Shērānī that Pandjābī was one of the principal Indo-Aryan components of the early Muslim *lingua franca* of India, as might be deduced from the known patterns of conquest and settlement. The language of both the often garbled vernacular utterances occasionally included in some early Dihlī *malfūẓāt* [*q.v.* in Suppl.] and the amply preserved corpus of early Dakanī Urdū literature (*ca.* 1500-1650) clearly exemplifies this former Pandjābī predominance, largely eliminated in later varieties of Urdū where Khaṛī bōlī norms have become the rule. Such Pandjābisms notably include the preference for the retention of Middle Indo-Aryan geminates, e.g. *akkh* "eye" versus modern Urdū *āṅkh*, the use of vocabulary now distinctively Pandjābī, e.g. *ākh-* "say" besides *kah-* (now alone used in modern Urdū), and numerous morphological features, e.g. future *ākhsī* "he will say" (versus modern *kahēgā*), or ablative singular *prēmōṅ* "from love" (versus modern *prēm sē*).

Within the Pandjāb itself a similar pattern of influence from west to east may discerned in the pre-modern period. The local Muslim literary language, as often as not described by its authors in the usual Indo-Muslim fashion as "Hindī" or "Hinduī" rather than "Pandjābī" freely incorporates many Lahndā forms alongside those more strictly characteristic of the central Mādjhī dialect of Lahore, the provincial capital. This may be accounted for by the continuing importance of Multān as a spiritual and political centre in the south-west, and by the fact that many of the most important writers came from the districts west of Lahore, where Pandjābī shades into Lahndā. The broad dialectal base of the literary language is to be seen in the simultaneous use of numerous western (Lahndā), mid-western (Lahndā-Pandjābī) and central (Mādjhī) forms, e.g. feminine plural *akkhīṅ*, *akkhiyāṅ*, *akkhāṅ* "eyes", or future *akhēsi*, *ākhsī*, *ākhēgā* "he will say". Only from *ca.* 1750 is it possible clearly to distinguish the Sirāikī of south-western Pandjāb, more exclusively based on Lahndā [*q.v.*] from this composite Muslim Pandjābī literary idiom.

2. *Muslim Pandjābī literature*. The prolonged cultural

supremacy of Persian in the Pandjāb, only ended by the imposition of Urdū following the British conquests in the mid-19th century, accounts for the quite restricted nature of the typical genres of pre-modern Muslim Pandjābī literature, whose linguistic base has been indicated above. Written in Persian script and drawing extensively upon Perso-Arabic vocabulary, this Muslim literature may largely be considered in isolation from the contemporary Sikh scriptural and post-scriptural literature, whose dialectal base incorporates many more Hindī forms alongside their Pandjābī equivalents, which is recorded in the sacred Gurmukhī script, and whose abstract vocabulary is largely Sanskritic in origin. The two literatures coincide only in the isolated small corpus of pre-16th century *shalōk* and hymns attributed to Farīd al-Dīn Gandj-i Shakar (571-664/1175-1265 [*q.v.*]) which is preserved in the Sikh *Ādi Granth* (1604). While valuable as uniquely early examples of Muslim vernacular poetry in the Pandjāb, and as linguistic records (especially since the Gurmukhī script records such archaic features as morphemically significant distinctions of short vowels, never systematically indicated in the Persian script), these verses must in many ways be regarded separately from the later Muslim literature.

This abounds in the difficulties of attribution and dating, not to speak of the uncertainties of textual transmission, to be expected from its semi-popular character in relation to Persian. Also consistent with its popular nature is the fact that it is all composed in verse, whose patterns are based not upon the learned *ʿarūḍ* certainly familiar to many of its authors but on local metres characterised by regular accentual beats. The literature may be classified under three broad headings. The first consists of versified Islamic treatises on fundamentals of the faith or prescriptions of the *sharīʿa*. Although quite copious in quantity, this genre is of the least literary interest, even in the well preserved works of its first and best known exponent, Mawlawī ʿAbd Allāh "ʿAbdī" of Lahore (d. 1075/1664).

A far greater literary significance attaches to the Ṣūfī lyric associated with *ḳawwālī* performance. Here the premier genre is the *kāfī*, a lyric consisting of rhymed couplets or short stanzas having a refrain repeated after each verse, and normally following the usual Indian poetic convention whereby the poet assumes a female persona, typically that of a young girl yearning to be united with her husband/lover, allegorically to be understood as an expression of the soul's yearning for God. The 16th-century *malāmatī* of Lahore, Shāh "Mādhō Lāl" Ḥusayn, is considered to be the first exponent of the Pandjābī *kāfī*, although it must observed that the transmission of the verse attributed to him has been largely through the oral *ḳawwāl* tradition. The master of the genre is the Ḳādirī, ʿAbd Allāh "Bullhe Shāh" (1680-1758), whose tomb is at Ḳaṣūr, and in whose *kāfīs* the combination of a lyrical poignancy underpinned by imagery from local legends and local life with wide-ranging Islamic references creates a local expresion of Ṣūfī teaching and ideals still rightly regarded as classic. His reputation is matched only by that of another Ḳādirī, Sulṭān Bāhū of Jhang (d. 1102/1691), whose more sober poetry is cast in the quatrain form called *dōhṛā*.

The third genre consists of longer narrative poems, composed in one or other of the two local metres called *baiṇt*, and arranged by rhyme either in *mathnawī*-style couplets, or more usually in stanzas (*pauṛī*) of four or more lines, whose contents are often headed by Persian prose rubrics. Although more obviously designed for reading than the Ṣūfī lyric, at least the most famous of these narratives are equally performed as ballads to more or less set tunes. One category of such narratives indeed consists of historical ballads (*vār*) on martial themes, the best known examples being the 18th-century *Nādir Shāh dī vār* by Nadjābat, and the mid-19th century *vār* on the Anglo-Sikh wars by Shāh Muḥammad.

The largest and most popular class of narrative poems belongs, however, to the romance or *ḳiṣṣa*. Well attested from the 17th century, the Pandjābī *ḳiṣṣa* reaches its apogee in the *Hīr Rāndjhā* by Wārith Shāh (1180/1766). Comprising some 4,000 lines, this version of one of the most famous local legends is rightly regarded as the masterpiece of Muslim Pandjābī literature, not merely for its narrative skill but for its encyclopaedic vision of Pandjābī society, its exploitation of the total stylistic range of language from the most rarefied Perso-Arabic to the most earthily obscene, and its challenging mixture of the sardonic with the romantic. Classic treatments of other local legends, besides adaptations from the Persian of such widely diffused romances as Laylā-Madjnūn or Shīrīn-Farhād, followed in the early 19th century, and many further imitations were inspired by the development of Lahore as a major publishing centre from the 1860s. The only later *ḳiṣṣa* to achieve a popularity rivalling that of the Wārith Shāh *Hīr* was, however, the lengthy and elaborate re-working of the Arabian Nights' romance of *Sayf al-Mulūk* (1272/1855) by the Ḳādirī Miyān Muḥammad Bakhsh of Mīrpūr (Kashmīr) in some 10,000 lines as a Ṣūfī allegory incorporating a vast range of references to Islamic learning and local culture, characteristically concluding with the first history of Muslim Pandjābī literature.

3. *Modern Pandjābī*. While Pandjābī literature of a traditional type, if no longer of very high quality, continues even now to be produced in Pākistān, pre-modern patterns have been increasingly affected by the major linguistic and political changes which have overtaken the Pandjāb in the 20th century.

The intimate association in modern South Asia between Urdū and Islām facilitated the ready acceptance during the British period by educated Pandjābī Muslims of Urdū in place of Persian as their main cultural language. The creation and development of a modern standard Pandjābī was therefore left to the Sikh reformists and writers who from 1900 onwards used it as the medium of a modern prose literature. Being written in the Gurmukhī script, this literature was, however, unintelligible to nearly all Muslim readers, from whose ranks only a very small number of writers began to experiment with newer poetic forms, including adaptations of Urdū and English models into Pandjābī. This profound cultural barrier was naturally reinforced by the partition of the Pandjāb in 1947, and the wholesale exchange of populations between its Indian and Pākistānī parts [see PANDJĀB. 2. after 1911].

The place of Pākistān Pandjāb as one of the stoutest continuing bastions of Urdū in South Asia was challenged in the succeeding decades only by very small groups of intellectuals and writers who began to lay the foundations of a modern standard Pākistānī Pandjābī, inevitably profoundly influenced by Urdū, but consciously differentiated from it by the adoption of some elements from modern Sikh Pandjābī, and of a more carefully distinguished orthography (e.g. through the adoption of super-dotted *nūn* to mark the retroflex *ṅ*). The efforts of these pioneers have borne some fruit in recent decades, when political

developments have encouraged an increasing role for linguistic and other manifestations of local ethnicity in Pākistān. Their reversal of direction in the historic patterns of influence from west to east has served to base the written language more closely on the Mādjhī of Lahore, but at the cost of emphasising its distinctiveness from other regional standards, notably the Sirāikī of Multān-Bahāwalpūr. For the present, therefore, Urdū continues to represent an attractive alternative to the greater adoption of Pandjābī as literary language, even in the specialised world of Pākistānī Pandjābī scholarship.

Bibliography: 1. Language. G.A. Grierson, ed., *Linguistic survey of India*, ix, part I, *Western Hindī and Pañjābī, 607-825*, Calcutta 1916, contains a full bibliography of the earlier sources. The significance of Pandjābī in the early formation of Urdū was first argued in Ḥ.M. Shērānī, *Pandjāb meṉ Urdū*, Lahore 1930. More recent studies are best consulted through O.N. Kaul and M. Bala, *Punjabi language and linguistics, an annotated bibliography*, Patiala 1992. There is no systematic account of Muslim Pandjābī comparable to the description of modern standard Sikh Pandjābī in H.S. Gill and H.A. Gleason, *A reference grammar of Punjabi*, Patiala 1969.

2. Literature. There is a lengthy composite account (in Urdū) in *Pandjābī adab*, in *Tārīkh-i adabiyyāt-i musulmānān-i Pākistān ō Hind*, ed. Fayyāḍ Maḥmūd, xiii, part I, Lahore 1971, 185-433. The earlier period is surveyed in C. Shackle, *Early vernacular poetry in the Indus valley*, in *Islam and Indian regions*, ed. A.L. Dallapiccola and S. Zingel-Avé Lallemant, Stuttgart 1993, i, 259-89. For the Ṣūfī poetry, L. Rama Krishna, *Pañjābi Ṣūfī poets, A.D. 1460-1900*, Calcutta 1938, still awaiting its long overdue English replacement, may be supplemented by *Bulleh Shah* [*sic*], *a selection*, tr. Taufiq Rafat, Lahore 1982. A comprehensive bibliography of English and other sources for the Wārith Shāh *Hīr* (and to the *ḳiṣṣa* poetry generally) is provided in C. Shackle, *Transitions and transformations in Vāris Shāh's* Hīr, to appear in *The Indian narrative: perspectives and patterns*, ed. idem and R. Snell, Wiesbaden 1993.

3. Modern Pandjābī. The changing status of the language is examined in C. Shackle, *Punjabi in Lahore*, in *Modern Asian Studies*, iv (1970), 239-67; idem, *Language, dialect, and local identity in northern Pakistan*, in *Pakistan in its fourth decade*, ed. W.-P. Zingel, Hamburg 1983, 175-87; idem, *Some observations on the evolution of modern standard Punjabi*, in *Sikh history and religion in the twentieth century*, ed. J.T. O'Connell, Toronto 1988, 101-9. (C. Shackle)

PANDJDIH (Pendjdeh), a village now in the Turkmenistan Republic, situated to the east of the Kushk river near its junction with the Murghāb at Pul-i Kishti. The fact that the inhabitants of this area, the Sarik Turkomans, were divided into five sections, the Soktīs, Harzagīs, Khurāsānlis, Bayrač, and the ʿAlī Shāh, has been put forward as a possible explanation of the origin of the name Pendjdeh, but it carries no weight as the Sariks were only 19th-century immigrants, whereas the name was in use in the 15th century.

This obscure oasis owes a somewhat melancholy importance to the "Pandjdih Incident" of 1885, when an Afghān force suffered heavy losses in an engagement with Russian troops, and which threatened to become a major Anglo-Russian military confrontation in Central Asia. History proves that an ill-defined boundary is a potential cause of war. It was a knowledge of this and the Russian occupation of Marw in 1884, with an intention in Imperial Russian minds of extending power over all the Turkmen peoples of the region, that gave the necessary impetus to negotiations which ended in the appointment of an Anglo-Russian Boundary Commission for the delimitation and demarcation of the northern boundary of Afghānistān. Trouble immediately arose in this quarter, for while the Russians contended that the inhabitants of Pandjdih were independent, the British held the view that they were subjects of the *Amīr* of Afghānistān. According to the British, the district of Pandjdih, which comprised the country between the Kushk and Murghāb rivers from the Band-i Nādir to Ak Tepe, together with the rest of Bādghīs, formed part of the Harāt province of Afghānistān. During the first quarter of the 19th century, Pandjdih had been occupied by Djamshīdīs and Hazāras. Towards the end of this period, some Turkomans of the Ersari tribe, whose settlements were scattered along the banks of the Oxus between the Čardjuy and Balkh, moved to Pandjdih and obtained permission to settle there. Salor Turkomans had also settled in this area. About 1857, the Ersaris migrated from the oasis of Pandjdih, and soon afterwards the Sarik Turkomans, forced southwards by their more powerful neighbours, the Tekkes, occupied Yulatan and Pandjdih and compelled the Salor families to migrate elsewhere. Although, therefore, Pandjdih had from time to time been occupied by various tribes, they had all, whether Djamshīdīs, Hazāras, Ersaris, Salors or Sariks, acknowledged they were on Afghān soil and paid tribute to the *nāʾib* or deputy of the Afghān governor of Harāt. The Sarik Turkomans had even supplied the *Amīr* with troops. The British therefore contended that the district of Bādghīs, of which Pandjdih formed a part, had long been under Afghān rule (Foreign Office mss. 65, 1205).

The Russians, on the other hand, contended that the people of this oasis had always enjoyed independence. Lessar, a Russian engineer, who visited Pandjdih in March 1884, discovered no trace of Afghān authority, but a Russian doctor, named Regel, who visited it in June of the same year reported the presence of an Afghān detachment. In their opinion, therefore, Pandjdih had only recently been occupied by Afghān troops.

The fact that the Afghāns had not permanently garrisoned this area was no proof of its independence. On the contrary, it was only natural that, after the Russian occupation of Marw and Pul-i Khātūn, ʿAbd al-Raḥmān Khān should have taken steps to indicate his sovereign rights over this area. When, therefore, an Afghān garrison occupied Pandjdih, the Russian Government immediately protested and disputed the *Amīr*'s claim to the territory. While negotiations were taking place between London and St. Petersburg, events moved swiftly on the frontiers of Afghānistān. On 29 March 1885, General Komarov sent an ultimatum demanding the withdrawal of the Afghān garrison. The Afghāns resolutely refused to withdraw, whereupon the Russians attacked them, driving them across the Pul-i Kishti with the loss of some 900 men. It must be admitted that the posting of Afghān troops in Pandjdih, and the Russian advance to Yulatan on the Murghāb and to Pul-i Khātūn on the Harī Rūd, were both provocative actions almost certain to precipitate war. The whole incident should have been avoided, but the confusing reports of Sir Peter Lumsden, the British Commissioner, to the Foreign Office, and the delay of Zelenoi, the Russian Commissioner, in arriving at Sarakhs complicated matters still more.

At the time, this incident seemed likely to embroil Russia and Britain in war, but, fortunately, the good sense of the *Amīr*, who was at this critical moment on a State visit to Rawalpindi, and the diplomatic skills of the Viceroy, Lord Dufferin, prevented this, for even the pacific Liberal government of Gladstone had proposed to Parliament that £11,000,000 should be expended on preparations for war.

It was finally agreed that Pandjdih should be handed over to Russia in exchange for Dhu 'l-Fiḳār, and by the year 1886 the northern boundary of Afghānistān had been demarcated from Dhu 'l-Fiḳār to the meridian of Dukči within forty miles of the Oxus. After a dispute as to the exact point at which the boundary line should meet the Oxus, the process of demarcation was completed in 1888. This recognition of a definite frontier between Russia and Afghānistān led to a decided improvement in the Central Asian question.

In the history of mediaeval Islamic literature, Pandjdih appears as the home, or the place of ultimate origin, of at least two poets: Abū Ḥanīfa Pandjdihī, whose Arabic verses are quoted in al-Bākharzī, *Dumyat al-ḳaṣr*, ed. al-Ḥilū, Cairo 1388-91/1968-71, ii, 257 no. 303 = ed. al-ʿĀnī, Baghdād 1390-1/1960-1, ii, 154; and Muẓaffarī Pandjdihī Marwī (Marwarrūdhī ?), a Persian poet included by Niẓāmī ʿArūḍī, *Čahār maḳāla*, ed. Ḳazwīnī, 28, and ʿAwfī, *Lubāb al-albāb*, ed. Browne and Ḳazwīnī, ii, 63-5, amongst the eulogists of the Ghaznawids.

(C.C. Davies)

PANDJHĪR, the name of a river and its valley in the northeastern part of Afghānistān. The river flows southwards from the Hindū Kush [*q.v.*] and joins the Kābul River at Sarobi, and near this point a barrage was constructed in the 1950s to supply water for Kābul. The Pandjhīr valley has always been important as a corridor for nomads who winter in the Lāmghānāt-Djalālābād [*q.vv.*] regions and then travel to summer pastures in Badakhshān [*q.v.*].

In mediaeval Islamic times, Pandjhīr was a famed centre for silver mining [see maʿdin at V, 964, 967, 968 for details], and coins were minted there by the Ṣaffārids [*q.v.*], Abū Dāwūdids or Bānīdjūrids [*q.v.* in Suppl.] and Sāmānids [*q.v.*] (see E. von Zambaur, *Die Münzprägungen des Islam*, i, Wiesbaden 1968, 79). Pandjhīr seems to have produced a poet in Persian of some renown (the "well-known" al-Bandjhīrī of Yāḳūt, *Buldān*, ed. Beirut, i, 499?), Abu 'l-Muẓaffar Makkī al-Pandjhīrī, eulogist of the Ghaznawids; see ʿAwfī, *Lubāb al-albāb*, ed. Browne and Ḳazwīnī, London-Leiden 1903-6, ii, 46.

In the 1980s, the Pandjhīr valley was a particular centre of *Mudjāhid* [*q.v.*] resistance to the Communist régime in Kābul and its Soviet Russian supporters.

(Ed.)

PANDJWĀY [see ḳandahār].

PĀNDU'Ā, a mediaeval Islamic town of the Bengal Sultanate [see bangāla], now in the Mālda District of the West Bengal State of the Indian Union, and situated about 16 km/10 miles to the south of modern Mālda town, in lat. 25° 8′ N. and long 88° 10′ E. It was the residence of Shams al-Dīn Ilyās Shāh of Bengal (746-59/1345-58) and his five successors, and it was at Pāndu'ā that he mounted the throne. Pāndu'ā continued as the capital of the Bengal Sultanate till the reign of Djalāl al-Dīn Muḥammad Shāh (817-35/1414-31), who transferred the capital to Gawr or Lakhnawtī [*q.v.*]. On coins, Pāndu'ā is referred to as Fīrūzābād. It was deserted due to its unwholesome climate and the rise of swamps and marshes. It is now a deserted town—a square mound, five miles in diameter with archaeological evidence of fortification.

Pāndu'ā developed as a brisk centre of spiritual activity in Bengal. Djalāl al-Dīn Tabrīzī established his *khānaḳāh* at Deotala, near Pāndu'ā. In 742/1342 ʿAlā' al-Dīn ʿAlī Shāh built his tomb at Pāndu'ā. Shaykh Sirādj al-Dīn ʿUthmān, known as Akhī Sirādj, a distinguished disciple of Shaykh Niẓām al-Dīn Awliyā' [*q.v.*], planted the Čishtī order at Pāndu'ā. His successors—Shaykh ʿAlā' al-Ḥaḳḳ, Nūr Ḳuṭb-i ʿĀlam and others—played an important role in the cultural life of the place. Shaykh ʿAlā' al-Ḥaḳḳ (d. 800/1398) pushed further the work of his distinguished predecessors and made Pāndu'ā the centre of a powerful religious and intellectual movement. His son Nūr Ḳuṭb-i ʿĀlam built there a big *madrasa* and a hospital. The land granted by ʿAlā' al-Dīn Ḥusayn Shāh to his *khānaḳāh* continued up to recent times. According to the *Riyāḍ al-salāṭīn*, Ḥusayn Shāh used to come from Ekdala every year on foot to visit the tomb of Nūr Ḳuṭb-i ʿĀlam. We find eminent saints, like Shaykh Aḥmad ʿAbd al-Ḥaḳḳ of Rudawlī, visiting his shrine (*Anwār al-ʿUyūn*, ʿAlīgaṙh 1905, 12-14).

The site of Pāndu'ā contains some splendid Muslim buildings, mostly in a ruinous condition, including the remarkable Ādīna or Friday Mosque, the largest in the subcontinent, built by the second Ilyās Shāhid, Sikandar Shāh I (759-92/1358-90), completed in Radjab 776/December 1374-January 1375 according to an inscription in the mosque; the 10th/16th century Ḳuṭb Shāhī mosque; and several significant tombs (see A.H. Dani, *Muslim architecture in Bengal*, Dacca 1961, 55-73, 76-83, 168-70; G. Michell (ed.), *The Islamic heritage of Bengal*, UNESCO, Paris 1984, 109-14, 155-64).

PANGULU [see penghulu].

PĀNĪPAT, a town of northern India (lat. 29° 24′ N., long. 76° 58′ E.) situated 86 km/57 miles north of Dihlī; it is also the name of the southernmost *taḥṣīl* in the Karnāl District of what was in British Indian times the province of the Pandjāb [*q.v.*] but has since 1947 been in the eastern or Indian part of the divided province of the former Pandjāb, at present in Haryana province of the Indian Union.

On three occasions has the fate of Hindustān been decided on the plain of Pānīpat: in 1526, when Bābur

[*q.v.*], the Barlās Turk, defeated Ibrāhīm Lōdī [*q.v.*]; in 1556, when Akbar [*q.v.*] crushed the forces of Hēmū; and lastly, in 1761, when the Marāthās [*q.v.*] were defeated by Aḥmad Shāh Durrānī [*q.v.*]. The geographical factor combined with internal decay and a weak system of frontier defence has been chiefly responsible for this. From the strategic background of Afghānistān the path for invaders lay along the lines of least resistance, the Khyber, Kurram, Tochi, and Gomal passes, on to the Pandjāb plains, for the Indus has never proved an obstacle to an enterprising general. Checked on the south by the deserts of Rādjputāna, invading armies were forced to enter the Ganges and Djamnā valleys through the narrow bottleneck between the north-eastern extremity of the desert and the foot of the Himālāyas.

Hence because of this strategic position, Pānīpat has always been important, and is mentioned in the *Mahābhārata* and in the historical sources on the Dihlī Sultanate [*q.v.*]. In the first battle of Pānīpat, Bābur defeated and killed Ibrāhīm b. Sikandar Lōdī on 8 Radjab 932/20 April 1526. His success was attributed by earlier scholars to an extensive use of cannon, 700 *ʿarabas* [*q.v.*] being mentioned in the *Bābur-nāma*, tr. Beveridge, 463 ff., see esp. 468-9 n. 3; but these must have been for the conveyance of baggage, not gun carriages. Bābur certainly had an unspecified number of cannon, and his Master Gunner Ustād ʿAlī-Ḳulī had *farangī*, *ḍarbzan* and *dēgh* cannon which were lashed together for action [see further BĀRŪD. vi. India]. The battle sealed the fate of the Lōdī dynasty [*q.v.*], but much tougher resistance to Bābur was offered to him in the following year at the battle of Khānuʾā, when he routed the Rādjpūt Rāṅā Sāṅgā of Mēwāṛ [*q.v.*] and brought about the extinction of Mēwāṛ as a separate kingdom (see *Bābur-nāma*, tr. 558-75).

The second battle of Pānīpat took place on 2 Muḥarram 964/5 November 1556, when Akbar, soon after his accession, defeated the usurping Hindu minister Hēmū, who had assumed the title of Rādjā Vikramaditya, this victory being the first major step in Akbar's constituting the Mughal empire.

The third battle of Pānīpat took place on 7 Djumādā II 1174/14 January 1761, when the Marāthās, having managed to occupy Dihlī, were nevertheless put to flight by the Afghān *amīr* of Ḳandahār, Aḥmad Shāh Durrānī. Although Aḥmad Shāh returned to Afghānistān shortly afterwards and Marāthā power revived, the battle had long-term effects in preserving the Muslim state of the Niẓām in Ḥaydarābād [*q.v.*] and in allowing the British to consolidate their position in Bengal.

The modern town of Pānīpat still retains its fort and a wall with 15 gates, and amongst its monuments are the ruins of a mosque in the Kābulī Bāgh built to commemorate the first battle of Pānīpat. In 1971 Pānīpat had a population of 87,981.

PANTELLERIA [see ḲAWSARA].

PANTHAY, a term applied to the Chinese Muslims of Yunnan and their rebellion in the 19th century.

In the second half of the 19th century, Chinese Muslims in Yunnan province (in south-west China, bordered by Burma, Thailand and Vietnam) were known to the Europeans as *Panthay*, a term which had never been used anywhere in China. The Yunnanese Muslims were known as *Huei-Huei* up to 1949, when the incoming communist government referred to them as *Huei-Min* or *Huei-Tsu*.

Views differ as to the etymology of the term *Panthay*. If it derives from Chinese, it may have meant indigenous (*Pen-ti*) or rebellious brigand (*Pan-Tsei*), although there is no reliable evidence. If, alternatively, it derives from Persian or Burmese, it might have been a corruption of *Pan-see*, a Burmese term, referring to Indo-Burmese of northern Arakan, who had converted to Islam in the early 13th century, and originating from Persian *Parsi* of which the *r* sound was dropped by Burmese, who called Muslims *Pathi* or *Passi*. The most likely etymology is that the term was a British coinage, corrupted by colonial officers in British India from the Burmese term *Pan-see* to designate the Yunnanese Muslims during their 1855-73 rebellion against the Manchu authorities. For today's Yunnanese Muslims in Burma, *Panthay* carries a pejorative meaning.

Sources concerning the first entry of Muslims and Islam to Yunnan vary in accuracy and credibility. Tang (618-906 A.D) and Sung (960-1279 A.D) records have left no adequate summary of the religious status and activities of Central Asian migrants in Yunnan, although archaeological evidence from the Tang period suggests that they were enslaved in the Buddhist Tali Kingdom of the native Yunnanese at that time. This accords with the fact that, when Tibet invaded the Tali Kingdom in 801, many of those taken prisoner were found to be conscripts from Samarḳand. An unofficial history of the Tali Kingdom dating from the Sung period maintains that the first Muslims were Persian merchants and Southeast Asians on a tribute mission. According to Chinese Muslim legend, however, the first settlers were Arab merchants in the middle years of the Tang dynasty, and there is no evidence of Islam taking root in Yunnan prior to the Mongol conquest of the whole of China (1279), after which mass Muslim immigration into Yunnan was carried out by the central government through their own Muslim generals.

After the conquest, Muslims migrated to Yunnan in three waves, in 1253, 1256 and 1267. Various Muslim ethnic groups (Tanguts, Tatars, Uyghurs, Persians, etc.) were introduced, following their overlords there as the province was settled. The Muslim immigrants were allocated lands and scattered all over the province, so that camps or villages, known as *Huei-Huei Yin* or *Huei-Huei Chun*, gradually developed. Furthermore, Central Asian Muslim soldiers were continually sent thither from other parts of China as part of a political and military strategy aimed at pacifying Burmese or local insurgents. This also served to promote social integration in that the Muslims began to intermarry with native or Han women or to adopt non-Muslim orphans and bring them up as Muslims to become natural suitors for their daughters.

In order to maintain control of the Muslim population, the Mongol-Yüen court appointed Muslim generals as provincial governors, amongst whom the most eminent was the Bukhārī general, Sayyid Adjall Shams al-Dīn ʿUmar, who was entrusted by Ḳubilay

Khān [q.v.] with the task of sinicising not only the local tribes but probably also the Muslims. Under his governorship, many mosques were built, although he did not intentionally promote Islam. By the end of the Yüen period, the Muslims had gradually abandoned their Central Asian traditions in order to adopt Chinese customs and had developed their religion into a syncretised one.

During the Ming period (1368-1644), Muslim migration continued. However, unlike the Mongols, who had allowed their non-Han subjects to retain their traditions, the Ming rulers imposed Confucianism in an attempt to eliminate all non-Han culture. Under these conditions, Muslims were forced further to integrate, but managed to preserve their religious freedom and their numbers grew. As military activity decreased, soldiers engaged in other occupations, the most important of which, in mineral-rich Yunnan, was mining. The early Ming period also saw the start of the caravan trade, and eventually six trade routes linked Yunnan, Burma, Tibet and other parts of China. Porcelain manufacture also flourished. *Huei-Ch'ing* (Islamic blue) was made chiefly in Yunnan for Muslim patrons abroad. By the onset of the Manchu-Ch'ing period (1644-1911), leather and carpet manufacture also significantly contributed to the Yunnanese economy. By the mid-19th century, the province of Yunnan was home to the second largest Muslim population centre next to that of Northwest China [see KANSU].

Under the Mongols, Muslims had enjoyed more political privileges and higher social status than the Han Chinese. Even under the Ming, they were still able to live without political and social discrimination. However, under the Manchus, Muslims found it increasingly difficult to uphold their religious freedom in the face of oppressive Confucianisation and Han chauvinism, which discriminated against all non-Han cultural elements. The resulting resentment led to serious uprisings in Muslim population centres in northwestern China. In Yunnan, where imperial law was only weakly enforced, social order broke down still further as the Yunnanese Muslims began to take up arms against the Han.

Chief among the factors contributing to the Yunnanese Muslim rebellion of 1855-73 were religio-cultural and economic conflicts and institutionalised oppression by Han officials. Muslim traditions, preserved from their ancestors, particularly dietary customs, set them apart from Han society. Muslims abhorred pork, while the Han reared cattle only as draught animals. Other cultural and religious disparities, which caused conflict, included methods of worship (Muslims considered the Han idolatrous), dress, language, wedding and funeral customs.

The national economic crisis prevailing in the 19th century was chiefly reflected in Yunnan in the mining industry, in which there was much Han-Muslim rivalry. Both groups had constantly to look for new veins of ores, and ownership disputes frequently occurred. The Han resented the Muslims' superior techniques and trade acumen and would wrest wealth from their opponents by force.

The maintenance of social order had previously been the responsibility of the local gentry, but during the 19th century the whole social system increasingly became corrupt and local government all but collapsed. Instead of restraining wayward elements, many of the gentry were themselves a source of disturbance, particularly in firing Han Chinese hatred against Muslims. They colluded with local officials, secret societies and local militia in order to oppress the Muslims for their own interests. With all these factors ranged against them, the Muslims vainly tried to seek justice from the central government, but eventually they were driven to rebel against the Manchu authority itself.

The rebellions took place in the early 1850s in most parts of Yunnan, but were concentrated around Yunnan Fu (present-day Kunming), the provincial capital in the east, and the Tali region in the west. From the middle of 1856 onwards, local, uncoordinated insurrections gradually gravitated towards a few centres of leadership in eastern Yunnan. Here, the grand *imām*, Yūsuf Ma (Chinese name *Ma Te-Hsing* or *Ma Fu-Chu*) was elected as spiritual leader, but military responsibility was in the hands at first of his *ahund* disciples, mainly Hsu Yüen-Chi, later a military degree holder, Ma Ju-Lung.

Imām Ma, a prolific writer and Islamic educationalist, under whom Yunnan became one of the three Islamic learning centres in China, was a moderate theologian who advocated a negotiated solution to the Muslims' problems. On the other hand, Ma Ju-Lung, who had also been one of the *imām*'s disciples, was an opportunist who sought privileges with the ruling Manchu.

Muslim forces were able to lay siege to Yunnan Fu three times between 1855 and 1862, causing severe strains on the imperial army and local Han militia, but failed to take the city. The response of the Manchu provincial government was to adopt a policy of "Pardon and Pacification" and to reward the eastern rebel leaders with governmental posts and honorary titles. Imām Ma was appointed the Beg of Yunnan, which was the equivalent of *Shaykh al-Islām* of Yunnan. This bought off the loyalty of the eastern rebels, who later became the main force led by Ma Ju-Lung to subdue the rebellion in the west.

This had been led by Tu Wen-Hsiu, also known as Sultan Sulaymān to the Europeans, who was more committed to the political and religious cause of Islam. His experience of the brutality of Manchu rule towards the Muslims in northwest China during the Djahriyya (a Naḳshbandiyya [q.v.] Ṣūfī sub-order) movement, inclined him not to yield to the Manchu's inducements and to hold out instead for a independent Muslim state within China.

Thus in western Yunnan, the situation was different. Here, the rebels seized Tali as capital of their sultanate (*Ping-Nan-Kuo*, in Chinese, "Southern Pacified Kingdom") in 1855. An Islamic court was set up and Islamic law implemented, but this only applied to Muslims, while the old Ming laws were re-adopted and applied to non-Muslim subjects. Islamic learning was encouraged, Islamic schools were established to educate Muslims and many conversions took place, although these were not forced.

During the course of the rebellions, the two rebel groups were at odds and the only opportunity for them to unite to drive the Manchu out of Yunnan was wasted for two reasons. First, Tu Wen-Hsiu offered Ma Ju-Lung a high-ranking post in his court. Ma, who was politically and militarily more ambitious, rejected this, saying that he could serve under no-one other than the grand *imām*, Ma Te-Hsing. Secondly, there was considerable sectarian conflict. The eastern rebels belonged to the traditional conservative Kê-Ti-Mu (Ar. *al-Ḳadīm*) who opposed new teaching or reform. The Tali court, on the other hand, was dominated by the Djahriyya reformists who had been exiled to Yunnan after the suppression of their movement in northwestern China by the Manchu government. The grand *imām*, who himself belonged to the

Kê-Ti-Mu, was once courteously invited by the Tali Sultan to lead religious affairs, but the invitation was turned down. Under these circumstances, the Kê-Ti-Mu rendered assistance to the Manchu government to suppress the Tali rebellion for the sake of preserving their own religious interests.

After only 18 years, the Tali sultanate collapsed. Its fate was sealed following the defection to the Manchu of most of its Han leaders and its lack of modern weaponry in order to continue to fight. The defection of the Han leaders resulted from unbalanced power-sharing in the Tali court. The sultan was accused of favouring his Muslim followers in administrative and military affairs. Towards the end of its rule, the Tali court sought military assistance from Western powers. At the beginning of 1872 a Panthay mission, mediated by the British Government of India, and headed by the sultan's adopted son, Prince Ḥasan, was sent to London to secure arms and recognition from Queen Victoria as a tributary of Britain. However, at that time the British government's relations with Peking, from whom they hoped to gain further trade advantages, outweighed other considerations and the mission was not well received. Nor did it obtain the support of the Ottoman government in Istanbul, where it stopped on its way back to Yunnan.

The Yunnanese Muslim rebellion was not simply a political uprising against Manchu corruption, as it has been sometimes viewed. It was in reality a search for ethno-religious identity and social status. Prior to the Manchu period, Muslims were included in the Middle Kingdom, China, as Muslim Chinese and were treated equally with their Han counterparts. Under Manchu rule, they were classified as a minority, and their previous equal rights were gradually eroded. In these circumstances, a rejection of Manchu rule developed and was fanned by the religious undercurrents of reform brought by the Ṣūfī Djahriyya movement, these currents thus crystalising in the ideology of a secession movement, fighting for its own separate future.

The suppression of the rebellion was highly significant in Chinese history. It was another triumph of the Han supremacy and Confucianism which had never been challenged or set aside by non-Han elements. The status of Yunnanese Muslims was now reduced to its lowest level. They were forced to abandon their ethno-religious identity and to assimilate further into Confucian society. Many of those who did not want to live under these conditions fled to Burma [*q.v.*] and formed solid communities there in order to maintain their traditions, these being the forebears of the present-day Chinese Muslims in Burma.

(Chang-Kuan Lin)

PAPYRUS, a term of Greek origin, πάπυρος, is one of the world's oldest writing materials; it seems to have been used in Egypt, the land of its provenance, since the 6th dynasty, *ca.* 2470-2270 A.D. As an equivalent for this word the Arabs, after their conquest of this country, used *bardī, abardī*, or better still *warak al-bardī*. However, these expressions were not of widespread usage, and in Egypt the term employed was *fāfīr*, corresponding more closely to the original Greek. Elsewhere, the word *ḳirṭās* was also used, derived from the Greek χάρτης, through the intermediary of the Aramaic *ḳarṭīs*. And since this last term denoted not only papyrus but also parchment and later even paper, it became necessary in this context to add the adjective *miṣrī* "Egyptian", as was done by Ibn al-Nadīm in his *Fihrist*, 21, ll. 10 f.

The use of this material extends over some seven centuries, lasting until the 8th/14th century. Its utilisation increased following the arrival of the Arabs in Egypt and remained dominant even in the 3rd/9th century, despite the introduction of paper [see kāghad].

Arabic papyrology is the scientific study of texts written on papyrus, although it is conventional, as A. Grohmann (*Einführung*, 3, l. 1) has pointed out in his definition of this branch of scholarship, to include automatically within its scope non-literary documents written on other materials, such as leather, parchment, cloth, paper, ostraca, bone or wood. However, the mass of documents on papyrus is by far the most important.

Despite the antiquity of papyrus as a writing mate-

rial in Arabic culture, Arabic papyrology has developed quite recently. In fact it was only in 1824 that the subject first emerged as a science in its own right, this being the year in which two papyri were discovered in a small sealed pottery, located in a tomb or in a well near the Pyramids of Saḳḳāra (see Grohmann, *Aperçu*, table IX; N. Abbott, *The rise*, table IV). A. Silvestre de Sacy published them and thus became the founder of this discipline, which was nevertheless not to attain real prominence until 1877, the year in which sensational discoveries of papyri were made in the ruins of the old Arsinoe-Krokodilopolis (Kōm Fāris and Kōm al-Kharyāna) to the north of the town of al-Fayyūm. In subsequent years excavations continued, bringing to light a mass of material. The pieces found were sold to the museums of Berlin, to the Bodleian in Oxford, and to the National Library of Vienna, where the Archduke Rainer of Austria purchased 1,000 pieces; thus began the gradual development of the famous PER collection (Papyri Erzherzog Rainer), which currently holds the world's greatest accumulation of Arabic pieces and which celebrated its centenary in 1983 (see *Festschrift zum 100-jährigen Bestehen*...). Sales continued and other collections came into being around the world: in Hamburg, Heidelberg, Strasbourg and elsewhere. Excavations also continued in the hills of Old Cairo (Fusṭāṭ), in other ruins including those of the Memphis Necropolis, Abūṣīr al-Malaḳ, and those of Ahnās (Herakleopolis), and, with fewer pieces found, at al-Ushmūnayn (Hermopolis Magna) and Kōm Eshḳawh (Aphrodito) where in 1901, during the digging of a cistern, two metres of papyri were found. Other discoveries were made in Upper Egypt, at Akhmīm (Panopolis), at Gabalayn (Pathyris), the source of part of the Heidelberg collection (see the works of C.H. Becker and R.G. Khoury) and also at Edfu (Apollinopolis Magna) where the Institut Français d'Archéologie Orientale of Cairo found some important pieces, including the well-known codex on papyrus of *al-Djāmiʿ* by ʿAbd Allāh Ibn Wahb (d. 197/812) (see the edition by J. David-Weill), the only relatively complete book written on papyrus which has been preserved.

Outside Egypt, there have been few discoveries of papyri. In Palestine some 600 pieces were found (including about a dozen in Arabic) in the course of British excavations conducted at ʿAwdjāʾ al-Ḥafīr in 1936-7, and a few other texts, which Grohmann has published, were discovered by Bedouins in the cave of Khirbet el-Mird.

Collections, of varying degrees of importance, have thus been gradually assembled in both the eastern and the western world. In the East, it is the Cairo collection which is the most important; in the former Khedival Library (currently the Dār al-Kutub), some 2,000 pieces are to be found: papyri, parchments, papers, a few ostraca and a rare fragment of a wooden tablet. The founder of this collection was B. Moritz, director of the afore-mentioned Library from 1896 to 1914 (with reference to this collection, see B. Moritz, *Arabische Schrift/Arabic script*; Grohmann, *Einführung*, 36 ff.; R.G. Khoury, *Papyruskunde*, 253-54). But it is Grohmann who deserves the greatest credit for his study of these papyrological materials, devoting to them a series of ten volumes, the first six of which were published in his lifetime, while the four final volumes remain in manuscript form (see Grohmann, *APEL*).

In America, most worthy of mention is the University of Chicago, where the Oriental Institute has assembled, since 1929, a collection comprising numerous documents, in particular historical, literary and Ḳurʾānic texts. Chiefly responsible for the publication of these was Nabia Abbott (see *Bibl.*). At the Library of the University of Michigan (Ann Arbor) there are also a few pieces, and the same applies to the Museum of the University of Philadelphia. Other small collections exist, which have not been catalogued or which are not sufficiently well known to have attracted academic interest.

In Europe, as in the world at large, by far the most important collection is that of the National Library of Vienna, which owes its success to "a very thorough collaboration" between the merchant Theodor Graf (on his visits to Cairo), the director of the Library, Joseph von Karabacek, a papyrologist in his own right (see *Bibl.*) and the already-mentioned Archduke Rainer. Currently, it contains more than 50,000 pieces and fragments, including more than 10,000 papyri, 340 parchments, some thirty thousand papers, 33 pieces of cloth, a text on bone and ten ostraca. Not included in this list are all those items which have yet to be classified and made available to scholars, as well as countless fragments. Karabacek and Grohmann have studied several hundreds of these, in various forms, as have, more recently, Khoury, W. Diem and Y. Rāghib (Ragheb) (see *Bibl.*).

In Germany, numerous collections exist: in Giessen, and especially in Hamburg where A. Dietrich has conscientiously published various letters or documents (see *Bibl.*), and also in Berlin (formerly East Berlin), where there is an important collection, consisting primarily of business letters and a variety of documents, some of which have been studied by Grohmann, Khoury and Rāghib. Particular importance is attached to the Heidelberg collection, which contains some rare and particularly precious items: (1) the most important collection of administrative correspondence, dating from the year 91/710, of Ḳurra b. Sharīk [*q.v.*], Umayyad governor of Egypt, which has been published by C.H. Becker (see Becker, *PSR* I, and *Arabische Papyri*); (2) the oldest existing version of the life of the Prophet Muḥammad (*Maghāzī*) and the story of King David (*Ḥadīth Dāwūd*); and (3) the only papyrus scroll preserved from the entirety of Arab-Islamic culture. (Khoury has published all these texts; see *Wahb b. Munabbih* with reference to the first two, and *ʿAbd Allāh b. Lahīʿa*, for the third.) This collection, known as *PSR* (Papyri Schott-Reinhardt), in memory of the collector and patron Schott, who purchased a large proportion of the material and then presented it to the University of Heidelberg, also contains a variety of other texts, letters of all kinds, etc. (with regard to publications relating to these categories, see E. Seidel; Grohmann, *CPR*; K. Jahn; Dietrich, *Zum Drogenhandel*, also, most relevant to this article, in particular, Diem, *Arabische Briefe*).

In France, in the Louvre and in Strasbourg, there are hundreds of contracts and letters of all kinds, including texts or fragments of texts belonging to the celebrated correspondence of the governor Ḳurra b. Sharīk. J. David-Weill began the systematic study of these collections, in particular that of the Louvre (see *Bibl.*) and this work has been continued by Cl. Cahen and most notably Rāghib, who has edited two unpublished letters of Ḳurra b. Sharīk and has undertaken, with considerable success, to classify series of papyri according to common central themes (see *Bibl.*).

In England, there is a small but valuable collection in the British Museum, and another, of equal impor-

tance, in the John Rylands Library at Manchester; the Bodleian Library of Oxford holds about a hundred texts, to which more have recently been added.

In Italy, there are a few items in Milan and in Florence. In addition, Arabic pieces have come to light from time to time almost everywhere: in Oslo, Istanbul, Geneva and, in particular, St. Petersburg and Moscow. Prague also has about a thousand fragments. There exist, besides these, many other libraries which hold Arabic papyri, as well as private collections, often unknown to the academic community; not only here, but especially in the important collections mentioned above, in the East and in the West, there is an enormous quantity of material to be classified, examined and studied, which cannot be utilised until it has been treated and placed at the disposal of specialists. All these items need to be closely examined, as has been done, for example, in Vienna, Heidelberg and elsewhere, with the object, first of all, of saving the pieces from destruction; they can then be subjected to the appropriate scientific scrutiny.

It is unnecessary to stress the importance of papyri for the study of Arabic paleography and orthography, in spite of the fact that it is possible only to trace in part the history of these two auxiliary disciplines and to give examples of the possible methods of writing. However, since papyri constitute the preferred material for writing used in the period before the proliferation of paper, documents on papyrus have acquired a pre-eminent importance, not only in the two areas just mentioned, but also, and especially, in that of the Arabic language: scrutiny of such documents does not relate exclusively to the study of certain particular philological phenomena, such as, for example, the history of Ḳurʾānic vocabulary, an area in which fragments on papyrus are very numerous (see especially the analysis of Abbott, *The rise*, 60-91), but also to the study of classical Arabic of the first three centuries of the Islamic calendar, as has been shown by S. Hopkins (*Studies in the grammar*...). Furthermore, it is clear that papyri afford considerable interest to scholars of the later centuries of the Arabic language, in particular the language of the Middle Ages (for more detail on this point, see Grohmann, *Einführung*, 88 ff.; Khoury, *Papyruskunde*, 263-68; G. Endress, *Herkunft und Entwicklung der arabischen Schrift*, in *GAP*, i, 165-97; and *Handschriftenkunde*, in *ibid.*, 271-96). This is to say nothing of the sometimes unique value of much of the testimony, authentic and usually dated, supplied by the papyri, of which more will be said in due course.

Particularly interesting are those documents which may be classified as texts of protocols, official or private documents:

(1) *Protocols*. As early as the Byzantine period, for example, the start of each scroll was usually introduced by an official formula or protocol (πρωτόκολλον). The Arabs borrowed this method at a quite early stage, no doubt from the Byzantines: this is attested for the first time (among the texts currently available) in a bilingual text found at ʿAwdjāʾ al-Ḥafīr and bearing the date Dhu 'l-Ḳaʿda 54/674. Around 105/724 the unilingual genre began to replace the bilingual.

(2) *Official and private documents*. Unfortunately the number of official documents available is too small to permit close study of the functioning of Islamic institutions in the early years. In the majority of cases one is at the mercy of later historians and scholars, who have not always left a reliable picture of preceding periods; this fact has been definitively established by the celebrated correspondence of the above-mentioned governor of Egypt, Ḳurra b. Sharīk (90-5/709-14). All of the important elements of this correspondence published so far (Becker, *PSR*, i; Abbott, *The Ḳurrah papyri*; Rāghib, *Lettres nouvelles*), show him in a quite different light to his received image: equitable, zealous for the public good, resolute, etc. These administrative letters are all the more important in that they constitute a source of a unique kind, and that nothing comparable regarding the other Islamic provinces has survived in original and authentic form. We thus remain dependent on these letters, which are of considerable elegance, concerning the functioning of the administration of the earliest Islamic periods.

It is appropriate to draw attention to the opening of these letters, which usually begin with the *basmala*, followed by the name of the governor, who is himself the sender, and that of the addressee of his letter. The final formula *al-salām ʿalā man ittabaʿa 'l-hudā* ("peace be upon him who follows the Guidance") accompanies every letter written by a Muslim to a non-Muslim; in general, and notably in the correspondence under consideration here, the letter concludes with the name of the scribe and the date of composition (concerning such usages, see for example, al-Ṣūlī, *Adab al-kuttāb*, 225; al-Ḳalḳashandī, *Ṣubḥ*, vi, 344, 366). Other official letters, of equal rarity and of no less worth, do not contain, for the reasons stated above, the above formula but conclude with the classical phrase *wa 'l-salām ʿalayka wa-raḥmat Allāh* ("may peace be upon you, and the mercy of God"), before introducing the name of the scribe and the date of the letter.

As for private documents, these concern official or strictly private relations between individuals: marriage, divorce, purchase, sale, complaints and legal proceedings of all kinds, etc. Grohmann undertook in his *CPR* (see *Allgemeine Einführung*, 17-88), and subsequently in his *Einführung*, 107-30, a study of the theory of diplomatic study (*Urkundenlehre*) of the papyri. The form of these documents varies to some degree according to the content: ratification of a marriage contract, simple business contract, receipt concerning a sum of money received or outstanding, business letter, etc. In spite of the efforts made in this area, by Grohmann, Jahn and others, a comprehensive account of the theory of diplomatic has yet to be written. For such a project it would be necessary to examine the maximum possible number of papyri and to compare all the documents which bear a resemblance, close or distant, to others, first within the Arab-Islamic culture, subsequently in the neighbouring civilisations (Byzantine, Coptic), from which Islam profited in this respect.

The value of the various documents of papyrus cannot be over-stressed, value for the study not only of purely philological problems, but in particular of those relating to the administration and the social and private life of the early Islamic centuries in general, all the more so since this type of source is authentic, and often unique in its original authenticity. This opens the way to more reliable methods of scientific investigation and constitutes a firm basis for further, more thorough studies.

(R.G. Khoury)

PARA (Gk. Paros), Turkish name of an important Aegean Cycladic island, west of Nakshe and north-east of the once-attached Antiparos (1981 pop.: 8,516), celebrated since Antiquity for its marble, still popular in the 15th century according to the Italian travellers Buondelmonti (ed. Legrand, 53 ff.) and Cyriacus of Ancona (cf. Miller-Lampros [= M-L], ii, 380, 397), and rich in Byzantine, post-Byzantine and Catholic (Capuchin) monuments. The Byzantine period (to 1207) saw the island's incorporation in the Aegean maritime theme after *ca.* 843 (see Malamut, *Les îles...*, 47 ff., s.v. Paros, Paronaxia), as well as several Arab raids, due to its strategic position in Aegean sea routes (see nakshe), mostly from the amīrate of Iḳrīṭish [*q.v.*] in the 9th-10th centuries, chief among them being those of 837, directed by Nis(i)r and associated with legendary St. Theoctiste of Lesbos, who died on the island (872), and of 904, directed by the renegade conqueror of Thessalonica [see selānik], Leo of Tripoli; the devastations of such raids are vividly recorded in the *Vita S. Theoctistae* (see Christides, *Conquest of Crete*, 6, 166-7, 211 ff.; Malamut, 109, 112, 136, 142-3, 269, 401 and s.v.; more refs. in A. Savvides, *Notes on Naxos and Paros-Antiparos* [in Gk.], in *Pariana*, xlii [1991], 227-37).

Turkish raids began within the intricate period of the Archipelago Duchy (1207-1566), when successive Latin families strove for power; Nakshe, Para and Antiparos were ravaged by Turcoman and Christian corsairs from the early 15th century, to the effect that the Loredani fortified the Antiparian capital "Kastron" and the Sommaripae transferred the Parian capital from Paroikiā, on the north-west, to the eastern fortress of Kēphalos, following an Ottoman raid of 1490 (M-L, ii, 372, 381; Pitcher, 67; Krantonelle, 50, 379, n. 114, 400, 437, 443). The first Ottoman raid against Para was led by admiral Čalî Bey at the head of the Gelibolu fleet and was caused by the Archipelago Duke's failure to greet sultan Meḥemmed I at Izmīr as master of the western Anatolian coast; extensive looting was followed by the abduction of many Parians (Ducas, ed. Bonn, 109; Critobulus, ed. Reinsch, 92; cf. M-L, ii, 371; Krantonelle, 25, 192, 257, 400; Uzunçarşılı, *Osmanlı tarihi*, ii⁵, 1988, 30; Melas, 10), yet subsequent treaties (1419, 1426, 1446, 1454) acknowledged Venetian overlordship over the Duchy. Bāyezīd II's 1490 raid aimed at the Duke Sommaripa's overthrow, but the Venetian Admiral Capello hindered the Ottoman expedition (M-L, ii, 394), while the information that extensive ravages took place in that raid is to be taken with reservations (Th. and N. Aliprantes, *Paros-Antiparos²*, 48-9, 168). Being a base for western espionage against the Sultanate in the early 16th century made Para one of the targets of Khayr al-Dīn Pasha [*q.v.*] in the latter's Cycladic raids; its last ruler, Sagredo, surrendered Kēphalos fortress (Dec. 1537) and 6,000 Parians and Antiparians suffered massacre, the young men ending up as oarsmen in the Pasha's vessels and young girls entering his harem, apart from many spoils (see nakshe; cf. M-L, ii, 404, 406, 407 ff.; Pitcher, 138 and map XIV; Vakalopoulos, iii, 151 and map; Krantonelle, 142, 160, 206, 405; Slot, *The Turkish conquest of the Cyclades*, 1537-8 [in Gk.], in *Kimoliaka*, vii [1978], 62 ff.; idem, *Archipelagus*, 73 ff.; Frazee, 83, 90, 253; M. Roussos-Melidones, in *Pariana*, xxxvi, [1990], 20 ff. [acc. to W. sources]). Ottoman control was ratified by the 1540 treaty, which allowed for semi-autonomy under a *kapudan pasha*, while a semblance of Latin power continued until the eventual annexation of 1566 (see Th. and N. Aliprantes, 49-50, 66 ff., 156, 168-9); the local influential families were also directly involved in the

island's affairs, predominantly the Kondylai and the Mavrogenai (see Th. Blancard, *Les Mavrogeni*, Paris 1909; cf. *Pariana*, xviii [1985], 71 ff. [Mavroi]; xxvi [1987], 113 ff. [Sphaelloi]; xxxvi [1909], 95 ff. [Desyllai]; also refs. in N. Aliprantes, in *DEGEE*, v [1985], 42-119 [on families and coats of arms]).

After the Jewish Duke Nasi's death in 1579 [see NAḲSHE], extensive privileges were granted by Murād III (*ʿahd-nāme* of 1580, renewed by Ibrāhīm in 1646, shortly after the ravages against Para in 1645-6) (cf. Zinkeisen, iv, 766; Vakalopoulos, iii, 491, 502, n. 2; Polemis, *Hist. of Andros*, 74-5, 80-1); Naḳshe became the seat of the Cycladic *sandjaḳ*, enjoying privileges until the early 19th century, while Para was to suffer from incessant piratical raids in the course of the Turco-Venetian wars of the 16th-17th centuries (Vakalopoulos, ii², 139, n. 39, 144 ff.; iii, 503; iv, 134 and map, 192, 198; N. Kephalleniades, in *Pariana*, xiv-xv [1984]; Krantonelle, 35, 49, 60, 121, 176, 241-5, 290, 357, 405 and s.v. Paros). Meanwhile, the first waves of Capuchins and Jesuits established themselves on Para, particularly on its northern fortified harbour of Naoussa (cf. Vakalopoulos, ii², 148; iii, 404 ff.; iv, 120 ff., 132 ff.; Th. and N. Aliprantes, 53 ff., 170). Ottoman fleets used to collect *kharādj* annually from Naoussa and Dryo ports, and it was off Dryo that the Venetian Admiral Mocenigo scored a spectacular victory over the Ottomans bringing succour to the besiegers of Crete in mid-1651 or 1652, capturing 5,000 Turks (Muṣṭafā Naʿīmā, v, 98 ff.; Sathas, *Turkish-dominated Greece*, 263-4; Vakalopoulos, ii², 141; iii, 499-500; iv, 38; cf. *Pariana*, vii [1981], 100 ff.), while in 1666 or 1668 the *ḳapudan pasha* Muṣṭafā Ḳaplan, while chasing Latin corsairs, sacked Paroikiā with 63 vessels, executing publicly the local notable Kondyles and abducting 400 Parians, and moreover pillaging the celebrated 6th-century Ekatontapylianē (= Our Lady of one hundred gates) church (cf. E. Kriaras, *The sack of Paroikiā: Cretan verses of the 17th c.* [in Gk.], *Athenā*, xlviii [1938], 120-62; Vakalopoulos, ii², 142; Th. and N. Aliprantes, 51-2, 53 ff.); meanwhile, the Turco-Venetian war in Crete brought waves of Cretan refugees on Para, which was terrorised by the "Saldar" of Aḳ Deñiz (= Aegean) in 1674; in 1676-7 another Ottoman fleet, in chase of western pirates, landed at Naoussa and looted it (cf. Vakalopoulos, ii², 145-6).

From the late 17th century local administration was carried out by a *voivode*, 2 annual *ḳodja-bashis* and a *ḳāḍī*. In *ca.* 1700, however, the French traveller Tournefort records that the local magnate Constantine Kondyles secured the Porte's favour and became acting *voivode*, to be accused of harbouring pirates and overthrown by the *ḳapudan pasha* Djānīm Khodja, who had him executed (1716); these developments caused new waves of refugees to Smyrna (Vakalopoulos, iv, 148-9, 446, 448, 482; V. Sphyroeras, in *Mikrasiatika Chronika*, x, 1963, 172 ff.; Mathiopoulos, 27 ff.; *Pariana*, xvl [1991], 73 ff.). In the course of the first Turco-Russian war (1668-74), the Russian fleet under admirals Orlov and Svyridov seized Naḳshe, Para and Antiparos, using Naoussa as their base until 1774, when ousted by the Ottomans according to the Küčük Ḳaynardja treaty [*q.v.*], before materialising their plan to sell Para-Antiparos to the British or French (cf. testimony of the Dutch Pasch van Krienen, in Sathas, 516-17, 520; Vakalopoulos, iv, 412 ff.). There ensued hard decades for the Parians, whose penury is vividly depicted in their 1820 petition to the *ḳapudan pasha*; yet both Parians and Antiparians were among the first islanders to join the 1821 Greek War for Independence, with distinguished personalities, like Demetrakopoulos, Delagramates and the legendary heroine Manto Mavrogenous (E. Konstantinou, *Parian fighters for independence*, and *Cycladian fighters for independence*, Athens 1985; cf. Vakalopoulos, v, 406 ff.; vi, 515-16, 718-19 and s.v.; vii, 384, 726, 811 ff.; cf. *Pariana*, xvi-xvii [1984-5]; xxx [1988], 145 ff.; xxxvii [1990], 71 ff. [all in Gk.]). In the course of the uprising, both islands suffered from domestic pirates [see NAḲSHE], until incorporated into the newly-founded Greek Kingdom between 1830-2 (cf. Roussos-Melidones, in *Paria-na*, xxx [1988], 152 ff.). A most interesting case of Christianisation of an ex-Muslim Turkish woman is recorded in 1823 (see *Pariana*, x [1982], 106 ff.), the same year of the Maltese Knights' abortive attempt to purchase Naḳshe, Para and Antiparos from the temporary Greek government (Vakalopoulos, vi, 486).

PĀRA (P. "piece, fragment"), a Turkish coin of the Ottoman and early Republican periods. It was originally a silver piece of 4 *aḳčes*, first issued early in the 18th century; it soon replaced the *aḳče* as the monetary unit. The weight, originally 16 grains (1.10 grammes), sank to one-quarter of this weight by the beginning of the 19th century and the silver content also depreciated considerably. The multiples of the silver *pāra* were 5 (*beshlik*) *pāras*; 10 (*onlïḳ*); 15 (*onbeshlik*); 20 (*yigirmiparalïḳ*); 30 (*zolota*) and 40 (*ghurūsh* or piastre). Higher denominations: 60 (*altmïshlïḳ*); 80 (*ikilik*, i.e. two piastres); and 100 (*yüzlik*) *pāras* were occasionally issued.

In the new Medjidiyye currency of 1260/1844, the *pāra* became a small copper coin with multiples 5 (*beshpāralïḳ*), 10 (*onpāralïḳ*), 20 (*yigirmipāralïḳ*) and 40 (*ghurūsh*). In the later years of the Ottoman empire, the larger copper pieces were replaced by nickel. The

pāra under the republic was a money of account, the 100 *pāra* or 2½ piastre piece of aluminium bronze being the smallest denomination issued. With the post-World War II inflation, the *pāra* eventually disappeared from use in Turkey; in present-day Turkey, *para* has acquired, by a process of semantic evolution akin to that of Arabic *fulūs* [see FALS], the general meaning of "money".

When Serbia became independent, it retained the name *pāra* for its smallest coin, as did Montenegro also. The name survived in the former Yugoslavia during the interwar period, where the nickel 50 *pāra* piece was the smallest coin issued. During the Russian occupation of Moldavia and Wallachia in 1771-4, copper coins were issued with the value in *pāras* and kopecks.

PARČĪN-KĀRĪ (P.), a technique of inlay-work used in the architecture of the Indo-Pakistan subcontinent, in Urdū *paččī-kārī*.

It is usually set in marble in a technique which reached its fullest development in Hindūstān under Djahāngīr and Shāh-Djahān in the 11th/17th century, by then as an essential element in imperial symbolism. The craft of using semi-precious stones in floral or foliate compositions in the equivalent of the Florentine *commesso di pietre dure* appears to have arisen from a long regional tradition of stone intarsia work with a stimulus from imported Florentine pieces, and possibly European craftsmen. The Tīmūrid use of faience mosaic, *kāshī-tarāshī* [*q.v.*], following a somewhat comparable development in Persia and greater Khurāsān, provided the model for compositions in specific architectural situations: it was already used extensively at Bīdar [*q.v.*] in the *madrasa* of Maḥmūd Gāwān [*q.v.*] (877/1472), under direct Persian influence, probably *via* Māhān (the plan is derived from Khargird). Although the technique of wood inlay was well known to the Tīmūrids, they had not transferred it to stone, except in marble dados inlaid with geometric networks, as at Gāzurgāh (832/1429) and Ṭaybād (848/1444) or with tesserae of stone or bisque tile and faience. Stone inlay may therefore be regarded as a medium developed in Hindūstān, whose use can be distinguished in three stages: first the use of strips or bands of contrasting stone, then the use of a more varied range of colours in geometrical compositions based on the Persian tradition of cut-brick or tile profiles (see Wulff, *op. cit.* in *Bibl.*, fig. 187), and finally the freely-drawn work in coloured stones inlaid and polished *in situ*. The origins of this third stage have been investigated since 1839, and their foreign origin disputed, but the arguments have been admirably collated, and an Italian connection clearly demonstrated, by Koch (in *Bibl.*).

The effect of contrasting marble with stone masonry was already recognised in the Aṛhā'ī-din-kā Djhōṅpṛā mosque at Adjmēr (595/1199), where a single white *miḥrāb* with swirling scrolled carving is set against the *ḳibla* wall. A similar contrast is used for the *miḥrāb* in the mosque at Sulṭān Ghārī (629/1231) and for the *miḥrāb* and cenotaph in Iltutmish's tomb at Dihlī (*ca.* 1235). Inset marble first appears there under the Khaldjī sultanate in the ʿAlāʾī Darwāza (711/1311), where white architrave fillets, inscribed bands, lotus-bud arches, colonnettes and arched niches are deftly alternated with elements in red stone, articulated by changes in plane, and united by the imposition of a mesh of similar deeply incised carving on both. The inserts of black marble and blue schist suggest a connection with Gudjarātī work.

The vocabulary is extended in the tomb of Ghiyāth al-Dīn Tughluḳ (*ca.* 725/1325), where marble spandrels and a fretted tympanum contrast with grey panels in the red stone, and the treatment is echoed in the interior. At Dhār the *miḥrāb* of the Kamāl Mawlā Masdjid (795/1392-3) is surrounded with black and white fillets in the architrave, and in the Djāmiʿ Masdjid (Lāṭ Masdjid) (807/1404-5) this treatment is extended to white lines trimming the black spandrels. In the Djāmiʿ Masdjid at Aḥmadābād (827/1424), all five *miḥrābs* are carved in carefully assorted marbles, with an open flower in coloured stones that may be the first application of true *pietre dure*. By 858/1454 contrasting marble trims to the *miḥrāb* of the Djāmiʿ Masdjid at Māṇḍū are combined with the use of blue tile infill between the merlons of a frieze above; the trim and contrasting spandrels are repeated in the main entrance. Combinations of this kind reached a sophisticated level in the Purānā Ḳilʿa complex at Dihlī a century later, where intersecting white arches surround panels of ultramarine tile mosaic, alternately geometric and floral, with traces of turquoise green: these suggest a technique imported from Persia by Humāyūn [*q.v.*] on his return in 1555. In his Shēr Manḍal (*pre*-1556) the dados at both levels outside are filled with geometric inlay, white marble stars and kite-shaped lozenges in the Iranian range of cut brick shapes set in linear rosettes of structural stone. The spandrels are trimmed with a single white line, and inlaid with a six-pointed star on either side. The internal dados, however, are of faience. At the roughly contemporary Masdjid-i Kuhna nearby, the tympanum of the central bay is filled with square and rectangular panels of this geometric inlay, framed with white strips, while the inner architrave is of successive rectangular panels inlaid with frets of white lines to form a geometric spider's web. Black outlines to the inscribed panels define *miḥrābī* cartouches which were to be used regularly thereafter. The white semidome of the *miḥrāb* is divided into sectors by a fine black trim. Use of tilework combined with stone, both in contrasting colours, continued until the mosque and tomb of ʿĪsā Khān were built in 954/1547-8.

Geometric marble set in a red stone matrix, however, gained ascendancy in the metropolitan style fostered by the harem faction under Persian influence during Akbar's [*q.v.*] minority. The elegant little tomb of Ātagā Khān (974/1566-7) at Niẓām al-Dīn has a fully Persian *pīshṭāḳ* [*q.v.*] with inlaid white geometric tesserae on both dados and spandrels, the latter alternating with smaller areas of dark blue tile and green centres. Those in the lateral panels are reticulated in black lines rather than the red background stone; yet tile mosaic is fitted to the blind arches of the western enclosure wall. Larger-scale marble inlay appears in the merlon frieze and in a display of six-pointed stars among hexagons on the drum. This appears again on the drum of Humāyūn's tomb (969/1561-2 to 1570), probably reflecting his preoccupation with astrology, and notably in stars set in the floor of the main chamber, though the exterior is trimmed only in the earlier linear style. It has been suggested by Lowry (*op. cit.* in *Bibl.*, 140-5) that the choice of red and white here refers deliberately to India's tradition under the Sultanate, in contrast to Transoxania where such stone is absent, and that the star was used to symbolise both Humāyūn and his successors. Tessellated inlay is consummated in the great mosque at Fatḥpur Sīkrī (979/1571-2), where geometric networks are used extensively on the intrados of arches and in bands framing blind arches, niches, and rectangular panels, mostly inside: again, some are set off with black lines and some with accents

of faience. The main *miḥrāb* is inlaid with black and white marbles, but the lateral ones, though on the same model, vary in detail, two being set with tilework in four colours.

The transition to floral forms is marked by the southern gateway to Akbar's tomb at Sikandra (1022/1613). Though the wings are decorated with superimposed panels of geometric work, the background alternates in buff and red. The framing bands are in *bannāʾī* technique, and the spandrels carry diagonal palmettes with arabesque scrolling—both translating Tīmūrid practice into stone. The tall extrados within the *pīshṭāḳ* transforms the usual interlocking rosettes into boldly stylised petals and leaves in a sequence of giant flowers reminiscent of block-printing: black, white, and green marble are used. The scheme is repeated in the *pīshṭāḳ* of the tomb itself. In the gateways to the tomb of Iʿtimād al-Dawla (1031-7/1621-7) at Āgra the character of these features is already changed: the inlay on the extrados is intrincately laced, and the spandrel arabesques are spread more loosely but more evenly, while the side elevations are articulated with arched outlines framing vases and flasks. The tomb, wholly in white marble, astonishes by its wealth of meticulous surface ornament of polished *pietra dura* work, establishing a fully Persianate vocabulary under the aegis of Nūr Djahān [*q.v.*], and epitomising the new technique and its overall use; the inlay is in black, grey, brown, buff and white, blue accents being introduced only in the pavilion roof near the skyline. The material includes *khattū*, agate, jasper and yellow porphyry. The dados both outside and in are in continuous geometrical work, some of interlocking angular pieces. Similar panels on the upper wall outside are subdivided by plain marble fillets, with borders of countered arabesque meanders throughout, and vivaciously coiled arabesques in the spandrels. The arch reveals are decorated with grouped trees, flasks, flower-vases and cups set within outlines of niches, cartouches, and lobed roundels, the round corner towers with ovate pole-medallions. As the interior is largely painted, it is clear that this work was intended for more exposed positions. The floor of the upper chamber, however, is inlaid with swirling arabesques. It may be noted that there is little difference between the types of designs chosen and those of the faience mosaic still used to face the Čīnī-ka Rawḍā (*ca.* 1048/1638) not far away, though there floral motifs predominate: the prototypes may well have been worked out in the Pandjāb [*q.v.*], where tiles were the usual ornament, in such buildings as the Sarāy Doraha (*ca.* 1610) west of Sirhind (see Begley, *op. cit.* in *Bibl.*, pl. 6). Under the same patronage, Djahāngīr's [*q.v.*] tomb (*ca.* 1627) at Shāhdara in Lāhawr [*q.v.*] is clad outside in red and white work with the same pervasion, while the access corridor, the floor, walls and cenotaph of the tomb chamber are inlaid with *pietre dure*, including floral designs in which the petals are shaded in differing colours. The inscriptions, too, are inlaid in black marble. The work, now referred to as *parčīn-kārī* or *parčīn* in both the *ʿAmal-i Ṣāliḥ* and the *Pādshāh-nāma*, established the standards and the vocabulary used throughout Shāh Djahān's reign.

At Āgra Fort [see MAḤALL], geometrical work is no longer in evidence. The Muthamman Burdj apartments (1628-30) combine floral and arabesque inlay with floral relief carving in the marble dados, and for the first time the faceted columns are inlaid from base to scrolled brackets; even the sculpted leaves of the pool spread among inlay. The *djarōkhā* of the public audience hall (1037-46/1628-37), with three trefoil arches and a *čīnī-khāna* wall at the rear, is of a more curvilinear design, in which the convex arched soffits, the concave ceiling coving, and the swelling capitals are inlaid. The spandrel arabesques are without central palmettes, and the ceiling is articulated with foliate strapwork with sharp angles and clasps at intervals like wrought iron work. As Koch has pointed out (*op. cit.*, 20), the increasingly florid fullness in marble forms is in contrast to an increasing stylisation, slenderness, and symmetry of the floral inlay accompanying them. The deliberate choice of white marble as an image of purity was combined with a floral evocation of paradise referring to both legendary and Ḳurʾānic sources, as both inscriptions and contemporary historians consistently make clear. The developed medium thus played an essential rôle in the Mughal idea of divinely-endowed kingship. By 1045/1635 the Dawlat-khāna-yi Khāṣṣ was built with marble columns in which the inlay is differentiated between powerfully serrated leaves framing the pedestal carving, and delicately framed floral repeats in the collars; all the dados are bordered with floral strapwork of the angular type.

This répertoire is that of the Tādj Maḥall (1041-57/1632-47 [*q.v.*]). The relatively bold spandrel scrolling still centres on palmettes, or a lyre-shape, and vestigial use is made of the coarser technique of alternating chevrons for framing dados, but the work tends to incorporate tiers of paired flowers, and tendrils converted to strapwork: it is subordinate to the sculptured forms. The mosque and its counterpart continue the older red stone style, with geometric inlay on the dome drum.

The great mosques at Āgra (1058/1648) and at Dihlī (1066/1656) make no use of the finer technique, though their red stone is set off by white accents and outlined panelling, with chevron work at Āgra and reeding at Dihlī, both extending to the bulbous domes themselves. At Dihlī a new element is introduced in an outlined network of panels in the curved zone of transition under the domes. It appears that the imagery of floral inlay was appropriate only to the palace. It is significantly absent in the marble court mosques at Āgra, the Mīnā Masdjid, the Nagīna Masdjid, and the Mōtī Masdjid, though the quintessence of the material can be seen in the serene black outlines of the *djā-yi namāz* on the floor. At those in Lāhawr and Dihlī it is allowed a discrete appearance on the skyline.

A final stage in the development can be recognised in the Red Fort at Dihlī (1048-58/1638-48), where the tendrils in borders are wiry meanders linking predictably-placed foliage and flowers. The main floral motifs, though finely executed, are reduced to a display of buds and blooms scarcely connected by their stems. The Bangālī vault of the baldachin in the public audience hall is plainly elaborated from that at Āgra, with its convex arch soffit and coving. It is the wall behind this which is clad with work from Florence, with a figure of Orpheus at the apex and surrounding panels of birds amongst foliage and fruit, with lions at the foot, unique in Mughal architecture. The black matrix of these 318 panels, typical of the Grand Ducal workshops, is itself an innovation, accommodated by dint of composing it in an arboreal setting with Indian birds on the usual white ground, probably done *in situ* by local craftsmen. Koch has shown (*op. cit.*, 23-33) that the whole is to be interpreted as a Solomonic setting for the ruler, as bringer of harmony to nature, hence of natural justice, with reference to David's pacification of the natural world through music.

In this instance, a convergence between the interests and crafts of the Mughal and European courts could lead to a cross fertilisation which, however, seems to have led no further. That the main impetus for the development of *parčīn-kārī* came from faience mosaic is clear in such details as the inclusion of centres of a different colour in peripheral leaves. A stimulus may well have been received from Bīdar, as the Rangīn Maḥall there (*ca.* 1542-80) was decorated not only with faience mosaic but exceptionally fine mother-of-pearl inlay on dark basalt; Shāh Djahān had passed through Bīdar during his rebellion of 1623-4, and the complex seems to have been emulated at the Muthamman Burdj at Āgra on his accession. Patterns on textiles, and the floral painting as found in some tombs at Burhānpur, are likely to have contributed to its evolution.

With the exception of the Mōtī Masdjid at Dihlī (1073/1662-3), little use was made of *parčīn-kārī* after Shāh Djahān's death, and the craft had so declined by the mid-19th century that it could only be revived by a British initiative (Koch, *op. cit.*, n. 24). At the Pādshāhī Masdjid in Lāhawr (1084/1673-4), the exterior makes further use of red and white work, but though some strips are inlaid flush, the central *pīshṭāḳ* is ornamented with marble inlay standing out in relief: the spandrel scrolling is centred on a sunflower, with petals, leaves, and tendrils all embossed, and the soffit of the arch carries continuous floral scrolling articulated by a sequence of vases, both highly stylised, and possibly under Italian influence (Chaghatai, *op. cit.* in *Bibl.*, 1972, 26-7). The contrast between sculpted marble and inlay is thus finally resolved by sculpting the white inlay itself.

Technique. The Muslim craftsmen still practising at Āgra, who claim descent from those who worked for Shāh Djahān, state that the work is properly called *paččī-kārī*, from a Hindi root meaning "joined, sticking", as in Platts' dictionary. The design, *khākā*, is first drawn in pencil, and then chiselled out with a burin, *narza* (?), tapering conically to 1.5 mm with a 30° point held between the fourth and fifth fingers like a pen; another chisel, *ṭāṅkī* (*tanḳīḥ*?), with a point 2.5 mm square is used to clean out the edges with a digging action, *narzāna*. The white marble *sang-i marmar*, for the background is from Makrāna, some 100 km/60 miles west of Djaypur. The inlaid stones include malachite, *dāna-farang*, lapis lazuli, *lādjward*, cornelian, *ʿaḳīḳ*, mother of pearl, *sīp*, black onyx, *sang-i mūṣā*, coral, *mardjān*, turquoise, *fīrūza*, besides garnet, moonstone, smoky topaz, golden or yellow topaz, and all types of agate. Of these the malachite is now from the Congo, the lapis lazuli from Afghānistān, the cornelian from India, the mother-of-pearl is abalone from Australia, and the coral is from Sicily—a black variety is more expensive. The inlay in general is called *paččī*; the petals and leaves are *pattī*, and the stems *daṇḍ*. The flowers, seen as roses, *gulāb*, or jasmine, *čamēlī*, are inlaid first, and then the stems.

The marble, once blasted, is cut with a bamboo bow, *kamāna*, with a wire blade: seven pieces can be cut at once with seven blades. It is then reduced with a hammer, *hatōṛā*, and chisel, *čhēnī*, to the required shape, *shakl*; its edges are ground, *ghisnā*, with a broken piece of grinding wheel, *sān*. The inlay is cut roughly to shape with shears, *kāṅṭī*, and ground on a wheel, *ca.* 30 cm diameter by 2.5 cm thick, set on a steel axle and operated by a bow 90 cm long. The composition of this wheel, regarded as the essential secret of the craft, is of river sand, sugar-cane juice, and brown resin: it should last 30 years, and if pitted can be restored by heating it with charcoal and rubbing it with marble. The flat surface of the wheel is used to grind the inlay surface, and its bevelled edge for the profile; it takes half an hour to shape a flower of 3 or 5 petals by eye, *raḳam banānā*, to fit one another. The marble is usually hollowed, *kaṭyānā*, to twice the depth of the inlay, the profile being exact. After the fit of each piece has been tested, a glue mixed from white cement, plaster of Paris, and beeswax, is put in the hollow and softened by holding a red hot coal over it with tongs, *čimṭa*, for 5-10 seconds, and the stone pressed in place: it sets in 25 seconds. In some cases the parts of a flower are pre-assembled with heated resin, *sarēs*, on a mica table. Once set, the work is ground smooth, *ṣāf karnā*, with a piece of grindstone, water, and river sand, and finally polished with white zinc powder, water, and a soft cloth. A piece of work some 40 cm across takes two craftsmen seven hours to complete (informant: Ustād Muḥammad Āṣaf Khān b. Muḥammad ʿAbd al-Khān b. ʿAbd al-Salām b. ʿAbd al-Asad, 1981).
